Note. (1614) A concise, authoritative guide addressed to students and teachers in medical colleges, nurses, physicians and surgeons, as well as to anesthetists. Special attention has been given to describing the signs of anesthesia. The anesthetic requirements for various operations are stated explicitly The second part, which is devoted to anesthetic accidents, constitutes half of the book. Although few cases are discussed, this part consists mainly of discussions of techniques and precautions that guard against accidents.

WATERS RALPH MILTON editor

Chloroform a study after 100 years. Madison The University of Wisconsin Press, 1951 138 p. illus. 22 cm. $2 75 1372

Contents: The effect of chloroform on hepatic function, by O. S. Orth and others. The effect of chloroform on renal function, by O. S. Orth and E. B. Cohen. The effect of chloroform on the cardiovascular system, by O. S. Orth and others A clinical evaluation of chloroform, by N A. Gillespie. Chloroform in blood and respired atmosphere, by L. E. Morris. Conclusions, by R. M. Waters. References. Index.

Note. The results of series of planned studies of chloroform as an anesthetic drug are reported in this short but valuable book. *The studies were unusual in that they were made of an old drug* rather than new one. Some of the studies were conducted on ex-

perimental animals, but detailed observations were recorded of the results when chloroform was administered in more than 1000 cases of surgery on human beings. The editor is Director of the Department of Anesthesia of the Medical College of the University of Wisconsin.

FRACTURES

AMERICAN MEDICAL ASSOCIATION SPECIAL EXHIBIT COMMITTEE ON FRACTURES

Primer on fractures Prepared by the Special Exhibit Committee on Fractures in cooperation with the Committee on Scientific Exhibit of the American Medical Association Sixth edition. New York Paul B Hoeber, Inc. 1951 109 p illus. 24 cm. $2 00 1373

Contents. Emergency first aid splinting for arm and leg. How to apply plaster of paris bandages. Fracture of the neck of the femur. Intertrochanteric fracture of the femur. Fracture of the shaft of the femur. Fracture of the tibia and fibula. Fracture at the ankle. Fracture of the clavicle. Fracture about the upper end of the humerus. Fracture of the shaft of the humerus. Supracondylar fracture of the humerus. Fracture of both bones of the forearm. Colles' fracture. Dislocation at the shoulder joint. Compression fracture of the spine. Compression fractures of the os calcis. Fracture of carpus, metacarpus and phalanges. Active movement in the treatment of fractures. Massage in the treatment of fractures. Splints and accessories for the doctor's automobile. Splints and accessories for the doctor's office. Index.

Note. (2616a) A useful manual which supplements the Annual Fracture Exhibit staged by the American Medical Association for its members. The following information is given for each variety of fracture the directions the fracture may follow (transverse, oblique, etc) reduction and immobilization, immobilization by internal fixation (when appropriate), after care. Nonoperative treatment for fracture of the femur is described. The 46 illustrations are all reproductions of line drawings. In the present edition changes have been made in the terminology in illustrations, and in the format, but most of the book's content is the same as in the fifth edition, 1943 because there was no need for extensive revision.

COMPERE EDWARD LYON AND SAM W BANKS

Pictorial handbook of fracture treatment. Third edition. Revised with the assistance of Clinton L. Compere. Illustrated by Harold Laufman. Chicago The Year Book Publishers Inc. 1952 424 p. illus. 21 cm. (The general practice manuals) $6 50 1374

Contents (abridged) Part I, General considerations of treatment of fractures and dislocations. Fracture pathology Fracture healing. The diagnosis of fracture Emergency treatment of fractures. Anesthesia. Reduction of fractures. Immobilization of fractures. Rate of healing of fractures. After-treatment of fractures Open and infected fractures Complications of fractures. Aseptic necrosis of bone. Pathologic fractures. Birth fractures. Part II, Fractures and dislocations of the upper extremity scapula and clavicle Part III, Fractures and dislocations of the lower limbs. Part IV Fractures and dislocations of the trunk Part [illegible] The face and skull Index

Note (1201) A concise reference book addressed primarily to the general medical practitioner The text is concise and explicit and approximately half of the space is devoted to illustrations. Methods of fracture management which have proved successful in the authors' own experience and are available to the average general practitioner are described. Only slight reference is made to the wide assortment of gadgets and automatic reducing devices available in large hospitals. The second edition was published in 1947 Important changes were made in preparing this edition and three chapters have been extensively rewritten. Revisions were made also in the illustrated matter

KEY JOHN ALBERT AND H EARLE CONWELL

The management of fractures dislocations and sprains. Fifth edition. St. Louis The C V Mosby Company 1951 1232 p. illus. 26 cm. $17 00. 1375

Contents. Part I, Principles and general aspects General considerations. Repair of fractures. Principles of treatment of fractures. First aid in fractures and automobile injuries. Complications of fractures. Pathologic fractures. Compound (open) fractures and war wounds. Dislocations. Part II, Diagnosis and treatment of specific injuries: Fractures of the skull and brain trauma, by E. F. Fincher. Fractures of the jaws and related bones of the face, by J. B. Brown. Injuries of the spine. Fractures and dislocations of the hyoid, larynx, and tracheal cartilages. Injuries of the thorax. Injuries in the region of the shoulder girdle and shoulder. Fractures of the shaft of the humerus. Fractures in the region of the elbow Fractures of the forearm. Injuries in the region of the wrist and hand. Fractures and dislocations of the pelvis. Injuries in the region of the hip. Fractures of the shaft of the femur. Injuries in the region of the knee joint. Fractures of the shafts of the tibia and fibula. Injuries in the region of the ankle. Injuries of the foot. Index.

Note. (1205*) A comprehensive treatment of this branch of surgery It covers not only injuries to bones but injuries to the soft tissues which often accompany fractures. Instead of attempting to include all recorded procedures, the authors have selected those which they have come to consider the best as based on their own experience. The book is used as text in medical colleges and as reference book in the offices of general practitioners and surgeons. This edition represents a comprehensive revision. The book has been shortened somewhat. Nevertheless, much new textual material has been included. Among the new additions the revised treatment of compound (open) fractures and the use of medullary fixation of fractures of the femur and of the tibia should be mentioned. There are now 1195 figures.

MAGNUSON, PAUL BUDD, AND JAMES K. STACK

Fractures. Fifth edition. 323 illustrations. Philadelphia J B Lippincott Company 1949 537 p. illus. 24 cm. $7 00. 1376

Contents Fundamentals. "Textyard" treatment of fractures. Treatment of compound fractures. Pathology and repair of fractures. Anatomic mechanism and physical equipment in the reduction of fractures Equipment. Fractures and dislocations of the clavicle and the scapula. Fractures about the shoulder. Fractures and dislocations of the humerus. Fractures about the elbow. Fractures and dislocations of the forearm, the wrist and the hand. Injuries of the wrist and hand. Fracture of the ribs and costal cartilages and the sternum. Fracture of the pelvis—dislocation of the hip. Fractures of the neck of the femur. Fractures of the femur below the neck. Fractures of the femur in children—separation of lower epiphysis. Fractures of the patella. Fractures of the tibia. Fractures of bones of the leg. Fractures of the ankle and the foot. Fractures and dislocations of the spinal column. Applied anatomy of the spinal column and the spinal cord, by L. Davis. Fractures of the cervical spine. Fracture-dislocations of the spinal column, by L. Davis. Compression fractures of the spine. Fractures of the spinous, articular and transverse processes of the vertebrae. Fractures of the skull, by L. Davis. Physical therapy in the treatment of fractures, by J. S. Coulter Exercise in the treatment of fractures, by J. S. Coulter Index.

Note (1633) A standard manual addressed to general practitioners. Its purpose is to make available to the physicians who are usually the first to treat fractures the basic anatomic and physiologic knowledge and to relate this knowledge to practical techniques of diagnosis and treatment. Modern techniques of treatment are described explicitly and in adequate detail. The book is very well illustrated. In comparison to the fourth edition, the greater part of the text is unchanged However the second chapter has been added, and the chapter on compound fractures has been revised. A few changes have been made in illustrations.

SURGERY OF SPECIAL REGIONS

BOYCE, FREDERICK FITZHERBERT

Acute appendicitis and its complications. New York Oxford University Press, 1949 487 p. illus 24 cm. $8.75 1377

Contents (abridged) Embryology anatomy (including anomalies), and physiology of the appendix. Etiologic factors in acute appendicitis. The bacteriology of acute appendicitis. Morphologic aspects of acute appendicitis, by R. Halpert. The pathologic process in acute appendicitis. The clinical picture and the diagnosis of acute appendicitis

citis. The complications of acute appendicitis. The therapy of acute appendicitis and its complications. Special types of acute appendicitis—acute appendicitis in infancy and childhood—acute appendicitis in middle and late life—appendicitis during pregnancy—traumatic appendicitis. Chronic and recurrent appendicitis in relation to acute appendicitis. Factors of mortality in acute appendicitis. References. Name index. Subject index.

Note: A comprehensive monograph based chiefly on an extensive experience with surgical cases of acute appendicitis at the Charity Hospital of Louisiana at New Orleans. The author stresses the fact that the disease is far from conquered and that there is little ground for the complacency with which it is currently regarded by many members of the medical profession. He emphasizes the importance of early diagnosis, and his discussions of diagnosis and differential diagnosis run to about 80 pages. There are 81 figures and 20-page list of references.

CALLAHAN ALSTON

Surgery of the eye—injuries. Springfield, Illinois Charles C Thomas, 1950 217 p illus. (part col d) 29 cm. $12 00. 1378

Contents: Injuries of the cornea, conjunctiva and sclera. Injuries of the iris and ciliary body Injuries of the lens. Intraocular foreign bodies. Traumatic separation of the retina. Removal of the eye. Lacerations of the eyelids. Injuries of the lacrymal system. Retention of the upper lid after removal of the eye. Wiring of the canthus. Pedicle flaps. Tube pedicles. Free skin grafts. Major reconstruction of the lids. Traumatic ptosis. Reconstruction of the socket. Fractures of the orbit. Reconstruction of bony orbit. Ophthalmoscopic and ocular prostheses Appendix: Preparation. Index.

Note: A book of techniques selected on the basis of the author's experience in United States Army ophthalmic center and at the Thigpen-Cater Eye Hospital, Birmingham, Alabama. According to the author various methods were tried on similar cases at the ophthalmic center and therefore an unusual opportunity for comparative evaluation was presented. Generally speaking, in each of the book's chapters there is general discussion and then description of specific surgical technique. The word descriptions are supplemented by many illustrations, the majority of which were made from photographs of actual cases. Altogether there are 313 figures and 20 plates reproduced in color. As the title indicates, the book is limited to the repair of injuries.

COLLER, FREDERICK A. AND OTHERS

Indications for and results of splenectomy By Frederick A. Coller Alexander Blain, III, and Gould Andrews. Springfield, Illinois Charles C Thomas 1950 100 p illus 22 cm. (American lecture series. Publication no 86 A monograph in American lectures in surgery edited by Michael E DeBakey and R. Glen Spurling) $2.50 1379

Contents (abridged) Clinical material used in study Essential thrombocytopenic purpura. The hemolytic anemias Hereditary spherocytic anemia. Idiopathic acquired hemolytic anemia. Banti's syndrome. Cruveilhier-Baumgarten disease. Splenic neutropenia and panhematopenia. Hypoplastic anemia. Hypersplenism with congestive splenomegaly and atypical reticuloendothelial hyperplasia. Felty's syndrome. Disseminated lupus erythematosus with splenomegaly and leukopenia. Gaucher's disease. Cysts of the spleen. Splenomegaly of miscellaneous or unknown etiology Infectious mononucleosis with spontaneous splenic rupture. Technique of splenectomy Anesthesia. Accessory spleens. Pathologic features of the spleen. Summary Bibliography

Note A study based on 133 splenectomies performed by the authors during the period 1934–1949 The cases are classified under the headings given above and the experience in each group is summarized. In addition, the authors present the current concepts of normal physiology of the spleen, the rationale for splenectomy the various disorders of the spleen, etc. There are 16 illustrations and selected bibliography The authors are members of the Departments of Surgery and Medicine of the Medical School of the University of Michigan.

EVANS JOSEPH PATRICK

Acute head injury Springfield, Illinois Charles C Thomas, 1950 116 p illus. 22 cm. (American lecture series. Publication no 60 A monograph in American lectures in surgery edited by Michael E. DeBakey and R. Glen Spurling. Neurosurgical division editor Barnes Woodhall) $2 50 1380

Contents. Introduction. Scalp injuries. Skull fractures. Meningeal hemorrhage. Cerebral trauma. Bibliography References.

Note: A practical account of the effects and the treatment of head injuries. Gun shot wounds are not included, and the other classes of injuries are considered in four groups as indicated by the chapter titles. Under each heading, surgical treatments are the main topic but other matters such as diagnosis, anesthesia, and treatment of the scalp are discussed also. Several case studies are included in each group. A good bibliography and 24 clear figures of special cases are included.

GURDJIAN ELISHA STEPHENS, AND JOHN E WEBSTER

Operative neurosurgery with emphasis on procedures in trauma. Baltimore The Williams & Wilkins Company 1952 422 p. illus. 26 cm. $10 00 1381

Contents: Head Craniotomy—historical. Preliminary considerations. Supratentorial and vascular lesions. Posterior fossa and cranial nerves. Head injury Spine: Historical notes on surgery of the spinal cord. Certain points about the vertebral column and vertebral articulations The spinal cord. Neurosurgical procedures. Autonomic nervous system Historical considerations. Anatomy and physiology Surgical management. Neurosurgical procedures. Peripheral nervous system: Historical considerations Anatomy, physiology and pathology Principles in surgical technique. Diagnosis of peripheral nerve lesions. Rehabilitation. Neurosurgical procedures. Index.

Note Throughout most of this volume there is plate of illustrations on right hand page while on the facing left-hand page there is description and discussion of the techniques illustrated. Altogether there are 129 plates and most of these contain several drawings. Only techniques which have won general acceptance are represented. Extensive bibliographies of papers and other literature pertaining not only to the techniques illustrated but to others are included. The book is suitable for use as medical college text and also as reference volume for surgeons who are not specialists in neurosurgery but occasionally perform neurological operations, especially in the repair of wounds.

HORRAX GILBERT

Neurosurgery an historical sketch. Springfield Illinois Charles C Thomas 1952 135 p illus. 22 cm. (American lecture series. Publication no 117 A monograph in American lectures in surgery edited by Michael E. De Bakey and R. Glen Spurling. Neurosurgical Division Barnes Woodhall, editor) $3 75 1382

Contents: Introduction. Prehistoric and Egyptian eras. The Greek or Hippocratic and Galenic period (400 B.C. to circa 300 A.D.) The medieval period (circa 300 to 1500 A.D.) The Renaissance (circa 1500 to 1700 A.D.) The pre-Listerian period (circa 1700 to 1846) The pre-Horsley period (1846 to 1890 A.D.) The era of neurosurgery as surgical specialty (circa 1890 A.D. and to the present day) Conclusion. Bibliography

Note: This outline history can fairly be designated as neurosurgeon's history of neurosurgery The space is almost evenly divided between accounts of techniques and outstanding developments up to 1890 and the highlights of developments since that year. There are forty figures divided among portraits of great neurosurgeons, pictures of surgical instruments, views of operating theaters, and diagrams of operative techniques. There are 181 references in the bibliography

JOHNSON JULIAN AND CHARLES K. KIRBY

Surgery of the chest a handbook of operative surgery Illustrated by Edna Hill. Chicago The Year Book Publishers, Inc. 1952 387 p. illus. 22 cm. $9.00 1383

Contents: Introductory considerations. The management of chest injuries. Operations for empyema and lung abscess. Including Surgical anatomy of the lungs. Pneumonectomy Lobectomy Segmental

resection. Special problems arising during major thoracic operations. Surgery of the esophagus. Surgery of the heart and great vessels. The surgery of pulmonary tuberculosis. Miscellaneous operations. Index.

Note. A compact atlas which contains 41 plates [illegible] clear drawings of operative techniques including some used in diagnosis. The authors have selected techniques of clearly established value and they have described them for general surgeons who are beginners in thoracic surgery or who only occasionally perform operations in this region. The drawings are supplemented by both general and specific discussion. Each plate is accompanied by at least one page of discussion. The authors ar[e] members of the faculty of the School of Medicine of the University of Pennsylvania.

KIRBY, DANIEL B

Surgery of cataract. 339 illustrations, including 52 subjects on 21 color plates. Philadelphia J B Lippincott Company 1950 695 p. illus. (part col d) 26 cm. $30 00 1384

Contents (abridged) Part one, The development of cataract surgery: *The early history of cataract surgery.* The development of cataract extraction. The thesis and the organization of the book. Basic sciences applied to cataract surgery by L. B. Rone. Preoperative examination of the eye and prognosis for restoration of vision. Standards for judging the progress or the arrest of cataract. The nonsurgical treatment of cataract. Classification of cataract. Part two, Preparation for cataract surgery. Part three, Present-day cataract surgery: The removal of soft cataract. Extracapsular extraction of cataract. Intracapsular extraction of cataract. The removal of luxated and subluxated lenses. The prevention of complications during and after cataract extraction—also their handling should they arise. Traumatic cataract. After-cataract. Part four The correction of aphakia. The use of glasses in aphakia. Part five, Results obtained in cataract surgery. Index.

Note. A comprehensive treatment in which the historical background, the pertinent anatomy and embryology and many other related topics are covered in addition to the surgical techniques. Operative methods a[re] not restricted to those [wh]ich the author uses but include also procedures of other ophthalmologic surgeons. The book is intended for use as [a] text in graduate courses offered to medical college graduates and as [a] reference book for graduate surgeons who are beginning to operate in this specialty. The author is Professor of Ophthalmology in the College of Medicine of New York University

LYONS WILLIAM REGINALD AND BARNES WOODHALL

Atlas of peripheral nerve injuries. Philadelphia W B Saunders Company 1949 339 p. illus. (part col d) 34 cm. $16 00 1385

Content[s] Introduction. The peripheral nerve. Completely severed nerves. Traumatic nerve lesions in continuity. Nerve sutures. Nerve grafts. Addendum. Bibliography. Index.

Note. This work is based on [a] very extensive experience with peripheral nerve injuries among U. S. A. soldiers in World War II. The greater part of the space in the book is occupied by the 1[illegible] plates, most of which contain reproductions of several photographs or macrophotographs. Each of the illustrations is described and discussed in short legends on the facing page. The book is of primary interest to neurosurgeons, both those with civilian and those with military practices

METTLER, FREDERICK ALBERT editor

Psychosurgical problems. By the Columbia Greystone Associates, Second Group. New York The Blakiston Company 1952 357 p. 24 cm. $7 00 1386

Contents: Nature of the project, by F A Mettler and M. A Carry. Hospital management and social evaluation, by M. A. Carry and others. Surgical procedures, by J L. Pool and others. General medical condition, including hematological and physiologic findings, by G. H. Glaser and others. Neurology by W Cavenes and H. H. Merritt. Olfaction, by R. M [illegible] Vestibular function and [illegible], by N [illegible] Klose. The design of the psychologic investigation, by J. Zubin. Psychometric studies, by D C Shaer and M. Shuttleworth. Complex mental functions—memory learning, mental set, and perceptual tasks, by R. D North and others. Attitude evaluation, by M. Garrison, Jr and T D Olin. Time-sampling study of behavior, by K. F Kinder and D Williamson. Psychophysiology by H. E. King and J Clausen. Discussion of psychologic investigations, by C. Landis and J Zubin. Report of the psychiatric discipline, by P H. Hoch and others. Conclusions, by F A. Mettler and C. Landis. The original Columbia-Greystone patients two years after operation, by J J. Weber. Bibliography Index.

Note. A companion work to Mettler Fred A., editor, *Problems of the human brain, selective partial ablation of the frontal cortex,* described above. It is [a] detailed study of the effects of several psychosurgical procedures other than lobotomy and topectomy "Eighteen patients were operated on as follows. In 12 cases bilateral ligation of the superior cerebral veins was carried out [illegible] In 2 cases bilateral surgical thalamotomy was performed [illegible] In 2 cases thermocoagulation of the cerebral cortex in the rostral portion of each frontal lobe was done, while in the 2 remaining cases topectomy procedure was carried out." Together the two books present the results of [a] pioneering application of the techniques of operations research analysis to the study of [a] complex problem in therapy

OVERHOLT, RICHARD HOLLIS, AND LAZARO LANGER

The technique of pulmonary resection. Revised second printing. Springfield, Illinois Charles C Thomas, 1951 216 p. illus. (part col d) 24 cm. $9.50. 1387

Contents: Pre-operative preparation. Operative preliminaries. General considerations pertaining to all resections. Intrapulmonary and hilar surgical anatomy. Specific resections. Post-resection management and complications. Post-resection thoracoplasty. Afterword. Bibliography. Index.

Note. A well-rounded treatise for students and general surgeons preparing for thoracic surgery. The techniques described are those actually used by the [au]thors, including their new technique for segmental excision which was first presented in May 1946 before the American Association for Thoracic Surgery. Pathology, diagnosis and other topics not directly related to surgery are not covered. Instead, the book is limited to those topics of direct concern to the surgeon. The style is direct and explicit and the illustrations are of excellent quality. In the "afterword," developments between January 1947 and January 1951 are reviewed concisely

PRATT GERALD HILLARY

Surgical management of vascular diseases. 181 illustrations. Philadelphia Lea & Febiger 1949 496 p. illus. 24 cm. o p. 1388

Contents (abridged) Section I, Nomenclature and case history. Section II, The arterial system. Occlusive arterial diseases. Amputation. Vasospastic diseases or syndromes. Arterial collateral circulation. Injuries to arteries. Arteriovenous fistula or aneurysm. Arterial aneurysms. Arterial thrombosis. Arterial embolism. Surgical management of acute arterial occlusion. Mesenteric thrombosis. Neurovascular lesions of the upper extremity. Interruption of the sympathetic system. Hypertension. Arteritis. Section III, The venous system. Varicose veins. Arterial varices. Hemangiomata in the genital tract. Pathologic venous clotting. Anticoagulant therapy. Section IV, The lymphatic system. Section [illegible] Surgery of the heart. Section VI, Special technics: Angiography and cardiovascular catheterization. Skin grafting. Surgical treatment of vascular ulcers. Surgical treatment of esophageal varices. Abnormal artery and [illegible] [illegible] Vascular diseases and trauma. Index.

Note. In this work the emphasis is on the surgical therapies developed in recent years and on the cardiovascular diseases which are common enough to be encountered by general surgeons and general medical practitioners. The style is concise, but both diseases and therapies are described explicitly. Extensive but not comprehensive bibliographies are included in the chapters. The author [is a] member of the faculty of the Medical School of New York University and Chief of the Vascular Clinic of Saint Vincent's Hospital, City of New York.

ROEN, PHILIP R.

Atlas of genito-urinary surgery. Introduction by Clarence G Bandler. Illustrations by Charles Stern. New York Appleton-Century-Crofts Inc., 1951 325 p. illus. 25 cm. $10.00. 1389

Contents (abridged) General principles of urologic surgery. Operations on the kidney. Operations on the adrenal gland. Operations on the ureter. Operations on the bladder. Operations on the prostate. Operations on the scrotum and testicle. Operations on the urethra. Operations on the penis. Index.

Note This book is organized so that the right-hand pages contain reproductions of drawings of standard surgical techniques, while the facing left-hand pages contain concise discussions of the drawings and the techniques illustrated by them. In most instances the drawings on one page illustrate all of the surgical steps in particular operation, but in other instances the author has used several successive pages. Drawings are original and are reproduced in adequately large scale. The book is designed for medical college students and for general surgeons who are not specialists in urological surgery but who must nevertheless occasionally perform urological operations. The author is member of the New York Post-Graduate Medical School and the book is based on his long experience in practicing and teaching urological surgery

SELETZ, EMIL

Surgery of peripheral nerves. Art editor Tom Jones. Springfield Illinois Charles C Thomas, 1951 185 p. illus. 29 cm. $11.50 1390

Contents: Principles and technique of nerve surgery The hand. The median nerve. Incisions in the hand and wrist for exposure of median and ulnar nerves. The ulnar nerve. The median and ulnar nerve combined. The radial nerve. The axillary nerve. The musculocutaneous nerve. The scapular nerves. The anterior thoracic (pectoral) nerves. The long thoracic nerve. The brachial plexus. The femoral nerve. The sciatic nerve. The foot. The peroneal nerve. The tibial nerve. Injuries to the cranial nerves. Index.

Note: A detailed, fully illustrated presentation of surgical techniques that were largely developed by the author while in the surgical service of the United States Surgeon General's Office. According to statement in the introduction, he personally observed and followed the progress of 2017 peripheral nerv injuries while he was in service at Wakeman Hospital Center. More than half of the space is devoted to illustrations—reproductions of both drawings and photographs. A considerable number of the illustrations are paired in order to show examples of correct and incorrect incisions. The author is now member of the faculty of the School of Medicine of the University of Southern California.

SWEET RICHARD HARWOOD

Thoracic surgery Illustrations by Jorge Rodriguez Arroyo Philadelphia W B Saunders Company 1950 345 p. illus. (part col d) 25 cm. $10.00. 1391

Contents: Surgical anatomy of the thorax. General technical considerations. Thoracic incisions. Operations on the thoracic wall. Operations concerning the pleural cavity Operations on the lung. Operations within the mediastinum. Operations on the esophagus. Abdominal operations performed through thoracic incisions. Surgery of the diaphragm. Index.

Note: A manual of established techniques. The book is addressed primarily to general surgeons; nevertheless, each operation included is described in full detail and the verbal descriptions are supplemented by clear drawings, which are based mainly on sketches made of actual operations In addition to the full discussions, there is included step-by-step outline of procedure for operations on the lungs. The author is member of the faculty of the Medical School of Harvard University

TARLOV ISADORE MAX

Plasma clot suture of peripheral nerves and nerve roots—rationale and technique. Springfield, Illinois Charles C Thomas, 1950 116 p. illus. 24 cm. $6.25 1392

Contents: The need for an improved nerve suture technique. The basis for selecting the most suitable type of plasma for nerve suture. Preparation of nerve stumps for suture. Necessity for using mold to suture nerves with clot. Tantalum wire tension sutures combined with plasma clot. Suture of the nerve stumps by plasma clot. Suture of nerve grafts. Suture of the cauda equina nerve roots. The place of plasma clot suture in repertory of the neurosurgeon. Bibliography Index.

Note Plasma clot suture techniques are explicitly described in this work. The illustrations include pictures of the latex mold and other instruments. The bibliography includes 94 references. The author, pioneer worker in the development of plasma clot suture, is Associate Professor of Neurosurgery in the New York Medical College.

VER BRUGGHEN, ADRIEN

Neurosurgery in general practice. Springfield Illinois Charles C Thomas, 1952 665 p. illus. 26 cm. $14.00 1393

Contents: Head injuries. Injury to the cranial bones. Extradural hemorrhage. Chronic subdural hematoma. Head injuries in children. Spinal cord injuries. Peripheral nerve injuries. Herniated nucleus pulposus. Scalenus anticus syndrome and cervical rib. Trigeminal neuralgia. Intractable pain. Diseases of the spinal cord. Spinal cord tumors. Increased intracranial pressure. Cerebral tumors. Cerebellar tumors in children. Pituitary tumors. Suppurative diseases of the central nervous system. Cerebral vascular diseases. Coma. The sympathetic nervous system. Congenital anomalies. Miscellaneous entities. Spinal puncture. X-ray diagnosis. Neurological examination. Bibliography Index.

Note: A practical book on the injuries and diseases of the nervous system which are likely to be encountered in general practice. In addition, few rare conditions, for instance massive extrusions of lumbar intervertebral discs, are included because of the importance of early diagnosis. The book is frankly for the general practitioner and is not intended either for the medical college student or for neurosurgeons. It is written in clear style and includes considerable number of illustrated case histories. There is particular emphasis on the symptoms, signs, and diagnostic features of the various common neurological disorders. The author is member of the faculty of the College of Medicine of the University of Illinois.

WALKER, ARTHUR EARL, editor

A history of neurological surgery Editorial committee Robert E. Green, Herbert C. Johnson, and W Eugene Stern. Baltimore The Williams & Wilkins Company 1951. 583 p. illus. 26 cm. $12 00. 1394

Contents (abridged) Prologue, by D. C. O'Connor and A. E. Walker. Diagnostic procedures, by A. E. Walker. Techniques of cranial surgery by R. E. Green and W E. Stern. Techniques of intracranial surgery by R. E. Green and W E. Stern. Surgery of the posterior fossa, by R. E. Green. Surgery of the third ventricle, by A. F Thomson. Surgery of the hypophysis, by H. C. Johnson. Surgery of the craniocerebral infections, by W E. Stern. Surgery of craniocerebral trauma, by A. E. Walker. Surgery of cerebral vascular anomalies, by H. C. Johnson. Psychosurgery by R. G. Fisher. Surgery of epilepsy and motor disorders, by C. Marshall. Surgery for pain, by J. V Crawford and A. E. Walker. Surgery of the congenital anomalies, by R. G. Fisher. Surgery of the spinal cord and vertebral column, by J. W Markham Surgery of the peripheral nerves, by K. M. Browne. Surgery of the autonomic nervous system, by W J Atkinson. Bibliography Index.

Note: An informal but rather comprehensive account of major surgical specialty The authors are members of the Division of Neurological Surgery of the Johns Hopkins University and the material was first presented at seminars at that university The various chapters are based mainly on the published liter ure and number of the authors have devoted good deal of heir space to the antique and curious. However, the historical accuracy of the work was assured by submitting the manuscript to authorities on medical history before publication. Included but not indicated in the contents above are short biographical sketches of fourteen persons who made major contributions to the development of neurological surgery The bibliography of nearly 2 400 references is valuable feature. There are 152 figures, most of which illustrate surgical techniques of historical interest.

WELCH CLAUDE EMERSON

Surgery of the stomach & duodenum a handbook of operative surgery Illustrated by Muriel McLatchie Miller Chicago The Year Book Publishers Inc. 1951 349 p. illus. 22 cm. $8.50. 1395

Contents (abridged) Anatomy of stomach and duodenum. Pre- and postoperative treatment. Anesthesia. Incisions and closure. Congenital abnormalities. Perforating wounds. Gastrotomy and duodenotomy Gastrostomy Diverticula of the stomach and duodenum. Hiatus hernia. Pyloroplasty and cardioplasty Side-to-side gastroenterostomy. Duodenal and gastric ulcer. Gastric cancer. Tumors of the duodenum. Complications of gastric resection. Anastomosis with special clamps. Duodenal fistula. Appendixes: Normal laboratory values—postoperative data. Bibliography Index.

Note: Essentially an atlas, this book consists chiefly of 79 full-page plates, most of which contain reproductions of several drawings. The drawings are accompanied on facing pages by short specific descriptions and discussions. They have been made from original sketches based chiefly on operations at Massachusetts General Hospital. The work is potentially of interest to surgeons who are beginning to work in this specialty and to general surgeons who do not specialize in it but who do occasionally perform a stomach or duodenum operation. *The author is a member of the faculty of* Harvard Medical School.

WIENER, MEYER, AND HAROLD G SCHEIE

Surgery of the eye. Third revised edition. New York Grune & Stratton 1952 449 p illus. 26 cm. $15 00 1396

Contents: Basic technics in ophthalmic surgery Anesthesia. Preoperative and postoperative care. Cataract surgery Glaucoma surgery Retinal detachment. Intraocular foreign bodies. Operations on the cornea. Removal of eye. Operations on the conjunctiva. Operations on the lids and socket. Ptosis. Operations on the muscles of the eye. Operations on the tear apparatus. Index.

Note: A medical college textbook and reference manual for graduate surgeons. The techniques described have been critically selected by the authors on the basis of their experience and judgment. Although no attempt was made to present all known techniques, those which are covered are described explicitly and in full detail. The descriptions are supplemented by nearly 450 drawings of high quality The second edition was published in 1949 For the third edition many changes were made in both the text and illustrations. Several chapters were completely rewritten and sections describing new operative procedures have been added to others. Many new illustrations were added. There is no bibliography

ORTHOPEDICS

BANCROFT FREDERIC WOLCOTT, editor

Surgical treatment of the motor-skeletal system. Supervising editor Frederic W Bancroft associate editor Henry C. Marble. Second edition with 1049 illustrations and 3 color plates. Philadelphia J B Lippincott Company 1951 2 v illus. (part col d) 26 cm. $25.00 1397

Contents Part one Deformities: Congenital anomalies of upper extremity and shoulder girdle, by F R. Ober Congenital deformities of the spine, by J. A. Freiberg. Congenital deformities of lower extremities, by J H. Kite. Congenital dislocation of hip, by A. H. Brewster. Acquired and static deformities of lower extremities, by R. D W Hauser Surgical treatment of scoliosis, by W. H. von Lackum. Paralytic disorders. Anterior poliomyelitis, by M. Cleveland. Treatment of paralytic disorders exclusive of poliomyelitis, by W M. Phelps. Affections of back, muscles, fasciae, tendons, bursae and ganglia. Low-back pain, by J. A. Freiberg. Affections of muscles, fasciae, and tendons (except tumors and trauma) by C. R. Murray Affections of bursae and ganglia, by G. A. Caldwell. New growths: Treatment of bone tumors, by B. L. Coley Treatment of tumors of joints, by B. L. Coley and J C. Pierson. Tumors of muscle, fasciae, and tendons, by C. R. Murray Diseases of bones and joints: Tuberculosis of bones and joints, by F D Dickson. Joint infection and arthritis (except tuberculosis) by J. A. Key Hematogenous osteomyelitis, by F Beekman. Miscellaneous bone diseases and infection, by C. R. Murray Nontraumatic affections of epiphyses, by R. K. Ghormley Amputations. Amputations, disarticulations, and prostheses, by F C. Coleman. Amputations in diabetes and vascular disease, by L. S. McKittrick and T C. Pratt. Kineplastic amputations, by H. H. Kessler Part two Bone repair The physiology of bone repair by M. R. Urist. Fractures and dislocations in general: General discussion of fractures, dislocations, and other trauma, by C. R. Murray Compound fractures, by W Darrach and B. B. Stinson. Fractures and dislocations of face: Fractures of facial bones, by G. R. Brighton. Fractures of jaws, by F X. McCaffery Fractures and dislocations of trunk Injuries to the spine, by A. G. Davis and M. J Bellinger Treatment of patients paralyzed after cord injury, by H. S. Talbot. Treatment of fractures of pelvis, sacrum, and coccyx, by F B. Davis. Fractures and dislocations of upper extremities: Injury to shoulder girdle, by H. C. Marble. Fractures of humerus, by J. A. Caldwell. Fractures and dislocations involving elbow joint, by F M Smith. Treatment of fractures of bones of forearm, by F B Magnuson. Fractures and dislocations of carpus, by D. W G. Murray Fractures and dislocations of metacarpals and phalanges, by J. F North. Fractures and dislocations of lower extremities: Hip fractures, by L. Thornton. Fractures of shaft of femur, by R. R. Lepiak and W R. Lee. Fractures and dislocations involving knee joint, by R. A. Griswold and C. F Ward. Internal derangements of knee joint, by F K. Stinchfield and W U. Cuthbert. Fractures of shafts of tibia and fibula, by R. D. Carothers. Fractures of ankle and foot, by O. J. Hermann. Sprains, sprain-fractures, muscle and tendon injuries: Treatment of sprains, including marginal joint fractures, by P H. Harmon. Contusions, strains, sprains and avulsions of muscles, tendons and ligaments, by T A. Quigley Birth injuries of motor-skeletal system: Skeletal birth injuries, by K. D. Truesdell. Bibliographic index. Subject index.

Note A detailed description of currently useful surgical techniques. Except in a few of the chapters, there is little discussion of etiology or diagnosis or of other methods of therapy; instead the space is devoted to surgery The text is explicit and detailed and liberal use has been made of illustrations. The 1049 illustrations mentioned in the title refer to figures. Many of the figures contain several illustrations. The first edition was published in 1941. In preparing this edition most of the chapters were revised to some extent and at least one was completely rewritten.

BURMAN, MICHEL, AND SAMUEL E. SINBERG

Injury of the xiphoid. New York Columbia University Press 1952 92 p. illus. 23 cm. $3 50. 1398

Contents: Apparent and real xiphoiditis. The epigastric syndrome and the sometimes malformed but unbroken xiphoid. The referred pain of secondary xiphoidalgia. Primary and secondary disease of the xiphoid. On direct injury to the xiphoid. On the rigid xiphoid and its fracture. Analytic summary of symptoms and signs in the various groups of disability Bibliography Index.

Note A monograph based on the literature and on "at least 75 to 100" cases of xiphoid injury and disease encountered by the authors in their own practice. Numerous cases are concisely described. The illustrations include reproductions of 15 roentgenograms.

COLONNA, PAUL C.

Regional orthopedic surgery Philadelphia. W B Saunders Company 1950. 706 p. illus. 25 cm. $11 50. 1399

Contents: Physiology of the bone and joints. Orthopedic examination—muscle function testing charts. General pathology of bones and joints. The spine and thorax. The shoulder. The arm. The elbow. The forearm. The wrist and hand. The hip and pelvis and. The thigh. The knee. The leg. The ankle and foot. Neuromuscular disabilities. Tumors of bone. Principles of apparatus. Physical medicine as applied to orthopedic surgery Index.

Note A textbook designed for use by upperclass undergraduate students and graduate students in medical colleges. Although organized by region of the body and with the emphasis on common clinical conditions, the book is in effect a comprehensive survey that includes some information on even the uncommon diseases such as osteomalacia of the long bones. Diagnosis by physical techniques and techniques of treatment are emphasized. There are 411 illustrations and most of the chapters are supplemented by bibliographies of substantial length. The author is Professor of Orthopedic Surgery in the Medical School of the University of Pennsylvania.

DANIEL EARLE HORACE

Amputation prosthetic service. Foreword by Howard A. Rusk. Baltimore The Williams & Wilkins Company 1950. 327 p. illus. 24 cm. $7.00. 1400

Contents (abridged) Glossary of prosthetic terms. Chapter: Amputation procedures. Psychological treatment of the amputee. Care of stump. Limb selection and construction. Leg specifications. Suction socket. Artificial limbs for children. Limb measurements. Prosthetic service. Amputee clinics. Arm selection. Plastic cosmetic gloves and hands. Employment of the amputee. Special clothing for arm and leg amputees. Limb shop data. Government research and development of artificial limbs. List of limb and brace makers. Appendix. Conclusion. Index.

Note A practical manual designed for use by all who are concerned with amputation cases from surgeons to artificial limb-makers. The complete care of the patient including adequate training in the use of artificial limbs is stressed. The book is also outstanding for the wide range of information on details of artificial limbs, for its stress on the mechanisms of artificial hands. The buyers' guide and directory of limb and brace makers included at the end of the book

but only U. S. A. firms. The author is Director of Prosthetic Service in the Institute of Physical Medicine and Rehabilitation of New York University-Bellevue Medical Center.

HART VERNON L.

Congenital dysplasia of the hip joint and sequelae (in the newborn and early postnatal life) Springfield, Illinois Charles C Thomas, 1952 187 p illus. 22 cm. (American lecture series publication number 107 A monograph in American lectures in surgery, division of orthopedic surgery *editor* Robert P Kelly) $5.50. 1401

Contents: Introduction. The background. Definition. Etiology. Pathogenesis. Clinical findings. The "sign of the jerk." Rotational attitude of the extremities. Pathological dislocation. Roentgen features. Differential diagnosis. Treatment. Summary. References.

Note: The fact that this work was originally prepared for delivery as lectures probably explains its brevity. In effect it is thorough discussion of not only the historical aspects of diagnostic and corrective techniques, but also it contains considerable discussion of the relations between congenital dysplasia of the hip joint and hip disorders in later life. There are 83 figures and bibliography of 141 references. It is addressed to pediatricians, roentgenologists, and general practitioners as well as to orthopedic surgeons.

HASS JULIUS

Congenital dislocation of the hip Springfield, Illinois Charles C Thomas 1951. 405 p. illus. 25 cm. $13 00 1402

Contents: History. Frequency and occurrence. Classification and nomenclature. Pathology. Etiology. Symptoms. Course. Prognosis. Diagnosis. Prophylaxis. Closed reduction. Open reduction. Reconstruction (shelf) operation. Palliative procedures. Summary of treatment. Treatment of the atypical congenital dislocations. Conclusion. Bibliography. Author index. Subject index.

Note: All aspects of congenital dislocation of the hip that are of interest in orthopedic surgery are covered in this substantial monograph. However, the history and other background topics are treated briefly whereas such aspects as pathology are treated at length. The chapter on closed reduction, for example, runs to 87 pages and contains 18 illustrations. There are 134 illustrations in the whole and 70-page bibliography. The author, who now practices in New York City, was associated with Dr. Adolph Lorenz in Vienna for many years.

HOWORTH MARION BECKETT

A textbook of orthopedics with a section on neurology in orthopedics By M. Beckett Howorth, in association with Fritz J Cramer A. Wilbur Duryee, Donovan J McCune, J William Littler and Walter A. Thompson. Philadelphia W B Saunders Company 1952 1110 p. illus. 26 cm. $16.00 1403

Contents (abridged) Section I. Introduction and basic principles of orthopedic practice. *History of orthopedics. Anatomy and physiology of the musculoskeletal system.* Examination and diagnosis. Treatment. Section II, Regional orthopedics. The spine. Shoulder and shoulder girdle. The elbow. The hand and wrist. The hip. The knee. Foot and shoes. Section III, Orthopedic disorders. Congenital deformities. Orthopedic infections. Orthopedic conditions due to trauma. Arthritis. Vascular diseases. Metabolic and endocrine diseases. Tumors of the spine and extremities. Orthopedic diseases of unknown etiology. Section IV. Neurology in relation to orthopedic practice: History, physical examination and diagnosis. Clinical syndromes of neuromuscular and neural disorders. Lesions of peripheral nerves. Peripheral nerve syndromes. Congenital maldevelopment of the neurons and skeleton. Infections. Diseases due to trauma. Tumors affecting the motor and coordinative functions. Diseases of undetermined origin. Index.

Note: Although textbook and introductory to the subject, this work combines broad coverage with wide range of information about specific disorders and treatments. The importance of understanding the basic anatomy is stressed. Most of the space has been given necessarily to the discussion of diseases. There are 443 figures, and short lists of references are attached to most of the chapters. The index is exceptionally full. The author is Professor of Orthopedic Surgery in New York University Post-Graduate Medical School.

KENDALL, HENRY OTIS, AND FLORENCE P KENDALL

Muscles testing and function. Baltimore The Williams & Wilkins Company 1949 278 p. illus. 29 cm. $7.50 1404

Contents: Fundamental principles in manual muscle testing. Nerve and muscle charts for recording muscle examinations. Upper extremity and scapular muscles. Lower extremity muscles. Trunk muscles. Facial, neck, and throat muscles. Appendix—muscle origins and insertions. Index.

Note. Modern techniques for testing the response and strength of groups of muscles and major individual muscles are explicitly described in this work. The word descriptions are supplemented by 142 figures, the majority of which are reproductions of photographs. The book is based on an extensive experience in the Physical Therapy Department of the Children's Hospital School in Baltimore. It is organized so that it can be used both as textbook in classes and as reference manual for orthopedic surgeons, physical therapists, etc.

KLEINBERG, SAMUEL

Scoliosis pathology etiology and treatment. Baltimore The Williams & Wilkins Company 1951 286 p. illus. 24 cm. $7.50 1405

Contents (abridged) Part I, Anatomy pathology, etiology: Anatomy embryology physiology Classification and pathology Etiology History symptomatology examination, records. Part II, Treatment. Preventive treatment. Treatment of (functional and transitional) scoliosis. Treatment of structural scoliosis. Gymnastic exercises. Treatment by forcible correction. Surgery in structural scoliosis. References. Index.

Note. Although considerable amount of background is included, this book is essentially practical manual of the modern treatment of scoliosis. All currently used methods of treatment from exercises to surgery are described in detail. Preventive therapy also is discussed. There are 161 figures and bibliography of 107 references. The work is of interest not only to orthopedists but also to general practitioners of medicine. It supersedes another work on the same subject written by the author and published quarter of century earlier.

LEWIN PHILIP

The knee and related structures injuries—deformities—diseases—disabilities. Illustrated with 333 figures and 2 colored plates. Philadelphia Lea & Febiger 1952 illus. (part col'd) 914 p. 24 cm. $16.00 1406

Contents (abridged) The anatomy of the knee. Physiology and biomechanics of the knee joint. Etiologic factors in knee disturbances. Physical examination of the knee. Roentgen ray findings in disorders of the knee. The diagnosis of disorders of the knee. Prognosis in disorders of the knee. Neurosis in knee disorders. Nonoperative treatment of knee disturbances. Operative treatment of knee disorders. Internal derangements of the knee. Loose bodies in the knee joint—bursae. The ligaments of the knee. External derangements of the knee. The flexor apparatus of the knee and its disorders. Deformities of the knee. Industrial knee injuries. Fractures in and around the knee joint. Dislocations of the knee joint. Knee disorders in the military service. Tuberculosis of the knee. Syphilis of the knee. Osteomyelitis involving the knee region. The antibiotics in infections of the knee. Arthritis of the knee. Operations for the residual effects of anterior poliomyelitis. Spastic paralysis involving the knee. Circulatory and vascular disturbances of the knee. Metabolic and endocrine disorders that affect the knee. Neoplastic tumors of the knee. Equalization of length of lower extremities. Appendix. Bibliography. Index.

Note: A comprehensive treatise in which the author has endeavored to incorporate all of the currently valid knowledge pertinent to disorders of the knee and to medical and surgical methods of treating them. Altogether there are 44 chapters and long appendix. The latter includes discussions of such aspects of the subject as the embryology of the knee and of lesser subtopics such as leg pains in children. The work is based both on the author's thirty-five years of editing abstracts of the world's literature on orthopedic surgery

and his long experience as teacher and orthopedic surgeon. The bibliography is international in scope.

LUCK JAMES VERNON

Bone and joint diseases pathology correlated with roentgenological and clinical features Springfield, Illinois Charles C Thomas 1950 614 p illus. 26 cm. $18 50 1407

Contents The normal skeletal system. Acute infections of bones and joints. Chronic osteomyelitis. Aseptic osseous necrosis. Fractures. Chronic arthritis. Neuro-arthropathies. Skeletal manifestations of metabolic disorders. Osteitis fibrosa. Paget's disease. Melorheostosis. Hypertrophic osteoarthropathy. Skeletal manifestations of endocrine disorders. Congenital defective skeletal ossification. Extraskeletal calcification and ossification. Osseous lesions in the reticulo-endotheliosis. Bone changes produced by lead, bismuth, phosphorus, radium, and fluorine. Benign tumors of bones. Malignant primary tumors of bones. Secondary involvement of the bones by malignant disease. Tumors of joints. Index.

Note. Correlation of pathology with clinical manifestations and with the interpretation of roentgenograms is the main theme of this comprehensive work. The subheadings in a typical chapter—that on Paget disease—will serve to illustrate the approach historical, skeletal distribution, laboratory findings, etiology complications, roentgenologic correlations, clinical correlation, references. Although organized as a textbook the book is also well adapted because of its full coverage and detailed indexes to reference use in personal and institutional libraries. There are more than 450 figures, including several in color and extensive lists of references to the literature.

ORR, HIRAM WINNETT

On the contributions of Hugh Owen Thomas of Liverpool, Sir Robert Jones of Liverpool and London John Ridlon M.D of New York and Chicago, to modern orthopedic surgery Springfield Illinois Charles C Thomas 1949 253 p illus. 22 cm. $4.50 1408

Contents Biographies: Hugh Owen Thomas. Sir Robert Jones. John Ridlon. A review of past and present methods in surgical practice. Rest as the fundamental factor in the relief of pain and the arrest and cure of inflammation. Methods of securing rest in fractures and in articular disease. Diagnosis and treatment of hip disease. Disease of the knee joint, foot, and ankle. The prevention and cure of disability and deformity in fractures. Comments upon methods still in use in orthopedic practice, from the writings of H. O. Thomas, Sir Robert Jones, and Dr John Ridlon. Supplement: Ridlon and his share in making orthopedic surgery by Arthur Steindler. *Annotated bibliography*

Note The scope of this contribution to the history of orthopedic surgery is indicated by the title and table of contents. The biographical sketches at the beginning of the book are short, but in the chapters which follow there is much additional information on the influence of these men and many quotations from their writings. There are twenty figures, most of which show early orthopedic appliances.

SHANDS ALFRED RIVES JR.

Handbook of orthopaedic surgery In collaboration with Richard Beverly Raney Illustrated by Jack Bonacker Wilson and others. Fourth edition. St. Louis The C V Mosby Company 1952 644 p illus. 23 cm. $8 00 1409

Contents (abridged) Congenital deformities. Affections of growing bone. Affections of adult bone. Infections of bone (exclusive of tuberculosis). Infections of joints (exclusive of tuberculosis). Tuberculosis of bones and joints: the spine and pelvis—the extremities. Chronic arthritis. Neuromuscular disabilities—infantile paralysis. Neuromuscular disabilities (exclusive of infantile paralysis). Involvement of the brain and spinal cord—involvement of peripheral nerves and of muscles. Tumors. Fracture deformities. Body mechanics and physical therapy. Affections of the spine and thorax. Affections of the low back. Affections of the hip. Affections of the knee. Affections of the ankle and foot. Affections of the neck and shoulders. Affections of the elbow, wrist, hand, and fingers. Bibliography. Index.

Note: (1937) A standard work used both as a text in medical colleges and as a reference book in the office libraries of general practitioners. It is not an exhaustive treatise but all of the common conditions are covered. The third edition was published in 1948. The fourth edition was prepared after consultation with the heads of departments of orthopedics in the medical schools of the United States of America. Although no major change was made in the text, numerous small revisions were made and ten sections were added on topics not included in the third edition. More extensive changes were made in the third edition. More extensive changes were made in the illustrative matter. These are described by the author thus: "There are one hundred six new illustrations as follows: seventy-one new roentgenograms, twenty new drawings, two retouched drawings, two replacements of drawings from the first edition, and three copies of drawings from other publications; forty of the illustrations of the third edition have been deleted, most of which were drawings from roentgenograms.

STEINDLER ARTHUR

Post-graduate lectures on orthopedic diagnosis and indications. Springfield Ill. Charles C Thomas 1950–52 4 v 27 cm. Vol. I $7.50 Vol. II, $6 00 Vol. III, $8.75 Vol. IV $9 75. 1410

Contents (abridged) Volume I, Section A, Propedeutics in orthopedic diagnosis: Symmetry and asymmetry of the body. On contractures. On the interpretation of pain in orthopedic surgery. On the pathology of the gait. Section B Congenital deformities and disabilities: General observations and remarks on congenital deformities of the locomotor system. On congenital deformities due to disturbance of bone growth—the chondrodystrophies. On congenital deformities of the spine and thorax. On congenital talipes. On congenital defects and malformations of the long bones of the lower extremities. On congenital dislocation of the hip. On congenital deformities of the upper extremity. Index. Volume II: Section A, Paralytic disabilities. On poliomyelitis (pathogenesis and pathology). On anterior poliomyelitis—the clinical pathology. On anterior poliomyelitis—conservative treatment. On anterior poliomyelitis—operative treatment. On the paralytic scoliosis. On spastic paralysis. Section B, Static disabilities: On lumbosacral pain or low back pain. On idiopathic scoliosis. On the internal derangement of the knee. On static deformities of the foot and ankle. Subject index. Author index. Volume III: Section A, Tuberculosis of the skeletal system. On tuberculosis of the skeletal system. On tuberculosis of the spine. On tuberculosis of the hip joints. On tuberculosis of the knee. On tuberculosis of the foot and ankle. On tuberculosis of the upper extremity. Section B, Osteomyelitis. On the pathogenesis and pathology of osteomyelitis. On the clinical pathology of osteomyelitis. On the treatment of osteomyelitis. On osteomyelitis of the spine. On osteomyelitis of the pelvis. On the more unusual types of osteomyelitis. Subject index. Author index. Volume IV: Section A, Arthritis and diseases of muscles, bursae, tendons and fasciae. On chronic nonspecific arthritis. On the general treatment of atrophic arthritis. On the orthopedic treatment of atrophic arthritis. On hypertrophic arthritis. On spondylarthritis. On gout. On pyogenic arthritis. On syphilis of bone and joint. On the inflammatory diseases of the muscles. On Dupuytren's contracture. On diseases of tendons and bursae. On primary neuromuscular disease—muscular dystrophies and atrophies. Section B, Deficiency and degenerative diseases of the locomotor system. On osteomalacia. On senile decalcification of the bones. On degenerative bone disease. On aseptic necrosis or the osteochondritides. On neuro-arthropathies. Subject index. Author index.

Note. A collection of lectures by one of the most eminent authorities on orthopedic surgery in the United States of America. All orthopedic conditions are covered including rare conditions. A wide range of material from case histories is included. Much attention is given to pathogenesis, pathology and differential diagnosis. Therapy is covered also, but more briefly. Literature references accompany most of the lectures.

YEAR BOOK OF ORTHOPEDICS AND TRAUMATIC SURGERY

The 1951 year book of orthopedics and traumatic surgery (November 1950–November 1951) Edited by Edward L. Compere. Chicago The Year Book Publishers, Inc., 1952 380 p. illus. 20 cm. $5.50 1411

Content Introduction. Poliomyelitis. Congenital deformities. Anatomy embryology pathology and physiology of the skeletal system. Tumors. The epiphyses. Osteomyelitis and other infections. Fractures. The cysts and fibrodysplasia. Arthritis and rheumatism. The hand. The hip. Spine and pelvis. The neck, shoulder and arm. Surgical technic. Amputations. Leg and knee. The foot and ankle.

and prostheses. Instruments, appliances and bone banks. Miscellaneous. Index. Index to authors.

Note: (1230*) This annual volume is edited and organized similarly to the other books in this useful series. Selections from the world's medical literature published during the period noted in the title are abstracted at some length, some abstracts running to 500 words or more. Footnote references are given in all cases to the original publication. The abstract is sometimes supplemented by a note in which the editor himself evaluates the findings reported in the article or relates them to other work. There are 120 figures in the issue at hand.

PLASTIC SURGERY

BROWN JAMES BARRETT, AND FRANK MC DOWELL

Plastic surgery of the nose including reconstruction of war injuries and of deformities from neoplastic, traumatic, radiation, congenital, and other causes. With 379 illustrations including 48 in color St. Louis The C. V Mosby Company 1951 427 p. illus. (part col d) 26 cm. $15 00 1412

Contents: Section 1 General considerations: Introduction and historical note. Preoperative examination and evaluation of patients for plastic surgery of the nose. Preliminary preparations, anesthesia, and instruments. Section 2, Surgical reduction in the size of the nose. Hump removal and lowering of dorsal line. Narrowing the nose. Shortening the nose. Reconstruction of the lower lateral cartilages by rim incision exposure. Reconstruction of the lower lateral cartilages by the eversion technique without rim scars. Miscellaneous adjustments. Dressing, postoperative splinting and care. Section 3, Building up and straightening the nose. Bonding up the nose by osteoplastic procedures. Cartilage and bone transplants for dorsal line reconstruction and tip support. Straightening the crooked or twisted nose. Early treatment of fractures and other acute injuries. Section 4 Correction of cleft lip nasal deformities: Secondary repairs of noses associated with single cleft lips. Secondary repairs of noses associated with double cleft lips. Section 5 Repairs which include the grafting of skin. Skin grafts to the nose. Treatment of radiation lesions of the nose. Composite free grafts of skin and cartilage from the ear to the nose. Reconstruction of whole nose and of partial losses with flaps. Columellar repairs. Section 6, Various other nasal repairs. Secondary nasal operations. The nose in relation to the upper lip and chin. Benign tumors of the nose. Cancer of the nose. Repair of scars, burns, tattoos, rhinophyma, stenosis, hypertelorism, and rare congenital anomalies. Prostheses. War injuries of the nose—methods of reconstruction. Bibliographical note. Index.

Note: A book of operative procedures which the authors—who are now members of the faculty of Washington University School of Medicine—have used "and found most practical." No attempt is made to describe all operative techniques, and there is no bibliography except for an occasional footnote. However, the techniques included are described fully and the various steps are illustrated in photographs and drawings reproduced in large scale.

BROWN, JAMES BARRETT AND FRANK MC DOWELL

Skin grafting Second edition. 239 illustrations, including two plates in color Philadelphia J B Lippincott Company 1949 339 p. illus. (part col d) 26 cm. $7.50. 1413

Contents (abridged): Early general care of burns. Early local care of burns. Spontaneous healing of burns and other open wounds. Preparation of wounds for skin grafting. Application of thick split skin grafts. Application of free full-thickness grafts. Pedicle flaps. Repairs of hand, arm and axilla. Repair of body and lower extremities. Repairs of face, neck and mouth. Repairs of nose and ears. Homografts. Restoration of defects from mechanical injuries. Repair of chemical and electrical burns. Surgical repair of radiation injuries. Skin grafting in military plastic surgery. Faults of skin grafts. Bibliography. Index.

Note: (2459) The first edition of this book—published in 1943—was limited to skin grafting of burns. In this edition its scope has been enlarged to include skin grafting in the repair of lesions from other causes as well. Though not exhaustive, the book represents a manual of selected techniques, based largely on the authors' own work but including also some techniques described in the literature. Approximately half of the space is devoted to the illustrations. The text which accompanies the illustrations is written in direct and lucid style. The bibliography is extensive.

FOX SIDNEY A.

Ophthalmic plastic surgery New York Grune & Stratton, 1952 290 p. illus. 27 cm. $15.00 1414

Contents: The brow and the lids—anatomy. Fundamentals of lid surgery. Grafts. Technical details. Minor surgical procedures. The lid margins—first aid. Lid notches and colobomata. Canthal repairs. Entropion. Ectropion. Ptosis. Displacements of lid and globe. The conjunctiva. Socket reconstruction. Reconstruction of the lower lid. Upper lid reconstruction. Hair-bearing grafts. Index.

Note: A useful, well-illustrated manual addressed to general surgeons and to beginners in ophthalmic surgery. The author states, "I have attempted to include here in systematic and progressive order all the basic classical operations of our specialty. Except for a few final chapters on the more esoteric reconstructive aspects of lid surgery, all the procedures found here are those commonly used in every day practice. Generally speaking, each procedure included is described in a compact text and is illustrated in a series of drawings. Included also are valuable comments on special points in connection with the selected procedure and on alternative procedures. The author is a member of the faculty of New York University Post-Graduate Medical School.

KAZANJIAN VARAZTAD HOVHANNES, AND JOHN MARQUIS CONVERSE

The surgical treatment of facial injuries. Baltimore The Williams & Wilkins Company 1949 574 p. illus. 26 cm. $10.00 1415

Contents: The face. Healing of wounds. General principles of operative technic. Early treatment of facial injuries. Fractures of the mandible. Fractures of the maxilla. Fractures of the nose. Fractures of the zygoma. Complex fractures of the face. Some general principles of reconstructive surgery. Pedicled skin flaps. Free grafts of skin and mucosa. Free grafts of dermis, fat, fascia, cartilage and bone. Deformities of the upper portion of the face. Deformities of the eyelids and orbital region. Deformities of the nose. Deformities of the soft tissues of the lower portion of the face. Deformities of the bones of the lower portion of the face. Surgery of the oral cavity and pharynx. Temporomandibular ankylosis. Facial paralysis. Deformities of the external ear. Burns of the face. Maxillofacial prosthesis. Anesthetic management. Index.

Note: A comprehensive work based on the very extensive experience of the authors in private, institutional, and military practice. Anatomical, psychological and other basic aspects are not neglected but most of the space in the book is devoted to descriptions and illustrations of surgical cases and techniques. There are 746 figures and many of them contain several reproductions of drawings or photographs. A typical chapter is organized under the following subheadings: "Introduction—general considerations—the healing of burns—local treatment—late treatment of burn deformities—case histories. The book is of primary interest to medical students with interests in plastic surgery and to plastic surgeons and general surgeons, and of secondary interest to general practitioners of medicine, dentists, etc.

SELTZER, ALBERT PINCUS

Plastic surgery of the nose. 221 illustrations including 7 plates in color Philadelphia J B Lippincott Company 1949 305 p. illus. (part col d) 24 cm. $12.00 1416

Contents (abridged): The nose in physical anthropology. Anatomy of the nose. The embryology of the nose. The physiology of the nose. Preliminary and postoperative measures. Instruments. Grafts and their preparation. A typical rhinoplasty. Submucous resection of the septum. Saddle nose. Nasal deformities. Restoration of the subtotal and total loss of the external nose. Surgery about the nares. Cleft lip. Postoperative complications. The unsuccessful operation—its causes and prevention. Index.

Note: By limiting this book to the nose and the upper lip rather than attempting to cover the whole field of plastic surgery the author, who is a member of the faculty of the Graduate School of Medicine of the University of Pennsylvania and chief of plastic and reconstructive surgery of Community Hospital of Philadelphia, has been able not only to cover the appropriate surgical matters thoroughly but also to include a fair amount of background material. The illustrations include the expected before and after pictures of cases and also numerous step-by-step series illustrating surgical techniques. Literature references are included.

DENTISTRY

AMERICAN DENTAL ASSOCIATION

Accepted dental remedies including a list of accepted products together with other in formation compiled to promote rational thera peutics in dentistry 17th edition. Chicago American Dental Association 1952 211 p illus. 20 cm. Paper $2 00 1417

Contents. Members of the Council. Council consultants. Provisions for acceptance of products. Official agencies and official standards relating to drug products. Prescription writing. Analgesics, sedatives and hypnotics. Anesthetics. Antiseptics and germicides for topical application. Antibiotics and other anti-infectives. Agents and methods for the sterilization or disinfection of dental instruments. Astringents, styptics, hemostatics and vasoconstrictors. Central nervous system stimulants. Dentifrices. Fluorine compounds. Mechanical aids. Miscellaneous preparations. Mouth washes. Nutritional factors. Zinc oxide preparations. Formulas and tables. Symptoms and treatment of acute poisoning. Bibliographic index to products not included in A. D. R. Index to other current reports from the Bureau of Chemistry and the Council. Index to distributors. General index.

Note A standard manual of information about drugs and other remedies that have been officially accepted for use in dentistry by the American Dental Association. The points covered in the descriptions of individual medicines vary somewhat but generally speaking there are statements on properties, incompatibilities, actions, and uses. A structural diagram of the molecule is often included and literature references are made to the *United States Pharmacopeia* and the *National Formulary* for drugs included in these works.

APPLETON JOSEPH LUKE TEASDALE

Bacterial infection with special reference to dental practice. Fourth edition, thoroughly revised with 108 illustrations and 5 plates 4 in color Philadelphia Lea & Febiger 1950 644 p illus. (part col d) 24 cm. $10 00 1418

Contents (abridged) Part I, Bacteriology: Relation of bacterial growth to oxygen supply Pure culture study of bacteria. Filtrable viruses. Chemoprophylaxis and chemotherapy Part II, Infection How bacteria produce disease The natural defenses. The humoral defenses. The cellular defenses. Resistance or immunity Artificial active immunization. Characteristics of infection. Types of infection. The control and prevention of infectious disease. Part III, Special infections of the oral cavity: Ecology of the oral cavity The streptococcus-pneumococcus group. The spirochetes of the mouth. Dental caries. The bacteriology of the dental pulp. Periodental disease and infection. Focal infection. Vincent's disease. Actinomycosis. Osteomyelitis. Oral manifestations of extra-oral infections, exclusive of syphilis and tuberculosis. Interrelations of tuberculosis and oral infections. Bacteriologic aspects of oral hygiene. Index.

Note (1949) An inclusive, well-documented textbook and treatise. It is organized so as to convey sound knowledge of the principles, routes, and causes of infection and to describe the oral and related infections which are of interest in the practice of dentistry The text is compactly written and much ground is covered. Literature references are given in the form of footnotes and there are ten or more citations on many of the pages. Both sides of controversial matters, such as the concept of focal infection, are presented. The third edition was published in 1944. In this edition new textual material and new illustrations amounting to about 140 pages have been added and references to recent publications have been entered in the footnotes.

ARCHER, WILLIAM HARRY

A manual of dental anesthesia an illustrated guide for student and practitioner Philadelphia W B Saunders Company 1952 192 p illus. 26 cm. $5 50. 1419

Contents: The history of anesthesia. Part I, Local anesthesia: Local anesthetic solutions. Local anesthesia. Anesthesia for operative dentistry and root canal therapy Postinjection complications. Part II, General anesthesia: Preanesthetic examination. Preanesthetic and preoperative preparation of ambulatory patient. Face or patent airway General anesthesia for oral surgery in the office. Analgesia in dentistry General anesthesia for oral surgery in the hospital. Complications of general anesthesia for oral surgery—their prevention and treatment. Legal aspects of anesthesia. Index.

Note. Both anesthetic drugs and anesthetic techniques are covered in this well-written, fully illustrated work. Drugs are discussed in regard to chemical and physical properties, pharmacology and toxicity uses, duration of anesthesia, etc. Techniques are described explicitly The 146 figures are special feature. They include reproductions of drawings, roentgenograms and photographs and many are arranged in series that illustrate techniques in step-by-step fashion. The preliminary chapter on history runs to 34 pages and includes long list of references.

ARCHER, WILLIAM HARRY

A manual of oral surgery a step-by-step atlas of operative technics. Philadelphia. W B Saunders Company 1952 643 p. illus. 26 cm. $15 00. 1420

Contents: The extraction of teeth. The use of elevators in oral surgery Impacted teeth. Apicoectomy Oral surgery for dental prosthesis. Heat and cold indications in oral therapy Oral infections. Cysts of the oral cavity Surgical treatment of cysts of the oral cavity Salivary stones (sialolithiasis) Surgical treatment of oral nonmalignant tumors. Complications associated with oral surgery Oral malignancies—the dentist's responsibility—management of the primary lesions and their cervical metastases. Radiation therapy of carcinoma of the oral cavity Cleft lip. Cleft palate. Oral prosthesis in rehabilitation of cleft palate patients. Surgical treatment of prognathism of the lower jaw Fractures of the mandible and maxilla. Roentgen anatomy of the facial bones and jaws. Oral radiographic localization. Anatomical explanation of pain in and about the oral cavity Treatment of pain in the oral cavity and vicinity Oral surgery in the hospital. Sterilization and disinfection. Hospital dental care and dental education. Legal aspects of oral surgery Index.

Note An exceptionally inclusive and detailed textbook designed for students in dental colleges and for dental practitioners. For the latter it can serve both as "refresher" and presentation of new techniques. The more than 1000 figures include many step-by-step sequences of drawings and photographs illustrating techniques. Textual discussions also are explicit. Descriptions and illustrations of numerous interesting cases are included. The author is Professor of Oral Surgery and Anesthesia in the School of Dentistry of the University of Pittsburgh. Ten of the chapters were written by other specialists.

BRECKER SOL CHARLES

The porcelain jacket crown a manual stressing the preparation of normal and abnormal teeth. With 290 illustrations and frontispiece in color St. Louis The C. V Mosby Company 1951 263 p illus. (part col'd) 26 cm. $8.50 1421

Contents Classification of preparations for the porcelain crown. The preparation. Preparation of teeth influenced by their anatomy. Preparation of teeth influenced by their condition. Preparation of teeth influenced by their position. Procedures after the preparation is completed. Shortcomings of the porcelain jacket crown—how to prevent or minimize them. Porcelain bridges. References. Index.

Note: The aim of this very carefully prepared volume is to provide a technical guide for dental students and graduate dental practitioners. By means of numerous photographs and drawings rather than by many words the author explains the procedures and techniques involved in the construction of porcelain jacket crowns. There are selected references at the end of the volume.

BURKET, LESTER WILLIAM

Oral medicine diagnosis and treatment. With a chapter on oral cancer by S Gordon Castigliano 372 illustrations, including 40 subjects in color Second edition. Philadelphia J B Lippincott Company 1952 575 p. illus. (part col'd) 26 cm. $14 00 1422

Contents (abridged) Section One, General considerations: Medical-dental relations. Diagnosis in dentistry Section Two, Gingivitis, gingival enlargement, (nonspirochetal disease, metal intoxication and intolerance, halitosis. Section Three, Diseases of the tongue and dermatologic diseases of dental interest The dermatoses. Section Four Diseases of the organ systems: The respiratory system. The cardiovascular system. The gastro-intestinal system. The urogenital system. The endocrine system. The blood and the blood forming tissues. The bones and the joints. The nerves, the nervous system and the muscles. Section Five, Nutritional deficiencies and diseases of metabolism. Section Six, Specific infectious granulomata: Syphilis. Tuberculosis. Miscellaneous infectious granulomata. Section Seven, Focal infection, dental pediatrics, and geriodontics. Section Eight, Occupational hazards in dentistry and in industry Section Nine, Oral cancer Section Ten, Laboratory aids in diagnosis: Laboratory procedures. Section Eleven, Color atlas. Section Twelve, Regional diagnostic index. Index.

Note: (1214) A treatise which is concerned not only with those diseases that originate in the oral cavity but also with the pathology diagnosis, and treatment of various systemic diseases with oral relations. The principal theme is that the dentist often has an unusual opportunity to detect and diagnose diseases which are the direct concern of the physician, and that there should be therefore close cooperation between dentists and medical practitioners in the care of patients. Of course many of the diseases covered are wholly within the scope of the dentist. Discussions are full rather than concise and etiology symptoms, and treatment are usually covered. Extensive bibliographies are included and the illustrations are numerous and well reproduced. The chapter on oral cancer has been added in this edition. Certain other chapters have been rewritten or expanded and recent literature has been added to the bibliographies.

COOLIDGE EDGAR DAVID

Endodontia the clinical pathology and treatment of the dental pulp and pulpless teeth. 355 illustrations on 179 figures and a colored plate. Philadelphia Lea & Febiger 1950 300 p illus. (part col'd) 24 cm. $6 00 1423

Contents: Therapeutic principles. Dental pain, its source and characteristics. Treatment of the dentin Treatment of the dental pulp in which vitality should be preserved Treatment of vital pulps that should be removed Removal of the pulp and preparation of root canals for filling. Anatomy of root canals with relation to pulp removal and root canal filling Treatment of infected pulps and pulpless teeth Sulfonamide and antibiotic medication for infected root canals. Principles and technique of filling root canals. Healing and repair after pulp removal and root canal filling. Treatment of teeth with inflammatory disturbances of the apical periodontal tissues. Root resection. Focal infection Pulpless teeth. Index.

Note. A text on preventive dentistry or that branch of dentistry which aims at the conserving of rather than the extraction of teeth. The author considers all phases of healing and repair of pulpless teeth but places specific emphasis on root-canal treatment He considers each type of disease separately and outlines the proper treatment. He has incorporated results of recent research, such advances as the use of antibiotics in achieving sterility in infected root canals. References to the literature are included The book is of interest to upperclass students in dental schools and to dental practitioners.

COOLIDGE EDGAR DAVID AND MAYNARD K. HINE

Periodontia clinical pathology and treatment of the periodontal tissues. 378 illustrations on 219 figures and 2 colored plates Philadelphia Lea & Febiger 1951 318 p. illus. (part col d) 24 cm. $6.00 1424

Contents: Oral and dental hygiene. Dental prophylaxis. Classification of pathological changes in the periodontal structures. Treatment of gingivitis caused by mechanical irritants. Treatment of gingivitis caused by dental calculus. Treatment of gingivitis caused by infection. Gingivitis associated with systemic disturbances. Periodontitis. Periodontosis. Treatment of atrophy of the periodontal tissues. Functional response to occlusal stress and the treatment of traumatism. Hyperplasia of the gingival tissues and hyperplastic gingivitis. The use of the toothbrush in the treatment of periodontitis. Index.

Note. (1240*) This book is essentially an advanced text for students in dental colleges, but it has some usefulness also as an office reference book for graduate dentists. The descriptions of diseases and therapeutic procedures are clear and specific. Most of the illustrations are reproductions of photographs (including some microphotographs) and they are well reproduced Literature references are included. The book supersedes the senior author's *Clinical pathology and treatment of the pulp and periodontal tissues*, second edition, 1944, and it contains much textual matter and many illustrations which did not appear in that work.

DIAMOND MOSES

Dental anatomy including anatomy of the head and neck. Third edition. New York The Macmillan Company 1952 471 p. illus. 26 cm. $15 00 1425

Contents: Introduction and nomenclature. Comparative dental morphology The development of teeth. Formation and calcification of hard tissues. The tooth tissues Eruption. Deciduous teeth. The maxillary teeth. The mandibular teeth. Technique for reproducing basic tooth forms. Variations and anomalies. Arrangement of teeth and occlusion. The supporting tissues of the teeth. Atlas: The pulp chamber and the pulp canals. The muscles of the head and neck. The oral cavity and its soft tissues. The vascular system. The nervous system Temporomandibular articulation. The growth and development of the skull. Bibliography Index.

Note: (1473) An outstanding text published in first edition in 1929 and in second edition in 1935. The present third edition contains much new material of fundamental nature derived from research studies made subsequently to the writing of the second edition. The whole book has been reorganized and its scope considerably extended. The Atlas noted in the table of contents contains 32 plates based on original drawings made from new dissections. This atlas is not included in the paging of the volume. The bibliography is an extensive one classified according to the chapter arrangement.

ELLIS ROY GILMORE

The classification and treatment of injuries to the teeth of children a reference manual for the dental student and the general practitioner Third edition. Chicago The Year Book Publishers Inc. 1952 247 p. illus. 19 cm. $4 25 1426

Contents (abridged) Class 1, Simple fracture of crown, involving little or no dentin. Class 2, Extensive fracture of crown, involving considerable dentin but not the pulp. Class 3 Extensive fracture of crown, involving considerable dentin and exposing the pulp: Pulp capping. Pulpotomy Class 4 Traumatized teeth which become nonvital, with or without loss of crown structure Vital teeth Nonvital teeth, with pulp chamber opened by fracture. Nonvital teeth, with pulp chamber not opened by fracture. Class 5, Teeth lost as result of trauma. Placement of restoration. Repositioning to compensate for loss of teeth. Class 6, Fracture of the root, with or without loss of crown structure Class 7 Displacement of teeth, without fracture of crown or root: Partial displacement—extreme mobility but little displacement. Total or complete displacement. Class 8, Fracture of the crown en masse and its replacement Class 9 Traumatic injuries to deciduous teeth: Fracture of deciduous teeth, division 1 Displacement of deciduous teeth, division 2 Index.

Note A compact and useful work written from the viewpoint of the graduate dental practitioner. Each of the chapters begins with "Prescription for treatment" in which all the steps are covered from the recording of the case history to step-by-step notation of the treatment. Following this, various approaches to each problem are considered and diagrams, pictures, and X-ray photographs are used where applicable. Bibliographies are included. The author is Professor of Operative Dentistry at the University of Toronto.

ENNIS, LE ROY MASSEY

Dental roentgenology Fourth edition thoroughly revised. With 1207 illustrations Philadelphia Lea & Febiger 1949 538 p illus 24 cm. $10 00 1427

Contents (abridged) The roentgen-ray tube. Roentgen-ray dermatosis. Intra-oral and extra-oral technique. Methods of localization. Dental roentgen-ray films. Normal anatomical landmarks of the teeth and jaws as seen in the roentgenogram. Dental pathology in relation to roentgenology Index.

Note A standard treatise, the first edition of which was published in 1931 It is addressed to advanced students in dental colleges and to dental practitioners Although introductory to the field, it is an inclusive treatment with both basic information and detailed descriptions of practical techniques. The chapter on pathology is nearly 200 pages in length. A majority of the illustrations are reproductions of roentgenograms.

FELDMAN MAX HILLEL

Exodontia. Fourth edition thoroughly revised with 322 illustrations. With a chapter on dental malpractice jurisprudence by Michael A. Hayes Philadelphia Lea & Febiger 1951 290 p illus. 24 cm. $6.50 1428

Content The management of teeth in the presence of acute infection. Indications necessitating the extraction of teeth. The significance of roentgenographic examinations of the teeth. Operative considerations. Manipulation of instruments Exodontia technic for teeth in normal alignment Exodontia technic for teeth in abnormal alignment. Exodontia technic for roots fractured during extraction. Exodontia technic for roots fractured some time in the past and wholly or partially embedded. Exodontia technic for morphologically abnormal teeth. Impacted teeth. Exodontia technic for pathologically abnormal teeth. Sutures and drainage The management of deciduous teeth. Operative accidents. Postoperative considerations. Dental malpractice jurisprudence, by M. A Hayes. Index.

Note A detailed treatise on tooth removal As much attention is given to pre- and post-operative techniques as to the actual techniques of removal, although the latter are covered in full detail also. Two tools invented by the author a "cross-bar pathelever" and a surgical drill used to make an opening in the tooth for the insertion of the pathelever and the techniques dependent on these instruments are given some emphasis but other instruments and techniques are well covered also The author is Director of Dentistry at Lincoln Hospital, New York City

FISCHER, BERCU

Orthodontics diagnosis prognosis treatment. With 1180 illustrations on 212 figures. Philadelphia W B Saunders Company 1952 334 p. illus. 26 cm. $12 00 1429

Contents Hazards of treatment. The individuality hypothesis The meaning of the "normal" Case analysis. Inadequacy of intra-oral reciprocal orthodontic force The basic treatment plan—sectional treatment. Specific cases. Technical procedures. Methods of anchorage. Index

Note. A thoroughly detailed treatise on a system of orthodontic treatment which the author terms "sectional treatment" because a minimum number of teeth are subjected to orthodontic force at one time The principal technique makes use of occipital force applied to the teeth through an edgewise arch and occipital bow the latter of which is supported by a headcap worn by the patient Background matters such as variation of response in individuals are fully discussed The illustrations include many "before and after" photographs of cases and many drawings of appliance details

GOLDMAN HENRY MAURICE

Periodontia a study of the histology physiology and pathology of the periodontium and the treatment of its diseases. Second edition. With 488 illustrations including 18 in color St. Louis The C. V Mosby Company 1949 611 p. illus. (part col d) 26 cm. 1430

Contents: Periodontal anatomy histology, and physiology Pathology Etiology Experimental pathology Examination. Diagnosis. Treatment. Necrotizing ulcerative gingivitis. Medicinal aids in periodontal therapy Diseases of the oral cavity Index.

Note. (2660) A comprehensive, fully illustrated treatise. An understanding of the periodontium is viewed as essential knowledge on the part of every practicing dentist, and the subject is covered fully both in regard to the basic information and to the techniques of examination, treatment, etc., which are useful in practice. The book is based on the professional literature including the author's own writings. Comprehensive bibliographies are included with the chapters. Most of the illustrations are reproductions of photographs. The first edition was published in 1942 In this second edition the work reflects the great advances in the field made since 1942 in both histopathology and therapy The number of pages has been increased by more than 200 and the number of illustrations by 178.

GOTTLIEB BERNHARD AND OTHERS

Endodontia. By Bernhard Gottlieb Seth Lee Barron and J Hobson Crook. With 103 illustrations. St. Louis The C. V Mosby Company 1950. 177 p. illus. 24 cm. $6.50. 1431

Contents (abridged) A new approach to the biological problem behind root canal work. Pulpotomy of a young pulp which was exposed by trauma. The preparation of dentin-oxide [illegible] Pulp exposures not caused by trauma. The use of dentin, bone, or ivory powder for stimulation of hard tissue formation. The ideal closure of the apical foramen. Replacement of the dentin [illegible] by hard tissue formation. Root canal filling before replantation of teeth. The limits of pulpotomy Extirpation of the living pulp. Root canal filling after removal of a living pulp. Arsenic application on a living pulp. Prophylactic pulp extirpation. How far should a root canal filling go? Ionization—damaging applications during root canal treatment. Filling infected root canals. Reliable information by the X-ray as to whether it is safe to retain pulpless teeth. Endodontia—tooth resorption and interference with cementum cementum deposition. Inflammation and cementum deposition in endodontia and periodontia. Sclerotic bone. Root canal work and cementum hyperplasia. Formation of a fistula. Formation of a radicular cyst. Periapical curettage. Bleaching discolored teeth. Light technique. Electric pulp testers. [illegible] Index.

Note A series of experiments on dogs which extended over [illegible] years and was designed to throw light on the body's reaction to pulpless teeth formed the basis for this monograph. The work on dogs was supplemented by cadaveral and subsequent work on human beings. Among the findings reported is the fact that newly formed living cementum is often laid down over dead cementum "thus bridging over the outlets of the pulp canals and assuring that no infection in the root canal can ever cause any harm to the body outside the tooth. Although essentially a report, the book is addressed to dental practitioners and techniques are graphically described Most of the illustrations are reproductions of microphotographs. The authors are on the staff of the College of Dentistry of Baylor University

GROSSMAN LOUIS IRWIN

Dental formulas and aids to dental practice. With 25 illustrations 1 in color Philadelphia Lea & Febiger 1952 318 p. illus. (part col d) 21 cm. $5 00 1432

Contents (abridged) Section I, Operative dentistry Dentin desensitizers. Cavity sterilizing solutions. Dental cements. Self-curing acrylics. Silver alloys. Inlay gold. Dental ceramics. Coloring agents for porcelain. Section II, Prosthetic dentistry Impression materials Waxes Separating media. Investment material. Solders. Dental base materials. Denture adhesive powders. Denture cleaners. Section III, Therapeutics Anesthetics Endodontics. Periodontics, Oral hygiene. Oral surgery Prescription writing. Nutrition and vitamins. Section IV Diagnosis X-ray processing. Bacteriology Histological methods for dental tissues. Biologic tests. Section V 104 helpful hints. Section VI, Cosmetics, home remedies, antidotes, conversion tables, etc. Index.

Note: A useful collection of formulas for drugs and materials currently used in dentistry For each formula, ingredients and their amounts are stated and brief directions are given for compounding. At the beginning of each sub-section there is usually a discussion of the uses of the class of compound to which the sub-section is devoted, for example, formulas for cavity varnishes are preceded by a paragraph of discussion of their uses and limitations. Formulas for a few commercial compounds, particularly tooth powders and toothpastes, are included. The author is a member of the faculty of the University of Pennsylvania.

GROSSMAN LOUIS IRWIN

Root canal therapy Third edition thoroughly revised with 119 illustrations Philadelphia Lea & Febiger 1951 368 p. illus. 24 cm. $6.50 1433

Contents: History of root canal therapy Anatomy of root canals. Diseases of the dental pulp. Diseases of the periapical tissues. Examination and diagnosis. Pulp capping. Pulpotomy Pulp mummification. Pulpectomy Pulpless teeth and focal infection. Selection of cases for treatment. Principles of root canal treatment. Preparation of the root canal. Sterilization of the root canal. Bacteriologic examination. Filling of the root canal. Treatment of fractured and traumatized anterior teeth. Root resection. Bleaching of discolored pulpless teeth. Treatment of deciduous teeth, by K. Gerlach. Index.

Note: (1248*) A standard guide for dental practitioners. The discussions of history anatomy, and of standard techniques are not materially changed in this edition in comparison to the second edition published in 1946. However, important revisions and additions have been made in the section on antibiotics. Also there are approximately 30 new illustrations.

GROSSMAN, LOUIS IRWIN editor

Lippincott's Handbook of dental practice. Second edition with 388 illustrations, 4 color plates. Philadelphia J B Lippincott Company 1952 503 p. illus. (part col d) 26 cm. $10.00 1434

Contents Part one, Diagnosis and treatment. The prevention of dental caries, by R. G. Kesel and J. F Volker Control of dental caries, by L. I. Grossman. Oral diagnosis, by O. R. Winter and L. I. Grossman. Roentgenologic interpretation, by E. C. Stafne. Orthodontics, by A. G. Brodie Periodontics, by B. Orban. Endodontics, by L. I. Grossman. Diseases of the mouth, by L. W Burket. Prescription writing, by E. C. Dobbs. Anesthesia, by W H. Archer. Exodontics, by J R. Cameron and J. J Statter Jr. Part two, Restorative dentistry: Gold inlay restorations, by R. M. Grewett and H. K. Mathews. Amalgam, silicate and direct resinous restorations, by B. Kornfeld. Ceramic restorations, by C. C. Bastian. Pedodontics, by C. A. Sweet. Crown and bridge restorations, by A. G. Kleffenbach. Partial dentures, by V R. Trapozzano. Complete dentures, by V R. Trapozzano. Index.

Note: (1243*) A reference guide for practicing dentists. The style of presentation is direct and concise. Much use is made of illustrations and of tabular and semi-tabular statements of data and reference information. Bibliographies are included, but the book is not literature digest and no effort has been made to make them complete. The first edition was published in 1948 The major change in the second edition is the addition of the chapter on oral diagnosis. A section has been added on the use of the self-curing acrylics, and numerous smaller revisions and additions have been made in other chapters. About 80 illustrations have been added.

KRONFELD RUDOLF

Histopathology of the teeth and their surrounding structures. Third edition, thoroughly revised and edited by Paul E Boyle. With 464 illustrations. Philadelphia Lea & Febiger 1952 514 p. illus. 24 cm. $8.00 1435

Contents: Anomalies in shape and number of teeth. Physiology and pathology of tooth calcification Enamel hypoplasia and hypocalcification. Hutchinson's teeth. Mottled enamel. Regressive changes in dentin and pulp Dental caries, by H B. Williams. Pulpitis. Acute apical periodontitis. Chronic apical periodontitis. Tissue changes following root canal therapy Cementum—changes with age, function and infection. Tooth resorption. Epithelial attachment and gingival crevice. Periodontal diseases (gingivitis, periodontoclasia, pyorrhea alveolaris) Influence of function upon teeth and surrounding structures. Tissue changes due to excessive functional stress. Tissue changes in orthodontia. Embedded teeth—dentigerous (follicular) cysts—median anterior maxillary cysts. Tooth fracture. Healing of extraction wounds. Histology of edentulous jaws. Vincent's disease. Discolorations and stains. Common diseases of the oral mucosa. Tumors of the oral cavity Addenda Index

Note: A well-written treatise on the tissue changes that "correspond to certain well-defined, clinical conditions. Both etiologic and reactive changes are included and there is also much supplementary information such as discussion of the relationship between caries and pregnancy The book is used by advanced students of dentistry and by graduate dental practitioners. Very extensive bibliographies are included in the chapters. The second edition was published in 1939 In preparing this edition important revisions were made in the text of many chapters. The literature of the 1930's was added to the bibliographies and the number of illustrations was increased.

LANGLEY, LEROY LESTER, AND E. CHERASKIN

The physiological foundation of dental practice With 149 illustrations St. Louis The C. V Mosby Company 1951 511 p. illus. 25 cm. $8.25 1436

Contents (abridged) Section 1 The nervous system: Receptors. The nerves. Skeletal muscle. Sensory functions. Motor systems. Cerebellum. Cranial nerves. Referred pain and special reflexes. Vision. Audition, olfaction, gustation. Section 2, Circulation Cardiac muscle. The cardiac cycle. Electrocardiography Regulation of the heart's action. Cardiac output. Arterial blood pressure. The venous blood pressure. The capillaries and lymphatics. Blood. Section 3, Respiration Oxygen and carbon dioxide transportation. Control of respiration. Integration of the respiratory system—the administration of an anesthetic. Section 4, Excretion: Acid base balance. Integration of excretion—normal constituents, drugs, diuretics. Section 5, Alimentation: The dental tissues. Salivation. Food metabolism. Energy metabolism. Nutrition. Section 6, Endocrinology Index.

Note. This textbook was written with the aim to meet the needs of dental students for particular presentation of physiology different from that which would satisfy the medical student. About third of the volume is devoted to the physiology of the nervous system, the dentist being more intimately concerned with the nervous system than with any of the other systems. All the material is presented very briefly but accurately and is supported by illustrations. The authors are members of the faculty of the School of Dentistry of the University of Alabama.

MCBRIDE, WALTER CLAR

Juvenile dentistry Fifth edition thoroughly revised, with 302 illustrations. With special chapters by James Nuckolls Dorothea Radusch, C. Taylor Hall and Harold V Dwyer Philadelphia Lea & Febiger 1952 370 p illus. 24 cm. $7.00 1437

Contents: The management of the child. The management of the office. Growth and development of the teeth. Morphology of the deciduous teeth, with special reference to the pulp cavity and its relation to cavity preparation, by J. Nuckolls. Examination and diagnosis. Preventive dentistry Operative procedure for vital deciduous teeth. Pulp management in both dentitions. Operative procedures for young permanent teeth. Root resection, by C. T Hall. Filling materials and their application. Extraction and anesthesia. Preventive orthodontics. Teeth and the diet, by D. F Radusch. Physical diagnosis, by H. V Dwyer. Index.

Note: (1248*) This book is both text for use in dental colleges and manual for graduate dentists whose practice includes child patients. Most of its content pertains to disorders of children's teeth and the techniques of treating and restoring them but interspersed with the technical material is good deal of advice on the management of the child patient (and his parents) so as to obtain cooperation. The fourth edition appeared in 1945. Although much of the contents of this edition is identical with the contents of that one, some revision has been made in most of the chapters, and the recent literature has been added to the reference lists.

MCCALL JOHN OPPIE, AND SAMUEL STANLEY WALD

Clinical dental roentgenology technic and interpretation, including roentgen studies of the child and the adolescent. Third edition, with 1277 illustrations on 475 figures. Philadelphia. W B Saunders Company 1952 384 p. illus. 26 cm. $8.50 1438

Contents: Introduction. Electricity and roentgenology. The dental roentgenogram and the films used in dental roentgenography. Factors in dental roentgenography. Complete intra-oral roentgenographic ex-

ray—orientation of roentgenograms. Stereoscopic roentgenography Roentgenographic interpretation. Dental roentgenograms of the normal child. Differential diagnosis between anatomic landmarks and indications of pathologic conditions. Anomalies and abnormal development. Growth phenomena. Hypoplasia. Dental caries. Periapical lesions. Root resorption. Periodontal disease. Fractures of the teeth and jaws, and operative trauma. Osteomyelitis. Cysts. Bone dysplasias. Benign tumors of the jaws. Malignant tumors of the jaws. Involvements of the maxillary sinus. The temporomandibular articulation. Localization of misplaced teeth, cysts, salivary calculi and foreign bodies. Index.

Note. (1249*) Intended for dental hygienists, students, and practitioners, this book covers in detail the use of X-rays in diagnostic techniques in dentistry Almost as much space is given to the illustrations as is given to the text. As would be expected, large proportion of the illustrations are reproductions of roentgenograms, but some are photographs that show correct positioning of patients. The *second edition was published in 1947 In the third edition the scope* and organization are the same however significant additions and revisions have been made. The additional material includes description of the long cone technique. The number of pages has been increased by 40 and the number of illustrations by nearly 100.

McGehee William Harper Owen and Melvin W Green

Pharmacology and pharmacotherapeutics for dentists Fourth edition. Philadelphia *The Blakiston Company 1952 550* p Illus 24 cm. $7 50 1439

Contents. Basic principles of pharmacology and prescription writing. Drugs used by the dentist chiefly for their local effects on the mouth and teeth. Local drugs altering the inflammatory process. Drugs acting locally on the gastro-intestinal tract. Drugs acting on sensory nerves. Drugs acting chiefly after internal administration. Drugs acting on the autonomic nervous system and drugs acting on muscles. The pharmacology of the metals, specifics, vitamins and hormones Appendix. Therapeutic index. Subject index.

Note (1151) A standard text for college students of dentistry and reference book for use by practicing dentists. Property uses, dosages, and methods of application are given for wide range of drugs and pharmaceuticals Dental remedies whose value is still controversial are included if they have won some acceptance but their current status is clearly indicated. The appendix includes among other information tabulation of the solubility of important drugs and dental formulary and prescription guide. The third edition appeared in 1947 Important changes have been made in the present edition. These include discussions of new products, such as the ammoniated dentifrices, and changes in terminology necessary to make the text conform with the *United States Pharmacopoeia XIV* the *National formulary IX* and *Accepted dental remedies*, fifteenth edition.

Massler, Maury and Isaac Schour

Atlas of the mouth and adjacent parts in health and disease Drawings by Carl T Linden 180 illustrations (19 in color) Chicago Illinois American Dental Association 1951 unpaged. illus. (part col d) 29 cm. $2.50 1440

Contents The oral cavity The permanent arch. The deciduous arch. Relationships of enamel, dentin and pulp. Occlusion of the teeth (normal and abnormal) Life cycle of the tooth. Physiologic spacing of the anterior teeth Dental caries The progress of dental caries Effects of the loss of teeth Dental erosion Dental fluorosis. *Chronology of tooth development Growth and calcification patterns* of enamel and dentin Enamel hypoplasia. The teeth in congenital syphilis. Common lesions of the buccal mucosa. Common lesions of the lips. The progress of periodontal disease Diseases of the tongue. Benign conditions of the tongue The tongue in systemic disturbances. Oral diseases of occupational origin The floor of the mouth. The salivary glands. The tonsils (Waldeyer' ring) Common ailments of the throat. The paranasal sinuses. The effects of mouth breathing Frontal and horizontal sections through the face. Arteries of the head Veins of the head. The trigeminal nerve. Anatomy of the temporomandibular joint. Action of the temporomandibular joint in mouth opening Abnormal openings of the mouth. Abnormal closure of the temporomandibular joint Deviation of the midline in mouth opening. Facial asymmetry and midline deviation. The temporal muscle The masseter muscle. The internal pterygoid muscle. The external pterygoid muscle. Muscles of the mandible Fractures of the neck of the condyle. Fractures of the angle of the mandible. Fractures of the body of the mandible. Multiple fractures of the mandible and fracture in the midline. Treatment of mandibular fractures.

Note A compilation of large-scale illustrations of the teeth, the mouth, and related parts. As indicated by the plate titles—given above—the work has diagnostic value as well as anatomical. The book is made up so that each right-hand page is occupied by plate while the facing left-hand page carries the verbal legend or description.

Mead Sterling Vernon

Anesthesia in dental surgery With 212 illustrations. Second edition. St. Louis The C. V Mosby Company 1951 648 p. illus. 25 cm. $12 50 1441

Contents (abridged) Part I: Selection of anesthesia. Anesthesia and analgesia for various dental operations. Part II. History of local anesthesia. Anatomy Local anesthesia. Local anesthetic solutions. Armamentarium for local anesthesia. Infiltration, intraosseous, or peripheral method of producing anesthesia. Blocking the maxillary nerve and its branches by the intraoral method. Blocking the mandibular nerve and its branches by the intraoral method. Blocking the second or maxillary division of the fifth cranial nerve and its branches by the extraoral method. Blocking the third or mandibular division of the fifth cranial nerve and its branches by the extraoral method. Complications and accidents of local anesthesia. Part III History of general anesthesia. Physiology in relation to general anesthesia. Preoperative preparation and medication for general anesthesia. Intravenous anesthesia. Rectal anesthesia. Inhalation anesthesia. Muscular relaxation. Unfavorable reactions and complications. Emergency measures and resuscitation. Postoperative care. Index.

Note This work is primarily text for dental college students and secondarily survey of current techniques and reference manual for practicing dentists. There is decided emphasis on the practical aspects including such important but sometimes neglected topics as the legal responsibility of the dentist who administers anesthetics. The author does not favor any particular drug or technique but he does advise (1) that dentist work only with type of anesthesia with which he is fairly familiar and (2) that he keep up to date by taking training from an anesthetist on new types. Selected reference lists are included. The first edition of the book was published in 1935 In preparing this edition most of the original text was revised and much new material was added.

Salzmann Jacob Amos

Principles of orthodontics. Second edition. 533 *illustrations* Philadelphia J B Lippincott Company 1950 887 p. illus. (part col d) 24 cm. $15 00 1442

Contents Orthodontics in preventive dentistry and public health. Orthodontics and prophylactic orthodontics. Growth and development. Bone growth and the carpal index. Development and growth of the head. Developmental anatomy and physiology of the face and jaws Development of the dentition. Anomalies of tooth formation and eruption. Ontogenetic development of the occlusion of the teeth. The endocrines in relation to dentofacial deformities. Nutrition in relation to dentofacial development. Etiologic factors in dentofacial deformities. Classification and diagnosis of dentofacial anomalies. Differential diagnosis and treatment planning. Orthodontic examination of the patient. The prevention and treatment of malocclusion. Principles of mechanotherapy The Twin arch method The Johnson twin-wire appliance. The Mershon system. Labial and bite plates. Dentofacial changes in orthodontics. Index of authors. Subject index.

Note (1701) A treatise of wide scope. The primary emphasis is on the necessity of understanding growth processes and other biological factors. However, the latter 370 pages of the book are devoted to techniques. The book is used both as text in advanced and graduate courses and as reference manual in professional libraries. Very extensive bibliographies are included and the names of the authors of the cited papers are entered in the author index, thus forming guide to the currently important literature. The first edition appeared in 1943. Important additions and revisions are evident in this edition. The book is more than 200 pages longer, the number of illustrations has been substantially increased and the significant literature published since 1943 has been added to the bibliographies.

Sarnat Bernard G , editor

The temporomandibular joint. Springfield, Illinois Charles C Thomas 1951 148 p. illus.

23 cm. (American lecture series. Publication no 134 A monograph in American lectures in dentistry edited by Edward J Ryan) $4 75 1443

Contents: Functional anatomy of the temporomandibular joint, by H. Sicher. Histophysiology of the temporomandibular joint, by J. P Weinmann and H. Sicher. Contribution of the mandibular condyle to the growth of the face, by A. G. Brodie. Pathology of the temporomandibular joint, by J P Weinmann and H. Sicher. An evaluation of Costen's syndrome from an anatomic point of view by A. A. Zimmermann. Diagnosis of some abnormal temporomandibular joint conditions, by A. G. Brodie. Temporomandibular disorders: diagnosis and dental treatment, by J. R. Thompson. References.

Note: A collection of original papers written to clarify certain segments of the knowledge of the temporomandibular joint and to relate this knowledge to clinical problems and treatment. The level of writing is postgraduate. The editor is Head of the Department of Oral and Maxillofacial Surgery of the College of Dentistry of the University of Illinois.

STRANG, ROBERT HALLOCK WRIGHT

A text-book of orthodontia. Third edition thoroughly revised with 1050 illustrations on 583 figures and 5 plates some in color Philadelphia Lea & Febiger 1950 825 p. illus. (part col'd) 24 cm. $15 00. 1444

Contents (abridged) The basic principles of orthodontia. Normal occlusion of the teeth. The natural mechanics of the human denture. Malocclusion of the teeth. The etiology of malocclusion. The histology of the dental tissues. The growth and development of the denture. Tissue changes taking place coincidental to tooth movement. Orthodontic mechanisms. The edgewise arch mechanism. The corrective treatment of malocclusion. Routine operative technic. Appendix: Office equipment and routine. Index.

Note: A thoroughly detailed work in which the techniques of treatment are based on the use of the edgewise arch mechanism developed by Edward Hartley Angle. It is used both as text in dental schools and as an office reference book by graduate practitioners. Positioning of the bands on the teeth and adjusting of the wires in various types of malocclusion and in specific illustrative cases are described in minute detail. The second edition was published in 1943. This edition is longer by about 100 pages.

THOMA KURT HERMANN

Oral and dental diagnosis, with suggestions for treatment. With contributions by Henry Goldman and Fred Trevor Third edition. With 776 illustrations 60 in color Philadelphia W B Saunders Company 1949 563 p. illus. (part col d) 24 cm. $10.00. 1445

Contents (abridged) Part I, Principles and methods of examination and diagnosis: Case history. Physical examination. Laboratory tests. Special examinations for dental and oral diseases. Roentgen examination. Treatment planning Part II, Diagnosis and treatment of dental and oral diseases: Diagnosis of developmental malformations and their relation to the head, face, and jaws. Diagnosis of underdevelopment of the jaws, and malocclusion of the teeth. Diagnosis of malformations of the teeth. Diagnosis of general dental and oral conditions. Diagnosis of environmental changes in the teeth. Diagnosis of odontalgia. Diagnosis of periodontal disease. Diseases of the partially and completely edentulous mouth. Diagnosis of diseases of the oral mucosa, lips, and tongue. Diagnosis of fractures of the teeth and jaws. Diagnosis of diseases of the jaws Diagnosis of swellings of the soft tissues of the face and neck. Diagnosis of neurologic complaints. Diagnosis of oral foci, potential sources of systemic disease. Glossary Bibliography Index.

Note: (1710) A standard work widely used as textbook in dental colleges and as reference book by graduate dentists. A wide range of diseases is covered in compact style. Diagnosis is emphasized but treatment also is covered. In fact, in this third edition there is more attention to treatment than in preceding editions. 110 of the illustrations are new

THOMA, KURT HERMANN

Oral pathology a histological, roentgenological, and clinical study of the diseases of the teeth jaws, and mouth. Third edition. With 1660 illustrations, including 78 in color St. Louis The C. V Mosby Company 1950. 1592 p. illus. (part col d) 28 cm. $17.50. 1446

Contents (abridged) Part I, Hereditary influence in anomalies of the teeth and jaws. Endocrine influences on the development of teeth and jaws. Nutritional influences on the development of the teeth and jaws. Part II, Anomalies and diseases of the teeth: Developmental anomalies of the dentition. Pathology of the form and structure of the teeth. Environmental pathology of the teeth. Changes in the teeth caused by general disease. Traumatic injuries of the teeth. Part III, Odontitis: Dental caries. Pulp involvement. Dentoalveolar abscesses. Periodontal diseases, by H. M. Goldman. Complications caused by odontogenic infection. Part IV Anomalies and diseases of the head and jaws: Congenital malformations of the head and face. Malformations of the skull and their effect on the jaws. Congenital clefts of the face. Developmental anomalies of the jaws. General diseases affecting the jaws. Part Abnormalities and diseases of the temporomandibular articulation: Developmental anomalies. Traumatic injuries of the mandibular joint. Inflammatory arthropathies. Tumors of the mandibular joint. Part VI, Diseases of the nerves and muscles of the face and jaws. Part VII, Mouth diseases: Congenital and acquired anomalies. Oral diseases essentially local in character. Allergic manifestations and drug intolerance. Oral diseases of metabolic origin. Oral manifestations of virus diseases. Oral lesions in blood diseases. Oral lesions in dermatological diseases. Part VIII, Diseases of the salivary and mucous glands. Part IX, Tumors of the jaws: Tumors of odontogenic origin. Tumors of osteogenic origin. Tumors of the soft tissues of the oral cavity Index.

Note: (1710a) A treatise of exceptionally comprehensive scope. It covers both the gross pathology and the microscopic pathology of all of the common and most of the rare abnormalities and diseases of the teeth, jaws, and mouth. Clinical aspects are emphasized. Extensive references to the pertinent literature are included in the individual chapters. The work is used both as text in dental colleges and as reference book by dental graduates and others engaged in research or teaching of dentistry It is companion to the author's *Oral surgery* described below The second edition of *Oral pathology* was published in 1944. Numerous revisions were made in both text and illustrations in preparing this edition, and the total number of illustrations was increased by 272.

THOMA, KURT HERMANN

Oral surgery Second edition. With 1789 illustrations including 121 in color St. Louis The C. V Mosby Company 1952 2 v illus. (part col d) 26 cm. $30.00 1447

Contents: Volume I, The principles of surgery The general care of the patient. Anesthesiology Chemotherapeutics and antibiotics. Dentoalveolar surgery The treatment of abnormalities of the edentulous mouth. The treatment of traumatic diseases of the jaws. The treatment of odontogenic diseases of the maxillary sinus. The treatment of osteomyelitis and necrosis of the jaws. Volume II, The treatment of diseases of the mandibular joint. The treatment of infections of the face and neck. The treatment of diseases of the salivary and mucous glands. The treatment of diseases of the fifth and seventh nerves. The treatment of cysts of the jaw The treatment of benign tumors of the mouth and jaw The treatment of malignant tumors. The treatment of developmental deformities of the jaw The treatment of acquired defects of the mandible. The treatment of oral abnormalities and defects.

Note: (1241) An outstanding work which provides comprehensive and detailed description of surgical techniques used in the correction of diseases, injuries, and abnormalities of the oral cavity teeth, jaw and adjacent structures. Although addressed primarily to graduate dentists, especially those who are taking instruction in postgraduate dental schools, the scope of the book is so wide that it is useful reference treatise in both dentistry and medicine. Considerable attention is given to pre- and post-operative care of patients as well as to surgical techniques. Each volume is profusely illustrated and well supplied with extensive lists of the related literature. The first edition was published in 1948. In preparing this edition moderately extensive revisions were made in both the text and illustrations. The number of illustrations and the length of the text have both been increased, and recent literature has been added to the bibliographies.

WHEELER RUSSELL CHARLES

A textbook of dental anatomy and physiology Second edition, illustrated. Philadel-

phia W B Saunders Company, 1950 422 p. illus. 26 cm. $7 00 1448

Contents. Nomenclature and general considerations. Development of the teeth, calcification and eruption. General considerations in the physiology of the permanent dentition. Physiologic tooth form protecting the periodontium. The deciduous teeth. The permanent teeth—the maxillary incisors. The mandibular incisors. The canines (cuspids) maxillary and mandibular The maxillary premolars (bicuspids) The mandibular premolars (bicuspids) The maxillary molars. The mandibular molars. The pulp cavities of the permanent teeth. Dento-osseous structures. Temporomandibular articulation—muscles of mastication—analysis of mandibular movements. The arrangement of the teeth and occlusion. Index.

Note. (1711) A textbook for use in schools of dentistry. It is introductory to dental anatomy but it is thorough enough and sufficiently detailed to make it of interest to graduate dentists as well as to students. Terminology, embryology and physiology are considered in the first four chapters. The succeeding chapters are devoted to detailed study of general anatomy as the chapter titles indicate. The first edition was published in 1940. No major changes were made in preparing this edition, but the text has been revised and clarified in numerous places. Also, changes have been made in the illustrations. These include an entirely new series of illustrations in the chapter on pulp cavities. A selection of recent literature has been added to the bibliography. The author is Associate Professor of Anatomy in the School of Dentistry at Washington University

YEAR BOOK OF DENTISTRY

The 1951 year book *of* dentistry (August, *1950*–August, *1951*) Editors Stanley D Tylman and others. Chicago The Year Book Publishers, Inc. 1952 512 p. illus. 20 cm. $5 00 1449

Contents: Diagnosis. Pulpal and periodontal disease and related pathology. Caries. Public health. Dentistry for children. Orthodontics. Surgery and related pathology. Restorative and prosthetic dentistry. Index. Index to authors.

Note: (1144) As in other volumes of this useful series, the chapters consist of abstracts of important articles selected from the world's medical periodicals published during the period indicated in the title. The abstracts average about page in length and are therefore long enough to do justice to the original article. In many instances an abstract is supplemented by an editorial note. A reference to the original article is always included. In the present issue there are 347 figures.

ZEISZ, ROBERT C, AND JAMES NUCKOLLS

Dental anatomy The form and function of the permanent teeth, by Robert C. Zeisz, and The form and function of the deciduous teeth, by James Nuckolls With 427 illustrations. St. Louis The C. V Mosby Company 1949 486 p illus. 29 cm. $10 00 1450

Contents (abridged) Part I, Descriptive anatomy of the permanent dentition The permanent incisors. The permanent cuspids. The bicuspids. The permanent molars. Occlusion of the permanent teeth. Part II, Descriptive anatomy of the deciduous dentition The deciduous incisors. The deciduous cuspids. The deciduous molars. The relationship of the deciduous teeth. Measurements of the permanent teeth of man. Measurements of the deciduous teeth of man. Glossary Index.

Note: By limiting the scope of this book to the teeth the authors have been able to cover their teeth comprehensively. The drawings represent ideal teeth constructed as composites based on thousands of examples. Each face of each tooth is illustrated. Each surface is fully described and several cross-sections are shown. The glossary is extensive and the index is full and highly specific. The authors are members of the faculty of the Dental School of the University of California.

INDUSTRIAL MEDICINE

ELKINS HERVEY BERTRAND
The chemistry of industrial toxicology New York John Wiley & Sons Inc., 1950 406 p. illus. 23 cm. $6.50 1451

Contents (abridged) Evaluation of hazards. The elements. Inorganic compounds. Organic compounds. Natural and industrial products. Preventive measures. Industrial operations and processes. Maximum allowable concentrations. Fallacies and unsolved problems. Air sampling devices. Analytical methods and procedures. Bibliography Index.

Note: A reference manual of chemical information about harmful substances encountered in industry. It describes the properties of the various elements and compounds, indicates their harmful physiological effects, states the maximum allowable concentrations, and describes tests and other methods of evaluating concentrations and contaminations. However it does not cover pathology and other medicinal topics which usually constitute the main content of books on industrial toxicology. It will be useful to plant physicians, industrial health engineers, public health workers, and others concerned professionally with industrial hygiene.

FAIRHALL, LAWRENCE TURNER
Industrial toxicology Baltimore The Williams & Wilkins Company 1949 483 p illus. 24 cm. $6.00. 1452

Contents (abridged) Part I, Inorganic substances. Part II, Carbon compounds. Index.

Note A reference manual of information on substances handled in industry that have some toxicological interest although they may not be poisonous. Iron and tin, for instance, are discussed under inorganic substances along with arsenic, beryllium, etc. Each of the two major parts consists of a series of short essays arranged alphabetically under the names of the substances. The following points are covered in the typical essay on an individual substance: chemical and physical properties, industrial uses, toxicity analyses, and literature references. The average length of an essay is slightly over two pages.

FORBES, JOHN JOSEPH VINCENT, AND OTHERS
Review of literature on dusts by J J Forbes, Sara J Davenport, and Genevieve G Morgis. Washington, D C. Government Printing Office, 1950 333 p 23 cm. (United States. Bureau of Mines Bulletin 478) Paper $0 65 1453

Contents: Introduction. Definitions and classification of dusts Exposure to dust. Physiological effects of breathing dust. Historical résumé. Incidence of dust diseases. Types of dust injurious to health. Terminology of dust diseases. Pneumoconioses. Silicosis. Prevention of dust diseases. Principal dust factors producing pulmonary pathology. Determination of dust in air. Engineering control in prevention of dust diseases. Medical control in prevention of dust diseases. General recommendations for control of dust diseases in industry. Economic and legal aspects of dust diseases in industry. Cost of compensation for silicosis. Determination of working capacity. Bibliography. Index.

Note: This revision of Bureau of Mines Bulletin 400, 1937 assembles information in convenient form on various phases of the dust problem especially in the mining and allied industries. Because of the large amount of literature available on the subject the authors have not attempted to include all published material or all types of dust disease, but have limited their assemblage of data to certain aspects of the subject, with particular reference to lung affections.

HAMILTON ALICE AND HARRIET L. HARDY
Industrial toxicology Second edition, revised and enlarged. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1949 574 p. 22 cm. $6 50. 1454

Contents (abridged) Diagnosis of industrial poisoning. Alkalies, acids. Chromium. Lead. Mercury Arsenic. Phosphorus. Cadmium. Antimony metal fume fever, zinc, manganese Beryllium. Selenium, tellurium, vanadium, aluminum, copper tin. Nickel and other metals. Asphyxiants. Aromatic series. The petroleum, fatty aliphatic series. Chlorinated hydrocarbons. Carbon disulphide. Turpentine, toluene. Synthetic rubber, plastics, welding. Oil folliculitis. Occupational cancer of the skin. Occupational cancer of the lung. Occupational cancer of the bladder. Radiant energy. Rubbertest. Bibliography Index.

Note: (1373) A standard work which in this edition has undergone extensive revision and enlargement. The more important additions include new material on chemical agents used in the synthetic rubber and [illegible] welding industries, and new chapters on beryllium and radioactive substances. Intended for the use of plant physicians and general practitioners, the book is a discussion of the mode of bodily entry toxic effects, therapy and preventive measures of a wide variety of industrially useful organic and inorganic substances. Although enough information is given on most topics to suit the needs of most industrial physicians in their everyday work, the style is condensed. Key numbers in the text serve to guide the reader to the source publications. The bibliography has been brought up to date and lists 1300 references.

JACOBS MORRIS BORIS
The analytical chemistry of industrial poisons, hazards, and solvents. Second edition, revised and enlarged. Volume I. New York Interscience Publishers, Inc., 1949 788 p. illus. 24 cm. (Chemical analysis. A series of monographs on analytical chemistry and its applications. Editors Beverly L. Clarke and I M. Kolthoff) $13 50 1455

Contents. Industrial hygiene and industrial poisons. Sampling. Measurement of gas volume and quantity Absorbers and absorbents. The chemical and microscopic estimation of dust. The chemical and microscopic estimation of silica. Lead, mercury and arsenic. Other harmful metals. Common poisonous compounds of sulfur phosphorus, and nitrogen—oxygen and ozone. The common poisonous compounds of the halogens. Carbon monoxide, carbon dioxide, cyanides, and nitriles. General methods for the determination of combustible and solvent vapors. Paraffin and unsaturated aliphatic hydrocarbons. Benzene and the aromatic hydrocarbons. Halogenated hydrocarbons. Alcohols, glycols, alcohol-ethers, and ethers. Acids, esters, aldehydes, and ketones. Phenolic compounds—aniline and other organic nitrogen compounds. Appendix. Subject index.

Note (3117) A comprehensive technical treatment of interest not only to toxicologists, but also to specialists in industrial hygiene and safety personnel in manufacturing establishments. As the title indicates the emphasis is on the analytical chemistry Most of the space is devoted to detailed descriptions of analytical procedures. However data are also included on physical and chemical properties, toxicity physiological response, and detection. Literature references are included as footnotes. Substantial additions representing the advances in the field in the past decade have been made in this edition, and the length of the book has been increased by more than 100 pages.

KUHN HEDWIG STIEGLITZ
Eyes and industry Formerly *Industrial ophthalmology* Second edition with 151 text illustrations including 3 color plates. St. Louis The C. V Mosby Company 1950 378 p. illus. (part col d) 26 cm. $9.00. 1456

Contents: Visual testing in industry Visual skills. Visual standards. Corrective program. Industrial eye injuries caused by solid

bodies, by A. C. Snell. Radiation. Chemical eye injuries. Eye protection. Illumination. The blind in industry. Miscellaneous. Appendix. References. Index.

Note: (1729) Based on research work by the Joint Committee of Industrial Ophthalmology of the American Academy of Ophthalmology and Otolaryngology and the Section of Ophthalmology of the American Medical Association, this monograph presents ophthalmology from the standpoint of the importance of vision in industry. The plan of organization is indicated by the chapter titles. Much of the material on eye injuries in industry, eye protection, lighting of work, etc., is not readily available elsewhere. The first edition appeared in 1944. This edition, though similar in scope and organization, has been increased in length by more than 80 pages and contains one new chapter, that on the blind in industry. New data and new expository material have been added in various parts, and recent publications have been added to the extensive literature lists.

PATTY, FRANK ARTHUR, editor

Industrial hygiene and toxicology. Volume II. New York, Interscience Publishers, Inc., 1949. p. 535–1138. illus. 25 cm. $15.00 1457

Contents: The halogens, by F. F. Heyroth. Alkaline materials, by F. A. Patty. Arsenic, phosphorus, selenium, sulfur and tellurium, by F. A. Patty. Compounds of oxygen, nitrogen, and carbon, by F. A. Patty. The cyanides and cyanogen compounds, by J. H. Sterner. Industrial lead poisoning, by R. A. Kehoe. The metals (except lead) by F. F. Heyroth. The aliphatic hydrocarbons, by F. A. Patty. Aromatic and cyclic hydrocarbons, by F. A. Patty. Halogenated hydrocarbons, by J. H. Sterner. The alcohols, by L. F. Treon, jr. Organic acids, by J. H. Sterner. The esters, by J. H. Sterner. The aldehydes, by J. H. Sterner. The ketones, by F. A. Patty. Ethers, glycols, and glycol ethers, by F. A. Patty. Aliphatic nitro, diazo, and amino compounds, by J. H. Sterner. Nitro and amino compounds of the aromatic series, by D. O. Hamblin. Phenol and phenolic compounds, by W. B. Deichmann. Potential exposures in industry: their recognition and control, by F. A. Patty and F. R. Holden. Subject index, volumes I and II.

Note: (1217*) Volume I of this work covers the broad aspects of the subject of industrial hygiene and volume II the properties and action of specific atmospheric contaminants, and furnishes information on industrial exposures, analytical methods, permissible concentrations, flammability, odors, and warning properties of the substances. The final chapter presents information about 60 processes, occupations, or industries that are of hygienic interest, the arrangement being alphabetical from "abrasive blasting" to "welding," the length of the treatment varying from a single paragraph to several pages. Bibliographical references are given throughout the volume in footnotes.

STONE, ROBERT SPENCER, editor

Industrial medicine on the plutonium project: survey and collected papers. New York, McGraw-Hill Book Company, Inc., 1951. 511 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Vol. 20) $7.00. 1458

Contents: Introduction. General introduction to reports on medicine, health physics, and biology, by R. S. Stone. Part A, Survey: Medical services of the plutonium project, by J. E. Wirth. Biological bases for maximum permissible exposures, by S. T. Cantril. Protective measures for personnel, by J. J. Nickson. Clinical laboratory examination of plutonium project personnel, by L. O. Jacobson and E. K. Marks. Hematological effects of ionizing radiations, by L. O. Jacobson and others. Biochemical studies relating to the effects of radiation and metals, by S. Schwartz. Uranium excretion studies, by R. J. Ferretti and others. Distribution and excretion of plutonium, by E. R. Russell and J. J. Nickson. Management and treatment of exposed personnel, by J. E. Wirth. Requirements of an adequate health service in relation to atomic research and industrial development, by S. T. Cantril and others. Part B, Collected papers: Industrial medical program—Hanford Engineer Works, by S. T. Cantril. Blood changes in human beings following total-body irradiation, by J. J. Nickson. Hematological studies on patients treated by total-body exposure to X-rays, by R. V. A. Lowe-Beer and R. S. Stone. Changes in serum blood levels of metallurgical laboratory employees during the first year of employment as related to working conditions, by N. Pearlman and G. A. Sacher. Biometric investigations of blood constituents and characteristics in a population of project workers, by G. A. Sacher and others. Effect of exercise on leucocytes: statistical analysis, by E. K. Marks and others. Determination of radium in excreta, by E. R. Russell and G. W. Reed, Jr. Treatment of plutonium poisoning by metal displacement, by J. Schubert. Status of health and protection at the Hanford Engineer Works, by S. T. Cantril and H. M. Parker. Tolerance to whole-body radiation of patients with advanced cancer, by L. F. Craver. Index.

Note: A collection of summarized reports and papers based on original research (and to a lesser extent on experience) carried out in connection with the production of the atomic bomb. The style of presentation is technical. The book is suited to such readers as graduate scientists who are concerned with programs of research into the effects of radioactive substances upon living tissue and physicians whose duties include the protection of industrial and laboratory personnel from exposure to excessive radiation.

AVIATION, MILITARY AND NAVAL MEDICINE

ADAMS GEORGE WORTHINGTON

Doctors in blue the medical history of the Union Army in the Civil War New York Henry Schuman, 1952 253 p. illus. 22 cm. 1459

Contents The medical confusion of 1861. Reformers vs. regulars. The Pecksniff regime and the army surgeons. Beginnings of an ambulance system. Improvement in field tactics. Wartime surgery. Operations and infections. The general hospitals. Nurses, staffs, and convalescents. Army sanitation and hygiene. Diseases and treatments. A note on the sources. Appendix. Index.

Note: A detailed and graphic picture of military medicine as practiced during the Civil War period in the United States of America. Despite the advances that had been made in medicine up to that time, the descriptions of camp conditions, facilities for hospitalization, care of the wounded on the battlefield, surgical methods and general medical care, indicate rather appalling conditions. Although limited to one phase of medical practice, the book provides a general picture of the state of medical knowledge in the United States in the 1860's. A long list of source materials is included; however, statements and data in the text are not directly related to the sources.

ARMSTRONG HARRY GEORGE

Principles & practice of aviation medicine. Third edition Baltimore The Williams & Wilkins Company 1952 476 p. illus. (part col d) 24 cm. $7.50 1460

Contents Historical (to 1900) Historical (twentieth century) Principles and practice. Introduction to pilot selection. Examination of the eye. Cardiovascular examination. Ear nose and throat examination. General physical examination. Neuropsychiatric examination. Objective aptitude tests for flying training. Various substances in aviation. The atmosphere. Altitude sickness. Oxygen in aviation. Aerotitis media and aerosinusitis. Effects of aircraft noises. Aerial equilibration. Airsickness. Decompression sickness. Pressure cabin aircraft. Speed and acceleration. Accidents in aviation. Emotional reactions to flight. Air rescue and air evacuation. Aerial hygiene and sanitation. Protective flying equipment. Index.

Note. (3715a) A standard treatise which provides a general survey of the scope and contents of aviation medicine and is addressed to both advanced students in medical colleges and graduate practitioners of medicine. In many parts the terminology is only semi-technical, hence the book has some utility as a source of information for technically trained persons in fields other than medicine. Four new chapters have been added to the present edition and there has been considerable revision and rearrangement of the material carried over from preceding editions. The author is the Surgeon-General of the United States Air Force.

BEEBE GILBERT WHEELER, AND MICHAEL E. DEBAKEY

Battle casualties incidence mortality and logistic considerations. Springfield, Illinois Charles C Thomas, 1952 277 p illus. 24 cm. $10.50. 1461

Contents Introduction. Incidence of hits and wounds. Death from wounding. Effectiveness of weapons. Location of hits and wounds. Logistic problems of personnel, hospitalization, and evacuation in forward areas. Appendices. Glossary. Index.

Note: A work based on data contained in official records of the Army Medical Service, United States Army. It contains analyses of United States experience in World War II. The experience is analyzed in discussions and also in about 100 tables. The work is of interest to military surgeons, especially those who are in charge of planning for the surgical care of men wounded in battle.

BEECHER, HENRY KNOWLES

Early care of the seriously wounded man. Springfield, Illinois Charles C Thomas 1952 52 p. 22 cm. (American lecture series. Publication no. 138. A monograph in American lectures in surgery edited by Michael E. DeBakey and R. Glen Spurling) $0.75 1462

Contents: Introduction. General considerations. Field care prior to hospital admission. Specific preoperative procedures. Care of men with specific wounds. Morphine and other narcotics. Anesthesia for wounded men. Summary

Note This monograph is based on actual experience with men wounded in battle. The emphasis is on treatment of the patient in the interval between the actual wounding and the final repair. The author weighs the various levels of resuscitation in their application at different times and under many conditions. He describes anesthetic action to be taken in a variety of wounded conditions with emphasis first on general conditions and finally on specific procedures. In each instance the effects of specific remedies are described. Where certain anesthetics should not be used, that information is also presented.

COBURN ALVIN FREDERICK, AND DONALD C YOUNG

The epidemiology of hemolytic streptococcus during World War II in the United States Navy Baltimore The Williams & Wilkins Company 1949 229 p. illus. 24 cm. $4.00. 1463

Contents (abridged) Magnitude of the streptococcal problem in the U. S. Navy during World War II. The mechanism of spread of streptococcus hemolyticus within a naval training center. The development of focal points of streptococcal infections early in World War II. The introduction of mass chemoprophylaxis—its relation to the epidemiology of streptococcus hemolyticus. The spread of sulfonamide resistant strains of streptococcus hemolyticus. A comparison of conditions and occurrences at six naval activities where sulfonamide resistant strains of streptococcus hemolyticus spread rapidly in the winter months of 1943. Observations on the infecting agents in relation to the initiation of streptococcal outbreaks during the last year of World War II. Observations on the relation of geographical environment to the virulency of streptococcus hemolyticus in dust. Observations on the correlation between fomentitis and endemic reservoirs of streptococcus hemolyticus at naval training stations. Observations on the relation of rheumatic fever to the epidemiology of streptococcus hemolyticus. Observations on the relation of testing streptococcus hemolyticus for serologic type and sulfonamide resistance. Potential factors in the spread of streptococcus hemolyticus on which information was lacking prior to World War II. Conclusions. Glossary. Bibliography. Index.

Note Essentially this work is a detailed field report on the experience with hemolytic streptococcus in the United States Navy during World War II. The data on which the book was based were unusually comprehensive. The authors have not only summarized them but have also pointed out interrelationships and drawn certain conclusions. There are numerous tables and a bibliography of 73 references.

bodies, by A. C. Snell. Radiation. Chemical eye injuries. Eye protection. Illumination. The blind in industry. Miscellaneous. Appendix. References. Index.

Note. (1720) Based on research work by the Joint Committee of Industrial Ophthalmology of the American Academy of Ophthalmology and Otolaryngology and the Section of Ophthalmology of the American Medical Association, this monograph presents ophthalmology from the standpoint of the importance of vision in industry. The plan of organization is indicated by the chapter titles. Much of the material on eye injuries in industry, eye protection, lighting of work, etc. is not readily available elsewhere. The first edition appeared in 1944. This edition, though similar in scope and organization, has been increased in length by more than 50 pages and contains one new chapter, that on the blind in industry. New data and new expository material have been added in various parts, and recent publications have been added to the extensive literature lists.

PATTY FRANK ARTHUR, editor

Industrial hygiene and toxicology Volume II. New York Interscience Publishers Inc., 1949 p. 535–1138 illus. 25 cm. $15 00 1457

Contents: The halogens, by F F Heyroth. Alkaline materials, by F A. Patty. Arsenic, phosphorus, selenium, sulfur and tellurium, by F A. Patty. Compounds of oxygen, nitrogen, and carbon, by F A. Patty. The cyanides and cyanogen compounds, by J H. Sterner. Industrial lead poisoning, by R. A. Kehoe. The metals (except lead) by F F Heyroth. The aliphatic hydrocarbons, by F A. Patty. Aromatic and cyclic hydrocarbons, by F A. Patty. Halogenated hydrocarbons, by J H. Sterner. The alcohols, by J F Treon, jr. Organic acids, by J H. Sterner. The esters, by J H. Sterner. The aldehydes, by J. H. Sterner. The ketones, by F A. Patty. Ethers, glycols, and glycol ethers, by F A. Patty. Aliphatic nitro, diazo, and amino compounds, by J H. Sterner. Nitro and amino compounds of the aromatic series, by D O. Hamblin. Phenol and phenolic compounds, by W B. Deichmann. Potential exposures in industry, their recognition and control, by F A. Patty and F R. Holden. Subject index, volumes I and II.

Note. (1177*) Volume I of this work covers the broad aspects of the subject of industrial hygiene and volume II the properties and action of specific atmospheric contaminants, and furnishes information on industrial exposures, analytical methods, permissible concentrations, flammability, odors, and warning properties of the substances. The final chapter presents information about 80 processes, occupations, or industries that are of hygienic interest, the arrangement being alphabetical from "abrasive blasting" to "welding," the length of the treatment varying from a single paragraph to several pages. Bibliographical references are given throughout the volume in footnotes.

STONE ROBERT SPENCER, editor

Industrial medicine on the plutonium project survey and collected papers. New York. McGraw Hill Book Company Inc., 1951 511 p illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division IV—Plutonium project record. Vol. 20) $7 00 1458

Contents: Introduction. General introduction to reports on medicine, health physics, and biology by R. S. Stone. Part A, Survey: Medical services of the plutonium project, by J E. Wirth. Biological bases for maximum permissible exposures, by S. T. Cantril. Protective measures for personnel, by J. J. Nickson. Clinical laboratory examination of plutonium project personnel, by L. O. Jacobson and E. K. Marks. Hematological effects of ionizing radiations, by L. O. Jacobson and others. Biochemical studies relating to the effects of radiation and metals, by S. Schwartz. Uranium excretion studies, by R. J Ferretti and others. Distribution and excretion of plutonium, by E. R. Russell and J J. Nickson. Management and treatment of exposed personnel, by J E. Wirth. Requirements of an adequate health service in relation to atomic research and industrial development, by S. T Cantril and others. Part B, Collected papers: Industrial medical program—Hanford Engineer Works, by S. T Cantril. Blood changes in human beings following total-body irradiation, by J. J Nickson. Hematological studies on patients treated by total-body exposure to X-rays, by B. V A. Low-Beer and R. S. Stone. Changes in serum blood levels of metallurgical laboratory employees during the first year of employment as related to working conditions, by N Pearlman and G. A. Sacher. Biometric investigations of blood constituents and characteristics in a population of project workers, by G. A. Sacher and others. Effect of exercise on leucopenia: statistical analysis, by E. K. Marks and others. Determination of radium in excreta, by E. R. Russell and G. W Reed, jr. Treatment of plutonium poisoning by metal displacement, by J. Schubert. Status of health and protection at the Hanford Engineer Works, by S. T. Cantril and H. M. Parker. Tolerance to whole body irradiation of patients with advanced cancer, by L. F Craver. Index.

Note. A collection of unrestricted reports and papers based on original research (and to a lesser extent on experience) carried out in connection with the production of the atomic bomb. The style of presentation is technical. The book is suited to such readers as graduate scientists who are concerned with programs of research into the effects of radioactive substances upon living tissue and physicians whose duties include the protection of industrial and laboratory personnel from exposure to excessive radiation.

PUBLIC HEALTH

CHENOWETH LAURENCE BENJAMIN, AND WHITELAW REID MORRISON

Community health. Third edition. New York Appleton-Century-Crofts, Inc. 1949 314 p. illus. 22 cm. $3.00. 1466

Contents: Hygiene and health education. Health conditions in the United States. Types and causes of disease. Immunology. Contact infection. Diseases spread by the human carrier. Diseases usually contracted from the soil. The relation of air to health. Water and water-borne diseases. Diseases spread by animals. Diseases usually transmitted by food. Diseases spread by insects. Quarantine, isolation, and disinfection. Waste disposal. The accident problem. Public health administration. Vital statistics. Difficult health problems. Glossary. Index.

Note: (1779) A survey of typical community health problems and of methods of handling them, written for use in introductory college courses. Emphasis is placed on preventive measures, with some attention given to the historical background of the subject. Previous editions were entitled "Community hygiene." For this edition the work was not only re-titled but there has been considerable rearrangement and revision.

COHN ALFRED EINSTEIN, AND CLAIRE LINGO

The burden of diseases in the United States. New York Oxford University Press, 1950 129 p. illus. (part col'd) 31 cm. $10.00 1467

Contents: The international list of causes of death—changes in nomenclature. On the value of statistical statements. Population and the death rate. Leading causes of death. Race. Sex. The course of events in specified diseases. Shape of curves by diseases. Numerical changes in selected causes of death. Morbidity. Summary. Addendum. Notes. References.

Note: A valuable interpretive study of statistical data available in the publications of the United States Bureau of the Census and the World Health Organization. The statistical data have been used as a basis for a series of graphs and charts and these are supplemented by a commentary written by the authors. In the chapter on leading causes of deaths the data and commentary are organized by age groups, and in that on the course of events and specified diseases the arrangement is by specific diseases and groups of related diseases. Five charts reproduced in color, suitable for wall mounting and on a large scale, are supplied in a separate slipcase. The book is a basic reference tool in public health work, life and sickness insurance, and in other fields where data on disease, causes of death, and life expectancy are useful.

HANLON, JOHN JOSEPH

Principles of public health administration. With 48 illustrations St. Louis The C. V Mosby Company 1950 506 p. 25 cm. $6.50 1468

Contents: Part I, Introduction. The philosophy of public health. The background and development of public health in the United States. The socioeconomic implications of public health activities. Part II, Administrative considerations in public health. Organizational considerations in public health. Personnel factors in public health. Fiscal management in relation to public health. Legal considerations in public health. Governmental aspects of public health. Public relations in the public health program. Part III, Pattern of public health activities in the United States. Present organization of official public health programs. Vital statistics. The control of communicable diseases. Maternal and child health activities. Chronic diseases and adult health. Environmental health. Laboratory services. Health education. Public health nursing. The voluntary health agencies. Public health, the private physician, and medical care. Public health and private enterprise. Authors' index. Subject index.

Note: An introductory work for students and graduates who are preparing for careers in administrative positions in the public health field. The subject is covered both broadly and specifically and against the background of the current public health situation in America. The author is a member of the faculty of the School of Public Health of the University of Michigan.

HISCOCK IRA VAUGHAN

Community health organization. Fourth edition. New York The Commonwealth Fund, 1950 278 p. illus. 24 cm. $2.75 1469

Contents: The government and public health. The planning of community health work. Organization and administration. Public health education. Statistics and records. Preventable disease control: epidemiology. Venereal disease control. Tuberculosis control. The maternal and child health program. The school health program. Public health nursing. Environmental sanitation. Laboratory service. Hospital and health center facilities. Newer health problems. Medical care administration in relation to public health. Voluntary health service. The health survey. Financial aspects of community health work. Index.

Note: (3764) A new and revised edition of a standard work on community health services and organization. In comparison to the edition of 1939 many of the chapters have been rewritten and new material has been added in order to furnish health officers, nurses, and teachers of public health with up-to-date practices for the protection and promotion of public health. The work is practical rather than theoretical, being based upon surveys of health administration in cities of varying sizes. The work may be used as a handbook by the health administrator and his staff, as an instruction manual for the training of health personnel, and also as a source of information for the layman interested in the health work of official and voluntary agencies.

HOPKINS EDWARD SCOTT AND FRANCIS B ELDER

The practice of sanitation. Baltimore The Williams & Wilkins Company 1951 423 p. illus. 24 cm. $7.50. 1470

Contents: *Fundamental concepts. Principles of disinfection.* The sanitary survey. Food sanitation and the public health. Milk and milk products. Water supplies. Disposal of sewage. The control of stream pollution. Disposal of refuse and solid wastes. Ventilation. Swimming pools. Environmental sanitation and the public health. Insect and rodent control. Administrative procedures. Index.

Note: A manual of fundamental practices according to the best public health standards in the United States of America. Such methods as food handling in restaurants and such devices as incinerators for the disposal of garbage and other combustible refuse are described. The descriptions are cast in a simple, readable style and are only semi-technical. However the chapters are all supplemented with well-selected references to the technical literature. The book is suited to use as an elementary text in courses offered to medical, nursing, and public health students and as a reference book in public health and general libraries.

MATHESON ROBERT

Medical entomology Second edition. Ithaca, New York Comstock Publishing Company Inc., 1950 612 p illus. 24 cm. $7.50 1471

Contents (abridged): Arthropods and human disease. The order Acarina. The Pentastomida. The orders Orthoptera and Hemiptera. The order Anoplura—the biting and sucking lice. The Diptera—flies. Mosquitoes. The problem of mosquito control. Other bloodsucking nematocerous flies. The bloodsucking muscoidean flies. The housefly and its allies. Myiasis of man and allied conditions. The Siphonaptera—fleas. Poisonous and urticating arthropods. Collecting, preserving, and mounting insects. Index.

Note: A survey which serves both as an introductory text for col-

large students of medicine and public health and as a reference guide for graduate workers in the field. It is arranged by order and much morphological information is included. However more attention is given to life cycles rather than the transmission of human diseases and the control. The extensive bibliographies contain largely literature on the medical and public health aspects, but the chief systematic descriptions are listed also. The first edition was published in 1932. This edition is a complete revision in which are incorporated the major advances in the field during World War II and the subsequent years. There are now 242 figures, of which 83 were added in this revision.

MAXCY, KENNETH FULLER, editor

Rosenau preventive medicine and hygiene. Seventh edition. New York Appleton-Century-Crofts Inc., 1951 1462 p. illus. 25 cm. $14 00 1472

Contents (abridged) Section one, Prevention of communicable diseases: Contagious diseases spread largely from the mouth and nose. Air-borne infection, by A. D. Langmuir. Contagious diseases spread largely through fecal discharges. Contagious diseases spread by genital contact, by E. G. Clark. Arthropod-borne diseases. Control of rats and other rodents, by D. E. Davis. Diseases spread largely by contact with animal or other extrahuman sources. Section two Nutrition and deficiency diseases, by W H. Sebrell, Jr Section three, Maintenance of health and prevention of disability: Historical development of maternal and child health, by P A. Harper Maternal health services, by J Whitridge, Jr. Infant and preschool services, by P. A. Harper. Health services for children of school age, by A. Foord. Services for the physically handicapped child, by R. M. Dorsey. Senescence, chronic disease and disability in adults, by L. Breslow Mental hygiene, by P V Lemkau. Section four, Food sanitation. Section five, Environmental medicine, by A. M. Baetjer. Section six, Industrial hygiene disease of occupation, by A. M. Baetjer. Section seven, Sanitary control of water supplies, sewage and refuse disposal. Section eight, Methodology: Epidemiology Statistical reasoning, by P M. Densen. The health of the population, by P M. Densen. Section nine, Public health organization and activities, by E. L. Stebbins. Index

Note. (2775) This work has long been recognized as an authoritative presentation for the instruction of students of medicine and public health and the guidance of graduate practitioners in these fields. It provides a comprehensive view of the subject and includes some historical and statistical information. The preceding edition appeared in 1935 and was the last one written by the original author Much revision is evident in the present edition. Changes in preventive medicine, such as the great progress in recent years in the control of communicable diseases, the increasing number of aged in the population, and the extension of public health organizations, are reflected. There are now 51 chapters and 26 contributors in addition to the editor. The extensive reference lists have been revised.

MILBANK MEMORIAL FUND

Research in public health papers presented at the 1951 annual conference of the Milbank Memorial Fund. New York Milbank Memorial Fund, 1952 279 p illus. 23 cm. Paper $1 00 1473

Contents (abridged) Part I, Types of studies and methodology: Role of basic research in elucidating etiology and prevention of major causes of disability and death, by L. A. Scheele. The longitudinal study of families as a method of research, by J Downes. Ecological investigation of disease, by J. E. Gordon. Experimental studies of effects of changing environment, by D. G. Wiehl. Evaluation of preventive health services in industry by L. J. Goldwater Evaluation of special tests and procedures in public health, by H. F Dorn. Research in public health administration, by E. L. Stebbins. Part II, Family studies as a method of public health research: A frame of reference for family research in problems of medical care, by L. W Simmons. Longitudinal study of the health insurance plan of greater New York, by M. R. Densford. The Canadian sickness survey by F W Jackson. Family study of poliomyelitis, by A. D Langmuir and others. Family studies of the common respiratory diseases, by G. F Badger. Family studies in Pittsburgh, Pennsylvania, by A. Ciocco. The long term study at Hagerstown, Maryland, by P S. Lawrence.

Note. In this collection of original papers the main theme is the need for research that will develop knowledge upon which public health programs for the prevention and care of adult diseases, especially the chronic and degenerative diseases, may be based. Research methods are discussed and some notable research studies are described. Transcripts of the discussion at the conference are included with most of the papers.

NATIONAL HEALTH ASSEMBLY, WASHINGTON, D C., MAY 1–4, 1948

America's health. A report to the nation by the National Health Assembly Official report. New York Harper and Brothers, 1949 395 p. 24 cm. $4.50 1474

Contents: Introduction, by Oscar R. Ewing, Federal Security Administrator Chairman, National Health Assembly What is the nation's need for health and medical personnel? What is the nation's need for hospital facilities, health centers, and diagnostic clinics? What is the nation's need for local health units? Chronic disease and the aging process. A national program for maternal and child health. A national program for rural health. What is the nation's need for research in the service of health? What is the nation's need for medical care? State and community planning for health. Physical medicine and rehabilitation. What can be done to improve dental health? A national program for mental health. What can be done to improve nutrition? A national program of environmental sanitation. International co-operation in health. Index.

Note. The National Health Assembly was convened in Washington by the Federal Security Administrator in 1948 to furnish the groundwork needed in the preparation of a ten-year plan for expanding the health resources of the United States with a view to raising the health standards of the entire population. Attending the Assembly in fourteen different sections were about 800 representatives of professional medical and welfare organizations and public and private agencies concerned with matters of public health. This book is the official report of that Assembly It presents factual information on all phases of the public health problem in the United States, indicates which were considered the most critical by the Assembly and explains what could be done with the full co-operation of community and state health units and the general public.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON NUTRITION SURVEYS

Nutrition surveys their techniques and value. Washington D C. Published by the National Research Council, National Academy of Sciences 1949 144 p 24 cm. (National Research Council. Bulletin number 117 May 1949) Paper $1.50. 1475

Contents: The objectives and demonstrated value of nutrition surveys. Dietary surveys and their interpretation. Chemical tests and their interpretation. Clinical diagnosis in nutrition surveys. The role of surveys in community nutrition programs. Nutrition surveys in relation to professional training in schools of medicine and public health. The role of health departments in nutrition surveys and appraisal. Bibliography

Note. Organized surveys of the nutritional status of selected human populations are an important research tool in public health and medicine because, if properly conducted, they reveal dietary inadequacies of nutritional deficiencies of large groups. In this work the objectives, organization and uses of such surveys are authoritatively discussed. Sample forms are included and each of the parts includes a bibliography. In addition, the fourth part contains a special bibliography of clinical publications on diseases and syndromes which are or may be related to malnutrition.

NEW YORK ACADEMY OF MEDICINE. EASTERN STATES HEALTH EDUCATION CONFERENCE

Biological foundations of health education. Proceedings of the Eastern States Health Education Conference, April 1–2 1948. New York Columbia University Press, 1950. 169 p. illus. 21 cm. $2.50. 1476

Contents: Health education, yesterday and today by C. E. Turner. Malnutrition—its nature, causes, and significance, by H. D. Kruse. Diet in pregnancy by F F Tisdall. Nutrition in health education, by F. J. Stare. Backgrounds for psychiatry by P V Lemkau. Contribution from the psychiatric standpoint, by G. S. Stevenson. The psychiatric social worker's contribution, by E. L. Ginsburg.

tology and nutrition, by C. M. McCay Orientation in gerontology by E. J. Stieglitz. The growth and aging processes, by C. A. Schaffenberg. Epidemiology by A. D. Langmuir. Strategic concepts in epidemiology by H. A. Schneider. An epidemiological approach to chronic diseases through family studies, by A. Ciocco. The social philosophy of health, by E. L. Bartz.

Note: A collection of original papers written around the central idea of bringing significant biological data to the attention of persons concerned with health education. There are a few footnote references to related literature but no formal bibliography and no index.

NEW YORK ACADEMY OF MEDICINE. INSTITUTE ON PUBLIC HEALTH 1947

Ecology of health. Edited by E. H. L. Corwin. New York The Commonwealth Fund, 1949 196 p. 21 cm. $2.50 1477

Contents: Genetics and the public health. Maternal health and nutrition—a problem in preventive medicine. Animal and insect reservoirs of disease. Climate, geography and disease. Realism in preventive psychiatry Trends in state and local health service. The hospital survey and construction act and a nation-wide health program, by H. Emerson. The preparation of professional workers in the field of public health, by C.-E. A. Winslow Education of the layman in health responsibilities, by F Babbitt. Index.

Note: Except for the three chapters for which particular authors are indicated in the above table of contents, the chapters of this book consist of facts and ideas gathered from various papers and discussions that occurred at the Institute. These composite chapters are described in the book's foreword as "distillates of the discussions." The book as a whole presents a synthesis of current thought in the United States of America on the aspects of public health named in the chapter titles. The presentation is largely nontechnical, hence the book may be read by anyone with a general interest in the field. The chapters are supplemented by selected lists of references.

PUFFER, RUTH RICE

Practical statistics in health and medical work. Foreword by Hugo Muench. New York McGraw-Hill Book Company Inc., 1950 238 p. illus. 21 cm. (McGraw-Hill series in health science, Amos Christie, consulting editor) $4.50 1478

Contents: Value and uses of statistical data. Planning of program, study or experiment. Methods of handling statistical data. Presentation of data. Elementary statistical method. Study and utilization of prevalence data. Method of study of development of disease in limited period of time. Method of study of development of disease in observed population over period of time. Method of study of life experience of specific group. Method of study of cases over a period of time. Studies of illness in the population. Development and utilization of industrial statistical data. Statistical phases of control programs. Index

Note. As the title indicates, this is a book on practical applications of statistical methods and data in medicine and public health work. It is introductory to the subject in the sense that no previous acquaintance with statistical methods on the part of the reader is assumed. The treatment is broad enough to give the reader a view of the scope of applied biostatistics in these fields and to enable him to set up a practical statistical program. Literature references are included in the chapters. The author is Director of the Statistical Service of the Department of Health of the state of Tennessee.

SCHRENK HELMUTH HERMAN AND OTHERS

Air pollution in Donora, Pa. Epidemiology of the unusual smog episode of October 1948 Preliminary report, by H. H. Schrenk, Harry Heimann, George D Clayton, W M. Gafafer and Harry Wexler Federal Security Agency Public Health Service, Bureau of State Services, Division of Industrial Hygiene. Washington, D C Government Printing Office, 1949 173 p. illus. 30 cm. (United States. Public Health Service. Public health bulletin no. 306) Paper $1.25 1479

Contents: Origin of study Introduction: The Donora area. Plan of investigation. Biological studies: Acute episode. Collection of data. The acute illness. Related studies. References. Long term effects: Oral structures. Morbidity and mortality References. Atmospheric studies: Investigation of atmospheric contaminants: Collection and determination. Evaluation of plant effluents. Atmospheric pollution from domestic sources, steamboats, trains, and automobiles. General atmospheric pollution. Meteorological investigation Micrometeorology of the Monongahela River Valley vicinity of Donora. The Donora smog episode of late October 1948. References. Meteorological conditions and atmospheric contaminants. Discussion of cause of episode: Substances studied. Single substances. Combination of substances. Summary and recommendations. Appendix.

Note This bulletin presents a report of the results of five months of intensive field work by a team of 37 investigators from the Division of Industrial Hygiene of the U S. Public Health Service and the U S. Weather Bureau following the lethal smog which settled down over the area surrounding the industrial town of Donora, Pa., October 27–31 1948, and led to the death of 20 persons and the illness of several thousand more. The investigation is said to have been the most exhaustive ever made on a problem of air pollution, every facet of the problem was examined, including effects upon health as well as the cause of the fatalities The objectives of the study were (1) to ascertain the cause of the episode, and (2) to obtain information applicable to preventing future occurrences of similar nature. Consideration was also given to obtaining data of a fundamental nature relating to the general problem of atmospheric pollution. The work is potentially of interest to public health officials, engineers, and others who are professionally concerned with atmospheric pollution.

SHEPARD WILLIAM PEACEY, AND OTHERS

Essentials of public health. By William P Shepard. With the collaboration of Charles Edward Smith, Rodney Rau Beard and Leon Benedict Reynolds. With a foreword by Ray Lyman Wilbur Second edition. Philadelphia J B Lippincott Company 1952 581 p. illus. 20 cm. $6.50 1480

Contents: Public health and the practicing physician. Environmental sanitation Communicable disease—general, by C. E. Smith. Special communicable disease control. Other public health problems. The school health service. Health education. Occupational health—industrial hygiene. Occupational health—light, heat, ventilation, by R. R. Beard. Statistics, by R. R. Beard. The physician and the public health nurse. Index.

Note (1297*) Although intended as a condensed handbook of the scope of public health and its chief methods, a wide range of information both general and specific has been packed into this work. The chapter on environmental sanitation contains sections on water supply sewerage disposal, refuse disposal, food hygiene, and insect control. All of these topics are treated from the public health standpoint but enough technical information is included to give the reader the necessary background information about how such processes as sewage treatment operate. Much reference data on such topics as infant mortality rates are included. The relations between official agencies and voluntary agencies in the various fields of public health in the United States of America are described. The book is addressed to medical practitioners and medical students and its purpose is to inform such readers about public health and to enlist them to the use and support of public health work. The first edition was published in 1948. In preparing this second edition the final chapter on the physician and the public health nurse was added, statistical data were revised, and recent literature was added to the bibliographies.

SMILEY DEAN FRANKLIN, AND ADRIAN GORDON GOULD

Your community's health. A revision of *Community hygiene.* New York The Macmillan Company 1952 454 p. illus. 22 cm. $5.50. 1481

Contents (abridged) Section I, A record of progress. Section II, Controlling health hazards in our environment: Combatting infection from person to person. Controlling sources of infection in animals. The fight against insect borne diseases Making indoor and outdoor air safer. The health significance of soil. A sanitary water supply The communities' interest in housing. Food and restaurant

sanitation. Section III, The community attack on specific diseases and disorders Community problems in mental hygiene. Community problems in sex hygiene. The care of the chronically ill. Section IV Meeting the needs of specific population groups: Health protection in infancy childhood, and maternity Better medical facilities for rural dwellers. Protecting the health of our urban dwellers. Making old age happier. Section Agencies for improving health and welfare: Your doctors, dentists, nurses, and hospitals. Your public health agencies. The drug industry Your social and welfare agencies. Your community recreational agencies. A look ahead. Suggested list of sources of motion pictures on selected health subjects. Index.

Note: (1924) A textbook written at the college level, but so [illegible] so that it is useful also as an elementary reference book in public libraries, etc. The viewpoint is that of the educated citizen interested in public health rather than of students who are preparing to make their careers in this field. Contemporary problems in the United States of America and techniques useful in solving them are covered in lucid style. Selected references to professional literature are provided in the form of footnotes, and lists of suggested reading useful to the non-specialist are given at the ends of chapters. The preceding edition was published in 1941 Extensive revision was made throughout the text in preparing this edition.

SMILLIE, WILSON GEORGE

Preventive medicine and public health. Second edition. New York The Macmillan Company 1952 603 p. illus. 24 cm. $7 50 1482

Contents (abridged) Section I, Introduction. Population trends and the public health. Vital statistics. Section II, Environmental sanitation. Water supplies and swimming-pool sanitation. Excreta disposal. Vermin and their control. Food inspection. Disease transmitted through food other than milk and milk products (food poisoning) Housing and its relation to health. Section III, Communicable disease control Epidemiology Control of the communicable diseases of childhood. Control of acute respiratory infections. Control of enteric infections. Control of tuberculosis and leprosy Venereal diseases. Section IV Child hygiene. Section Adult health protection and promotion Mental hygiene. Malnutrition and its prevention. Industrial hygiene. Geriatrics. Section VI, Public health administration Administration of local health services. Rural health administration. National health services. Voluntary health activities. The public health [illegible]. Medical social work. A nation-wide medical care program. Index.

Note: (1299*) An outstanding text for use in schools of medicine. The author has stressed the fact that it is not designed for public health personnel. The major thesis is that the main obligation of the physician is to keep all people well not only by means of his contacts with patients but also by promotion of family and community health. Much attention is given to the social and economic factors involved in the maintenance of health. However there is also considerable information on specific clinical techniques. The present edition represents very substantial revision with added material on premature babies, child health in general, accident prevention, health protection of the young adults and many other topics. The references to literature have been revised.

SYMPOSIUM ON NUTRITION FRONTS IN PUBLIC HEALTH

Nutrition fronts in public health proceedings of the Nutrition Symposium held at Yale University, November 10 1950 New York The National Vitamin Foundation Incorporated 1951 168 p illus. 23 cm. $1.50 paper 1483

Contents (abridged) Nutrition and maternal health, by [illegible] Factors conditioning the development of malnutrition, by [illegible] Nutrition as factor in aging, by C. M. McCay [illegible] Influence of nutrition on work performance by [illegible] Nutrition and resistance—susceptibility to infection, by H. A. Schneider Nutritional factors and hormones in stress reactions, by [illegible]

Note. This volume contains the original papers which were presented [illegible] symposium attended by professional workers in the [illegible] Pennsylvania Maryland, [illegible]

Note: In th[illegible] need for research [illegible] health programs especially the [illegible] Research methods [illegible] fields of nutrition research and public health. The public health aspect is stressed in all of them. Bibliographies and transcripts of discussions are included.

WENSLEY, EDITH

The community and public health nursing a handbook for and about boards and citizens committees For the National Organization for Public Health Nursing. New York. The Macmillan Company 1950 250 p. illus. 21 cm. $3 50. 1484

Contents (abridged) Part I, Public health nursing—background: A bit of history Public health nursing today Trends. Part II, Boards and citizens committees—their responsibilities and organization: A citizens committee for the public health nursing service of health department or other governmental agency Responsibilities of board of directors in voluntary agency Schoolboards and school nursing. Officers and committees of board of directors. Who shall be members? And how long? Part III, Boards and citizens committees—how their responsibilities are carried out: Meetings—how to make them interesting and productive. Board-executive-staff relationships. Finances. Public relations. Interagency relationships. Appendices. Index.

Note: Information about public health activities and about the functions and responsibilities of citizens serving on boards and committees of public health agencies is contained in this work, successor to the (1305) National Organization for Public Health Nursing's *Board members' manual*, second edition, 1937 The particular purpose of the book is to inform members of advisory committees of official agencies and of boards of voluntary agencies, but it [illegible] also to public health personnel who work with members of such committees and boards. The book depicts public health practices and organization in the United States of America.

WILLIAMS RALPH CHESTER

The United States Public Health Service, 1798–1950 Washington D C. Commissioned Officers Association of the United States Public Health Service, 1951 890 p. illus. 26 cm. $10 00. 1485

Contents. Origin and background; hospitals. On guard against disease from without. The evolution of public health. Public health laboratory research. Field studies and demonstrations in public health. Intragovernmental relationships. International health [illegible] them. Leadership and leaders. Those who carry on. When war came. World War II. Public health in the mid-twentieth century. Source of material. Index.

Note A factual history of the origin, evolution, organization, and activities of the U S. Public Health Service and of its predecessor the U S. Marine Hospital Service, written by the Assistant Surgeon General. It is based both upon manuscript and printed records and upon abstracts, statements, sketches, and other material submitted by large number of active and retired officers and employees. The 191 illustrations include numerous portraits.

WINSLOW CHARLES-EDWARD AMORY

Man and epidemics. Princeton New Jersey Princeton University Press, 1952 246 p. illus. 22 cm. $4 00. 1486

Contents: The evolution of the public health program. Objectives and approaches. The problem of pure water. Disposal of human wastes. Milk supply Sanitary problems of food supply Insects and the transmission of disease. Synopsis of the past. Challenges of the future. References. Index.

Note. A narrative account of the public health movement, its techniques and some of its achievements. The style is factual and moderately technical. The book is suitable for reading and elementary reference by teachers, journalists, and the general public. The author is Professor Emeritus of Public Health in Yale University.

PHARMACY

American Council on Education

Pharmaceutical survey The general report of the pharmaceutical survey, 1946–49 Edward C. Elliott, director Washington, D C. American Council on Education 1950 240 p. illus. 27 cm. $6.00 1487

Contents (abridged) Part I, The pharmaceutical survey. Part II, American pharmacy Part III, The educational system. Part IV The student quality Part The pharmaceutical curriculum. Part VI, The prescription study Part VII, Professional licensure. Part VIII, Alumni data and reaction. Part IX, Pharmacy in action. Part X, Retail pharmacy projects. Part XI, The findings and recommendations. Postscript. Index.

Note. The final publication of unit of the American Council on Education that was set up in 1946 to study pharmaceutical education and the requirements of the practice of pharmacy particularly in the United States of America. The chief viewpoint is that pharmacy has become profession that plays significant part in the maintenance of health and that the educational preparation and requirements for entering the profession need adjusting accordingly A wide range of data and opinion was collected in the course of the survey and is summarized in this work. The assembled information bears not only on educational aspects but also on such matters as the incomes of pharmacists now practicing, the probable effects of the current tendency of retail drugstores in the U. S. A. to become department stores in miniature, the effects of chain store retailing of drugs, etc.

Burlage, Henry Matthew and others

Fundamental principles and processes of pharmacy by Henry M. Burlage, Joseph B Burt, Charles O Lee and L. Walt Rising Second edition. New York McGraw Hill Book Company Inc. 1949 651 p. illus. 21 cm. $7.50 1488

Contents (abridged) Historical development of the profession of pharmacy by C. O. Lee. Ethical principles for the practice of the profession of pharmacy by H. M. Burlage. The pharmaceutical curriculum, by H. M. Burlage. The branches of and opportunities in pharmacy by H M. Burlage. The essential pharmaceutical literature, by C. O. Lee. Metrology by J. B. Burt. The physical properties of matter, by J B. Burt Theory generation, and control of heat, by J. B. Burt. Applications of, and processes involving heat, by J B. Burt. Solutions, by L. W Rising. The colloidal state, by L. W Rising. Emulsification and emulsions, by C. O Lee. Extraction, by C. O. Lee. Precipitation, crystallization, and granulation, by L. W Rising. Mechanical subdivision of drugs, by L. W Rising. The separation of substances by mechanical means, by H. M. Burlage. The storage and preservation of drugs, by L. W Rising. The natural products used in pharmacy by C. O. Lee Appendix A suggested list of books for the pharmacist's library Minimum standard equipment for pharmacy Pronouncing and subject index.

Note: (2148) A successful introductory textbook planned so as to give the beginning pharmacy student broad outline of the professional subjects he will study in his academic program. As the title indicates, the book deals with principles and processes rather than drugs, although the final chapter does provide an introductory survey of classes of drugs. There is considerable emphasis on the pharmaceutical literature The first edition was published in 1944 Chapter titles and contributors' names in this second edition are identical with those in the first edition. However, changes have been made in the text of several chapters and in the bibliographical matter. The length of the book has been increased by 35 pages.

Cook Ernest Fullerton and Eric W Martin

Remington's Practice of pharmacy a treatise on the preparing, standardizing, and dispensing of official, unofficial, and extemporaneous pharmaceutical products, with descriptions of medicinal substances, their properties uses and doses. Also a guide to other professional services rendered by the pharmacist in connection with community health. Intended for the use of pharmacists and physicians and as a textbook for students. Over eight hundred illustrations. Tenth edition. With the collaboration of more than ninety associates. Easton, Pa. The Mack Publishing Company 1951 1616 p. illus. 29 cm. $16.00. 1489

Contents (abridged) Pharmaceutical background. Technical operations in pharmacy Galenicals and other pharmaceutical preparations. Inorganic chemicals. Organic chemicals. Testing and analysis. Laws governing pharmacy Professional pharmacy The pharmacist in public health service. Business methods of pharmacy Hospital pharmacy Manufacturing pharmacy Biological products. Perfumery and cosmetics. Appendix: Useful formulas. Poisons and antidotes. Glossary of medical terms. Pharmaceutical manufacturers. Index.

Note: The first edition of this comprehensive and widely-used text and reference manual was published in 1885. As with each succeeding edition, this volume has been revised to conform to the latest *United States Pharmacopeia* XIV and the *National Formulary* IX edition. Antiquated remedies and obsolete processes have been eliminated, and much new material added on research in pharmacy pesticides, radioactive isotopes, and antibiotics Extensive rewriting has been accomplished in the chapters on sterilization, ophthalmic solutions, labeling regulations, venereal disease control, and business methods An important feature of this edition is the inclusion of information on therapeutic action and dosages. A very full index is again provided.

The Dispensatory of the United States of America

The Dispensatory of the United States of America, 1950 edition. By Arthur Osol and George E. Farrar Jr with E. Emerson Leuallen, Willard F Verwey Heber W Youngken and David K. Detweiler Advisory editor Horatio C. Wood, Jr Complete in two volumes. Volume one Based on the thirteenth revision of The United States Pharmacopoeia, The National Formulary eighth edition, and The British Pharmacopoeia, 1932 and its addenda. Volume two Being a commentary on the new drugs introduced in the fourteenth revision of The United States Pharmacopoeia, The National Formulary ninth edition, The British Pharmacopoeia, 1948 as well as the new drugs not officially recognized. Philadelphia J B Lippincott Company 1950 2057 p. 27 cm. $25.00. 1490

Contents (abridged) Volume one. Part one: Drugs recognized by The United States Pharmacopoeia—The Pharmacopoeia of Great Britain or The National Formulary Part two Drugs not official in The United States Pharmacopoeia—The Pharmacopoeia of Great Britain, or the National Formulary Part three: General tests, pro-

ceous, reagents and solutions. Part four: Veterinary uses and doses of drugs. Part five: Tables of The United States Pharmacopoeia or The National Formulary. Supplement of changes authorized by the First U.S.P. XIII shoot supplement and The First supplement to The National Formulary eighth edition. Index. Volume two. Part six: In which are described new drugs of the fourteenth revision of The United States Pharmacopoeia, The National Formulary ninth edition, and The British Pharmacopoeia, 1948, that heretofore have not had official status, also certain other official drugs for which important new data have recently become available. Part seven. New drugs not official in The United States Pharmacopoeia, The Pharmacopoeia of Great Britain, or The National Formulary. Index.

Note. (499*) This 1950 edition" of an authoritative reference book consists of two volumes as noted in the title. The first volume contains the text of the 24th edition copyright in 1947 and apparently reprinted without change. The scope of the second volume is indicated in its title. In this second volume there are no innovations in organization or in the material included on each drug listed; but many of the drugs described in it have not appeared in the *Dispensatory* heretofore. The complete 1950 edition consists of the two volumes bound in one cover as described here. Volume two is also offered in separate binding at the price of $5.00. The two volumes do not have common index.

JENKINS GLENN LLEWELLYN AND OTHERS
Quantitative pharmaceutical chemistry, by Glenn L. Jenkins, Andrew G DuMez, John E. Christian, and George P Hager Third edition. New York McGraw Hill Book Company Inc. 1949 531 p. illus. 21 cm. (McGraw Hill publications in pharmacy) 1491

Contents (abridged) Part 1 General methods used in official pharmaceutical analyses. Gravimetric analysis. Principles of titrimetric (volumetric) analysis. Alkalimetry Acidimetry Precipitation methods. Oxidation-reduction methods. Gasometric methods. Part 2 Physical methods used in official pharmaceutical analyses: Solubility Specific gravity and density Melting, congealing, and boiling temperatures. Refractometric measurements. Rotatory power Viscosity measurements Photometric methods of analysis. Determination of hydrogen ion concentration. Electrolytic methods. Part 3 Special methods used in official pharmaceutical analyses Ash and moisture determinations. Extractive and crude fiber content. Constants of fats, fatty oils, waxes, balsams, resins, etc Assay of volatile oils. Alkaloidal assaying. Official type methods Alkaloidal assays by special methods. Assay of enzyme-containing substances. Appendix. Index.

Note (2141) The book is both text and reference manual. Typical chemical and physical methods which are recognized as official by the *United States Pharmacopoeia* and the *National Formulary* are presented and in addition some nonofficial methods of analysis which are widely used are covered. *Laboratory procedures are described* in detail. The second edition was published in 1937. This edition has been revised so as to incorporate revisions in the official methods published in U.S.P. XIII and N.F. VIII. The reference material includes more than seventy tables of organized information.

JENKINS GLENN LLEWELLYN AND OTHERS
Scoville's The art of compounding. By Glenn L. Jenkins Don E Francke, E. A. Brecht and Glen J Sperandio Eighth edition. New York The Blakiston Company 1951 515 p. illus. 26 cm. $7 50 1492

Contents: The prescription Nomenclature and vocabulary Powders, capsules, and effervescent salts. Pills Tablets. Lozenges and similar preparations. Simple, compound, and stock solutions. Percentage, saturated, and gaseous solutions Adjusted solutions. Parenteral solutions. Solutions for special application. Colloidal solutions. Allergenic solutions. Liquids containing insoluble substances. Emulsions. Ointments and ointment-type preparations. Suppositories. Miscellaneous external preparations. Sterilization and disinfection. Homeopathic pharmacy Therapeutic and physical incompatibilities. Chemical incompatibilities. Incompatibilities of organic substances. Index.

Note. (2145) A standard reference manual and textbook for practicing pharmacists and pharmacy students first published in 1895. Emphasis is placed on the practical aspects of the subject with detailed descriptions of techniques and equipment employed in the preparation of powders, pills, capsules, tablets, etc Basic principles underlying each operation are also discussed. Numerous prescriptions and standard formulas are included to illustrate the range of application. This edition has been extensively revised and the subject matter rearranged. New chapters on solutions for special purposes and allergenic solutions have been added, and the chapters on solutions, parenteral solutions, sterilization, and incompatibilities have been expanded.

KREMERS, EDWARD, AND GEORGE URDANG
History of pharmacy a guide and a survey Second edition revised and enlarged. Thirty illustrations. Philadelphia J B Lippincott Company 1951 622 p. illus. 24 cm. $7.50. 1493

Content (abridged): Part One, Early backgrounds in the Old World. Part Two, The rise of professional pharmacy in Europe Medical theories and materia medica. The development in Italy. The development in France. The development in Spain. The development in Germany The development in England. International trends. Part Three, Pharmacy in the United States The North American colonies. The Revolutionary War. The young republic and pioneer expansion. The growth of associations. The rise of legislative regulation. The development of education. The establishment of literature. Economic structure. Part Four Discoveries, inventions and other contributions to society by pharmacists: The American pharmacist and society Contributions by pharmacists to science and industry Bibliography Chronology Appendix. Index.

Note (2142) A book designed for use as text in supplementary reading by college students of pharmacy but which is so inclusive in scope that it has reference value also. Particular attention appears to have been given to presenting the development of the profession of pharmacy as a phenomenon of developing society; thus there is considerable background material on cultural and political history Reference features in addition to the research text proper are the bibliography an international chronology 40 page appendix containing very short biographical sketches of men who contributed to the development of pharmacy notes identifying standard pharmaceutical publications, and definitions of selected pharmaceutical terms. The first edition was published in 1940. In this edition a chapter on the development of pharmacy in Spain has been added and the other chapters have been revised and enlarged, some of them very substantially

LYMAN, RUFUS ASHLEY editor
American pharmacy: fundamental principles and practices, pharmaceutical preparations. Editor in-chief Rufus A. Lyman. Advisory editors, James M Dille and others. Consulting editor, George Urdang. Third edition. Philadelphia J B Lippincott Company 1951 505 p. illus. 27 cm. $8.00. 1494

Contents: Part one, Fundamental principles and processes: Metrology Specific gravity and specific volume. Heat and refrigeration. Purification and clarification. The mechanical subdivision of drugs. Extraction [illegible] Solutions. Colloids, emulsions, and suspensions Waters, syrups and [illegible]. Part two, Pharmaceutical preparations: [illegible] Juices. Solutions, injections, and ampuls. Inhalants and [illegible] Mucilages, creams, glyceroogelatins, glycerites, collodions. Mixtures, magmas, and gels Soap and cleanser. Liniments, lotions, [illegible] and sprays. Ointments, cerates, plasters, cataplasms. [illegible] positories. Spirits and elixirs. Vinegars, tinctures, fluidextracts, [illegible] glycerates, and extracts. Resins and oleoresins. Masses, pills, troches and tablets. Powders, capsules, cachets, and [illegible] candy medication and triturations. Effervescent salts. Index.

Note. As the title indicates, this college text is concerned with the basic principles of pharmacy and with the methods for compounding broad groups of pharmaceuticals. No attempt is made to cover the business aspects of pharmacy or to describe the properties of specific drugs as is done so comprehensively in Remington's *Practice of pharmacy*. Each chapter is the work of a professor of pharmacy associated with a leading American university.

LYMAN RUFUS ASHLEY, editor-in-chief
Pharmaceutical compounding and dispensing. Editor in-chief Rufus A Lyman advisory editors James M. Dille and others. Technical editor George Urdang Philadelphia. J B Lippincott Company 1949 321 p. illus. 26 cm. (Lippincott's American pharmacy series) $6 50 1495

Contents: Dispensing through the ages, by G. Urdang. The prescription, by E. M. Plein. Accuracy in dispensing, by L. M. Ohmart. Dosage forms, by L. M. Ohmart. Dermatologic pharmaceuticals, by L. C. Zopf. Solutions, by J. B. Sprowls, Jr. Solubility, by T. Higuchi. Incompatibility and the incompatibilities of inorganic compounds, by L. W. Busse. Incompatibilities of organic compounds, by D. E. Wurster. Prescription packages and labels, by J. W. Sturgeon. Prescription pricing, by W. P. Briggs. Inter-professional relations, by P. A. Foote. Index.

Note: Although a good deal of specific information on the ingredients of standard prescriptions, solubilities of various compounds, and incompatibilities is presented, this work is essentially a presentation of basic scientific principles and techniques. Its main purpose is the development of a general understanding of pharmaceutical dispensing. The authors include prominent teachers in colleges of pharmacy and an eminent authority on pharmacy packaging. Each chapter includes a short list of literature references. There are 16 tables of reference data.

MERCK & COMPANY, INC.

The Merck index of chemicals and drugs: an encyclopedia for the chemist, pharmacist, physician, and allied professions. Sixth edition. Rahway, N. J.: Merck & Co., Inc., *1952*. 1167 p. illus. 24 cm. $8.00 thumb index edition; $7.50 plain edition. 1496

Contents (abridged): Abbreviations. Chemicals and drugs. Organic "name" reactions. Radioactive isotopes used in medical therapy and diagnosis. Coal-tar colors (dyes) for foods, drugs, and cosmetics. Indicators for volumetric work and pH determinations. Mixed indicators. Universal indicators. Absorption indicators. Oxidation-reduction indicators. Standard buffers for calibration of pH meters. pH values of standard solutions. Equivalents of the metric and U. S. systems of measures and weights. Comparison of United States, British imperial, and metric systems of liquid measures. Concentration of acids and bases. Thermometric equivalents. Specific gravity comparisons. Anti-freeze mixtures. Cooling mixtures. Constant humidity solutions. Boiling temperatures of liquids. Melting points of some organic liquids. Refractive index (n_D) of liquids. Specific gravity of liquids. Specific gravity of solids. Weight of liquids per gallon. Volumetric dilutions. Percentage solution tables. Alchemical symbols used in biology and botany. Weights and logs of elements and groups and their multiples.

Note: (2163) A widely-used encyclopedic reference book of chemicals and drugs primarily of interest to medical practitioners and pharmacists. Most of the space (1025 pages in this edition) is occupied by a dictionary of terms. Here are entered in one alphabet short statements of information about specific chemicals and drugs together with cross references from synonyms. Data given in a typical listing include the *chemical formula, synonyms,* molecular weight, color, odor, specific gravity, boiling point, solubility, medical uses, dosage, and industrial uses. If a chemical is commercially available there is a statement to this effect. The remaining pages are devoted to useful tables, formulas and other data frequently used in working with and dispensing drugs. The fifth edition appeared in 1940. The present edition is an extensive revision in which matter carried over from the previous edition has been thoroughly revised and 2900 new entrys have been added. Among the material added to the supplementary lists and tabulations is a useful compendium of standard organic reactions known by name such as Arndt rearrangement.

PARKS, LLOYD M., AND OTHERS

Inorganic chemistry in pharmacy, by Lloyd M. Parks, Paul J. Jannke, and Loyd E. Harris. With a chapter on isotopes by John E. Christian. Philadelphia: J. B. Lippincott Company, 1949. 298 p. illus. 26 cm. $6.00 1497

Contents: Introduction. The periodic table. Elements of Group VII. Metallic halides. Hydracides (oxyacids) of Group VII, and their salts of pharmaceutical importance. Elements of Group VI. Metallic oxides. Metallic sulfides. Hydracides (oxyacids) of Group VI and their salts of pharmaceutical importance. Elements of Group V. Hydracides (oxyacids) of Group V and their salts of pharmaceutical importance. Elements of Group IV. Hydracides (oxyacids) of Group IV and their salts of pharmaceutical importance. Elements of Group III. Elements of Group II. Elements of Group I. Elements of Group VIII. The isotopes of the elements and their uses in pharmacy, pharmaceutical research and medicine. Index.

Note: A textbook expressly written for use in courses given in colleges of pharmacy. The authors' state "It . . . presupposes a knowledge of general chemistry and qualitative analysis, and may be described briefly as a review of certain principles of inorganic chemistry with special reference to the preparation, properties, testing, and uses of inorganic chemicals applied in pharmacy and medicine." Most of the chapters are directly related to various editions of the *National Formulary* and the *United States Pharmacopeia.* There are 60 tables of reference data.

THE PHARMACOPOEIA OF THE UNITED STATES OF AMERICA

The pharmacopeia of the United States of America (The United States pharmacopeia). Fourteenth revision (U.S.P. XIV) and the first U.S.P. XIV supplement. By authority of the United States Pharmacopoeial Convention, Inc., meeting at Washington, D. C., May 14 and 15, 1940. Prepared by the Committee of Revision and published by the Board of Trustees. Official from November 1, 1950. Easton, Pa.: Mack Publishing Company, 1950. 1071 p. illus. 23 cm. $9.00 1498

Contents (abridged): The history of the United States Pharmacopeia. General principles for revision. Articles added to the U.S.P. XIV. Articles official in the U.S.P. XIII but not admitted to the U.S.P. XIV. Changes in official English titles. U. S. pharmacopeial titles in English and Spanish. Monographs on vegetable and animal drugs, chemicals and preparations. General tests, processes, and apparatus. Reagents, test solutions, colorimetric solutions, indicators, volumetric apparatus, volumetric solutions, and pH measurements. Tables. Index.

Note: (222*) The official description of medicinal drugs for the pharmacy profession of the United States of America. In this revision the format and scope of the previous edition have been retained, with the monographs on drugs, chemicals, and preparations accounting for most of the work's length. Two hundred and two new monographs have been added, and one hundred and nineteen items which appeared in U.S.P. XIII have been deleted. Supplementary sheets are issued from time to time.

PRATT, ROBERTSON, AND HEBER W. YOUNGKEN, JR.

Pharmacognosy: the study of natural drug substances and certain allied products. 67 illustrations, including 4 plates in full color. Philadelphia: J. B. Lippincott Company, *1951*. *644* p. illus. (part col'd) *24* cm. $8.50 1499

Contents: Part 1, General aspects of pharmacognosy: definitions and sources of drug materials. Part 2, An introduction to cellular chemistry. Organic products of cellular synthesis. Part 3, Utilization and classification of drugs. Part 4, Biosynthetic products and certain of their derivatives—physiologic and pharmaceutical applications: Drug substances derived from plants and animals. Plant and animal products that directly affect the gastro-intestinal tract. Plant and animal products that promote systemic effects on the muscle, the nervous and the circulatory systems. Natural products used chemotherapeutically for the treatment of infectious diseases. Natural products used for diagnosis, prophylaxis and therapy in specific noninfectious maladies. Part 5, Practices and procedures: Production of crude drug materials. Preservation and protection of crude drugs. Evaluation of crude drugs. Part 6, Pest and weed control—problems in public health. General statement of the problem and public health aspects of applied measures for pest control. The control of insects. The control of rodents. The control of fungi, weeds and other plants. Appendix. Index.

Note: An introductory textbook for undergraduate students of pharmacy. It is concerned with drug materials which are biologic in origin, and it deals with their chemical, physical, and physiological properties and with their evaluation and applications in medicine and public health. Most of the space is given to descriptions of drugs and of specific drugs. However, this information is always presented against a background of basic biochemistry and is related to applications. The illustrations are of good quality and extensive reference lists are included with most of the chapters.

ROGERS, CHARLES HERBERT, AND OTHERS

A text-book of inorganic pharmaceutical chemistry By Charles H. Rogers, Taito O Soine and Charles O Wilson. Fifth edition, thoroughly revised, with 22 illustrations Philadelphia Lea & Febiger, 1952 850 p. illus. 24 cm. $10 00 1500

Contents (abridged) Oxygen and ozone. Hydrogen. Water and hydrogen peroxide. Nitrogen, nitrous oxide and ammonia. The halogen family The alkali metals. The coinage metals, copper silver and gold. Beryllium and magnesium and their compounds. The alkaline earth metals. Boron, aluminum and metals of group III. The elements of group IV The phosphorus family Group VI. Iron, cobalt and nickel. Platinum metals and their compounds. The inert gases. Radioactivity and radioactive elements. Appendix. Index.

Note. (891) A comprehensive textbook for pharmaceutical students and reference book for pharmacists and physicians. The elements and their inorganic compounds are presented in short descriptions covering history occurrence, physical and chemical properties, tests for identity methods of preparation, and medical uses. However, the background information is given equal emphasis with that which bears directly on pharmacology In its fifth edition the length of the book has been increased approximately 150 pages. Concise descriptions of procedures for quantitative determinations omitted in the fourth edition have been reintroduced and there are numerous other changes. The bibliographic references presented in footnotes are brought up to date.

STOCKING CHARLES HOWARD AND ELMON L CATALINE

Arithmetic of pharmacy Based on the original text by Alviso B Stevens Eighth edition. New York D Van Nostrand Company Inc. 1952 148 p. illus. 24 cm. $2 75 1501

Contents: Weights and measures. Specific gravity and specific volume. Weight—volume. Percentage solutions. Dilution and concentration. Reducing and enlarging formulas. Additional calculations pertaining to prescriptions. Conversion of temperatures. Commercial calculations. Chemical calculations. Appendix. Index.

Note: (2167) A long-established introductory textbook for students and reference book for beginning pharmacists. It covers chiefly the arithmetical calculations that are used in connection with the compounding of medicines on prescription. Many worked examples are included, and there are also problems for the student to solve. The work has been considerably revised and reorganized in the present edition.

UNIVERSITY OF CALIFORNIA

Hospital formulary and compendium of useful information. Second edition completely revised. Berkeley and Los Angeles University of California Press 1952 317 p. 17 cm. Paper $3 75 1502

Contents. Prescription writing and conversion tables. Size of prescriptions and orders. Drugs subject to Federal and state regulations. Buffered and isotonic solutions. Therapeutic index. Drug list. Parenteral solutions. Biologicals. Pediatric therapeutic index and procedures. Dental formulas. Parasitologic procedures. Antiparasitic agents and their administration. Procedures for X ray examination. Contrast media used in radiology Laboratory and clinical procedures. Treatment of acute poisoning. Miscellaneous tables. Index.

Note. The scope of this reference handbook is indicated by the chapter titles. Although designed primarily for the personnel of the University of California Medical Center it is potentially useful to the staff of other hospitals and also to graduate physicians practicing independently Each of the chapters is a compact arrangement of useful information. The drug list contains precise descriptions of not only drugs which are listed in the *United States Pharmacopoeia*, the *National Formulary* and *New and Non-Official Remedies*, but also of some non-official drugs used in the medical center. The appendix includes an index of proprietary and common drug names which are different from the official names.

WILSON, CHARLES O, AND OLE GISVOLD, editors

Organic chemistry in pharmacy Philadelphia J B Lippincott Company 1949 622 p. illus. 26 cm. $9 00 1503

Contents: Introduction, by C. O. Wilson and O. Gisvold. Physical properties in relation to biologic action, by T. C. Daniels and W. D. Kumler. Metabolic changes of drugs and related organic compounds in the body (detoxication) by T C. Daniels and W D. Kumler. Aliphatic and cycloparaffin hydrocarbons, by A. Taub. Aliphatic halogenated compounds, by A. Taub. Aliphatic hydroxy-containing compounds, by C. O. Wilson. Aliphatic ethers, by C. O. Wilson. Aliphatic and alicyclic aldehydes and ketones, by E. V Lynn. Aliphatic carboxylic acids and their derivatives, by C. O. Wilson. Aliphatic nitrogen-containing compounds, by E. V Lynn. Aromatic hydrocarbons, by C. O. Wilson. Aromatic halogenated compounds, by C. O. Wilson. Phenols and their derivatives, by O. Gisvold. Aromatic alcohols, aldehydes, ketones, ethers and quinones, by C. O. Wilson. Aromatic acids, their salts and esters, by C. O. Wilson. Aromatic nitrogenous compounds, by C. O. Wilson. Sulfur compounds, by T. C. Daniels and W. D. Kumler. Compounds containing metals, by T C. Daniels and W D Kumler. Heterocyclic compounds, by E. V Lynn. Dyes, by T C. Daniels and W D. Kumler Surface-active agents, by A. Taub. Terpenes and related compounds, by C. O. Wilson. Carbohydrates of saccharides, by O. Gisvold. Glycosides, by O. Gisvold. Steroids, by O. Gisvold. Plant alkaloids, by T O. Soine. Antibiotics, by E. V Lynn. Vitamins, by O. Gisvold. Proteins and amino acids, by E. V Lynn. Resins, oleo-resins, resins and balsams, by H. W Youngken, Jr. Index.

Note: A textbook written for use in courses offered to students who have completed a course in basic organic chemistry The authors state that they have attempted to include discussions of all products described in the U S P XIII, N F VIII and New and nonofficial remedies, as well as the most important pharmaceuticals reported in the periodical literature. In most of the chapters the general class of compounds under consideration is first discussed generally with particular reference to its chemical structure and properties, then the compounds of pharmaceutical interest are described individually In descriptions of the individual drugs, preparation, physical properties, medical uses and average dosages are covered. Literature references are given at the end of each chapter. The copy of the book that was furnished for review contained an 8 page "Supplement of new compounds, copyright 1952.

NURSING

GENERAL WORKS

BARRETT, JEAN

Ward management and teaching. New York Appleton-Century-Crofts Inc., 1949 399 p. 22 cm. $4.50 1504

Contents (abridged): Part I, The position of head nurse. Part II, The responsibility of the head nurse for the quality of patient care: The meaning of good nursing. Nursing care of the patient on admission to the hospital. Preparing the patient for discharge from the hospital. Planning a program for the improvement of nursing care. Part III The responsibility of the head nurse for good ward management: The factors involved in good ward management. The responsibility of head nurse for the physical environment. Providing supplies and equipment. Record keeping. Giving and receiving reports. Arranging duties and responsibilities. Part IV The educational responsibilities of the head nurse: General principles of ward teaching. The conference. Bedside clinic and teaching rounds. The demonstration. Evaluation of teaching and supervision. Part [illegible] The head nurse's responsibility to herself and her profession. Index.

Note: A textbook addressed primarily to nursing school graduates who are preparing to become head nurses in hospitals. The author is Director of the Department of Nursing Education of the Syracuse University School of Nursing.

BOYD, WILLIAM

An introduction to medical science an elementary text on pathology Fourth edition thoroughly revised, with 124 illustrations and 3 colored plates. Philadelphia Lea and Febiger 1952 304 p. illus. (part col d) 24 cm. $7.50. 1505

Contents (abridged) Part I, Some general principles: The evolution of medical science. The nature and causes of disease. Inflammation, immunity and allergy. Some bacterial infections. Tumors. Part II, The organs and their diseases. Part III, Practical applications: The principles of treatment. The collection of material for the laboratory. Index.

Note: A standard introduction for student nurses. Concise descriptions of common diseases are provided, together with discussions of causes, manifestations and symptoms, and principles of treatment. In this edition revisions have been made to cover recent developments in the fields of treatment and therapy and new sections have been added dealing with such topics as congenital heart disease, edema, shock, fluid balance, virus pneumonias, and dust diseases of the lungs. The author is Professor of Pathology in the University of British Columbia.

DAKIN, FLORENCE, AND ELLA M THOMPSON

Simplified nursing. 78 illustrations. Fifth edition. Philadelphia J B Lippincott Company 1951 730 p. illus. 21 cm. $4.00. 1506

Contents (abridged) Part one, Getting your bearings. Part two, Health is everybody's business. Part three, The human body in action: The living body. The skeletal system. The muscular system. The circulatory system. The digestive system. The respiratory system. The urinary system. The reproductive system. The endocrine system. The nervous system. The special senses. Part four, Family living: The patient is part of the family. What shall we eat? Special diets for special conditions. The child is a person, too. After 40—what? Mother and baby care. Part five, Illness and the home: Your patients and their illnesses. Mental disorders. Part six, Nursing is an art: The patient in his surroundings. Health and comfort measures for the patient. Information the doctor needs. Nursing treatments and medications. Care in emergencies. List of national organizations distributing health information. References for you. Glossary. Index.

Note: (1717) In this edition this useful book has been thoroughly rewritten and its scope considerably changed. The fourth edition, published in 1941, was slanted somewhat toward the instruction of women interested in the care of their own families. In the present edition the book is intended frankly for the instruction of students who are preparing for careers of practical nursing and women who are already engaged in such nursing in hospitals and the homes of others. (In the United States of America practical nurses and professional nurses are distinguished by different educational preparation and duties, those of the practical nurse being much simpler.) Basic knowledge and techniques, nurse-patient, patient-family and group relationships are discussed in simple, practical style. Aids to comprehension and use of the textual material include numerous tables of specific directions, clear explanatory diagrams, chapter summaries, and a glossary of simple definitions.

EMERSON, CHARLES PHILLIPS JR., AND JANE ELIZABETH TAYLOR

Essentials of medicine the basis of nursing care. Sixteenth edition, revised and reset. 190 illustrations including 4 subjects in full color Philadelphia J B Lippincott Company 1950 815 p. illus. (part col d) 21 cm. $4.50. 1507

Contents (abridged) Unit one, Introduction to nursing care: Observation of the patient. Treatment of the patient. Unit two, The respiratory system. Unit three, The circulatory system: The cardiovascular and lymphatic systems and peripheral vascular disease. Heart disease. Unit four, The digestive system. The gastro-intestinal tract and its disorders. The pancreas and its diseases. Unit five, The renal system. Unit six, The integumentary system. Unit seven, allergic conditions. Unit eight, The endocrine glands and metabolism. Unit nine, The nervous system. Unit ten, The musculoskeletal system. Unit eleven, The reproductive system. Unit twelve, The communicable diseases: Infection and immunity. Bacterial infections. Virus infections. Rickettsial infections. Spirochetal and protozoan infections. Parasitic infestations. Index.

Note: A very successful text, the first edition of which was published in 1908. It provides an introductory but fairly inclusive survey of the diseases and disorders that come within the scope of internal medicine and their nursing care. The purpose is to provide the nurse with the background and specific knowledge that will enable her to render sympathetic and effective nursing care. The fifteenth edition was published in 1946. In preparing this edition the authors wrote four new chapters on therapeutic techniques in which the present-day nurse usually participates directly. In addition, revisions were made in other chapters.

FADDIS MARGENE O., AND JOSEPH M HAYMAN, JR.

Care of the medical patient a textbook for nurses. New York McGraw-Hill Book Company Inc., 1952 654 p. illus. 24 cm. (McGraw Hill series in nursing, Lucile Petry consulting editor) $4.50. 1508

Contents (abridged) Part one, Introduction: What is disease? What are the qualifications for good medical nursing? The importance of understanding the patient. The examination of the patient. Part two, The patient's needs are the nurse's problem: The nature and importance of special needs. The patient with severe, acute illness. The patient with long term illness. The aging patient. The patient with disturbances of consciousness and of muscle movements. Part three, Special treatments and diagnostic procedures: The administration of oxygen. The aspiration of fluids from body cavities. Part four Nursing patients with particular diseases. Visual aids. Index.

Note. Primarily a textbook for use in schools of nursing, this book is of value also as a reference book to nurses in practice. The main theme is that of viewing the patient as a person and providing for his needs as an individual. General techniques and general applications are covered in the first 150 pages. Most of the remainder of the book is devoted to descriptions of specific diseases and to their particular nursing care. Diseases are considered under such headings as "Cardiovascular diseases," "Diseases of the respiratory system," "Diseases of the urinary tract" and "Infectious diseases." Most of the chapters conclude with a short "Suggestions for study" and with a selected bibliography. The first-named author is Professor of Medical Nursing in the School of Nursing of Western Reserve University and the second-named author is Professor of Medicine in the School of Medicine of the same university.

FINER, HERMAN

Administration and the nursing services. New York The Macmillan Company 1952 333 p. illus. 22 cm. $4 00 1509

Contents (abridged) Part one, The nursing service's need for administrative skill. *Part two, Compulsions to awareness of administrative skill.* The scarcity of personnel. Loss of personnel in nursing service. Diverse departmental skills and nursing service. Multiplicity of skills within the nursing service itself. Nonmeasurability of quality of nursing care. Regional responsibilities and size of nursing unit. Part three, The content of administration. The scope and principles of administration. Planning, organization, and budget. Personnel. Part four. Spark of education for nurses. The place of administration in the nursing service curriculum. The spirit in which to teach administration to nurses. Summary research needs, and study advice. Appendices. Index.

Note. This book is based largely on the findings of a research project for which funds were furnished by the W. K. Kellogg Foundation. The research project had as its purpose the study of such questions as "What is the science of administration needed in the conduct of nursing service? If so needed, how seriously is it needed? Third, what inferences are to be drawn for the curriculums of schools of nursing and for the spread of knowledge of administration among nurses already on the job at various levels in nursing service departments?" In the course of exploring these questions, the research project and the author studied various aspects of the nursing profession and nursing service, some of which are indicated by the chapter titles listed above. The book is of primary interest to directors of nursing schools and of nursing services in hospitals. It is also of interest to those who are concerned with the social aspects of nursing.

HULL, EDGAR AND CECILIA M. PERRODIN

Medical nursing. Fourth edition. With 172 illustrations 12 in color Philadelphia F A Davis Company 1950 826 p illus. (part col d) 22 cm. $4.50 1510

Contents (abridged) Unit I, Basic principles: Causes and classifications of disease. The manifestations of disease—the nature of symptoms and signs. The prevention of disease. General principles involved in the nursing care of the medical patient. Unit II, The respiratory system. Diseases of the upper respiratory tract. Diseases of the lungs. The nursing care of respiratory diseases. Unit III, The cardiovascular system. Diseases of the heart. The nursing care of heart disease. Diseases of the arteries. Abnormalities of the blood pressure. The nursing care of vascular diseases. Unit IV, The blood and blood-forming organs: Diseases of the blood. Unit V, The digestive system. Diseases of the digestive system. The nursing care of digestive diseases. Unit VI, Urinary system. Diseases of the kidneys and urinary tract. The nursing care of urinary diseases. Unit VII, Diseases of the locomotor and cutaneous systems. Nursing care in diseases of the locomotor system. The nursing care of skin disorders. Unit VIII, Ductless glands and metabolism: Diseases of metabolism. The nursing care of endocrine and metabolic diseases. Unit IX, The nervous system. Diseases of the brain. Emotional disorders. Nursing care in neurologic disorders and emotional disturbances. Unit X, Nutrition. The nursing care of deficiency diseases. Unit XI, Allergy, physical agents, chemical agents. The nursing care of diseases due to allergy. The nursing care of diseases due to chemical agents. Unit XII, Infectious diseases: Bacterial diseases. Protozoal diseases. Virus and rickettsial diseases. The nursing care of the specific infectious diseases. Index.

Note. (1193) An introductory textbook for use in schools of nursing. It covers from the viewpoint of nursing the various classes of internal diseases and outlines their nursing care. The text is adequately supplemented with illustrations and literature references. The fourth edition represents an extensive revision and some increase in the length of the book. As might be expected, most of the added material deals with developments in therapy but a considerable number of changes have been made in the discussions of diagnosis, disease prevention, etc.

JENSEN, DEBORAH MACLURG

History and trends of professional nursing. Second edition. St. Louis The C. V Mosby Company 1950. 365 p illus. 22 cm. $3 75 1511

Contents (abridged) Part I, Backgrounds for the development of professional nursing: Unit I, *Pre-Florence Nightingale nursing as background for the development of professional nursing.* Unit II, The medical background—the evolution of modern medicine. Unit III, The physical background—the evolution of the modern hospital. Unit IV, Social and economic backgrounds for the development of professional nursing. Part II, *Florence Nightingale:* Unit V, *Florence Nightingale—her life and influence in nursing.* Part III, The development of professional nursing in the United States: Unit VI, Early American nursing (until about 1900). Unit VII, Expansion of professional nursing. Unit VIII, American nursing between the two World Wars. Unit IX, American nursing during World War II. Unit X, Postwar development and trends. Unit XI, Professional nursing in United States dependencies. Part IV, The development of professional nursing in other countries and international relationships: Unit XII, British nursing since *Florence Nightingale.* Unit XIII, Canadian nursing. Unit XIV, Nursing in the British colonies and dominions. Unit XV, The development of professional nursing in European countries. Unit XVI, The development of professional nursing in Central and South American countries. Unit XVII, The development of professional nursing in *Asiatic* countries. Unit XVIII, International relations in nursing. Unit XIX, Conclusion. Index.

Note. (1201) A standard textbook for student nurses. Although it includes biographical sketches of the persons who have made major contributions to the art of nursing, the development of nursing is pictured as an integral part of development of social structure. Many developments are necessarily only summarized, but good bibliographical lists are included for those students who wish to pursue a topic further. This second edition is some 50 pages longer than the first. Material has been added particularly in the chapters on the status of nursing in countries other than the United *States of America.*

MCCLAIN, MARY ESTHER

Scientific principles in nursing. Illustrated. St. Louis The C. V Mosby Company 1950. 410 p illus. 22 cm. $3 00 1512

Contents: Unit I, Orientation to hospital nursing: The meaning of nursing. Personal health. Public health. The hospital. A safe and comfortable environment for the patient. Unit II, The patient in the hospital. Admission. Observation. Comfort. Dismissal. The care of the dying and the dead. Unit III, The patient's needs: Bathing. Care of the skin. Care of nails, hair, and mouth. Food and its service. Elimination and treatments of the bladder. Elimination and treatments of the large intestine. Unit IV, Making the diagnosis. Temperature. Pulse and blood pressure. Respiration and treatments of the respiratory tract. Diagnostic tests. Unit V, Therapeutic measures: Applications of heat and cold. Treatment of the vaginal canal. Treatments of the eye. Treatments of the ear. Nose and throat treatments. Treatments of the stomach. Oral medication. Needle injections. Treatments of the stomach. Oral medication. Needle injections. Care of wounds and bandaging. Isolation. Planning nursing care. References. Index.

Note. An introductory textbook for students of nursing in which the author has stressed the dependency of nursing upon scientific principles. The main part of each chapter is titled "Scientific principles" and is subdivided under the following headings: Anatomy and physiology, Microbiology, Chemistry, Pharmacology, Physics, Psychology and Sociology. The descriptions of standard nursing procedures are concise and clearly stated. The author is an instructor on the staff of the Providence Hospital School of Nursing in Detroit.

PETRY, LUCILE, editor

The encyclopedia of nursing. Prepared under the editorial supervision of Lucile Petry Philadelphia W B Saunders Company 1952 1011 p. 21 cm. $4 75 1513

Note. A reference work which is arranged in alphabetical order. The majority of terms are followed by concise essays of one or more paragraphs in which the terms are not only defined but additional information of interest to nursing students and graduate nurses is given. The matter under some main terms—for instance, hospitals, physics—runs to several pages. Terms from medicine, physiology, physics

chemistry and the social sciences are included—the criterion for inclusion having been pertinence to nursing. Also included are short biographical sketches of persons who have contributed to the advance of medicine and nursing. There are no illustrations.

WORKS ON SPECIAL TOPICS

ANTHONY, CATHERINE PARKER

Textbook of anatomy and physiology Third edition. With 208 illustrations including 16 color plates. St. Louis The C. V Mosby Company 1950 614 p illus. (part col d) 22 cm. $4.25 1514

Contents (abridged) Unit I, The body as an integrated whole. Unit II, The erect and moving body: The skeletal system. The muscular system. Unit III, Integration and control of the body Unit IV Maintaining the metabolism of the body: The circulatory system. The respiratory system. The digestive system. The urinary system. Unit v Reproduction of the human being. Unit VI, Glandular control of body functioning. Index.

Note: An introductory text for students of nursing. By the use of tables, outline summaries, and a high number of illustrations the author has succeeded in presenting more information than the number of pages would indicate. However fundamental information rather than verbose details is emphasized. The preceding edition was published in 1944. In this edition there is more emphasis on physiology However, material has been added on anatomy also.

BIDDLE, HARRY CLARENCE

Chemistry for nurses, a combined text and laboratory manual, including essential principles from inorganic, organic, and biochemistry Fourth edition. Consultant, Vaughn W Floutz. With 212 illustrations. Philadelphia F A. Davis Company 1951 351 p. illus. 22 cm. $4.00 1515

Contents (abridged) Part I, Inorganic chemistry: Structure and behavior of atoms. Oxygen—the breath of life. Water. Solutions—liquids of everyday use. Ionization—facts explaining chemical and electrochemical reactions in solution. Salts—compounds having no common ion. Metals and nonmetals—base-forming and acid-forming elements Part II, Organic chemistry: Compounds that make life possible. Important classes of organic compounds—substitution products of hydrocarbons. Carbohydrates—aldehyde or ketone derivatives of complex alcohols. Fats—our most important body storage foods. Proteins—tissue builders. Digestion—chemical change in alimentary canal. Part III, Appendix: Vitamins and milk. Blood and urine. Foods. Part IV *Glossary* Part v *Laboratory experiments. Index.*

Note: A long established introductory text. Although it includes material from various branches of chemistry and also a considerable range of reference data, it is not one of those texts which overwhelms the student with detail. The matter included has been carefully selected from the standpoint of its usefulness to nurses. Comprehension is facilitated by chapter outlines, summaries, "self-testing questions, etc.

COOPER, LENNA FRANCES AND OTHERS

Nutrition in health and disease. By Lenna F Cooper Edith M. Barber and Helen S Mitchell. Associate author Henderika J Rynbergen. Eleventh edition revised and reset. 133 illustrations, including 4 plates in color Philadelphia J B Lippincott Company 1950. 744 p. illus. (part col d) 21 cm. $4 00 1516

Contents (abridged) Part I, Principles of nutrition: Nutrition and optimum health Carbohydrates. Fat and related substances. Proteins. Energy metabolism Digestion, absorption and cell metabolism. Recommended dietary allowances *Nutrition during pregnancy* and lactation Nutrition during infancy Nutrition for adults, young and old. Part II, Diet in disease Overweight and underweight. Fevers and infections Deficiency diseases. Diabetes mellitus. Gastric disorders. Peptic ulcer Diseases of the liver and the biliary tract. Allergy—skin diseases. Cardiovascular diseases. Diseases of the urinary tract. Diseases of the musculoskeletal and the nervous systems. Preoperative and postoperative diets. Food requirements in diseases of infancy and childhood. Reference books and scientific journals. Glossary Index.

Note: (1521) A long established textbook and reference manual. It is addressed primarily to student nurses. However it is so comprehensive and so explicit that it is useful also as a reference book in physicians' offices, the offices of child care agencies, etc. The tenth edition was published in 1947 Parts of this edition were revised to make them conform to the 1949 revision of the National Research Council's *Recommended dietary allowances* and other parts to bring them in line with the American Dietetic Association's *A manual for teaching dietetics to student nurses*, 1949 Other chapters and parts have been revised where necessary to bring them abreast of newly developed knowledge of nutrition and diet therapy As in previous editions there are several reference features, including an extensive bibliography.

COURCHAINE, ARMAND JOSEPH

Chemistry visualized and applied. Edited by M. Cordelia Cowan. Drawings by Richard Albany New York G P Putnam s Sons, 1950 687 p. illus. 22 cm. $5.50. 1517

Contents (abridged) Part one, Fundamentals and applications of inorganic chemistry: Chemistry and physics. Matter. Energy Nonmetals and metals. Oxides—compounds of oxygen. Solutions. Acids. Bases. Salts. Ionization and its applications. Part two, Fundamentals and applications of organic chemistry: Hydrocarbons. Alcohols and ethers. Aldehydes and ketones. Organic acids, salts, esters, and amines. Nitrogen derivatives—urea and uric acid. Alkaloids and chemotherapeutic drugs. Part three, Introduction to biological chemistry: Carbohydrates. Fats and related compounds. Amino acids and proteins. Sterols and vitamins. The chemistry of hormones. Enzymes. Digestion. Metabolism. The chemistry of blood and milk. Urine. Appendixes. Index.

Note: An inclusive survey designed primarily for student nurses but useful also to students in other fields where a knowledge of chemistry and biochemistry is important but is subordinate to other sciences. The essentials of not only general chemistry but also of biochemistry are covered descriptively Comprehension on the part of the reader is facilitated by the liberal use of structural diagrams, graphic illustrations, and references to applications of the chemical knowledge in the understanding of life processes. The author is a member of the faculty of Hahnemann Medical College and Hahnemann Hospital School of Nursing, Philadelphia.

CULBERTSON JAMES T AND M CORDELIA COWAN

Living agents of disease. New York G. P Putnam's Sons 1952 624 p. illus. 22 cm. $5.50. 1518

Contents (abridged) Unit one, Introduction: Ways by which organisms produce disease. Social significance of living agents of disease. Unit two, The nature of living agents of disease: Bacteria. Spirochetes. Yeasts and molds. Rickettsiae and allied organisms. Viruses. Protozoa. Arthropods. Organizations participating in the study of organisms. Unit three, Methods in the study of living agents of disease: The laboratory Disinfection and sterilization. The study of bacteria. The study of spirochetes and yeasts and molds. The study of rickettsiae and viruses. The study of protozoa, helminths, and arthropods. Collection of specimens and use of experimental animals. Unit four The human body in relation to other organisms: Natural bacterial flora of the body. Infections of the human body Resistance to organisms and factors which determine infectivity of organisms. Response of the body to antigens of other human beings. Unit five, The control and eradication of living agents of disease: Prevention of spread of disease. Increment of resistance of potential hosts. Organizations for the control and eradication of infectious disease. Some of the laws concerned with or relating to infectious diseases. Unit six, Bacterial organisms and the diseases they cause. Unit seven, Other organisms and the diseases they cause: Pathogenic spirochetes and spirochetal infections. Pathogenic yeasts and molds and mycotic infections. Pathogenic rickettsiae and allied organisms and their infections. Pathogenic viruses and viral infections. Parasitic protozoa and protozoal infections. Parasitic helminths and helminthiases. Primary arthropodal pathogens and arthropodal disease conditions. Man's potential ability for survival. Index.

Note: An introductory treatment that gives a broad view of the role of microorganisms and some larger organisms in disease. The book is organized so that it may be used as a text in nursing schools

and other educational institutions. Some information is included on diagnosis and treatment of specific diseases caused by living organisms, but the book is not intended as clinical manual.

FRANCIS CARL C., AND G CLINTON KNOWLTON

Textbook of anatomy and physiology Second edition. With 365 text illustrations and 31 color plates St. Louis The C V Mosby Company 1950 624 p illus. (part col d) 22 cm. $5.00 1519

Contents (abridged) Unit I, The body body tissues, environment. Unit II, Posture and movement. Unit III, Integrative mechanisms. Unit IV Maintenance of the body tissues. Unit Reproduction. Glossary Index.

Note. A standard text for use in nursing schools. Anatomy and physiology are correlated rather than presented as separate subjects. The illustrations are of high quality The first edition was published in 1943 The original book was extensively rearranged and revised for this edition.

FRANCIS CHARLOTTE A., AND EDNA C MORSE

Fundamentals of chemistry and applications chosen from inorganic, organic, and biochemistry with applications in physiology microbiology nutrition, and everyday concerns. Third edition. New York The Macmillan Company 1951 545 p. illus. 22 cm. $4.50. 1520

Contents (abridged) Substances and how they are recognized mixtures. Physical and chemical change. Oxygen the element. Catalytic agents. Chemical changes may involve energy transformations. Introduction to bases, acids, and salts. Valence. A study of water. Solutions. Colloidal solutions. Emulsions. Ions and ionization. Oxidation reduction. An introduction to organic chemistry Proteins. Chemistry of digestion. Function and fate of glucose, fats, and proteins in the body Important physiological functionings of electrolytes. Index.

Note. An introductory text for students of nursing, home economics, and other fields where some knowledge of basic chemistry is essential because of its application to life processes. The treatment is simple and largely descriptive. However more ground is covered than in some introductory texts for students of nursing. The second edition was published in 1943 Extensive and important revisions are apparent in this edition.

GOOSTRAY STELLA, AND J RAE SCHWENCK

A textbook of chemistry Sixth edition. New York The Macmillan Company 1950 401 p. illus. 22 cm. $3 75 1521

Contents Introduction A chemist looks at nursing. We live in changing world. Our complex world is made of simple things. Chemical shorthand and weight relationships. From chemical activity to nuclear research. Types of chemical changes and their control. How the states of matter are explained. Oxygen. Redox. The most important compound to life Behavior of substances in water. The chemical opposites and their reaction products. Electrically charged particles in solution Two typical families of elements. The most versatile element. The field of organic chemistry Simple derivatives of the hydrocarbons. Cyclic organic compounds. The chemical nature and functions of food. Chemical changes within the body Chemicals that control body processes. The chemistry of the blood. Bibliography Appendix. Index.

Note (2837) A long-established textbook used in schools of nursing. It contains selection of basic information from general chemistry inorganic chemistry and biochemistry of interest in nursing. Topics such as water solutions, the chemistry of food, and the chemistry of the blood are discussed more fully than topics less directly related to nursing. Each chapter is prefaced by an outline and concludes with summary both being devices to facilitate comprehension on the part of the reader. The fifth edition was published in 1940. The chapter outlines are new feature in the present edition, and there are numerous other changes.

GREISHEIMER, ESTHER MAUD

Physiology and anatomy 478 illustrations, including 52 in color Sixth edition. Philadelphia J B Lippincott Company 1950 841 p. 21 cm. $5 00 1522

Contents (abridged) Unit one, The body as an integrated whole: Introduction to anatomy Introduction to physiology Unit two, The erect and moving body: The skeletal system. The muscular system. Anatomy of the muscular system. Unit three, Integration and control of the body by the nervous system. Unit four Maintaining the metabolism of the body: Blood, tissue fluid and lymph. Anatomy of the circulatory system. Physiology of the circulatory system. Anatomy of the respiratory system. Physiology of the respiratory system. Anatomy of the digestive system. Physiology of the digestive system. Anatomy of the excretory system. Physiology of the excretory system and water balance. The regulation of the body temperature. Anatomy and physiology of the glands of internal secretion. Unit five, The reproductive system. Unit six, Aviation: Physiology of aviation. Reference books and articles. Glossary Index.

Note. (2838) A standard introductory textbook for use in nursing schools. For work of this level it contains large amount of material but is well organized and adequately equipped with summaries and illustrations to facilitate study No major changes have been made in this edition as compared to the fifth edition published in 1945, but several chapters have been rewritten and extensively revised, and significant material has been added to other chapters. The author is Professor of Physiology in the School of Medicine of Temple University

JOHNSON, DORIS

Modern dietetics. Edited by Hazel E. Munsell. New York G P Putnam s Sons, 1951. 529 p. illus. (part col d) 21 cm. $4 95 1523

Contents (abridged): Part I: Nutrition and health. Proteins. Carbohydrates. Energy metabolism. Vitamins. Water and cellulose. Planning the adequate diet. Food habits and customs of various nationality groups. Pregnancy and lactation. Infant feeding. Feeding of children. Nutrition for the aged. Part II: Diet therapy Modifications of the normal diet—in selection of food—in consistency—in energy value—in protein content—in fat content—in carbohydrate—in mineral content. Part III: Introduction to the study of cookery Food hygiene. Beverages. Eggs. Cereals. Soups. Vegetables. Fruits. Salads and salad dressings. Desserts. Cheese. Meat, fish and poultry Part IV Appendix: Calculation of food values. General references. Index.

Note. An inclusive, introductory text in which the fundamentals of nutrition, normal and special dietary requirements, the principal foods, and diet-planning are all discussed. There is somewhat more emphasis on general aspects of dietetics even though the book was planned primarily for student nurses. There are 45 tables of reference data and many typical menus.

MILLARD NELLIE D., AND BARRY G KING

Human anatomy and physiology Third edition. 309 illustrations with 55 in color 215 by Lucille Cassell Innes. Philadelphia W B. Saunders Company 1951 596 p. illus. (part col d) 21 cm. $5 00 1524

Contents (abridged) Unit one, The body as an integrated whole. Unit two, The erect and moving body: The skeletal system. Articulations. The physiology of muscle. Unit three, Maintaining the metabolism of the body: Blood, lymph and tissue fluids. The circulatory system The lymphatic system. The respiratory system. The digestive system. Absorption and metabolism. Structure and function of the urinary system. Regulation of body temperature. The endocrine system. Unit four, Reproduction of the human being. Unit five, Integration and control of the body by the nervous system: Nervous tissue. Initiation and propagation of the nerve impulse. The spinal cord. The brain and cranial nerves. The autonomic nervous system. The special senses. References. Index.

Note. (1521*) An established introductory textbook designed primarily for use in schools of nursing, but used also in courses in liberal arts colleges and other courses where an abbreviated treatment is desired. 15 new illustrations have been added in this edition and there has been some revision of the text.

NETER ERWIN

Medical microbiology for nurses. Second edition. With 130 illustrations 9 in color

Philadelphia F A. Davis Company 1951. 470 p. illus. 23 cm. $4 00 1525

Contents (abridged) Introduction—the scope of medical microbiology Section I, General bacteriology: Morphology physiology, ecology and classification of bacteria. Destruction of bacteria and other micro-organisms. Section II, Immunology: Antigens and antibodies. Immunity, immunization and serum therapy Anaphylaxis and allergic diseases. Blood groups, blood transfusion reactions and hemolytic disease of the newly-born. Section IV Special bacteriology: Staphylococci and staphylococcal infections. Streptococci and streptococcal infections. Pneumococcus and pneumococcal infections. The gram-negative cocci (Neisseriae) and allied infections. The aerobic, gram negative, enteric bacilli and allied infections The proteus, alcaligenes and pseudomonas groups and allied infections. Vibrio comma and Asiatic cholera. The genus Brucella and brucellosis. Bacterium tularense and tularemia. The genera Hemophilus and Moraxella and allied infections. Pasteurella pestis and plague. Donovania and granuloma inguinale. The genus Corynebacterium and diphtheria. The genus Mycobacterium and allied infections. The genus Bacillus and anthrax The genus Clostridium and allied diseases. The spirochetes and allied infections. The normal bacterial flora of the human body General bibliography Glossary Index.

Note An introductory textbook that provides concise survey of those aspects of microbiology that are of particular interest in nursing. The role of microorganisms in disease, their control by disinfection and sterilization, and their identification are the aspects that are emphasized. Most of the chapters are short; for example, the one on rickettsiae and rickettsial diseases runs to only seven pages; but in it this class of organism is identified, the diseases due to it are briefly described, the vectors are named, the diagnostic tests are described, and control methods are outlined. In addition, there are twelve references to the literature. The first edition appeared in 1948. In the second edition short accounts of antibiotics, such as aureomycin, and of other new developments have been added.

Peplau Hildegard E.

Interpersonal relations in nursing a conceptual frame of reference for psychodynamic nursing. Foreword by R. Louise McManus. New York G P Putnam s Sons 1952 330 p. illus. 21 cm. $5.00 1526

Contents: Part I, Phases and roles in nursing situations. A definition of nursing. Phases of nurse-patient relationships. Roles in nursing. Part II, Influences in nursing situations: Human needs. Interferences to achievement of goals. Opposing goals. Unexplained discomfort. Part III, Psychological tasks Learning to count on others Learning to delay satisfaction. Identifying oneself. Developing skills in participation. Part IV Methods for studying nursing as an interpersonal process: Observation, communication, and recording. Selected bibliography (by topics) Index.

Note: A well written book on applied psychology in nursing. It is written throughout in the terms of nurse-patient relationships. As background to the discussion of these, the author delineates the principles of behavior in terms that will enable the student nurse to relate them to her work. The author is Instructor in Nursing Education at Teacher's College, Columbia University

Proudfit Fairfax Throckmorton and Corinne Hogden Robinson

Nutrition & diet therapy Tenth edition. New York The Macmillan Company 1950 950 p. illus. (part col d) 22 cm. $4 50. 1527

Contents (abridged) Section I, Normal nutrition: Food and its relation to health Proteins. Carbohydrates. Fats Mineral elements. The fat-soluble vitamins. Water-soluble vitamins. Planning diets for adequacy and economy Feeding the foreign born. Section II, Normal nutrition in special conditions: Diet during pregnancy and lactation. Feeding during infancy Feeding the aged. Section III, Diet therapy Deficiency diseases. Diet in obesity and underweight—fevers and infections—disturbances of the stomach and duodenum—diseases of the intestinal tract—diabetes mellitus—glandular disturbances—diseases of the kidney—anemias—gout and arthritis. Section IV Practical applications of nutrition—elementary cookery Section Recipes. Tables: Composition of foods. Fruits and vegetables classified as to carbohydrate content. Sodium and potassium content of foods. Acid-producing foods. Alkali producing foods. Cholesterol content of foods. Tables for height and weight. Correlation of lectures and laboratory work in nutrition and cookery courses. Bibliography Additional references. Recipe index Index.

Note: (1334) A long established (The first edition was published in 1918) textbook for use in schools of nursing and reference manual for graduate nurses. It is useful to public health workers and physicians also. In it are covered the basic knowledge of food and nutrition and also wide range of specific information on standard and special diets, cookery and recipes. The sixth edition was published in 1944. In the present edition many changes have been made in both the text and tabular matter. A number of chapters have been extensively rewritten and the book has been revised wherever necessary to align it with the American Dietetic Association's *Manual for teaching student nurses.*

Stern, Frances

Stern s applied dietetics the planning and teaching of normal and therapeutic diets. Revised by Helen Rosenthal, Pearl C. Baker and Wilma A. McVey Third edition. Baltimore The Williams & Wilkins Company 1949 293 p. illus. 26 cm. $5 00. 1528

Contents: Part I, The daily food requirements of the body The construction of the normal diet. The construction of the therapeutic diet. Environmental factors that influence the effectiveness of the diet. The education of the patient on the normal diet. The education of the patient on the therapeutic diet. Part II, Tables to simplify the computation of the diet. Part III, Dietary outlines. Part IV Typical diets and menus.

Note: (2345) A standard book for nursing students, graduate nurses, public health workers, and others with professional interests in dietetics. It is based on long career in dietetics in the department of the Boston Dispensary that was eventually named the Frances Stern Food Clinic in honor of the author. The present edition was prepared after the author's death by the present chief of the Frances Stern Food Clinic and two other of her former associates. In comparison to the preceding edition, Part is not significantly changed, but the tables, dietary outlines and diets in the subsequent parts have been revised to bring them in line with present knowledge of food composition, nutritive requirements, etc. Part II now contains 42 tables.

University of Kansas. School of Medicine

Therapeutic meal plans a new diet manual. Prepared by The Department of Dietetics and Nutrition, University of Kansas School of Medicine. Edited by Virginia Toews, Berdena Rosenow and Ruth Gordon. Lawrence University of Kansas Press 1952 111 p. 22 cm. $3.00 1529

Contents (abridged) Routine hospital meal plans. Liquid variations. Carbohydrate, protein, fat variations Salt variations. Mineral variations. Ash variations Fiber variations Mechanical and chemical variations. Miscellaneous. Calorie variations. Glucose-value variations. Pregnancy and lactation. Infant and child feeding Test diets. Additional tables. Index.

Note This manual is intended to provide the medical and nursing staffs of hospitals with examples of meals which can be readily adapted to meet specific requirements of patients. Each type of diet includes listing of necessary and additional foods, foods to omit, special rules, suggested menu, and the total vitamin and mineral content of each meal plan.

Witton Catherine Jones

Microbiology with applications to nursing. New York McGraw Hill Book Company Inc., 1950 692 p. illus. 24 cm. (McGraw Hill series in nursing, Lucile Petry consulting editor) $4 75 1530

Contents (abridged) Part one, The basic structure and activities of microorganisms: The morphology of bacteria. The physiology of bacteria. Techniques of microbiology Part two, The control of microorganisms Control of undesirable microorganisms by physical means. Chemical disinfectants and their use Control of organisms on and in the human body Part three, Sources and modes of infection. Part four, Infection and immunity Part five, Introduction to the study

of pathogens. Part six, The pathogenic bacteria: *Salmonella typhosa*. Other bacteria of enteric infections. The *Pseudobacteriaceae*. *Corynebacterium diphtheriae* and other nonsporing rods of medical importance. The Diplococci and Neisseriae. The Streptococci and the Micrococci. The pathogenic spore-forming bacilli. *Mycobacterium tuberculosis* and *Mycobacterium leprae*. The pathogenic spirochetes. Part seven, Pathogenic organisms other than bacteria. The Rickettsiae. The filtrable viruses. The pathogenic Actinomycetes and fungi. The pathogenic protozoa. The pathogenic worms. Appendixes. Laboratory methods. Literature and teaching aids. Classification of medically important Schizomycetes. Index.

Note. In this introductory book there is presented both general and specific information on bacteria and other microorganisms (together with few that are not microscopic) of pathogenic interest. The book is addressed particularly to nurses but the information presented is of background nature, that is to say no attempt is made to cover fully such matters as the specific techniques of nursing patients with communicable diseases. Most of the space is devoted to general control matters which are of interest in such fields as public health and to descriptions of specific organisms. The illustrations include many diagrams of lif cycles. The author is Associate Professor of Biology in Simmons College.

SPECIAL TYPES OF NURSING

ALEXANDER, EDYTHE LOUISE

Operating room technique. Second edition. With 668 illustrations. St. Louis The C. V Mosby Company 1949 765 p. illus. 26 cm. $10.00 1531

Contents: General arrangement of an operating room for general surgery Care and cleaning of the operating rooms. Nursing personnel of the operating room. History of asepsis. Sterilization. Wound healing, treatment, and preparation of operative areas. The care and sterilization of equipment. Suture materials. Anesthesia. Standardization of duties and procedures. Surgical positions. Draping of the operative field. Instruments, needles, and suture materials. Nose, mouth, throat, and neck operations. Chest operations. Abdominal incisions. Digestive system. Small intestine. Liver gall bladder bile duct, pancreas, and spleen. Large intestine. Lower sigmoid, rectum, and anal region. Genitourinary system. Operations upon the genitourinary system. Vaginal gynecologic operations. Abdominal gynecologic operations. Reconstructive surgery of bones, joints, and tendons Operations upon the spinal cord Vascular operations. Index.

Note. (2832) A nursing school textbook and reference manual in which detailed directions for all nursing procedures carried out in the operating pavilion of modern hospital are described in detail. In addition to the specific descriptions, background information is supplied in the first eight chapters and in sections of subsequent chapters. In discussing specific operations, there is usually brief note on the anatomy of the region and definition of the condition for which the operation is being performed. These are followed by concise instructions on necessary equipment, anesthesia, positioning of the patient, operative preparation, draping, etc. Another useful feature is the inclusion of illustrations of instruments. The first edition of the book was published in 1943. Although intended for the same audience as the first edition, the book has now been revised and much expanded. There are three times as many illustrations and substantially more text in the second edition than in the first.

CROSSEN ROBERT JAMES AND ANN JONES CAMPBELL

Gynecologic nursing. Fourth edition. With 167 illustrations, including two in color St. Louis The C. V Mosby Company 1951 256 p. illus. (part col d) 22 cm. $3 75 1532

Contents: Points in anatomy Points in physiology Gynecologic symptoms and their significance Gynecologic history and examination. Pelvic infections. Uterine displacements, injury to the pelvic floor fistulae. Extrauterine pregnancy Tumors of the uterus. Ovarian tumors. Malformations. Disturbances of function Gynecologic treatment methods. Nursing procedures. Public health aspects of gynecologic nursing. Glossary Index.

Note: (1111*) An introductory textbook for student nurses. Obstetric nursing is not covered. Instead, the book is limited to nursing techniques in relation to diseases of women. The third edition was published in 1946. This fourth edition is the result of considerable reorganization and revision. The most important change from the standpoint of users of the book is the placing of the material on nursing care of disease in the chapter where the disease is described. The first-named author is Assistant Professor of Clinical Gynecology and Obstetrics in Washington University School of Medicine and the second-named author is Instructor in Nursing in the School of Nursing of the same university

ELIASON, ELDRIDGE LYON AND OTHERS

Surgical nursing, by Eldridge L. Eliason, L. Kraeer Ferguson, and Lillian A. Sholtis. Ninth edition, revised and reset. 336 illustrations including 9 subjects in full color Philadelphia J B Lippincott Company 1950. 728 p. illus. 21 cm. $4 50 1533

Contents (abridged) Unit one, Introduction to surgical nursing: The surgical nurse and her patient. Inflammation—wound care. Antisepsis and asepsis. Preoperative nursing care. The patient in the operating room. Postoperative care. Tumors and malignancy Unit two, Nursing in conditions of the respiratory system. Surgery of nose, throat, lungs and pleura. Unit three, Nursing in conditions of the circulatory system, the blood and the blood-forming organs. Unit four, Nursing in conditions of the alimentary system: Surgery of lips, mouth, tongue and esophagus. Surgery of the abdomen. Unit five, Nursing in conditions of the urinary tract—male urinary Unit six, Nursing in conditions of the integumentary system (including subcutaneous and areolar tissue and the breasts) Unit seven, Nursing in conditions of the eye and the ear. Unit eight, Nursing in conditions of the endocrine glands. Unit nine, Nursing in conditions of the nervous system. Unit ten, Nursing in conditions of the musculoskeletal system. Unit eleven, Nursing in conditions of the reproductive system. Unit twelve, Nursing in surgical communicable diseases. Unit thirteen, Operative aseptic technic. Index.

Note (1847) A long established textbook used in courses offered to student nurses. Although still designed as an introduction to the techniques of surgical nursing, this edition represents an extensive rewriting with much new material added. The material presented is not limited to nursing techniques but includes enough of anatomy and physiology "to enable the nurse to grasp intelligently the principles and treatment of surgical diseases and to appreciate her responsibilities in the care of her patient. The techniques of postoperative care are well covered. Selected literature references are included in all of the sections. Two of the authors are associated with the University of Pennsylvania School of Medicine and one of them is member of the faculty of the Yale University School of Nursing.

ELMAN ROBERT

Surgical care a practical physiologic guide. New York Appleton-Century-Crofts, Inc., 1951 586 p illus. (part col d) 25 cm. $10.00 1534

Contents: Introduction. Systemic reaction to trauma. Psychogenic factors in surgery Nutrition in surgery Physical factors in surgery. Basic preoperative care. Anesthesia, by M. Sakiad. Inhalation therapy and resuscitation, by M. Sakiad. Routine postoperative care. Chemotherapy in surgery Postoperative pain Pulmonary complications. Thromboembolic disease. Postoperative renal dysfunction. Surgical shock. Wound complications. Abdominal complications. Postoperative fever. Thermal burns. Author index. Subject index.

Note: A textbook on convalescent care of surgical patients. It covers care both before and after operations; and there are also discussions of anesthesia and resuscitation which are, of course, related to the operation itself. All of the material is written from the standpoint of the basic physiological principles. Nevertheless, much of the exposition is specific and directly related to the daily work of house physicians and nurses. For example, formulas for the tube feeding of patients are included. The author is Professor of Clinical Surgery of the School of Medicine of Washington University

FADDIS MARGENE O , AND JOSEPH M. HAYMAN JR.

Care of the medical patient a textbook for nurses. New York McGraw Hill Book Company Inc. 1952 654 p. illus. 23 cm. (McGraw Hill series in nursing, Lucile Petry consulting editor) $4 50. 1535

Contents (abridged) Part one, Introduction What are the qualifications for good medical nursing? The importance of understanding the patient. The examination of the patient. Some important reactions to injury Part two, The patient's needs are the nurse's problems: The nature and importance of special needs. The patient with

nurse, acute illness. The patient with long-term illness. The aging patient. The patient with disturbances of consciousness and of muscle movements. Part three, Special treatments and diagnostic procedures: The administration of oxygen. The aspiration of fluids from body cavities. Part four: Nursing patients with particular diseases. Visual aids. Index.

Note: In writing this book the authors took into account (1) the increasing number of patients with chronic illnesses such as the aged, (2) the importance of psychological rapprochement between nurse and patient and (3) the nurse's part in the education of the patient and his family to care for himself and to live with his illness. An understanding of these new factors in successful nursing is stressed as an important adjunct to technical knowledge and skills. The greater part of the volume (473 pages) is devoted to discussions of particular diseases, written from the nurse's standpoint. This part has considerable reference value for graduate nurses. The authors are faculty members of the School of Nursing and the School of Medicine of Western Reserve University

FELTER, ROBERT KENNETH, AND OTHERS

Surgical nursing. By Robert K. Felter Frances West, and Lydia M. Zetzsche, and associates. Sixth edition. With 363 illustrations 7 in color Philadelphia F A. Davis Company 1952 768 p. illus. (part col'd) 23 cm. $4.50 1536

Contents (abridged) Unit I, Introductory and basal pathological states: Inflammation and infection. Unit II, Surgical skills and nursing: Preoperative nursing care. Anesthesia. General postoperative nursing care (during normal convalescence) Unit III, The respiratory system: Surgical treatment of pulmonary tuberculosis and nursing care. Unit IV Diseases of the cardiovascular and the lymphatic systems. Unit Diseases of the gastrointestinal system: Surgery of the stomach and duodenum and nursing care. Hernia and nursing care. Unit VI, Genitourinary surgery: Surgical procedures and postoperative nursing care. Unit VII, Surgery of the osseous and muscular systems: Diseases of the osseous system. Tuberculosis of the osseous system. Sprains, dislocations, and transportation of the injured. Fractures. Unit VIII, Endocrine diseases. Unit IX, Surgery of the nervous system. Unit X, Eye, ear nose, and throat. Unit XI, Integumentary system: Burns. Unit XII, The female reproductive system. Unit XIII, Plastic and reconstructive surgery Unit XIV The nurse in the operating room. Index.

Note: (2169) A textbook for use in schools of nursing. Classes of diseases and individual diseases which are treated by surgery are described from the nurse's viewpoint. In general for each disease there is an outline of the basic anatomy and physiology some discussion of pathology etiology and description of signs and symptoms However, the main emphasis is on pre- and post-operative care. The fifth edition was published in 1948. It was extensively revised for this edition Many changes were made in the text and more than 100 of the illustrations are new

FUNSTEN ROBERT VIVIAN AND CARMELITA CALDERWOOD

Orthopedic nursing. Second edition. With 208 text illustrations. St. Louis The C. V Mosby Company 1949 660 p. illus. 22 cm. $4.25 1537

Contents (abridged) Unit 1, Introduction for the teacher and the student: Orthopedic principles in general nursing. Unit 2, General features of orthopedic nursing: Nursing care of cast patients. Nursing care of the orthopedic surgical patient. Physical therapy Unit 3, Congenital and acquired deformities. Unit 4, Bone disorders in children. Unit 5, Acute and chronic inflammation of joints. Unit 6, Fractures, dislocations, sprains, and other joint injuries Nursing care of the fracture patient. Amputations. Nursing care following amputation. Nursing care of patients in traction. Unit 7 Static deformities and disabilities. Unit 8 Conditions resulting from injury or disease of the brain, spinal cord, and nerves Nursing care of patients with poliomyelitis Nursing care of patients with cerebral palsy Progressive muscular dystrophy Unit 9 Bone tumors. Unit 10, Conditions of the low back. Unit 11 Bone disorders in adolescent and adult life. Osteochondritis Bone diseases in adult life. Slipped femoral epiphysis. Glossary Index.

Note: An outstanding textbook on the nursing of orthopedic patients. It is used mainly as textbook in courses offered to nursing school students who are preparing for this specialty but it is useful also to graduate nurses working in other branches of nursing who are called upon to care for orthopedic cases. The specialized techniques of orthopedic nursing are covered in full detail and the necessary background of medical information on diseases that cause deformities is included also. The book is written in direct style that is easy to understand and is well illustrated. The first edition was published in 1943. The scope and content of this edition are essentially the same except for new material on such matters as the nursing care of paraplegic patients, early ambulation, and the use of hot, moist packs in the treatment of poliomyelitis. The number of pages has been increased by 58 and the number of illustrations by 27 A selection of recent literature has been added to the lists of references.

GILBERT, RUTH

The public health nurse and her patient. Cambridge Mass. Published for The Commonwealth Fund by Harvard University Press, 1951 348 p. 24 cm. $3 75 1538

Contents: Mental hygiene in public health nursing. Teaching health. Nurse and maternity patient. The child in his family Nursing the sick patient. Relationships with co-workers. Bibliography Index.

Note: (1973) An illuminating presentation of attitudes and relationships among patients and nurses engaged in public health nursing. The book is addressed to the public health nurse but it is devoted mainly to the patients. Family situations and typical problems of individual patients are both discussed thoroughly together with indications of the nurse's part in helping to solve them. The first edition appeared in 1940. This edition represents an extensive revision based on larger experience and upon the literature published since 1940.

HETHERINGTON HUBERT WILLOWS, AND FANNIE W ESHLEMAN

Nursing in prevention and control of tuberculosis. Revised third edition. Illustrated with photographs and charts. New York G P Putnam's Sons, 1950 361 p. illus. 21 cm. $4.50 1539

Contents. Pulmonary tuberculosis—history epidemiology etiology, pathology symptoms. The diagnosis of tuberculosis. Treatment of pulmonary tuberculosis. The management of pulmonary tuberculosis and its complications. Tuberculosis and pregnancy Collapse therapy in pulmonary tuberculosis. Tuberculosis in infants and children. Tuberculosis case-finding. Prevention of tuberculosis among nurses. Nursing in the treatment of tuberculosis. The prevention of tuberculosis. Tuberculosis dispensary or chest clinic. Family health service Family case studies. Rehabilitation. Appendix. Index.

Note: A nursing college textbook in which information on the special nursing techniques of tuberculosis nursing is combined with general and public health on this disease. There is long chapter on the prevention of tuberculosis and related information in other chapters. The book thus has potential value for social case workers and other persons outside the nursing profession who have professional interest in the tuberculosis problem. However, its main purpose is the information and instruction of student and graduate nurses. Selected literature references are included. The first named author is Chief of Clinic of the Henry Phipps Institute of the University of Pennsylvania and the second author is Supervisor of Public Health Nursing in the same Institute.

KALKMAN MARION E

Introduction to psychiatric nursing New York McGraw Hill Book Company Inc., 1950 336 p. illus. 24 cm. (McGraw Hill series in nursing, Lucile Petry consulting editor) $4.50 1540

Contents (abridged) Part one, Preliminary considerations: Learning to observe the psychiatric patient. Part two, Understanding the patient. Part three, What can be done for the patient: Patient's history Physical methods of treatment. Psychological and social methods of treatment. Teamwork in psychiatric treatment. Part four, How the psychiatric nurse works: Discussion of some general concepts of psychiatric nursing The problem of restraint. The problem of suicide. Psychiatric nursing orders and attitudes. The nurse's first experiences on psychiatric service. Talking to psychiatric patients. Part five, Suggestions for the nursing care of various types of psychiatric patients: The nurse and psychiatric reaction patterns—hyperactive and hypoactive states. Anxiety, acute, and chronic

organic reactions. Paranoid, panic, and anxiety states. Hysterical and neurasthenic reactions and personality disorders. The psychiatric nursing care of the individual patient. Index.

Note: A clearly written book addressed to student nurses and graduate nurses who are acquainted with basic nursing techniques. Practically all of the space is devoted to psychological and psychiatric topics which are directly important in psychiatric nursing or are useful as background. Little is included on general nursing procedures. Extensive lists of the related literature are included. The book is based on the author's extensive experience in psychiatric nursing and in the teaching of psychiatric nursing to others.

KNOCKE FREDERICK JOHN, AND LAZELLE S KNOCKE

Orthopaedic nursing. 312 illustrations. Philadelphia F A. Davis Company 1951 682 p. illus 23 cm. $5.50 1541

Contents (abridged) Unit II, Psychology: Psychology of orthopaedically handicapped, by H. B. Holodnak. Unit III, Rehabilitation: Rehabilitation—a composite science, by Col. J. N Smith, Jr. Role of nurse in rehabilitation. Unit Bed patients. Care of bedfast orthopaedic patient. Orthopaedic surgical patient. Care of cast patient. Care of traction patient. Patient on frame. Unit VI, Up patients. Care of semiambulatory and ambulatory patients. Unit VII, Home care Orthopaedic implications in community nursing, by M. Kerr. Unit VIII, Special therapies: Physical therapy by E. C. Addams. Occupational therapy by E. H. Bruker Daily-activity teaching, by M. E. Brown. Unit IX, Applying fundamentals of orthopaedic nursing. The poliomyelitis patient. Appendix. Index.

Note A textbook that is introductory to this specialized field of nursing but which nevertheless provides full and explicit discussions of present-day techniques including the psychological and occupational therapy aspects. Selected bibliographies and lists of visual aids accompany the chapters. The first-named author is an orthopedic surgeon on the faculty of the College of Physicians and Surgeons of Columbia University and the second author, his wife, is a nurse who has specialized in orthopedic nursing.

LYNCH THERESA INES

Communicable disease nursing. Second edition. With 131 text illustrations and 4 color plates. St. Louis The C. V Mosby Company 1949 776 p. illus. (part col d) 22 cm. $4 75 1542

Contents (abridged) Part I, Orientation to communicable disease nursing Preparation for communicable disease nursing. Prevention and control of communicable diseases. Vaccines, immune sera, and serum reactions. Sulfonamides and antibiotics. Medical asepsis. Part II, Medical aspects and nursing care of communicable diseases: A, Diseases spread mainly by discharges from the nose and mouth. B, Diseases spread mainly through discharges from the skin and mucous membranes. C, Diseases spread mainly through discharges from the gastrointestinal tract. D Diseases transmitted mainly by infected animals. E, Diseases transmitted mainly by infected insects. Part III, Tuberculosis. Part IV The venereal diseases. Part Communicable diseases and the community Appendices Morbidity reporting requirements. Precaution technics suggested for general hospitals. Nursing procedures Glossary Index.

Note. (1533) A textbook for use in nursing schools. In it the special techniques of communicable disease nursing are described fully and, in addition, enough information is included on medical aspects such as etiology sources of infection, course of the disease, complications and treatment to give the nurse an adequate background for informed and sympathetic nursing. There is a special chapter on home care which is of interest both to the public health nurse and to nurses practicing privately. The first edition was published in 1942. For this edition three chapters were added and numerous revisions were made in those carried over. Many of the changes were a reflection of the advances in the control of communicable diseases made during World War II.

MODELL WALTER

Handbook of cardiology for nurses the disease the patient, modern concepts of treatment. Foreword by Edna L. Fritz. New York Springer Publishing Company Inc. 1952 246 p. illus. 22 cm. $3.50 1543

Contents: Anatomy and physiology. Pathology and pathologic physiology The cardiac examination. Signs and symptoms of heart disease. X-rays, electrocardiography and other instrumental procedures. Laboratory tests. The course of heart disease. Heart attack. Heart failure. Disorders of cardiac rhythm. Etiology of heart disease. Congenital heart disease. Rheumatic heart disease. Luetic heart disease. Hypertensive heart disease. Arteriosclerotic heart disease. Bacterial endocarditis. Less common forms of heart disease. Functional heart disease. Complications of heart disease. Emergencies in heart disease. Treatment of heart disease General nursing care. Drugs. Surgery Climatotherapy Habits and hygiene. Psychotherapy The outlook for the cardiac patient. Appendix. Index.

Note: Not a textbook but a self-instruction manual and reference book. In it are presented the essentials of heart disease, nursing care in heart disease, drugs and other therapies, all from the standpoint of nurses who are concerned with cardiac patients. The appendix contains a typical low sodium diet and a tabulation of the amounts of sodium in a considerable range of common foods. The author is a member of the faculty of Cornell University Medical College.

MORRISSEY, ALICE B

Rehabilitation nursing. Foreword by Howard A. Rusk. New York G P Putnam's Sons, 1951 299 p. 21 cm. $5 00 1544

Contents: Part I, The meaning of rehabilitation. Historical survey of rehabilitation. Incidence of disability in the United States. Integration of personality in disability The nurse's role in rehabilitation. Part II, Nursing principles and procedures in rehabilitation: Fundamentals of nursing care in rehabilitation. Nursing measures to prevent physical deterioration. Procedures for bladder and bowel rehabilitation. Measures for the prevention and care of decubitus ulcers. Teaching the activities of daily living. Techniques of crutch walking. Care and use of mechanical leg braces. Wheel chairs. The nurse and speech rehabilitation, by Elmer E. Baker Jr. Part III, Nursing practice in rehabilitation: The care of the amputee. The care of the hemiplegic patient. The care of paraplegic and quadriplegic patients. Index.

Note. In this book current techniques in the rehabilitation of physically handicapped persons are presented for nurses. Most of the discussion pertains to the care and teaching of such patients. However this material is presented against the background of the modern viewpoint of full rehabilitation. Thus there is a long discussion of the psychological aspects. Lists of references accompany the chapters, and there are 14 figures. The author is Supervisor of Nursing Service, Department of Physical Medicine and Rehabilitation, Bellevue Hospital.

MULLER, THERESA GRACE

The nature and direction of psychiatric nursing the dynamics of human relationships in nursing Philadelphia J B Lippincott Company 1950 379 p. 21 cm. $5.00. 1545

Contents. Part one, Status of psychiatric nursing: Introduction. Mental illness. Mental institutions. Psychiatric nursing and general education. Psychiatry and medical education. Psychiatric social work and clinical psychology Therapeutic and preventive measures. Part two, Nature of psychiatric nursing: Role of the nurse in psychotherapy Psychodynamics of behavior deviations. Underactive behavior Overactive behavior Psychosomatic viewpoint. Community health aspects. Part three, Direction of psychiatric nursing: Personal qualifications. Inservice education. Psychiatric nursing in the basic curriculum. Psychiatric nursing in advanced professional curricula. Evaluation and research. Bibliography Index.

Note. Rather than a beginner's text, this work is a source book of information on the current status of psychiatric nursing in the United States of America, the special nature of psychiatric nursing as distinguished from other types of nursing, and on the teaching of psychiatric nursing. There is much in it of interest to persons who are responsible for curricula in nursing schools. Also, there is much for the graduate nurse who is considering entering the field of psychiatric nursing or who is generally interested in the social contribution of nursing. Lengthy bibliographies are included in each chapter The author is Associate Professor of Nursing in the Psychiatric Department of Boston University School of Nursing.

NEWTON, KATHLEEN

Geriatric nursing. St. Louis, Mo. The C. V Mosby Company 1950 420 p. illus. 22 cm. $4 75 1546

Contents. Unit I, General background: The aging and the aged. Basic sociopsychologic needs. Employment and economic security Housing in health and during illness. Unit II, Nonspecific

considerations: General hygiene. Nutrition. Unit III, Clinical nursing: Special treatments. Anesthesia and operative care. Nursing in diseases of the gastrointestinal tract. Nursing in cardiovascular renal disease. Nursing in diseases of the ear, nose, and throat. Nursing in diseases of the chest. Nursing in diabetes mellitus. Nursing in diseases of the skin. Nursing in diseases of the eye. Neurological nursing. Psychiatric nursing. Orthopedic nursing. Urologic nursing. Gynecologic nursing. Index.

Note: Both the general aspects and specific techniques associated with the nursing care of aged people are covered in this book. Much attention is given to the importance of viewing the patient as a person and extending sympathetic understanding to him. Diseases of the aged are described from the nurse's viewpoint. The book is designed for use as a text in nursing schools and also for self-instruction purposes. Literature references are included. The author is in charge of Graduate Nursing Education at Cornell University-New York Hospital School of Nursing.

PILLSBURY MARY ELIZABETH AND ELIZABETH JOHANNA SACHS

Nursing care of communicable diseases prophylactic technics for the prevention and the control of disease. Science adviser and editor Jean Broadhurst. Contributors, Jessie Wright and Jane Taylor Torrance. Seventh edition. 146 figures, 23 charts, 3 color plates. Philadelphia J B Lippincott Company 1952 843 p. illus. (part col d) 21 cm. $4 50. 1547

Contents (abridged) Part one, The scientific bases and technics for the control of communicable diseases. Part two, The nursing care of communicable diseases. Part three, Historical review of hospital and public health care of communicable diseases. Part four, Supplementary materials. Index.

Note: ([illegible]) A successful textbook for use in schools of nursing. It assumes on the part of the reader an acquaintance with the basic principles of nursing. In part one such topics as causal organisms, resistance to disease, prophylactic techniques are covered. In part two, the communicable diseases are considered individually and their nursing care is described in detail. The content of part three is obvious from its title. In part four reference data on disinfection procedures, dilutions of literature, cubic and metric tables, etc have been collected. The sixth edition was published in 1943. It was very extensively rewritten in preparing this edition. New chapters were added and new information was inserted in sections and paragraphs carried over. The number of pages was increased by more than 100. The general bibliography was revised so that it now includes chiefly recent books.

SELTZER ALBERT PINCUS

Diseases of the eye, ear nose and throat a textbook for nurses. With the technical assistance of Bernard C Gettes. New York McGraw Hill Book Company Inc., 1950 347 p. illus. 24 cm. $4 50 1548

Contents (abridged) Part one, General considerations. Part two, The eye. Part three, The nose. Part four, The mouth. Part five, The throat and the esophagus. Part six, The larynx and its disorders; the trachea. Part seven, The ear. Part eight, Special subjects. Visual aids. Index.

Note: An inclusive work which covers the basic anatomy, embryology and physiology insofar as these are of concern to nurses but is devoted chiefly to nursing techniques. Techniques are described explicitly. The author's style is lucid. There are short lists of literature references and 16 figures.

STEELE KATHARINE MCLEAN, AND MARGUERITE LUCY MANFREDA

Psychiatric nursing. Fourth edition. 91 illustrations. Philadelphia F A. Davis Company 1951 546 p. illus. 22 cm. 1549

Contents (abridged) Unit I, Historical background. Unit II, Introduction to psychiatric nursing. Orientation. Legal aspects of psychiatric nursing. Mental hygiene and prevention. Unit III, Studying the psychiatric patient: Case study. Staff conferences. Unit IV, Fundamental nursing care: Environmental management. Hygiene. Nutrition. Treatment of physical complaints. Night nursing. Unit V, Overactive, underactive, and convalescent patients. Unit VI, Practical procedures: Charting. Special procedures. Prevention and treatment of hazards. Unit VII, Specific mental disorders: Psychoses with mental deficiency. Psychopathic personality. Psychoneuroses. Organic psychoses. Paranoia and paranoid types. Schizophrenia (dementia praecox). Unit VIII, Therapeutic technics: Psychotherapy. Shock therapies. Educational therapy. Hydrotherapy. Psychosurgery. Unit IX, Psychiatric nursing outside the psychiatric hospital: Care of mental patient in the home. Application of psychiatric principles in the general hospital. Traveling with the mental patient. Psychiatric nursing in public-health work, by W W Warner. Glossary. Index.

Note: ([illegible]) A standard text for graduate and student nurses who are preparing for the specialty of psychiatric nursing. It is outstanding for its full descriptions of nursing procedures in the care of mentally disturbed patients. Therapeutic techniques such as hydrotherapy are described in detail from the nurse's viewpoint. The third edition was published in 19[illegible]. The fourth edition represents a major revision with a large number of new chapters and extensive revision in chapters that were carried over.

WEST JOHN PETTIT AND OTHERS

Nursing care of the surgical patient, by John Pettit West, Manelva Wylie Keller and Elizabeth Harmon. Fifth edition. Formerly *Textbook of surgical nursing* 4th ed., by MacFee and Keller New York The Macmillan Company 1951 500 p. illus. 22 cm. $4.00 1550

Contents: Unit I, Introduction to surgical nursing. Unit II, Fundamental considerations. Unit III, Nursing care. Index.

Note: ([illegible]) A standard textbook for use in schools of nursing. Concise information on diseases treated by surgery accompanies full descriptions of nursing techniques. The style is simple and direct. The section on the operating room which appears in earlier editions has been dropped. The book is consequently shorter. In the sections retained extensive revisions have been made. There are now 70 figures, good selected bibliographies, and a detailed index.

WOODWARD HENRY L. AND BERNICE GARDNER

Obstetric management and nursing With sections on Home deliveries, by William P Gillespie Diseases of the newborn, by Harold F Downing and The public health nurse in obstetrics by F Kirby Harder Fourth edition. 490 illustrations, 7 in color Philadelphia F A. Davis Company 1951 844 p. illus. (part col d) 23 cm. 1551

Contents (abridged) Unit I, The background of obstetric nursing. Unit II, Anatomy and physiology correlation. Unit III, Normal pregnancy and prenatal care: Symptoms, signs and diagnosis of pregnancy. Diet in pregnancy. Mental hygiene of the pregnant woman. Minor disorders of pregnancy. Examinations preliminary to labor. Unit IV, Normal labor and its management with nursing care: Physiology of normal labor. Management of normal labor. Care during normal puerperium. Care of the normal newborn infant. Case study of a normal obstetric patient. Unit V, Home delivery and public health obstetric nursing. Unit VI, Abnormalities of pregnancy and nursing care. Toxemias of pregnancy and nursing care. The hemorrhages of pregnancy and nursing care. Intercurrent conditions of pregnancy and nursing care. Unit VII, Abnormalities and complications of labor. Unit VIII, Obstetric injuries and operative obstetrics. Unit IX, Puerperal complications. Unit X, The abnormal infant and its care. Index.

Note: ([illegible]) One of the standard textbooks used in schools of nursing as an introduction to this nursing specialty. The range of information presented in the text proper is unusually inclusive. Furthermore, the text is supplemented by a high number of illustrations. The inclusion of a section on home delivery is also noteworthy. The third edition was published in 1945. The organization of the book and the main content were unchanged in preparing this edition. However numerous minor changes made necessary by such advances as the introduction of new antibiotic drugs have been made in various sections. More recent literature has been added to the selected bibliographies entitled "Continued study aids," which accompany many of the chapters.

ZABRISKIE, LOUISE, AND NICHOLSON J EASTMAN

Nurses handbook of obstetrics. 377 illustrations, including 8 color plates. Ninth edition completely revised. Philadelphia J B Lippincott Company, 1952 695 p. illus. (part col d) 21 cm. $4 75 1552

Contents (abridged) Unit one, Human reproduction: Aims of obstetric nursing. Anatomy as basis for obstetrics. Physiology in relation to obstetrics. Development and physiology of the fetus. Presentations and positions. Unit two, Nursing in pregnancy: Normal pregnancy Prenatal care. Complications of pregnancy The mental hygiene of pregnancy Preparations for labor and delivery Unit three, Nursing during labor and delivery Anesthesia and analgesia in labor. Conduct of normal labor. Operative obstetrics. Unit four, Nursing during the puerperium: Normal puerperium. Complications of the puerperium. Unit five, The neonatal period: The nursing care of the new baby Nursing care of the premature baby After-care of the baby Unit six, Additional maternity information: History of obstetrics. Teaching aids. Glossary. Index.

Note: (2904) A long-established textbook, outstanding for comprehensiveness, the clarity of the presentation, and the number and quality of the illustrations. Although intended primarily for use in organized classes it is useful also as reference book by specialized public health nurses, etc. The first-named author was formerly Night Supervisor in the Lying-In Hospital, New York. The second-named author is Professor of Obstetrics in the Johns Hopkins University The eighth edition was published in 1948. For this ninth edition the book was reorganized and the type reset. A new chapter has been added and many revisions have been made in other chapters. The revisions relate to such important topics as prenatal care, the rh factor new analgesics and anesthetics, care of premature babies, etc. Many illustrations have been added.

HOSPITALS

FAXON, NATHANIEL WALES editor

The hospital in contemporary life. Cambridge Harvard University Press, 1949 288 p. illus. 22 cm. $5.00. 1553

Contents: The development of the hospital, by E. D. Churchill. The relief of suffering, by H. K. Beecher. Human nature and the understanding of disease, by S. Cobb. The care of the patient, by L. S. McKittrick. The education of the doctor by O. Cope. How medicine grows and its relation to science, by E. M. Landis. Unsolved problems, by J C. Aub. The place of the hospital in the social order by N W Faxon. Index.

Note: The primary purpose of this book—composed of the revised texts of lectures originally delivered under the sponsorship of the Lowell Institute—is to promote on the part of the general public an informed and sympathetic understanding of the social importance of the hospital. However, only the author of the final lecture has addressed himself specifically to the hospital as social institution. Several other chapters are devoted to highlights in the history of medicine and of hospitals. The authors are members of the staff of the Massachusetts General Hospital and the faculty of the Harvard Medical School.

HAUN PAUL

Psychiatric sections in general hospitals an architectural record book. New York F W Dodge Corporation, 1950 80 p. illus. 26 cm. 1554

Contents (abridged) Introduction, by K. A. Menninger Psychiatric sections in general hospitals. Analysis of floor plans. The psychiatric floor incorporated in general hospital, by C. Butler and A. Erdman. Bibliography Index.

Note. This book is both plea for the inclusion of psychiatric sections in the planning of general community hospitals and discussion of the design of such section or floors. Included are critical discussions and ratings of eight floor plans of psychiatric units in general hospitals. The author is member of the faculty of Georgetown University Medical School.

McGIBONY JOHN R.

Principles of hospital administration. New York G P Putnam s Sons 1952 540 p. illus. 21 cm. $6.80. 1555

Contents (abridged) Section 1, Introduction. Section 2, Planning for services: Measuring the community Fund raising. Functional plans for hospital construction. Section 3, Planning for operation: Functional hospital organization. The governing board of the hospital. The medical staff. The administrator Section 4 Management services: Public relations. Legal responsibilities. Hospital personnel. The business office. Plant operations. Safety fire and disaster programs. Section 5, Clinical services: Medical services. Surgical services. Obstetrical services. Nursing services. Pathology and clinical laboratory services. Radiological services. Pharmacy services. Dental services. Medical records. Dietary services. Outpatient services. Index.

Note: This book is both an introduction to current methods in hospital management and reference book on hospital organization, policies, and daily administration. Obtaining support for community hospital and the major steps in building such hospital are covered in the second part. Practically all of the rest of the book is devoted to the general and specific problems of organization and management. The long section on the individual clinical services is both statement of good standards and description of such details as lighting and equipment The author—who is now Chief of the Division of Medical and Hospital Resources of the United States Public Health Service—is medical college graduate and nationally known authority on hospital administration.

ROSENFIELD ISADORE

Hospitals integrated design. Second edition completely revised. New York Reinhold Publishing Corporation, 1951 398 p. illus. 30 cm. $15 00 1556

Contents: Integration of facilities. General considerations and functional elements. The nursing unit. Miscellaneous facilities. X-ray and radiation therapy Laboratories and necropsy The operating department. The maternity and pediatrics departments. Service departments. The outpatient department. Communicable disease and tuberculosis hospitals. Cancer and chronic disease hospitals. Psychiatric hospitals. Convalescent, rehabilitation and cardiac hospitals. The small hospital Housing and training facilities. Daylighting for hospitals. Artificial illumination. The mechanical plant. Hospital construction. Details and finishes. Hospital construction cost. Index.

Note (1354*) A survey of good current practice in the design and construction of hospitals Most of the space is devoted to discussions of the various facets of design. Numerous floorplans of modern hospitals are included. Also included are many photographs of rooms and details. The first edition was published in 1947 and was based largely on lectures given by the author at New York University and Columbia University In this edition the scope of the book has been considerably extended and the material reorganized and expanded. There are now over 300 figures. The author is an architect who has specialized for many years in hospital planning.

PERSONAL HYGIENE AND FIRST AID

AMERICAN RED CROSS

First aid textbook for juniors. Philadelphia The Blakiston Company 1949 132 p. illus 22 cm. $1 00. 1557

Contents (abridged) Suggestions for instructors. The certificating course. Materials needed. Need for first aid. Shock. Wounds. Dressings and bandages. Bruises. The circulatory system. First aid for bleeding. Special wounds and eye injuries. The breathing system. Artificial respiration. Artificial respiration and rescues. Poisoning. Body framework. Fractures. Signs of and first aid for fractures. Dislocations and sprains. A general plan for giving first aid. Moving injured or sick persons. Injuries due to heat and cold. Unconsciousness. Common illnesses. First aid kits. Index.

Note. This textbook varies from the standard first aid course of the American Red Cross in that it is specifically designed for young people from twelve to fourteen years old. The descriptions are written in simpler language and the range of injuries covered is less extensive. The book is designed for use in organized classes and the chapters are accompanied by review questions.

COLE, WARREN HENRY, AND CHARLES B PUESTOW

First aid surgical and medical. Illustrated by Carl Linden and Tom Jones. Fourth edition. New York Appleton-Century-Crofts, Inc., 1951 432 p illus. 22 cm. $4.00 1558

Contents: Precautions and limitations in first aid work, by W H. Cole. General principles of first aid—common conditions requiring first aid—material needed, by W H. Cole. Anatomy and physiology by C. B. Puestow Bandaging, by W H. Cole. Wounds, by W H. Cole. Shock—blood transfusions, by C. B. Puestow Injuries to large blood vessels, by Géza de Takats. Burns—frost bite, by F W Gracky Transportation of the injured, by L. Seed. Fractures, dislocations and sprains, by H. B. Thomas and F W Hark. Compound fractures—compound dislocations, by H. B. Thomas and C. W Lambert Gas and brush [illegible], by H. C Lueth Respiratory emergencies, by W H. Cassels. Injuries of the chest, by W Van Hazel. Abdominal emergencies, by W C. Beck. Emergencies of the genito-urinary tract, by C. M. McKenna and J H. Kiefer Wounds of the mouth, face and neck, by L W Schultz. Injuries of the scalp, skull, spine and nervous system, by E Oldberg and P Bailey Medical emergencies, by R. W Keeton and M. M. Montgomery The prostrate patient, by W H. Cole. Civilian versus military casualties, by C. B Puestow Miscellaneous conditions frequently requiring first aid care, by W H. Cole. The feet, by C. B. Puestow First aid in industry by W F Lynn and R. C. Kilbourne. References. Index.

Note. (1316) A book which is inclusive enough to be of practical value not only to laymen who are taking training in first aid but also to nurses and physicians. Some of the material is more advanced than is commonly included in books on first aid treatment but care has been taken to point out where first aid treatment should be given only as a precautionary measure or not at all and the injured or ill person turned over to a physician. Some of the information on treatment is addressed specifically to the physician rather than to the lay worker The third edition was published in 1945. Much of its text has been carried over to this edition. However revisions have been made wherever advances in medicine have made them necessary A chapter has been added on first aid in industry; a section has been added on first aid in atomic warfare and recent literature has been added to the bibliography

DIEHL, HAROLD SHEELY

Healthful living. Third edition revised and enlarged. New York McGraw Hill Book Company, Inc. 1949 595 p. illus. 24 cm. (Whittlesey House health series, Morris Fishbein editor) $5.50. 1559

Contents: Possibilities of longer life and better health. Major health problems. Why we eat and drink. The choice of foods. Weight and its control. Digestive disturbances. Dietary [illegible]. Stimulants and narcotics. Exercise—fatigue—rest. Sunlight and fresh air. Specific disease prevention. Colds and influenza. Care of the nose, throat, and ears. The conservation of vision. Sound teeth. Care of the skin and hair. Glands of internal secretion. Marriage and life. Modern parenthood. Mental health. Health problems of advancing years. Choosing a health adviser. Community health. Organized health work. Appendices. Index.

Note: (1357*) A standard manual of personal hygiene. Its first edition published in 1931 was specifically designed for the general reader but in subsequent editions changes were made to adapt it to use in introductory college courses. The change in title in the present edition apparently reflects a re-direction to the layman. However the scope and contents are not much changed in comparison to the preceding edition. The book remains a substantial and fairly comprehensive guide to reliable health practices, and is characterized by careful description of planned experiments and other scientific foundations for statements on controversial issues, or rather those issues on which the layman is apt to be confused. For example, in the discussion of the treatment of colds the author describes several experiments planned to determine the effects of vaccines, the injection of extra quantities of vitamins, and of cold medicines. The preceding edition appeared in 1945. Numerous minor changes have been made throughout the text, and the type was reset for this edition.

DIEHL HAROLD SHEELY, AND RUTH E. BOYNTON

Personal health and community hygiene a revision of *Healthful living for nurses* Second edition. New York McGraw Hill Book Company Inc. 1951 469 p. illus. 24 cm. (McGraw Hill series in nursing, Lucile Petry consulting editor) $4 75 1560

Contents (abridged) Safeguarding the health of nurses. Mental health. Nutrition and growth. Stimulants. Exercise—fatigue—rest. Sunlight and fresh air. Specific disease prevention. Colds and influenza. Care of the nose, throat, ears, and teeth. The conservation of vision. Care of the skin and hair. Care of the feet. Glands of internal secretion. Sex life and venereal diseases. Modern parenthood. Health problems of advancing years. Community health. Controlling communicable diseases. Animals, insects, and disease. Sanitation and health. Health in school and on the job. Government and health. Voluntary health services. Appendices. Index.

Note. (2709) As a textbook used in nursing schools and in non-professional courses in hygiene under its two previous titles, *Healthful living for nurses* and *Textbook of healthful living*, this book has been a standard tool of instruction for decades. In its present title new material (4 chapters) has been added with its present title on community health and health services. It is written in clear, non-technical language and gives a general understanding of the whole subject without including specific treatments. The [illegible] references, charts, and tables have for the most part been brought up to date.

MARVIN H M

You and your heart a clinic for laymen on the heart and circulation. Foreword by Paul

D White. New York Random House, 1950 306 p. illus. 22 cm. $3.00 1561

Contents: The miracle of health, by H. M. Marvin. Blood and muscle (the circulatory system and how it works) by H. M. Marvin. Internal adventure (short history of man's exploration of his circulatory system) by H. M. Marvin. The heart at birth (congenital defects and their treatment) by H. M. Marvin. Road blocks of the heart (diseases of the coronary arteries) by H. M. Marvin. Hearts in trouble (diseases other than those of the coronaries) by H. M. Marvin. Rheumatic fever (the nature and treatment of rheumatic heart disease) by T Duckett Jones. High blood pressure (our commonest chronic complaint) by Irvine H. Page. Faulty supply lines (diseases of the blood vessels) by Irving S. Wright. The course of prevention (public health aspects of heart disease) by David D. Rutstein. Misapprehensions (some common fallacies about heart disease) by H. M. Marvin. Unanswered questions (the status and the need for research) by H. M. Marvin. Index.

Note. A book for lay readers written by five physicians active in the American Heart Association and the National Heart Institute. T insure clarity the technical papers of the medical men were put into everyday English by non-medical writer. The book is reliable source of information for sufferers from heart disease and other non-physicians interested in the subject. Its purpose is to inform and to allay fear, rather than to encourage self-diagnosis and treatment.

SMILEY DEAN FRANKLIN AND ADRIAN GORDON GOULD

Your health. New York The Macmillan Company 1951 555 p. illus. 22 cm. $4 75 *1562*

Contents: Good health is not just good luck. Building resistance—avoiding infection. Immunity by inoculation. Avoiding nose and throat disorders. Science conquering tuberculosis. Fresh air indoors. Food and health. Preventing intestinal infections. Healthy teeth and gums. Preventing nervousness. Some facts about sleep, play and narcotics. Keeping healthy mind. Keeping up appearances. Exercise—how much, how little? The hygiene of excretion. Combatting heart disease. The hygiene of the sexual system. Social hygiene problems. Safeguarding vision and hearing. Choosing your doctor and hospital. The proprietary remedies—yes or no? You and your health department. When you build that home. When that first baby comes. When your child enters school. If you work in fac tory. If you live in the country. When you pass sixty. Sources of motion pictures on health. Glossary of technical terms. Index.

Note: (1951a) Although designed as text for college freshman courses, this volume has value for the general reader as guide in developing sensible habits of living. The book is based on the author's *College textbook of hygiene* (3rd ed., 1940) but the material has been so extensively revised and rewritten as to constitute new work. Less attention is now given to the structure and functions of the various parts of the body and more emphasis placed on community health problems. Chapter bibliographies are included.

PSYCHOSOMATIC MEDICINE

ABRAMSON, HAROLD ALEXANDER, editor

Somatic and psychiatric treatment of asthma. Baltimore The Williams & Wilkins Company 1951 751 p illus. 24 cm. $11 00 1563

Contents Part I, Basic concepts: The physiology of respiration, by H. E. Hoff and C. G. Breckenridge. Lung volume and air flow characteristics in asthma, by J. L. Whittenberger Experimental asthma, by B Ratner The psychodynamics of respiration, by L. J. Saul and J. W Lyons. Animal allergy by F W Wittich. The influence of experimental neuroses on the respiratory function, by H. Liddell. Part II, General testing and treatment. Office treatment of bronchial asthma, by H. L. Rogers. The differential diagnosis of asthma, by J. Furman. Differential diagnosis charts, by H. A. Abramson. Critical evaluation of diagnostic tests for sensitization, by M. M. Peshkin. Part III, Nature of inhalant allergens and their therapy The nature of pollen allergens, by H. A. Abramson. Chemistry and standardization of pollen extracts, by E. Perlman. The chemical nature of dust allergen, by C Rimington. Oil-seed allergens, by J R. Spies Specific pollen therapy by G. E. Rockwell and E. M. Rockwell. Specific therapy in general, by B. Swinny Pollenosis with negative cutaneous reactions, by M. M. Peshkin. Part IV Somatic therapy Asthma in children, by B. Ratner Treatment of asthma commencing in middle life, by M. M. Peshkin. Diototherapy by H M. Durham. Intravenous treatment of status asthmaticus, by E A. Brown. Antihistaminic agents in the treatment of bronchial asthma, by E. A. Brown. Cortisone and adrenocorticotropic hormone in bronchial asthma, by H. F Colfer. Inhalation of gases, by O A Koelsche. Aerosol therapy of the lungs and bronchi, by H. A Abramson. Experimental asthma in man with aerosols, by H A Abramson and others. Special techniques of aerosol therapy for infants and children, by J. B. Miller Respiratory allergy from the standpoint of otolaryngology by F K. Hansel. Bronchoscopy in bronchial asthma, by F K. Hansel. Surgical treatment of bronchial asthma, by R. H Overholt and J H. Walker Primary irritants and chemical warfare agents, by W Fleischmann Part Psychotherapy Psychodynamic pharmacology in the therapy of asthma, by H A Abramson Maternal rejection in the treatment of bronchial asthma, by H. Miller and D. W Baruch Psychotherapy in bronchial asthma, by H Rose and C. P Wilson. Part VI, Special geography Therapy of asthma in Cuba and other countries of Latin America, by O Estrada de la Riva.

Note This work represents planned effort to coordinate the established knowledge of the allergic bases of asthma with psychotherapeutic techniques. It may be used by specialists in allergy as source of information about the psychotherapeutic aspects and by psychiatrists as source of information about the physiological aspects. The roster of authors comprises specialists in both branches of treatment. The chapters are accompanied by extensive literature references.

ALEXANDER FRANZ

Psychosomatic medicine its principles and applications With a chapter on the functions of the sexual apparatus and their disturbances by Therese Benedek. New York W W Norton & Company Inc., 1950 300 p illus 22 cm. $4.50 1564

Contents. Part one, General principles: Introduction. The role of modern psychiatry in the development of medicine. The influence of psychoanalysis upon the development of medicine. The contribution of Gestalt psychology neurology and endocrinology. Conversion hysteria, vegetative neurosis, and psychogenic organic disturbance. Progress in etiological thought. Methodological considerations concerning the psychosomatic approach. Fundamental principles of the psychosomatic approach. Part two, Emotional factors in different diseases: Emotional factors in gastrointestinal disturbances. Emotional factors in respiratory disturbances. Emotional factors cardiovascular disturbances. Emotional factors in skin diseases. Emotional factors in metabolic and endocrine disturbances. Emotional factors in the disturbances of the joints and skeletal muscles. The functions of the sexual apparatus and their disturbances. Therapy. Bibliography Index of names. Subject index.

Note. The Director of the Chicago Institute for Psychoanalysis has in this book presented an introductory survey of the main concepts of psychosomatic medicine and of their implications in treating disease. The book is written in semi-technical style. It may be read without much difficulty by sophisticated general readers and by professional workers in fields related to medicine. Also its content is substantial enough to make it valuable to general practitioners of medicine in search of generalized presentation. There is bibliography of 160 references.

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASES

Life stress and bodily disease. Proceedings of the Association December 2 and 3 1949 New York, N Y With 345 illustrations, 83 tables and 2 color plates Baltimore The Williams & Wilkins Company 1950 1135 p. illus. (part col d) 24 cm. (Association for Research in Nervous and Mental Diseases. Research publications. Vol. XXIX. Editorial board Harold G Wolff and others) $15 00. 1565

Contents (abridged) Part I, Mechanisms involved in reactions to stress Situational stresses and neuropsychological disorder in different personalities, by E. S. Schwab and J. S. Pritchard. The reaction to pain as determined by the galvanic skin response, by M. Fore and J. D. Hardy with the assistance of M. D. Hebner and E. Wolff. Experimental production of human convulsive brain potentials by stress-induced effects upon neural integrative function, by W Barker and S. Barker. Reaction to life stresses following unilateral prefrontal lobectomy or lobotomy by J. E. Scott. Life situations, emotions and idiopathic epilepsy by J. Barrow and others. Some specific factors that modify tolerance for anxiety... mental stress, by H. Liddell. Part II, The problem of specificity bodily reactions during stress. Communications and bodily ... study of vasospastic conditions, by J. Ruesch and A. R. Prestwood. Specificity of bodily reactions under stress, by R. E. Malmo and others. The predictable association of certain emotions and biochemical changes in the blood, by O. Dunbar and others. Life situations and serum antibody titers, by J. L. Zoller and H. G. Wolff. Part III, Life stress and disorders of growth, development and metabolism: Stress and the adrenal cortex with special reference to potassium metabolism, by H. Hoagland. Studies in diabetes mellitus —changes in glucose, ketone, and water metabolism during stress by L. E. Hinkle, Jr and S. Wolf. Fat and carbohydrate metabolism by W R. McCulloch and others. The relation of life stress to arthritis, by L. Hellman. Changes in body heat regulation associated with varying life situations and emotional states, by E. Cantril and others. Life situations, emotions and Graves' disease, by T Lidz and J. S. Whitehorn. Part IV Life stress and disorders of the eye by H. S. Ripley. Part ... Life situations, emotions and glaucoma, by ... Life situations, emotions and Life stress and disorders of the airways ... Variations in the secretion of bronchial mucus during periods of life stress, by ... Psychological mechanisms, by T. H. Holmes and others. Part VI, Life stress and headache: Psychological mechanisms in chronic headache, by A. P Friedman and C. Brenner. Part VII, Life stress and disorders of the stomach: Effects on gastric secretion

of frontal lobe stimulation, by L. M. Davey and others. Variations of gastric functions during conscious and unconscious conflict states, by S. G. Margolin and others. Part VIII, Life stress and diseases of the colon. Life situations, emotions and chronic ulcerative colitis, by W J Grace. Constipation and diarrhea, as reactions to life stress, by T P Almy and others. Part IX, Life stress and diseases of the muscles, joints and periarticular structures: Personality factors in osteoarthritis, by Henry Lihn and others. Part X, Life stress and cardiovascular disease: Possible cortical areas involved in arterial hypertension, by W P Chapman and others. The relation of stress to clotting time, relative viscosity and certain other biophysical alterations of the blood in the normotensive and hypertensive subject, by R. A. Schneider. Character structure in hypertensive persons, by N. W Ackerman. An appraisal of factors that evoke and modify the hypertensive reaction pattern, by S. Wolf and E. M. Shepard. Part XI, Life stress and disease of the skin. The pathogenesis of hives, by D T Graham. Life situations, emotions and atopic dermatitis, by J G. Kepecs and M. Robin. Part XII, Life stress and genital disorders: Disturbances of bladder function associated with emotional states, by L. R. Straub and others. Disturbances in sexual functions during periods of stress, by W H. Gantt. Life situations, emotions and gynecologic pain associated with congestion, by H. C. Taylor Jr Part XIII, A formulation: Life stress and bodily disease, by H. G. Wolff. Index.

Note: A collection of the papers, together with transcripts of discussions, presented on the occasion indicated in the book's title. Altogether there are 49 papers contributed by 111 graduate scientists. As the titles of the papers indicate, "disease" has been interpreted liberally and papers are included on such topics as relations between stress and growth in children, relations between psychological conflict and neuromuscular tension, etc. Many of the papers report the results of recent research carried out by the authors. The book is a primary contribution to the literature of psychosomatic medicine.

BELLAK, LEOPOLD editor

Psychology of physical illness psychiatry applied to medicine, surgery and the specialties. New York Grune & Stratton 1952 243 p. 24 cm. $5 50 1566

Contents: Introduction, by L. Bellak. Psychiatric considerations in general practice, by M. Maier Psychiatry applied to internal medicine, by E. Hammerschlag Psychiatric problems of malignancy by J. A. M. Meerloo and A Zeckel. Psychiatric problems in general surgery by V H. Rosen. Psychiatric aspects of plastic surgery by L. Linn. Psychiatric implications in gynecology and obstetrics, by S. Haas. Psychiatric aspects of diseases of the genitourinary system, by J M. Bilegy Rehabilitation, orthopedics and psychiatry by M. Greyson and A. S. Russek. Eye, nose and throat diseases and psychiatry by A. Zeckel. Psychiatric and psychoanalytic aspects of neurological disease, by A. Romer. Psychiatric aspects of pediatric practice, by M. L Levine Psychiatric aspects of dermatology by M. Hecht. Psychiatric aspects of dentistry, by S J Kesa. The personality of the physician as a factor by L. L. Altman. Index.

Note: Integration of medicine in such a way that the psychological aspects of illness will always be taken into account in diagnosis and treatment is the main theme of this book. The editor points out that a traditional separation of psyche and soma is out of date and states "the alert and informed doctor will use the taking of the medical history as an occasion for appraising not only the psychosomatic aspects of the onset of symptoms, chief complaints, and the like, but also for a stock taking of such emotional involvements as already mentioned. Most of the chapters are devoted to discussions of psychological or psychiatric aspects of specific classes of medical and surgical disorders The book is addressed to general medical practitioners and general surgeons rather than to psychiatrists or specialists in psychosomatic medicine. Essentially it is a statement of a thesis and an outline of the main aspects with literature references for those who wish to pursue particular phases further.

BENEDEK, THERESE

Psychosexual functions in women. New York The Ronald Press Company 1952 435 p illus (part col d) 24 cm. (Studies in psychosomatic medicine of The Institute for Psychoanalysis, Chicago Illinois. Vol. 2) $10.00 1567

Contents: Introduction. General survey of the material. Vaginal smear and basal body temperature techniques of hormone evaluation. General aspects of the application of psychoanalytical method. Interpretation and prediction. A study of two cycles. Critical evaluation of the methods and the discrepancies. The gonadal and the emotional cycle. Personality structure and the sexual cycle. Variations in sexual cycles. Comments and conclusions. The psychosomatic implications of the primary unit mother-child. Climacterium a developmental phase. The functions of the sexual apparatus and their disturbances. Some psychophysiological problems of motherhood. Bibliography Index of names. Index of subjects.

Note. (1942a) A collection of studies based on psychoanalytic investigations of fifteen women of child bearing age, carried out in conjunction with physiologic observations over a period of several years. The aim of the studies was to discover whether a physiological function, such as ovulation, which in animals determines their social behavior, could be recognized in the emotions and behavior of a particular group of emotionally unbalanced women. Although the work does not purport to be a comprehensive presentation of the psychology of women, the findings of the studies are basic information for psychiatrists, gynecologists, and general practitioners of medicine. The first eleven chapters are reprinted from a National Research Council monograph of 1942, of which the co-author was Boris B. Rubenstein. The added chapters include one giving a brief comparison of the psychosexual problems of men and women.

COBB STANLEY

Emotions and clinical medicine. With an introduction on semantics and definitions by John R. Reid. New York W W Norton & Company Inc., 1950 243 p. illus. 21 cm. $3.50. 1568

Contents: Physiology: The anatomy of emotion. The hypothalamus. Cerebral control of emotional expression. Docility ferocity and oral behavior. Endocrinology and the autonomic nervous system. Classification of emotional reactions. Lesions in man associated with changes in emotional behavior Clinical application The neural functions of the emotions and psychosomatic medicine. Anorexia nervosa as a psychosomatic problem. Patterns of personality The problem of specificity in psychosomatic reactions—"constellation of conflict" and "choice of the organ. Emotions and social psychiatry Bibliography Index.

Note: An interpretive synthesis of recently gained knowledge pertaining to the relations among the emotions, certain areas in the brain, and endocrinology The results of frontal lobotomy for instance are summarized as well as the current knowledge of the function of the pituitary The book is written in a semi-technical style and is suited to mature general readers and to professional workers in such fields as child study where a fundamental knowledge of the bases of emotion is useful. The author is a member of the faculty of Harvard Medical School.

CURRENT TRENDS IN THE RELATION OF PSYCHOLOGY TO MEDICINE, by Wayne Dennis and others. Pittsburgh University of Pittsburgh Press, 1950. 189 p. 22 cm. $4.00 1569

Contents: Interrelations of psychology and medicine, by W Dennis. Psychology and public health, by R. H. Felix. Psychology in medical education, by C. Jacobsen. Experimental psychopathology by R. A. Patton. Psychology in neurological research, by Y D. Koskoff. Psychology in relation to psychiatry by P K. Hunton. Psychology and gerontology by N. W Shock. The relation between medicine and psychology in England, by H. J Eysenck.

Note. Similar in plan to the other volumes in this useful series, this book contains lectures that were originally delivered at the University of Pittsburgh under the auspices of the Department of Psychology Each author has devoted himself to the current status and current trends in the area named in the title of his lecture. However some of the authors have also sketched in the historical background. Literature references are included for most of the lectures. The volume is a useful and authoritative summary for advanced college students majoring in psychology and for college graduates with professional interests in the topics.

DORCUS ROY MELVIN AND G WILSON SHAFFER

Textbook of abnormal psychology Fourth edition. Baltimore The Williams & Wilkins Company 1950 717 p. illus. 24 cm. $5.00 1570

Contents: The field and scope of abnormal psychology Sensory disorders. Motor disorders. Brain damage disorders (topographical

and cytoarchitectural relationships) Disorders of association and memory Theories of disorders of the central functions. Desires, feelings, and emotions. Psychosomatic disorders. Sleep, dreams, and hypnosis. Classification and history of mental diseases. Organic psychoses. Functional psychoses. Psychoneuroses. Mental deficiency and psychopathic personality Physical and chemical therapies. Psychotherapy Bibliography Glossary Author index. Subject index.

Note (1377*) A standard work widely used as text for medical students and advanced students of psychology The level of treatment assumes considerable preparation in basic psychology on the part of the reader. In this edition there are three newly added chapters and important revisions have been made in numerous sections carried over from the preceding edition. The extensive and useful bibliography now includes 1200 citations, of which—according to the authors—approximately 230 are new

HOLMES, THOMAS H., AND OTHERS

The nose an experimental study of reactions within the nose in human subjects during varying life experiences By Thomas H. Holmes Helen Goodell, Stewart Wolf and Harold G Wolff With a foreword by Warfield T Longcope. Springfield, Illinois Charles C Thomas 1950 154 p. illus. 24 cm. $4 50. 1571

Contents Review of nasal physiology; objective and method of present study Range of nasal functions in normal subjects. Alterations in nasal function following specific threats to respiratory apparatus. Alterations in nasal function following general threats to bodily integrity Relation of nasal changes to bodily disturbances involving the eyes and deeper respiratory structures. Personality and background of an intensively studied subject. Alterations in nasal function occurring as part of the organism's pattern of adjustment to his environment. Temporal correlation of threatening life situations with nasal disturbances in one hundred patients with chronic or recurrent nasal disease. The relation of nasal to sexual function. The relation of nasal to gastric function. Mechanisms involved in disorders of the nasal and paranasal spaces. Pain from the nasal and paranasal structures—the mechanism of "sinus headache. Considerations and formulation. Summary Index.

Note: A technical report of series of planned observations of the changes in color and other properties of the nasal mucosa and of alterations in nasal and respiratory functions in response to emotional stimuli. The observational methods are described and the results of particular experiments and groups of experiments are commented. A variety of detailed case histories are included. The presentation is technical and is addressed chiefly to medical graduates. The work is of particular interest in psychosomatic medicine.

KALINOWSKY LOTHER B AND PAUL H. HOCH

Shock treatments, psychosurgery and other somatic treatments in psychiatry Second revised and enlarged edition. Foreword by Nolan D C. Lewis. New York Grune & Stratton, 1952 396 p. 24 cm. $8 75 1572

Contents Historical development Insulin shock treatment. The convulsive therapies. Combined insulin-convulsive treatment. Psychosurgery Other somatic treatments. Theoretical considerations. Bibliography Index.

Note (1481) A survey of techniques and experience up to about mid-year 1951 It is based on the literature evaluated in the author's experience and the text is keyed to 33-page bibliography It is addressed to psychiatrists and to neurologists and neurosurgeons, and its purpose is to aid in the appraisal of the value of these relatively new therapies. Much important material has been added in this edition, especially in the chapter on psychosurgery

MASSACHUSETTS GENERAL HOSPITAL. PSYCHIATRIC SERVICE

Case histories in psychosomatic medicine. By the staff of the Psychiatric Service Massachusetts General Hospital, Boston. Edited by Henry H W Miles Stanley Cobb and Harley C. Shands. New York W W Norton & Company Inc., 1952 306 p. illus. 22 cm. $4 50 1573

Note. Twenty-one cases which illustrate considerable range of psychosomatic illnesses are discussed in this book. They illustrate not only varieties and manifestations of psychosomatic medicine but also show expert techniques in diagnosing and treating such cases. Participants in the discussions are for the most part physicians associated with the Massachusetts General Hospital and faculty members of Harvard Medical School. Literature references are included for the most of the papers.

OSBORN, LESLIE A.

Psychiatry and medicine an introduction to personalized medicine. New York McGraw Hill Book Company Inc., 1952 494 p. 24 cm. $7 50 1574

Contents (abridged) Part one, Theoretical considerations: Section one, Nature of the subject: Attitudes to illness. Origin and nature of symptoms. Adaptation and adjustment. Internal medicine and psychiatry Organic mental reactions. Section two, Development and relationship Developmental needs. Mating and parenthood. Maturing and independence. Individuality Friendship and support. Section three, Social living: Self-assertion and freedom. Frustration and its effects. Heredity and its implications. Part two, Practical application Section one, Types of reaction to life's experiences: Descriptive and dynamic psychiatry Degree of reaction. Kind of reaction. Section two, The clinical study: Observing and interviewing. The organic investigation. Psychological testing. Steps in correlation. Section three, Therapy: Psychotherapy Change of environment. Psychosomatic considerations. Relatives and social work. Symptomatic treatment. Helping children. Part three, Mental hygiene. Preventive medicine and psychiatry Appendix. Index.

Note Integration of psychiatry and general medical practice is the chief theme of this book, which was written for use as text in undergraduate courses in medical schools. No previous acquaintance with psychiatric concepts is assumed; and nowhere does the author lean heavily upon technical terminology of psychiatry although he makes use of it after defining it. More often he uses the common language in such passages as "Each person has private thoughts, feelings, wishes, and undeclared motives that he keeps to himself." The author who is Professor of Psychiatry and acting Director of the Wisconsin Psychiatric Institute in the Medical School of the University of Wisconsin, has had extensive experience in both the general practice of medicine and in psychiatry

SULLIVAN ALBERT JOSEPH AND THOMAS E MCKELL

Personality in peptic ulcer Springfield, Illinois Charles C Thomas, 1950. 100 p. illus. 22 cm. $3.00 1575

Contents: Emotional factors in peptic ulcer. Physiologic transition from emotion to ulceration. Theory of multiple etiology Clinical classification of cases. The ulcer personality The criteria for peculiarity The precipitating situation. Inter-relation of various etiologic factors. Observations and predictions. Treatment. Report of cases. References. Index.

Note A short but valuable study of peptic ulcer from the psychosomatic viewpoint. It is based on clinical observation of over 1000 cases and detailed analyses of over two hundred. On these bases the authors divide ulcer patients into four groups (A) the typical ulcer personality (B) definitely psychosomatic cases, (C) cases due to striking external precipitating situation, and (D) those with no personality or situational psychic factors. The typical ulcer personality is described in some detail under these subheadings: drive, versatility emotional responsiveness, self-reliance, religion, marital adjustment, determination, age, sex, race, group specificity [illegible] Eighteen cases typical of the four groups are described in some detail.

WEISS EDWARD AND O SPURGEON ENGLISH

Psychosomatic medicine the clinical application of psychopathology to general medical problems. Second edition. Philadelphia W B Saunders Company 1949 803 p. illus. 24 cm. $10.00. 1576

Contents: Part I, General aspects of psychosomatic medicine: Psychosomatic medicine. Personality development and psychopathology. Psychosomatic diagnosis. Treatment—general principles of psychotherapy. Treatment—"normal" problems in psychotherapy. Treatment—special psychotherapeutic procedures. Training in psychosomatic medicine. Part II, Special applications to general medicine and the specialties: The cardiovascular system. The cardiovascular system—emotional factors in organic heart disease. The cardiovascular system—essential hypertension. The gastrointestinal system. Endocrine system and metabolism. The genito-urinary system and the sexual function. The respiratory system. The central nervous system. Ear and eye. Skin disorders and allergies. Dentistry, arthritis and orthopedic problems. Appendix. References. Selected references. Index.

Note: (1917) A useful treatise based on extensive clinical experience and written in terms of average medical practice. Its purpose is to help graduate medical practitioners who are not specialists in psychoanalysis and psychopathology to differentiate between symptoms of psychic origin and those of organic etiology; to pick out the emotional factors complicating physical disease; to uncover the underlying causes of these emotional disturbances, and to institute therapy. The first-named author is professor of clinical medicine and his associate is professor of psychiatry. The first edition appeared in 1943. The original text was rearranged and widely rewritten for this edition. Also, much material, derived partly from medical experience during World War and partly from additional civilian practice, has been added. The book is suitable for use as survey and orientation guide for graduate physicians and as text in courses in psychosomatic medicine offered to advanced medical college students.

YACORZYNSKI, GEORGE K.

Medical psychology a basis for psychiatry and clinical psychology New York The Ronald Press Company, 1951 535 p. Illus. 24 cm. $6 00 1576a

Contents: Introduction. Part I, Basic psychobiological principles: Biological needs. Emotions. Learning. Perception. Motives. Adjustment to conflicts. Part II, Inheritance and maturation: Introduction to genetic psychology. Inheritance of behavioral responses. Maturation related to physical and physiological factors. Maturation of more complex functions. Part III, Integration—structure and structuralization of personality: Introduction to personality. The biological substratum of personality. Behavioral manifestations of personality. The structuralization of personality. A partial list of some of the more recent texts in psychiatry and clinical and abnormal psychology. Index of names. Index of subjects.

Note: A succinct introductory presentation of the generally accepted principles of human behavior, written for medical college students who are preparing for further study of psychiatry and clinical psychology. The style is more technical and the level of treatment more advanced than would be appropriate in text intended for general college students. Also, there is more emphasis on the underlying physiology. References to papers in which important experiments and clinical studies have been reported are carefully given. The author is Associate Professor of Nervous and Mental Diseases in the Medical School of Northwestern University

PSYCHIATRY

Alexander, Franz, and Helen Ross, editors

Dynamic psychiatry Chicago The University of Chicago Press 1952 578 p. 23 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $10.00 1577

Contents. Part I, *Concepts of dynamic psychiatry:* Development of the fundamental concepts of psychoanalysis, by F. Alexander. Dreams and rational behavior by T. M. French. History of metapsychological concepts, by E. Weiss. Personality development, by T. Benedek. Part II, Clinical psychiatry: Neuroses, behavior disorders, and perversions, by F. Alexander and L. B. Shapiro. Acute neurotic reactions, by L. J. Saul and J. W. Lyons. Emotional disorders of childhood, by M. W. Gerard. Contributions of psychoanalysis to the study of organic cerebral disorders, by H. W. Brosin. Psychodynamic approach to the study of psychoses, by J. C. Whitehorn. Contributions of psychoanalysis to the study of the psychoses, by H. W. Brosin. Principles of psychiatric treatment, by M. Levine. Part III, *Influence of psychoanalysis on allied fields:* The psychosomatic approach in medicine, by F. Alexander and T. S. Szasz. Some relationships between social anthropology and psychiatry by M. Mead Clinical psychology by D. Shakow Animal psychology in its relation to psychiatry by D. M. Levy A review of the influence of psychoanalysis on current thought, by H. W. Brosin. Index.

Note. By "dynamic psychiatry" the editors and authors of this book designate contemporary psychiatry the scope of which has been enlarged by the impact of the theories and techniques of psychoanalysis. The editors state "The advent of dynamic psychiatry is liquidating the isolated existence of psychoanalysis. As a therapy psychoanalysis is being merged with medicine, hence it is accepted as a method of psychiatry As a body of theory it is becoming recognized as a basic science, both in psychiatry and in the social sciences." The various chapters are original papers. The authors include staff members of the Institute for Psychoanalysis, Chicago, and prominent teachers in American medical schools. The work is a survey of orientation value for psychiatrists and others with professional interest in the field. Literature references are included.

American Psychopathological Association

Relation of psychological tests to psychiatry The proceedings of the fortieth annual meeting of the American Psychopathological Association held in New York City June 1950 Edited by Paul H. Hoch and Joseph Zubin New York Grune & Stratton 1952 301 p illus. 22 cm. $5.50 1578

Contents (abridged) Part I, *Historical bases for psychological tests:* What is tested by psychological tests? by R. W. White. Development of clinical tests in psychopathology by L. S. Selling. Theoretical bases of psychometric tests, by L. F. Shaffer Part II, Diagnostic use of psychological tests An experimental criterion for the prognostication of the status of schizophrenics after a three-year interval based on Rorschach data, by Z. A. Piotrowski and N. D. C. Lewis. The diagnostic use of psychological tests from the psychiatrist's standpoint, by O. Diethelm and C. A. Knehr Personality and intelligence—integration of projective and psychometric technics, by S. S. Tomkins. Part III, Presidential address The philosophy of scientific cooperation, by W. J. Tolman. Part IV Influence of exogenous factors on psychological test procedures. The relationship of abstract thinking to the autonomic nervous system in schizophrenia, by A. Meadow and D. H. Funkenstein. The prediction of success in clinical psychology by E. L. Kelly The conditioned reflex function as an aid in the study of the psychiatric patient, by W. H. Gantt. Some theoretical and practical aspects of the diagnosis of early and latent schizophrenia by means of psychological testing, by M. S. Gurvitz and J. S. A. Miller. Part V Influence of the psyche on psychological test performance: Rorschach studies in combat flying personnel, by L. Alexander and A. F. Ax. The use of serial testing in regressive electroshock treatment, by B. C. Glueck, Jr., and others. Illness—the realization of an infant's fantasy with special reference to testing methods, by F. Dunbar The influence of psychopathological emotions on psychological test performance, by L. Welch and T. A. C. Rennie. Index.

Note. A collection of original papers written for delivery on the occasion mentioned in the book's title. Together they represent a wide range of experience with the use of tests in psychiatry and a wide range of information about the usefulness and reliability of such tests. The book is of interest not only to psychiatrists but also to psychologists concerned with the development of tests. Each part of the book except the third is accompanied by one or two discussion papers which are not listed in the above table of contents.

Bellak Leopold

Manic-depressive psychosis and allied conditions With Blaise Pasquarelli, Ernest Parkes Sonya Sorel Bellak and the collaboration of Sydell Braverman. Foreword by Winfred Overholser New York Grune & Stratton, 1952 306 p. illus. 24 cm. $9 75 1579

Content Introduction. Part I, Manic-depressive psychosis: Definition and description. Vital statistics. Etiology. Physiopathologic studies. Psychopathologic studies. Diagnosis and symptomatology. Manic-depressive psychosis in childhood. Treatment. Complications and sequelae. Prognosis. Prevention. Part II, Allied conditions: Psychotic reactions to pregnancy Involutional psychoses. Reactive depressions. Depressions of old age. Suicide. Bibliography Index.

Note. A digest of the world literature. The various chapters consist essentially of abstracts which are keyed to the classified bibliography by mention of authors' names. The coverage is comprehensive and the presentation is non-critical. The index is adequately detailed for a subject approach, but it does not include the names of authors of cited papers.

Bender Lauretta

Child psychiatric techniques diagnostic and therapeutic approach to normal and abnormal development through patterned, expressive, and group behavior Springfield, Illinois Charles C Thomas 1952 335 p. illus. (part col d) 26 cm. $8.50. 1580

Contents Techniques in child psychiatry—a survey. Form as a principle in the play of children. Form principles in the spatial drawings and games of children. Genesis and maturation in children's motor gestalten. Deviations in visual motor gestalten in children. Theories of art and its relation to the psychology and psychopathology of childhood. Abstract art as an expression of human problems. The drawing of a man by children with chronic encephalitis. The art of high grade mental defective children depicting their struggle with emotional disorganization and their primitive perceptual experiences. Beasts in the art and fantasy of children. Animals in the children's art and fantasy of children. Group activities on a children's ward as methods of psychotherapy. The use of graphic art in psychiatric therapy. Clay modeling as a projective technique in child psychiatry. Creative dance. Special Puppet shows as a psychotherapeutic method. The school room attitudes and activities for the problem child. The problem of therapy of a child. The art of children and the problems of modern art. Bibliography. Name index. Subject index.

Note. A book based largely on observations over a period of fifteen years in the children's ward of the Psychiatric Division of Bellevue Hospital in New York City. It does not represent the efforts of a single author as the title page appears to indicate but is composed of papers written by Paul Schilder, Lauretta Bender, and others. Many of the papers have been published elsewhere, but in most instances they ... The use of art in both diagnosis and therapy is stressed.

have been rewritten or extensively revised for this book. There are 33 figures and practically all of these are reproductions of children's art work.

BERGLER EDMUND

The superego unconscious conscience—the key to the theory and therapy of neurosis. New York Grune & Stratton, 1952 367 p. 23 cm. $6 75 1581

Contents: The superego's power and its subterfuges. Impersonal biology and two facts in frustration. Constant "reformulation" of the oral megalo mythical material in the "language" of later stages. The life blood of neurosis—psychic masochism. The slightly paradoxical moral code of the unconscious ego and the mechanism of taking the blame for the lesser crime. *Differences between external and internal justice.* The unconscious process of resolving normal and neurotic guilt. The pseudo-moral connotation of neurotic symptoms. Dreams and inner conscience. First thoughts on awakening, and our daily moods. Are parents or inner conscience to blame for the neuroses of children? The tragicomedy of it all: superego triumphant—some dangling from the shoestring of twin aids. Index.

Note: (1170*) A complementary volume to the author's *The Battle of the conscience*, Washington, D. C., 1948. It contains further original studies on that hidden element of the personality which Freud named the "superego."

BYCHOWSKI GUSTAV AND J LOUISE DESPERT, editors

Specialized techniques in psychotherapy New York Basic Books Inc. 1952 371 p. illus. 22 cm. $5.00. 1582

Contents (abridged) Narcodiagnosis and narcotherapy by P. H. Hoch and F Polatin. Hypnoanalysis as psychotherapeutic technique, by R. M. Lindner The use of the telepathy hypothesis in psychotherapy by J. Ehrenwald. Free painting as an auxiliary technique in psychoanalysis, by M. M. Stern. Group therapy as specialized psychotherapeutic technique, by H. Spotnitz. Simultaneous treatment of both parents and their child, by B. Mittelmann. Adaptations of the psychoanalytic technique for the treatment of young children with atypical development, by B. Rank. Treatment in child schizophrenia—presentation of case, by J. L. Despert. Notes on the development of treatment of schizophrenics by psychoanalytic psychotherapy by F Fromm-Reichmann. Psychotherapy with the crippled and disabled, by G. Bychowski. Dynamic therapy for the stutterer by I P Glauber. Psychotherapeutics of alcoholism, by R. Fox. Some aspects of treatment of sex offenders, by D. Abrahamsen. Psychotherapeutic techniques in psychosomatic medicine, by M. Sperling. Differential psychotherapy of borderline states, by V W Eisenstein. The emergency psychotherapy of depression, by L. Bellak. Rorschach psychoanalytic assessment of personality changes during and after intensive psychoanalytically oriented psychotherapy by Z. Piotrowski and M. Schreiber. Index.

Note. A collection of original papers written by prominent psychiatrists, psychoanalysts and psychologists associated with such organizations as the New York State Psychiatric Institute, New York University-Bellevue Medical Center and the College of Physicians and Surgeons of Columbia University Most of the papers are concise descriptions of recently developed techniques or of the application of psychoanalytic techniques to the treatment of special groups such as sex offenders. Literature references are included with each paper. The viewpoint is Freudian

CAMERON NORMAN AND ANN MAGARET

Behavior pathology Boston Houghton Mifflin Company, 1951 645 p. 25 cm. (Under the editorship of Leonard Carmichael) $5.00. 1583

Contents: Introduction. Behavior organization. Need, stress and frustration—learning and behavior pathology Symbolization, role-taking and emotional reactions. Motivation and function. Behavior pathology in biosocial immaturity: developmental retardation—social deviation. Regression, withdrawal and invalidism. Conflict. Anxiety in normal behavior. Anxiety in behavior pathology Regression. Pseudocommunity and delusion. Autistic community and hallucination. Desorganization. Depersonalization. Deterioration. Therapy in behavior pathology Learning and therapy Name index Subject index.

Note: An outstanding work written from the biosocial viewpoint. The human being is viewed as biological organism learning and maturing in social environment, and pathological behavior is presented as development of dynamic effort to maintain the self in the social environment. The authors state [illegible] we have utilized the principle of continuity—that pathological behavior is related to and derived from normal behavior and that therapy is dependent upon this relationship. Although the whole field is surveyed, many phases are covered in considerable detail. The pertinent literature is copiously cited. Both authors are members of the faculty of the University of Wisconsin and both have had thorough training in psychology and psychiatry

COBB STANLEY

Foundations of neuropsychiatry Fifth revised and enlarged edition of the work formerly known as *A preface to nervous disease*. Baltimore The Williams & Wilkins Company 1952 287 p. illus. 23 cm. $3.00. 1584

Contents: Some general problems of anatomy and physiology Autonomic nervous system. Segmental and suprasegmental aspects of the cerebrospinal nervous system. *Motor integration and locomotion.* Functional localization in the cerebral cortex. Consciousness and the "mind body" problem. Cerebral circulation. Cerebrospinal fluid. General neuropathology The peripheral nerve and muscle. Special neuropathology. Epilepsy Some psychological concepts important in medicine. Some psychopathological reactions. Index.

Note: (1375*) A standard work designed for advanced students and general practitioners of medicine. Though [illegible] basic terminology describes the anatomy and physiology of the nervous system, and correlates them with the chief nervous disorders. In this edition the work has been much revised, particularly in such parts as the chapter on functional localization in the cerebral cortex.

COLBY KENNETH MARK

A primer for psychotherapists. New York. The Ronald Press Company 1951. 167 p. 21 cm. $3 00. 1585

Contents: Psychotherapy—its aim and its basic theory The patient. The therapist. Time and space conditions for the interview Behavior during the interview Beginning the therapy The middle course of therapy Ending the therapy Schizophrenia. Index of subjects. Index of names.

Note: A small book presenting in simple and concise form the elementary principles of psychotherapy Although especially intended for beginners in the field of psychotherapy [illegible]

COLEMAN JAMES COVINGTON

Abnormal psychology and modern life. Chicago Scott, Foresman and Company, 1950 657 p. illus. 25 cm. $4.0 1586

Contents: Part one, Introduction: Abnormal behavior in our times. Development of our modern view of abnormal behavior Part two, Dynamics of normal and abnormal behavior [illegible] and adjustment. Causes of abnormal behavior [illegible] Part three, Abnormal [illegible] Psychosomatic disorders. [illegible] Mental disorders with brain or organic [illegible] and behavior disorders. Alcoholism and drug addiction. [illegible] mental deficiency Part four [illegible] standing, treatment, and prevention [illegible] Therapy The [illegible] Name index. Subject index.

Note: A textbook for use in college courses. [illegible] of California.

FEDERN PAUL

Ego psychology and the psychoses. Edited with an introduction by Edoardo Weiss [illegible]

York Basic Books, Inc., 1952 375 p. 24 cm. $6 00 1587

Contents, Introduction. Part I, On ego psychology: Some variations in ego feeling. Narcissism in the structure of the ego. Ego feeling in dreams. The awakening of the ego in dreams. A dream under general anesthesia. Part II, On the treatment of psychosis: Psychoanalysis of psychoses. Principles of psychotherapy in latent schizophrenia. Mental hygiene of the ego in schizophrenia. Paranoid certainty. Ego psychological aspect of schizophrenia. The ego in schizophrenia. Depersonalization. Ego response to pain. Manic-depressive psychosis. Part III, Narcissism. The ego as subject and object in narcissism. On the distinction between healthy and pathological narcissism. Writings of Paul Federn. Index.

Note: The author of the papers in this book was among the earliest followers of Sigmund Freud and in 1924 when Freud retired he succeeded to Freud's practice in Vienna. He came to the United States of America in 1938 and practiced and taught here until his death in May 1950. Some of the papers were written in English and are here printed for the first time. Notable in this group is a series of three lectures on schizophrenia originally delivered in June, 1949 at Winter's Veteran Hospital in Topeka, Kansas.

FISHER, VIVIAN EZRA

The meaning and practice of psychotherapy New York The Macmillan Company, 1950. 411 p. 22 cm. $5 00 1588

Contents. Part I, A general orientation. Concerning approach and procedure. Part II, Some psychotic and closely related disorders: Early schizophrenic reactions. Manic-depressive reactions. Early paranoid trends. Involutional-melancholic reactions. Psychopathic reactions. Hypochondriacal reactions. Part III, Psychoneurotic reactions. Neurasthenic neurosis. Neurotic anxiety reactions. Some anxiety-equivalent reactions. Anxiety hysteria. Simple phobias. Obsessive-compulsive reactions. Conversion hysteria. Mental regression. Reactive depression. Part IV Some maladjustive psychosocial tendencies and reactions: Suicidal tendencies. Compulsive drinking. Symptomatic feelings of inferiority. Homosexual tendencies. Psychical impotence. Sexual frigidity. Marital discord. Selected readings. Glossary. Index.

Note. The special value of this book lies in its detailed accounts of psychotherapeutic procedures. The author has drawn from his twenty years of practice cases which are typical of the various classes of psychotic and psychoneurotic disorders and has shown how he treated them and what the outcome of the treatment was. The cases are a fair cross-section of what a psychotherapist encounters in practice and they include even such everyday problems as marital discord. Although the author's viewpoint is essentially Freudian, his therapeutic methods are also tempered with common sense. The book is potentially of interest not only to psychoanalysts and to medical graduates preparing for this specialty but also to general practitioners who encounter neurotic patients in their general practice.

FROMM REICHMANN FRIEDA

Principles of intensive psychotherapy Chicago The University of Chicago Press, 1950. 246 p. 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $3 75 1589

Contents: Part I, The psychiatrist—personal and professional requirements: Insight into the emotional aspects of the doctor-patient relationship. The psychiatrist's part in the doctor-patient relationship. The psychiatrist's attitude toward cultural and ethical values in its relatedness to the goals of psychotherapy. Considerations of the psychiatrist in the establishment of the treatment situation. Part II, The psychotherapeutic process—the patient and the therapist: The initial interview. Introductory remarks on the psychotherapeutic procedure. Associations, marginal thoughts, physical sensations, and their usage in psychotherapy. Interpretation and its application. How to begin and how to terminate a psychotherapeutic interview. Termination of treatment. Part III, Adjuncts to intensive psychotherapy: The attitude of the psychiatrist toward intercurrent events in the lives of the patient and of the therapist. Contacts with relatives. Reference list. Index.

Note: A principal theme in this book is the importance in psychotherapy of the interpersonal relationships between psychiatrist and patient. After exploring this phase of psychotherapy in the first part, the author then turns to more specific aspects of interviewing and finally she discusses the importance of the psychiatrist's attitude towards such disturbing events in the life of the patient as the death of a close relative, divorce, and severe illness. Also, she discusses briefly the effects of such events on the psychotherapeutic process, when they occur not to the patient but to the psychiatrist. The book is addressed primarily to practicing psychiatrists.

GREENBERG, HAROLD A., AND OTHERS

Child psychiatry in the community: a primer for teachers, nurses, and others who care for children. In collaboration with Julian H. Pathman, Helen A. Sutton, and Marjorie M Browne. New York G P Putnam's Sons, 1950 296 p. illus. 21 cm. $3.50. 1590

Contents: Part I, The child: The child guidance movement in the United States. Personality development. The psychogenesis of behavior problems. Symptoms—diagnosis. Prognosis. Treatment in child guidance clinic. Collaborative therapy. Part II, The clinic team: The psychiatrist. The psychologist. The social worker. Part III, The clinic and the community: The psychiatrist's role as consultant in children's institutions. Emotional problems in a hospital-school for crippled children. Child guidance and the courts. Child guidance and the teacher. Juvenile delinquency. A look to the future. Appendix. Glossary. Selected readings. Index.

Note. The methods and experiences of the Institute for Juvenile Research in Chicago were the basis for the greater part of the content of this introductory authoritative work. However, a broad view of child psychiatry from the community aspect is presented. Current diagnostic and therapeutic techniques that are applicable to work in community clinics and similar organizations are described rather fully although nontechnically. The author is Senior Staff Psychiatrist of the Institute for Juvenile Research.

HINCKLEY ROBERT GEORGE, AND LYDIA HERMANN

Group treatment in psychotherapy: a report of experience. Minneapolis University of Minnesota Press, 1951 136 p. 24 cm. $3.00 1591

Contents: The origins and aims of this study. The function of the group. The function of the therapist. The role of the patient. Dynamics of group movement. Functional mechanics in the group. Highlights from a group. Appendix—case load. Index.

Note: A study of group therapy in practice. It is based on extensive experience in the Students' Mental Hygiene Clinic of the University of Minnesota. The presentation is designed to illustrate both the practical techniques in group therapy and to indicate both the limitations and potentialities of this type of treatment. The text includes [illegible] transcripts of the conversations of groups undergoing therapy. The authors conclude [illegible] well planned and [illegible] fined group therapy is a very valuable method and tool. It differs from individual treatment, but discreetly and skillfully employed it can be well used for many patients as the complete mode of treatment. The first-named author is Associate Professor of Psychiatry and the second-named is Associate Professor of Social Work in the University of Minnesota.

KLEIN, DAVID BALLIN

Abnormal psychology A revision of Edmund S. Conklin's *Principles of abnormal psychology* New York Henry Holt and Company 1951 589 p. illus. 24 cm. $4.75 1592

Contents: Abnormality—perspectives and meanings. A psychological orientation. The self and its dynamisms. Abnormalities of memory and speech. Sensation and perception. Abnormalities of [illegible]. Volitional and intellectual abnormalities. The chemically [illegible]. Dreams, normal and abnormal. Hypnotism and abnormal [illegible]. [illegible]. Psychoneurotic disorders. Functional psychotic disorders. Structural psychotic disorders. A review outline of psychopathology. Therapy—psychoanalytic and allied approaches—non-directive and experimental approaches—physicochemical and surgical approaches. Index.

Note (1943) A substantial textbook in which abnormal psychology is treated as a branch of psychology and not as a discipline exclusively concerned with mental disease. It is addressed primarily to students who are preparing for careers in clinical psychology and is intended as an introduction for those who have acquired

sound knowledge of basic psychology. The reader is offered an inclusive view of the field including accounts of the contributions of Freud and other major figures; descriptions of abnormalities of vision, memory, intelligence, etc.; descriptions of the chief neuroses and psychotic disorders; and a critical discussion of therapeutic approaches. Although based on Conklin's text as indicated in the subtitle, the book is essentially a new work. The author is Professor of Psychology on the faculty of the University of Southern California.

LANDIS, CARNEY, AND M. MARJORIE BOLLES

Textbook of abnormal psychology. Revised edition. New York. The Macmillan Company 1950 634 p. illus. 24 cm. $5.25 1593

Contents (abridged) Section one, Orientation: Description, terminology and orientation. Psychopathology. Section two, Varieties of abnormality: Physical illness. Physical handicap. Hysteria and dissociated personality. Anxiety, compulsive and reactive neuroses. Traumatic neuroses. Manic-depressive psychosis. Dementia praecox—schizophrenia. Involutional melancholia and paranoia. Old age and senile psychoses. Organic disorders of the brain. General paresis. Alcoholism and alcoholic mental disease. Epilepsy. Mental deficiency. Psychopathic personality. Section three, Explanations: Heredity. Culture and environment. Development. The brain. Section four, Psychopathology: Disorders of sensation, perception and action. Disordered emotion. Impairment of intellect. Amnesia and aphasia. Disorders of volition. Section five, Diagnosis and therapy: Psychodiagnosis. Psychotherapy. Educational guidance and counseling. Mental hygiene. Glossary. Index.

Note: (1584*) An introductory text that is designed not only for students who are specializing in psychology, but also for those majoring in such fields as education and sociology. It provides an inclusive view of the field but considerably more space is given to describing and explaining the various types of psychological deviations than is given to diagnosis and therapy. The authors have not favored the theories of any one school but have selected from the various schools what they believe to be the most rational explanations. The first edition appeared in 1946. Much revision and rearrangement is apparent in this edition. Changes have been made in most of the chapters and in some of them, for instance that on alcoholism, they are extensive. Recent literature has been added to the chapter bibliographies.

LEWIN, BERTRAM DAVID

The psychoanalysis of elation. New York W. W. Norton & Company Inc., 1950. 200 p. 21 cm. $3.50. 1594

Contents: Introduction—a psychoanalytic approach to elation. Literary survey of depression and elation. Denial, other defense mechanisms, and the analytic process of cure. Mania and sleep. Additions to the theory of oral eroticism. The oral triad in the elations. Elation and the sense of reality. Bibliography. Index.

Note: A study of elation or "pathological happiness." It is written in the terminology of psychoanalysis and is addressed primarily to specialists in this field. The bibliography is comprehensive.

LOWREY, LAWSON GENTRY

Psychiatry for social workers. Second edition. New York Columbia University Press, 1950. 385 p. 22 cm. $4.50. 1595

Contents: Introduction. The data of psychiatry. Specific etiological factors. Clinical combinations of symptoms. Psychoses of organic origin. Psychoses of toxic origin. Psychodynamics and functional disorders. Cyclothymic (manic depressive) reactions. Schizophrenia (dementia praecox). Paranoia and paranoid conditions. The convulsive disorders. Mental deficiency. The neuroses (psychoneuroses). Psychopathic personality. Behavior and its disorders. Mental disorders in the young. Reactive behavior disorders. Problems of rejection and veterans. The social worker and treatment. Selected reading list. Index.

Note: (1301) An authoritative presentation of psychiatry and abnormal psychology written from the viewpoint of professional social workers. Psychoanalytic concepts and techniques are not discussed in detail. Instead, the book presents the background knowledge and the clinical knowledge that will be useful to the social worker in her contacts with disordered personalities. This edition represents considerable revision and expansion of the original edition. The final chapter is new and sections of several other chapters are new or revised. Statistical data and the bibliography have been brought up to date.

MAIER, NORMAN RAYMOND FREDERICK

Frustration: the study of behavior without a goal. New York McGraw Hill Book Company Inc., 1949 264 p. illus. 23 cm. (McGraw Hill publications in psychology, John F. Dashiell, consulting editor) $4.00. 1596

Contents: Part one, Experimental and theoretical considerations: Introduction. Experimental evidence of abnormal behavior fixations. The characteristics of frustration-instigated behavior. Theoretical implications. Part two, Implications and applications of the theory of frustration: Introduction. Comparison of motivational and frustration-induced behavior problems in children. The influence of reward and punishment on motivation and frustration. Counseling and therapy. Bibliography. Index.

Note: A monograph reporting an experimental program of research on frustration conducted in the author's laboratory at the University of Michigan over a period of ten years and drawing certain conclusions therefrom leading toward a theory of frustration. The reported studies largely utilized sub-human subjects (chiefly rats) but some of the conclusions were checked by comparable experiments on human subjects. The work is of interest to psychologists concerned with abnormal behavior.

MASLOW, ABRAHAM HAROLD, AND BÉLA MITTELMANN

Principles of abnormal psychology: the dynamics of psychic illness. Revised edition. New York Harper & Brothers 1951 665 p. 24 cm. (Under the editorship of Gardner Murphy) $5.00 1597

Contents (abridged) Part I, Introductory concepts: The meaning of "healthy" ("normal") and of "sick" ("abnormal"). Psychosomatics—motivation, emotion, experimental neurosis. Part II, Psychodynamic processes: Unconscious psychological processes—conflict. Frustration and its effects. Disturbances of self-evaluation. Coping with dangers—defenses, amelioration, devious solutions, etc. Part III, The etiology of psychopathology: Constitutional factors. Individual psychogenic factors. Group psychogenic factors. Part IV, Therapy: Aims and nature of psychotherapy. Techniques of psychotherapy in adults. Suggestion and hypnosis. Psychoanalytic therapy. Psychotherapy in children and adolescents. Somatic treatment. Part V, Syndromes in infancy, childhood, and adolescence. Part VI, Syndromes in adulthood: Character disorders. Psychopathic personality. Reactions to shock, threat, or bodily injury (traumatic neuroses). Reactions in which neurotic effects predominate. Reactions in which obsessions and compulsions predominate. Reactions in which disturbed states of consciousness and of memory predominate. Reactions in which bodily complaints predominate. Reactions in which alcoholism and drug addiction predominate. Reactions to conditions of war. Manic-depressive reactions. Schizophrenic reactions. Organic (chemogenic and histogenic) psychotic reactions. Part VII, Syndromes in old age. Glossary. Appendixes: Test procedures—projective methods of examination. The magnitude of the problem of mental disease—statistical data. Bibliography. Author index. Subject index.

Note: A successful textbook which has been widely used since the publication of the first edition in 1941. The information presented in it has been drawn from several fields of science including not only psychology but also anthropology and sociology. Most of it has been gathered from the literature, but the authors' own observations are included too. Their contributions in integrating the material so as to form a coherent survey of abnormal psychology was substantial. They have added information on psychological disturbances in the young and the aged, on the influence of war, on epilepsy, and on somatic methods of treatment. Other parts of the book have been brought up to date. In addition to a bibliography of 1015 items there are annotated reading lists at the end of each chapter.

MAY, ROLLO

The meaning of anxiety. New York The Ronald Press Company 1950 376 p. 22 cm. $5.00. 1598

Contents (abridged) Part I, Modern interpretations of anxiety: Philosophical predecessors to modern theories of anxiety. Anxiety interpreted biologically. Anxiety interpreted psychologically. Anxiety interpreted culturally. Summary and synthesis of theories of anxiety. Part II, Clinical analysis of anxiety: Case studies demonstrating anxiety. Appendix: Anxiety check-lists. Bibliography. Index of names. Index of subjects.

Note. A comprehensive study in which the author examines the various theories of anxiety and finally presents conclusions based partly on a synthesis of this material and partly on his own observations. The first part in which the theories are stated and discussed runs to 234 pages. The remainder of the book is devoted to the analysis of typical cases and to the author's conclusions. The book is written in a lucid style which makes it available to anyone with an elementary knowledge of psychological terms. However, the level of treatment and subject content make it of interest to professional clinical psychologists to whom it is actually addressed.

MEDUNA LADISLAS JOSEPH

Carbon dioxide therapy, a neurophysiological treatment of nervous disorders. Springfield Illinois Charles C Thomas 1950 236 p. illus. 24 cm. $7 50 1599

Contents. Central actions of carbon dioxide. The effect of carbon dioxide upon the function of isolated nerve. The effect of carbon dioxide upon the function of the brain. Technique and administration of the carbon dioxide treatment. Material and statistical data. Argumentation. A neurophysiological theory of psychoneuroses. *Bibliography Index.*

Note A pioneer monograph on the use of carbon dioxide anesthesia in the treatment of psychiatric patients. It is based largely on the author's own researches and applications of the technique. Reports of 100 cases of psychoneurosis and psychosomatic disorders other than obsessive-compulsive neurosis are included. The final chapter is a development of the author's theory that the phenomena of psychiatric conditions can be understood and expressed in certain physiological and biological terms and therefore it is unnecessary to resort to symbolical explanations. *The author is Professor of Psychiatry in the University of Illinois College of Medicine.*

MENNINGER, KARL AUGUSTUS

A guide to psychiatric books with a suggested basic reading list. With the collaboration of George Devereux. New York Grune & Stratton 1950 148 p. 23 cm. (The Menninger Clinic monograph series. No 7) $3.50 1600

Contents Part I, A guide to psychiatric books: Introduction. Basic disciplines. Psychiatry. Psychiatric therapies. Preventive psychiatry and mental hygiene. Part II, A suggested basic psychiatric reading list. Introduction. Basic disciplines. Psychiatry. Psychiatric therapies. *Mental hygiene.* Supplementary list of strongly endorsed books. Index.

Note The main part of this bibliography is a classified arrangement of approximately 1200 selected books. For each book is given the name of the author, the title, the place of publication, the publisher and the year of publication. There are no annotations but certain specially recommended books have been starred. The second part contains a more selected list—119 books—and is a revision of a list that was first published in 1948 in the *Bulletin of the Menninger Clinic.*

MENNINGER KARL AUGUSTUS

A manual for psychiatric case study New York Grune & Stratton 1952 355 p 23 cm. (The Menninger Clinic monograph series. no. 8) $6 75 1601

Contents Part One, The collection and organization of case material. The approach to the psychiatric patient. The collection and recording of historical data. The collection and recording of examinational data. The analysis of the collected data. Part Two, Treatment records: The prescription of a therapeutic program. The record of treatment, developments, and complications. The nature and purposes of case summaries. The re-referral of a patient to the referring physician. Part Three, Case reports. The writing of psychiatric reports and papers. Illustrative case records. Appendix: New American Psychiatric Association nomenclature. Standard Veterans Administration nomenclature (1951). List of personality types. Adjunctive therapy modalities. Model commitment law. References and reading list. Index.

Note. A practical work on orderly procedures in studying psychiatric patients. It deals with methods of history taking; recording of physical, neurological, laboratory and psychological data; the prescribing of therapy and the recording of therapeutic progress and complications. Special problems such as the recording of especially confidential data are discussed in a helpful manner. A long series of illustrated case histories is included. The book is aimed at medical graduates who are beginners in the specialty of psychiatry or who are preparing for this specialty.

PEARSON, GERALD HAMILTON JEFFREY

Emotional disorders of children a case book of child psychiatry New York W W Norton & Company Inc., 1949 368 p. 22 cm. $5.00 1602

Contents: Introduction. The methods of studying a psychiatric problem in a child. The diagnosis and classification of psychiatric problems in children. Anxiety states. Anxiety hysteria. Conversion hysteria. The interrelationships of organic and psychic illness. The obsessional neurosis. The child who is intellectually retarded. The sexual perversions. Psychoses in children. Character neuroses in children. General considerations of the treatment of psychic disorders in children. Index.

Note: A treatise organized around an extensive series of case histories. The histories are used not only to demonstrate the types of neuroses and psychoses to which children are subject but also to show how children's emotional disorders may be diagnosed and managed according to the principles and methods of psychoanalysis. The author has assumed that his readers will have some understanding of basic concepts and terminology of normal and abnormal psychology. The presentation is not highly technical, but the book is more suitable for psychologists and physicians than for general readers and parents.

PROGRESS IN NEUROLOGY AND PSYCHIATRY: AN ANNUAL REVIEW Volume VI. Edited by E. A. Spiegel. New York Grune & Stratton, 1951. 562 p 22 cm. $10 00 1603

Contents: I. Basic sciences: Neuro-anatomy by A. T. Rasmussen. General neurophysiology by Robert Gesell and others. Regional physiology of the central nervous system, by E. C. Hoff and H. Kleitman [illegible]. Neuropathology by A. Ferraro and L. Roizin. Pharmacology of the central nervous system, by A. S. Marrazzi and E. R. Hart. II, Neurology: Clinical neurology by J. C. Yaskin and C. Rupp. Otoneurology by H. B. Perlman. Neuro-ophthalmology—the ocular motor system, by H.-L. Teuber and M. B. Bender. Epilepsy by F. M. Forster. The autonomic nervous system, by A. Kuntz. Neuro-endocrine relationships, by R. Levine and M. A. Goldstein. Cerebrospinal fluid. Electroencephalography by M. A. B. Brazier. Cerebrospinal fluid by M. Spiegel-Adolf. Radiology of the skull and central nervous system, by B. R. Young and R. L. Bromley. III, Neurosurgery: Peripheral nerve surgery by B. Woodhall. Surgery of the spinal cord and column, by M. Scott. Cerebral trauma and surgical infections of the central nervous system, by H. T. Wycis. Brain tumors by L. M. Davidoff and E. H. Feiring. The surgical treatment of pain and motor disturbances, by A. E. Walker and C. E. Hamby. Psychosurgery (surgical aspects) by J. W. Watts and P. B. Dunn [illegible]. IV. Psychiatry: Clinical psychiatry by A. Boyer and E. M. Bluth [illegible]. Mental hygiene, by R. E. Foster and J. C. Bowman [illegible]. Child psychiatry by [illegible]. Forensic psychiatry by W. Overholser. The neuroses, by J. R. Dubo and R. D. Rabinovitch. The neuroses, by E. Weiss and others. Psychosomatic medicine, by E. Weiss and others. Psychoanalysis, by R. L. Frank and associates. Alcoholism, by E. B. Allen and C. T. Prout. Projective methods, by L. Bellak and L. Adler. Psychiatric Shock therapy by F. H. Wilcox and [illegible]. Group psychotherapy (psychiatric aspects) by W. Freeman. Psychiatric nursing and occupational therapy, by A. E. Bennett and B. Engle. Rehabilitation, by M. Marks and E. F. Hoerner. Index.

— Volume VII. Edited by E. A. Spiegel New York Grune & Stratton 1952 604 p. 24 cm. $10 00 1604

Contents I. Basic sciences: *Neuro-anatomy* by E. C. Crosby and R. T. Woodburne. General neurophysiology by W. Kass [illegible]. Regional physiology of the central nervous system, by W. Ferraro and L. Roizin and E. C. Hoff. Neuropathology by A. Ferraro and L. Roizin. Pharmacology of the nervous system, by A. S. Marrazzi and E. R. Hart. II, Neurology: Clinical neurology by J. C. Yaskin and C. Rupp. *Otoneurology* by H. B. Perlman and J. R. Lindsay. Neurosyphilis, by R. Dattner and M. A. Green. Pediatric neurology by H. W. Baird. Epilepsy by F. M. Forster and R. O. [illegible]. The autonomic nervous system, by A. Kuntz and C. A. Richins. Neuro-endocrine relationships, by R. Levine and M. A. Goldstein. Cerebrospinal fluid. Electroencephalography by M. A. B. Brazier.

by M. Spiegel-Adolf. Radiology of the skull and central nervous system, by B. R. Young and R. L. Scanlan. III, Neurosurgery: Peripheral nerve surgery by B. Woodhall. Surgery of the spinal cord and column, by M. Scott. Cerebral trauma and traumatic infection of the central nervous system, by H T Wycis. Brain tumors, by L. M. Davidoff and E. H. Feiring. The vascular system, by A. E. Walker and J. D. McQueen. Psychosurgery by W Freeman and J W Watts. IV Psychiatry: Clinical psychiatry by A. Simon. Genetics in neurology and psychiatry by T Sjogren and B. Hallgren. Mental hygiene, by H. Freed. Forensic psychiatry by W Overholser. Criminal psychopathology, by S. B. Maughs. Child psychiatry by R. D. Rabinovitch and S. Dubo. The neuroses, by J. H. Masserman and others. Psychosomatic medicine, by E. Weiss and others. Psychoanalysis, by R. L. Frank and others. Projective methods, by L. Bellak and D. Brower. Group psychotherapy by S. R. Slavson and others. Shock therapy, by P H. Wilcox and L Adler. Psychiatric nursing and occupational therapy by A. E. Bennett and R. Engle. Rehabilitation, by M. Marks and L. B. Greene. Index.

Note. (1401) Each chapter of these volumes is essentially descriptive literature digest keyed by means of text numbers to an extensive bibliography. The series is addressed to graduate practitioners and its obvious purpose is to enable such readers to keep abreast of the current literature and to select for fuller reading those articles of particular interest. The successive volumes in the series are organized on the same pattern. Section titles and chapter titles vary little from one volume to the next and the editor and publisher aim at an average size of 400 pages. The actual content of each chapter is of course different in each issue since it is based on the year's periodical literature.

Pumpian Mindlin E , editor

Psychoanalysis as science the Hixon Lectures on the scientific status of psychoanalysis. Stanford, California Stanford University Press 1952 74 p. 24 cm. $4.25 1605

Contents: Experimental approaches to psychoanalysis, by E. R. Hilgard; Psychodynamics. Psychotherapy Problems and techniques of psychoanalytic validation and progress, by L. S. Kubie; Introduction. Fundamental propositions of psychoanalysis The position of psychoanalysis in relation to the biological and social sciences, by E. Pumpian Mindlin. References. Index.

Note: A collection of lectures which were delivered first at the California Institute of Technology The authors together describe the content of psychoanalysis, critically evaluate it and discuss certain psychoanalytic techniques and interpretations. The style of presentation varies from non-technical to semi-technical. The book is valuable one for educated readers who desire an authoritative point of view of contemporary psychoanalysis.

Ruesch Jurgen and Gregory Bateson

Communication, the social matrix of psychiatry New York W W Norton & Company Inc., 1951 314 p. illus. 22 cm. $4.50 1606

Contents. Values, communication, and culture. Communication and human relations. Communication and mental illness. Communication and American values American perspectives. Communication and the system of checks and balances. Information and codification. Conventions of communication. Psychiatric thinking. The convergence of science and psychiatry. Individual, group, and culture. References. Index.

Note. In this book, authored by psychiatrist and by an authority on cultural anthropology the society which presses upon every individual person and the means (communication) by which the impress made are studied from the standpoint of their effects upon psychiatric theory and techniques. The authors state, "While, in the past, theories of personality were concerned with one single individual, modern psychiatrists have come to the realization that it is necessary to see the individual in the context of social situation. The authors also pay attention to the effects of society upon psychiatrists and especially upon contemporary psychiatric thinking The book is addressed primarily to psychiatrists and secondarily to sociologists.

Sarason Seymour B

Psychological problems in mental deficiency New York Harper & Brothers, 1949 366 p. illus. 22 cm. (Under the editorship of Gardner Murphy) $5 00 1607

Contents: Criteria of mental deficiency Problems in classification. Problems in the diagnosis of brain injury Problems in test interpretation. Garden-variety mental deficiency Cultural factors in the etiology of garden-variety deficiency Cerebral palsy Other forms of mental deficiency Projective techniques. Psychotherapy Bibliography Author index. Subject index.

Note: A critical study of potentialities and applications of psychological and psychiatric theories and techniques in the diagnosis and therapy of mental deficiencies. The author states this book is evidence of my own belief that the psychological problems in mental deficiency are as intriguing, puzzling and pressing as those found in any other clinical group." It is based largely on the literature including the author's own writings. The bibliography contains 319 citations. Since the names of the authors of the cited papers are assembled in the author index, the book can be used also as guide to the literature of this specialty The author is Associate Professor of Psychology at Yale University

Saul, Leon Joseph

Bases of human behavior a biologic approach to psychiatry Philadelphia J B Lippincott Company 1951 150 p 24 cm. $4 00. 1608

Contents: Part one, The power of the emotional forces—psychodynamics as basic science The place, the scope and the goals of dynamic psychiatry Part two, Motivation and its effects: Emotional forces can affect the physiology Emotional forces can affect the physiology to produce symptoms Emotional forces can affect the physiology to produce tissue damage. Emotional forces can affect perception, thinking, feeling and behavior. Scheme of operation of emotional forces Part three, Elements of psychodynamics: The organism as unit The structure of the mind. Development of the mind. Basic biologic forces in the mind. Appendix: The nature of neurotic reactions Index.

Note. Primarily an introduction to psychiatry this work can be used also as an introduction to the study of behavior or of personality The author views it as book on dynamic psychiatry or "psychodynamics, and he defines the latter term as "the science of motivations of biologic organisms. The unity of the living organism, the roots of behavior in basic physiologic processes, and the interactions of psychologic and physiological reactions are emphasized. Only the main ideas of the field are discussed and the book is written in style that makes it available to wide circle of readers both within and without the professions of psychology and psychiatry

Scheidlinger, Saul

Psychoanalysis and group behavior a study of Freudian group psychology New York W W Norton & Company Inc., 1952 245 p. 22 cm. $3 75 1609

Contents: Part one, The Freudian concepts of group relations: The social tendencies of man—a historical background. The Freudian theory of the drives and social tendencies. Basic group processes. The role of the leader. Intra- and inter-group conflicts. Part two, Implications and applications: The Freudian concepts of group relations—a recapitulation. Some implications of Freudian group psychology The Freudian concepts and other fields of group study Psychoanalysis and educational practice. The relationship of psychoanalysis to group psychotherapy Bibliography Index

Note The author believes that the emotional factors in group behavior have not been given sufficient importance by the psychologist. The purpose of his book, written for social psychologists, group workers, and teachers, is to summarize the contributions of the orthodox Freudians to our understanding of group psychology The author does not favor the point of view of one school over others He has merely assembled and classified the concepts of the Freudians in the field. In his examination of psychoanalytic concepts methods of therapy and research have not been discussed. There are thirteen pages of bibliography including books, pamphlets, and periodical literature with full author and title notations

Sheldon, William Herbert

Varieties of delinquent youth an introduction to constitutional psychiatry with the collaboration of Emil M. Hartl and Eugene McDermott. New York Harper and Brothers, 1949 899 p. illus. 23 cm. $8.00 1610

Contents (abridged) Part one, *Orientation for* biological humanics: Orientation. Glossary 1—definitions basic to the constitutional approach. The psychiatric variables; outline for an operational psychiatry. Part two, Two hundred biographies: Glossary 2—glossary for the Hayden abridgement for biography. The biographies. Part three, Psychiatry of delinquency: Biological delinquency. The social psychiatry of delinquency. Epilogue. Index.

Note: An elaborate technical presentation of a thesis which says essentially that a person's behavior is closely related to his bodily structure or somatic type. "Constitutional psychiatry" is thus diametrically opposed to the Freudian concept of the mind and its effects upon behavior and personality patterns. It leads to a view that delinquency is a result of the weakness of the human stock—a stock which is currently declining in quality according to the author. The text is buttressed with 200 case histories, each one of which is accompanied by three photographs which show the body type of the subject. The work is based on a ten-year study of delinquent youths at the Hayden Goodwill Inn, a Boston social agency. The author is Director of the Constitution Laboratory of the College of Physicians and Surgeons, Columbia University.

SILVERBERG, WILLIAM V

Childhood experience and personal destiny a psychoanalytic theory of neurosis. New York Springer Publishing Company Inc., 1952 289 p. 22 cm. $4.50 1611

Contents: Introduction—the need for a theory of personality. Toward a theory of personality and neurosis. The areas of early experience. The first experiential area—problems of orality and deprivation. The second experiential area—problems of discipline. The third experiential area—problems of rivalry and genitality. Psychotherapeutic aims. Bibliography. Index.

Note: A new theory of neurosis based upon the theories of Freud but going beyond them in broadening the range of childhood experiences which may cause psychic trauma. The categories of experiences which the author believes affect mental health are named in the sub-titles of the third, fourth and fifth chapters above. The author stresses the importance of the experiences of the first six years of life. The book is written in the technical terminology of Freudian psychoanalysis. The author is Clinical Professor of Psychiatry in New York Medical College.

SLAVSON SAMUEL RICHARD

Analytic group psychotherapy with children adolescents, and adults. New York Columbia University Press 1950 275 p. illus. 23 cm. $3 75 1612

Contents: Historic backgrounds and current practices. Transference and substitution in group psychotherapy. Catharsis, regression, and anxiety. Direct and derivative insight. Ego strengthening, catharsis displacement, sublimation, and reality testing. Some specific dynamics in analytic group therapy. Functions of the group therapist. Play group psychotherapy with pre-school children. Activity-interview psychotherapy with children in latency. Analytic group psychotherapy with girls in puberty. Analytic group psychotherapy with adolescent girls. Analytic group psychotherapy with adults. Analytic group psychotherapy in an institution. Selection and grouping of patients. The use of groups in the treatment of psychotics. Glossary. Index.

Note: (2041) Three types of group psychotherapy are described and illustrated in this work: group play psychotherapy for pre-school-age children, activity-interview group psychotherapy for certain older children, and interview group psychotherapy for adolescents and adults. A generous portion of the volume is given over to records of actual sessions at the Jewish Board of Guardians, a child guidance agency in New York City. Short extracts from records are selected to illustrate or heighten the meaning of theoretic statements. Full records of six sessions are included with condensed interpretations and brief discussions of dynamics as related to the therapeutic process. The book is a companion work to the author's *An introduction to group therapy* New York, 1943.

STRECKER, EDWARD ADAM

Fundamentals of psychiatry Fifth edition. 21 illustrations. Philadelphia J B Lippincott Company 1952 250 p. illus. 24 cm. $4.50. 1613

Contents: The importance and the opportunities of psychiatry. Etiology. Classification of mental diseases. Further thoughts about nomenclature and classification. Methods of examination and symptoms. Organic psychoses. Toxic psychoses. Functional psychoses and psychoneuroses. Psychosomatic medicine and psychiatry. Defect reaction types. Treatment including psychotherapy. Psychiatry and war. The nurse and the psychiatric patient. Glossary. Index.

Note. (1409) A standard manual of information on the concepts of psychiatry which the author believes are essential to general practitioners in their regular practice. By writing in a terse style and addressing himself to persons already educated in medicine, the author has succeeded in covering much ground in a small space. He emphasizes the importance of psychiatry and the importance of an understanding of psychiatric concepts and techniques on the part of medical men in general practice and in other specialties. The main change in this edition in comparison to preceding ones is the addition of the chapter on treatment.

STRECKER, EDWARD ADAM, AND OTHERS

Practical clinical psychiatry By Edward A. Strecker Franklin G. Ebaugh and Jack R. Ewalt. Section on Psychopathologic problems of childhood by Leo Kanner Seventh edition. Philadelphia The Blakiston Company 1951 506 p. illus. 24 cm. $7.00. 1614

Contents: Personality development and function. *Methods of psychiatric examination.* The organic reaction type. Toxic psychoses. The affective reaction types. The schizophrenic reaction types. The constitutional psychopathic inferior. Reactions of developmental and constitutional defects. Paranoid reaction types and paranoia. Traumatic reactions. Psychoneuroses. Psychosomatic medicine. "Support" psychotherapy. Pathologic drinking. Psychopathologic problems of childhood. Index.

Note: (1410*) A standard, widely-used medical college textbook. It presents a broad, fairly detailed view of the subject in a relatively small space. Case histories are used freely in the presentation and the areas of contact among psychiatry, internal medicine and other specialties are indicated. The book is useful also to general medical practitioners as an authoritative source of information about contemporary clinical psychiatry. The sixth edition was published in 1947. In this edition the major changes are a revised statement of classification in the second chapter and the addition of the chapter on "support" psychotherapy. Less extensive changes have been made in other chapters and recent literature has been added to the bibliographies.

WATKINS JOHN GOODRICH

Hypnotherapy of war neuroses a clinical psychologist's casebook. New York The Ronald Press Company 1949 384 p. illus. 23 cm. $5 00 1615

Contents. Part I, Military neuroses: Introduction. Psychotherapy in a military setting. *Theoretical bases of treatment.* Strategy and tactics. Part II, Hypnotherapy: *Hypnosis, past and present.* Inducing trance states. Hypnotherapeutic techniques. *Advanced* [illegible] therapeutic techniques. Part III, *Individual case studies:* [illegible] to the case studies. Aphonia. Amnesia. Stuttering. Tremor. [illegible]. Phobia. Psychogenic skeleto-muscular reaction. Part IV, The conversion hysteria. Camptocormia. Hysterical paralysis. [illegible] hypnoanalytic treatment of an entrenched phobia. [illegible] old man. The problem is much deeper. Conflicts: [illegible] personalities. The battle of Mr. Y. Dreams of [illegible] X [illegible] Y. The masquerade is ended. Part V, Evaluation: Summary. Glossary: Military terms. Professional terms. Bibliography. Author index. Subject index.

Note: A report of psychotherapy done by the author in the neuropsychiatric division of an Army convalescent hospital during and immediately after World War II. The men whose treatment is described in the case studies were men of various backgrounds who became neurotically ill during their Army service as a result of the stress of war. The cases were selected from a much larger number in order to illustrate the different forms which war neuroses—the "shellshock" of 1918—may take and the variations of therapeutic attack necessary to bring about improvement. The cases are introduced by an account of the nature and purposes of wartime psychotherapy, the theoretical basis of the author's work, and the nature of hypnotherapeutic techniques. The case studies include the quoted transcripts of extended sessions between hypnotherapist and patient.

WATSON, ROBERT IRVING

The clinical method in psychology New York Harper & Brothers, 1951 779 p. 22 cm. (Under the editorship of Gardner Murphy) $5.00. 1616

Contents (abridged) Part I, Introduction The clinical method. Part II, Diagnostic appraisal: The functions of diagnosis. Observation and rating in clinical diagnosis. The diagnostic interview Tests as diagnostic instruments. Procedures in diagnostic testing. The Wechsler-Bellevue intelligence scale. Revised Stanford-Binet tests of intelligence. Performance tests of intelligence. The Vineland social maturity scale. Diagnostic testing of infants and preschool children. Tests of memory and conceptual thinking. The projective approach to personality evaluation. The Rosenzweig picture-frustration study The thematic apperception test. Part III, Psychotherapy: The psychotherapeutic values to be found in diagnostic materials. The common factors in psychotherapy Some systematic approaches to psychotherapy Psychotherapy with children. Group psychotherapy. Indirect methods of treatment. Name index. Subject index.

Note: This text on the application of psychological principles and techniques to the problems of the individual is designed primarily for advanced college students. The treatment of diagnosis is more detailed and written on higher level than that of psychotherapy where the author has been intentionally descriptive rather than critical. Projective techniques other than those listed in the contents are treated only sketchily and case studies are used only when needed to complete understanding of basic methods. However the extensive, up-to-date bibliographies included with each chapter refer to much additional material. The author is faculty member of the Department of Neuropsychiatry of Washington University's School of Medicine.

MENTAL HYGIENE AND POPULAR PSYCHIATRY

CARROLL, HERBERT ALLEN

Mental hygiene the dynamics of adjustment. Second edition New York Prentice-Hall, Inc. 1951 448 p. illus. 22 cm. $6.35 1617

Contents: Introduction. Mainsprings of human behavior The need for physical security The need for emotional security The need for mastery The need for status. Learning behavior disorders. Adjusting to frustration. Neurotic adjustments. Psychotic adjustments. The school and the community Mental superiority and deficiency The role of measurement. Regaining mental health. Questions for study and discussion. Bibliography Index.

Note. (1410*) A textbook on mental hygiene written especially for two groups of college students: (1) those beginning work as "majors" in psychology; (2) those who are not "majoring" in psychology but are interested in learning something of the dynamics of adjustment for personal or professional enrichment or advancement. Emphasis in the book is upon the application of principles rather than upon theory as such. In the second edition about two-thirds of the material is carried over from the first with minor changes the remaining one-third is new Several of the chapters, including those on motivation and learning, have been almost completely rewritten. Statistical data have been brought up to date and additional research studies and case material included. The final chapter serves as transition to courses in clinical psychology

DOLLARD JOHN AND NEAL E. MILLER

Personality and psychotherapy an analysis in terms of learning, thinking, and culture. New York McGraw Hill Book Company Inc., 1950 488 p. illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $7 50. 1618

Contents (abridged) Part I, Orientation. Part II, Basic principles of learning. Part III, The normal use of the mind in solving emotional problems Introduction to higher mental processes. The role of words and sentences in arousing drives, mediating rewards, and producing foresight. Reasoning and planning Social training in the use of higher mental processes. Part IV How neurosis is learned: Social conditions for the learning of unconscious conflicts. How symptoms are learned The unconscious—how repression is learned. Part The new conditions of therapeutic learning: Selecting patients who can learn. Free association—permissiveness and the compulsion to utter Transference—generalized responses in the therapeutic situation. Labeling—teaching the patient to think about new topics. Teaching the patient to discriminate—role of past and present. Part VI, Conflict Why conflicts and misery can be relieved only in real life The dynamics of conflict—their implications for therapy A hypothesis concerning alcohol, barbiturates, and lobotomy Part VII, Special aspects of therapy Ways of getting rid of symptoms. Techniques of therapeutic intervention. How therapy can go wrong. Part VIII, Two applications to normal living Self-study Suppressing troublesome thoughts to get freedom for creative thinking. Bibliography Name index. Subject index.

Note An original and interesting presentation of the principles and potentialities of psychotherapy in the resolving of neuroses. Both the formation of neuroses and their therapy are explained in terms of the learning process and of interactions between individuals and society The point of view is synthetic one based on the principles of Freud and his school, the findings of experimental psychology and on social psychology The organization and style of the book are such that persons not trained in psychology or psychoanalysis can read it with profit On the other hand the main theme and the content will be of interest to persons who are professionally concerned with psychoanalysis and personality study There is an extensive bibliography The authors are staff members of the Institute of Human Relations of Yale University.

HORNEY, KAREN

Neurosis and human growth the struggle toward self-realization. New York W W Norton & Company Inc., 1950. 391 p. 22 cm. $4 50 1619

Contents: Introduction—a morality of evolution. The search for glory Neurotic claims. The tyranny of the should. Neurotic pride. Self-hate and self-contempt. Alienation from self. General measures to relieve tension. The expansive solutions—the appeal of mastery. The self-effacing solution—the appeal of love. Morbid dependency. Resignation—the appeal of freedom. Neurotic disturbances in human relationships. Neurotic disturbances in work. The road of psychoanalytic therapy Theoretical considerations. Reference headings. Index.

Note A penetrating study of neurosis viewed as special and unfortunate form of human development. It is designed for lay readers primarily and is written in the same clear convincing style that has characterized this author's other books.

HUGHES, MARGARET MARY, editor

The people in your life psychiatry and personal relations, by ten leading authorities. New York Alfred A. Knopf 1951. 278 p. 21 cm. $3 50 1620

Contents Man—woman, by Eric Fromm. Husband—wife, by L. S. Kubie. Parent—child, by F. H. Allen. Age—youth, by F. J. Braceland. Race majority—race minority, by M. Mead. Brother—brother [illegible]. Race majority—race minority, by [illegible]. Pupil—teacher by C. Kluckhohn. Friend—friend, by J. A. P. Millet. Employer—employee, by L. H. Bartemeier. Pastor—parishioner, by O. R. Rice. Citizen—community by G. S. Stevenson.

Note: The ten lectures here collected were first delivered as courses in psychiatry sponsored by Town Hall of New York. Conceived in tone and keyed to the background and understanding of the average layman, they serve as sound introduction to any one who seeks from psychiatry better comprehension of himself and of the society of which he is part. Included in the text and contributing to its worth are questions and answers transcribed from the discussion which followed each lecture when it was presented. Lacks index.

LEMKAU PAUL VICTOR

Mental hygiene in public health. New York McGraw Hill Book Company Inc., 1949 396 p illus. 23 cm. (McGraw Hill series in health science, Amos Christie, consulting editor) $5 50. 1621

Contents (abridged) Part 1, The place of mental hygiene in public health The field of mental hygiene. The field of public health. Mental hygiene as public health responsibility. Public health practices and mental hygiene. The attack on the problem. The [illegible] Part 2 The development of the individual: The period of infancy—[illegible]. The prenatal and natal period. The adolescent [illegible]. The preschool period. The school period. The adolescent period. The young adult period. The period of middle age. The period of old age. Summary and prospect. Appendix: Review of psychopathological states. List of visual aids. Author index. Subject index.

Note. This book follows the organization of course in mental hygiene given by the author in the School of Hygiene and Public Health of the Johns Hopkins University It gives practical discussion of the elements of mental hygiene in an overall program of public health and preventive medicine.

McKINNEY, FRED
Psychology of personal adjustment, students' introduction to mental hygiene. Second edition New York John Wiley & Sons, Inc., 1949 752 p illus. 22 cm. (Wiley publications in psychology Herbert S Langfeld, advisory editor) $6 00 1622

Contents: Introduction. Adjustment to college work. Concentration, learning, and thinking. Personal efficiency. Understanding oneself. Development of personality. Creative adjustment. Personal orientation. Vocational selection. Social adjustment. Social proficiency and leadership. Affections and conventions. Marital adjustment. Emotional stability. Self-confidence. The adjusted personality. Appendix. Name index. Subject index.

Note: (3002) A well-written and eminently practical discussion of the emotional and psychological problems which face the average college student. The book stresses the student's point of view and is designed for use as text in introductory psychology courses and for individual reading. In this edition it has been revised and enlarged to incorporate the latest trends and developments in the field of personal adjustment. A chapter on development of personality has been added, and new case studies have been included. The chapter bibliographies have also been brought up to date.

MILBANK MEMORIAL FUND
Epidemiology of mental disorder Papers presented at a round table at the 1949 annual conference of the Milbank Memorial Fund, November 16–17 1949 New York Milbank Memorial Fund, 1950 198 p. 23 cm. Paper $0 50 1623

Contents: Part I, Review of available material on patterns of occurrence of mental disorder: Introduction, by R. H. Felix. Minor disorders, by E. Lindemann and others. Major disorders, by E. M. Gruenberg. Part II, Evaluation of this material: Evaluation of this material, by J. H. Dingle and T. Francis, jr. Part III, Plans for study of the epidemiology of mental disorder: Plans for study of the epidemiology of mental disorder—most urgent problems to be investigated, by R. P. Knight. A proposal for research in the epidemiology of psychiatric disorders, by A. H. Leighton. An epidemiologic analysis of suicide, by J. E. Gordon and others. Review of available material on patterns of occurrence of mental disorders—major disorders, by E. M. Gruenberg. List of participants.

Note: A collection of original papers, together with transcripts of the discussions of them at the round table named in the book's title. The "Review of available material on patterns of occurrence of mental disorders, by E. M. Gruenberg, is classified bibliography of 342 references. The book is of particular interest to persons concerned with the public health aspects of mental disorders.

STECKLE LYNDE CHARLES
Problems of human adjustment. New York. Harper and Brothers, 1949 351 p. illus. 22 cm. [Under the editorship of Gardner Murphy] $3.00 1624

Contents Introduction. Man the animal. Emotional living. Mind-body. Realistic living. The road to neurosis. The main problems of life. Security in sex. Courtship and marriage. Happiness in work. The search for God. Maturity in old age. A realistic outlook on life. Bibliography. Index

Note The author of this book states "college students, professional persons, industrialists, factory or clerical workers,—in fact all mankind—must face and resolve certain fundamental issues of living. The theme here presented is that these issues obtain problem status only when man attempts to meet them with inadequate preparation. The book is nontechnical, commonsense discussion aimed at general readers and college students. It is well documented with references to more than 270 books and papers. The author is professional psychologist.

STRECKER EDWARD ADAM
Basic psychiatry New York Random House, 1952 473 p. 21 cm. $3 75 1625

Contents: Introduction. Causation. Classification or naming. Examination and symptoms. The organic psychoses. Toxic psychoses. "Functional" psychoses. Manic-depressive and schizophrenic psychoses. Paranoia and paranoid conditions. Psychoneuroses. The psychoneuroses and psychosomatics of pregnancy and childbirth. Pathological drinking. Mental defects. Constitutional psychopathic inferiority. Treatment. The silver cord. A design for childhood. The psychiatry of war. Postscript. Index.

Note. A book for laymen and other non-specialists on the human problems which develop need for psychiatric attention. The common psychiatric ailments are described with case studies to point up the descriptions and make them more concrete to the reader. The language is relatively simple and the total work paints broad picture of what the psychiatrists are currently able to do in discovering causation and treating mental ailments. The author is Professor of Psychiatry at the University of Pennsylvania.

THORPE, LOUIS PETER
The psychology of mental health. New York The Ronald Press Company 1950 747 p. illus. 21 cm. $5.25 1626

Contents: Part I, The problem of mental health. Modern society and mental health. Part II, The psychodynamics of mental health. Basic needs and mental health. Psychoanalysis and mental health. Nature and evaluation of mental health. Adjustment mechanisms and mental health. Part III, Personality and mental health: Mental health and the organization of personality. Physiological factors in personality and mental health. Development of personality. Part IV Conditions marked by moderate mental health. Minor personality maladjustments. Psychosomatic disorders. Hostile behavior. Deviate sexual behavior. The psychoneuroses. The functional psychoses. Part Improving mental health: Mental health and the home. The school and mental health—teacher-pupil relationships—subject matter and administrative aspects. The community and mental health. Diagnosing mental health and personality. Therapeutic methods and readjustment. Glossary of technical terms. Author index. Subject index.

Note A comprehensive text written at the college level and designed for use in courses on mental hygiene, dynamics of personality, etc. Its wide scope makes it useful also as an orientation survey for such professional people as teachers and social workers. Particular attention is paid to the significance of home and school experiences in relation to mental health. Source articles and books are cited in footnotes throughout the book and the chapters conclude with lists of recommended readings. The author is Professor of Education and Psychology in the University of Southern California.

WALLIN JOHN EDWARD WALLACE
Personality maladjustments and mental hygiene a textbook for students of mental hygiene, psychology education, sociology and counselling. Second edition. New York Mc Graw Hill Book Company Inc., 1949 581 p. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $5.50. 1627

Contents (abridged) Part I, Introduction: The concept of mental health and mental hygiene. The remedial, preventive, and positive objectives of the mental-hygiene program. The physical, psychological, and social factors or elements of the mental-hygiene program. The educational elements and implications of the mental-hygiene program. Types of children with whom mental hygiene is concerned. Psychotherapeutic methods. Part II, Symptoms of personality maladjustment as evidenced by inadequate or unwholesome modes of response to difficulties. Specific types of faulty methods of solving life's problems, with preventive and remedial suggestions. Bibliography. Author index. Subject index.

Note: (3011) An introduction for the classes of readers named in the subtitle. For book at this level it is exceptionally inclusive. All of the common types of personality maladjustments are described in some detail. Also, fully as much attention is given to normal resolving of mental difficulties and the developing of balanced personalities. A feature of the book is large number of short autobiographical sketches that illustrate personality maladjustments including those of intellectually normal and superior individuals. The first edition was published in 1935. For this edition the chapters of the original edition were subdivided and regrouped. One new chapter has been added and there are many new sections within chapters. The bibliography is an extensive one and in this edition it covers literature published as late as 1948.

PSYCHOLOGY

GENERAL

ANASTASI, ANNE, AND JOHN P FOLEY, JR.
Differential psychology individual and group differences in behavior Revised edition New York The Macmillan Company, 1949 894 p. illus. 22 cm. $6 00 1628

Contents: Part I, Historical and methodological orientation: Historical introduction. Basic concepts of psychological testing. Nature and extent of individual differences. Heredity and environment. Part II, Analysis of individual differences: Biological factors in simple behavior development. Psychological factors in simple behavior development. The effects of practice. Schooling and intelligence. Age differences. Family resemblance. Twins and foster children. Bodily conditions and behavior. The quest for constitutional types. Variability within the individual. Trait organization. Part III, Major group differences: The subnormal. Genius. Sex differences—basic problems—major results. Racial comparisons—problems of grouping—problems of measurement. Racial versus cultural differences. Socio-economic differences. The individual as member of multiple groups. Index.

Note: (3073) A textbook in which differential psychology is presented as one approach to the understanding of behavior and in which the experimental knowledge upon which differential psychology is based is organized and summarized. The book is designed primarily for upperclass undergraduate college students who are majoring in psychology. Long lists of literature references are included. In addition to their usefulness in connection with the study of the book, these have some utility as guides to the knowledge and the literature of such subjects as psychological differences between the sexes. In this edition the book has been extensively revised and much enlarged.

ANNUAL REVIEW OF PSYCHOLOGY Volume 3 Calvin P Stone, editor Donald W Taylor associate editor Stanford, Calif Annual Reviews, Inc. 1952 462 p. 23 cm. $6.00 1629

Contents: Child psychology, by V Nowlis and H. H. Nowlis. Learning, by H. F Harlow. Vision, by H. Helson. Hearing, by W R. Garner. Somesthesis and the chemical senses, by C. R. Wendt. Individual differences, by L. G. Humphreys. Personality by H. J Eysenck. Social psychology and group processes, by M. B. Smith. Industrial psychology by C. W Brown and E. E. Ghiselli. Comparative and physiological psychology by H. W Nissen and J Semmes. Abnormalities of behavior by J Zubin. Clinical methods: Psychodiagnostics, by A. Magaret. Clinical methods: psychotherapy by V C. Raimy. Counseling: therapy and diagnosis, by W M. Gilbert. Educational psychology by J. E. G. Flemming. Statistical theory and research design, by Q McNemar. Motivation, by O. H. Mowrer. Indexes.

Note: The sections or papers in the present volume of this recently established review are essentially literature digests after pattern. The series is addressed to graduate psychologists and serves both as a review of progress and guide to the recent literature. Names of authors of all the cited papers are entered in the author index and detailed subject index covers the contents of the entire volume.

BORING EDWIN GARRIGUES
A history of experimental psychology Second edition. New York Appleton-Century Crofts, Inc., 1950. 777 p illus. 24 cm. (The Century psychology series Richard M. Elliott, editor) $6 00. 1630

Contents (abridged): Orientation: The rise of modern science. Origin of modern psychology within science: Psychophysiology in the first half of the nineteenth century. Phrenology and the mind-body problem. Physiology of the brain, 1800–1870. Specific energies of nerves. Physiological psychology of sensation, 1800–1850. Hypotheses. The personal equation. Origin of modern psychology within philosophy: Beginning of modern psychology—Descartes, Leibnitz and Locke. British empiricism—Berkeley Hume and Hartley. British associationism—the Mills and Bain. German psychology before 1850—Kant, Herbart and Lotze. The founding of experimental psychology: Gustav Theodor Fechner. Hermann von Helmholtz. Wilhelm Wundt. Establishment of modern psychology in Germany. Establishment of modern psychology in Great Britain. Establishment of modern psychology in America. Later trends in modern psychology: Gestalt psychology. Behaviorists. Brain function. Dynamic psychology. Index of names. Index of subjects.

Note: The first edition of this scholarly work appeared in 1929 and rapidly attained the status of classic. The original text was rather extensively rewritten for the present edition. The author has stated that about half of the new edition is new writing. The scope is still the psychology of the general [illegible], human, normal, adult mind as revealed in the psychological laboratory and the range in time is now from about 1840 to about 1940. In spite of much subdivision by nation, school, and other groups the effect of the book is that of [illegible] of the subject. The narrative is studded with names, dates, and titles of works. However, these are integrated in historical narrative in which the author clearly and authoritatively delineates the contribution of each school and movement and evaluates the significant work of each psychologist mentioned.

BRUNSWIK, EGON
The conceptual framework of psychology Chicago The University of Chicago Press, 1952 102 p. illus. 24 cm. (International encyclopedia of unified science. Vol. 1, no. 10) $2 00. 1631

Contents: Experience and the emergence of the objective approach. The functional unit of behavior and the level of complexity of psychological research. Misconceptions of [illegible] in psychology. Conceptual approach and constructive crisis in psychology. Converged on objective functional approach. Bibliographical notes.

Note: A critical study of the concepts and methodology of psychology. The author deals mainly with the problems in these areas which are posed by the two basic approaches, the objective and the functional, or molar. In examining these problems he describes and evaluates very concisely the concepts and methodologies of the chief schools of psychology and of the major individual contributors to psychological thought. There is long, partly annotated bibliography.

CRAFTS LELAND WHITNEY AND OTHERS
Recent experiments in psychology By Leland W Crafts, Theodore C. Schneirla, Elsa E. Robinson, and Ralph W Gilbert. Second edition. New York McGraw Hill Book Company Inc. 1950. 503 p. illus. 24 cm. (McGraw-Hill publications in psychology Clifford T Morgan consulting editor) $4.00 1632

Contents (abridged): A study of attitudes toward [illegible] among college students. The origin of the cat's responses to rats and mice. Migration and the "instinct" problem. Competition and cooperation. The physiology of emotional behavior. Facial expression in emotion. The perception of obstacles by the blind. The duplicity theory of vision. The function of the brain in relation to intelligence. Organic nervous diseases in relation to behavior. The electrophysiology of the nervous system. The effect of distraction upon the performance of certain tasks. A comparison of the intelligence of "racial" and national groups in Europe. The conditioning of vasomotor responses. The importance of organization for retention and transfer. Methods of breaking undesirable habits. Conflict and experimental neuroses in cats. Problems in the perception of the vertical in space. Perception and memory as influenced by attitude and experience. Implicit muscular activities during thinking. Projection and the thematic apperception [illegible].

perception test. The opinion-polling technique as used in study of the effects of bombing on Japanese morale. Index.

Note: (3018) A college textbook that serves as an introduction to the methods of current experimental psychology and to some notable results of modern experiments. In general, in each of the chapters several experiments are specifically described, then the methods and findings are both discussed. Although some technical terminology is employed, the book is easy to read and most of it can be grasped by the average educated reader without the aid of an instructor. In this edition the work contains seven chapters that did not appear in the original edition and there are other important changes.

CURRENT TRENDS IN PSYCHOLOGICAL THEORY by Wayne Dennis and others. Pittsburgh University of Pittsburgh Press, 1951 213 p. 22 cm. $4.00. 1633

Contents: Developmental theories, by W Dennis. Theories of personality by R. Leeper. Learning theories, by H. F Harlow Theories of perception, by J. J. Gibson. Cognition and motivation in psychological theory by D. Krech. Theories of psychotherapy by D. McK. Rioch. Brain and behavior by W S. McCulloch. Principles and problems of theory construction in psychology by H. Feigl.

Note: A collection of lectures originally delivered at the University of Pittsburgh in February 1951 under the auspices of the Department of Psychology The authors include professors of psychology and psychiatry from leading American universities. Each of the authors has outlined the current status of specific area of psychology and has indicated the probable direction of further developments. A list of literature references accompanies each lecture. Although addressed to advanced college students majoring in psychology and graduate psychologists, the book is handy and authoritative survey for anyone with professional interests in the field.

GARRETT, HENRY EDWARD

Great experiments in psychology Third edition. New York Appleton-Century-Crofts, Inc., 1951 358 p. illus. 24 cm. (The Century psychology series edited by Richard M. Elliott) $3.50. 1634

Contents: Pavlov and the conditioned reflex. Franz's and Lashley's studies of the role of the brain in learning. Thorndike's laws of learning. Köhler's experiments in perception and learning and their importance for Gestalt psychology Thorndike's and Woodworth's experiments on the transfer of training and their influence upon the doctrine of formal discipline. Ebbinghaus's studies in memory and forgetting. Watson's studies of the behavior of the human infant. Cannon and experimental studies of the emotions. Experimental approaches to personality study McDougall and social psychology Binet and the individual intelligence test. The Army tests—Alpha, Beta, and AGCT Galton and the measurement of individual differences. Visual and auditory perception—the work of Helmholtz and others. Cattell's studies of reaction time. Weber's and Fechner's laws and the development of psychophysics. Index.

Note. (3018a) The plan of organization in most of the chapters of this book is first to describe classical experiment, then to show what has followed it. The author's interpretation of these significant experiments and his evaluations of the theory built upon them are in themselves contributions to psychology The book is used mainly by college students of psychology However, some chapters as those on intelligence testing are also useful to laymen and to persons in professions other than psychology The second edition was published in 1941. In this edition the scope and purpose of the book are unchanged but considerable rewriting is evident in most of the chapters. Revisions and additions have been made in the text and new literature has been added to the bibliographies now printed at the ends of the chapters. The chapter on "McDougall and social psychology" has been added. The order of the chapters has been rearranged and the order of topics within the chapters has also been revised.

HAYEK, FRIEDRICH AUGUST VON

The sensory order an inquiry into the foundations of theoretical psychology With an introduction by Heinrich Klüver Chicago Illinois The University of Chicago Press, 1952 209 p. 22 cm. $5.00. 1635

Contents: The nature of the problem. An outline of the theory. The nervous system as an instrument of classification. Sensation and behaviour. The structure of the mental order. Consciousness and conceptual thought. Confirmations and verifications of the theory Philosophical consequences. Bibliography Index.

Note: Professor Hayek, an eminent economist, was at one time student of psychology This book is presentation of his theory of sensory order and the relations between physical and sensory phenomena. It is his thesis that "sensory perception must be regarded as an act of classification. He approaches this problem of classification to determine the relationships between experience and the relationship to the condition which makes experience possible. The work is philosophical and theoretical and is designed to pose problems for future consideration as well as to stabilize some of the material already known and available.

JEFFRESS LLOYD A., editor

Cerebral mechanisms in behavior the Hixon symposium. New York John Wiley & Sons, Inc., 1951 311 p illus. (part col d) 23 cm. $6.50 1636

Contents: The general and logical theory of automata, by J. von Neumann. Why the mind is in the head, by W S. McCulloch. General discussion. The problem of serial order in behavior by K. S. Lashley Functional differences between the occipital and temporal lobes with special reference to the interrelations of behavior and extracerebral mechanisms, by H. Klüver Relational determination in perception, by W Köhler. Brain and intelligence, by W C. Halstead. General discussion. The symposium from the viewpoint of clinician, by H. W Brosin. Name index. Subject index.

Note: The edited transcripts of lectures and discussions presented at symposium held September 20–25 at the California Institute of Technology under the auspices of the Hixon Fund Committee. The symposium was planned as step in the integration of experimental results and knowledge from several fields of science which impinge on the relations between behavior and brain. The level of discussion is advanced and the book is addressed to such readers as graduate psychologists, neurologists, and biologists.

KUHLEN RAYMOND G AND GEORGE G THOMPSON editors

Psychological studies of human development. New York Appleton-Century-Crofts, Inc. 1952 533 p. illus. 24 cm. (The Century psychology series edited by R. M. Elliott) $3.50 1637

Contents (abridged): Foreword to students. Physical factors in psychological development. Processes of learning and adjustment. Psychological growth under different social-cultural conditions. Intellectual changes with age. Intelligence and psychological adjustment. Patterns of language-conceptual growth. Interest patterns and their implications. Growth of social values and attitudes. Social development—interpersonal relations. Home and family relations. Adjustments in school. Vocational orientation and adjustment. Some factors in personal and emotional adjustment. Index.

Note: An anthology of selections or "readings" chosen for college students who are majoring in developmental psychology child psychology or in other fields where knowledge of the psychological aspects of human development is essential. There are 71 papers or selections, classified under the headings given above. Most of them are abridged, but the abridgments were skillfully done and reference is always given to the original publication. As to the criteria for selection, the editors state: "The present papers have been selected to provide sampling both with respects to important areas of research in the psychology of human development and with respect to broad age-levels of the life span. An effort has been made to provide papers which utilize great variety of research procedures or which summarize group of studies as means of arriving at broader generalizations which extend theory

LAWRENCE, MERLE

Studies in human behavior a laboratory manual in general psychology organized to stress the basic principles of individual and group behavior with emphasis on perception. Princeton Princeton University Press, 1949 184 p. illus. 28 cm. $3.50 1638

Contents (abridged): Instructions regarding laboratory work. General introduction. Part I, Sensory experience. Part II, The nature of

experience. Part III, Social factors and perception. Part IV The process of learning. Part V Individual differences.

Note: Most of the space in this book is devoted to descriptions of 24 laboratory experiments designed "with the object of presenting some of the more important basic concepts that flow through general, social and clinical psychology. The directions for carrying out each experiment are prefaced in most instances by a paragraph or two of discussion addressed to the student and intended to indicate the significance of what will be demonstrated. Illustrations of apparatus are usually included in many instances. The book is based on a laboratory course in introductory general psychology given at Princeton University.

LE CRON LESLIE M editor

Experimental hypnosis. A symposium of articles on research by many of the world's leading authorities. New York The Macmillan Company 1952 483 p illus. 21 cm. $6.00 1639

Contents: Introduction, by L. M. LeCron. Hypnosis in perspective, by G. W Williams. *Dynamics in hypnotic induction*, by J A. Christenson, Jr. A rapid method for the induction of hypnosis, by J E. Whitlow Deep hypnosis and its induction, by M. H. Erickson. *Hypnotic susceptibility as a function of waking suggestibility* by W D. Furneaux. Narcotic hypnosis, by J. S. Horsley A study of age regression under hypnosis, by L. M. LeCron. Rorschach psychodiagnosis in hypnotic regression, by B. A. Mercer. Time distortion in hypnosis, by L. F Cooper and M. H. Erickson. The influence of hypnosis in somatic fields of function, by F J. Kohler The control of the heart rate by hypnotic suggestion, by A. J Van Pelt. Hypnosis in obstetrics, by W T Heron and M. Abramson. Hypnodontics, by A. A. Moss. Hypnosis in dentistry by T O. Burgess. Extrasensory perception and hypnosis, by J B. Rhine. Antisocial uses of hypnosis, by P C. Young. Hypnosis and dissociative states, by G. Odencrantz. Automatic writing and hypnosis, by A. M. Muhl. Projective hypnoanalysis, by J G. Watkins. The hypnoanalysis of phobic reactions, by J. M. Schneck. Index of names. Index of subjects.

Note. A collection of independent papers reporting on research in hypnosis itself rather than on practical applications. Most of the articles are here published for the first time, having been prepared at the invitation of the editor, who has furnished the introduction, the connecting material between chapters, and one of the articles. The editor and 14 of the contributors are from the United States, of those from other countries, three are English, one is Danish, one is Swedish, and one is South African. The papers deal with the experiments of their authors, and report the techniques, results, and allied research. Most of the papers are accompanied by bibliographies.

MARX, MELVIN HERMAN editor

Psychological theory contemporary readings. Arranged and edited by Melvin H. Marx. New York The Macmillan Company 1951 585 p. illus. 22 cm. $5.00 1640

Contents (abridged) Part one, Theory construction. The general nature of theory construction, by M. H Marx Psychology and the science of science, by S S Stevens. Operationism and theory construction, by G. Bergmann and K W Spence. Types of constructs in psychology by K. W Spence The intervening variable, by E. C. Tolman. The conceptual focus of systems, by E Brunswik. The molar-molecular distinction, by R. A Littman and E. Rosen The emphasis on molar problems, by G. W Allport. The probability point of view by E Brunswik. The mathematical point of view by C. L. Hull. Topology and hodological space, by J. F Brown. Factor analysis, by L. L Thurstone Operational analysis, by D G. Ellson. The nature of field theory by K Lewin Psychoanalytic propositions, by E. Kris. Part two, Theory foundations The gestalt interpretation of perception, by K Koffka. The psychology of objective relations, by E Brunswik. Connectionism, by E. L. Thorndike. Contiguity theory by E. R. Guthrie Descriptive behaviorism, by B. F Skinner The Freudian theory of anxiety by S. Freud. Principles of psychosomatic research, by F Alexander Social theory of neurotic conflict, by K Horney The frustration-aggression hypothesis, by N E Miller Stimulus-response theory of anxiety by O. H. Mowrer Approaches to personality by G. Murphy Stimulus-response theory in social psychology by N E. Miller and J. Dollard. The basic personality structure, by A Kardiner Index.

Note: A collection of short papers and excerpts, most of which are reprinted from previously published work. The value of the book lies in the assembly of authoritative writings on psychological theory

MUNN NORMAN LESLIE

Handbook of psychological research on the rat, an introduction to animal psychology Boston, Mass. Houghton Mifflin Company 1950 598 p. illus 25 cm. (Under the editorship of Leonard Carmichael.) 1641

Contents: Introduction. Unlearned behavior. General activity Motives, emotions, and hoarding. Sensory processes. The role of sensory processes in maze behavior The learning process. Some aspects and conditions of learning. Systematic psychology Abnormal and social behavior Appendices. Books on comparative psychology. Some additional references on comparative psychology Bibliography Index of authors. Index of subjects.

Note (3103) This work supersedes the author's *An introduction to animal psychology: the behavior of the rat*, published in 1933. The new work includes extensive revisions of former conclusions made necessary by investigations and research in the intervening years. It also includes certain fields of animal psychology not covered in the earlier book behavior disorders, social behavior, emotional behavior and systematic psychology Illustrative material consists of 130 figures, many of them picturing mazes and other apparatus used in psychological testing, and 13 tables showing data resulting from experiments. The bibliography of more than 1300 entries covers publications in all languages on rat behavior.

MURPHY GARDNER

Historical introduction to modern psychology Revised edition. New York Harcourt, Brace and Company 1949 466 p. illus. 22 cm. $6 00 1642

Contents (abridged) Part one, The antecedents of modern psychology The intellectual background. The seventeenth century The eighteenth century The early nineteenth century Part two, The rise of the research spirit Some intellectual antecedents of experimental psychology British psychology in the mid-nineteenth century. The theory of evolution. Psychiatry from Pinel and Mesmer to Charcot. German physiological psychology in the age of Helmholtz. Wundt and experimental psychology Early studies of memory The influence of neurology 1840–1910. The Würzburg school. Experiments on the acquisition of skill. Part three, Contemporary psychological systems: Behaviorism. Modern conceptions of association. Gestalt. Field theory Sigmund Freud. The response to Freud. Part four Some representative research areas: The measurement of intelligence. Physiological psychology Child psychology. Social psychology Personality An interpretation. Bibliography Index of names. Index of subjects.

Note: Concentrating upon the nineteenth and twentieth centuries, the author traces the course of developments which transformed psychology from a discipline reflecting upon the nature and the activities of the mind to a science akin to other biological sciences relying upon experimental and mathematical methods. Emphasis is upon the results of research work rather than upon the progress of psychological theory In the new edition several new chapters have been added and every chapter dealing with the modern period (i. e. after Wundt and James) has been entirely rewritten in order to bring the picture up to date.

PRONKO N H AND OTHERS

Empirical foundations of psychology by N H. Pronko and J W Bowles, Jr with the collaboration of D T Herman, Harris Hill, and John Bucklew Jr New York Rinehart & Company Inc. 1951 464 p. illus. 22 cm. $4.25 1643

Contents. Introduction. Heredity and psychology The natural biography the psychological life history of organisms. Biological characteristics of the organism and early acquisition of behavior. Basic patterns of behavior Social behavior. Personality Intelligence. Attention. Perception and factors which affect it. Implicit or "thinking" behaviors. Feelings. Emotion. Nature of stimulus-response coordination. Remembering. Learning. Interrelationships between physiology and psychology Name index. Subject index.

Note A book of selections or "readings" in modern psychology suited for use in connection with a general introductory textbook of psychology Many of the articles are reprinted from journals of psychology Many of the articles are dated between 1941 and 1948, with a few inclusions from earlier years. The remainder over half the contents of the book, was written especially for the book by the five authors whose names are on the title page.

RIESEN AUSTIN HERBERT, AND ELAINE F KINDER

Postural development of infant chimpanzees a comparative and normative study based on the Gesell behavior examination. With a foreword by Henry W Nissen. New Haven Yale University Press 1952 204 p illus. 24 cm. $5.00. 1644

Contents: Introduction. Posture as behavior. General postural characteristics of the chimpanzee. Subjects and procedures. Treatment of data and methods of presentation. Comparative data—postural development of chimpanzee and man. Postural schedule for chimpanzee infants. Individual differences in postural development among the chimpanzee subjects. Discussion. Summary Bibliography Index.

Note: This book contains detailed report of comparative behavior study of chimpanzee infants and human infants during their first year of life. Both groups of infants were tested on 202 items of the Gesell and Thompson behavior examination and the data obtained are carefully tabulated and analyzed to indicate differences in postural development of each species. The material, which is primarily of interest to students of psychology is part of larger study being conducted at the Yerkes Laboratories of Primate Biology regarding the physical, psychological, and behavioral development of chimpanzees.

SNYGG DONALD AND ARTHUR W COMBS

Individual behavior a new frame of reference for psychology New York Harper & Brothers, 1949 386 p. 22 cm. (Under the editorship of Gardner Murphy) $3.50 1645

Contents. Part I, The personal approach to behavior: The challenge to psychology The personal frame of reference. How behavior changes. What people strive for. The way we are motivated. The phenomenal self in action. People under threat—the anatomy of maladjustment. Techniques of dealing with threat. Part II, The personal approach applied: Social structure and action—the individual approach. The goals of education. The task of the teacher. Diagnosis and research in phenomenological systems. The personal approach to therapy—inductive methods—self-directive methods. Part III, The personal approach as method of science. The place of phenomenological approach in psychology Appendices. Bibliography Index.

Note: The heart of this distinctive book is phenomenological system for the study of individual behavior system in which the field of observation is shifted from the experience of the observer to the experience of the behaver The authors show that the basic human need is the preservation and enhancement of the phenomenal self, and they define the phenomenal self in the following terms: "The phenomenal self includes all those parts of the phenomenal field which the individual experiences as part or characteristic of himself. The first part of the book is carefully stated and fairly detailed outline of the proposed system. The second part illustrates the application of the system in various fields of psychology and the third part is short discussion of the inadequacies of other approaches to the study of behavior. The bibliography runs to more than 200 references.

STEVENS, STANLEY SMITH editor

Handbook of experimental psychology New York John Wiley & Sons Inc. 1951 1436 p. illus. 23 cm. (A Wiley publication in psychology, Herbert S Langfeld advisory editor) $15 00 1646

Contents: Mathematics, measurement, and psychophysics, by S. S. Stevens. Physiological mechanisms: Excitation and conduction in the neuron, by F Brink, Jr. Synaptic mechanisms, by F Brink, Jr. Sensory mechanisms, by T C Ruch. Motor systems, by T C Ruch. Homeostasis, by E. W Dempsey Growth and development: Mechanisms of neural maturation, by R. W Sperry Ontogenetic development, by L. Carmichael The genetics of behavior by C. S. Hall Growth curves, by N W Shock Phylogenetic comparison, by H. W Nissen. Motivation Instinctive behavior: reproductive activities, by F A. Beach. Learnable drives and rewards, by N E. Miller. Emotion, by D. B Lindsley Learning and adjustment: Methods and procedures in the study of learning, by E. R. Hilgard. Animal studies of learning, by W J Brogden Human learning and retention, by C. I. Hovland. Theoretical interpretations of learning, by K. W Spence. Cognitive processes, by R. Leeper. The psychophysiology of learning, by C. T Morgan. Speech and language, by G. A. Miller. Sensory processes: Basic correlates of the visual stimulus, by D. B. Judd. Visual perception, by C. H. Graham. The psychophysiology of vision, by S. H. Bartley Basic correlates of the auditory stimulus, by J. C. R. Licklider. The perception of speech, by J. C. R. Licklider and G. A. Miller The mechanical properties of the ear by G. von Békésy and W A. Rosenblith. Psychophysiology of hearing and deafness, by H. Davis. Taste and smell, by C. Pfaffmann. Somesthesis, by W L. Jenkins. Vestibular functions, by G. R. Wendt. Time perception, by H. Woodrow Human performance: Selection, by H. P Bechtoldt. Training, by D Wolfle. Engineering psychology and equipment design, by P M. Fitts. Work and motor performance, by R. H. Seashore. Name index. Subject index.

Note: A technical survey of most of the field of experimental psychology written by 34 eminent U. S. A. psychologists. Each of the chapters depicts the contemporary state of its phase of the subject in some detail with frequent references to the literature; and some of them appraise the immediate present and near future of the subject at hand The work is generously illustrated with drawings, charts, and diagrams. Each chapter has its own bibliography The volume is an important reference book for graduate students and research workers in psychology

THORNDIKE, EDWARD LEE

Selected writings from a connectionist's psychology New York Appleton-Century Crofts, Inc. 1949 370 p. illus. 22 cm. $3.50 1647

Contents: The law of effect. The spread or scatter phenomenon. The influence of punishments. The influence of the repetition of connection. The influence of mental systems. The influence of the impressiveness of the first member of related pair. Analytic and selective processes. The psychology of thinking in the case of reading. Ideo-motor action. The influence of primacy Mental abilities. The constitution of arithmetical abilities. Heredity and environment. Mental fatigue. Valuations of certain pains, deprivations, and frustrations Valuations of achievements, acts, and persons. Personality The origin of language. The psychology of semantics. The psychology of labor. Science and values. *Darwin's contribution to psychology* Index.

Note. A selection made by the author, himself, of his writings published over considerable span of years. On his criteria for selection he has stated: "I have, in fact, had in mind especially the needs of teachers who wish their students to know something of connectionist psychology at first hand, but find *Human learning* and *Man and his works* far too superficial, and my books of recent date far too long and too burdened with evidential matter. The book includes number of papers in which were reported important advances in the psychology of learning together with miscellaneous essays on language, science, etc.

TOLMAN EDWARD CHACE

Collected papers in psychology Berkeley University of California Press, 1951 269 p. illus. 25 cm. $4.50 1648

Contents: A new formula for behaviorism. Can instincts be given up in psychology? A behavioristic account of the emotions. Behaviorism and purpose. Purpose and cognition. A behavioristic theory of ideas A behaviorist's definition of consciousness. Sign Gestalt or conditioned reflex? Gestalt and sign Gestalt. Psychology versus immediate experience. Operational behaviorism and current trends in psychology The acquisition of string pulling by rats. Determiners of behavior at choice point. Physiology psychology, and sociology Prediction of vicarious trial and error by means of the schematic sowbug. Psychological man. A drive-conversion diagram A stimulus-expectancy need-cathexis psychology Cognitive maps in rats and men. Bibliography

Note: This volume contains selection of papers together with complete bibliography of the publications of one of America's outstanding psychologists whose best known book is *Purposive behavior in animals and men*, New York, 1932. It is commemorative volume sponsored by *colleagues and former students of Professor Tolman's.* However the papers printed in it were selected by Tolman himself as representative of significant steps in the development of his psychological theory

VINACKE, WILLIAM EDGAR

The psychology of thinking. New York McGraw Hill Book Company Inc., 1952 392 p. 24 cm. (McGraw Hill publications in psychology *Clifford T Morgan, consulting editor*) $5 50 1649

Contents: Introduction. Historical background. Consciousness and the field of attention. Ideas, imagery and imageless thought. The mechanism of thinking. Logic in relation to the psychology of thinking. Concept formation. The transfer-retroaction sequence. Problem solving. Imagination. Autistic thinking. Creative thinking. The internalization of experience. General aspects of personalized thinking. Attitudes. Public aspects of personalized thinking. Conclusion. Name index. Subject index.

Note: A survey in which knowledge from various areas of psychology that bears on the thinking process in human beings has been assembled and organized. It is addressed primarily to intermediate-level college students; hence familiarity with accepted psychological terminology and some acquaintance with the methods of experimental psychology have been assumed. The book was based on an extensive literature survey and statements in the text are keyed to literature citations in the bibliographies appended to each chapter. The author is a faculty member of the University of Hawaii.

TEXTBOOKS

ANDERSON, JOHN E.

The psychology of development and personal adjustment. New York Henry Holt and Company 1951 720 p. illus. 22 cm. $3 90 1650

Contents (abridged) Why study human adjustment? Section 1 Equipment for living: The body and the nervous system. Life span and the development of the infant. Section 2 Learning skills: How skills are acquired. The development of language and symbolic skill. Problem solving and thinking. Section 3 Motivation, emotions, and attitudes. Section 4 Social behavior. Section 5, Adjustment Personality underlies adjustment. Stress, maturity and adjustment. Inadequate adjustment. Section 6, Orientation to adult life Adjustment in college. Maturity and old age. Adjustment to a vocation. Section 7 Adjustment to family life: Courtship and beginning the home. Adjustment in marriage. References. Index.

Note: This book is an example of texts in which findings in various fields of psychology are drawn on and reinterpreted for the benefit of freshmen and sophomore college students who are not primarily interested in psychology. In other words, it is a "cultural" type of text designed to give the general student some idea of the scope of psychology and a fuller idea of its potential applications to himself and his life problems.

GUILFORD JOY PAUL, editor

Fields of psychology basic and applied. Second edition New York D Van Nostrand Company Inc., 1950 779 p illus. 24 cm. (The Van Nostrand series in psychology J P Guilford, editor) $5 00. 1651

Contents (abridged) Animal psychology: viewpoint and program—methods and results, by C. J. Warden. Child psychology by H. B. English. Educational psychology by H. B. English. The concepts and methods of social psychology by D. Katz. The psychology of the crowd, by D Katz. Abnormal psychology: the significance and causes of abnormal behavior—the minor abnormalities—the major abnormalities, by L. F Shaffer The nature of individual differences, by A. Anastasi. Major group differences, by A. Anastasi. Clinical psychology by R. I. Watson. Individual mental efficiency by D. H. Fryer. Vocational psychology by M. S. Viteles Professional psychology by D H. Fryer Physiological psychology by C. L. Freeman. Aesthetics, by K. Hevner. Points of view by M. Heidbreder. Index of names. Index of subject matter

Note. (1051) A book planned to give a broad view of the fields or subdivisions of contemporary psychology Under each heading the field is defined, its subject content outlined, some of the basic knowledge pertinent to it is discussed, and a selected list of literature is furnished. The book is designed primarily for college students who have completed an introductory course and need additional information either to round out their knowledge of psychology or to enable them to select a field in which to specialize. In this edition several chapters are new and several others have been revised.

GUILFORD, JOY PAUL

General psychology Second edition New York D Van Nostrand Company Inc., 1952 587 p illus. 24 cm. (The Van Nostrand series in psychology J P Guilford general editor) $5.00 1652

Contents: What psychologists do. Psychology and its methods. An organism develops. An organism has needs. Complex motives develop. Conflicts of motives. Emotional responses. Likes, interests, and attitudes. Seeing—colors. Seeing—forms, space, and movement. Hearing. The simpler senses. Observing. Conditioned responses. Other ways of learning. Memorizing. Remembering. Thinking. Reasoning. Inventing. Human abilities. Human personality. Index.

Note: (1052) A standard introductory textbook for use in college courses. It gives a scientific and fairly inclusive picture of the nature and content of contemporary psychology It is especially suited to the needs of students who take a course in psychology for its cultural values. The first edition was published in 1939. For this edition the original work was extensively reorganized and rewritten. The third chapter is new Several of the chapters that appeared in the first edition have been dropped entirely or their content has been incorporated in other chapters. Some recent literature has been added to the bibliographies, but the references are still predominantly to literature published before 1940.

HELSON, HARRY, editor

Theoretical foundations of psychology New York D Van Nostrand Company Inc., 1951 787 p illus. 24 cm. (Textbooks on psychology, J P Guilford, general editor) $7.25 1653

Contents: Methodological considerations, by M. G. Preston. Some problems of nervous function, by J. M. Oppenheimer Some neurological correlates of behavior, by E. Gellen. Development and maturation, by N. Bayley Motivation, by F W Irwin. Feeling and emotion, by J. G. Beebe-Center. Fatigue and efficiency, by S. H. Bartley Perception, by H. Helson. Learning, by E. R. Keesey. Thinking, by H. F Harlow Measurement in psychology by J. P Guilford and A. L. Comrey Intelligence, by J Loevinger. Personality, by D. W MacKinnon and A. H. Maslow Psychological theory and social psychology by D. Krech. Abnormal psychology by D. B. Klein.

Note: A textbook for advanced undergraduate and graduate college students It is organized in the form of a symposium on the fundamental ideas, concepts, theories, and problems of modern psychology. Each chapter is a detailed presentation, containing discussions of facts, techniques, methods, and experimental data, as well as references to history and schools of psychology and to the work of individual psychologists. Bibliographies appear at the ends of the chapters.

KELLER, FRED SIMMONS AND WILLIAM N SCHOENFELD

Principles of psychology a systematic text in the science of behavior New York. Appleton-Century-Crofts, Inc., 1950 431 p. illus. 22 cm. (The Century psychology series, Richard M. Elliott, editor) $4 00. 1654

Contents. Psychology and the reflex. Respondent conditioning. Operant conditioning. Extinction and reconditioning. Generalization and discrimination. Response variability and differentiation. Chaining. Secondary reinforcement. Motivation. Emotion. Social behavior. A last word. References and author index. Subject index.

Note: A college text for introductory courses, but so unusual in that it is limited to the knowledge of fundamental principles of behavior which has been gained from experimental psychology. It is unusual also in its attempt to present even introductory materials in psychology (Skinnerean) from systematic and coherent theoretical points of view Much of the space is given to descriptions of experimental techniques and to the results of noted experiments, most of which were performed on rats and other small animals. However, applications to the understanding of human behavior are discussed. The book is suited to use by college students and also by educated lay readers who wish a dependable survey of the scientific bases of psychology The list of references runs to 306 citations. The authors are members of the faculty of the Department of Psychology of Columbia University

MURPHY GARDNER

An introduction to psychology by Gardner Murphy with the assistance of Herbert Spohn. New York Harper & Brothers, 1951. 583 p. illus. (part col d) 24 cm. $4.50. 1655

Contents: The study of persons. The biological significance of individuality. Heredity. Environment. Individuality in development. The endocrine system. Some elementary motives. Emotions. Conflict. Sensing and perceiving. Seeing. Hearing. Tasting, smelling, and the general senses. Learning. Remembering. Imagining and dreaming. Thinking. Creating. Intelligence and its measurement. The pattern of abilities. The self. Assertion of the self. Defense of the self. Personality measurement. Projective methods. Social attitudes and their testing. Personality patterns. Culture and the individual: ethnological evidence. Culture and the individual: our own tradition. Oneself and others: mapping one's own education; understanding others. Glossary and index.

Note. Utilizing viewpoint, developed primarily in the study of personality, that every psychological act is the act of whole person and that the first task of psychology is to focus upon the nature of person, the author presents an introductory textbook in psychology in new terms. Motives, percepts, thoughts, attitudes are seen as activities of persons. Since biographers, novelists, and other imaginative writers are concerned with persons and their interactions, the works of such authors as Walt Whitman, Walter de la Mare, Thomas Wolfe, and Truman Capote are drawn upon to help portray clearly what persons are. Similarly photographs are used as illustrative material to help make clear the relations of individual human beings to certain situations. The book deals with the subject of individual differences more fully than do other types of introductions to psychology but emphasis is rather upon the description of the nature of person in terms of what all persons have in common. The author acknowledges his indebtedness to William Stern and Gordon W Allport in his thinking and writing and at the end of the chapters presents brief lists of suggested readings.

POSTMAN, LEO AND JAMES P EGAN

Experimental psychology an introduction. Under the editorship of Gardner Murphy New York Harper & Brothers 1949 520 p. illus. 21 cm. $4.50 1656

Contents: The scope of experimental psychology. The psychophysical methods. Cutaneous sensitivity. Audition. Smell and taste. Vision. Perception of color. Perception of form. Perception of space. Perception of movement. Experimental analysis of judgment. Reaction time and association. Measurement of learning. Conditioning. Experimental study of human learning. Retention and forgetting. Transfer of training. Emotional behavior. Behavior in social situations. Name index. Subject index.

Note: This is well organized and well illustrated textbook for students who have studied general psychology and are ready for study of experimental methods and laboratory procedures. In it is presented survey of the main empirical findings and functional relationships in selected areas of experimental psychology with special emphasis on the control, manipulation, and measurement of variables. Thirty experimental exercises are described; these are included as concrete illustrations to supplement the text. References are given at the ends of the chapters.

STAGNER, ROSS AND T F KARWOSKI

Psychology New York McGraw Hill Book Company Inc. 1952 582 p. illus. 26 cm. $5 00 1657

Contents. Orientation. Part one, Dynamics: Biological drives. Emotions. Social motives. Part two, Cognition: Sensing. Perceiving. Association. Conditioning. Problem solving. Remembering. Thinking. Intelligence. Part three, Personality: Foundations. Conflict. Maturity. Bibliography. Name index. Subject index.

Note: An introductory textbook for use in college courses. Psychology is presented as the scientific study of man's nature and behavior. The treatment is unified by emphasizing the principle of homeostasis. The authors have been exceptionally skilled in relating psychological principles and facts to background of experiences such as beginning college student is likely to possess. The following passage illustrates this point: A persisting mental set interferes with attention to objects outside its scope. The last class before vacation is inattentive to the lecture. Although written in style obviously designed to hold the interest of the beginning student, the book has substantial content. Perceptual processes, conditioning, and other difficult topics are presented without sidestepping difficult ideas and with frequent references to the experiments on which the knowledge is based. The book is well illustrated. The chapters include lists of recommended readings and there is 16-page bibliography of source material.

STONE, CALVIN PERRY, editor

Comparative psychology Third edition. New York Prentice-Hall, Inc., 1951 525 p illus. 24 cm. $8.00 1658

Contents: Introduction, by C. P. Stone. Historical background of comparative psychology by R. H. Waters. Maturation and "instinctive" functions, by C. P. Stone. Motivation of animal behavior by P. T. Young. Internal secretions and behavior, by W. C. Young. Learning: general introduction, by W. T. Heron. Primate learning, by H. F. Harlow. Theoretical interpretations of learning, by K. W. Spence. The neurology of learning, by D. G. Marquis. Discriminative behavior in animals, by K. U. Smith. Individual differences, by C. S. Hall. Problems and principles of animal sociology by N. E. Collias. Social behavior in primates, by H. W. Nissen. Abnormal behavior in animals, by R. A. Patton. Author index. Subject index.

Note. (3101) A college textbook designed for use in first courses in comparative (or animal) psychology. It was formerly edited by F. A. Moss. The pattern of the preceding edition, published in 1942, has been followed, and each of the chapters is monographic summary with references to the source literature. The authors of five of the chapters which appeared in the 1942 edition have rewritten their monographs for the present edition. All of the other chapters are the work of new contributors. All of the bibliographies have been revised.

UNDERWOOD BENTON J

Experimental psychology an introduction New York Appleton-Century-Crofts Inc. 1949 638 p. 22 cm. (The Century psychology series, edited by Richard M. Elliott) $4.50. 1659

Contents (abridged) Introduction. Discriminal processes. Motivation. Frustration. Conflict. Transfer of training. Learning. Forgetting—retention. Work. References. Author index. Glossary and subject index.

Note: The methods and techniques of experimental psychology and the relationships between stimuli and behavior which have been demonstrated by experiment are given about equal emphasis in this college textbook. The author has tried to avoid the sterility which can arise from an over emphasis on methodological sophistication (with little awareness of the sophistication necessary to evaluate the origins and quality of that content) The essential details of experimental procedures and apparatus set-ups are given but the author has excluded technical details of apparatus. Also, he has not included quantitative data derived from experiments but has stated results in generalized terms. However fair picture is given of contemporary methods. The bibliography contains 437 items and includes reference to original descriptions of many landmark experiments. The author is Associate Professor of Psychology in Northwestern University.

VALENTINE WILLARD LEE, AND DELOS D WICKENS

Experimental foundations of general psychology Third edition. New York Rinehart & Company Inc., 1949 472 p. illus. 22 cm. $4.00 1660

Contents: Magic and science. Psychology and the methods of science. The principle of control. Aptitudes. Inheritance. Maturation and growth. Intelligence. The meaning of intelligence-test scores. Physiological conditions. Drives and motives. Motives and incentives. The development of emotional behavior. Emotion in adults. Suggestibility and hypnosis. Perception. Conditioning. Learning. Remembering. Learning, thinking, imagining, dreaming. Personality. Index of authors. Index of subjects.

Note: (3074) An elementary text in which accepted psychological principles are developed by examining large variety of experimental work. These principles are then applied to practical situations in the lives of average people. The book does more than most introductory works to give the student and layman an understanding of scientific method in general and of experimental procedure in psychology. This revision of the 1941 edition presents new material on popular misconceptions about the nature of psychology, on animal behavior and on personality. Experiments have been added which are more precise or thought to be of more interest to the reader. Eighty five photographs and diagrams and large number of tables contribute to the book's usefulness. The book is intended to be used together with some standard text which would systematize the facts here presented. Professor Valentine died in 1947. Professor Wickens is on the faculty of Ohio State University. This is the first edition on which his name appears as coauthor.

PHYSIOLOGICAL PSYCHOLOGY

FORD, CLELLAN STEARNS, AND FRANK A. BEACH

Patterns of sexual behavior With a foreword by Robert Latou Dickinson M.D New York Harper & Brothers and Paul B Hoeber Inc., 1951 307 p. illus 24 cm. $4 50 1661

Contents: Foreword, by R. L. Dickinson. The task and the methods. The nature of coitus. Types of sexual stimulation. Circumstances for coitus. Attracting sex partner Sexual partnerships. Homosexual behavior. Relations between different species. Self-stimulation. Development in the individual. Feminine fertility cycles. Other physiological factors in sex behavior Human sexual behavior in perspective. Glossary Bibliography Authors' note. Index of names. Index of topics.

Note A comparative study of the sexual behavior of human beings of various present-day cultures and the sexual behavior of various lower animals. The human beings belong to 190 different societies scattered from the Arctic circle through five continents to the tip of Australia. The animals range from rats and mice to the great apes. The authors, respectively professors of anthropology and psychology at Yale University present the volume as step toward the development [illegible] sound understanding of the sexual behavior of human beings as it is affected by their evolutionary heritage and by the conditions imposed upon them by their social environment.

HEBB DONALD OLDING

The organization of behavior a neuropsychological theory New York John Wiley & Sons Inc. 1949 335 p illus 22 cm. $4.50 1662

Content The problem and the line of attack. Summation and learning in perception. Field theory and equipotentiality The first stage of perception growth of the assembly Perception of complex the phase sequence. Development of the learning capacity Higher and lower processes related to learning. Problems of motivation pain and hunger The problem of motivational drift. Emotional disturbances. The growth and decline of intelligence. Bibliography Index.

Note. In this book theory of behavior "that is based as far as possible on the physiology of the nervous system" is presented The gist of the theory is that no single nerve cell or pathway is essential to any habit of perception but that responses to stimuli are made by means of diffuse cell-assembly The author's interest in the subject developed from observations by him and others that human beings suffered little loss of intelligence as consequence of the removal of substantial amounts of brain tissue.

HULL CLARK LEONARD

A behavior system an introduction to behavior theory concerning the individual organism. New Haven Yale University Press 1952 372 p illus 25 cm. $6 00 1663

Contents: Introductory considerations Simple trial-and-error learning. Discrimination learning Behavior and the molar stimulus trace (s') Fractional antedating goal reactions. Simple behavior chains. Learning within the individual behavior link Behavior in relation to objects in space Multidirectional maze learning. The problem-solving assembly of behavior segments. Value, valuation, and behavior theory Concluding considerations. Glossary of symbols. Index of names. Index of subjects

Note. (3087b) In the author' *Principles of behavior* New York, 1943 and his *Essentials of behavior* New Haven, Yale University Press, 1951 he stated systematically the primary behavior principles. In this book he has shown "the applications of the principles to the deductions of the simpler phenomena characterizing the behavior of single organisms These works are aimed toward the systematic quantitative description of both individual and social behavior although because of Professor Hull' death, the planned volume on social behavior will not be written. In the present book the content is cast largely in the form of theorems and of critical discussions of the experimental evidence on hich the theorems are based. The book is addressed to graduate psychologists.

MORGAN, CLIFFORD THOMAS, AND ELIOT STELLAR

Physiological psychology Second edition. New York McGraw-Hill Book Company Inc. 1950 609 p illus. 24 cm. (McGraw-Hill publications in psychology Clifford T Morgan consulting editor) $6.00 1664

Contents: Introduction. The peripheral response mechanism. The central nervous system. Nerve physiology The internal environment. The chemical senses. Spatial vision. Brightness vision. Color vision. Hearing. The skin senses. Somesthetic mechanisms. The motor systems. Reflexes. Coordination. Emotion. Sleep and activity Bodily needs. Instinctive behavior. Mating behavior. Conditioning. Sensory learning. Problem solving. Brain lesions in man. Behavior disorders. Electrical activity and behavior. Bibliography and author index. Subject index.

Note: (3083d) An introductory survey that is comprehensive enough to make it useful as non specialist's reference book as well as text for undergraduate college students. The emphasis is on the physiological mechanisms of normal behavior. Considerably more information is included on animal than on human psychology. Select lists of references for further reading are appended to the individual chapters, and the "Bibliography and author index" serves as an extensive list of the related periodical literature. The work was extensively rewritten in this edition. It is intended for the same group of readers as the original edition.

REYMERT MARTIN LUTHER, editor

Feelings and emotions. The Mooseheart Symposium in cooperation with the University of Chicago Anton J Carlson, president of honor Martin L. Reymert, general chairman James G Miller cochairman. Edited by Martin L. Reymert. New York McGraw-Hill Book Company Inc., 1950 603 p. illus. 23 cm. (McGraw Hill publications in psychology Clifford T Morgan consulting editor) $7 00 1665

Contents: Why feelings and emotions? by M. L. Reymert. I. Theory: psychophysiological approaches. Emotion as visceral action—an extension of Lange' theory by M. A. Wenger. An excitatory theory of emotion, by M. B. Arnold. The conditioning of emotions, by B. P Babkin. A biodynamic psychoanalytic approach to the problems of feeling and emotion, by J. H. Masserman. [illegible] of [illegible] by H. Piéron. Theory of emotions in Soviet [illegible] psychology by L. D London. II, Theory—psychological approaches [illegible] Emotional experience as necessary constituent in knowing, by E. J. Rank. Study of the integrative process—its importance for psychiatric theory by T M. French. The emotions regarded as functional connections, by A. E. Michotte. The phenomenological approach to the problem of feelings and emotions, by F J. J. Buytendijk. Emotions and sentiments in recent psychology by E. Klingman. A differential concept of feelings and emotions, by [illegible] Harms. III, Reports of recent experiments: The study of patterns of emotional expression, by H. E. Jones. Experimental studies of mental patients under stress, by R. R. Malmo. Animal origins of anxiety by H. S. Liddell. Psychotic behavior produced in wild Norway and Alexandrine rats apparently by fear of food poisoning by C. P Richter Connective inhibitions during thought processes by D Katz. IV Reviews integrating current experimental approaches [illegible] Central nervous mechanisms for the expression of anger in animals, by P Bard. Emotions and the electroencephalogram, by D. B. Lindsley A new frontier—neurophysiological effects of emotion on the brain, by C. W Darrow The experimental study of psychodynamic processes, by J. G. Miller Some implications of physiological individuality, by R. J. Williams. Emotion and psychosomatics: Physiological manifestations of chronic emotional states, by H W Shock. Life situations, emotions, and bodily disease, by H. G. Wolff. VI, Emotions in the study of personality dynamics and clinical psychology: Nature and the individual in the psychologist's perspective, by S. Rosenzweig. The use of clinical diagnostic techniques in research with normals, by A. Roe. [illegible] and change in the dynamic structure of personality, by J. Nuttin. Guilt feelings—their function and dysfunction, by M. Mead. Some anthropological considerations concerning guilt, by [illegible] The significance of the self-regarding attitudes and perceptions, by C. R. Rogers. Some psychological features of schizophrenia, by B. Zeigarnik [illegible] VII, Emotions in human development: Emotion from the standpoint of developmental morphology by A. Gesell. [illegible]

expression, and symbolic function in the drawing of children, by L. van der Horst. Changes in emotional responses with age, by J. E. Anderson. Meeting the emotional needs of older persons, by G. Lawton. VIII, Emotions in social behavior: Emotional dimensions of group life, by D. Cartwright. Group behavior and the concept of emotion, by F. Fearing. On the psychology of social groups as illustrated by their incidence of mental disorder, by Ø. Ødegaard. Emotion and the social crisis: a problem in phylobiology, by T. Burrow. The irrational in the international picture, by G. Murphy. IX, Emotions in applied fields: Emotions in the factory, by W. V. Bingham. The emotional stress of the foreman in present-day industry, by C. B. Frisby. The affective function of language, by R. H. Thouless. Feeling and emotion in art, by H. S. Langfeld. X, Methodology: The sample interview as a research tool to study motivation, by R. Likert. The factorial study of emotions, by Sir C. Burt. The significance of Q technique for the study of personality, by W. Stephenson. Epilogue, by A. J. Carlson. Name index. Subject index.

Note: An important volume which contains the papers originally presented at the second International Symposium on Feelings and Emotions held at Mooseheart and Chicago, Illinois, October 28–30, 1948. The contributors include scientists from several nations and from several branches of science, notably physiology, biochemistry, anthropology, and neurology as well as psychology.

PSYCHOLOGY OF PERSONALITY

ABT, LAWRENCE EDWIN, AND LEOPOLD BELLAK, editors

Projective psychology: clinical approaches to the total personality. New York, Alfred A. Knopf, 1950. 485 p. illus. 22 cm. $7.50 1666

Contents: Part I, The theoretical foundations of projective psychology: Introduction. On the problems of the concept of projection, by L. Bellak. A theory of projective psychology, by L. E. Abt. Part II, Projective tests in clinical psychology: Introduction. The content analysis of the Rorschach protocol, by R. M. Lindner. The inspection technique for the Rorschach protocol, by R. L. Munroe. Group techniques for the Rorschach test, by M. R. Harrower. The thematic apperception test in clinical use, by L. Bellak. The mosaic test, by F. Wertham. Figure drawing as a projective test, by S. Levy. The Szondi test, by S. K. Deri. The Bender visual motor Gestalt test, by A. G. Woltmann. The sentence completion test, by J. M. Sacks and S. Levy. Finger-painting as a projective technique, by A. L. Kadis. Part III, Projective tests in nonclinical areas: Introduction. Projective techniques in business and industry, by D. Brower and A. Weider. Projective techniques in action research—disguised diagnosis and measurement, by H. M. Proshansky. Index of names. Index of subjects.

Note. A treatise on the use of projective tests in clinical psychology and in certain nonclinical applications. More than four-fifths of the book is devoted to clinical applications and techniques. However, the introductory chapters are valuable in providing a theoretical rationale for projective tests. The various chapters were written particularly for this book and each one is essentially a condensed monograph on the phase of the subject named in its title. Each chapter is accompanied by literature references. The book is designed for graduate psychologists.

ADORNO, THEODOR W., AND OTHERS

The authoritarian personality, by T. W. Adorno, Else Frenkel-Brunswik, Daniel J. Levinson, R. Nevitt Sanford, in collaboration with Betty Aron, Maria Hertz Levinson and William Morrow. New York, Harper and Brothers, 1950. 990 p. illus. 24 cm. (Studies in prejudice, edited by Max Horkheimer and Samuel H. Flowerman) $7.50. 1667

Contents (abridged): Part I, The measurement of ideological trends: The contrasting ideologies of two college men—a preliminary view. The study of anti-Semitic ideology. The study of ethnocentric ideology. The measurement of implicit antidemocratic trends. Ethnocentrism in relation to intelligence and education. Part II, Personality as revealed through clinical interviews. Part III, Personality as revealed through projective material. Part IV, Qualitative studies of ideology: Prejudice in the interview material. Politics and economics in the interview material. Types and syndromes. Part V, Applications to individuals and to special groups: Genetic aspects of the authoritarian personality. Criminality and antidemocratic trends—a study of prison inmates. Psychological ill health in relation to potential fascism—a study of psychiatric clinic patients. References. Index.

Note: In this work based on an intensive, original study experts in the fields of social theory and depth psychology, content analysis, political sociology, and projective testing have developed the conception of an "authoritarian type" of personality common to most of the nations of the West. While conceding that only a small proportion of people fit this type in detail, the authors hold that the general conception is valuable for an understanding of minority group prejudice, socio-economic conservatism, and acceptance of totalitarian ideologies. The "type" is defined in terms of a pattern of characteristics isolated from group pencil-and-paper tests, projective devices and clinical interviews. It is explained largely in terms of family background (insecurity in relation to parents) and cultural norms. Insufficient attention is given to some of the economic and other factors which are also relevant. The book is designed for graduate students in the field of psychology and graduate psychologists and sociologists.

ALLPORT, GORDON WILLARD

The nature of personality: selected papers. Cambridge, Mass., Addison-Wesley Press, Inc., 1950. 220 p. illus. 24 cm. $3.00 1668

Contents: Attitudes; chapter 17 in *A handbook of social psychology* (edited by C. C. Murchison) 1935. The psychologist's frame of reference; *Psychological bulletin*, 1940, 37, 1–28. The functional autonomy of motives; *American journal of psychology*, 1937, 50, 141–156. Motivation in personality: reply to Mr. Bertocci; *Psychological review*, 1940, 47, 533–554. The ego in contemporary psychology; *Psychological review*, 1943, 50, 451–478. The psychology of participation; *Psychological review*, 1945, 53, 117–132. Geneticism versus ego-structure in theories of personality; *British journal of educational psychology*, 1946, 16, 57–68. Effect: a secondary principle of learning; *Psychological review*, 1946, 53, 335–347. Personalistic psychology as science: a reply; *Psychological review*, 1946, 53, 132–135. Scientific models and human morals; *Psychological review*, 1947, 54, 182–192. Personality: a problem for science or a problem for art? *Revista de psihologie*, 1938, vol. 1, no. 4, 1–15. Bibliography.

Note: (3124) This book is made up of photographic reproductions of articles written by the author and published in various books and periodicals as noted in the table of contents. All of the articles pertain to the theory of personality which was presented in the author's *Personality*, New York, 1937. Some of them were written explicitly in answer to critics who expressed disagreements and misgivings in print, and others represent extensions in theory or application provoked by the author's own dissatisfaction with his previously stated position.

ANDERSON, HAROLD HOMER, AND GLADYS L. ANDERSON, editors

An introduction to projective techniques & other devices for understanding the dynamics of human behavior. New York, Prentice-Hall, Inc., 1951. 720 p. illus. 22 cm. $9.00. 1669

Contents: Part I, Introduction: Human behavior and personality growth, by H. H. Anderson. Problems in the validation of projective techniques, by J. W. Macfarlane and R. D. Tuddenham. Principles of design in "projective" or misperceptive tests of personality, by R. B. Cattell. Part II, The Rorschach test: The Rorschach test: a multi-dimensional test of personality, by S. J. Beck. Validating and experimental studies with the Rorschach method, by A. I. Rabin. Part III, Varieties of tests of personality mechanisms: The four-picture test, by D. J. Van Lennep. The thematic apperception test, by R. R. Holt. The thematic apperception technique in the study of group and cultural problems, by W. E. Henry. Word association and sentence completion methods, by J. B. Rotter. The Rosenzweig picture-frustration study, by H. J. Clarke. The Bender visual motor Gestalt test, by F. Halpern. Drawing of the human figure: a method of personality investigation, by K. Machover. Spontaneous drawings of the human form in childhood schizophrenia, by J. A. Montague. Finger painting, by P. J. Napoli. Graphology, by R. Wolfson. Expressive movement and the methods of experimental depth psychology, by W. Wolff and J. A. Precker. The Szondi test, by A. I. Rabin. Other projective methods, by W. W. Morris. Part IV, General intelligence tests in personality appraisal: Interpretation of the Wechsler-Bellevue intelligence scale in personality appraisal, by M. Mayman and others. Qualitative aspects of the Stanford-Binet, by G. L. Anderson. Part V, Projective techniques in therapy: The use of puppetry as a projective method in therapy, by A. G. Woltmann.

Therapeutic use of play by J. C. Solomon. Psychodrama as a projective technique, by R. B. Haas and J. L. Moreno. The use of projective techniques in the interpretation of hostility patterns, by D. M. Levy Author index. Subject index.

Note: This book offers reasonably complete coverage of all the various projective and quasi-projective devices currently being employed in some aspect of personality appraisal. Each chapter is written by one or more experts in the use of the particular device under consideration. Theoretical, research, and applied interests are represented in varying degrees by the different contributions. Primarily for graduate students in psychology and practicing psychologists and psychiatrists.

BLAKE, ROBERT R., AND OTHERS

Perception an approach to personality By Robert R. Blake and Glenn V Ramsey in collaboration with Frank A. Beach and others. New York The Ronald Press Company 1951 442 p. illus. 23 cm. $6 00 1670

Contents: Perceptual processes as basic to an understanding of complex behavior by R. R. Blake and others. Some structural factors in perception, by C. T Morgan. Body chemistry and perception, by F A. Beach. The role of learning in perception, by E. R. Hilgard. Personality dynamics and the process of perceiving, by J. S. Bruner. Cultural and developmental factors in perception, by Wayne Dennis. The role of language in the perceptual processes, by A. Korzybski. Toward an integrated theory of personality by Urie Bronfenbrenner Unconscious processes and perception, by J G. Miller. Perceptual organization and behavior pathology by Norman Cameron. Perceptual reorganization in client-centered therapy by C. R. Rogers. The personal world through perception, by G. S. Klein. Personality theory and perception, by E. Frenkel-Brunswik. Index of names. Index of subjects.

Note The advances being made in the perceptual approach to personality at dozen different research centers are combined in organized form in this work, which is constructed around the view that the study of perceptual activity provides basic approach to an understanding of personality and interpersonal relations. The papers were delivered in substance at the 1949–1950 clinical psychology symposium held at the University of Texas. The editors have achieved better integration than is commonly true for such volumes. Stimulating reports of new research on perceptual tests indicating significant personality variables are accompanied by valuable theoretical articles, e.g., on the rapprochement of psychoanalytic and Gestalt theory in terms of perception. For graduate students of psychology and professional psychologists and psychiatrists.

BRUNER JEROME SEYMOUR, AND DAVID KRECH editors

Perception and personality a symposium. Durham N C Duke University Press, 1950 266 p. illus. 24 cm. $3 50. 1671

Contents: Some considerations concerning the relation between perception and cognition, by H. Wallach. Perception, cognition, and behavior by J Bruner and L. Postman. Where is the perceiver in perceptual theory? by G. S. Klein and H. Schlesinger. Discussion, by E. C. Tolman. Discussion, by G. Murphy Remarks on functionalism in perception, by E Brunswik. Notes toward psychological theory by D. Krech. Sensory-tonic field theory of perception, by H. Werner and S. Wapner Intolerance of ambiguity as an emotional and perceptual personality variable, by E. Frenkel-Brunswik. The nature and importance of individual differences in perception, by H. A. Witkin Autonomic discrimination without awareness: an interim report, by R. A. McCleary and R. S. Lazarus. Towards reformulation of the perception-motivation dichotomy by J. E. Hochberg and H. Gleitman. Task completion as function of organizational factors, by J W Tuney On the perception of incongruity: paradigm, by J S. Bruner and L. Postman. Personal values as determinants of perceptual fixation, by E. McGinnies and W Bowles. The effect of need for achievement on recognition of need-related words, by D. C. McClelland and A. M. Liberman. Selective sensitization in auditory perception, by J M. Vanderplas and R. R. Blake.

Note. The importance of the field of perception as the area where general experimental and clinical-social psychology meet is the main point around which this book has been constructed. The papers are written on graduate level and the book as whole is addressed to graduate students and professional psychologists. It provides an authoritative survey of current trends in research, and offers theoretical structure for further advance. The papers were published originally in *Journal of personality* Volume 18.

CATTELL, RAYMOND BERNARD

Personality, a systematic theoretical and factual study New York McGraw Hill Book Company, Inc., 1950 689 p. illus. 23 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $6.50. 1672

Contents: Describing personality through types or syndromes. Describing personality through traits. Measuring personality by the life-record method. Measuring personality by self-rating and objective tests. Inherited, constitutional influences in personality. Psychoanalysis: The intricate structure of dynamic traits. The structure of innate drives. The structures formed in the adjustment process. The self—its integration, adaptation, and adjustment. Psychosomatics. Known functional patterns. Methodological avenues to further evidence. Personality and the cultural matrix: The family: its structure and setting. The family: its relation to child personality. Group dynamics and personality. Personality and specific social organs. The abnormal and maladapted personality: Evidence from the school misfit, the delinquent, and the criminal. The neurotic. The psychotic. Life stages in personality: Conception to puberty. Adolescence, maturity old age. Principles of personality formation. Name index. Subject index.

Note: The initial definition of personality is given as that which permits prediction of what person will do in given situation. The concluding summary indicates that the principles of personality formation and operation may be incorporated in structure now born. From outset to conclusion this volume treats personality only by scientific standards such as apply in experimental psychology and integrates personality study with psychological concepts in systematic manner. The treatment of motivation leans heavily upon McDougall, and the methodology upon Thurstone's factor analysis. The emphasis is upon experiment and research rather than on clinical views of personality. The book may be used as text for a graduate or an undergraduate course in personality study and is especially intended for the student majoring in psychology or expecting to take psychology as a profession. It covers the subject of personality study in detail, considering it as the natural hub upon which all more specialized sectors of psychology turn. A bibliography accompanies each chapter.

FERGUSON LEONARD W

Personality measurement. New York McGraw Hill Book Company Inc., 1952 457 p. illus. 24 cm. (McGraw Hill publications in psychology, Clifford T Morgan, consulting editor) $6 00 1673

Contents (abridged) Fundamental concepts. Interests: an empirical approach—a rational approach. Attitudes—an empirical approach—a rational approach. Personality: unidimensional approaches—multidimensional approaches. Adjustment: diagnostic approaches—prognostic approaches. Ratings: nonanalytical approaches—analytical approaches. Projective techniques: perceptual approach—an imaginal approach. Performance: observational approaches—experimental approaches. Evaluation and summary References. Index.

Note The chief virtue of this book is its detailed analysis of the preparation of objective (questionnaire) tests for personality measurement. Its chief defect is the slight attention given to projective devices. It is designed for undergraduate majors or beginning graduate students in psychology but can be used with little effort by students and others lacking technical psychological training.

FRENCH THOMAS MORTON

The integration of behavior Volume I Basic postulates. Chicago The University of Chicago Press, 1952 272 p. illus. 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine, Lowell T Coggeshall Lester R. Dragstedt, Franklin C. McLean, C. Phillip Miller Thomas Park, William H. Taliaferro) $5.00. 1674

Contents (abridged) Section I, Our problem and our method. Section II, Systematic analysis of common-sense conceptions: Patterns of motivation. Analyses of the goal-seeking mechanism. Qualitative analysis of the integrative function. Dreams, hopes, wishes, and the modifying effect of an integrative field. Hypotheses and facts. Section III, Integration and disintegration of purposive behavior: Dreams and rational behavior. Case report. Interpretation. A clinical analysis of purposive behavior. Freud's theory of personality structure. Section IV Effects of frustration. Reactions to obstacles. The nature and effects of frustration. Mitigation of frustration effects. The need for activity and stimulation. Theories about the drives and about play. Experimental studies of frustration. Section Present and past: Two dream sequences compared. Changing patterns of hopes and fears. The learning process in psychoanalytic therapy. Section VI, The modifying influence of sleep. Section VII, Reconstruction of the integrative process. Appendix Life history of patient. Life chart. Bibliography. Author index. Subject index.

Note: A detailed analysis of the thoughts and acts of one person during two years of psychoanalytic treatment. The volume is the first of five projected volumes on the subject of human behavior, the objects of which are to analyze human behavior into elementary reaction patterns and then to show how these elementary reactions are combined and coordinated. In the first volume the author starts with the commonsense notions of motivation and insight, constructs picture of the integrative apparatus and how it works, then checks this picture against the clinical data of the case history. The author assumes as working hypotheses that rational behavior, neuroses, and dreams have much in common and that in irrational behavior are found fragments of the integrative mechanism which account for rational behavior.

GILBERT G M

The psychology of dictatorship based on an examination of the leaders of Nazi Germany New York The Ronald Press Company 1950. 327 p. illus. 22 cm. $4.00 1675

Contents Part I, The genesis of dictatorship. The emergent pattern of dictatorship—a psychocultural view Adolf Hitler and the Nazi movement. Part II, Selected case studies: The revolutionists. The diplomats. The militarists. The state police. Part III, Psychological implications: Clinical and psychodynamic aspects. Some social relationships. Dictatorship and adaptive social behavior References and bibliography Name index. Subject index.

Note: The author of this unique work served as prison psychologist at the Nuremberg trial of the Nazi war criminals in 1945–46, and thus was able to make thorough first-hand study of such German leaders as Goering, Hess, von Ribbentrop and Keitel. This report of his findings, based on almost daily contact with the prisoners, offers revealing picture of the character development, emotional conflicts, and social values of Hitler's chief lieutenants, and indirectly of Hitler himself. The author has also attempted to integrate some of the data of economics, sociology politics and history as they throw light upon the rise of Nazism. Although written primarily for psychologists, the subject matter and the semitechnical style of the book make it of interest to readers outside this field.

HARSH CHARLES MAXFIELD AND H. G SCHRICKEL

Personality development and assessment. *New York The Ronald Press Company* 1950 518 p. illus. 24 cm. $5.50. 1676

Contents: Part I, Nature and development of personality: Introduction. Beginnings of personality Infancy—the first two years. Infancy—sources of personal differences. Progress in early childhood. Childhood learning and acculturation. Middle childhood—six to twelve. Middle childhood—expansion of personality Adolescence. Adolescent personality Early adulthood. Adjustments to love and marriage in early adulthood. Middle and old age Part II, Personality study in theory and practice: Theories of personality The psychoanalytic movement. Cultural approach and synthesis. Assessment of personality. Questionnaires and trait organization. Interpretive assessment. Integration in personality Appendix: Theories of trait organization References. Index of names. Index of subjects.

Note A general study of personality from the standpoint of psychology organized for use as textbook. In the first part are traced the typical stages of personality development from infancy to old age. For each period there is *discussion of (1) factors influencing* personality (2) major problems and mechanisms of adjustment, (3) changes in motivation, (4) changes in ability and learned adjustment patterns, (5) significance of the phase for later development, and (6) characteristic individual variations. The second part of the book is survey of theories about personality and methods of assessing it.

By cross references in Part II the reader is reminded that theory and method must be related to the phenomena discussed in Part I. References are made throughout the text to the 23-page bibliography

HAVIGHURST, ROBERT JAMES, AND HILDA TABA

Adolescent character and personality By Robert J Havighurst and Hilda Taba [of] The Committee on Human Development [of] the University of Chicago In collaboration with Andrew W Brown [and others] New York John Wiley & Sons Inc., 1949 315 p. illus. 22 cm. $4 50. 1677

Contents: Part I, Overview of the studies, by Robert J. Havighurst and H. Taba: The problem of studying character. The community setting. Subjects and procedures. Part 2 Group studies: Community factors in relation to character formation, by R. J. Havighurst and D. Neubauer. Social class and school adjustment in relation to character reputation, by M. L. Weckler. The relation of the church to character formation, by D. Neubauer. The role of adults outside the family in character formation, by R. J. Havighurst and A. F Kluger. Moral beliefs and the ability to apply them in solving problems of conduct, by H. Taba. The relation of values to character by M. Dorr and R. J Havighurst. Personal-social adjustment and character reputation, by F A. Kingsbury Part 3, Character and personality types, by M. Dorr and others: Studies of individuals. The self-directive person. The adaptive person. The submissive person. The defiant person. The unadjusted person. Part 4 Suggestions for character education Conclusions and implications, by R. J. Havighurst and others. Part 5 Methods of studying character and personality: Methods of studying character reputation, by F A. Kingsbury and N L. Weckler. Methods of determining social status, by W L. Warner and others. Methods of studying affectional family relationships, by A. W Brown and others. Methods of studying the role of adults outside the family by R. J. Havighurst. Methods of studying moral beliefs, by H. Taba. Methods of studying values, by M. Dorr and R. J. Havighurst. Methods of studying personal-social adjustment, by F A. Kingsbury Interviewing and miscellaneous methods, by D. Neubauer and R. J. Havighurst. Comparison of these studies with the Character Education Inquiry by N. L. Weckler. Index.

Note. A report of field work carried on in "Prairie City small predominantly laboratory city typical of midwestern communities, by the Committee on Human Development and interdepartmental group representatives of the biological and social sciences at the University of Chicago. The book covers character development in youths of this city who were 16 years of age when the study was begun. The final part of the volume records some of the tests and questionnaires that were used in the studies. The book is especially intended for social workers, teachers, and other persons who work with youth.

KRECH DAVID AND GEORGE S KLEIN, editors

Theoretical models and personality theory Durham, North Carolina Duke University Press, 1952 142 p. illus. 24 cm. $2.50 1678

Contents: The problem of personality and its theory by G. S. Klein and D. Krech. Theoretical models in biology and psychology by L. von Bertalanffy. The role of neurological ideas in psychology by D. O. Hebb. The conceptual model of psychoanalysis, by D. Rapaport. Comments on theoretical models illustrated by the development of theory of conflict behavior, by N. E. Miller. The organization of personality by H. J. Eysenck. Biological intelligence, by W. C. Halstead. A theoretical model for personality studies, by A. Angyal.

Note: In this volume the nine authors have written on various aspects of the problems of developing personality theory. More specifically they have considered the advantages and disadvantages of theoretical models in developing and stating personality theory. One of the authors (Eysenck) states the problem "If, then, we would construct science of personality we must seek abstract models which will adequately represent our knowledge of existing facts and which at the same time will point forward to new facts which can verify modify or refute our theoretical models. The papers include contributions on general problems of conceptualization, special theoretical approaches, such as psychoanalysis and methodological devices relevant for theory such as factor analysis. It originally appeared as an issue of the *Journal of personality*. It is of value primarily to professional psychologists.

LINDNER, R[illegible]
Prescription [illegible] rebellion. New York Rinehart & Co Inc., 1952 305 p. 22 cm. [illegible] 1679

[illegible] Part one, Diagnosis: The lie that binds. [illegible] The eleventh commandment. Rebel's fate. [illegible] and consequences—history from [illegible] new dimension [illegible] Part two Prescription: The revolutionist [illegible] [illegible] Additional bibliography

[illegible] this work [illegible] professional clinical psychologist argues [illegible] on the part of psychologists and psychiatrists [illegible] adjustment as [illegible] sound principle of human conduct. [illegible] this concept calls on men to conform, to adopt an [illegible] and [illegible] philosophy of resignation. He believes [illegible] should be replaced by one that will [illegible] man's [illegible] conformity. He is particularly critical of some of [illegible] methods of psychoanalysis and psychiatry. Even though [illegible] to be addressing professional psychologists and psychia[illegible] the book is written so as to appeal also to lay readers. The [illegible] is forceful and intentionally provocative.

MCCLELLAND, DAVID CLARENCE
Personality New York William Sloane Associates, 1951 654 p. illus. 22 cm. $5 50 1680

Contents: Part I, Methodology: How personality is studied. The [illegible] approach to personality: the history of [illegible] belief. Obtaining the facts. Interpreting the facts. Relating the facts to one another. Part II, Trait as [illegible] personality variable. Expressive traits. Performance traits. Trait theory. Part III, Schema as [illegible] personality variable: [illegible] and [illegible] Roles and role models. Socialization. The sources of [illegible] and motives. Part IV Motive as [illegible] personality variable: Motivation: clinical approach. Motivation: experimental approach. The effects of motivation on behavior. Part [illegible] Summary and integration: Conceptions of the self. Interrelation among the basic personality variables: predicting the concrete act. References and author index. Subject index.

Note: Using mainly the motivational scheme of H. A. Murray but combining methodological resources of many kinds, this author has attempted to develop [illegible] psychology of the individual personality somewhat along the lines long advocated by Gordon Allport. The diverse discussions of theoretical and research problems are tied together by constant reference to [illegible] single case who has been studied with extraordinary thoroughness. Intended for the advanced undergraduate student of psychology it will be more useful at the graduate level.

MIKESELL WILLIAM HENRY AND GORDON HANSON
Psychology of adjustment. New York D Van Nostrand Company Inc. 1952 406 p 24 cm. (The Van Nostrand series in psychology J P Guilford, general editor) $4 50 1681

Contents. Frustration and maladjustment. Conflict. Our important wants. Indirect living. Arrested development. The aggressive mechanism. The withdrawal mechanism. The regressive mechanism. Our fantasy life. Illness as [illegible] mechanism. The problem of sex. The place of learning in educational adjustment. Social responsibility and work. Adjustment in the family. Various forms of therapy. Better choice of defense mechanisms. Building confidence. Function and goal-centered behavior. Index.

Note An introductory college text in which the individual personality is viewed as the product of adjustment to the pressures of the society in which the individual lives. Considerably more space is given to maladjustment than to adjustments that build up the normal personality; but the authors' purpose behind this emphasis appears to be to enable college students and other readers to avoid the maladjustments. N[illegible] previous introduction to psychology is required and the book is written in [illegible] style that makes it available to lay readers as well as to those who study the subject under an instructor. [illegible] reference are included.

MOWRER [illegible] ORVAL HOBART
Le[illegible] theory and personality dynam[illegible] [illegible] papers. New York The Ronald Press C[illegible] 1950 776 p. illus. 24 cm. $8.00 1682

[illegible] survey of [illegible]

Contents (abridged) Part I, Learning theory: A stimulus-response analysis of anxiety and its role as [illegible] reinforcing agent. Preparatory set (expectancy)—some methods of measurement. Fear as an intervening variable in avoidance conditioning. Extinction and behavior variability as functions of effortfulness of task. Habit strength as [illegible] function of the pattern of reinforcement. The law of effect and ego psychology. On the dual nature of learning—a reinterpretation of "conditioning" and "problem solving." An experiment exemplifying "learning" as induction and "insight" as deduction. Part II, Personality dynamics: An experimental analogue of "repression" [illegible] incidental observations on "reaction formation." Enuresis—a method for its study and treatment. Time as [illegible] determinant in integrative learning. Discipline and mental health. An experimental analogue of fear from [illegible] sense of helplessness. Learning theory and the neurotic paradox. The problem of anxiety. Biological vs. moral "frustration" in the causation of personality disturbances. Identification—a link between learning theory and psychotherapy. On the psychology of "talking birds"—a contribution to language and personality theory. Bibliography. Index of names. Index of subjects.

Note The author of this book points out that its title and organization imply [illegible] distinction between the [illegible] which is more apparent than real, since "learning theory" and "personality dynamics" both refer to the processes and principles according to which human personality or "mind" develops and functions. The distinction, however, is made and serves to demonstrate that knowledge in the field of psychological science derives from two approaches: that of the laboratory and that of the clinic. Several of the studies are mostly concerned with the psychology of fear and related states, an approach which has had comparatively little previous study although, as the author quotes Freud, anxiety is "the fundamental phenomenon and the central problem of neurosis." Most of the chapters are reprinted from various psychological and educational journals. Introductory paragraphs to integrate them and in some cases to cover additional developments since their original publication have been added. Eight of the chapters are here published for the first time.

SLOTKIN JAMES SYDNEY
Personality development. New York Harper & Brothers, 1952 401 p. illus. 22 cm. (Harper's social science series, under the editorship of F Stuart Chapin) $4.50. 1683

Contents: Part one, Inheritance: The concept of inheritance. Traits resulting from inheritance. Biological aspects of the individual. Part two Socialization: The concept of socialization. Traits acquired through socialization. Social aspects of the individual. Part three Culturalization: The concept of culturalization. Traits acquired through culturalization. Cultural aspects of the individual. Part four Individualization: The concept of individualization. Traits developed through individualization. Particular aspects of the individual. [illegible] Subject index.

Note. In this work Dr. Slotkin develops the theory that "personality is the product of the responses made by an individual with [illegible] particular heredity to the specific sequence of situations confronting him during his life history." Emphasis is placed on the influence of social and cultural factors, and the [illegible] hypotheses are illustrated with numerous quotations from anthropological works and examples from case histories. These illustrations are [illegible] examples of childhood behavior for the author believes that the personality pattern is established during the first five years of life. Of interest primarily to professional psychologists and advanced students of psychology

SYMONDS PERCIVAL MALLON
The ego and the self. New York Appleton-Century-Crofts Inc. 1951. 229 p. 21 cm. (The Century psychology series Richard M. Elliott, editor) $2.50 1684

Contents: Introduction. The structure of the ego. Functions of the ego. Development of the ego. Development of the self. Self-love, [illegible] and self-valuation. Ego strength and ego weakness. The role of the [illegible] Ego breakdown. [illegible] affects in the ego. Ego, superego, and self-ideals. Ego [illegible] states and depersonalization. The role of the ego in pathological [illegible] The place of the ego and the self in psychotherapy. Education for ego and self development. Bibliography. Index.

Note In this book the author views the ego as "the objective self as it might be observed by [illegible] behaviorist," and the self as "the subjective self as it is perceived, conceived, valued and [illegible] responded to by the individual himself." After defining the concepts of the ego and [illegible] he presents in [illegible] concise style the current knowledge of the ego and the self from the viewpoint of psychology. In most parts the text is [illegible] well organized and smoothly written digest of selected literature. Statements in the text are cross-referenced to the source articles and books. Included among the source materials are numerous [illegible]

ings of psychoanalysts as well as the writings of experimental psychologists. The book is useful as text in advanced college courses and as reading guide for graduate psychologists who wish to explore this area of psychology

YOUNG KIMBALL

Personality and problems of adjustment. Second edition. New York Appleton-Century-Crofts Inc. 1952 716 p. illus. 24 cm. $5.00. 1685

Contents (abridged) Part I, The foundations of personality: Constitutional foundations of personality Motivation and affective processes. Internal organization and interactional processes. The development of language in the individual. The rise and function of the self. Symbolic behavior and the self. Typology—facts and theories. Theories of personality Part II, Selected problems of personal adjustment. Infancy and childhood. Adolescence and problems of physical and social maturation. Pupil adjustment in school. Mental health of college students. Some problems of marriage and divorce. Psychology of modern women Psychological problems associated with occupation. The psychology of later maturity and old age. Constitutional deficiencies and adjustment. Some personality characteristics of delinquents and criminals. Neurotic and psychotic manifestations of personality Glossary Index of names. Index of subjects.

Note: (3140) This is revision, without major changes, of widely used and valued textbook utilizing sociological approach to personality While some new material has been added and some attention given to changes in the field of theoretical psychology the orientation is still toward groups, social roles, and institutional patterns as the major determinants of personality Can be used by advanced undergraduates in psychology and sociology

SOCIAL PSYCHOLOGY

ASCH SOLOMON E.

Social psychology New York Prentice-Hall, Inc. 1952 646 p. 24 cm. 1686

Contents: Part I, Introduction Doctrines of man. Part II, Organization in psychological events: Structured properties of experience and action. Psychological invariance and change. Part III, Human interaction The transformation of man in society The problem of human interaction. Social facts—the products of interaction. The expression of emotions Knowledge of persons and groups. An introduction to group theory Part IV Social needs: The ego. Social interest Rules and values. The fact of culture and the problem of relativism. Part Effects of group conditions on judgments and attitudes The doctrine of suggestion. Structural factors in the understanding of assertions. Group forces in the modification and distortion of judgments The study of small groups. Opinion and attitude—their sociological shape. Sentiments and attitudes. Some remarks on propaganda. Name index. Subject index.

Note. A re-examination and evaluation of the fundamental concepts and assumptions regarding the social nature of man, in terms of Gestalt theory Rather than providing an exhaustive or historical review of the subject, the discussion centers around those aspects of behaviorism and psychoanalysis which relate directly to social psychology The chapters dealing with the expression of emotion, the understanding of assertions, and the distortion of judgments are based largely on the author's experimental studies in these fields. The author is Professor of Psychology at Swarthmore College.

BALES ROBERT F

Interaction process analysis a method for the study of small groups. Cambridge Mass. Addison Wesley Press Inc., 1951 203 p. illus. 23 cm. $6 00. 1687

Contents: Description of the method. Theoretical framework Training observers. Appraising observer reliability Analysis and interpretation. Appendix Definitions of the categories. Bibliography Index.

Note: In this original work method of studying or analyzing the social behavior or more precisely "social interactions" of small groups of people is described explicitly By "small groups" the author means groups ranging from two persons up to about twenty and including such types as children's play groups, adolescent gangs, social clubs, teacher and pupil, and professional specialist and client. Essentially the method techniques in experimental or observational social psychology It involves the use of an instrument called the interaction recorder or of substitute forms, and the rapid classification by trained observers of the acts of the group under study The observed acts are classified under one or more of twelve categories of interactions which are carefully explained in the first chapter.

BAUER, RAYMOND A.

The new man in Soviet psychology Cambridge Harvard University Press, 1952 229 p. 22 cm. $4 00. 1688

Contents: Foreword, by J. S. Bruner. The relationship of psychology to society Two kinds of Marxism. The pattern of social change. The behavioral psychologies of the twenties. The mechanistic model of personality Consciousness comes to man. The turning point in applied psychology The decree against pedology The "new man" in Soviet psychology Modern Soviet psychology Psychology and the Soviet system. Notes. Index.

Note: This book is both study of the effects of the Soviet political system upon psychology in Russia and study of the concept of human nature as it is presented in the new Soviet psychology It is penetrating and well documented. Although of primary interest to psychologists, it is written in style that makes it available also to educated people outside this profession.

BERRIEN, FREDERICK KENNETH

Comments and cases on human relations. New York Harper & Brothers, 1951 500 p illus. 22 cm. $4.50. 1689

Contents (abridged) Part one: The setting. Words and things. Observing and thinking. Motivation and behavior Social skills and group codes. Attitude, prejudice, and rumor. Reorienting attitudes. Organization, control, and personality Society and self. Part two: Appendix. Index of names. Index of subjects.

Note. A "case method" text designed for use in undergraduate college courses and adult education groups where considerable use is made of group discussion in teaching. In the first part—which occupies about one-half of the space—the social pressures of contemporary society are described and analyzed, and successful methods of adjusting conflicts due to them are outlined. The second part of the book is devoted to narrative descriptions of 28 individual and group situations ranging from problems in the maladjustments of adolescents to complex problems in labor-management relations. These "cases" are intended for discussion by the classes and other groups making use of the book, and they constitute its unique feature. The author is Professor of Psychology at Colgate University

BETTELHEIM, BRUNO AND MORRIS JANOWITZ

Dynamics of prejudice. A psychological and sociological study of veterans. New York Harper & Brothers, 1950. 227 p. illus. 24 cm. (Studies in prejudice edited by Max Horkheimer and Samuel H. Flowerman. Sponsored by The American Jewish Committee. Social studies series publication no. IV) $3.50. 1690

Contents: Dynamic approach to intolerance. Patterns of ethnic intolerance. Stereotyping the minority Social status. The war experience. Anxiety and intolerance. Tolerance: function of control. Combating intolerance: anti-Negro attitudes. Reflections, and applications for social action. Appendix The interview Sampling procedure. Comments on the interview situation. Defining the patterns of intolerance. Reliability of analytic procedures. Schedule of interview questions. Supplementary tables. Index.

Note. One of series of volumes of which the aim is not merely to describe prejudice but to explain it in order to help in its eradication. In the view of the editors eradication of prejudice means re-education on the basis of scientific understanding. In this volume the connection between personality traits and prejudice among war veterans is examined with the purpose of discovering what there is in the psychology of the individual that renders him "prejudiced" or "unprejudiced." The group selected for intensive study was random sample of 150 male veterans of World War II who were residents of Chicago, excluding those who were officers and members of ethnic groups toward which hostility is most frequently directed, i.e., Negroes, Jews, Chinese, Japanese, Mexicans. The work is of interest to psychologists and sociologists.

BRITT STEUART HENDERSON

Social psychology of modern life. Revised edition. New York Rinehart & Company Inc. 1949 703 p. illus. 24 cm. $6.00. 1691

Contents (abridged): Part I, Social psychology and its methods: The social psychology of everyday life. The methods of social psychology Part II, Biological and social foundations of behavior: Biological bases of human behavior Social antecedents of behavior. The nature of culture. Part III, Some individual factors of social adjustment: Behavior traits, and attitudes. The social psychology of language. The psychology of irrationality Part IV Behavior in the presence of others. Our judgments of other persons. The influence of other persons. Group behavior. Sex, dominance, and prestige. The psychology of leadership and invention. Part The social psychology of institutions: The family Education—the school. Religion—the church. Fraternities and political parties. Occupational groups. Part VI, Social conflicts: Delinquency patterns. Race differences. Prejudices against minority groups. Nationalism and war. Appendices: Literature cited. List of textbooks on social psychology Other bibliographical sources. Terminology Author index. Subject index.

Note: (3109a) An inclusive work which is organized so that it may be used as textbook in college courses but is at the same time written in style that makes it available to journalists and interested laymen. The list of literature cited is more than 60 pages long. Since the text is keyed to it it constitutes useful guide to the literature on many aspects of social psychology and sociology This edition represents very extensive revision both in the text and the bibliographies.

DEWEY, RICHARD, AND W J HUMBER

The development of human behavior New York The Macmillan Company 1951 762 p. illus. 24 cm. $5.50 1692

Contents: Part I, A note on the function of theory: What is social psychology? Human nature' Interactive variables. Mechanisms of biological inheritance. Potentialities for human nature. Environment. The interactive processes. Motivation in social behavior. Personality Part II, The social psychology of age groups: Infancy and the preschool years. Childhood. Adolescence. Adulthood. Old age. Part III, Abnormal status, deviant roles, and personality: Who is normal? The social psychology of minority status. Physiological-anatomical minorities. Cultural minorities. Personal-social minorities. Those outside of the law Those outside our world. Part IV Institutions, organizations, and personality The school and personality Religion and human nature. The job, the economic system, and the individual. Riots, mobs, and panics. Part Social psychology and ethics: The good society Appendix. Index of names. Index of subjects.

Note. An introductory but substantial presentation of the principles of social psychology and of the behavior of groups in society interpreted in terms of social psychology Much emphasis is placed on the importance of the scientific attitude and on the information so far accumulated by the techniques of scientific investigations. In the first part basic information on such pertinent topics as genetics, the structure of the nervous system, the influence of the social environment on human nature and human motivation is presented. In the remainder of the book the phenomena of behavior evidenced within groups and in interactions among groups are analytically discussed. The text is well documented with literature references, and the names of the authors of cited papers are brought out in the index of names. The book is suited to use as text in college courses offered to students who have completed basic courses in psychology It has value also as reference and orientation book for teachers, journalists, etc.

DOOB LEONARD WILLIAM

Social psychology an analysis of human behavior New York Henry Holt and Company 1952 583 p. 24 cm. $5 00 1693

Contents: Part one, The individual in society the social setting The bases of behavior Socialization and learning. Actions and reactions. Language. The methods of research. Part two, The behavior of groups: Ethnic groups. The individual and his group. Organized groups. Group laws. Leaders. Group prejudice Delinquency and crime. Part three, Social change: Vogues. Communication and the mass media. Education and re-education. Social conflicts. The diffusion of change. The problems and scope of social psychology Index.

Note. Mainly this book is survey of the problems with which social psychology must deal. There is considerable emphasis on unsolved problems. So many quotations from significant surveys, reports, and other basic materials of social psychology are included that the book can be used as an introductory guide to such literature. The author has made good use of important research studies of World War II and the years immediately after. Each of the three main parts contains selected bibliography The book is useful chiefly as an introductory text at the college level for students with serious interests in social psychology and sociology

FARIS, ROBERT E. LEE

Social psychology New York The Ronald Press Company, 1952 420 p. 23 cm. $5.00. 1694

Contents: Human nature and the social order. Inadequacy of biological motivation. Motivation—the individual aspect—social sources. The emergence of consciousness. The concept of unconscious mind. The emergence of self-consciousness in social interaction. Social determination of learning, perception, and memory Social determination of attitudes and beliefs. The social factor in ability The character of primary interaction. The differentiation of persons by variations of roles. The neurotic role. Personality disorganization. Trends and problems in social psychology Index of names. Index of subjects.

Note. A well-written introduction in which the main emphasis is on the significant results of the outstanding scientific investigations in recent decades of the phenomena of social behavior and of personality development in human society No particular school of psychological thought is favored; however the author is critical of the Freudian school. Frequent quotations from the writings of other authors are incorporated in the text, and there are numerous footnote citations of other writings. Although primarily text for college courses, the book is so written that it can be read with profit by mature lay readers not enrolled in formal courses.

LAPIERE, RICHARD TRACY, AND PAUL R. FARNSWORTH

Social psychology Third edition. New York McGraw Hill Book Company, Inc., 1949 626 p. 24 cm. $6 00 1695

Contents: Part I, The nature of the individual and of society: Social psychology The psychobiological bases of human behavior. The sociocultural bases of human behavior. Part II, The process of socialization: Socialization. Types of human behavior. Overt symbolic behavior—gesture—speech. Overt nonsymbolic behavior. Overt nonsymbolic behavior—symbolic sources. The covert behavior. Part III, The human personality: Personality Personality stereotypes. Personality sources. Personality deviations. Personality and social controls. Part IV Personality and social adjustment: The dynamics of social adjustment. Social disorganization and maladjustment in modern life. Social change and maladjustment. Socially atypical patterns of adjustment. Psychologically abnormal modes of adjustment. Part Social interaction: The interactional situation. Cultural situations. Interpersonal situations. Publics. Abnormal situations. Appendix. Bibliography and author index. Subject index.

Note: (3117) A standard introductory textbook for use in college courses. In the present edition three new chapters have been added and most parts that have been carried over from the second edition have been extensively revised. The first-named author is Professor of Sociology and the second is Professor of Psychology in Stanford University.

LEMERT EDWIN MCCARTHY

Social pathology a systematic approach to the theory of sociopathic behavior New York McGraw Hill Book Company Inc., 1951 459 p illus. 24 cm. (McGraw Hill series in sociology and anthropology Richard T LaPiere, consulting editor) $5 00. 1696

Contents: Part one, Theory: Introduction. Deviation and differentiation. The societal reaction. Sociopathic individuation. Part two, Deviation and deviants: Blindness and the blind. Speech defects and the speech defective. Radicalism and radicals. Prostitutes and the prostitute. Crime and the criminal. Drunkenness and the chronic alcoholic. Mental disorders. Appendix: Suggested outline to be followed in studying and writing the life history of deviant. Glossary. Index.

Note: In this book an original theoretical structure for the study of sociopathic phenomena is presented and its applications to specific sociopathological types, such as radicals and alcoholics, are discussed. Since the author's main purpose is to advance theory which will facilitate the integration of the study of social deviants with sociology rather than with the abnormal psychology textbooks, the book is potentially of greater interest to sociologists than to psychologists. However it presents point of view about which the specialist in abnormal psychology should be informed. The level of treatment implies previous study of psychology and sociology on the part of the reader

LEWIN, KURT

Field theory in social science selected theoretical papers. Edited by Dorwin Cartwright. A publication of the Research Center for Group Dynamics, University of Michigan. New York Harper & Brothers, 1951 346 p. illus. 22 cm. $5 00 1697

Contents: Formalization and progress in psychology. Constructs in field theory. Defining the "field at a given time." Field theory and learning. Regression, retrogression, and development. Field theory and experiment in social psychology. Problems of research in social psychology. Psychological ecology. Frontiers in group dynamics. Behavior and development as a function of the total situation. Appendix: Analysis of the concepts whole, differentiation, and unity. Index.

Note: All of the papers in this volume were previously published elsewhere. Though written and published separately, they now form a reasonably coherent whole. The editor has modified them slightly by omitting duplicate passages and occasionally writing transitional paragraphs. The book is a basic work both in social psychology and in sociology.

LINDESMITH, ALFRED RAY, AND ANSELM L. STRAUSS

Social psychology New York The Dryden Press Inc. 1949 549 p. illus. 22 cm. (The Dryden Press sociology publications, general editor Edwin H. Sutherland) $5.00 1698

Contents: Part I, Language behavior: Sub-human behavior and its limitations. Groups, language, and symbolic environments. Complex mental functions. Man without symbols. Part II, Socialization: The child's acquisition of language. Roles, Roles and the self. Thinking as adaptive behavior. The social bases of thought. Part III, Personality: Personal organization. Symbolic adaptations. Conflict and disorganization. Deviant behavior. Part IV, Race and sex: Race relations. Sexual behavior. Part V, Collective behavior: Social change. Mass behavior and shifting perspectives. Biological and social factors in behavior. Index.

Note: The importance of language symbols and of the influence of social groups in the development and determination of individual behavior are the main themes in this refreshing text. The authors emphasize the importance of data derived from investigations and experiments and they imply that the time for inclusive theories in social psychology has not yet arrived. Although most of the text is based on other works in which the results of investigations are reported, the book is not a mere literature digest. The authors, who are members of the faculty of Indiana University, have performed valuable integration and interpretation. Literature references and annotated reading lists are included.

MILLER, JAMES GRIER editor

Experiments in social process a symposium on social psychology New York Mc Graw-Hill Book Company Inc. 1950. 205 p. illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $3.50. 1699

Contents: Scientific methodology in human relations, by D. G. Marquis. The strategy of sociopsychological research, by R. Lippitt. Laboratory experiments—the role of group belongingness, by L. Festinger. Survey research—psychological economics, by D. Cartwright. Survey techniques in the evaluation of morale, by D. Katz. Field experiments—changing group productivity, by J. R. P French, Jr. A comparative study of national characteristics, by D. V. McGranahan and I. Wayne. The implications of learning theory for social psychology, by J. J. Gibson. Social psychology and the atomic bomb—a round-table discussion, by members of the symposium and L. Szilard. Index.

Note: Papers presented at a symposium held at the University of Chicago in November, 1947 have been collected in this volume together with two papers first published elsewhere. Except for the final chapter each of the papers is a description of a recent study in the field of social psychology or a discussion of methodology. The final chapter is a transcript of discussion rather than a formal paper. The editor is Chairman of the Department of Psychology of the University of Chicago.

NEWCOMB, THEODORE MEAD

Social psychology by Theodore M. Newcomb with the assistance of W W Charters, jr New York The Dryden Press 1950. 690 p. illus. 24 cm. (The Dryden Press publications in interpersonal relations, general editor Theodore M Newcomb) $5.50. 1700

Contents: I, The nature and scope of social influence: Asking and answering questions about social influence. Uniformities and variations in social behavior. II, Motives and attitudes. Motivation in social behavior. Acquiring motives and attitudes. The measurement of attitudes. Change and persistence of attitudes. III, Social norms and roles. Social norms and common attitudes. Role behavior and the self. IV, Individual personality: Processes of personality development. The patterning of self-other attitudes. Culture and personality. Individual adaptation to role prescriptions. V, Group membership: Effects upon individuals of membership in groups. Multiple group membership. Group conflict. Group solidarity. References. Index of names. Index of subjects.

Note: A college textbook written from a new standpoint by a professor who has made use of the text in preliminary form in his teaching at the University of Michigan. Focussed in the reciprocal influences among human beings as they interact with one another. The author shows that individual persons come to act, perceive, think, and feel in certain preferred ways in relation to their environments. The total organization of a person's predispositions to relate himself to his environment is held to represent his personality. Throughout the book the author emphasizes the human part of the individual's environment, stating that many of the most important conditions which account for individual behavior are group conditions.

ROHRER, JOHN H., AND MUZAFER SHERIF, editors

Social psychology at the crossroads, the University of Oklahoma lectures in social psychology New York Harper & Brothers, 1951 437 p. 22 cm. $4 00. 1701

Contents: Part one, Social psychology: integrating individual and social approaches. Social psychological theory: integrating individual and social approaches, by T. M. Newcomb. Part two, Biological factors and human behavior: Genetic variability and human behavior, by P. R. David and L. H. Snyder. The "levels" concept in the study of social organization in animals, by T. C. Schneirla. Levels of integration along the phylogenetic scale: learning aspect, by H. F. Harlow. Part three, Interaction in the cultural setting: On cultural and psychological reality, by M. J. Herskovits. Cultural factors in the structuralization of perception, by A. I. Hallowell. The psychological habitat of Raymond Birch, by R. C. Barker and H. F. Wright. Part four, Basic psychological functions: The place of phenomenological analysis in social psychological theory, by R. B. MacLeod. Toward a general theory of cognition, by L. Postman. Scales of judgment and their implications for social psychology, by J. Volkmann. Part five, Group structure and individual roles: Small groups and large organizations, by W. F. Whyte. Work and the self, by E. C. Hughes. Behavior and organization: industrial studies, by C. M. Arensberg. Part six, Human behavior in the social psychological frame of reference: Conceptions of roles and ego in contemporary psychology, by S. S. Sargent. Psychological problems of multiple group membership, by E. Hartley. A preliminary experimental study of inter-group relations, by M. Sherif. Name index. Subject index.

Note: This book contains a series of papers written by invitation and delivered at a conference held in April, 1950. Together the papers give not only an account of the present status of social psychology but indicate the direction it must take if it is to make a significant contribution to the understanding and improvement of human relations. A principal theme is that a unified scheme of social psychology must consider and integrate biological and psychological factors stemming from the individual with the factors from his sociocultural surroundings. Areas where the need for research is crucial are indicated.

SARGENT, STEPHEN STANFELD

Social psychology an integrative interpretation. New York The Ronald Press Company 1950. 519 p. illus. 21 cm. $4.50. 1702

Contents: Part I, Socialization of the individual: Biological and social backgrounds. Culture and personality Social influences on personality Social learning—processes and products. Part II, The dynamics of social behavior Motives. Frustration and mechanisms. Ego-development and ego-involvement. Part III, The patterning of social behavior Communicating and symbolizing. Social interaction and social groups. Social roles. Leadership. The person in social situations. Part IV Understanding social phenomena: Public opinion. Propaganda. Mass behavior. Social change and social movements. Group differences and prejudice. Applications in the area of social issues. Social psychology today and tomorrow Name index. Subject index.

Note. An introductory text for use in college courses developed from course in social psychology given at Barnard College, course on which the author (a psychologist) and sociologist, Willard W Waller collaborated. In presenting the relationships among individual and group behavior the author has integrated techniques and studies from the fields of psychology sociology, anthropology and psychiatry The extensive bibliographical material includes both citations of source articles and annotated lists of supplementary readings.

SOCIAL SCIENCE RESEARCH COUNCIL

The American soldier Volume I, Adjustment during Army life. By Samuel A. Stouffer Edward A. Suchman, Leland C. DeVinney Shirley A. Star Robin M. Williams, jr Princeton New Jersey Princeton University Press 1949 599 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. I) $7.50 1703

Contents. How these volumes came to be produced. The old Army and the new How personal adjustment varied in the Army—by longitudinary considerations—by background characteristics—by type of experience in the Army Social mobility in the Army Job assignment and job satisfaction. Attitudes toward leadership and social control. The orientation of soldiers toward the war Negro soldiers.

—— Volume II, Combat and its aftermath. By Samuel A. Stouffer Arthur A. Lumsdaine, Marion Harper Lumsdaine, Robin M Williams jr M Brewster Smith, Irving L. Janis, Shirley A. Star Leonard S. Cottrell, jr Princeton, New Jersey Princeton University Press, 1949 675 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. II) $7 50 1704

Contents Attitudes before combat and behavior in combat. General characteristics of ground combat. Combat motivations among ground troops. Problems related to the control of fear in combat. The combat replacement. Attitudes of ground combat troops toward rear echelons and the home front. Morale attitudes of combat flying personnel in the Air Corps Objective factors related to morale attitudes in the aerial combat situation Psychoneurotic symptoms in the Army Problems of rotation and reconversion. The point system for redeployment and discharge. The aftermath of hostilities. The soldier becomes veteran. Appendix. Consolidated index for volumes and II.

—— Experiments on mass communication. By Carl I. Hovland, Arthur A. Lumsdaine, Fred D Sheffield. Princeton, New Jersey Princeton University Press, 1949 345 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. III) $5 00. 1705

Contents Introduction. Part I, Film evaluation studies: The orientation film, "The battle of Britain. General implications derived from the orientation film experiments. The audience's evaluation of films. Experimental comparison of alternative presentations. Effects of films on men of different intellectual ability Part II, Studies employing controlled variation Short time and long-time effects of an orientation film. The effects of presenting "one side" versus "both sides" in changing opinions on controversial subject. The effect of an audience-participation technique in film strip presentation. Summary and evaluation. Appendices: Measurement problems encountered. Index.

—— *Measurement and prediction.* By Samuel A. Stouffer Louis Guttman, Edward A. Suchman, Paul F Lazarsfeld, Shirley A. Star John A. Clausen. Princeton, New Jersey Princeton University Press, 1950. 756 p. illus. 24 cm. (Social Science Research Council. Studies in social psychology in World War II. Vol. IV) $10.00. 1706

Contents: An overview of the contributions to scaling and scale theory The problem of attitude and opinion measurement. The basis for scalogram analysis. The scalogram board technique for scale analysis. The utility of scalogram analysis. Relation of scalogram analysis to other techniques. The intensity component in attitude and opinion research. Problems of reliability The principal components of scale analysis. The logical and mathematical foundation of latent structure analysis. The interpretation and computation of some latent structures. Two case studies in prediction—introductory comments. The screening of psychoneurotics in the Army—technical development of tests. The screening of psychoneurotics—comparison of psychiatric diagnoses and test scores at all induction stations. Studies of the postwar plans of soldiers—a problem in prediction. Some notes on sampling and questionnaire administration by the Research Branch. Index.

Note These volumes present the techniques and the findings of comprehensive, detailed study of the attitudes and adjustments of American soldiers to army life, training, and combat duty They are the work of group of sociologists and psychologists, and are based on data assembled between 1941 and 1945 by the Research Branch, Information and Education Division of the United States Army. Volumes one and two are largely reports of the findings of the Council regarding soldiers' attitudes. Volume three contains an evaluation of various training programs used by the Army including educational films. Volume four is devoted to descriptions and analyses of the techniques used by the Research Branch in collecting the data. The series is monumental contribution to the literature of social psychology It is of value not only to psychologists who are concerned with military training and morale but also to social and applied psychologists in general.

SOCIETY FOR THE PSYCHOLOGICAL STUDY OF SOCIAL ISSUES

Readings in social psychology Revised edition. Prepared for the Committee on the Teaching of Social Psychology of the Society for the Psychological Study of Social Issues. Editorial committee Guy E. Swanson [and others] New York Henry Holt and Company 1952 680 p. illus. 24 cm. $5.35 1707

Contents: Part I, Approaches to the study of interaction: forms of interpersonal influence. Signs, symbols, and language in interpersonal communication. Transmitting influence through interpersonal communications. Part II, The social patterning of interaction—collective problem-solving: Collective problem-solving in small groups. Public opinion as collective problem-solving. Behavior in the absence of collective solutions. Part III, Recurring interaction patterns: Social norms. Social roles. Stratified role structures. Leader-follower roles. Part IV Some effects of interaction patterns on individual participants: Social influences on individual psychological processes. Attitudes and judgments as influenced by reference groups. Social influences on persistence and change of attitudes. The continuing socialization of the individual. Part Some social psychological approaches to public issues. Index.

Note: A carefully selected anthology of papers and selections from books and papers illustrative of the "empirical foundations" upon which social psychology rests. It is used in conjunction with other large courses in social psychology and is an excellent introduction to methods of investigation in the field. About half of the material in the present edition was added since the first edition was published in 1947

SYMONDS, PERCIVAL MALLON

Dynamic psychology New York Appleton-Century-Crofts, Inc. 1949 413 p. 24 cm.

(The Century psychology series, Richard M Elliott, editor) $4.25 1708

Contents: Introduction. Drive. Frustration. Aggression. Punishment. Anxiety Defenses against anxiety Fixation. Regression. Repression and the unconscious. Introjection and the superego. Projection. Identification. Conflict. *Guilt and self-punishment.* Sublimation. Compensation. Rationalization. Love and self-love. The ego and the self. Normality Index.

Note: (1477*) An undergraduate textbook based on the author's *The dynamics of human adjustment*, New York, 1946. Several chapters which appeared in the more advanced work have been eliminated entirely and advanced material has been largely removed from those chapters which have been taken over. In addition, a new chapter entitled "The ego and the self" has been added. Questions for discussion and short lists of recommended reading also have been added.

THOMAS, WILLIAM ISAAC

Social behavior and personality Contributions of W I. Thomas to theory and social research. Edited by Edmund H. Volkart. New York Social Science Research Council, 1951 338 p. illus. 24 cm. $3.00 1709

Contents: Introduction: Social behavior and the defined situation, by Edmund H. Volkart. Part I, Social science and social behavior: The need for a social science. Methodological note. The behavior pattern and the situation. The methodology of behavior study The role of methodology in the development of science. Research and the social process. The comparative study of cultures. Part II, Social behavior and personal dynamics: The four wishes. A theory of social personality Personality and the content of the family The configurations of personality Part III, Social behavior and cultural dynamics: The psychology of culture change. The primary group and the definition of the situation. Social disorganization and reconstruction. The individualization of behavior. Reconciliation of the heritages. Part IV, Personality and culture: Outline of a program for the study of personality and culture. Bibliography of W I. Thomas, compiled by A. Paul Hare. Biographical note. Index of names. Index of subjects.

Note: A posthumous volume reviewing and integrating the major contributions to sociological and social-psychological theory and method of W I. Thomas (1863–1947) and making available a selection of his out-of-print and unpublished materials. Thomas was a former president of the American Sociological Society Two features of his position in social science are summarized by the editor as follows: "The goal of social science is to obtain verifiable generalizations about human behavior. The end is to make available the kind of knowledge necessary and useful for the rational control of behavior.

CHILD STUDY

AMERICAN ASSOCIATION FOR GIFTED CHILDREN

The gifted child. Edited by Paul Witty Boston D C. Heath and Company 1951 338 p. illus. 23 cm. $4.00. 1710

Contents: Progress in the education of the gifted, by P Witty Identifying gifted children, by W H. Bristow and others. The Stanford studies of the gifted, by L. M. Terman and M. H. Oden. The contributions of Leta S. Hollingworth to the study of gifted children, by M. C. Pritchard. Some observations of highly gifted children, by M. Zorbaugh and others. The teacher of gifted children, by W C. Ryan and others. Mental hygiene of gifted children, by R. Strang. Community recognition of the gifted, by M. Hobbs. Nature and extent of educational provisions for the gifted pupil, by P Witty A high school of science for gifted students, by M. Meister. Search for talent in science, by W Davis. Experiences with children talented in the arts, by A. Lally and L. La Brant. Administrative problems in educating gifted children, by L. Krueger and others. The education of gifted children and youth—summary and recommendations, by P Witty Annotated bibliography on gifted children, by E. H. Martens. Index.

Note: A book designed to inform non-specialists such as parents, beginning teachers, and members of school boards about current *thought and problems in connection with specially gifted children.* The various chapters were written for the book by recognized leaders in this field of education. The book is a nontechnical or semitechnical presentation rather than a popularization. It includes some statistical data and numerous literature references. The bibliography is comprehensive.

AMES LOUISE BATES, AND OTHERS

Child Rorschach responses developmental *trends from two to ten years.* By Louise Bates Ames Janet Learned, Ruth W Métraux and Richard N Walker New York Paul B Hoeber Inc., 1952 310 p illus. 24 cm. $7.50 1711

Contents. Part one: Review of literature. Subjects and methodology Scoring. Statistical analysis. Area. Determinants. Content. Additional test factors. Part two Two years. Two and a half years. Three years. Three and a half years. Four years. Four and a half years. Five years. Five and a half years. Six years. Seven years. Eight years. Nine years. Ten years. Normal adult record. Clinical considerations. Summary Bibliography Index.

Note: In this work findings based upon studies of 650 children ranging in age from two to ten years of age show the changes which occur in normal responses at each age level to the Rorschach test. It is shown also that many types of Rorschach responses which suggest disturbances in the adult may be quite characteristic in the child. The *system of scoring used by the authors in evaluating the* Rorschach tests is given in some detail. Methods of administering the tests to young children are mentioned but the reader who is looking for specific instructions in testing procedure is referred to a standard text on the subject. This book is not an introductory manual on Rorschach procedure; familiarity on the part of the reader with one or more of the scoring systems is assumed. The authors are members of the staff of the Gesell Institute of Child Development.

BETTELHEIM BRUNO

Love is not enough, the treatment of emotionally disturbed children. Glencoe, Illinois The Free Press, 1950 386 p. illus. 22 cm. $4.50. 1712

Contents: The children. First encounter. Events in sequence. *From dreams to waking. The in-between times. The challenge of* learning. Food, the great socializer. Rest and play Alone and in the group. The world outside. In the bathroom. Bedtime. Publications on the school. Index.

Note. An informal account of the work and methods of the Sonia Shankman Orthogenic School at the University of Chicago. Although it deals with child psychiatry the style is nontechnical and the organization of the material is informal. The book can be used by anyone interested in the problems presented by delinquent, schizophrenic, or neurotic children. On the other hand, its content is substantial enough to make it valuable to child psychiatrists and others who work professionally with emotionally disturbed children.

ENGLISH HORACE BIDWELL

Child psychology New York Henry Holt and Company 1951 561 p. illus. 24 cm. $4 75 1713

Contents: Part I, Introduction. Part II, Discipline and authority Part III, Emotion. Part IV Motivation. Part v, The importance of physical development. Part VI, The child's intellectual life. Part VII, Social development. Part VIII, The individual child. Appendices. Bibliography and index of authors. Index of subjects.

Note. An introductory text addressed to college students but useful also to educated parents and others with mature interests in the psychology of children. It is written in a lucid direct style, and although introductory to this branch of psychology it includes a fair amount of professional grade material. There is a bibliography of over 300 references. The author is a member of the faculty of Ohio State University

ERIKSON ERIK HOMBURGER

Childhood and society New York W W Norton & Company Inc. 1950 397 p. illus. 22 cm. $5.00 1714

Contents: Part one, Childhood and the modalities of social life: Relevance and relativity in the case history The theory of infantile sexuality Part two, Childhood in two American Indian tribes: Hunters across the prairie. Fishermen along a salmon river. Part three,

The growth of the ego. Early ego failures—Jean. Toys and reasons. Eight stages of man. Part four. Youth and the evolution of identity: Reflections on the American identity. The legend of Hitler's childhood. The legend of Maxim Gorky's youth. Conclusion—The fear of anxiety. Appendix. Index.

Note. A collection of studies in which the social significance of childhood is interpreted in the terms of psychoanalysis. They range from detailed discussions of cases from the author's practice—in some of which the role of society is not too apparent—to anthropological studies of child training in certain American Indian tribes. The book is of about equal interest to students of cultural anthropology and to psychoanalysts interested in the psychiatric difficulties of children.

FAEGRE, MARION ELLISON LYON

Your child from 6 to 12. Washington, D. C. Government Printing Office, 1949. 141 p. illus. 23 cm. (United States. Federal Security Agency. Social Security Administration. Children's Bureau. Publication number 324) Paper $0.20. 1715

Contents. What 6- to 12-year olds are like. How family life is different today. What successful parenthood involves. How families influence their children's social adjustment. What play means in the life of a child. Home life as preparation for independent living. Helping children to make the most of their mental ability. When home and school get together. Everyday problems. Fears, worries, frustrations, and their outlets. Some special family concerns. Pursuits and hobbies. Children and money. Developing wholesome sex attitudes. Growth in middle childhood. Keeping your child healthy. The sick child. The community's services for your children.

Note. A useful, non-technical guide for parents.

FIEDLER, MIRIAM FORSTER

Deaf children in a hearing world: their education and adjustment. With a foreword by Mary Fisher Langmuir. New York. The Ronald Press Company. 1952. 320 p. illus. 21 cm. $5.00 1716

Contents (abridged). Part I, Education of deaf and hard-of-hearing children. The Vassar staff asks some questions. The research program. Part II, The children. Introduction: how we studied children. Part III, The parents discuss their problems. Social relations with other children. What problems arise with siblings? Reactions of parents to their deaf children. Helping the child understand his handicap. Who is a handicapped child? Parents as teachers of their children. What does a child's hearing loss mean? Should a child wear a hearing aid? Part IV, Reports of mothers and teachers on the children's experiences. Part V, Conclusion. Summary remarks. Appendix. Sources of help and information for parents of deaf and hard-of-hearing children. Index of names. Index of subjects.

Note. A discussion of the problem whether it is advisable to include deaf and hard-of-hearing children in schools and educational programs planned for boys and girls of normal hearing. It is a report of research conducted by the Vassar Summer Institute for Family and Community Living as part of a five-year program for the study of children with hearing difficulties. The author tells how a group of deaf children were received into groups with no hearing handicaps. The first of the five parts of the book explains the background of the study, what its definite objects were, and how and by whom it was conducted. Part II tells about the children individually; charts are included to show the hearing ability of each child. Seven mothers of the children were in residence at the Institute while the investigation was in progress, and Part III records some of the discussions between parents and teachers of these children. The fourth and fifth parts give the reports of the mothers and teachers and the conclusion of the study.

GARRISON, KARL CLAUDIUS

Growth and development. With a chapter by Florene M. Young and a chapter by Florence Heisler. New York. Longmans, Green and Co., 1952. 559 p. illus. 22 cm. $5.00 1717

Contents: Part I, Introduction. Studying child growth and development. Biological inheritance and prenatal development. The period of infancy. Some fundamental principles of growth. Part II, Aspects of growth: Physical growth and health. The development of motor skills. Emotional growth and control. Intelligence—growth and measurement. Language growth and development, by Florene M. Young. Growth in knowledge and understanding. Growth in creative expression. The development of social behavior and attitudes, by Florence Heisler. Part III, Personality development: Change of interests with age. Personality development—its nature and evaluation. Personality development—conflicts and adjustment. Mental hygiene of childhood. From childhood to adolescence. From adolescence to maturity. Appendix. Author index. Subject index.

Note. In this book on the physical growth and mental development of children from infancy through adolescence fundamental knowledge is adequately presented and there is emphasis on those aspects of the subject which are of special concern to teachers. For example, stated reasons for adolescents leaving school before graduation are discussed. The book is based on a variety of research reports and other professional publications and these are cited in footnote references. The author is Professor of Education in the University of Georgia.

GARRISON, KARL CLAUDIUS

The psychology of exceptional children. Revised edition. New York. The Ronald Press Company. 1950. 517 p. illus. 21 cm. $4.50 1718

Contents: Part I, Introduction. Our children—their needs and abilities. Fundamental principles of development. Part II, Studying the individual child: The child's physical development. The child's capacities, interests, and achievements. The child's personality. Part III, Mentally retarded children: Characteristics of the mentally retarded. Special disabilities. Curricular provisions for the mentally retarded. Social and personal development of the mentally handicapped. Part IV, Gifted children: Characteristics of the mentally gifted. Psychology of special abilities. School provisions for the gifted. Personal and social development of the gifted. Part V, The physically handicapped child. The problem of defective vision. Children who are hard of hearing. The speech defective child. The crippled child. Children of lowered vitality. Part VI, Emotionally and socially maladjusted children: Children with emotional or adjustive difficulties. Socially maladjusted and delinquent children. Nervous and psychosomatic children. The hygiene of childhood. Appendix. Author index. Subject index.

Note. (3142) A standard work which is used as a text in college courses and also as a guide for teachers, social workers, and parents' groups. Its scope is children whose physical and emotional make-up set them apart in one way or another from the average child. Literature references are included in the form of footnotes and also as selected lists at the ends of chapters. In this revision the purpose and organization of the book are the same as in the first edition, but the incorporation of new case studies and the results of investigations conducted by the author and other workers in the field accounts for more than 100 additional pages.

GESELL, ARNOLD

Infant development: the embryology of early human behavior. New York. Harper & Brothers, 1952. 108 p. illus. 24 cm. $3.50 1719

Contents. Introduction—the concept of growth. Charting the normal growth cycle. The embryology of human behavior. The human action system in evolution. Eyes, hands, and brain. The total action system. The growth process. Individual differences and developmental [illegible]. The diagnosis and supervision of development. A developmental philosophy. Appendices: General references. Collateral readings. Correlated edited films. Illustrations of principles and methods of developmental diagnosis at 28 weeks level of maturity. Index.

Note. The theme of this short book is "that there is a profound continuity in the prenatal and postnatal phases of human growth." It is in effect an outline, brought down to date, of the findings of the extensive researches of Dr. Gesell and his colleagues at the former Clinic of Child Development of Yale University and the currently active Gesell Institute of Child Development. The human child is shown to be a continuously developing organism in [illegible] and precise cycle of physical, mental, and functional growth. A series of outstanding photographs of infant behavior—taken from the film "The embryology of development"—which show distinct points in the growth cycle are included. The book can be read as preparation for viewing the film or independently as an orientation toward the current knowledge of the field.

HORROCKS, JOHN E.

The psychology of adolescence. Boston. Houghton Mifflin Company Inc., 1951. 614

p. illus. 23 cm. (Leonard Carmichael, consulting editor) $4.50. 1720

Contents: Part one, The adolescent period: The nature of adolescence. Part two, The adolescent and his relation to others: The adolescent and his family. Social adjustment. Friendships and personal acceptability. Adolescent groups and group membership. Heterosexual relations. Part three, Development and growth: Intellectual development. Physical growth. Physiological and anatomical development. Strength and motor abilities. Part four, Adolescent activities and interests: Nature and importance of interests and activities. Interests and the media of communication. Vocational interests and aptitudes. Attitudes and ideals. Part five, An overview of behavior: The bases and outcomes of adolescent behavior. The case of Mary Mackey—an example of adolescent behavior. Index of authors. Index of subjects.

Note: A quite complete overview of the psychology of adolescence, strongest perhaps in its discussion of development and growth, and less strong in its discussion of vocational interests and aptitudes. It is well written, readable, well documented, and the selection of source materials has been critically done.

HURLOCK, ELIZABETH BERGNER

Adolescent development. New York McGraw-Hill Book Company, Inc., 1949 566 p. illus. 23 cm. (McGraw Hill publications in psychology Clifford T Morgan consulting editor) $5.50. 1721

Contents: Adolescence the transition age. Puberty changes. Body changes. Emotions in adolescence. Social behavior. Friends and leaders. Social interests. Personal interests. Recreational interests. Religious beliefs and attitudes. Moral concepts and behavior. Sex interests and behavior. Personality. Meaning of maturity. Bibliography. Index.

Note: A book summarizing knowledge concerning adolescent behavior, interests, and attitudes of boys and girls between the ages of 10 and 21 years. It may be used as textbook in the field of adolescent psychology and also may serve to enlighten interested parents, teachers, social workers, and physicians concerning the physical, mental, and emotional development to be expected in the "teen age." The bibliography covers 23 pages, but only 24 references are to literature published since 1945.

HURLOCK ELIZABETH BERGNER

Child development. Second edition. New York McGraw Hill Book Company Inc., 1950 669 p. illus 23 cm. (McGraw Hill publications in psychology Clifford T Morgan, consulting editor) $5.50 1722

Contents: The history of child psychology. Principles of development. Prenatal development. The newborn infant. Physical growth. Motor development. Development of speech. Emotional development. Social development. Play. Development of understanding. Moral development. Some childhood interests. Family relationships. Personality. Bibliography. Index.

Note: (3164) A well-organized and comprehensive study of the physical and psychological growth of the child from conception to puberty. The first edition covered both childhood and adolescent years, but due to the rapid growth of information in these fields this revision has been limited to the childhood years proper. In spite of the elimination of the material on adolescence, the inclusion of new material accounts for almost 100 additional pages. An expanded bibliography covering 33 pages is included.

HURLOCK ELIZABETH BERGNER

Child growth and development. New York McGraw Hill Book Company Inc., 1949 374 p. illus. 21 cm. $4.00 1723

Contents: Part one, How life begins. Preparing for the baby. The newborn baby. Facts about children. Part two, The child's growth: How child grows. Feeding and clothing the child. Physical care of the child. Learning body control. Learning to talk. Emotions and their control. Part three, The child' problems and habits. Mealtime and bedtime problems. The child's day. What to do about bad habits. Discipline, good and bad. Toys for toddlers. Play and playthings. Part four, The child as person. The child's companions. A place of his own. The child and his clothes. Personality building. Getting ready for school. Bibliography. List of visual aids. Index.

Note: Mother of two children and member of the Psychology Department of the University of Pennsylvania, the author has written practical, non-technical guide to the developmental pattern of the child. Problems likely to arise during the first five years of life are emphasized. Parents using the book will be enabled to compare the physical and mental growth of their children with the accepted norms. Suggestions are given for dealing with children who exhibit obvious deviations from the normal pattern. In addition to the general bibliography of both technical and non-technical books, there are supplementary reading lists at the end of each chapter for those who want more detailed information on some particular aspect. Other noteworthy features include large listing of intelligence tests for the pre-school child, test of readiness for school, and list of films which can be used to supplement the book in group instruction.

KENT, GRACE HELEN

Mental tests in clinics for children. New York D Van Nostrand Company Inc. 1950 180 p 24 cm. (Textbooks on psychology, J P Guilford, general editor) $2.45 1724

Contents: Why children are referred to the clinic. The clinical examination. Sources of error in use of tests. The composite scale versus the battery. Language and performance tests, with and without timing. Use of unstandardized tests. The psychological report. Criteria for construction of clinical tests. Serviceable scales and sub-tests. Home manufacture of materials. Appendices. Bibliography. Index.

Note: A book based on extensive clinical experience. The author is critical of the use of the intelligence quotient (IQ) as sole measuring stick and argues for the use of battery of tests that will provide several different and complementary scores. Against the background of this conviction, she describes and evaluates various types of tests. Much practical information on the conducting of examinations is included. There is bibliography of 170 references.

KUHLEN, RAYMOND G

The psychology of adolescent development (under the editorship of Gardner Murphy) New York Harper and Brothers, 1952 675 p. illus. 24 cm. $5.00. 1725

Contents (abridged): Part I, Physical, intellectual, and cultural backgrounds of adolescent behavior: Physical development and health in adolescence. Adolescent growth in mental abilities. The American culture and adolescent personality. Changing behavior in adolescence as revealed in interest patterns. Part II, Areas of adolescent adjustment: Motivation, adjustment, and emotion in adolescence. Social development and adjustment. Adolescent ideology—attitudes, character and morals. Life philosophy. Educational development of adolescents and adjustment to school. The development of vocational plans and work experiences. Home relationships of adolescents and achievement of independence. Part III, The individual adolescent. Name index. Subject index.

Note: Essentially textbook for college undergraduate courses in adolescent psychology this monograph is useful also for reference. The thorough reader will emerge with the core of knowledge necessary for practical understanding of the field and will know how to apply this knowledge to practical situations. Beyond this, the student is provided with bundle for comprehending and evaluating research literature. The author believes that adolescence and its problems should be considered in the perspective of the developmental trends of childhood and of adult life, not as an independent, overly dramatic entity. In its entirety the bibliography which closes each chapter lists over 500 books and journals, including publications of 1950. Charts and tables are used to present concrete data and to summarize information.

MERRY FRIEDA KIEFER AND RALPH VICKERS MERRY

The first two decades of life. A revision and extension of *From infancy to adolescence.* Under the editorship of Gardner Murphy New York Harper and Brothers, 1950 600 p. illus. 22 cm. $4.00 1726

Contents: How we study children and adolescents. How we begin life. How we grow before and after birth. How our body structure and functions develop. How motor abilities develop. How language develops. How intelligent behavior develops. How we learn. How we gain emotional maturity. How we develop socially. How person-

ality develops. Growth of character and religious experience. Interests in reading, radio, and movies. Creative activities. Author index. Subject index.

Note (3171) An introductory presentation designed principally for use as textbook in courses offered in teachers' colleges. The style is more technical and the content more advanced than in books written primarily for parents. Also, the text is heavily documented with references to the literature. The book is thorough revision and expansion of the authors' *From infancy to adolescence* (1940)

MIDCENTURY WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH

Personality in the making. Edited by Helen Leland Witmer and Ruth Kotinsky New York Harper & Brothers, 1952 454 p. 25 cm. $4 50. 1727

Contents: Part I, The development of the healthy personality: The making of healthy personality. The influence of congenital characteristics. The influence of physical limitations. The importance of parent-child relations. Income level and health of personality. The effects of prejudice and discrimination. Religion as an aid to healthy personality development. Part II, Implications for the conduct of social institutions. Some cultural considerations. The family. The church and the synagogue. The school. Leisure-time services. Vocational guidance and employment services. Health services. Social services. Services of law-enforcement agencies. Next steps in research. Members of the staff of the Midcentury White House Conference on Children and Youth. Index.

Note. The conference named in the title of this book was guided and composed of physicians, social workers, educators, psychologists, and members of other professions concerned with the education, guidance, and care of young people. This book is the official report of the conference held in December 1950. It is not written in the condensed technical style that is characteristic of many official reports but is intended for reading as well as for reference. It is both description of the *status quo* and statement of accepted concepts and principles, and is essential reading for anyone interested in this field, particularly as it has been developed and is developing in the United States of America.

MIDCENTURY WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH

Proceedings, report of conference sessions Washington, D C., December 3–7 1950 Edward A. Richards general editor Raleigh, N C. Health Publications Institute Inc., 1951 363 p illus. 24 cm. $4 00 1728

Contents (abridged) Introduction. Conference platform. Selected addresses. What we know about the development of healthy personalities in children, by B Spock. Socio-economic influences upon children's learning, by A. Davis. The impact of culture on personality development in the United States today by M. Mead. Children in the world today by C. P Romulo. Selected technical papers: The dynamics of personality development, by F Alexander. The effect of mobilization and war on children, by L. M. Stolz. Principles and patterns of community planning for and with young people, by H. Alt. Summaries of work group opinions. Summaries of panel opinions. International participation. Program, committees, and staff for the conference.

Note This volume contains selected papers and summaries of the opinions of work groups and panels of national conference that was called to consider how we can develop in children the mental, emotional, and spiritual values essential to individual happiness and to responsible citizenship and what physical, social and economic conditions are deemed necessary to this development. It is valuable not so much for its technical content as for its record of current attitudes such as interest in the interrelationships between the social environment and the personalities developed by children.

MILLARD CECIL VERNON

Child growth and development in the elementary school years. Boston D C. Heath and Company 1951 511 p illus. 23 cm. $4.50. 1729

Contents: Part I, Basic growth concepts: Origin of the organismic viewpoint. Principles of growth and development. Interrelations of growth—an approach to study of the child as whole. Part II, Aspects of development: The physical growth of the child. Aspects of motor growth. The growth of intelligence. Language development. The development of creative ability. Personal-social development. Growth and the organization of learning. Part III, Concomitants of growth and learning: The role of emotion in child development. The development of moral and ethical behavior. The development of personality. Discipline and the growth process. Mental hygiene from the standpoint of growth. Index.

Note. Preliminary to his direction of child development observation center the author gave ten years to study and research with 400 children during which time some 100,000 observations were made and recorded. On the basis of this experience he presents an introductory overall picture of the physical and mental development of the elementary school child. The volume, intended for pre-service and in-service teachers, administrators, and others interested in child development, begins with an exploration of the principles of child development, follows with discussion of certain of its phases, and concludes with several chapters on those aspects of child development which are accompaniments of growth rather than measurable and direct phases of it—emotion, moral and ethical behavior, personality discipline, and mental hygiene from the standpoint of growth. Developmental changes in the child and on the relationship between the school environment and such changes are emphasized.

MYKLEBUST, HELMER R.

Your deaf child, a guide for parents. With a foreword by Hallowell Davis. Springfield, Illinois Charles C Thomas 1950. 133 p. illus. 22 cm. (American lecture series. Publication number 94 A monograph in American lectures in otolaryngology edited by Norton Canfield) $3.00. 1730

Contents. What deafness means to you. Causes and types of deafness. Your attitudes and what they mean. The deaf child and his needs. Learning to care for himself. Learning to communicate. What to expect from your child. Organizations which can help—reading materials—directory of schools. Index.

Note. A practical and reliable book in which the general and particular problems of managing deaf children in the home are discussed specifically and sympathetically. It is useful not only for help on problems directly related to deafness but also for collateral matters such as discipline and toilet training. The author is Director of the Children's Hearing Clinic of Northwestern University.

OLSON WILLARD CLIFFORD

Child development. Boston D C. Heath and Company Inc., 1949 417 p. illus. 23 cm. $4 00. 1731

Contents. Growth and development. Growth periods and educational programs. The expression and nurture of mental growth. Growth in school achievement. The child as whole. The human relations of the classroom. The child in the home and community. The affective life of the child. The teacher in individual and group relationships. Concepts of child development in curriculum and methods. Concepts of child development in the organization and administration of schools. The philosophy of growth. Appendixes: Textbooks and manuals in child development. Finding, abstracting and reviewing services. Instructional films. Manual for the behavior journal. Index.

Note This approach to child development is oriented toward school teachers. It is, however, comprehensive approach to the concepts of child development and to growth point of view concerning the organization and adjustment of behavior. A good deal of attention is given to the modern social point of view in education. Illustrations and graphs are excellent.

PLANT JAMES STUART

The envelope study of the impact of the world upon the child. New York The Commonwealth Fund 1950. 299 p. 23 cm. $3.00. 1732

Contents: Introduction. Security Authority Status [illegible] Cohesion. [illegible] The feeling of difference. Symbolization and reality. [illegible] in the sense of integration in the sense of self-sufficiency. Integration in the sense of cohesion. Physical expression of the sexual urge. The [illegible] values of sexual expression. Temperament. Reactions to [illegible] Emotional development [illegible] problems. Adequacy Intelligence. [illegible] — —) [illegible]—heterosexuality. [illegible] rivalry Personality differences. Some other problems. The search of meaning. Appendix. References. Index.

Note: (3131) This book complements and to some extent supersedes the author's *Personality and the culture pattern*, New York, 1937 Like the earlier work, it is thoughtful analysis of the influences of the social environment upon the development of the individual personality in children, especially adolescents. The author's viewpoint (expressed in his own words) was "normally the personality has the ability to shut out large sectors of its environment and to translate those parts that it takes in into usable or understandable material. It is the part of the personality where this occurs that I call the envelope." He describes how personality is molded but offers no rigid conclusions about how the processes should be altered or changed. The treatment is on professional level and the book is organized and written so as to make it understandable not only to psychiatrists but also to psychologists, social workers, and educated laymen.

REDL FRITZ, AND WILLIAM W WATTENBERG

Mental hygiene in teaching Under the editorship of Willard B Spalding and Ernest R. Hilgard. New York Harcourt, Brace and Company 1951 454 p. 22 cm. $3 75 1733

Contents: Part A, Introduction Food for thought. What it is all about. Part B, Some fundamentals: Behavior mechanisms. Growth. Influences that shape lives. Some personality distortions. Adjustment, maturity and normality Part C, Classroom applications Mental hygiene and school learning. Group life in the classroom. The psychological roles of teachers. Diagnostic thinking in the classroom. Influence techniques Some common dilemmas teachers face. Children who need special help. Working with parents. Teachers' problems. Limitations of mental hygiene in education. Part E, Appendixes: Sources of additional help and information. Meaning of special terms. Index.

Note: Well versed in modern dynamic concepts of personality development, the authors of this book have made distinct contribution to teachers who wish to approach children as individuals and to view the adjustment problems of children as real and significant. There is practically none of the technical terminology of clinical psychology Instead, the book is written in the common language. The cases and situations described are typical of those encountered in public schools. The appendixes contain guide to periodicals and pamphlets on mental hygiene, to audio-visual aids, and glossary of technical terms.

SCHNEIDERS ALEXANDER ALOYSIUS

The psychology of adolescence a factual and interpretive study of the conduct and personality of youth. Milwaukee The Bruce Publishing Company 1951 550 p. 23 cm. $4.00. 1734

Contents (abridged) Part Introduction Basic concepts of adolescent psychology Part II, Physical development during adolescence. Part III, The nature and development of motivational factors. The determinants of human conduct. Pleasure, pain, reward, and punishment. Part IV The dynamics of adolescent conduct: Adolescent needs and desires. Psychosexual development during adolescence. Development of interests and attitudes Development of values, ideals, and principles Part , The nature and development of temperament and character: Emotional development in adolescence. Moral and religious development during adolescence. Part VI, Social development in adolescence—growth in personality Part VII, Sensory and intellectual development during adolescence: Development of the psychophysical functions The development of intelligence Bibliography Glossary Index

Note: A broad and readable account of the psychological development of adolescents, addressed to parents, teachers, and college students. Throughout the book emphasis is given to explanations of why young people behave as they do, rather than to descriptions of typical behavior patterns. The importance of social pressures in the development of personality is given considerable attention, and there are frequent mentions of fundamental studies and experiments in this sphere. Each chapter concludes with selected lists of readings The latter are supplemented with 12 page bibliography

SLAVSON SAMUEL RICHARD

Child psychotherapy New York Columbia University Press, 1952 332 p 24 cm. $4.50 1735

Contents (abridged) Part one, Development: Normal needs in child development. Part two, Psychopathology: Pathogenic factors in childhood. The pathogenesis in interpersonal relations. Clinical approaches to child psychotherapy Part three, Psychotherapy: The dynamics of psychotherapy The psychotherapist in reality and phantasy Psychotherapy and therapeutic guidance of parents. Group psychotherapy with children. Treatment of neurotic nine year-old boy with organic deficiency (a case study) Index.

Note: Discussions of the principles and of the techniques of group treatment of emotionally disturbed and socially maladjusted children under twelve years of age form the main content of this treatise. However it is not limited to descriptions of clinical procedures, nor is the primary emphasis upon them. Instead, the author presents rounded picture of the child's normal psychological needs and of the familial and social influences which thwart these needs and lead to psychological maladjustment. The author is leader in the development of group psychotherapeutic techniques and the book is based on extensive experience with group therapy of children.

STRANG, RUTH

An introduction to child study Third edition. New York The Macmillan Company 1951 705 p. illus. 22 cm. $4 75 1736

Contents (abridged) Part one, The roots of behavior: The baby at birth. *Hereditary influences.* Part two, *Early preschool period*—the first two years: How the baby learns. Child study and parent guidance. Part three, The preschool period—years three, four and five: How preschool children learn. Special problems of the later preschool period. The family's daily routine and the child' diet. Study and guidance of preschool children. Part four, The primary period: Development during years six, seven, and eight. Problems of the primary period *Child study and guidance. Part five, From* the primary period to adolescence Learning in the preadolescent period. Special problems of preadolescents. Part six, The adolescent years. Index of names. Index of subjects.

Note: (3132) An established book which is extensively used as textbook for college courses, guide for study groups composed of parents, and reference manual for individual parents and teachers. It presents an overall survey of the subject with emphasis on the applied aspects Such topics as how children six to eight years old learn are discussed at considerable length. The previous edition appeared in 1938. The present edition represents very extensive revision.

SYMONDS PERCIVAL MALLON

Adolescent fantasy an investigation of the picture-story method of personality study New York Columbia University Press 1949 397 p. illus. 24 cm. $6 00 1737

Contents Introduction. A review of literature on the thematic apperception test The pictures and the data of the study Theme analyses. Inventory of themes in adolescent fantasy Norms on the picture story test. Comparison of fantasy and character. Associations to the stories. Study of quantitative relationships Final selection of pictures, with data on the fantasy value of the pictures. Significance of fantasy in personality *Implications of fantasy for counseling and* psychotherapy Characteristics of adolescent fantasy Case of Jack. Case of Jimmy Summary and conclusions. Appendixes: Sketches of the forty cases. Personality traits of the forty cases as inferred from the stories and as observed in real life. Theme headings. Frequency of themes by picture. Correlation tables. Bibliography on the thematic apperception test. Index.

Note The findings of *systematic study of forty normal students* equally divided as to sex and selected from junior and senior public schools are presented in this book. The main technique in the study was the use of the thematic apperception test, and forty-two original pictures designed especially for the elicitation of adolescent fantasy were used in the test. These pictures are reproduced at the end of the book. The stories as told by the subjects are analyzed in detail according to accepted psychoanalytic concepts; and the author states "The picture of the adolescent which this study presents agrees closely with psychoanalytically oriented analyses of the adolescent years." The thematic apperception test is shown to be valuable research technique in the study of the personality of adolescence.

TEMPLIN MILDRED C

The development of reasoning in children with normal and defective hearing Minneapolis The University of Minnesota Press, 1950. 143 p. illus. 24 cm. (University of Min-

nesota. The Institute of Child Welfare. Monograph series. No. xxiv) $3 00 1738

Contents: Introduction. The experiment. Analysis of reasoning by matched group technique. Comparison of the reasoning of the hearing and defectively hearing subsamples. Intercomparison of the reasoning within the experimental groups. Written language used in explanation of the Deutsche questions. The defective hearing. Summary Bibliography Index.

Note. The report of a study whose purpose is explained thus by the author: "The present study was designed to explore the effect upon reasoning of the restriction of experience by an intrinsic factor and by an extrinsic factor The intrinsic factor selected for this study was the reduction of hearing acuity The extrinsic factor selected was the reduction of the breadth and complexity of the environment through residence in an institution. Tests were made of 850 children in elementary and high school grades five through twelve. These comprised: ( ) 272 day school hearing subjects, whose environment was restricted by neither the extrinsic nor the intrinsic factor; (b) 283 residential hearing subjects, whose environment was restricted only by the extrinsic factor; (c) 108 day school defective hearing subjects, for whom only the intrinsic restricting factor was present; and (d) 177 residential defectively hearing subjects, whose environment was restricted by both the extrinsic and intrinsic factors. The methodology of the study is described and the results are presented for the use of such professionals as educators and psychologists, especially those who are concerned with the training of handicapped children.

THOMPSON GEORGE GREENE

Child psychology growth trends in psychological adjustment. Boston Houghton Mifflin Company Inc. 1952 667 p. illus. 22 cm. $5 50 1739

Contents: Studying the child's behavior and development. The new-born infant. Maturation basic process in behavioral change. Psychological adjustment. some general principles. Sensory and perceptual development. The development of motor abilities. Developmental trends in emotional behavior Language development. The meaning and measurement of intellectual development. Developmental trends in social behavior. Guiding the social development of children. The development of personal and social values. Developmental trends in personality Index.

Note This is a scholarly contribution to the general textbooks in child psychology The average undergraduate with no more than one general psychology course as preparation may find it somewhat difficult going, but more mature students will find it an exceedingly useful reference. The material on social development is particularly good. Graphic and tabular material have been well chosen and particularly well reproduced.

WECHSLER, DAVID

Wechsler intelligence scale for children. New York The Psychological Corporation, 1949 114 p. illus. 23 cm. Paper $2.50 1740

Contents. The rationale of the children's scale. Standardization statistics. General testing considerations. Table for converting scaled scores into IQs Scaled score equivalents for raw scores. Directions for administering the tests Appendices General comprehension—scoring criteria. Similarities—scoring criteria. Vocabulary—scoring criteria. Mazes—error guide. Equivalent test ages for the WISC. Presenting table.

Note The Wechsler Intelligence Scale for Children (WISC) consists of ten tests all of which are ordinarily given to every subject tested. This is the manual for the use of the examiners who administer the tests. As the table of contents indicates there is some background information about the tests but most of the manual is devoted to techniques of administering and scoring the tests in the Scale.

PSYCHOLOGICAL TESTING

BAUMAN MARY KINSEY AND SAMUEL P HAYES

A manual for the psychological examination of the adult blind. A project of the National Psychological Research Council for the Blind. New York The Psychological Corporation, 1951. 58 p. 23 cm. Paper $1.25. 1741

Contents: Why a special manual for testing the blind. Then things we all should know Special considerations in the client's history Tests and testing techniques. Reporting the psychological examination. Bibliography Appendix.

Note. The special problems encountered in administering psychological tests to the blind are considered in this booklet. The chapter on tests and testing techniques contains descriptions and evaluations of a selection of standard tests which have been used or may be used in testing the blind. The book is of interest to graduate psychologists who are concerned with testing of blind persons.

BECK SAMUEL J

Rorschach's test 1. Basic processes. Foreword by James G Miller Second edition. New York Grune & Stratton, 1949 227 p. illus. 24 cm. $4.00. 1742

Contents: Experimental procedure. The whole response: W Detail and rare detail: D and Dd. Scoring problems. The white space: Ds and Dds. The organization activity: Z. Approach and sequence: Ap. Seq. The movement response: M. The color response: C. The light-determined response: FV Y T Diverse determinants. Important ratios. The form response: F+ and F−. The popular response: P Content. Scoring record and summary Bibliography Appendix 1. Table of organization (Z) values in the ten figures. Appendix 2. Synopsis of changes from Dd to D. Appendix 3. Graph of approach expectancy for R to 120. Appendix 4. Numerical designations of most frequently selected D and Dd. Index.

Note: (1930, 1937*) One volume of a series of studies of the Rorschach tests. The evaluation of responses is demonstrated. The responses are cited verbatim and each of them is evaluated or scored in terms of the symbols of Rorschach test language. Scoring only is covered; no interpretations are offered. The first edition was published in 1944. Extensive research carried out at Michael Reese Hospital since the publication of the first edition in 1944 has been used as a basis for revisions made in the work for this edition. Among the more prominent changes are enlargement of the F+ list and the addition of a symbol T for texture-dictated associations.

BENNETT GEORGE K., AND OTHERS

Differential aptitude tests manual. By George K. Bennett, Harold G. Seashore, and Alexander G Wesman. Second edition. New York The Psychological Corporation, 1952 77 p. illus. 28 cm. $1.80. 1743

Contents: An integrated battery of guidance tests. Administration and scoring. Norms and profiles. Validity Reliability Principles of differential measurement. Appendices. Correlations of the DAT with other tests. Development of form B of the Mechanical Reasoning test. Bibliography

Note: The *Differential Aptitude Tests* are a battery of tests developed to provide an integrated, scientific and well standardized procedure for measuring the ability of boys and girls in grades 8 through 12 for purposes of education and vocational guidance. In this manual the eight tests are described, and directions are given for their administration and scoring. A good share of the space is devoted to data on norms, validity reliability etc., of the tests. The manual is addressed primarily to school personnel who will use the *Differential Aptitude Tests* in the testing of students. It is also of interest as an example of a well organized test manual to psychology college students and graduates with professional interests in psychological testing. The first edition was published in 1947 The most important new matter in the new edition bears on the validity of the tests as established by research studies.

BUROS OSCAR KRISEN editor

The third mental measurements yearbook. New Brunswick Rutgers University Press, 1949 1047 p. 27 cm. $12.50. 1744

Contents. Tests and reviews: Achievement batteries. Character and personality English. Fine arts. Foreign languages. Intelligence. Mathematics. Miscellaneous. Reading Science. Social studies. Vocations. Books and reviews. Periodical directory and index. Publishers directory and index. Index of titles. Index of names. Classified index of tests.

Note: The sixth in a series of volumes, begun in 1935, designed to aid workers in the fields of education, personnel administration, and psychology in locating and evaluating tests and books on testing. The aim is to include all commercially available tests published in English between October 1940 and December, 1947. Section one lists 663 tests in the above-indicated fields, accompanied by rather lengthy reviews and appraisals of the tests. A similar arrangement is followed in the second section for 549 books on measurements and related topics. Each section includes extensive bibliographies relating to the test or book under discussion.

CRONBACH LEE JOSEPH

Essentials of psychological testing. Under the editorship of Gardner Murphy New York Harper & Brothers, 1949 475 p. illus. 24 cm. $5.00. 1745

Contents: Part I, Basic concepts: Who uses tests? Purposes and types of tests. Interpreting test scores. How to choose tests. How to give tests. Part II, Tests of ability The Binet scale and its descendants. Mental diagnosis: the Wechsler test. Other tests of general ability Factor analysis: the sorting of abilities. Tests of special abilities. Problems in prediction: prognostic tests. Measures of achievement. Part III, Testing of typical performance: Problems and practices. Self-report techniques—personality Self-report techniques—interests. The use of test results in counseling. Self report techniques—attitudes. Observation of behavior in normal situations. Observation in test situations. Projective techniques. Appendixes: Reviews of studies of testing. Principal test publishers and distributors. Author index. Subject index.

Note: A textbook for college students. The author recognizes that the multiplication of available tests makes it impossible for the student to study them all and consequently concentrates on the basic principles of testing in order that the student may learn to choose tests wisely for particular needs and to be aware of the weaknesses of whatever tests he uses. At the same time he introduces the tests most widely used and most widely cited in the literature of the subject and, by critical analysis of such tests, provides examples of the application of the underlying principles. A selective summary listing of tests is included in many of the chapters, with accompanying critical remarks from qualified reviewers. Suggested readings and references appear at the conclusion of each chapter.

FREEMAN FRANK SAMUEL

Theory and practice of psychological testing. New York Henry Holt and Company 1950 518 p illus. 22 cm. $4 10 1746

Contents: Basic principles—theoretical and clinical. Statistics in psychological testing. Definitions and analyses of intelligence. The Binet scales. Revisions of the Binet-Simon scale. Semi-performance and performance scales. Nonverbal group scales of mental ability Verbal and mixed group scales of mental ability Scales for infants and preschool children. Aptitude tests. Tests of educational achievement. Intelligence tests as clinical instruments. Personality inventories and rating scales. Projective methods. Situational tests. Applications and problems. Index.

Note: Presents a descriptive treatment of the chief varieties of tests currently used for assessing the intelligence, personality and aptitudes of individuals. The book is intended for use as a text by psychology students, social workers, personnel officers, and others employing psychological tests. Emphasis is placed on the purpose, method of application, and interpretation of each test, but material is also included on the principles and theories upon which the tests are based. Although an elementary knowledge of statistical methods is desirable, a chapter on the subject is provided for students who lack this training.

GOODENOUGH FLORENCE LAURA

Mental testing: its history principles and applications. New York Rinehart & Company, Inc., 1949 609 p. illus. 24 cm. $5 00 1747

Contents (abridged) Part I, Historical orientation: The social need for mental diagnosis. The educational need. The early tests, 1887–1911. Later developments. Part II, Principles and methods: The bearing of testing theory upon test interpretation. The analysis and selection of test items. Units of measurement. Age standards and quotients as interpretative measures. Means, medians, and percentiles. Other devices for interpreting test scores. Testing the tests. Analysis of variance. Some questions of mental organization. Part III, Tests and scales. The conduct of an examination, with particular reference to the testing of young or difficult children. The measurement of special talents and deficiencies. The measurement of motor development and motor skill. The measurement of interests and attitudes. The measurement of personal-social characteristics. Projective methods for the study of personality. Tests for vocational guidance. Part IV Applications: Testing in schools and colleges. Testing in clinical practice. The use of tests in industry. Testing the Armed Forces. The use of tests in the study of group differences. Glossary Bibliography Author index. Subject index.

Note: A general survey of the development and current status of mental testing and mental tests. Particular attention is paid to the history of testing, the currently understood basic principles of testing, and to the chief types of tests. The book is useful to persons who want an inclusive and fairly detailed view of the subject, especially educators and others who are concerned with the selection and administration of tests.

GREENE EDWARD BARROWS

Measurements of human behavior Revised edition. New York The Odyssey Press, 1952 790 p. illus. 21 cm. $4 75 1748

Contents: Part one, Achievement and aptitude. Introduction. Types of appraisals. Characteristics of a good instrument. Construction of test items. Tests of early childhood. Individual tests of ability Measures of educational achievement. Group tests of ability Mechanical and motor tests. Tests of special aptitudes. Military development of tests and ratings. Part two, Elementary statistics. The interpretation of scores. Measures of relationship. Factorial analyses. Part three, Dynamic patterns: Personality—dynamic theory and structure. Types of situation. Drawing, painting, and handwriting. *Stories and fantasies. Play and drama. Interests. Appraisals of attitudes.* Personality inventories. Rorschach techniques. Observations of behavior. Appendixes: Publishers of tests and inventories. Classified list of tests and inventories. Index of authors. Subject index.

Note: (1952) An established textbook and reference manual. It provides at the same time a comprehensive view of behavioral measurement techniques and descriptive analyses of a wide variety of tests. The classified list of tests and inventories included as an appendix runs to 77 pages. The first edition was published in 1941. In the present edition the work has been rearranged, partially rewritten and widely revised so as to include material that has become available since 1941. Two completely new chapters deal with military contributions (the results of World War II experience) and personality theories. The useful lists in the appendixes also are new additions. The extensive bibliography which serves also as the author index, has been revised.

GULLIKSEN, HAROLD

Theory of mental tests. New York John Wiley & Sons, Inc. 1950 486 p. illus. 23 cm. (Wiley publications in psychology Herbert S. Langfeld, advisory editor) $6.00 1749

Contents (abridged) Basic equations derived from a definition of random error Fundamental equations derived from a definition of true score. Errors of measurement, substitution, and prediction. Effect of test length on mean and variance. Effect of test length on reliability Effect of test length on validity Effect of group heterogeneity on test reliability. Correction for univariate selection in the three-variable case. Correction for multivariate selection in the general case. A statistical criterion for parallel tests. Experimental methods of obtaining test reliability Reliability estimated from item homogeneity Speed versus power tests. Methods of scoring tests. Problems of weighting and differential prediction. Item analyses. Bibliography Appendixes. Author index. Topic index.

Note: The subject of this book is the mathematical theory and statistical methods used in interpreting psychological results. It is a well-organized advanced textbook which can also serve as a reference book. The author who is Research Adviser for the Educational Testing Service at Princeton and Professor of Psychology at Princeton University points out that, although the book is primarily for those working in test development, the techniques are applicable in fields other than test construction, such as measurement of attitudes or opinions, appraisal of personality and clinical diagnosis. Illustrative computing diagrams are given for those formulas simple enough to be changed into a linear form. The book brings together the technical developments in test theory of the first half of the twentieth century and in its introduction goes back to the beginnings in the 1890' There is a comprehensive bibliography

HARRIS, ROBERT E., AND OTHERS

Recent advances in diagnostic psychological testing, a critical summary Springfield,

Ill. Charles C Thomas, 1950 120 p. 22 cm. (American lecture series. Publication number 81 A monograph in American lectures in psychology Edited by Molly R. Harrower) $2 75 1750

Contents: Contemporary trends in psychodiagnosis, by J G. Miller Psychodiagnostic testing in psychiatry and psychosomatic medicine, by R. E. Harris. Neuropsychology, by H. L. Teuber Occipital lobes. The temporal lobes. The parietal lobes. The frontal lobes. Interpretations. References. The application of diagnostic psychological methods to counseling and psychotherapy by G. A. Muench: Treatability of patients. Success of therapy Process of therapy Comparative evaluation of therapeutic techniques. Tests as therapeutic agents. Development of new types of diagnostic devices. The personality of the therapist. References. Recent developments in diagnostic testing of children, by L. J Stone: Basic concepts of development and personality Diagnostic advances in nonprojective testing methods. Diagnostic advances in projective techniques. Conclusions. References. Test construction and methodology by J Zubin.

Note. This publication contains concise reviews of the recent applications of diagnostic psychological methods in the fields of counseling, psychotherapy psychiatry psychosomatic medicine, clinical neurology, and child development. Advances in mental test construction and interpretation are described and discussed, and the direction of future research is considered. The papers were originally read at the Symposium on Recent Advances in Diagnostic Techniques at the 1948 Boston meeting of the American Psychological Association.

HARROWER, MARY RACHEL, AND M E STEINER

Large scale Rorschach techniques Second edition. A manual for the group Rorschach and multiple choice tests With contributions by Floyd O Due, Beatrice A. Wright, and M Erik Wright. Springfield, Illinois Charles C Thomas 1951 353 p illus 24 cm. (American lecture series Publication number 82 A monograph in American lectures in psychology, edited by M R. Harrower) $9 00 1751

Contents (abridged) The group Rorschach—development, administration, scoring. Analysis of group Rorschach material in terms of location, determinants, and content. A multiple choice test for screening purposes. Recent developments in group techniques for the Rorschach test. An analysis of content. A statistical study of "card-pull. Index.

Note. A pioneer work in the administration of the Rorschach ink-blot test to groups of persons rather than to individuals. It was based originally upon an experimental investigation of the group technique, in which 340 persons took part and gave total of 8,526 responses. These responses were analyzed from various standpoints and the results are presented in Part Two of the book. The essential technique evolved is the projection of Rorschach blots on screen at the front of the auditorium while the persons being tested individually record their responses in specially prepared booklets. In variation of this technique the blots are printed in the booklet itself and projector is unnecessary The book is addressed to professional psychologists, and familiarity with the basic Rorschach test is assumed in the treatment The first edition was published in 1944. Experience acquired since that time in group techniques has been incorporated in this extensively revised edition

HATHAWAY STARKE ROSECRANS AND PAUL E MEEHL

An atlas for the clinical use of the MMPI. Minneapolis The University of Minnesota Press 1951 799 p. 27 cm. $9 75 1752

Contents (abridged) The making of the atlas Arrangement and description of the data. The use of the atlas and its indexes. Bibliography Case histories Low point index Contributors' index Diagnosis index Mf index L index F index K index.

Note. A reference book for clinical psychologists who use the Minnesota Multiphasic Personality Inventory Most of the space is devoted to 968 case histories, which are summaries of actual records of patients, most of them were patients of the Psychiatric Unit of the University of Minnesota Hospitals The histories are coded according to the MMPI profiles. They were selected to provide representative cross section of clinical experience with the MMPI.

LINDQUIST, EVERET FRANKLIN, editor

Educational measurement. Washington, D C American Council on Education, 1951. 819 p illus. 25 cm. $6 00. 1753

Contents. Foreword, by G. F Zook. Part one. The functions of measurement in education The functions of measurement in the facilitation of learning, by W W Cook. The functions of measurement in improving instruction, by R. W Tyler. The functions of measurement in counseling, by J G. Darley and G. V Anderson. The functions of measurement in educational placement, by H. Chauncey and N Frederiksen. Part two. The construction of achievement tests: Preliminary considerations in objective test construction, by E. F Lindquist. Planning the objective test, by K. W Vaughn. Writing the test item, by R. L. Ebel. The experimental tryout of test materials, by H. S. Conrad. Item selection techniques, by F B. Davis. Administering and scoring the objective test, by A. E. Traxler. Reproducing the test, by G. Spaulding. Performance tests of educational achievement, by D. G. Ryans and N. Frederiksen. The essay type of examination, by J M. Stalnaker Part three, Measurement theory: The fundamental nature of measurement, by I. Lorge. Reliability by R. L. Thorndike. Validity by E. E. Cureton. Units, scores, and norms, by J C. Flanagan. Batteries and profiles, by C. L. Mosier. Index.

Note. A reference work and textbook sponsored by the American Council on Education's Educational Advisory Committee, Measurement Book Project. The various chapters were written especially for the volume by recognized authorities on educational testing. The treatment is on the graduate level, and the book is of interest to graduate students in the field of educational testing and to psychologists, educators and others with professional interests in the subject. Extensive lists of references to the literature are included.

MICHEELS, WILLIAM JORDAN AND M. RAY KARNES

Measuring educational achievement. New York McGraw Hill Book Company Inc., 1950 496 p illus. 24 cm. (McGraw Hill series in education, Harold Benjamin, consulting editor) $5 50 1754

Contents: An introduction to measurement. Kinds and types of evaluating instruments. Purposes of evaluation. What makes good test. General principles of test construction. Multiple-choice items. True-false items. Matching items. Recall items. Modified, adapted, and combined items. Object tests. Manipulative-performance tests. Observation and evaluation. Evaluating major projects. Interpreting test data and assigning marks. Analyzing and improving tests. Improving your instruction—a challenge. Index.

Note General aspects of the use of tests in measuring educational achievements are discussed in the first three chapters of this book for professional teachers. The remainder is devoted to the principles and techniques of test construction. The purpose is to aid teachers in constructing tests and using them. Many of the examples are of tests suitable for use in connection with vocational education. However the general principles stated are generally applicable to other than vocational tests. The authors are members of the faculty of the Industrial Education Department of the University of Minnesota.

MURSELL JAMES LOCKWOOD

Psychological testing. Second edition. New York Longmans, Green & Co., 1949 488 p. 21 cm. $4.50 1755

Contents The general characteristics of mental tests. Psychological tests as instruments of measurement. The concept of general intelligence. Scales for the measurement of intelligence. Group tests of intelligence. Aptitude testing. Tests of personality interest, attitude and character. Applications of mental tests and their implications for testing. Wider psychological issues in mental testing. The evaluation and improvement of mental testing. Bibliography. References in the text other than to tests. Tests discussed in the text. Typical index. Index of references appearing in the text.

Note (1517*) The history of psychological testing, the basic theories, and the current status are covered in this work. As one of the important features, tests currently in use or of interest are described and critically evaluated. The first edition was published in 1947. Important additions and revisions were made in preparing the second edition. These include the incorporation at appropriate points of the results of approximately 180 research studies and the description and evaluation of twelve additional tests. The book is addressed primarily to advanced students of psychology. It is useful also as reference book to graduate psychologists, educators, and

others who are interested in psychological testing in general or in specific tests.

PASCAL, GERALD R., AND BARBARA J SUTTELL

The Bender-Gestalt test quantification and validity for adults. Foreword by David G Wright. New York Grune & Stratton 1951 274 p. illus. 26 cm. $6.50 1756

Contents: Part I, Quantification Introduction. Administration and scoring. Reliability Test standardization. Test validity Part II, Clinical use of the Bender-Gestalt test Introduction. The records of children and those with cortical deficit. The Bender-Gestalt test and psychogenic disorders. Appendix. Scoring manual. Index.

Note: In this book critical examination of techniques in the administration of the Bender-Gestalt test to persons suffering from mental or nervous disease and of the validity of test results is combined with practical manual on the clinical use of this test and the scoring of results. One of the conclusions of the authors is that "clinical judgment must be added to the quantitative score. However, more than half of the space in the book is occupied by the scoring manual and the atlas of scored records. The authors are associated with the Western Psychiatric Institute and Clinic. There is three-page list of references.

ROSENZWEIG SAUL

Psychodiagnosis an introduction to tests in the clinical practice of psychodynamics. With the collaboration of Kate Levine Logan. New York. Grune & Stratton, 1949 380 p. illus. 22 cm. $5.00 1757

Contents: Part I, Introduction: Clinical psychology as psychodiagnostic art. Part II, The range of available instruments: Scope. Tests of general intelligence. Measures of intellectual deviation. Vocational aptitude and interest tests. Personality inventories. Projective methods. Part III, The process of psychodiagnostic integration: The picture of the individual. Young woman with anxieties concerning adult status. A child with problems of post-encephalitic origin. An adolescent with episodes of morbid excitement. Part IV A variety of applications: The province of clinical practice. Psychotic reaction to military service. Psychotic overtones. Evaluation of limited intellectual capacity Defect of function from neurological damage. Maladjustment in later maturity Somatic complaint as an expression of personality Amnesia as pattern of reaction. Homicide on an unconscious basis. Part The future: Psychodiagnosis as science. Bibliography Index.

Note: This book attempts to integrate the objective tests of cognitive function and of personality with projective devices. By use of case materials in which several tests are compared and related to one another the author demonstrates the clinical use of personality evaluation in obtaining total picture of the individual. Primarily for graduate students and professional psychologists.

SHNEIDMAN EDWIN S

Thematic test analysis. With the collaboration of Walther Joel and Kenneth B Little. Foreword by Henry A. Murray New York Grune & Stratton, 1951 320 p illus. 26 cm. $8.75 1758

Contents (abridged) Introduction. Part I, Thematic test data: Thematic apperception test. Part II, Techniques of thematic test analysis, by Magda Arnold, Betty Aron, Leopold Bellak, Leonard Eron, Reuben Fine, A. Arthur Hartman, Robert R. Holt, Walther Joel, David Kaplan, Seymour Klebanoff, Sheldon Korchin, Jean L Logan, Julian B Rotter, Shirley Jones, Helen D. Sargent, Percival M. Symonds, and Ralph K. White. Part III, Additional test data: Rorschach test, interpreted by Bruno Klopfer. Wechsler-Bellevue scale, interpreted by Helen Kitzinger. Minnesota multiphasic personality inventory interpreted by Harry Gough. Draw person, interpreted by Karen Machover. Bender-Gestalt drawings, interpreted by Max L. Hutt. Part IV, Behavioral data: Psychiatric case history abstract (V.A. Neuropsychiatric Hospital). Course in neuropsychiatric hospital. Psychiatric follow-up interview Part Synthesis and summary. Bibliography Index.

Note: This unusual book is built around the detailed interpretations by individual psychologists of thematic apperception test (TAT) and complementary make picture story test (MAPS) administered to one mentally disturbed person who was unknown to the contributing psychologists. The various analyses of these two tests are supplemented by single interpretations of the responses to other tests by the same patient, by an abstract of the actual case history, and by summaries by the book's authors. The value of the book lies in its illustrations and discussions of the analytical methods used on the same test responses by various graduate psychologists.

SNYDER, FREDERIC WINKLER, AND N H. PRONKO

Vision with spatial inversion. Wichita, Kan. University of Wichita Press, 1952 144 p. illus. 21 cm. $2.50 1759

Contents: Studies in perception. The problem and general plan of the present study The card-sorting task. The Minnesota rate of manipulation test. The Purdue pegboard test. The mirror-tracing task. Observations on extra-experimental activities. Theoretical discussion and summary Bibliography Appendix: Experimental diary

Note: Reported in this book are the results of an experiment planned to obtain answers to the following questions: What occurs in perception when the visual field is inverted? What is the influence of past-experience on performance during disorientation and following removal of the inverting lenses?" During considerable part of the experiment the field of vision of the subject was both inverted and considerably restricted. Restriction and inversion of the visual field were accomplished by system of lenses set into pair of tubes so as to constitute binocular unit-power telescope. The effects of the disruption of established visuo-motor habits were studied by various tests of learning, some of which are named in the chapter titles. The diary printed in the appendix was kept by the subject himself and states the effects as they appeared to him. In the first chapter of the book previous studies which resemble the purpose and methodology of this study are discussed.

SUPER, DONALD EDWIN

Appraising vocational fitness by means of psychological tests. New York Harper & Brothers 1949 727 p. 24 cm. $6.50 1760

Contents (abridged) Testing and diagnosis in vocational guidance. Testing and prediction in vocational selection. Methods of test construction, standardization, and validation. The nature of aptitudes and aptitude tests. Test administration and scoring. Intelligence. Proficiency Clerical aptitude—perceptual speed. Manual dexterities. Mechanical aptitude. Spatial visualization. Aesthetic judgment and artistic ability. Musical talents. Custom-built batteries for specific occupations. Standard batteries with norms for specific occupations. Measures of interests. Personality attitudes, and temperament. Appraising individual vocational promise. Using test results in counseling. Preparing reports of test results. Illustrative cases—data and counseling. Appendix: Statistical concepts. Prediction and probability Test publishers and scoring services. Bibliography Index.

Note: A comprehensive treatise in which the theory of the use of tests in vocational counseling, the principles of test construction, techniques in test administration and scoring, and other general aspects are covered along with descriptions of individual tests. One of the most useful features is the evaluating of particular tests in the light of accumulated experience with them. References to the original publication of the research studies on which the evaluations are based are carefully given. The book is addressed to persons with professional interests in the use of tests in vocational aptitude measuring and vocational counseling Case histories illustrating the application and use of particular tests are included. The bibliography contains 953 references to books and periodicals.

TRAVERS ROBERT MORRIS WILLIAM

How to make achievement tests. New York The Odyssey Press, 1950 180 p. illus. 21 cm. $2.25 1761

Contents (abridged) Introduction Measurement and evaluation. The expanding meaning of achievement. Systematic versus unsystematic evaluation procedures. Inadequacies in the statement of educational goals. Steps in planning evaluation instruments: Stating the educational goals. Assigning weights to the goals. The selection of measuring techniques. Objective-type test questions: Origin of the objective test. The completion item. The true-false item. Rules for constructing multiple-choice test questions: The control of the difficulty of test questions. The assembly administration, and scoring of the test. The significance of test scores Some considerations in developing grading system. The validity of achievement

tests. The reliability of teacher-made tests. Appendix: Objective methods of scoring free-answer examinations.

Note: A brief and informative guide for teachers. It tells what objective achievement tests can measure, what they cannot be expected to measure, and what are the best methods of constructing such examinations. Also it provides teachers with techniques for defining educational goals in terms which make the extent to which they are achieved measurable function. However the author emphasizes that many of the most important outcomes of education are not subject to measurement by the objective examination.

APPLIED PSYCHOLOGY

BERRIEN, FREDERICK KENNETH

Practical psychology Revised edition. New York The Macmillan Company, 1952 640 p illus. 22 cm. $5 00 1762

Contents. Part 1 Psychology applied to problems of adjustment: Study efficiency Principles of mental health. Mental health and guidance. Treatment of maladjustments. Adjustments in later life. Part 2, Psychology applied to industry: Employment psychology. Training in industry and business. Efficiency in production. Morale and rewards for work. Industrial and highway accidents. Part 3, Psychology applied to consumers and advertising: Consumer and advertising research. Advertising. Part 4, Psychology applied to crime. Factors in criminal behavior Testimony and the courtroom. Detecting deception. Treatment of offenders. Part 5 Psychology applied to personal problems: Vocational guidance. Effective speaking and writing. Appendix Simple statistics. Name index. Subject index.

Note: (3217) A basic text designed for use in introductory college courses. However the inclusive scope and simple style make it useful also to persons out of college who have practical or professional interests in the subject. Literature references are given in the form of footnotes. The first edition appeared in 1944. This edition represents substantial revision and enlargement. The author is member of the staff of the Institute for Research in Human Relations.

BLUM, MILTON L

Industrial psychology and its social foundations. Under the editorship of Gardner Murphy New York Harper & Brothers 1949 518 p. 22 cm. $4 50 1763

Contents (abridged) The Hawthorne studies. Measuring attitudes in business and industry Job satisfaction. Industrial morale. Incentives. Job analysis. Job training Time and motion studies. Fatigue and related phenomena. Work environment. Accidents. Leadership. Industrial warfare. Unemployment. Psychological testing in industry Consumer research. Advertising. Selling. Test appendix. Company and institution index Name index. Subject index.

Note. Primarily college textbook in which is presented an introductory but fairly inclusive survey of applied psychology in the field of labor-management relations in democratic society. The author has drawn rather heavily upon the results of the "Hawthorne studies" conducted from 1927 to 1939 at the Hawthorne Works of the Western Electric Company but he has included material from recent literature also. Programs and experiences of particular companies and institutions are specifically described. In such chapters as that on consumer research he shows applications of psychology to industrial problems other than labor-management relations. Besides its use by students, the book is suitable for industrialists and union executives in need of reliable survey and guide to the more important literature.

BLUM MILTON L AND BENJAMIN BALINSKY

Counseling and psychology vocational psychology and its relation to educational and personal counseling New York Prentice-Hall, Inc. 1951 586 p illus 22 cm. $7 00 1764

Contents. Introduction. Pseudo-scientific guidance. Types of counseling centers. The counseling interview-general. The counseling interview-specific. Principles of vocational testing. Types of vocational tests. The guidance use of intelligence, aptitude, and achievement tests. The guidance use of interest and personality tests. Clinical psychology in relation to vocational counseling. Integrating tests and counseling interviews. Statistics in test interpretation. The concept of interest in relation to counseling. Occupational information. The relation of occupational information to vocational psychology. The counselor. Evaluation of guidance. Employee counseling. Relation of vocational guidance to vocational selection. Index of names. Index of subjects.

Note. The contributions of psychology to the body of knowledge known as vocational counseling is covered in this book. It is useful not only as college textbook but also as home reading for nonpsychologists such as teachers and social workers who are interested in and perform counseling duties. Selective bibliographies appear at the ends of the chapters.

CHAPANIS ALPHONSE, AND OTHERS

Applied experimental psychology human factors in engineering design. By Alphonse Chapanis, Wendell R. Garner and Clifford T Morgan. New York John Wiley & Sons, Inc., 1949 434 p. illus. 24 cm. (Wiley publications in psychology, Herbert S Langfeld, advisory editor) $5 50 1765

Contents. Introduction. A little statistics. The use of statistics. How we see. Instrument dials and legibility Visual displays. How we hear. Speech. Visual signaling systems. How we make movements. Controls for human use. The arrangement of work. Working and resting. The working environment. Index of names. Subject index.

Note. Here is an invaluable work for engineers who design machinery plan production operations, or are concerned with safety programs. Because considerable part of it is derived from investigations and experiments in the control of airplanes, it is of special interest to aeronautical engineers. Another considerable portion of it has direct application to personnel management in factories. A wide range of results of psychological investigations into such matters as the best design for dials, the legibility of type and symbols, the relations between the length of work periods and fatigue have been organized and interpreted. Source articles are carefully cited. Although technical terminology is by no means avoided, the book is outstanding for its readability.

CURRENT TRENDS PSYCHOLOGY IN THE WORLD EMERGENCY By John C. Flanagan and others. Pittsburgh University of Pittsburgh Press, 1952 198 p. 22 cm. $4.00. 1766

Contents. Psychology in the world emergency by J. C. Flanagan. Problems in the Research in military leadership, by F H. Sanford. Problems in the administration and utilization of contract research, by J. W. [illegible]. The uses and limitations of mathematical models, game theory, and systems analysis in planning and problem solution, by J. L. Kennedy Military requirements for the systematic study of psychological variables, by A. W. Melton. Psychological warfare, strategic intelligence, and overseas research in the world emergency, by F W Williams. Matching personnel and jobs, by D. E. Super. Organization and opportunities in service programs of psychological research, by G. Finch.

Note. A collection of eight lectures delivered at the University of Pittsburgh in February 1952. Described in the lectures are research projects and programs of application of psychology to such national problems as the selection of military leaders, the planning of military strategy and the conduct of psychological warfare. Most of the lectures are accompanied by bibliographies.

CURRENT TRENDS IN INDUSTRIAL PSYCHOLOGY By Wayne Dennis and others. Pittsburgh. University of Pittsburgh Press, 1949 198 p. 22 cm. (Current trends in psychology series, University of Pittsburgh Press) $4.00. 1767

Contents: The background of industrial psychology, by W. Dennis. Job requirements, by [illegible]. Organization structure, by C. L. Shartle. Training in [illegible], by G. L. Cissey. Personnel selection, by J. C. Flanagan. Personnel selection, by [illegible]. Employer-management relations, by [illegible] industry by W McGehee. Morale and motivation in industry by D. Katz. Industrial [illegible] Baxter. Morale and motivation in industry by H. C. Taylor psychology and the community by H. C. Taylor.

Note. A collection of papers presented at symposium held at the University of Pittsburgh in February 1949. As indicated by the title, the general topic for discussion is the part which psychology and psychologists are playing and should play in the industrial field. The authors are leaders in their fields, and include the head of the Psychology Department, University of Pittsburgh, and the director of the W. E. Upjohn Institute for Community Research.

FRYER, DOUGLAS HENRY AND EDWIN R. HENRY editors

Handbook of applied psychology Contributors Theodora M. Abel (and others) New York Rinehart & Company Inc., 1950 Two vol. 842 p. illus. 26 cm. $15.00 1768

Contents (abridged) Part one: Group living. Individual efficiency. The individual adjusting to his environment. Techniques of personnel psychology. Fields of personnel psychology selection and training. Industrial psychology. Transportation. Business psychology. Part two: Educational psychology—techniques of educational adjustment. Fields of educational psychology. Clinical psychology. Fields of clinical psychology. Penology. Consulting psychology. The professions—contributions of applied psychology. The arts—contributions of applied psychology. Administration of psychological services. The professional psychologist. A selected and classified bibliography in applied psychology. Index of contributors. Subject index.

Note: A work composed of 115 papers especially written for it by outstanding American psychologists. It was prepared under the auspices of the American Association for Applied Psychology. The papers are signed with the names of the contributors. Each one is a concise statement of the aspect of applied psychology named in its title and concludes with a selected bibliography. The main bibliography although a selected one, also runs to 30 closely printed pages.

GRAY JOHN STANLEY

Psychology in industry New York Mc Graw Hill Book Company Inc. 1952 401 p illus. 24 cm. (McGraw Hill publications in psychology Clifford T Morgan consulting editor) $5.00 1769

Contents: Introduction—Basic concepts in human engineering. Work analysis. Worker analysis. Job training. Methods of work. Wages and merit rating. Wages and job evaluation. Nutrition and rest. Safety. Monotony and boredom. Lighting and ventilation. Age of workers, by K. Gordon. The worker's morale, by K. Gordon. Employee adjustment, by K. Gordon. Appendix. Name index. Subject index.

Note: The inclusion of a chapter on nutrition and rest is indicative of the scope of this practical book. The author states [illegible] any factor which affects the production efforts of workmen is appropriately classified as industrial psychology [illegible] The level of treatment is introductory but the reader needs a basic knowledge of psychology and also some acquaintance with industry. Although organized so that it may be used as a college text, the book is equally suitable as a practical introduction to the field for men already employed in personnel work and time study in industry. Literature on which statements in the text are based is cited in footnotes.

GRAY JOHN STANLEY editor

Psychology in use a textbook in applied psychology Second edition. New York American Book Company 1951 550 p. 23 cm. (American psychology series Henry E Garrett, general editor) $5.00 1770

Contents: Principles of psychology available for use, by K. C. Gordon and M. Kogler. Psychology in determining vocational aptitudes, by K. C. Gordon. Psychology in home life, by A. S. Jensen. Psychology in education, by J. R. Stroud. Psychology in industry by E. E. Ghiselli. Psychology in business, by H. W. Hepner. Psychology in law and in criminology by C. A. Whitmer and G. L. Gierkel. Psychology in warfare, by T. W. Harrell. Psychology in clinical practice, by C. R. Rogers and M. L. Blatz. Psychology in medicine, by T. Hunt. The psychology of influencing other people, by R. Kagner. Psychology in social reform, by G. W. Hartmann. Author index. Subject index.

Note. (1951) A college textbook which affords a view of the main fields of applied psychology. The authors of the various chapters are prominent contemporary psychologists. Generally speaking, each author outlines applications of psychology in his field, describes particular examples, and refers to related professional literature. In comparison to the first edition published in 1941 revisions appear in most of the chapters, but few of the changes are drastic. The chapter on psychology in warfare is a new addition.

HARRELL, THOMAS WILLARD

Industrial psychology New York Rinehart & Company, Inc., 1950 462 p 23 cm. $4.50. 1771

Contents (abridged) Occupational information. Individual differences. Individual differences and their evaluation. Selection by interview and application blank. Personnel tests. Human engineering. Improving work methods. Training. Fatigue and conditions of work. Accident prevention. Human relations: Motivation. Attitudes and job satisfaction. Mental hygiene and personnel counseling. Psychological aspects of labor relations. Supervision. Name index. Subject index.

Note. An introductory but substantial text on the contributions that psychology can make in industry "to analyze the problems of labor management cooperation and to develop techniques which will facilitate such cooperation." The author firmly believes that psychology has an important place in developing scientific methods for the study of human behavior in industry. However he does not disguise the fact that industrial psychology is not yet a fully developed science with universally accepted principles and methods. Many case studies are used to illustrate methods and indicate results. Extensive bibliographies follow the several chapters. The author is Associate Professor of Psychology in the University of Illinois.

LAIRD, DONALD ANDERSON AND ELEANOR C. LAIRD

Practical business psychology New York The Gregg Publishing Company 1951 551 p. illus. 23 cm. $6.00 1772

Contents (abridged) Part I, A general view of how psychology is used. Part II, Personal efficiency: Ability to concentrate. More efficient reading and seeing. Making memory more efficient. Efficient learning and training. Planning and organizing work. Matching jobs and people. Part III, Human relations and morale. The day of modern human relations. Motivation for morale. Morale from self esteem. Hostility or friendliness? Part IV Personality and emotional health: "Nervous tension" and psychosomatics. Emotional maturity in business. How to conduct a personality interview. Part [illegible] Personal leadership and group co-operation. The development of personal leadership. The strategies of impelling leadership. Imitation, suggestibility and role playing in leadership. Group cooperation in business. Understanding group conflicts. Index.

Note: Before writing this book a survey of business education and industrial training directors was made by the authors to establish what the book should contain and how the contents should be presented. The result is that practical business methods are emphasized, while psychological research methods and laboratory achievements are treated only briefly. A brief statement, "To get the most from this book [illegible] presents helpful plans for students to follow in their chapter-by-chapter study of the volume. The authors have assumed that readers have not taken courses in introductory psychology but that they have some acquaintance with business methods and procedures.

MAIER, NORMAN RAYMOND FREDERICK

Principles of human relations applications to management. New York John Wiley & Sons, Inc. 1952 474 p illus. 24 cm. $6.00. 1773

Contents Introduction. A human relations training program. Discussion methods. Role playing. Role playing in large groups. Reactions to human relations training. Group-decision procedure. Democratic supervision in action—case studies. The quality of group decisions as influenced by the discussion leader. Transcriptions of two problem-solving conferences. The supervisor's dealings with individuals. Nondirective counseling. Bibliography. Index.

Note: Although this is essentially a book on the application of psychology to common management problems in industry psychological principles are subordinate to descriptions and analyses of practical techniques. The main theme of the book is the importance of the principle of participation on the part of both management and employees in arriving at decisions that affect personnel relations. Discussion procedures in which employees with grievances participate are described in detail, and are pointed up with full accounts of actual cases. There are 80 pages of case studies and some scores of pages of transcriptions of interviews and conferences. The new techniques suggested have been tested in industry by the author, who is Professor of Psychology in the University of Michigan.

NATIONAL RESEARCH COUNCIL COMMITTEE ON UNDERSEA WARFARE. PANEL ON PSYCHOLOGY AND PHYSIOLOGY

A survey report on human factors in undersea warfare. Washington, D C. The National Research Council Committee on Undersea Warfare, 1949 541 p illus. 26 cm. 1774

Contents: Part I, General visual problems: How we see—a summary of basic principles, by A. Chapanis. The night lookout, by C. H. Wedell and L. A. Riggs. The design and use of optical instruments, by L. A. Riggs. Printed materials, maps, and charts, by M. M. Crook. The design and use of instruments, by W. E. Kappauf. Visibility on radar scopes, by S. B. Williams. Visual display of complex information, by J. W. Gebhard. Part II, Design and arrangement of operating equipment. The design of controls, by D. R. Craig and D. G. Ellson. Human factors in panel design, by E. Rubin. Arrangement of equipment, by R. C. Channell and others. Part III, Auditory problems: Auditory signals, by W. R. Garner. Auditory discrimination in sonar operation, by W. D. Neff and W. R. Thurlow. Part IV, Communication. Voice communication—personnel and phraseology, by M. H. Abrams. Voice communications—effects of masking and distortion, by G. A. Miller. Visual communication, by W. S. Verplanck. Part V, Habitability. A. Physiological factors: Temperature and humidity in relation to the thermal interchange between the human body and the environment, by L. P. Herrington and J. D. Hardy with foreword on the habitability of submarines—a review of the physiological problems, by E. F. DuBois. Diet, by J. Brozek and O. Mickelsen. The sleep-wakefulness cycle of submarine personnel, by N. Kleitman. Part VI, Habitability. B. Psychological factors: Relation of noise to the habitability of submarines, by F. K. Berrien. Lighting and color by M. A. Tinker. Motion sickness—its psychophysiological aspects, by J. E. Barron. Motion sickness—physical considerations regarding its etiology, by M. F. Morales. Part VII, Emotional stability and adjustment. Psychophysiology of stress, by C. W. Darrow and C. E. Henry. Psychological causes and results of stress, by E. A. Haggard. Morale and leadership, by R. L. French. Part VIII, Selection and training. Selection and training, by L. J. Cronbach. Part IX, Personnel resources: Personnel resources for research in applied experimental psychology, by J. L. Kennedy and R. C. Benny. Name index. Subject index.

Note: A collection of original papers written by specialists in response to a request to provide "first, a concise, but comprehensive, account of the present status of basic and applied research" and second "to formulate recommendations for future research." The papers are accompanied by bibliographies. Three of the papers listed in the above table of contents are not included in the volume itself but are available only from the Chief of Naval Research of the Navy and are loaned only to persons authorized to receive classified documents.

THORNDIKE, ROBERT LADD

Personnel selection, test and measurement techniques. New York John Wiley & Sons, Inc. 1949 358 p 22 cm. $4 50 1775

Contents: Introduction. Job analysis. Test selection and invention. The estimation of reliability. The estimation of test validity—criteria of proficiency. The estimation of test validity—statistics of validity. Combining tests into a battery. The analysis and selection of test items. The administration of a testing program. Administrative problems in using the results of an aptitude testing program. The personnel selection program and the public. Appendixes. Index.

Note: Considerable original work is embodied in this book. The chief base for it was four years of study and organization of a program for the selection of crews for air craft of the United States Army Air Force during World War II. However, the approach has been generalized and adapted to make the findings and methods applicable to personnel selection programs in civilian enterprises. Statistical techniques play a considerable part in the methods described; therefore the reader needs an understanding of basic statistical principles.

THURSTONE, LOUIS LEON editor

Applications of psychology. Essays to honor Walter V Bingham. New York Harper & Brothers, 1952 209 p 21 cm. $3.00. 1776

Contents: A look across the years 1920 to 1950, by L. W. Ferguson. Growth of talent, by L. L. Thurstone. Application of psychological principles and procedures to the military problem, by J. C. Flanagan. Use of attitude surveys in personnel practice, by B. V. Moore. Validation of measures of interests and temperament, by J. P. Guilford. Should this student be at Harvard? by F. L. Wells. Twenty-year follow up of medical interests, by E. K. Strong, Jr. A tool for selection that has stood the test of time, by M. A. Bills. Identification and selection of teachers, by R. A. Lee. Professional use of the clinical method in employee selection, by G. U. Cleeton. A national scholarship program—methods, problems, results, by J. M. Stalnaker.

Note: A collection of original essays written by outstanding psychologists, all of whom were students or associates of Walter V Bingham, a pioneer and leader in the field of applied psychology.

EDUCATIONAL PSYCHOLOGY

COLE, LAWRENCE EDWIN, AND WILLIAM F BRUCE

Educational psychology Yonkers-on-Hudson, New York World Book Company 1950. 768 p. illus. 23 cm. $5.00. 1777

Contents (abridged): Part one, Life styles in their social settings: The study of educational psychology. The human person—his style of life. Part two, The development of personality—analysis and integration: The physical growth of the individual. The development of effective intelligence. The emotions—energies of man. Motives—from drives to purposes. Growth and development in the American culture. The development of the self into a mature person. Part three, The psychology of learning in a free society: Learning by conditioning responses. Learning by trial and error. Learning by insight—Gestalt psychology. The psychology of thinking—a new interpretation of learning. The creative imagination—the expressive person. Part four, Putting psychology to work in the schools: The teacher's task and the teacher. Studying and guiding development. Appraising development and learning—measurement in education. Bibliography. Index of names. Index of subject matter.

Note: A broad view of educational psychology is afforded in this introductory text. It is not limited to the psychology of the learning process but instead includes discussions of pertinent topics in social psychology and the psychology of personality. The organization of the book is somewhat unconventional also. For instance, there are passages quoted passages in which social backgrounds are dramatically presented. The authors' style is easy to read even in those parts of the book devoted to the technical aspects. Lists of "Further reading" for the students are included in the chapters and at the end of the book there is an extensive general bibliography.

DEESE, JAMES

The psychology of learning. New York. McGraw Hill Book Company, Inc., 1952. 398 p. illus. 24 cm. (McGraw-Hill publications in psychology, Clifford T Morgan, consulting editor) $5.50. 1778

Contents: Introduction. Reinforcement and learning. The nature of extinction. Stimuli in learning and the process of discrimination. Motivation and learning. Negative reinforcement and punishment. Factors affecting [illegible]. Serial learning and the chaining of responses. Transfer of training. The nature of complex learning. Retention. Forgetting. [illegible]. Efficiency in human learning. Thinking and problem solving. Learning and the nature of the learner. Emotion and conflict. Physiological problems in learning. Current theoretical problems. References. Author index. Subject index.

Note: A textbook designed for college use. It is intended for students who have completed at least a course in basic psychology. It provides both a survey of the current status of the psychology of learning, and the accumulated knowledge and the unsolved problems. Significant experimental studies are described and evaluated and information included in the original publications. The bibliography lists approximately 900 literature references. The author is Assistant Professor of Psychology in Johns Hopkins University.

GUTHRIE, EDWIN RAY

The psychology of learning. Revised edition. New York Harper & Brothers, 1952. 310 p. illus. 21 cm. (Under the editorship of Gardner Murphy) $3.00. 1779

Contents: Introduction. Psychological explanation. The conditioned response. Time factors in conditioning. Inhibitory conditioning.

ing. Generalization. The effects of repetition. Emotional reinforcement. Forgetting. Habits. Breaking habits. Reward and punishment. Skill. Trial and error in learning. Learning with and without intention. Perception and thought. Pluralistic theories of learning. Hull's reinforcement theory. Skinner's system of behavior. Cats in puzzle box. Conclusion. References. Index.

Note: (1241) Mainly this noted work is presentation of the association theory of learning, but related theories are described for comparison. The work is not textbook although it is often used as supplementary reading in college courses. The first edition was published in 1935. Four new chapters have been added in this edition to cover the main developments in learning theory in the past two decades. Although written for persons with professional interests in the psychology of learning, the style is not forbiddingly technical; hence the book is suitable for any educated person who has an interest in the subject.

GUTHRIE, EDWIN RAY, AND FRANCIS F POWERS

Educational psychology New York The Ronald Press Company 1950 530 p illus. 21 cm. (A volume in the Douglass series in education, edited by Harl R. Douglass) $4.25 1780

Contents (abridged) Part I, Introduction: The challenge of modern education to the psychologist. The definition and meaning of educational psychology Part II, Foundations of learning: Brightness and dullness. Perception and attention. Emotion and motivation. Physical basis of behavior and learning. Part III, Learning and its measurement: Viewpoints on the learning process. How children learn. How teaching guides learning. Psychology of audio-visual learning and teaching. Individual differences. Evaluating learning. Part IV Improving learning habits. Part Psychology of school levels, curricula, and methods. Part VI, Social adjustment through learning experiences. Part VII, Personal adjustment through learning experiences: How education affects personality Mental hygiene. Part VIII, Psychological factors in school organization and administration. Psychology of discipline. Psychology of the guidance program. Psychology of extracurricular activities. The improvement of teaching. Selected references. Index.

Note This introductory book on educational psychology is designed for the use of college students ho are preparing for careers in education. The authors have covered not only the standard topics in educational psychology but also certain new areas of the subject, including creative activity and audio-visual learning, the psychological analysis of school levels, of the curriculum, of teaching procedures, and the psychological study of extracurricular activities and school leadership. Each chapter concludes with group of about ten brief, practical questions and selected list of about 20 recent books and articles.

MCGEOCH JOHN ALEXANDER

The psychology of human learning. Second edition revised by Arthur L. Irion. New York Longmans, Green and Co., 1952 596 p illus. 22 cm. $5 00 1781

Contents: Concepts and methods. Some theoretical considerations. Conditioned response learning. Intraserial phenomena. The distribution of practice and reminiscence. Learning as function of motivo-incentive conditions. The law of effect. The role of frequency Transfer of training. Retention and forgetting. Learning as function of the material learned and of certain modes of practice and presentation. Individual differences and learning. Concluding statement. Author index. Subject index.

Note: (1249) A textbook which is designed primarily for college students who are majoring in educational psychology The treatment is advanced and the main emphasis is on theory Long bibliographies are included. The author index of cited publications runs to 10 pages. Very substantial changes have been made in the present edition. These include more attention to animal learning and to its correlation with the current knowledge of human learning.

SKINNER CHARLES EDWARD, editor

Elementary educational psychology Second edition. New York Prentice-Hall, Inc., 1950 592 p. illus. 22 cm. $6.00. 1782

Contents: Part I, Introduction: The nature of educational psychology by J W Charles. The teacher and his task, by F F Powers. Part II, Growth and development: Personality and behavior, by P L. Boynton. Growth and development, by P L. Harriman. Stages in human life: infancy childhood, adolescence, maturity and senescence, by F F Powers. Part III, Mental abilities and individual differences: Intelligence and aptitudes: their nature, development, and measurement, by P A. Witty Individual differences and school adjustments, by J. W Wrightstone. Part IV The learning process and evaluation of learning outcomes: General aspects of learning, by F F Powers. The dynamics of learning, by P L. Harriman. Transfer of training, by P L. Boynton. Perceptual motor and associational learning, by J. W Wrightstone. Reflective thinking and problem-solving, by P L. Harriman. Creative thinking and learning, by P L. Harriman. Psychology of the school subjects, by J. W Wrightstone. Appraising the results of learning, by J W Wrightstone. Part Personality adjustment, and guidance: Emotion and adjustment, by W C. Ryan. Social adjustment and conduct disorders, by W C. Ryan. Adjustment and guidance of the exceptional child, by W C. Ryan. Mental hygiene, by W C. Ryan. The nature and techniques of guidance, by F F Powers. Index of subjects. Index of names.

Note: (1330*) An established introductory text for college students ho are preparing for careers in teaching. Modern ideas and methods are emphasized. The pattern of the book is the same as in the first edition, but the several authors have brought their chapters and the accompanying reference lists up to the date of the revision.

TILTON, JOHN WARREN

An educational psychology of learning. New York The Macmillan Company 1951 248 p. illus. 22 cm. $3.50 1783

Contents: Part I, An introduction to learning theory: The general problem. Explanation in terms of elements? Explanation in terms of prior experience? Explanation in terms of effects? Part II, The learning process: A general description of learning. Learning in relation to problem solving. Learning as related to practice. Learning and adjustment. Part III, The individual learner: The measurement of achievement. Measures of ability to learn. Specialization of ability to learn. "Native" ability to learn. Personality Part IV Some implications for education Education and the psychology of learning. For more efficient learning. Index of names. Subject index.

Note: This work is not textbook or an encyclopedic reference book of the subject, but it rather an original presentation of the nature of the learning process. The author is Professor of Educational Psychology at Yale University

ENGINEERING

GENERAL

Christman Ruth C, editor

Industrial science present and future. A collection of papers presented at the installation of the Section on Industrial Science of the AAAS at the Philadelphia meeting on December 28–30 1951 Arranged by Allen T Bonnell. Edited by Ruth C Christman. Washington American Association for the Advancement of Science, 1952 152 p. 23 cm. Paper $2 00 1784

Contents. Bridging the gap, by K. R. Webb. Industrial science today The petroleum industry by R. E. Wilson. The steel industry by H. G. Batcheller The communications industry by J B. Fisk. The chemical industry by N A. Shepard. The pharmaceutical industry by E. H. Volwiler Industrial science tomorrow Horizons in industrial science from the viewpoint of the consultant, by L. M. Gilbreth Horizons in industrial science from the viewpoint of the educator by J. Cresse Horizons in industrial science from the viewpoint of the research institute, by F C. Croxton. Horizons in industrial science from the viewpoint of government, by A. T Waterman. The contributions of industry to scientific education, by C. L Emerson. Industrial science and community health, by C. L. Dunham. The new industry and the community, by E. A. Neary Industrial science and its public relations, by G. K. Pendray

Note. In the papers collected here some of the history achievements, and problems and the outlook for the future of industrial science are outlined By the term "industrial science, the authors collectively have designated not only research on the part of industry but also such other aspects as industry' relations to scientific education, and relations between government research and industrial research. The papers are addressed to the general public rather than to specialists; however they are of interest to scientists who are concerned with the larger and social aspects of science.

De Vries Louis

German English technical and engineering dictionary New York McGraw Hill Book Company Inc. 1950 928 p. 23 cm. $20 00 1785

Note. The English equivalents of approximately 135,000 German scientific terms are given in this reference book A considerable number of the terms are derived from private glossaries compiled by professional translators and research workers from the recent literature Many of these have not appeared in other dictionaries. A feature that adds much to the book usefulness is the inclusion of a high number of combinations and variants The main list is supplemented by a 34-page list of abbreviations with their German meanings and English equivalents.

Eshbach Ovid Wallace

Handbook of engineering fundamentals. Prepared by a staff of specialists under the editorship of Ovid W Eshbach Second edition. New York John Wiley & Sons Inc., 1952 1394 p. illus. 22 cm. $10.00 1786

Contents (abridged) Mathematical and physical tables. Mathematics. Physical units and standards Mechanics of rigid bodies. Mechanics of deformable bodies. Mechanics of incompressible fluids. Aerodynamics. Engineering thermodynamics Electricity and magnetism. Radiation, light, and acoustics. Chemistry Metallic materials. Non metallic materials. Engineering law Index

Note (1260) A comprehensive handbook of fundamental theories, data, and formulas essential in engineering practice It is designed for use by engineers in all branches of engineering. The contents given above are the titles of the sections. In most instances sections are composed of several subsections, each one of which is the work of an authority whose name is given. Bibliographies accompany the subsections, but the index is all inclusive. The first edition appeared in 1936. In the new edition some of the sections have been reorganized and all of them revised to some extent. A few sections have been completely rewritten.

Finch, James Kip

Engineering and Western civilization. New York McGraw Hill Book Company, Inc, 1951 397 p. illus. 24 cm. $5.50. 1787

Contents (abridged) Ancient engineering. The Middle Ages and the Renaissance. The age of French leadership. Early British engineering. The Victorian era. American engineering in the 19th century The new engineering. Modern engineering. Engineering and Western civilization. Engineering and economic change. Engineering and the worker. The distribution of technological gains. Technological change and capital goods. Engineering and research. Decisions. Bibliography Index.

Note In this outline history of engineering Dr. Finch states as his thesis that engineering and technological advances have exercised greater influence on the growth of modern institutions than have philosophic, economic, or social forces. Except for a brief survey of the growth of engineering from ancient times to the Victorian era, the author deals entirely with the part played by the engineer in the evolution of the United States of America. The book is intended primarily for use in introductory engineering courses, but it can be recommended also for general reading. It includes a valuable and extensive annotated bibliography

Forbes, Robert James

Man the maker, a history of technology and engineering. New York Henry Schuman, 1950 355 p. illus. 21 cm. $4.00. 1788

Contents Man and nature. The dawn of history (before 3000 B.C.) The great empires of the ancient Near East (3000–600 B.C.). Wisdom of the Greeks and Romans (600 B.C.–A.D. 400). Technology and theology (a classical heritage (A.D. 400–1000). Technology and [illegible] (A.D. 400–1500). New wine into old bottles (1500–1750). [illegible] age (1750–1830) The conquest of distance (1750–1900). [illegible] electricity (1830–1930) Technology and progress. Bibliography. Index.

Note. This history of technology is rather compactly written but it does touch upon numerous subjects which are not accorded space in larger works. Examples are anesthetics, bicycles, asphalt, and synthetic rubber About half of the space is devoted to the progress of technology before 1750. In the latter part of the book, when the stage really becomes crowded, the author found space for little more than mere catalogues of facts. The development of radio and television, to cite an example, is covered in less than five pages.

Hertz David Bendel

The theory and practice of industrial research. New York McGraw Hill Book Company Inc., 1950 385 p. illus. 23 cm. (McGraw Hill engineering management series, R. T Livingston consulting editor) $5.50. 1789

Contents Introduction. The creative scientist and research problems. Methods of problem solving in research. The method of research. The background of research in industry Research projects and programs. The magnitude of research personnel. Research The organization and administration of research programs and budgeting. Internal relationships in the research [illegible] Formal and informal research reports. Research facilities [illegible] design, research tools, and auxiliary services. Patent policies in research. External relationships of the research department. Bibliography. Index.

Note: The first chapters contain a careful analysis of the nature and general problems of research; then the author turns his attention to the practical organization and administration of research in industry. In both parts he has something worthwhile to say. The work is intended for use as a textbook in courses offered to advanced science and engineering students, but it is of interest to graduate workers in industrial research and corporation executives as well. There is a good bibliography

KEREKES, FRANK AND ROBLEY WINFREY

Report preparation including correspondence and technical writing. Second edition. Ames The Iowa State College Press, 1951. 448 p. illus. 29 cm. $7.50 1790

Contents (abridged) Reports. Planning the investigation and report. Collection of information. Mechanics of style. Format and arrangement. Tabular presentation. Preparation of illustrations. Effective writing. Writing the first draft and revising. Correspondence. Letter reports and short reports. Formal reports. Magazine feature articles and technical papers. Oral presentation of reports and technical papers. Letter of application. Editing, copyreading and proofreading. Appendix. Index.

Note: The authors of this book have taken plenty of room and have produced a full book that will be used not only in instruction but after graduation as a reference book. Numerous full-size examples of charts, graphs, business letters, employment applications, sample title pages and other illustrations of forms much needed by scientists and engineers in their work after graduation are included. The accompanying discussions are factual and practical.

LEIDECKER, KURT FRIEDRICH, editor

German English technical dictionary of aeronautics — rocketry — space navigation — atomic physics — higher mathematics — jet engines — turbines — hydraulics — petroleum industry — civil and mechanical engineering — ballistics — electronics — radio — radar — aerophotography — television — infrared research — communication — meteorology — topography — aeromedicine. Based on data compiled by the U S Air Force. New York S. F Vanni 1951 2 v 28 cm. $35.00. 1791

Note: The terms for this dictionary and the English equivalents were compiled by the Dictionary Unit which was first associated with the United States Strategic Air Forces in Europe and later was transferred to the Air Documents Research Center in Dayton, Ohio. Definitions are short, and no examples of usage are included. The work's merit lies in the inclusion of many terms in aeronautics and related fields which are not to be found in other dictionaries. Another edition of the work was previously made available to government agencies and to contractors of the United States Armed Forces, but this is the first edition to be offered generally

McCLOY, SHELBY T

French inventions of the eighteenth century Lexington University of Kentucky Press, 1952 212 p. illus. 25 cm. $4.50 1792

Contents: The balloon. Steam transportation. The telegraph. Lighting. Papermaking. Chemical inventions. Textiles. Automata. Other mechanical devices. Military inventions. Medicine and surgery Patents and encouragement. Conclusion. Bibliography Index.

Note: A readable, well-documented survey of French inventive activity during the eighteenth century Although individual inventions are described and illustrated, the main theme is the strong current of activity This is delineated against the social and political background. Inventors are named and there are occasional remarks on individual personalities and fortunes, but the biographical aspect is not emphasized. There are many scholarly footnotes and an extensive bibliography

MEES CHARLES EDWARD KENNETH AND JOHN A. LEERMAKERS

The organization of industrial scientific research. Second edition. New York McGraw-Hill Book Company Inc., 1950 838 p. 24 cm. $6.50 1793

Contents (abridged) Part I, General principles: The development of scientific organization. Industrial research. Part II, Agencies for the conduct of industrial research: Government laboratories. Associations for industrial research. Technological research institutes. Some large industrial laboratories. Part III, The organization and operation of industrial laboratories: The position of the laboratory in a company The direction of research. The transfer of research to production. Reports, patents, publications, and library The financial administration of the laboratory The design of a laboratory for a specific industry Index.

Note: This book deals chiefly with the setting up and administration of research laboratories in industrial corporations. The senior author is associated with the Eastman Kodak Company and has the title Vice-president in Charge of Research. His colleague is Assistant Director of the same company's research laboratory However, they have taken a general view of the subject and have drawn liberally from the experiences of other companies. The work is of interest both to staff members of industrial laboratories and to executive officers of corporations who are concerned with general company policy The first edition, written by the senior author alone, was published in 1920. This edition is largely new even though the viewpoint is the same.

NATIONAL RESEARCH COUNCIL

Industrial research laboratories of the United States including consulting research laboratories. Ninth edition, 1950 Compiled by Myron J Rand, with the assistance of Winnie Frances Yount, Roy F Newkirk [and] Emmit E. Noland. Washington, D C. Published by the National Research Council, National Academy of Sciences, 1950 444 p. 26 cm. (National Research Council. Bulletin. No 120 November 1950) 1794

Contents: List of laboratories. Appendixes: Government laboratories. Universities and colleges offering research services to industry Indexes: Geographical distribution of laboratories. Subject index to research activities.

Note: (1948*) The standard directory for the United States of America of research laboratories maintained by manufacturing and other commercial companies. In compiling it a liberal interpretation of the term "research" has been adopted so as to cover the development of industrial processes, methods, equipment, and production in a broad sense. However laboratories devoted solely to production control and commercial testing are not included. The name of the company and the laboratory address, names of the president, the executive officers in charge of research, the size of the research staff, the field or fields of research activity and the number of volumes in the library if any are given for each entry The number of laboratories listed in the present edition is 2845 which compares with 2443 in the preceding edition. In addition to the descriptions added all those carried over have been revised.

NELSON J RALEIGH

Writing the technical report. Third edition. New York McGraw Hill Book Company, Inc. 1952 356 p. illus. 24 cm. $4.50. 1795

Contents (abridged) Part I, The design of the report. Part II, Some suggestions as to the form and style of the report. Part III, The criticism of the report. Part IV Summary of basic principles. Part V Manual for class use. Index

Note In this text for both practicing and student engineers emphasis is placed on the basic principles and procedures which should be followed in preparing technical reports, rather than on the form of specific types of report. Thus, although numerous sample reports are included, the book is not intended to serve as a form or style manual. The major changes in this edition are found in the later part of the volume, where the basic principles previously discussed at length are now summarized and where an outlined course in report writing has been added.

OGBURN WILLIAM FIELDING editor

Technology and international relations. Chicago The University of Chicago Press, 1949 201 p. illus. 23 cm. $4.00 1796

Contents: Introductory ideas on inventions and the state, by W F Ogburn. The process of adjustment to new inventions, by W F Ogburn. Technology and the growth of political areas, by H. Hart. The steam and steel complex and international relations, by A. R. Usher. Aviation and international relations, by W F Ogburn. Atomic energy and international relations, by W T. R. Fox. The mass-communications inventions and international relations, by R. Leigh. New techniques of war and national policies, by B. Brodie. Modern technology and the world order by Q. Wright. Index.

Note: The lectures delivered at the twenty-fourth Institute of the Norman Wait Harris Memorial Foundation of the University of Chicago are collected in this volume together with an introduction by the editor. The main theme is the effects of technology or clusters of inventions, upon international relations. The portents of the atomic bomb underlie much of the discussion. The lectures were addressed to laymen, and the book is worthwhile reading for almost any educated reader interested in the social impact of science and technology

ROBB, LOUIS ADAMS

Engineers' dictionary, Spanish English and English Spanish. Second edition. New York John Wiley & Sons, Inc. 1949 664 p. 22 cm. $12.50 1797

Note: (1367) In its second edition this useful dictionary has been considerably enlarged. Radio and television terms are now included, and larger branches of engineering, such as civil, mechanical, and mining, are given more thorough coverage. As in the earlier edition, terms whose usage is more or less confined to a single Latin-American country are identified with a symbol which designates the country In contrast to some technical dictionaries, this one is not padded out with terms from the general literary language but is confined to engineering terms and terms closely related to fields of science and technology

ROSSNAGEL W E

Handbook of rigging. New York McGraw Hill Book Company Inc. 1950 321 p. illus. 24 cm. $6.00 1798

Contents. Fundamentals. Fiber rope. Wire rope. Hoisting chains and hooks. Slings. Wood for structural purposes. Planks for scaffolds. Testing scaffold planks. Swinging and suspended scaffolds. Scaffolding. Painting and repairing steel stacks. Life belts, boatswain's chairs, and life nets. Ladders. Strength calculations for timbers. Strength calculations for metal beams. Cranes, hoists, and derricks. Chain hoists. Jacks, rollers, and skids. Hoist signals. Accident prevention. Caring for the injured. Reference codes, laws, and standards. Appendix: Handy reference tables. Index.

Note: An important book for all who are concerned with scaffolding, hoisting machinery and related equipment. The material is presented from the viewpoint of those who will make practical use of it, such as machine operators, foremen, and safety engineers. There is a generous number of illustrations, and the chapter of "reference codes, laws, and standards" available from state governments and other agencies concerned with safety in the United States of America is a useful feature. The author is Safety Engineer with the Consolidated Edison Company of New York.

ZIMMERMAN OSWALD THEODORE, AND IRVIN LAVINE

Scientific and technical abbreviations, signs and symbols. Second edition. Dover N H. Industrial Research Service, 1949 541 p. illus. 22 cm. $8 00 1799

Contents: General list of abbreviations and symbols. Greek alphabet, numerical prefixes, metric abbreviations, mathematics, and statistics. Chemistry chemical engineering, physics, thermodynamics, heat flow humidity and radiation. Mechanics, hydraulics, acoustics, and illumination. Mechanical drawings, materials of construction, and shop terms. Electricity electronics, and magnetism. Mapping. Railway Aeronautics and aviation. Communications. Meteorology Military Medicine, botany and zoology Commerce. Astronomy Latin expressions, states, punctuation, and proof reading. Technical journals. Index.

Note. (1334*) A reference handbook of standard and accepted abbreviations and symbols. The first section consists of about 7,000 terms alphabetically arranged and followed by their recommended abbreviations or signs. The sections devoted to special fields contain standard abbreviations and symbols such as those adopted by the American Standards Association and, in addition, other abbreviations commonly employed in the particular field. The scope and even the format of the book are essentially unchanged in this second edition. There has been some rearrangement of material. Some of the tables have been expanded and seven new ones added.

MATHEMATICS FOR ENGINEERS

ADAMS DOUGLAS PAYNE, editor and compiler

An index of nomograms. New York. John Wiley & Sons, Inc. 1950 174 p 25 cm. $4.00 1800

Contents: Index A, Key words. Index B, Master list: Mathematics. Physics. Chemical engineering and chemistry Electricity electronics, radio. Hydraulics and power Waterworks and sewerage. Oil and gas and by-products. Illumination. Aeronautics. Heating, piping, ventilating, air conditioning, insulation, refrigeration. Building, structures, surveying, soils, cement. Highways, railroads, trucking. Machine design. Machine tools. Welding, foundry sheet metal. Metals. Mining. Paper. Textile. Medicine. Food.

Note: Useful nomograms are published from time to time in technical periodicals, where many of them have been buried because the persons who could have put them to use did not know of them or lacked time to ferret them out. This book locates more than 1700 such nomograms which have appeared in ninety-one scientific and technical periodicals. The index to key words is essentially a title index. The other and main index is a classified one.

BECKENBACH E. F., editor

Construction and applications of conformal maps proceedings of a symposium held on June 22–25 1949 at the Institute for Numerical Analysis of the National Bureau of Standards at the University of California, Los Angeles. Washington, D C. Government Printing Office, 1952 280 p. illus. 27 cm. (United States. National Bureau of Standards. Applied mathematics series, 18) $2.75 1801

Contents. On network methods in conformal mapping and in related problems, by R. v. Mises. Flow patterns and conformal mapping of domains of higher topological structure, by R. Courant. Some industrial applications of conformal mapping, by H. Poritsky. Conformal maps of electric and magnetic fields in transformers and similar apparatus, by O. M. Stuetzer. Conformal mapping applied to electromagnetic field problems, by E. Weber. On the use of conformal mapping in two-dimensional problems of the theory of elasticity, by I. S. Sokolnikoff. Conformal mapping related to torsional rigidity, principal frequency, and electrostatic capacity, by G. Szegö. Fluid dynamics, conformal mapping, and numerical methods, by A. Ferri. The use of conformal mapping in the study of flow phenomena at the free surface of an infinite sea, by E. P. Cooper. An application of conformal mapping to problems in conical supersonic flow, by R. C. F. Bartels and O. Laporte. On the Helmholtz problem of conformal representation, by A. Weinstein. Some generalizations of conformal mapping suggested by gas dynamics, by L. Bers. The use of conformal mapping to determine flows with free streamlines, with examples, by D. M. Young. Conformal mapping in aerodynamics, by I. E. Garrick. On the method of successive conjugates, by I. E. Garrick. On the convergence of Theodorsen's and Garrick's method of conformal mapping, by A. M. Ostrowski. On discrete analogues of Theodorsen's and Garrick's method, by A. M. Ostrowski. A variational method for conformal mapping of variable regions, by S. E. Warschawski. A variational method for simply connected domains, by A. C. Schaeffer and D. C. Spencer. Some remarks on variational methods applicable to multiply connected domains, by M. Schiffer and D. C. Spencer. The theory of kernel functions in conformal mapping, by S. Bergman and M. Schiffer. A new proof of the Riemann mapping theorem, by P. R. Garabedian. The kernel function and the construction of conformal maps, by Z. Nehari. An approximate method for conformal mapping, by L. H. Swinford. On the effective determination of conformal mapping, by M. Shiffman. The difference equation method for solving the Dirichlet problem, by P. C. Rosenbloom. Relaxation methods: conformal transformations as an auxiliary technique, by R. Southwell. Conformal invariants, by L. V. Ahlfors and A. Beurling. On subordination in complex variable theory by E. F. Beckenbach and E. W. Graham. Asymptotic developments at the continuance of boundary conditions, by H. Lewy. Recent contributions of the Monodiffric functions, by R. Isaacs.

Hungarian school to conformal mapping, by G. Szegö. Bibliography of numerical methods in conformal mapping, by W Seidel.

Note: An important collection of papers most of which were originally prepared for presentation at the symposium named in the book's title. As printed here, the original texts are supplemented by figures and literature references.

DULL RAYMOND WILLIAM

Mathematics for engineers. Revised and edited by Richard Dull. Third edition. New York. McGraw Hill Book Company, Inc., 1951 822 p. illus. 21 cm. $7.50 1802

Contents (abridged) Functions and graphs and the statement of problems in the form of equations. Linear or first-degree equations. Analytical and graphical solutions. Quadratic or second-degree equations. Explicit functions. Analytical and graphical solutions. Cubic functions. Polynomial functions. Power functions. Progressions. Variables, limits, and indeterminate forms. Exponential functions and their relation to logarithmic functions. Infinite series. Determinants. Permutations and combinations. Geometry and mensuration. Trigonometric functions. Polar coordinates. Vectors. Imaginary and complex numbers. Hyperbolic functions. Simple application of coordinates. Linear equations. Second-degree equations. Conics. The parabola. The circle and the ellipse. The hyperbola. Parametric and polar equations. Empirical equations. Application of coordinates to geometry of three dimensions. Linear equations in three variables. Differential calculus. Differentiation of logarithmic and exponential functions. Curve analysis. Integral calculus. The definite integral. Reduction methods for integration. Summation method. Differential equations. Dimensional and similarity analyses. Index.

Note: (1274) This volume is intended to serve practicing engineers as quick reference manual, or as text for reviewing or expanding their mathematical knowledge. The form and scope of presentation lie between the conciseness of the engineering handbook and the tutorial style of the mathematical textbook. Changes made in this edition include new chapter on differential equations and an expansion of the sections on infinite series, determinants, complex vectors, and trigonometric functions.

GRINTER, LINTON ELIAS editor

Numerical methods of analysis in engineering (successive corrections) A publication resulting from a symposium held at Illinois Institute of Technology, Chicago Illinois, arranged and edited by L. E. Grinter New York The Macmillan Company 1949 207 p. illus. 24 cm. $5.80. 1803

Contents: I, Numerical methods based upon physical concepts Analysis of continuous frames by distributing fixed-end moments, by H. Cross. Statistical state of stress studied by grid analysis, by L. E. Grinter. Appendix—Matched beam solution by grid analogy, by A. J. Fyfe II, Numerical solutions of equations for state of stress: Numerical solutions of boundary value problems by relaxation methods, by F S. Shaw The quest for accuracy in computations using finite differences, by R. V Southwell. A new approach to the numerical solution of Laplace's equation, by M. M. Frocht. III, Applications of numerical methods to heat transfer: Numerical solutions for thermal systems, by L. M. K. Boelter and M. Tribus. Two problems in building heating solved numerically by G. M. Dusinberre. Appendix—Temperature distribution through ground, by J. D. Bethel and Y S. Touloukian. IV Surveys and bibliographies of numerical methods. Successive corrections—a pattern of thought, by F. Baron. Numerical methods of analysis of bars, plates and elastic bodies, by N. M. Newmark. A survey of the approximate solution of two-dimensional physical problems by variational methods and finite difference procedures, by T J. Higgins. Author index. Subject index.

Note: The first paper in this volume, written by Hardy Cross and reprinted here from the *Proceedings* of the American Society of Civil Engineers, was the starting point for extensive investigation of the use of numerical methods of analysis in arriving at satisfactory approximations in engineering problems that could not be solved exactly. Most of the remaining papers are not reprints but are published here for the first time. They are of interest to graduate students and to graduates engaged in research and engineering design. Substantial bibliographies accompany the papers.

KULMANN C ALBERT

Nomographic charts. New York McGraw-Hill Book Company Inc., 1951 244 p. 26 cm. $7 00. 1804

Contents (abridged) Group I, Function scales Fifth power and root. 1/2 and 1/3 powers. 1 7/16 power. Reciprocals. Group II, General charts: Reciprocals of reciprocal sums. Present value of annuity Area of isosceles trapezoids. Group III, Hydraulics charts: Head and velocity. Suppressed weir discharge. Submerged weir discharge. Orifice discharge. Pipe flow and loss. Pressure wave velocity Pipe or tank volumes. Jet diameter and theoretical water horsepower. Pump size and horsepower. Rainfall runoff. Group IV, Mechanics charts: Column loading. Compression springs. Belt design. Torsional moment. Pile loading. Group Thermodynamics charts Orifice steam flow Heat loss in flue gases. Boiler efficiency Group VI, Electrical charts: Voltage drop in conductors. Power factor and total power Equivalent spacing. Capacitance and susceptance. Surge impedance. Voltage-characteristics evaluation. Vector equivalents. Index.

Note: In this book the author has assembled 92 charts of fairly general utility in engineering which he has found useful in his own work over period of years. In general the arrangement of the book places the chart on the right-hand page and the discussion of it on the facing left-hand page, thus facilitating use.

OLDENBURGER, RUFUS

Mathematical engineering analysis. New York The Macmillan Company, 1950 426 p. illus. 24 cm. $8.00 1805

Contents (abridged) Fundamentals of the mechanics of particles and rigid bodies. Applications and further development of the theory of the mechanics of rigid bodies. Fundamentals of electricity and magnetism. Electric systems. Electromagnetic fields. First law of thermodynamics. Second law of thermodynamics. Heat transfer. Fundamental theory of elasticity Elasticity for one and two dimensions. Elasticity in three dimensions. Fundamental fluid theory Compressible fluids. Aerodynamics.

Note: Not text in mathematics but one in utilizing mathematics in the solution of research problems in engineering. Its purpose is to show advanced engineering and science students who are preparing for industrial research how to set up physical problems so that they can be solved mathematically The author has assumed that his readers will have knowledge of advanced calculus. Scores of specific engineering examples are used in the exposition. These have such titles as: Automobile with shock absorbers and elastic tires, "Rocket moving in two-dimensional space, "Diesel engine driving marine propeller through long shaft, and "Flow past an airplane wing.

SALVADORI MARIO GEORGE

Numerical methods in engineering. With a collection of problems by Melvin L. Baron. New York Prentice-Hall, Inc., 1952 258 p. illus 21 cm. (Prentice-Hall civil engineering and engineering mechanics series N M. Newmark, editor) $7 15 1806

Contents The practical solution of algebraic and transcendental equations Finite differences and their applications. The numerical integration of initial value problems. The numerical integration of ordinary boundary value problems. The numerical solution of partial differential equations. Index.

Note: A useful introduction which is designed both for college students and for graduate engineers. The numerical methods described are especially adapted to use on electric calculating machines of the desk type and on slide rules. The book contains concise but clear explanations of many useful numerical methods, such as Gauss' elimination scheme, Cholesky's matrix method, the relaxation method, the trapezoidal rule for numerical integration, Fox's methods for second order linear equations, and Simpson's one-third rule. The author is Associate Professor of Civil Engineering in Columbia University

WIENER, NORBERT

Extrapolation interpolation, and smoothing of stationary time series with engineering applications. New York Published jointly by The Technology Press of The Massachusetts Institute of Technology and John Wiley & Sons, Inc., 1949 163 p. illus. 24 cm. $4.00 1807

Contents: Introduction. Résumé of fundamental mathematical notions. The linear predictor for single time series. The linear filter for single time series. The linear predictor and filter for multiple

time series. Miscellaneous problems encompassed by the technique of this book. Appendixes: Table of the Laguerre functions. The Wiener RMS (root mean square) error criterion in filter design and prediction, by N. Levinson. A heuristic exposition of Wiener's mathematical theory of prediction and filtering, by N. Levinson. Index.

Note. A treatise which has primary applications in communications engineering but applies also to the design of certain types of servomechanisms and other systems in which the mathematics of probability must be taken into account in predicting performance. The methods discussed can be applied to problems with the following characteristics (to use the words of the author) "the existence of a linear problem, invariant under the translation group, which is not capable of an exact solution, but in which a measure of the failure of an approximate solution may be given as the mean of the square of the modulus of an expression known to be linear in terms of the function upon which we are operating." The exposition is largely in mathematical terminology and is intended for such groups as graduate engineers who are familiar with Fourier series and related mathematical concepts.

WYLIE CLARENCE RAYMOND JR.
Advanced engineering mathematics. New York McGraw Hill Book Company Inc., 1951 640 p. illus 24 cm. $7 50 1808

Contents. Ordinary differential equations of the first order. Linear differential equations with constant coefficients. Simultaneous linear differential equations. Mechanical and electrical circuits. Fourier series and integrals. The Laplace transformation. Partial differential equations. Bessel functions. Analytic functions of a complex variable. Integration in the complex plane. Infinite series in the complex plane. The theory of residues. Conformal mapping. Analytic functions and field mechanics. Vector analysis. Numerical analysis. Appendix: Selected topics from algebra and calculus. Index.

Note. An engineering college text written by the Chairman of the Department of Mathematics and Astronomy of the University of Utah. The treatment assumes a knowledge of mathematics through elementary calculus. Preliminary mathematics leading up to the material covered in the book is reviewed in the appendix. Numerous worked examples and practice exercises are a feature of the book.

ENGINEERING MODELS

LANGHAAR, HENRY LOUIS
Dimensional analysis and theory of models. New York John Wiley & Sons Inc., 1951 166 p. illus. 23 cm. $4 00 1809

Contents. The nature and the use of dimensions. Principles and illustrations of dimensional analysis. Systematic calculation of dimensionless products. Algebraic theory of dimensional analysis. Similarity and model testing. Dimensional analysis applied to problems of stress and strain. Some applications of dimensional analysis in fluid mechanics. Dimensional analysis applied to the theory of heat. Dimensional treatment of problems of electromagnetic theory. Differential equations and similarity. Answers to problems. Index.

Note. Dimensional analysis is a set of mathematical techniques whereby the number of variables in a given problem may be reduced in order to obtain a useful partial solution. It has special application to the design and predictions of performance of full-scale machines from data obtained in experiments with small models. The book also contains discussions of applications of dimensional analysis to fields of engineering in which it is not practical or customary to use models in design work. The author is Professor of Theoretical and Applied Mechanics at the University of Illinois.

MURPHY GLENN
Similitude in engineering. New York The Ronald Press Company 1950 302 p. illus. 24 cm. $7.00 1810

Contents (abridged). Part I, Theory of similitude and its application to models: Observations and measurements. Dimensional analysis. Development of prediction equations. Theory of models. Structural models. Part II, Distorted models: Analyses. Distorted structural models. Fluid flow models. Thermal models. Electrical and magnetic models. Acoustical and illumination models. Applications of model theory to chemical engineering. Part III, Dissimilar models: Analogies from second-order ordinary differential equations. Analogies from second-order partial differential equations. Analogies from fourth-order differential equations. Analogies from four-term algebraic equations. Author index. Subject index. Tables: Criteria for rejection of observations. Average values of properties of a few solids. Average values of properties of a few fluids. Prediction factors for stress and deflection. Values of *K* in Flugel formula.

Note. This book deals with the design of engineering models and the interpretation of the results obtained in experiments with them. It is intended for use chiefly as a college textbook, and the chapters conclude with problems to be solved and, in some cases, with outlines of laboratory experiments. Worked problems, some of which require the use of laboratory equipment, are incorporated in the discussions. Familiarity with basic mechanics and with the handling of differential equations has been assumed in the treatment.

APPLIED MECHANICS

ADVANCES IN APPLIED MECHANICS. Edited by Richard von Mises and Theodore von Kármán. Volume II. New York Academic Press, Inc., 1951 233 p illus. 24 cm. $6.50. 1811

Contents: On the statistical theory of isotropic turbulence, by Th. von Kármán and C. C. Lin. The laminar boundary layer in compressible flow, by G. Kuerti. Bending of curved tubes, by R. A. Clark and E. Reissner. Recent developments in inverse and semi-inverse methods in the mechanics of continua, by P. F. Nemenyi. Theory of filtration of liquids in porous media, by P. Y. Polubarinova-Kochina and S. B. Falkovich. Author index. Subject index.

Note. (1143) Volume one of this valuable series was published in 1948. The purpose of the series, like similar periodical surveys, is to aid research workers and scientists in keeping abreast of developments in fields closely allied to their own specialties. Accordingly the treatment is on a professional level, and each paper includes extensive lists of references. In this volume, the 5th paper was originally published in Russian in 1947

BOYD JAMES E., AND PERCY W OTT
Mechanics a textbook for engineers. Third edition. New York McGraw Hill Book Company Inc., 1950 422 p. illus. 24 cm. $5.00 1812

Contents: Fundamental ideas. Concurrent, coplanar forces. Application of forces. Nonconcurrent, coplanar forces. Concurrent forces. Graphical methods. Method of work. Concurrent, noncoplanar forces. Nonconcurrent, noncoplanar forces. Machines and friction. Flexible cables. Center of gravity. Moment of inertia. Kinematics and dynamics. Force and motion. Dynamics of rotation. Momentum. Balancing. Simple harmonic vibration. Moving frames of reference. Some rotary problems. Index.

Note. (1146) An engineering textbook designed for a course of about seven or eight semester hours. The book places emphasis on fundamental principles and includes many examples and problems to encourage the student in the application of the principles. Much of the material has been entirely rewritten for the third edition. New chapters include those on Method of work, Machines and friction, Flexible cables, and Moving frames of reference. The treatment of kinetics has been rearranged and rewritten, with emphasis on orderly analytical methods. Throughout the text new problems have been added, some of them more difficult than the original problems.

FAIRES VIRGIL MORING AND SHERMAN DANIEL CHAMBERS
Analytic mechanics. Third edition. Problems in this edition revised by James Harvey Caddeas. New York The Macmillan Company 1952 540 p. illus. 24 cm. $6.00. 1813

Contents: Resultants and components. Coplanar concurrent forces. Moments and parallel coplanar forces. Non-concurrent, non-parallel coplanar forces. Flexible cords. Friction. Graphical methods. Maximum and minimum forces. Non-coplanar forces. Centroids. Moments of inertia of areas. Moments of inertia of masses. Plane motion. Relative motion. Force systems that produce rectilinear motion of rigid bodies. Curvilinear motion. Rotation and plane motion of rigid bodies. Work, kinetic energy, power. Impulse and momentum. Mechanical vibrations. Balancing rotating elements. Appendixes. Index.

Note. (1150) In this text for college engineering courses the authors have made a special effort to relate basic principles and theories to practical engineering problems. Numerous [illegible] problems of a practical nature are included, and illustrations and [illegible] are freely used to amplify the problems and to further clarify them. This edition has undergone some revision [illegible]. Other changes [illegible], and many new problems have been added.

cludes the addition of a chapter on vibration, short discussions of gyroscopic action and dimensional analysis, and brief historical and biographical sketches.

GEMANT ANDREW

Frictional phenomena. New York Chemical Publishing Co. Inc., 1950. 497 p. illus. 23 cm. $12 00 1814

Contents (abridged) Part A, Frictional processes in general: Review of the concept of friction in physics and engineering. Outline of the mathematical treatment of frictional processes. Part B, Frictional processes in gases: Theory and experimental facts. Absorption of sound waves and of supersonics. Part C, Frictional processes in liquids: Structural viscosity. The flow of fluids. Applications of liquid viscosity to electrical insulating liquids, particularly in high-voltage cables. Lubrication. Part D, Frictional processes in solids: The plastic flow of solids. Correlation between elastic moduli and viscosity of liquids and plastics. Engineering applications of the plastic flow of solids. Internal friction in solids. Reduction of vibrations by use of materials of high damping capacity. Stress-dependent plastic resistance and damping capacity of alloys. External friction of solids. Part E, Problems with solutions. Index.

Note: Essentially this is a monograph on the physics of frictional phenomena, but examples of engineering applications are introduced frequently. Many topics are discussed rather briefly. For example, the chapter on lubrication is only 15 pages long, but a bibliography of 36 references to books and papers is appended to it. The treatment is on a graduate level. The book is of interest in many fields of science and industry. The author is Staff Physicist in the Research Department of the Detroit Edison Company.

GIRVIN, HARVEY FRANK

Applied mechanics. Second edition. Scranton Pa. International Textbook Company 1949 417 p. illus 24 cm. (International textbooks in civil engineering, Benjamin A. Whisler consulting editor) $5 50 1815

Contents (abridged) Fundamental conceptions. Coplanar, concurrent force systems. Coplanar parallel force systems. Coplanar non-concurrent force systems by mathematical methods. Non-coplanar force systems by graphical methods. Flexible cables. Friction. Centroids and centers of gravity. Kinematics of a particle. Kinematics of a rigid body. Rectilinear translation of a rigid body. Curvilinear motion. Rotation. Work, energy and power. Plane motion of a rigid body. Impulse and momentum. Index.

Note (1191a) A successful textbook for engineering college courses. Both mathematical and graphical methods of problem solving are covered. Since numerous worked examples are included in the text, the book has some usefulness for study outside organized courses. No major changes were made in preparing this edition but numerous minor additions and rearrangements were made. The number of problems to be worked by the student has been greatly extended. The type for the whole book was reset. The new format is a considerable improvement over that of the first edition.

GREEN HENRY

Industrial rheology and rheological structures. New York John Wiley & Sons Inc., 1949 311 p illus. 22 cm. $6.50 1816

Contents (abridged) Part I, A rheological system. Part II, The system applied to laboratory measurements. Part III, The particle—the basis of rheological structure. Part IV Particle groups rheological structures. Appendixes Literature cited Glossary Author index. Subject index.

Note: In this work the author describes a system used in his own laboratory that is based on use of a multipoint consistency curve and is especially suited to practical use in industry. The system is explained and is compared with other systems. Its practical applications together with the mathematical computations involved are covered thoroughly. The work is addressed chiefly to technical personnel in industry who are concerned with processes where rheology of product is an important consideration.

MERIAM J L

Mechanics part I, Statics part II, Dynamics. New York John Wiley & Sons, Inc. 1952 2 v illus. 24 cm. Part I, $4.00 part II, $4.00 1817

Contents: Part I, Statics: Principles of mechanics. Force systems. Equilibrium. Structures. Distributed forces. Beams. Friction. Virtual work. Index. Part II, Dynamics: Kinematics. Principles of kinetics. Force, mass, and acceleration. Work and energy. Impulse and momentum. Periodic motion. Appendixes: Moments of inertia. Useful tables. Index.

Note: Although divided into two parts for convenience, this text for beginning students is a compact treatment in a total of 471 pages of the theory and application of mechanics. The opening chapter on the principles of mechanics, is repeated in both volumes, as are the appendixes. The exposition progresses from fundamentals to advanced theory with emphasis upon the importance of principles. An outstanding feature is the inclusion of a total of 1273 practical problems, almost all of which are illustrated by line drawings of exceptional clarity and reality. Solutions are printed in full for certain of the problems, and answers are given for many more.

PLETTA, DAN HENRY

Engineering statics and dynamics. New York The Ronald Press Company, 1951 392 p. illus. 23 cm. (A volume of a series in engineering mechanics, edited by Glenn Murphy) $5 50 1818

Contents: Statics: The scope and fundamental concepts of mechanics. The resolution and composition of force systems. Forces in equilibrium. Trusses, frames, and cables. Internal resistance of solid bodies. Centroids and moments of inertia. Dynamics, Part I, Kinematics: Motion of a particle. The motion of rigid bodies. Dynamics, Part II, Kinetics. Kinetics. Inertia forces. Work, energy and power. Impulse, momentum, and impact. Vibrations. Dimensional analysis and model similarity. Appendix. Answers to problems. Index.

Note: A textbook intended for beginning courses in statics and dynamics. The general theory of each topic is presented first and then the specific applications are considered. Descriptive matter is kept at a minimum, but many illustrative problems are presented. The author is Head of the Department of Applied Mechanics in the Virginia Polytechnic Institute.

SEELY FRED B AND NEWTON E. ENSIGN

Analytical mechanics for engineers. Fourth edition. New York John Wiley & Sons Inc. 1952 443 p. illus. 22 cm. $5 50 1819

Contents. Part one, Statics. Fundamental concepts and definitions. Resultants of force systems. Equilibrium of coplanar force systems. Equilibrium of trusses and cables. Equilibrium of non-coplanar force systems. Friction. Part two, Kinematics: Motion of a particle. Motion of rigid bodies. Part three, Kinetics. Force, mass, and acceleration. Work and energy. Impulse and momentum. Part four, Special topics: Mechanical vibrations. Balancing. Appendix: First moments and centroids. Index.

Note. (1194) A college textbook in which physical principles are presented for the benefit of prospective engineers. The emphasis is on the principles but engineering applications are indicated in the worked examples and in the problems for students to solve. Problems in equilibrium and in dynamics have been given special attention. The third edition appeared in 1941. In this edition moderate changes have been made in the illustrations, in the problems, and in various parts of the discussion.

VIBRATION

CREDE CHARLES E

Vibration and shock isolation New York John Wiley & Sons Inc., 1951 328 p 24 cm. $6.50. 1820

Contents Introduction. Isolation of vibration. Isolation of shock. Further considerations in vibration and shock isolation. Properties of materials and design of isolators. Particular applications of isolators. Index.

Note: A treatise covering both theory and practice in the use of resilient supports to protect machines and structures from vibration and shock. This subject is of interest to many engineers, ranging from those who design the relatively simple supports for automobile engines to those who are concerned with the installation of very heavy machines, such as punch presses. Most of the book is devoted to theory and fundamental considerations rather than to practical applications. It is addressed to graduate engineers and other persons who have equivalent backgrounds in mathematics, the fundamentals

of mechanics, etc. Each chapter includes selected list of literature references.

FREBERG, CARL ROGER AND E N KEMLER
Elements of mechanical vibration. Second edition. New York John Wiley & Sons, Inc. 1949 227 p. illus. 24 cm. $3 75 1821

Contents: Introduction. Vibrations without damping. Damped vibrations. Vibration of systems with several degrees of freedom. Vibration isolation and absorption. Equivalent systems. Beams. Sound. The mobility method. Mechanical and electrical models of vibration systems. Bibliography. Answers. Index.

Note: (1946) An introductory text which covers the basic techniques utilized in the analysis of vibrations in mechanical systems. The calculations involved do not require mathematical skill beyond that of differential and integral calculus. Practical applications of the theories and methods are illustrated by the use of numerous worked problems. In this edition the major changes consist of the expansion of the sections on beams to form new chapter and the addition of chapter dealing with sound as form of vibration.

HANSEN, HOLGER M , AND PAUL F CHENEA
Mechanics of vibration New York John Wiley and Sons, Inc. 1952 417 p. illus. 24 cm. $8.00. 1822

Contents. General concepts. Part I, Systems of one degree of freedom. *Free vibration without damping. Forced vibrations without* damping. Forced vibrations with damping. Part II, Systems of several degrees of freedom Classical method. The mobility method and use of the complex variable. Solution of the general frequency equation. Part III, Special topics Systems with distributed physical constants. Vibrations of transient character Vibrations of non-linear character Problems. Answers to problems. Index.

Note. The authors of this work are members of the faculty of the University of Michigan and the book has been developed from course in vibration analysis at that university It is introductory to the subject and is frankly textbook. However in the third part the student is introduced to problems and methods that are typical of those in use in practical vibration analysis in industry

HYDRAULICS

CREAGER, WILLIAM PITCHER AND OTHERS
Hydroelectric handbook, by William P Creager and Joel D Justin with the assistance of contributors Second edition. New York John Wiley & Sons Inc. 1950 1151 p. illus. 24 cm. $15.00 1823

Contents (abridged) Preliminary studies and economics. Rainfall. Factors affecting runoff. River gaging, by N C. Grover and J. C. Hoyt. Flood flows Investigation of sites. Hydraulics. Pondage and storage. Types of hydro plants. Cost of steam power. Cost of hydro power. Dams—design and construction. Solid gravity concrete dams. Arch dams. Earth dams. Timber dams and steel dams. Spillways and headwater control Conduits and powerhouses Intakes. Canals. Steel pipe, by C. H. Schaeen and H C. Boardman. Wood stave pipe, by R. E. White. Water hammer by E. B. Strowger Powerhouse substructure. Powerhouse superstructure, by J H. Gandolfo. Equipment and operation Hydraulic turbines, by Arnold Pfau and W M White. Electrical design, by R. A. Hopkins. Operation of hydroelectric plants, by Albion Davis. Index.

Note. There are 44 chapters in this comprehensive work. Each chapter is condensed technical essay on its title subject and is, in most cases, supplemented by bibliography of the useful technical literature. The book is standard one for practicing engineers and is especially useful to those members of the profession who have not specialized in hydroelectric engineering but are beginning to work with the construction or operation of hydroelectric plants. The first edition was published in 1927 and was 897 pages in length. The greater part of the material in the second edition is new

DAVIS CALVIN VICTOR, editor in-chief
Handbook of applied hydraulics. Second edition. New York McGraw Hill Book Company Inc. 1952 1272 p. illus. 24 cm. $15.00. 1824

Contents: River regulation by reservoirs, by E. T Knappen and others. Gravity dams, by C. V Davis. Arch dams, by L. E. Houk. Buttress dams, by E. H. Burroughs. Earth dams, by T. T Knappen and J. Lowe III. Rock fill dams, by L. C. Hoxie. Spillways and stream-bed protection works, by E. W Lane and C. V Davis. Spillway crest gates, by J. S. Bowman and J. R. Bowman. High pressure outlet works, by F A. Kittredge. Canals, flumes, covered conduits, tunnels, and pipe lines, by J Hinds. Hydroelectric plants, by J C. Stevens and C. V Davis. Hydraulic machinery by L. F Moody. Water hammer, by G. R. Rich. Surge tanks, by G. R. Rich. Speed regulation and governing stability by G. R. Rich. Navigation locks, by G. R. Rich. Irrigation, by I. E. Houk. Irrigation structures, by I. E. Houk. Water supplies, by T R. Camp. Water distribution, by T R. Camp. Water treatment, by T R. Camp. Sewerage, by S. A. Greeley and W. E. Stanley Sewage-treatment hydraulics, by S. A. *Greeley and W. E. Stanley. Hydraulic models, by G. E. Riche.* Hydrology by P E. Kirpich. Appendixes: Hydraulic formulas, by W L. Voorduin. Graphical aids to hydraulic computations, by E. E. Sorensen. Index.

Note. A standard engineering handbook of the "essay" rather than the "table" type. Although the pertinent formulas and the special collections of data are present, they are subordinated to an expository text which is designed to be read. In many of the sections fundamental principles and their practical applications are presented by describing the engineering features of representative projects already constructed. For this edition much of the original text was rewritten or augmented. Sections on water hammer surge tanks, navigation locks, and speed regulation have been added. The expanded discussions include those on gravity dams and hydroelectric plants. The appendixes on formulas and graphical aids are also newly added.

EINSTEIN, HANS ALBERT
The bed load function for sediment transportation in open channel flows. Washington, D C. Government Printing Office, 1950. 71 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1026) Paper 1825

Contents: Introduction. Approach to the problem. Elements of the bed-load function. *Hydraulics of the alluvial channel.* Suspension. Integration of the suspended load. Limit of suspension. Practical calculation of suspended load. Bed-load concept. The bed load equation. Transition between bed load and suspended load. The necessary graphs. Flume tests with sediment mixtures. Sample calculation of river reach. Limitations of the method. Summary. Literature cited. Appendix: List of symbols. Work charts.

Note: A method for determining the bed-load function for many but not all types of stream channels is described in this pamphlet. The method permits measures of protection of future channel changes, important in the prevention of bed erosion, which may be caused by improvements such as dams or other projects altering the flow of the stream and which, if severe, may lead to the undermining of costly installations, bridge piers, sewer outlets, and bank protection works. The illustrative material includes nine folded two-color work charts in pocket.

IOWA. STATE UNIVERSITY INSTITUTE OF HYDRAULIC RESEARCH
Engineering hydraulics proceedings of the fourth Hydraulic Conference June 12 15, 1949 Edited by Hunter Rouse. New York. John Wiley & Sons Inc. 1950. 1039 p. illus. 24 cm. $15.00. 1826

Contents. Fundamental principles of flow by H. Rouse. Hydraulic similitude, by J. E. Warnock. Flow measurement, by J. W Howe. Hydrology by G. R. Williams. Flow of ground water, by C. E. Jacob. Steady flow in pipes and conduits, by V L. Streeter. Surges and water hammer by J. S. McNown. Channel transitions and controls, by A. T Ippen. Gradually varied channel flow, by C. E. Posey Flood routing, by *R. R. Odeman.* Wave motion, by G. H. Keulegan. Sediment transportation, by C. B. Brown. Hydraulic machinery by J. W Daily Appendix: List of symbols. Dimensional considerations. Properties of common fluids. Author index. Subject index.

Note. A comprehensive treatise in which the emphasis is on the principles and basic techniques of hydraulic engineering rather than specialized applications. The work was planned as whole by the staff of the Iowa Institute of Hydraulic Research, and each of the thirteen subdivisions into which the main subject was divided was assigned to an outstanding authority. The manuscripts prepared by the thirteen authors were edited and correlated, then issued in

preprint form to the registrants for the fourth Hydraulics Conference sponsored by the Institute. This conference was devoted to criticism and discussion of the manuscripts. Finally all of the chapters were revised in the light of the experts' criticism. The final result is a book that should take its place as the basic volume in any library collection on hydraulic engineering.

McCLAIN, CLIFFORD HENDERSON

Fluid flow in pipes. A clear-cut summary of modern theory in the flow of liquids and gases through piping and ducts, with practical applications and detailed worked-out examples. New York The Industrial Press 1952 123 p. 24 cm. $3.00. 1827

Contents: Dimensions of fluid properties. Viscosity of fluids. Effect of piping on fluid flow. Design practice.

Note: Apparently this is the third edition of a book that has already enjoyed some circulation among engineers and other persons concerned with the design of industrial piping. The basic phenomena and theory are covered rather thoroughly from the standpoint of design. Though much of the exposition is expressed mathematically the mathematics is relatively simple. Twenty worked examples are included at appropriate points to assist the engineer or plumbing contractor who studies the book by himself.

POWELL, RALPH WATERBURY

An elementary text in hydraulics and fluid mechanics. A revision of *Mechanics of liquids* New York The Macmillan Company 1951 316 p. illus. 22 cm. $4 75 1828

Contents: Hydrostatics. Fundamentals of fluid flow. Orifices, tubes, nozzles, and weirs. Pipe flow. Flow in open channels. Further effects of viscosity, surface tension, and compressibility. Models. Appendixes: Properties of liquids, with tables. Dimensional analysis. Rational bases for pipe formulas. Stream gaging. Index.

Note: (1307) A textbook designed for use in engineering colleges. Appropriately it pays due attention to the historical development of the subject and emphasizes principles. However both the examples that are worked in the exposition and the problems for the student to solve illustrate concrete applications in engineering. Some reorganization and considerable revision have been put into the present edition. The major addition is the chapter on hydraulic models.

RICH GEORGE ROLLO

Hydraulic transients. New York McGraw Hill Book Company Inc., 1951 260 p. illus. 24 cm. (Engineering Societies monographs, Ralph H. Phelps, consulting editor) $7.00 1829

Contents: Water hammer. Turbine speed regulation. Stability of governing. Water-hammer pressures in pump discharge lines. The differential surge tank. The restricted-orifice surge tank. Navigation locks. *Surges in power canals—tidal harmonics. Elements of the* graphical method of water-hammer analysis. Index.

Note: An engineering college textbook applying arithmetic integration and trial-and-error arithmetic to practical problems in water-hammer, surge-tank design, turbine-speed regulation, stability of governing, pressures in pump discharge lines, filling systems for navigation locks, and surges in open canals. In a few cases where the development of theory requires the solution of partial differential equations the author has employed the complex operational calculus, explaining that the reader not familiar with the method "may take this small amount of routine mathematics for granted without any impairment of the general usefulness of the book in practical computation." The author states his opinion that no method exceeds the arithmetic-integration process in simplicity and directness or affords so clear an insight into the physical action at all stages of the cycle. Bibliographical references appear at the ends of the chapters.

STEARNS REID F AND OTHERS

Flow measurement with orifice meters, by Reid F Stearns Russell R. Johnson, Robert M. Jackson and Charles A. Larson. New York D Van Nostrand Company Inc. 1951 350 p. illus. 26 cm. $7.50 1830

Contents (abridged): Introduction. Derivation of flow equations. Applications of flow equations to metering problems. Evaluation of variable terms in flow equations. Principles of operation of commercial meters. Interpretation of meter records. Orifice meter installations. Testing and checking meters. Special metering problems. Accuracy of orifice meter installations. Appendixes: Supplemental metering information. Numerical data. Physical data. Bibliography Index.

Note: A comprehensive manual of the use of orifice meters for the measurement of the flow of fluids including gas, steam, water, oil, and chemicals in pipes and other closed conduits. It has been written by four engineers associated with the Standard Oil Development Company and it is addressed primarily to chemical engineers at work in industry. Such aspects of the general subject as selection of orifice sizes, types of differential meters, installation of meters, the keeping and interpretation of meter records, and estimations of accuracy are discussed fully. The book abounds in graphs and tables designed to facilitate its use by engineers who are not meter specialists.

STREETER, VICTOR LYLE

Fluid mechanics. New York McGraw-Hill Book Company Inc. 1951. 366 p illus. 24 cm. $5.50. 1831

Contents: Pressure intensity. Static pressure forces. Fluid flow concepts and basic equations. Action of fluid jets—turbomachinery. Laminar flow. Flow measurement. Steady flow in closed conduits. Flow in open channels. Flow around immersed bodies. Oil hydraulic systems. Appendixes: Physical properties of fluids. Partial derivatives and total differentials. Index.

Note: An elementary textbook for engineering students. It is supposed that the student will have completed a course in integral calculus and at least two courses in engineering mechanics before undertaking the course of study in fluid mechanics. Explanations of the various new topics introduced are carefully presented on an elementary level and, in general, the elaborate treatment that the use of partial differentials would make possible has been avoided so that students may focus upon the fluid phenomena. A large number of problems, both of the numerical type and of the multiple-choice type, are printed at the end of each chapter, and bibliographical references are given at the close of some of the chapters.

UNITED STATES. BUREAU OF RECLAMATION

Hydraulic and excavation tables. Tenth edition. Washington, D C. Government Printing Office, 1950. 173 p. 18 cm. $1.50. 1832

Note: Compiled originally for the official use of the engineers of the Bureau of Reclamation, this manual of tables has proved to be useful to other engineers concerned with projects involving hydraulics and earth moving. Most of the 54 tables were computed for this publication. Earlier editions appeared in 1905, 1910, 1913, 1917 1921 1924, 1935 1940, and 1946, and the number of tables has gradually increased from 13 to the present 54.

WILSON, WARREN ELVIN

Positive-displacement pumps and fluid motors. New York Pitman Publishing Corporation, 1950. 250 p. illus. 24 cm. $7.50 1833

Contents: History and elementary concepts. Deviations from ideal performance. Classification of pumps and fluid motors. Characteristics and applications of positive-displacement units. Elementary performance calculations. Elements of fluid flow. Pump and motor theory. Advanced analysis of experimental data. Design methods. Hydraulic clutches. Hydraulic transmissions. Appendixes: Bibliography. Symbol list. Conversion factors for dynamic viscosity. Index.

Note: Positive-displacement pumps (and fluid motors) include such types as vane pumps, radial-piston pumps, axial-piston pumps, gear pumps, screw pumps, and lobe pumps. Pumps of this class are widely used in hydraulic mechanisms, such as hydraulic presses, airplane control systems, and automatic transmissions; hence, an understanding of their basic principles is useful to engineers in many fields. This introductory book describes the chief types and their characteristics, the basic theory, and shows how capacity, efficiency, and other properties are calculated. The bibliography is almost 20 pages long, and covers the literature, except patents, published from 1939 through approximately the first half of 1940.

ENGINEERING MATERIALS

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on accelerated durability testing of bituminous materials. Presented at the fifty-second annual meeting Atlantic City, N J June 30 and July 1, 1949 Philadelphia, Pa. American Society for Testing Materials, 1950 181 p illus. 23 cm. (Special technical publication no. 94) Paper $2 00 1834

Contents: Introduction. A review of accelerated test methods for the evaluation of road tars, by E. O. Rhodes. Characteristics of carbon-arc light sources for accelerated exposure testing, by W W Lasier and others. Behavior of bituminous road materials under accelerated exposure conditions and laboratory heat tests, by Richard H. Lewis. Accelerated weathering of road tars, by R. W McGowen. Immersion-compression tests compared with laboratory traffic tests on bituminous concrete, by A. T Goldbeck. The use of an abrasion test as measure of durability of bituminous mixtures, by John H. Swanberg and W L. Hindermann. Test methods for performing accelerated durability tests on asphalts, by T K. Stanton and F M. Hveem. Durability tests; word of caution, by O. L. Oliensis. Accelerated weathering of pitches and asphalts, by W F Fair, Jr., and others. Mineral stabilizers in asphalt roofings, by L. Kirschbraun and others. A new method for evaluating failure of bituminous materials due to weathering in, by J B. Hunter and others. The design and application of spark-gap instrument for detecting crack failures of asphalt coatings during weathering tests, by A. H. Benner and L. A. H. Baum. Experience with reduction in accelerated durability tests on bituminous materials, by Joseph Zapata.

Note: The papers in this symposium are based on investigations conducted by authorities in the field. Written for research workers and engineers concerned with the utilization of bituminous materials, they provide technical information regarding the changes which occur in such materials during various conditions of exposure and weathering. Testing methods and equipment are described in detail. Discussions and brief lists of references are included.

BATEMAN JOHN HENRY

Materials of construction a textbook for students of engineering. New York Pitman Publishing Corporation 1950 568 p. illus. 23 cm $6 50 1835

Contents: Introduction Mineral aggregates. Cementing materials. Concrete—materials, essential properties, proportions—manufacture, placing, properties—mortar gypsum, and lime products. Structural clay products. Building stone. Lumber and timber. The manufacture of pig iron and steel. The crystal structure and constitution of metals and alloys. Alloy steels. The shaping of steel—the structural steels. Wrought iron, cast iron, malleable cast iron. Structural aluminum and structural magnesium. The preservation of the ferrous metals. Index.

Note A text and reference book in which the manufacture, properties, dimensions, etc. of building materials are described. A good deal of supplementary information is included. For example, the chapter on the manufacturing and placing of concrete provides reliable and fairly inclusive survey of current practices in the field including the placing of concrete in large structures such as dams, and also including special methods of placing such as "prepakt" concrete. The chapters are supplemented by good bibliographies.

BRADY GEORGE STEWART

Materials handbook an encyclopedia for purchasing agents, engineers executives and foremen. Seventh edition. New York Mc Graw Hill Book Company Inc. 1951 913 p 24 cm $9.00 1836

Note. (1577*) The usefulness of this handbook for anyone seeking concise, general information regarding the occurrence, properties, and uses of natural and manufactured products has been well established. In this edition many of the articles have been revised and expanded, while less important topics have been dropped or rechecked. An increase of eight pages in the index and check of the text proper indicate the inclusion of much additional material, with new entries on such topics as acrylonitrile, [illegible], [illegible], [illegible] oil, and latex. The tabulated data of Part II have also been expanded to include information on softwood trees, specific gravity, impact strength, etc.

BURTON WALTER E. editor

Engineering with rubber New York Mc Graw Hill Book Company Inc., 1949 486 p. illus. 23 cm. $8 00 1837

Contents: Types of rubber. Properties of rubber. Rubber adhesion. Latex products. V-belts and sheaves. Flat rubber belting—transmission—conveyor—elevator Extruded rubber Rubber mountings. Hard rubber Rubber hose. Rubber in hydraulic equipment. Lathe-cut rubber. Rubber linings. Molded rubber Packing and sheet rubber. Rubber proofing materials. Rubber-covered rolls. Sponge rubber. Rubber thread and tape. Miscellaneous rubber products. Vinyl chloride polymers. Case histories. Index.

Note. The chief purpose of this volume is to suggest to design engineers when and how rubber may be utilized to good advantage in machinery and manufactured products. In addition to serving a practical guide to the properties, uses, and engineering possibilities of natural and synthetic rubbers, it describes the methods of manufacture and operating characteristics for variety of products made from rubber and rubber compounds. Particularly useful are the tabulations of technical data regarding the dimensions, engineering properties, and structural details of these products.

DIETZ, ALBERT GEORGE HENRY

Materials of construction—wood, plastics, fabrics. New York D Van Nostrand Company Inc., 1949 347 p. illus. 24 cm. (A technical series on building construction Walter C. Voss editor) $5.50 1838

Contents: Sources of timber supply Growth and structure. Physical properties. Hygroscopic properties, shrinkage and swelling. Mechanical properties. Identification. Lumber, grades and sizes. Destructive agencies. Preservative treatment. Trusses, adhesives, plywood, laminated wood. Textile materials. Chemistry of plastics and resins. Plasticizers, fillers, colors, film and sheet, coatings. Molds and molding methods. Plastics-bound laminates, vulcanized fiber resin-wood combinations. Properties of plastics. Building boards, structural sandwiches, timber-concrete. Index.

Note. A concise, almost encyclopedic, presentation of information on materials used in modern building. The various materials are discussed from the standpoint of their use in building, but much information is also included on the processes by which the materials are manufactured. Numerous tables of engineering data are included, and each chapter is supplemented by useful bibliography

DIETZ ALBERT GEORGE HENRY editor

Engineering laminates. New York John Wiley & Sons, Inc., 1949 797 p. illus. 24 cm. $12 00 1839

Contents Introduction The strength of laminates and sandwich structural elements, by N J Hoff. Adhesives, by R. K. [illegible]. Glued laminated wood, by [illegible] Ketchum. Plywood, by [illegible] and D Countryman. Composite laminated wood-concrete construction, by W D Keeney. Plastics-based laminates, by R. K. Witt. Then [illegible] sheet metals, by U U Sorensen. Aluminum-clad products, by E. P. [illegible] H Dix, Jr. Hot-dipped aluminum-coated steel, by [illegible] Nickel-clad, monel, Copper and copper-alloy clads, by W L. Kern. Stainless clad, and inconel-clad steel, by W G. Theisinger. Stainless clad steel, by C. A. Schempp. Cast laminated metallic materials, by J. S Vanick. Hardness and wear resistance—hard surfacing by [illegible] welding, by H. S. Avery. Sprayed metal, by [illegible] Glass lined steel equipment, by O. I. Chormann. Composite and sandwich-type building [illegible] structures, by G. B. Watkins. Sandwich-type [illegible] laminates based cores, by A. [illegible] and M. Lief. Faced plywoods and their properties, by N. O. [illegible]. Structural sandwich construction, by R. T Schwartz. Rubber laminated, by W E Burton Molding laminates and sandwich materials, by C. R. Hemming. Index.

Note The term laminates, as used in this volume, includes all composites which are of value from an engineering point of view and whose properties differ significantly from the properties of the constituent materials. Emphasis is placed on the physical properties and engineering uses of the various types of laminates, but information regarding methods of manufacture and fabrication is also included.

cluded. The volume is designed for the use of engineers and architects, and is particularly valuable for its extensive tabulations of data regarding the physical and mechanical properties of wide variety of laminated products. Bibliographies accompany most of the chapters.

ENGEL, HARRY CHARLES AND OTHERS

Structural plastics by H. C. Engel, C. B Hemming, and H. R. Merriman. New York McGraw Hill Book Company Inc., 1950 301 p. illus. 23 cm. o p. 1840

Contents: Theoretical aspects of high-polymeric substances. Resins utilized in structural plastics. Reinforcing materials. Laminated plastics. Low pressure molding. Sandwich constructions. Structural adhesives. Radomes and microwave windows. Appendixes: Test methods. Derivation of optimum face-thickness ratio of sandwich panels. Partial list of adhesive trade names and suppliers. Author index. Subject index.

Note: A useful summary of plastic materials having properties which suit them to structural uses. It is designed for readers such as architects, aircraft designers, and structural engineers who will make practical use of the knowledge. Such aspects as methods of manufacture, types, official grades (when the latter have been established for the particular materials) structural properties, and effects of environmental conditions upon the finished products are covered. The presentation is compact, but liberal references are made to source publications. Trade names and trademarked products are mentioned only incidentally except in the chapter on adhesives. In an appendix most of the important adhesives are mentioned and identified as to type and also manufacturer's name.

LYSAGHT VINCENT E.

Indentation hardness testing. New York Reinhold Publishing Corporation 1949 288 p. illus. 24 cm. $7.50 1841

Contents: Foreword, by Charles H. Wilson. Hardness concepts. The Brinell test. Meyer's analysis. The scleroscope. The Rockwell tester The Rockwell superficial hardness tester. 136° diamond pyramid hardness method. Other hardness testers. Portable hardness testers. Hardness conversion relationships. Applicability of hardness tests. Tests on sheet metal. Cylindrical surfaces. Hot hardness testing. Microhardness testing of metals. Indentation hardness testing of non-metallic materials. Conclusion. Appendix. Index.

Note. A discussion of hardness and its measurement, written chiefly from the viewpoint of engineers, inspectors, and other persons who are concerned with the practical measurement of hardness in connection with the manufacture of industrial products. The greater part of it is devoted to detailed discussions of the principles, characteristics, and limitations of the principal instruments which are used for testing hardness. The instruments are shown in reproductions of photographs which are supplemented by drawings of mechanical details. Special problems such as the testing of hot metals are also covered. A number of useful tables are included. The author is associated with the Wilson Mechanical Instrument Company

MARIN JOSEPH

Engineering materials their mechanical properties and applications. New York Prentice-Hall, Inc., 1952 491 p. illus. 23 cm. (Prentice-Hall engineering design series, John A. Hrones, editor) $8.70 1842

Contents (abridged) Part one, Mechanical properties—general: Static properties in tension and compression. Static properties in shear and bending. Static properties under combined stresses. Fatigue properties. Impact properties. Creep and temperature properties. Part two, Specific materials: Structure of materials and control of their properties. Ferrous metals and alloys. Non-ferrous metals and alloys. Non metallic materials. Part three, Materials testing machines and strain gages. Name index. Subject index.

Note Although this college textbook is designed to be used in introductory courses it contains an analytical treatment that carries the reader farther into many topics than is common in introductory books. Methods of testing materials and the interpretation and application of results are emphasized. Unexpectedly full discussions of such topics as creep and temperature properties are included. Related literature is listed in footnotes in chapter bibliographies. The author is Professor of Engineering Mechanics and Research Professor of Engineering Materials at Pennsylvania State College.

NORD, MELVIN

Textbook of engineering materials. New York John Wiley & Sons, Inc., 1952 518 p. illus. 24 cm. $6.50 1843

Contents (abridged) Part I, The raw materials of engineering: Sources of raw materials. Formation of mineral deposits. Recovery of mineral. Part II, Production of engineering materials: Mineral dressing. Unit chemical processes in the production of engineering materials. Principles and processes of extractive metallurgy. Part III, Properties of engineering materials: States of matter. Mechanical properties of engineering materials. Physical and chemical properties of engineering materials. Part IV Specific engineering materials. *Section 1* Materials for the generation of energy—water—fuels—explosives. Section 2, Metals. Section 3, Natural and artificial stone. Section 4 Natural and synthetic organic materials of construction. Section 5, Protective materials. Index.

Note: The first three parts of this work are devoted to an exposition of basic aspects of engineering materials. Part IV—which accounts for more than 300 of the 500 odd pages—is devoted to *discussions and descriptions of specific materials. In this part each* material considered is defined, and its origin, properties, manufacture, and uses are described. Finally there is short list of literature references. Many of these descriptions contain enough material to make them useful for reference by readers who want background information rather than engineering data. However, the book is intended for use in short courses in engineering colleges.

WANGAARD FREDERICK FIELD

The mechanical properties of wood. New York John Wiley & Sons, Inc., 1950 377 p. illus. 22 cm. $7.50. 1844

Contents (abridged) Part I, Basic mechanical properties of clear wood: Structural uses of wood. Tensile strength. Compressive or crushing strength. Stiffness. Toughness. Hardness. Cleavage resistance. Elastic properties. Part II, Factors affecting the mechanical properties of wood: Defects—Knots—Checks and shakes—Cross grain—Wood-inhabiting fungi—Compression failures and cross breaks—Bird peck—Marine borer injury—Lightning rings. Factors other than defects—Density—Position in tree—*Moisture content—Preservative treatment* —Heartwood and sapwood—Season of cutting—Duration of stress—Fatigue. Part III, Working stresses for structural lumber: Factors concerned in the derivation of basic stresses. Basic-stress values for clear wood. The basis for structural lumber grades. Application of working stresses in design. Part IV Timber testing: Working plan. Moisture determination. Machines for static tests. Description of tests. References. Appendix. Index.

Note: In this useful book information is presented on the various factors which affect the strength and other mechanical properties of wood and the methods of testing wood. All of the topics mentioned in the above table of contents and about as many more are covered compactly but in sufficient detail for average use. The text is liberally supplemented with literature references and tabulated data. The book is of interest to builders, structural engineers, and others who are required to specify or test wood for manufacturing or structural purposes. It supersedes G. A. Garratt's book (1321) of the same title.

WOLDMAN NORMAN EMME

Materials engineering of metal products. New York Reinhold Publishing Corporation, 1949 583 p. illus. 24 cm. $11 00 1845

Contents (abridged) Section I, Materials for light-weight construction. Aluminum alloys. Magnesium alloys. High strength low alloy steels. Stainless steel. Section II, Materials for mechanical products: Gear materials. Spring materials. Bearing materials. Section III, Materials for the electrical industries: Magnetic materials. Electrical contacts. Thermostat metals. Section IV Materials for special and severe service: Corrosion and its prevention. High-temperature materials. Section Testing: Mechanical testing. Nondestructive testing and inspecting. Appendix: Properties of materials. Subject index.

Note: (3100*) Essentially desk reference book for engineers concerned with design and specification. However, it is more than mere compilation of data. The expected tabulations of properties are present, but the greater part of the text consists of concise but helpful discussions of such matters as the behavior of specific materials under working conditions. For example, the chapter on electrical contacts includes discussion several pages in length on contact operation and failure, in which the causes of contact failure are made clear. Most of the matter relates to metals, but few other materials, such as carbides for parts, are considered. The work is companion to the author's *Metal process engineering.*

MATERIALS HANDLING

HUDSON, WILBUR G

Conveyors and related equipment. Second edition. New York John Wiley & Sons, Inc., 1949 468 p. illus. 24 cm. $7.50 1846

Contents. General principles. Screw conveyors. Flight and apron conveyors. The bucket elevator. The skip hoist. Bucket carriers. Unit loads. The continuous-flow conveyor. Pneumatic and hydraulic conveyors. The belt conveyor. Aerial tramways. Storage and transport. Bins and bunkers. Unloading water-borne cargoes. Crushers, hammermills, and pulverizers. Screens and feeders. Car unloading. Weighing. Chains, drives, drive groups, motors. Power-plant coal and ash handling. Some problems and solutions. Dust-explosion hazards. Appendixes. Index.

Note: (3313a) Information is presented about machinery and equipment for the handling and storing of industrial materials, and about large-scale storage of selected materials such as coal. The viewpoint is that of an engineer concerned with the selection of materials-handling equipment, and the presentation is largely descriptive, though written in technical terminology. In revising the work for the present edition the author made numerous small changes throughout the text and added two chapters. There is no bibliography

REIBEL SIDNEY

Trolley conveyors. New York McGraw Hill Book Company Inc., 1949 265 p. illus. 24 cm. $5.00 1847

Contents: General features. What to buy. Laying out the conveyor. Chains. Trolleys. Track and supports. Horizontal bends. Vertical bends. Drives. Tables. Overhead devices. Multiple drives. Take-ups. Attachments, carriers, and hooks. Guards and runaway stops. Calculating chain pull. Special conveyors. Power and free. List of visual aids. Index.

Note: The overhead trolley conveyor is said to be the most important type of conveying equipment in present-day manufacturing plants and in other industrial establishments where loads must be moved frequently over the same route. In this book trolley conveyors are discussed thoroughly from the viewpoint of industrial engineers, plant managers, and others who may be concerned either with their layout or maintenance. Precise information, which includes dimensional drawings, is given on the chain, trolleys, tracks, and other parts of these conveyors. All other aspects which are needed in planning conveyor systems are fairly covered. A considerable proportion of the numerous illustrations show details of trolley conveyor installations in factories.

CIVIL ENGINEERING

GENERAL

URQUHART, LEONARD CHURCH editor

Civil engineering handbook. Third edition. New York McGraw Hill Book Company Inc., 1950. 1002 p. illus. 24 cm. $11 00. 1848

Contents: Surveying, by R. E. Davis. Railway, highway and airport engineering, by J. B. Babcock, 3rd, and A. J. Bone. Mechanics of materials, by J. B. Kommers. Hydraulics, by H. W. King and E. F. Brater. Stresses in framed structures, by L. C. Urquhart. Steel design, by C. T. Bishop. Cement and concrete, by H. J. Gilkey. Soil mechanics and foundations, by A. E. Cummings. Sewerage and sewage disposal, by R. G. Tyler. Water supply and purification, by H. E. Babbitt. Index.

Note: (3119) As in previous editions, this book is primarily a basic reference tool for upperclass students and practicing engineers. In spite of its handbook nature, many of the sections are fairly complete expositions of the topics to which they are devoted. Although the greater part of the text has been carried over from the previous edition, there has been extensive revision. The additional 125 pages are largely accounted for by new sections on photogrammetric surveying, airport engineering, and hydraulic models; but the chapter on cement and concrete has been expanded, and mechanics and soil testing are treated at greater length, and numerous small changes occur throughout the book. The bibliographies have been revised.

WHITE, LAZARUS, AND EDMUND ASTLEY PRENTIS

Cofferdams. Second edition, revised and enlarged. New York Columbia University Press, 1950 311 p illus. (part col'd) 24 cm. $10.00 1849

Contents: Hydrodynamics of cofferdams. Erosion in streams. Lateral earth pressure. Land cofferdams. Practical considerations. Examples of cofferdams. Appendixes: Miscellaneous photographs. Wages and prices. Glossary. Bibliography. Index.

Note: (3480) Apparently this work is the only full-scale treatment in book form of its subject. It covers both basic theory and practice. It is used chiefly as a survey and reference book by practicing engineers and contractors who are directly concerned with the construction of cofferdams. The chapter on examples contains specific descriptions of fifteen cofferdams of various types. The first edition appeared in 1940. A considerable amount of new material has been added in the present edition.

SURVEYING

GOSSETT F R.

Manual of geodetic triangulation. Washington, D C. Government Printing Office, 1950 344 p. illus. 25 cm. (United States. Coast and Geodetic Survey Special publication no. 247) Paper $1.50. 1850

Contents: Introduction. Reconnaissance. Triangulation. Base measurement. Azimuths. Special surveys. Appendix: Specifications for horizontal and vertical control. Strength of figure. Constants and formulas. Lists of instruments and equipment. Lists of books and forms. Standard list of common names of objects used as landmarks. Special applications of vertical-angle measurements. Miscellaneous tables. Index.

Note. The material in this manual is the product of accumulated experience in the field and in the office of numerous members of the U. S. Coast and Geodetic Survey for many years. The manual is a compilation of currently approved methods for triangulation surveys of the Coast and Geodetic Survey furnishing specifications and instructions for first-, second- and third-order triangulation by field parties of the Survey.

MEYER, CARL FREDERICK

Route surveying. Scranton, Pa. International Textbook Company, 1949 300 p. illus. 19 cm. $7.00 1851

Contents: Part I, Basic principles: Route location. Simple curves. Compound and reverse curves. Parabolic curves. Spirals. Earthwork. Part II, Practical applications: Special curve problems. Curve problems in highway design. Railroad surveys. Highway surveys. Surveys for other routes. Partial theory of the spiral. Part III, Tables. Index.

Note: The main principles and techniques of route surveying are presented in this text and pocket-book. The author is Professor of Civil Engineering in Worcester Polytechnic Institute, and his book is designed primarily for engineering college students. However, it contains a good deal of concise information including tabulated data which should be useful to the engineer in the field. The book is well organized and clearly written.

PICKELS GEORGE WELLINGTON, AND CARROLL CARSON WILEY

Route surveying Third edition. New York John Wiley & Sons, Inc., 1949 434 p. illus. 18 cm. $5.25 1852

Contents: Route surveys. Maps, plans, and profiles. Distance, curvature, and grades. Circular curves. Spirals. String lining railroad curves. Parabolic curves. Railroad turnouts, connections, and crossings. Earthwork. Appendix: Theory of spiral. Tables. Index.

Note: (3146) An advanced text and reference book for surveyors and civil engineers. Railroad surveys are treated first, then applications or modifications of the methods to other routes such as highways, pipe lines, and power transmission lines are dealt with. Knowledge of elementary surveying and trigonometry is presupposed. In this edition the chapter on string lining has been completely rewritten, and other lesser changes have been made throughout to incorporate new material.

RAYNER, WILLIAM HORACE

Advanced surveying. Second edition. New York D Van Nostrand Company Inc. 1950 369 p. illus. 20 cm. $5.00 1853

Contents: Errors. Precise leveling. Traverse. Triangulation. Field astronomy. Topographic surveying. Hydrographic surveying. The measurement of stream flow. Mine surveying. Photogrammetry. Plane coordinates. History of surveying. Index.

Note. (3147) A standard textbook designed for use in undergraduate college courses which have been preceded by courses in elementary surveying. It explains the more refined methods of measurements used in accurate work and also in specialized work. The major change in this edition is a revised treatment of photogrammetry. Also a true meter parallax table has been included and there are other minor revisions. The author is Professor of Civil Engineering in the University of Illinois.

RUBEY HARRY

Route surveys, a pocket book for the survey design, and construction of railways, highways tramways beltways, canals flumes, levees pipe lines transmission lines, and other route constructions. Revised edition. New York The Macmillan Company 1951 282 p. illus. 12 cm. $5.25 1854

Contents (abridged). The reconnaissance. Location. Simple circular curves. Compound and reverse curves. Vertical and other parabolic

curves. Spirals. Railway turnouts and track layouts. String lining of curves. Excavation and embankment. Rights of way. Construction. Observations for meridian. Adjustment of instruments. Aerial photography in route surveying. Index.

Note. (1170) A handy reference tool and guide for engineers concerned with the survey, design, and construction of a wide variety of transportation routes. In this edition little change has been made in the text of the original edition, but new chapters have been added on aerial photography and highway practice. The tables, which occupy approximately half the volume, have been modified, and eight-place tables of natural sines and cosines are now included.

RUBEY HARRY, AND OTHERS

Engineering surveys elementary and applied, by Harry Rubey George Edward Lommel, and Marion Wesley Todd. Second edition New York Macmillan Company 1950 888 p. illus. 21 cm. $6 00 1855

Contents (abridged) Measurement of distances. Compass surveying. Leveling. The transit. Adjustment and care of instruments. Observations for meridian. Stadia surveying. Topography Triangulation. Land surveys. Route surveys. Area surveys. City surveys. Office work. Organization of surveys. Introduction to applied engineering surveys. Horizontal control. Engineering astronomy. Vertical control. Topographic details. Photogrammetry. Hydrographic surveying and flow measurements. City planning surveys. Underground surveys. Construction surveys. Tables. Index.

Note. (1169) An engineering college textbook which covers the whole field of modern surveying practice including the newer developments such as photogrammetry and allied techniques such as the measurement of stream flow. These uncommon techniques are not covered exhaustively but the discussion is always supplemented by lists of references to related books and articles where more information can be found. The book's inclusiveness and its typographical excellence make it a good one for library use. Changes in this edition as compared to the first are not extensive, but they include the rewriting of the chapter on photogrammetry and revisions of the bibliographies.

SKELTON RUSSELL R

Route surveys. New York McGraw Hill Book Company Inc. 1949 531 p illus. 18 cm $6 00 1856

Contents Introduction. The reconnaissance. The preliminary survey. The location survey. Simple circular curves. Compound and reverse curves. Parabolic curves and their applications. Spiral curves. String lining of curves. Earthwork. Earthwork distribution. Right of way. Construction surveys. Elements of turnouts, frogs, and switches. Problems. Tables. Index.

Note. An engineering college textbook and field manual on the surveying of transportation routes. It is general in scope in the sense that it covers the surveying and location of railway routes, highway routes, transmission line routes, etc. However the major emphasis is on highway surveying. Practical methods currently in use in the United States are covered. Problems for students to solve are included but these are set off in a separate section where they do not interfere with the use of the book in the field. Approximately half of the space is occupied by a series of useful tables.

PHOTOGRAMMETRY AND CARTOGRAPHY

BROWN LLOYD ARNOLD

The story of maps. Boston, Mass Little Brown and Company 1950 397 p. illus. 26 cm. $7 50 1857

Contents Introduction. The earth takes shape. The habitable world. The world of Claudius Ptolemy. The Middle Ages. Charts and the haven-finding art. The map and chart trade. The latitude. The longitude. Survey of a country. Survey of a world. Notes. Bibliography. Index.

Note. A survey history of the science of mapmaking, written as far as possible from original sources consulted in the chief libraries of the United States and Europe. From the classical world of Egypt, Greece and Rome down through the days of Columbus and Magellan, to the Army Map Service of World War II, the story is told with emphasis upon the mapmakers and the methods and apparatus they used rather than upon the charts and maps which they produced. A selective bibliography representative of the literature on cartography arranged under 15 broad subject groupings covers 33 pages at the conclusion of the book. The illustrations number 91, aside from the end papers, which reproduce two Dutch maps of 1583. The author is connected with the Peabody Institute Library Baltimore.

LOW JULIAN W

Plane table mapping. New York Harper & Brothers 1952 364 p illus. 20 cm. (Harper's geoscience series Carey Croneis, editor) $4.50 1858

Contents: Concepts and definitions. Elementary plane table surveying. Plane table triangulation. Small and intermediate scale mapping. Large-scale mapping. Reconnaissance mapping. Adjustments of instruments. Care and repair of instruments. Characteristics of vertical aerial photographs. Plane table applications of vertical photographs. Drawing instruments and their uses. Methods and practice in map construction. Appendix. Index.

Note. A thorough textbook and handbook on the use of the plane table in the construction of engineering and geological maps. The treatment is well organized and the publisher has given the book an excellent format for its intended use. The author is a geologist on the staff of the California Company.

ROBINSON ARTHUR HOWARD

The look of maps an examination of cartographic design. Madison The University of Wisconsin Press, 1952 105 p illus. 24 cm. $2 75 1859

Contents: Toward a better cartography. The cartographic technique. Cartography as a visual technique. The importance of lettering. The style of lettering. The employment of lettering. Map structure. Map design. Color in cartography. The employment of color. A selected bibliography.

Note. As the subtitle indicates, this book is a study of the visual or graphic design aspects of maps. It is written for cartographers and others who may be concerned with the design of maps, and from this viewpoint it presents the current scientific knowledge of the legibility of type faces, the pertinent factors in color perception, etc. Selected bibliographies are included.

SHARP H. OAKLEY

Practical photogrammetry New York The Macmillan Company 1951 229 p. illus. 21 cm $3 75 1859a

Contents: Part I. Photogrammetry. Cameras. Perspective. Terrestrial photographic surveying. Aerial photogrammetry. Stereoscopic. Classification of maps. Control surveys. Planimetric and topographic details. Part II. Practical applications. Tilt and rectification. Flying along an aerial survey. Specifications for aerial photography and mapping. Appendix. Index.

Note. A compact, introductory survey of fundamentals, current techniques, and uses of photogrammetry written for engineering students and graduate engineers rather than for aerial photographers and specialists in photogrammetry. Among the 80 figures are numerous reproductions of photographs of plotting equipment and related devices. There is no bibliography.

SWANSON, L. W AND OTHERS

Topographic manual. Part II, Photogrammetry Washington D C. Government Printing Office 1949 570 p. illus. 26 cm. (United States. Coast and Geodetic Survey Special publication no. 249) $3.25 1860

Contents (abridged) Preliminary office procedures. Requirements for map accuracy. Outline of operations. Equipment and instruments for photogrammetric offices. Aerial photography by R. M. Berry. Coast and Geodetic Survey use of aerial photographs. Season and weather. Cameras and materials. Airplanes. Instruments, and accessories. General instructions for aerial photography. Flight planning. Photogrammetric theory by G. C. Tewinkel. Laboratory processing and records. Optical principles. The vertical aerial photograph. Tilt determination. Stereoscopy. The near-vertical photograph. Determination of the average scale. Radial plot procedures. Determination of photograph location. Control stations of photographs. Projection and grid construction. Control photographs with hand data. Radial plot assembly of nine-lens photographs with hand templets. Radial plot assembly of single-lens photographs. Map templets—with mechanical templets. Direct radial plotting. Orientation and manuscript delineation. Photograph interpretation.

adjustment for deflection. Three-point sextant fixes. Scaling of positions. Stereoscopic plotting instruments, by G. C. Tewinkel: The nine-lens method. The multiplex projector. The stereoplanigraph. Records and reports, by R. G. Jones: Records and reports for photogrammetric mapping. Smooth drafting and publication. Map revision. Coordination of photogrammetric and hydrographic surveys. Trimetrogon mapping. The Schneider stereoscope. Reference books. Index.

Note: The work describes, with appropriate illustrations, the methods of Coast and Geodetic Survey in the making of maps from aerial photographs. The publication is the second part of complete Topographic Manual being prepared by the Coast and Geodetic Survey Part (not yet published) contains the requirements and detailed instructions for field topographic surveys, including plane table surveys without using aerial photographs and photogrammetric field surveys made for the compilation of maps from aerial photographs.

THOMAS PAUL D

Conformal projections in geodesy and cartography Washington, D C. United States Government Printing Office 1952 142 p. illus. 26 cm. (United States. Coast and Geodetic Survey Special publication no. 251) Paper $0 60 1861

Contents (abridged) Mapping formulas: Mercator projection—transverse Mercator projection—oblique Mercator projection. Lambert conformal conic projection—one standard parallel—two standard parallels Stereographic projection—polar—meridian—horizon—polar coordinates for the stereographic projections of the sphere. Derivation of mapping formulas. Bibliography Index.

Note The mathematical formulas for the various projections named in the above table of contents are collected in the first 15 pages of this work for the convenience of those who are practically concerned with geodetic computations and cartography The remainder of the space is devoted to short account of complex variable theory and to derivations of the formulas. Short accounts of the history of each projection are included. The publication supersedes O. S. Adams, *General theory of the Lambert conformal conic projection*, Washington, D C., 1918, and includes material selected from several other publications of the Coast and Geodetic Survey

UNITED STATES. LIBRARY OF CONGRESS. MAP DIVISION

Three-dimensional maps an annotated list of references relating to the construction and use of terrain models. Compiled by Walter W Ristow Washington The Library of Congress, 1951 43 p. 26 cm. Paper $0.35 1862

Note The 234 references cited in this bibliography provide comprehensive listing of articles and books published from 1644 to June, 1951. Most of the references cover publications of the past ten or twenty years and describe the construction and use of terrain models made of plaster of Paris, plastics, and rubber. The entries are annotated and arranged alphabetically by author. A brief subject index is included.

STRESS ANALYSIS AND THEORY OF STRUCTURES

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on dynamic stress determinations. Presented at the Pacific Area National Meeting San Francisco California, October 11 1949 Philadelphia American Society for Testing Materials, 1950 61 p. illus. 23 cm. (Special technical publication no. 104) Paper $1.50 1863

Contents: Introduction, by H. D. Eberhart. Analysis and interpretation of dynamic records, by H. C. Roberts. Survey of pickups for dynamic physical measurements, by G. E. White. Selection of recording equipment for dynamic testing, by K. D. Swartzel. Some examples of dynamic testing in the field of materials and structures, by D. McHenry and H. K. Hosticka.

Note: A collection of original papers in which recently developed devices and techniques for the analysis of dynamic forces operating on foundations and structures are compactly described. The final paper includes an extensive bibliography

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on structural sandwich construction. Presented at the fifty fourth annual meeting American Society for Testing Materials Atlantic City N J June 21 1951 Philadelphia American Society for Testing Materials, 1952 114 p. illus. 23 cm. (Special technical publication no. 118) Paper $2.00. 1864

Contents: Introduction, by A. G. H. Dietz. Developments and trends in lightweight composite construction, by L. J. Markwardt. Sandwich construction in the elastic range, by H. W March. Strength of sandwich construction, by C. B. Norris. Compressive and torsional instability of sandwich cylinders, by G. Gerard. Paper honeycomb as core for structural sandwich construction, by E. W Kuenzi. Aluminum honeycomb sandwich construction, by T P Pajak. Some developments in structural sandwich building panels having inorganic cores, by G. M. Rapp. Fabrication techniques for structural sandwich constructions, by B. G. Heebink.

Note. Sandwich constructions consisting of thin strong facings bonded to lightweight cores are designed to provide strong light structures. These papers describe the composition, engineering properties, and methods of testing various types of "sandwiches." They have been prepared by experts in this field and report on experimental work conducted by the authors. Bibliographies and brief discussions are included. Of interest to structural engineers and architects.

BLEICH FRIEDRICH

Buckling strength of metal structures. With the collaboration of Commander Lyle B Ramsey Edited by Hans H. Bleich. New York McGraw Hill Book Company 1952 508 p 24 cm. (Engineering Societies monographs Ralph H. Phelps, consulting editor) $10 00 1865

Contents: Buckling of centrally or eccentrically loaded columns. The mathematical treatment of stability problems and the stability criteria. Buckling of centrally loaded columns by torsion and flexure. Lateral buckling of beams. Built-up columns and columns of variable stiffness. The stability of frameworks. The effective length of compression members in trusses and the stability of rigid frame structures. Stability of axially compressed bars elastically supported at specific points. Local buckling of plate elements of columns. Rectangular plates with longitudinal stiffeners. Stability of web plates of girders. Special problems in the design of ship plating. Author index. Subject index.

Note: The result of planned effort sponsored by the Bureau of Ships of the United States Navy to assemble reliable data on the analysis of fabricated steel structures under compressive loading. The literature of the subject has been surveyed, critically evaluated, and useful data and methods have been synthesized to form manual for practical use by graduate engineers. Not only are the larger aspects of the subject, such as are mentioned in the chapter titles, covered, but there are also discussions of many small points, such as the safety factor in short columns as compared to long columns. The methods and formulas presented are particularly applicable to the design of ship hulls and other heavy structures. The book is not intended for use in the design of light structures such as airplane frames.

COX, GLEN NELSON AND OTHERS

Strength of materials By Glen N Cox, Frank J Germano and John H. Bateman. New York Pitman Publishing Corporation, 1951 408 p. illus. 24 cm. $5.50 1866

Contents Stress and strain. Materials testing and properties of materials Riveted and welded joints: thin-walled cylinders and spheres. Torsion. Shearing force and bending moment in beams. Simple stresses in beams. Combined stresses. Special beams and beams of two materials. Deflection of statically determinate beams. Stat-

cally indeterminate beams. Columns. Fatigue of metals. Stresses caused by impact and energy loads. Curved beams. Appendixes: Moment-distribution method for continuous beams. Tables. Index.

Note: A clear explicit style and conformity to recently published experimental results and to major U. S. A. building codes are features of this introductory textbook. Current building techniques, such as the making of welded joints by shielded arcs, have been taken into account. The theory of columns is discussed in the light of Ryder's A rational explanation of column behavior, which appeared in 1948. Both the moment-distribution method and the theorem of three-moments for the solution of continuous beam problems are explained. A generous number of solved problems are included in the exposition.

DEN HARTOG JACOB PIETER
Advanced strength of materials. New York McGraw Hill Book Company Inc., 1952 379 p. illus. 24 cm. $8.50. 1867

Contents: Torsion. Rotating disks. Membrane stresses in shells. Bending of flat plates. Beams on elastic foundation. Two-dimensional theory of elasticity. The energy method. Buckling. Miscellaneous topics. Problems. Answers to problems. Index.

Note: A textbook designed for engineering college students who have completed an introductory course in strength of materials. The author describes it as an intermediate book designed to bridge the gap between elementary texts and advanced treatises on elasticity. It has been developed from material used in two courses offered to senior and graduate students at Massachusetts Institute of Technology.

DEN HARTOG JACOB PIETER
Strength of materials. New York McGraw Hill Book Company Inc., 1949 323 p. illus. 24 cm. $5 00 1868

Contents: Tension. Torsion. Bending. Compound stresses. Deflections of beams. Special beam problems. Cylinders and curved bars. The energy method. Buckling. Experimental elasticity. Problems. Answers to problems. List of formulas. Index.

Note. An introductory textbook for engineering college students who have completed an introductory course in mechanics. Though intended for use in a short course, the author has included more material than can be taught in such a course, thus giving instructors a choice of material. Special features include a full treatment of the Mohr's circle method for stresses and also for moments of inertia and strains, the use of cantilever formulae in the solution of beam problems, and brief accounts of the principles of photoelastic techniques and strain gages. The author is Professor of Mechanical Engineering in Massachusetts Institute of Technology.

FREUDENTHAL ALFRED M
The inelastic behavior of engineering materials and structures. New York John Wiley & Sons Inc. 1950 587 p illus. 23 cm. $9.50 1869

Contents (abridged): Part A, The structural aspect of mechanical behavior: The structure of matter. Structural theories of deformation. Part B, Mechanics of inelastic deformation. Mechanical variables. Linear behavior. Plasticity. Work hardening of polycrystalline metals. Creep and relaxation. Inelastic behavior under dynamic conditions. Fracture. Rheological behavior of suspensions and gels. Part C, Application of the mechanics of inelastic behavior: Plasticity. Work hardening and creep. Author index. Subject index.

Note: A contribution of considerable importance to the understanding of the behavior of engineering materials when they are stressed beyond the elastic limit. The subject has application to such techniques as the rolling of metals, the drawing of wires, the design of structural parts so as to avoid failure by fracture and creep. Basic physical principles interpreted in terms of the Bohr atom are emphasized, but there are frequent references to applications and testing methods. The book was developed from notes prepared for a graduate course at the University of Illinois, and its audience is graduate engineering students and practicing engineers.

FROCHT MAX MARK
Strength of materials a first course. New York The Ronald Press Company 1951 493 p. illus. 24 cm. $6 00 1870

Contents: Basic concepts. Statically determinate stresses in tension and bending. Statically determinate stresses due to internal pressure and torsion. Basic concepts of strain and axial deformation. The states of stress and strain at a point. The significance of static stresses and strains in design: photoelastic patterns. Shear and bending moments. Stresses in symmetrical beams. Failure under steady and alternating stresses. Torsion in circular shafts. Deflections of beams. Statically indeterminate beams. Columns and curved beams. Riveted joints and nonhomogeneous beams. Appendixes. Index.

Note: (1344) An engineering college textbook written by a well-known authority in photoelasticity and other methods of experimental stress analysis. The author has taken particular pains to emphasize the practical aspects of the subject and to describe contemporary methods. Among the numerous illustrations are a number of photographs of stress patterns obtained by photoelastic techniques. The book supersedes a text of the same title written by the author and M. C. Riggs, published in 1938. Only one chapter has been carried over from that book without extensive revision.

GRINTER, LINTON ELIAS
Theory of modern steel structures. Revised edition. New York The Macmillan Company 1949 2 vol. illus. 24 cm. Vol. I, $5.00 Vol. II, $5.25 1871

Contents: Vol. I, Statically determinate structures. Introduction. The theory of stress analysis. Industrial buildings. Industrial loading tests. Truss bridges—dead loading—highway loading—railway loadings. Lateral and portal bracing of bridges. The plate girder. Office and commercial buildings. Wind stresses in tier buildings. Index. Vol. II, Statically indeterminate structures and space frames. Analysis and design of indeterminate structures. Framed structures in space. Deflections of structures. Classical methods of analysis of indeterminate structures. Analysis of continuous frames by moment distribution. Analysis of continuous frames by balancing end angle changes. Influence lines and maximum moment curves for continuous, movable and long-span bridges. Analysis of arches and closed rings. Index.

Note: (1346) A successful introductory textbook for engineering colleges. It is used also for self-instruction and review by practicing engineers. Addressed to those who are preparing for careers in structural engineering, it provides not only reliable expositions of modern methods of stress analysis and structural design but, also, mentions outstanding names and structures in the development of structural engineering and pictures ancient and modern structures. Both graphical and algebraic methods of analysis are explained. Important revision and additions were made in preparing this edition.

HARRIS CHARLES OVERTON
Elementary structural design. Chicago American Technical Society 1951. 163 p. illus. 29 cm. $4 90. 1872

Contents: Fundamentals. Equilibrium. Centroid of an area. Moment of inertia. Simple stress and strain. Beams. Beams of standard section. Deflection of beams. Statically indeterminate beams. Reinforced-concrete floor slabs. Bending combined with tension or compression. Compression members. Structural connections. Answers to problems. Index.

Note: A home-study text that is exceptionally well written and well organized. The discussions are full and clear, and the author has included a generous number of worked examples. There are many illustrations—most of them diagrams—and also practice problems and review problems.

HARRIS CHARLES OVERTON
Strength of materials. Chicago American Technical Society 1949 212 p. illus. 29 cm. $4 90 1873

Contents. Introduction to strength of materials. Equilibrium of bodies. Simple stress and strain. Centroid of an area. Moment of inertia of area. Riveted, bolted, or welded joints. Stresses in beams. Bending moment combined with tension or compression. Shafts subjected to torsion. Bending moment combined with torque. Compression members. Repeated stress. Answers to problems. Index.

Note. An elementary text designed to acquaint engineering students with the fundamental principles and methods of analyzing and determining the strains and stresses in engineering materials, and the methods of adapting this knowledge to the design of structural and machine members. Special attention is given to the analysis and design of welded joints. The liberal use of worked examples, review problems, summaries, and illustrative diagrams makes the volume suitable for self-instruction as well as for study in organized classes.

HAYDEN, ARTHUR GUNDERSON AND MAURICE BARRON

The rigid-frame bridge. Third edition. New York John Wiley & Sons Inc., 1950. 240 p. illus. 24 cm. $6.00 1874

Contents: Principles of the rigid-frame bridge. Indeterminacy Theory of indeterminate analysis. Calculations for symmetrical single-span concrete frame bridge, hinged-end conditions. Calculations for unsymmetrical *single-span concrete frame bridge.* Calculations for symmetrical single-span steel-girder frame bridge. Theory and design of double-span frame bridge. Theory and design of skewed concrete frame bridges. Practical points of design and construction. General notes on rigid-frame bridges. Research in rigid-frame bridges. Architecture of short-span bridges.

Note: (1437) The principal engineering book on type of bridge which is much used these days to carry roads and streets over parkways and other arterial highways. The book is addressed to engineers who are concerned with the design of such bridges. The important changes made in preparing this edition include new simplified method for the analysis of skewed arch and frame bridges. The illustrations include photographs of several of the rigid-frame bridges constructed over the parkways of Westchester county in the state of New York.

HETÉNYI MIKLÓS IMRE, editor

Handbook of experimental stress analysis. New York John Wiley & Sons, Inc. 1950 1077 p. illus. 23 cm. $15 00 1875

Contents: Mechanical properties of materials, by C. W MacGregor. Testing machines, by J Marin. Mechanical gages and extensometers, by L. H. Donnell and W T Savage. Optical methods of strain measurement, by J. L. Meriam. Electrical-resistance gages and circuit theory by C. O. Dohrenwend and W R. Mehaffey. Electro-inductance gages, by B. F Langer. Electric-capacitance gages, by B. C. Carter and others. Motion measurements, by J. Ormondroyd and others. Strain rosettes, by J H. Meier. Working stresses, by C. R. Soderberg. Residual stresses, by O. J. Horger. Methods of crack detection, by C. Lipson. Interpretation of service fractures, by R. E. Peterson. Brittle models and brittle coatings, by M. Hetényi. Structural model analysis, by J R. Wilbur and C. H. Norris. Analogies, by R. D. Mindlin and M. G. Salvadori. Photoelasticity: Fundamentals and two-dimensional applications, by T J Dolan and W M. Murray. Three-dimensional photoelasticity by D. C. Drucker. X-ray analysis, by C. S. Barrett. Appendices: Fundamentals of the theory of elasticity by S. P Timoshenko. Dimensional analysis, by J. N. Goodier. The precision of measurements, by M. Hetényi. Index.

Note: This work is comprehensive handbook of information on all of the important techniques of experimental (as contrast to mathematical) stress analyses which are currently of interest to engineers. In the typical chapter essay" information on basic principles, uses, and limitations of the particular technique under discussion is combined with tabulated data, pertinent illustrations, and an extensive bibliography of related literature. Most of the authors are engineers associated with manufacturing corporations or are professors of engineering in outstanding schools of technology. The book is addressed primarily to graduate engineers.

HICKERSON THOMAS FELIX

Statically indeterminate frameworks. Third edition. Chapel Hill The University of North Carolina Press 1949 202 p. illus. 29 cm. $5.00 1876

Contents: Part I, Members with constant moment of inertia: Preliminary considerations. *Fixation factors and bending moments.* Analysis of continuous beams and frames—no sidesway—full sidesway. Building frames—vertical loads—horizontal forces. Part II, Members with variable moment of inertia: Bending moments and fixation factors. Beam deflections. Appendices: Tables. Tall building frames subjected to wind forces—analyses by approximate methods. Derivation of formulas for beam and load coefficients.

Note: (1397) *A presentation of original methods. The first edition* appeared in 1934 under the title *Structural frameworks*, and the second edition appeared in 1937 with the same title as the present edition. The analytical methods have been extended and refined in each successive edition. The third edition is careful revision in which some material that appeared in the second edition has been omitted, and new analytical methods for trapezoidal frames and bents and for determining wind moments in tall building frames have been added. Also new tables and new worked examples have been inserted here and there. The book is of interest to graduate engineers as well as to students.

LEE, GEORGE HAMOR

An introduction to experimental stress analysis. New York John Wiley & Sons, Inc., 1950. 319 p. illus. 23 cm. $5.50. 1877

Contents: An introduction to the theory of elasticity. *Stress determinations from strain measurements. Structural similitude. Strain* gages. The variable resistance wire strain gage. Photoelasticity—optical apparatus. Photoelasticity—experimental procedure. Analogies. The brittle lacquer method. Miscellaneous methods in experimental stress analyses. Experimental considerations. Name index. Subject index.

Note: A survey of currently practical methods without undue emphasis on any one method. The contents were developed from notes prepared by the author used in the course at the United States Naval Postgraduate School, and the book is intended for readers with previous education in engineering. Specific techniques and testing instruments are both described. In many instances pictures of the instruments are included. Each of the chapters concludes with well-selected bibliography of the international literature.

MURNAGHAN FRANCIS DOMINIC

Finite deformation of an elastic solid. New York John Wiley & Sons Inc., 1951 140 p. 24 cm. (Applied mathematics series, edited by I. S. Sokolnikoff) $4.00. 1878

Contents: Vectors and matrices. The specification of strain. The connection between stress and strain. Isotropic elastic media. Non-isotropic elastic media. Simple shear and tension. Particular problems. Index.

Note: An important contribution to the literature of the theory of elasticity. In it, methods of analysis based largely on matrix algebra are provided for the computation of the small deformations that occur in solids under stress. These minute deformations are usually ignored in conventional design, but they are important in connection with the design of highly stressed structural members such as the rotor blades of gas turbines. In the final chapter, matrix algebra is applied to the solution of problems involving the compression of the spherical shell, circular tube, and the torsion of circular cylinder.

NADAI, ARPÁD

Theory of flow and fracture of solids. Second edition. Volume one. New York Mc Graw-Hill Book Company Inc. 1950. 572 p. illus. 23 cm. (Engineering Societies monographs, *Ralph H. Phelps consulting editor*) $11.00 1879

Contents (abridged) Part I, Deformation of solids, analysis of stress and strain. Elastic and permanent deformation. Behavior of matter under high pressure. The ordered and unordered states of matter. Crystalline structure in metals. Mechanism of plastic deformation in the grain structure. Theory of the tensile test. Mohr's representation of stress. Finite homogeneous strain without rotation. Finite plane strain. Vector geometry of stress and strain. Part II, The yielding of solids, particularly of the metals under simple states of stress. Rules in the new theories of flow of solids. Strain and flow figures. Compression. Torsion of round bar. Plastic bending of beam. Buckling after the yield point is exceeded. Part III, The elastic, the very viscous, the ideally plastic substance and some of their generalizations: Isotropic elastic solid. Steady slow flow of very viscous substance. Ideally plastic substance. Constrained flow of ideally plastic material. Theory of the plastic deformation of flat rings or disks. The problem of plastic torsion. The flow layers in twisted bars of mild steel. Theory of the surfaces of slip. Index.

Note: (1141) The author's *Plasticity* has been recognized for the past two decades as major contribution to the knowledge of the behavior of solids when strained beyond the elastic limit. Much work has been done in the field in recent years because of the pertinence of the subject to the design of the machines operating at high speed or under high pressures, such as gas turbines; consequently in the present revision under new title both the content and length of the original work have been extended to include phenomena associated with *fracture as well as that associated with plastic* deformation.

PARKER, HARRY

Simplified mechanics and strength of materials. New York John Wiley & Sons, Inc., 1951 275 p. 20 cm. $4 00 1880

Contents: Mechanics and strength of materials. Forces. Forces acting on bodies. Moments of forces. Stresses and deformations. Properties of sections. Shearing stresses in beams. Bending moments in beams. Continuous and restrained beams. Deflection of beams. Bending stresses, design of beams. Built-up beams of two materials. Columns. Rivets and welds. Torsional stress and shafts. Stresses in pipes and tanks. Reinforced concrete. Retaining walls and dams. Index.

Note. The sixth of Professor Parker's "simplified" books. Like the others, the matter in this book is not so much simplified as it is brief and clear. The book [illegible] purpose is to give craftsmen, engineering students, architects and others [illegible]ho need an understanding of mechanics and strength of materials [illegible] working knowledge that can be put to practical use. The topics have been carefully selected, and the exposition contains numerous worked examples. The mathematics employed includes only arithmetic and algebra.

PRAGER, WILLIAM AND PHILIP G HODGE, JR.

Theory of perfectly plastic solids. New York John Wiley & Sons, Inc., 1951 264 p 24 cm. (Applied mathematics series edited by I S. Sokolnikoff) $5.50. 1881

Contents Basic concepts. Trusses and beams. Torsion of cylindrical or prismatic bars. Plane strain problems with axial symmetry—general theory—specific problems—contained plastic deformation—limit analysis. Extremum principles. Author index. Subject index.

Note An introduction for senior and graduate students of engineering and applied mathematics. Some previously unpublished material on limit analysis is included, along with the published contributions of such scientists as von Kármán, von Mises, Nadai, and Prandtl. The mathematical level is best described in the authors' own words "The mathematical background expected from the reader is that necessary for advanced strength of materials or elementary theory of elasticity. The authors have attempted to refrain from indulging in mathematics for mathematics' sake. On the other hand they did not hesitate to use the mathematical tools and techniques best fitted for the problems under discussion

SECHLER ERNEST EDWIN

Elasticity in engineering Galcit aeronautical series. New York John Wiley & Sons Inc. 1952 419 p. illus. 24 cm. $8.50. 1882

Contents Part 1 Fundamental equations and analysis methods. Introduction. Uniform stress conditions. Non-uniform stress conditions. Stress conditions. Stress-strain relations. The stress function. Elastic energy principles. Part 2 Engineering problems in stable structures. Two-dimensional stress problems. Theory of simple beams. Continuous and redundant structures. The torsion problem. Stable plates and shells. Part 3 Engineering problems in instability. Columns. Beam columns. Instability of plates and shells. Index.

Note An intermediate level text for engineering college students and graduate engineers. Methods of analysis which have proved useful in connection [illegible]ith the design of aircraft structures are emphasized, but the usefulness of the methods covered [illegible] not limited to the aeronautical field.

SEELY FRED B AND JAMES O SMITH

Advanced mechanics of materials Second edition. New York John Wiley & Sons Inc. 1952 680 p illus. 24 cm. $8 50. 1883

Contents Part one Preliminary considerations. Analysis of subject. Elementary stress formulas for static loads. Stresses and strains at [illegible] point. Theories of failure by yielding. Part two Special topics on the strength and stiffness of members subjected to static loads. Shear center for [illegible] cross section of [illegible] beam. Unsymmetrical bending. Curved flexural members. Beam on continuous elastic support. Flat plates. Torsional resistance of bars having non-circular cross sections. Thick [illegible]alled cylinders. Contact stresses. Part three. Localized stress—stress concentrations. Values and significance of localized stresses in various members. Part four Energy methods. Deflection of members and simp[illegible] structures by Castigliano [illegible] theorem. Deflection of members and simple structures by unit load or dummy load method. Forces and moments in statically indeterminate members and structures. Part five, Influence of small inelastic strains on the loading-carrying capacity of members: Effect of small inelastic strains in axially loaded members and in straight beams. Effect of small inelastic strains for combined bending and axial loads. Introduction to ultimate load analysis of statically indeterminate members. Part six, Introduction to instability—buckling loads. Buckling of cylindrical tubes under uniform external pressure. Appendixes. A brief introduction to the mathematical theory of elasticity. The elastic-membrane (soap-film) analogy for torsion. Properties of an area. Index.

Note: (3345) Although organized as [illegible] textbook with numerous problems for the reader to solve, the content of this book is sufficiently advanced and comprehensive enough to make it useful to graduate engineers. Somewhat more advanced methods are covered than are found in introductory books, and some more specialized problems are analyzed. The first edition was published in 1932 and was the work of Professor Seely alone. Though intended for the same audience as the first edition, the book has now been rewritten throughout and is essentially new. Although the theory of elasticity is not used in the body of the work it is outlined in the first appendix, and compared to the method of ordinary mechanics in the analysis of stresses and strains.

SLOANE, ALVIN

Mechanics of materials. New York The Macmillan Company 1952 468 p. illus. 24 cm. $5 50 1884

Contents. Introduction to mechanics of materials. Bending. The basic flexure theory. Corollary I—The longitudinal shear theory. Corollary II—The deflection theory. Violations of the limitations of the flexure theory. Torsion. Column theory. Combined loading. Elastic strain energy. Mechanical properties of materials. Additional uses of Mohr's circle. Appendix. Tables. Index.

Note A textbook for first courses in this subject in engineering colleges. It has [illegible] number of unusual features such as the introduction of Mohr's circle in the first chapter and frequent use of the concept in later exposition. The author is Associate Professor of Mechanical Engineering in Massachusetts Institute of Technology

SUTHERLAND HALE, AND HARRY LAKE BOWMAN

Structural theory Fourth edition. New York John Wiley & Sons Inc., 1950. 394 p. illus. 23 cm. $5 50 1885

Contents: Reactions and stresses. Graphic statics. Roof trusses. Truss and girder bridges. Long-span bridges. Lateral bracing and portals. Slope and deflection. Rigid frames. Wind stresses in tall building frames. Indeterminate trusses. Secondary stresses. Space frameworks. Index.

Note (3414) A long-established introductory text for engineering college students. It is concerned with the design of trusses, rigid frames, and space frameworks and omits more difficult structures such as the suspension bridge. There is some emphasis on the use of graphic methods in the solution of problems. The scope and arrangement are [illegible] unchanged from the preceding edition; but [illegible] fair amount of material has been added on such matters as the solution of compound trusses by means of the Williot Mohr diagram and the use of the theorem for virtual work in reaction and truss stress computations. The chapter on rigid frames has been considerably expanded.

SYMPOSIA IN APPLIED MATHEMATICS

Proceedings. Volume III Elasticity New York McGraw Hill Book Company Inc., for the American Mathematical Society 1950. 233 p. 26 cm. $6.00 1886

Contents. Approximate methods of solution of two-dimensional problems in anisotropic elasticity by I. S. Sokolnikoff. Some mixed problems in anisotropic [illegible]lasticity, by I. S. Sokolnikoff. Some mixed problems in [illegible] concentrated loading, by O. E. Hay. On unsymmetrical deformations of thin shells of revolution, by E. Reissner. On asymptotic integration in shell theory, by F. B. Hildebrand. Some recent applications of the theory of finite [illegible]lastic deformation, by R. R. Seth. Elastic stability of the facings of sandwich columns, by H. W. March. Dynamic loads on thin plates on [illegible]lastic foundations, by D. L. Holl. Kirchhoff's boundary conditions and the edge effect for elastic plates, by K. O. Friedrichs. Some problems in the bending of thin plates, by G. F. Carrier and F. S. Shaw. Prestressing [illegible] plane circular plates to stiffen it against buckling (abstract) by J. J. Stoker. The bending of thin elliptic plates, by C. L. Perry. New methods for the

estimation of torsional rigidity by A. Weinstein. Stress fields of axially symmetric shafts in torsion and related fields, by H. Poritsky. Stress analysis in elastic-plastic structures, by W Prager and P S. Symonds. Elastic plastic straining (abstract) by Sir R. Southwell. A graphical method for solving problems in plane plasticity by N Coburn. On stress discontinuities in plane plastic flow by E. H. Lee. References to papers by L. H. Donnell and others. Index.

Note: Collected in this volume are the papers presented at the third Symposium in Applied Mathematics, held at the University of Michigan in June, 1949. The papers illustrate applications of advanced mathematics to problems in elasticity and plasticity and in many instances describe recently developed methods of attack. Aside from four exceptions, the texts are printed in full and are usually accompanied by bibliographies.

TIMOSHENKO STEPHEN AND J N GOODIER

Theory of elasticity Second edition. New York McGraw Hill Book Company Inc. 1951 506 p illus. 24 cm. (Engineering Societies monographs Ralph H. Phelps, consulting editor) $9.50 1887

Contents: Introduction. Plane stress and plane strain. Two-dimensional problems in rectangular coordinates. Two-dimensional problems in polar coordinates. The photoelastic method. Strain energy methods. Two-dimensional problems in curvilinear coordinates. Analysis of stress and strain in three dimensions. General theorems. Elementary problems of elasticity in three dimensions. Torsion of prismatical bars. Bending of prismatical bars. Axially symmetrical stress distribution in solid of revolution. Thermal stress. The propagation of waves in elastic solid media. Appendix: The application of finite difference equations in elasticity. Author index. Subject index.

Note: (34141) In this book the fundamentals of the theory of elasticity are presented, together with solutions of special problems and descriptions of approximate and experimental methods for solving elasticity problems. Because practical applications of the theory of elasticity are emphasized, consideration of matters of chiefly theoretical interest is omitted. Bibliographical references are given in footnotes for the benefit of those desiring to study special problems in more detail. The second edition is expanded by nearly 100 pages in comparison with the 1934 edition. The sections in the first edition dealing with the photoelastic method and thermal stress have been expanded and made into separate chapters presenting many methods and solutions not given in the original edition. An appendix has been added on the method of finite differences and its applications, including the relaxation method. New sections and paragraphs have been incorporated into other chapters.

VAWTER, JAMISON AND JAMES G CLARK

Elementary theory and design of flexural members. New York John Wiley & Sons Inc., 1950 215 p. illus. 23 cm. $4.50. 1888

Contents: Pure bending in homogeneous, symmetrical sections. Bending in nonhomogeneous, symmetrical beams. Elementary design of steel beams and girders. Elementary design of steel columns with bending. Elementary design of reinforced concrete beams and columns. Bending in unsymmetrical sections. Bending in special beams including those with thin webs. Appendix Illustrative design of floor in timber. Index.

Note: An engineering college textbook intended for use in intermediate courses offered to students who have had basic course in strength of materials. In effect it is first book in practical design and as such is of potential interest to architects, practical builders, etc., who need an introduction or refresher on the engineering aspects of elementary structural design. The authors are Professors of Civil Engineering in the University of Illinois.

WESTERGAARD HAROLD MALCOLM

Theory of elasticity and plasticity Cambridge, Mass. Harvard University Press, 1952 176 p illus. 22 cm. (Harvard monographs in applied science. No. 3) $5.00 1889

Contents: Scope Historical notes Stress. Strain, Hooke's law the basic equations of elasticity and the simplest possible laws of plasticity Stress potential and applications to hollow cylinders and spheres, inertia forces, and thermal stresses. Galerkin vector, twinned gradient, and applications including effects of single force. Index of authors Index of subjects

Note: The theory of elasticity (with some references to plasticity) is presented very concisely and on fairly advanced level in this book. Considerable attention is given to the historical aspects, not only in the chapter "Historical notes, but to some extent in other chapters also. The author himself is responsible for many advances in the application of mathematics to the solution of practical engineering problems involving elasticity and his book is the essence of lectures which he gave for many years at Harvard University where he was until his death Gordon McKay Professor of Civil Engineering.

WILLIAMS, CLIFFORD DAVID, AND ERNEST C HARRIS

Structural design in metals. New York The Ronald Press Company 1949 596 p illus. 24 cm. $7 00. 1890

Contents: Introduction. Rivets, bolts and pins. Welding. Selection of sections. Connections. Plate girders. Trusses. Bracings. Light gage structural members. Fatigue of structural members. The rigid frame. Appendices. Index.

Note: An engineering college textbook which has several interesting features. Equal attention is given to welding and to riveting as techniques for the joining of structural metals. The structural aluminum alloys are considered along with steel. The method of exposition is to explain the design of structural elements and details rather than complete structures, thus enabling the student to acquire knowledge which is applicable to all types of structures from roof trusses to frames for airplanes. The appendix contains useful standard information and specifications.

CONCRETE CONSTRUCTION

AMERICAN SOCIETY OF CIVIL ENGINEERS

Design of cylindrical concrete shell roofs. Prepared by the Committee on Masonry and Reinforced Concrete of the Structural Division through its Subcommittee on Thin Shell Design. Adopted October 21 1951 New York American Society of Civil Engineers 1952 177 p illus. 23 cm. (American Society of Civil Engineers. Manuals of engineering practice. No. 31) $5.00 1891

Contents: Introduction. History of shell design theories. Design procedure. Design examples, long shells, simply supported. Design example, long shells, continuous over support. Design example, short shell simply supported. Design of transverse stiffeners. Effect of continuity of shell and transverse stiffener. Elastic stability of shells. Appendixes: References on the design of barrel shells. Theory Notation.

Note An authoritative manual with two expressed purposes: to facilitate the task of designing shells and to introduce the engineer to the mathematical theory of shell design. The first part on practical design runs to 99 pages and is supplemented by an 8-page bibliography. It contains numerous tables and charts which greatly reduce the amount of computation usually required in the design of this type of structure.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on use of pozzolanic materials in mortars and concretes presented at the first Pacific Area national meeting of the American Society for Testing Materials, San Francisco, Calif., October 10–14 1949 Philadelphia American Society for Testing Materials, 1950 203 p. illus. 23 cm. (American Society for Testing Materials. Special publication no 99) Paper $2.50 1892

Contents: Introduction, by T E. Stanton. Pozzolanic materials and their use in concrete, by R. E. Davis Pozzolans used in mass concrete, by H. S. Meissner. Experience with pozzolanic materials in Kansas, by C. H. Scholer and R. L Peyton. Effect of calcination on natural pozzolans, by R. C. Mielenz and others Effect of the use of diatomite treated with air-entraining agents upon the properties of concrete, by R. E. Davis and A. Klein. Summary of methods for determining pozzolanic activity by W T. Moran and J. L. Gilliland.

Strength, volume change and sulfate resistance of mortars containing portland-pozzolan cements, by R. E. Davis and others. Studies of some method of avoiding expansion and pattern cracking associated with the alkali-aggregate reaction, by W. C. Lerch. Studies of use of pozzolans for counteracting excessive concrete expansion resulting from reaction between aggregates and alkalies in cement, by T. E. Stanton.

Note: Most of the papers in this volume relate to work done in the western and middle western states of the United States, particularly California, Colorado, Kansas, and Illinois. The first presents general review of present-day knowledge of pozzolans, their effect upon some of the properties of concrete, and their use in concrete construction. The papers that follow deal in more detail with various aspects of the topic. Most of them contain bibliographies.

BAUER, EDWARD EZRA

Plain concrete. Third edition. New York McGraw Hill Book Company Inc. 1949 441 p. illus. 24 cm. $6.50 1893

Contents. Part Introduction. Standard Portland cement. Special cements. Mineral aggregates, admixtures, and water. Theories of proportioning. Applied proportioning. Factors affecting concrete strengths. Making of concrete. Placing, finishing, and curing concrete. Durability, workability and waterproofness. Field control of concrete. Specifications. Sampling. Testing. Part II. Instructions for performance of laboratory tests. Appendixes. Index.

Note. (1449) A standard engineering college textbook on plain (as contrasted to reinforced) concrete. It is combination of descriptive material and fundamental engineering information. The descriptive matter gives the book some value as general reference book on the subject for home owners, small contractors, etc. In the present edition discussions of several new important developments has been introduced. A considerable part of the older matter has been revised, and many new illustrations have been added. Revised specifications has been substituted for those which have been superseded.

DALZELL JAMES RALPH AND GILBERT TOWNSEND

Concrete block construction for home and farm. Illustrations by Arthur E Burke. Chicago American Technical Society 1952 216 p. illus. 22 cm. $2 75 1894

Contents. Mortar types, properties, and uses. Concrete characteristics and mixing. Concrete formwork. Design and construction of footings. Foundations and waterproofing. Concrete masonry. Index.

Note (1617*) A simple manual for farmers and other persons ho desire practical information on the building of farm buildings, dwelling houses, and other small structures of concrete blocks. It is based on the authors' more comprehensive *Masonry simplified*, Chicago, 1948, 1 The numerous illustrations include reproductions of many drawings showing structural details in three dimensions. Specific information is given on proportioning mortar waterproofing, etc., as well as on laying up the blocks.

KOMENDANT AUGUST E.

Prestressed concrete structures. New York McGraw Hill Book Company Inc. 1952 261 p. illus. 24 cm. $6.00 1895

Contents General considerations. Physical properties of materials used for prestressed concrete structures—steel—concrete—deformations. Theory of design of prestressed structures—changes of forces and stresses in prestressed structure due to shrinkage and plastic flow—method of design—illustrative problems—prestressed trussed beams—illustrative problems—prestressed trussed girders—prestressed shells—illustrative problems. Representative prestressed structures. Appendix. Index

Note The heart of this book is the 130-page third chapter, in hich the design of prestressed concrete structures is presented in practical manner for the use of graduate engineers. The two preliminary chapters present background information, and the final chapter contains illustrations and descriptions of prestressed concrete structures of arious types such as bridges, dams, and tanks. There are 130 figures and occasional footnote references to the source literature, mostly German.

LARGE GEORGE ELWYN

Basic reinforced concrete design a problems method approach. New York The Ronald Press Company 1950 340 p illus. 24 cm. (A volume of a series in civil engineering, Advisory editorial committee Lorenz G Straub and others) $5.50 1896

Contents Introduction. Beams. Bond, shear, diagonal tension and anchorage. Columns. Continuity. Buildings—design of beam and girder floors. Two-way and flat slab floors. Footings. Appendix. Index.

Note. An introductory textbook for college students of civil engineering which is organized for easy comprehension. In most of the chapters terms such as "bending moment" are explained concisely but clearly and the definitions are followed by series of worked examples of typical problems in reinforced concrete design. Problems for students to solve also are included. The illustrations include portraits of engineers who have made substantial advances in reinforced concrete design. The author is Professor of Structural Engineering in Ohio State University

UNITED STATES BUREAU OF RECLAMATION

Canal linings and methods of reducing costs. Washington, D C. Government Printing Office, 1952 69 p. illus. 23 cm. Paper $0.25 1897

Contents: Introduction. Types of canal linings. Concrete linings. Shotcrete linings. Asphaltic linings. Earth material linings. Membrane linings. Standardization of canal sections. Justification for canal lining. Seepage investigations. Appendix: Canal linings installed by the Bureau of Reclamation since 1946. Appendix: Summary of seepage tests.

Note Methods of reducing costs of concrete canal linings and development of new types of lining are notable technical achievements of the United States Bureau of Reclamation. This bulletin summarizes and brings up to date all available information on the lower cost canal lining program; presents the results of laboratory research, field installations, economic studies, and investigations of seepage measuring devices, describes new developments in equipment and methods of constructing lined canals, particularly those of small size; and gives current conclusions and recommendations as to the value of various types of linings and their suitability for use under various field conditions.

SOIL MECHANICS AND FOUNDATIONS

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on consolidation testing of soils. Presented at the fifty fourth annual meeting, American Society for Testing Materials Atlantic City N J June 18 1951. Philadelphia American Society for Testing Materials, 1952 109 p. illus. 23 cm. (Special technical publication no 126) Paper $1 75 1898

Contents. Introduction, by D. M. Burmister. Report of consolidation tests with peat, by J. B. Thompson and L. A. Palmer. Consolidation and related properties of loessial soils, by W. G. Holtz and H. J. Gibbs. Settlement of railroad embankment crossing the Marguam floodway Louisiana, by W. G. Shockley and C. I. Mansur. Aids in the interpretation of the consolidation test, by H. Mitchell and R. F. Dawson. A rapid technique of consolidation testing, by R. H. Karol. The effect of temperature on the consolidation characteristics of remolded clay by F. N. Finn. Observed settlements of highway structures due to consolidation of alluvial clay by E. S. Barber. The application of controlled test methods in consolidation testing, by D. M. Burmister

Note. These papers describe and evaluate the various tests currently employed to determine the consolidation characteristics and behavior of soils under stress. The material has been prepared by professional civil engineers and is based both on laboratory research and practical experience in the field. As with most of the American Society for Testing Materials symposia, the discussions following each paper constitute vital part of the presentation.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on the identification and classification of soils. Presented at the fifty third annual meeting American Society for Testing Materials, Atlantic City N J., June 29 1950 Philadelphia American Society for Testing Materials 1951 91 p. illus 23 cm. (Special technical publication no. 113) Paper, $1 65 1899

Contents: Introduction, by C. W McAlpin. Identification and classification of soils—an appraisal and statement of principles, by D. M. Burmister. A standard classification of soils as proposed by the Bureau of Reclamation, by E. A. Abdun-Nur. Discussion of the classification of highway subgrade materials initiated by the Highway Research Board, by W F Abercrombie. Soil classification for highway purposes, by E A. Willis. Soil series named as basis for interpretive soil classifications for engineering purposes, by E. J. Felt. General discussion.

Note: These papers describe the techniques and procedures which are most widely used at present by engineers for identifying and classifying soils. The purpose of the symposium was to foster the elimination of differences in procedures and to encourage the acceptance of standard methods. The authors are experts in the field of soil mechanics and have had wide experience with the particular method described.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on surface and subsurface reconnaissance. Presented at the fifty fourth annual meeting, American Society for Testing Materials, Atlantic City N J June 19 1951 Philadelphia American Society for Testing Materials, 1952 228 p illus. 23 cm. (Special technical publication no 122) Paper $3.00. 1900

Contents: Introduction, by C. W McAlpin and L. E. Gregg. Interpreting geologic maps for engineers, by E. B. Eckel. Engineering implications of geological reconnaissance in the Plains area—Missouri River basin, by E. A. Abdun Nur and J. D. Dowling. Preliminary foundation exploration in arctic regions, by L. A. Nees and A. M. Johnson. Preparation of county engineering soil maps for Illinois, by T. H Thornburn. The engineer looks at pedology by R. L. Greenman. Application of aerial photographs to preliminary engineering soil surveys, by R. D. Miles. The preparation of an engineering soil map of New Jersey by D. R. Lueder. Panel discussion on pedology and geology and air photo application. Earth resistivity tests applied to subsurface reconnaissance surveys, by R. W Moore. Earth-resistivity geophysical method as applied to engineering problems, by H. LeRoy Scharon. Geophysical measurements of the depth of weathered mantle rock, by D Woolland. The practical value of an earth resistivity method in making subsurface explorations, by W F Abercrombie. Application of seismic methods to foundation exploration, by A. M. Johnson and R. H. Worley. Experience with geophysics in New York State, by P H. Bird. Seismology applied to shallow zone research, by D. Linehan. Resistivity reconnaissance, by L. Rosman. Panel discussion on geophysical methods, including resistivity and seismic method. General discussion.

Note: These papers describe and evaluate the geological, geophysical, and photogrammetric techniques which may be applied in determining the physical characteristics and structure of surface and subsurface soils. The material has been prepared by experts in the above mentioned fields for the guidance of civil engineers concerned with the location, design, and construction of engineering works. Bibliographies are included.

CHELLIS ROBERT DUNNING

Pile foundations theory—design—practice. New York McGraw Hill Book Company Inc., 1951 680 p. illus. 24 cm. $14.00 1901

Contents (abridged): Basic principles of pile foundations. Pile-driving analysis. Hammer speeds, strokes, and driving stresses. Driving equipment. Selection of pile and methods of driving. Pile grouping and spacing. Structural design of piles. Wood piles. Concrete and pipe piles. Caisson-type piles and caissons. H piles and other metal piles. Sheet piling. Deterioration and preservation of piles. Solidification of soils. Pile load tests. Failures of pile foundations. Tables: Group I—Temporary compression figures. Group II—Operating data on hammers, extractors, and related equipment. Group III—Pile data. Group IV—Soil data. Group V—Jetting equipment data. Appendixes: Numerical examples using assumed data. Numerical examples using field data. Summary of comparative results of tests. Applications of methods of determining pile loads under eccentric loadings. Application of method of designing precast concrete piles. Pile inspector's reports and duties. Standard specifications. Bibliography. Index.

Note: A practical book which contains so much information that it is in effect an engineering handbook. It is useful not only in understanding and designing pile foundations but also in building them and protecting them after they are built. There are a wide range of engineering data and an adequate number of illustrations. The classified bibliography includes a list of catalogues of piles and pile-driving equipment. The author is associated with the Stone & Webster Engineering Corporation.

CRUM ROY WINCHESTER, AND OTHERS, editors

Soil exploration and mapping, presented at the twenty-ninth annual meeting, 1949 Highway Research Board Division of Engineering and Industrial Research, National Research Council. Editorial staff Roy W Crum, Fred Burggraf, W N Carey Jr Washington, D C. Highway Research Board, 1950. 121 p. illus. 25 cm. (Highway Research Board. Bulletin no. 28) Paper $1.50. 1902

Contents: Introduction, by F R. Olmstead. A system for designating map units on engineering soil-maps, by D R. Lueder. Drainage pattern significance in airphoto identification of soils and bedrocks, by M. Parvis. Maps for construction materials, by F E. Byrne. Development of geophysical methods of subsurface exploration in the field of highway construction, by R. W Moore. Influence of topographic position in airphoto identification of permafrost, by R. E. Frost and O. W Mintzer.

Note: The papers published in this bulletin bear on the status of geological and agricultural soil mapping in the United States of America and also describe methods whereby engineers may obtain from geological and soil maps and related sources of information such as aerial photographic information that is valuable in making terrain appraisals in advance of road building. Certain tables in the introduction supplement information on soil surveys published in the Board's *Bulletin no. 22*, described below.

CRUM, ROY WINCHESTER, AND OTHERS editors

The use of agricultural soil maps and the status of agricultural soil mapping in the United States, presented at the twenty-eighth annual meeting, 1948 of the Highway Research Board, Division of Engineering and Industrial Research, National Research Council. Editorial staff R. W Crum Fred Burggraf W N Carey, Jr Washington D C. Highway Research Board 1949 128 p. illus. 25 cm. (Highway Research Board. Bulletin 22) Paper $1.80. 1903

Contents: Review of the problem and a selected bibliography by F R. Olmstead. Status of county agricultural soil mapping in the United States—tabulation by states and counties. Use of agricultural soil maps in making soil surveys, by L. D Hicks. Significance of the soil survey report in the selection and preliminary assessment of sites for airplane landing strips, by O. R. Bodman.

Note: The cover-title of this bulletin is "Engineering use of agricultural soil maps." It gives information to enable highway engineers to make use of county soil maps and the soil profile method as sources of engineering data for soil survey work. The tabulation by states and counties shows the present status of agricultural soil

Strength, volume change and sulfate resistance of mortars containing portland-pozzolan cements, by R. E. Davis and others. Studies of some method of avoiding expansion and pattern cracking associated with the alkali-aggregate reaction, by W. C. Lerch. Studies of use of pozzolans for counteracting excessive concrete expansion resulting from reaction between aggregates and alkalies in cement, by T. E. Stanton.

Note: Most of the papers in this volume relate to work done in the western and middle western states of the United States, particularly California, Colorado, Kansas, and Illinois. The first presents a general review of present-day knowledge of pozzolans, their effect upon some of the properties of concrete, and their use in concrete construction. The papers that follow deal in more detail with various aspects of the topic. Most of them contain bibliographies.

BAUER, EDWARD EZRA

Plain concrete. Third edition. New York, McGraw-Hill Book Company, Inc., 1949. 441 p. illus. 24 cm. $6.50 1893

Contents: Part I. Introduction. Standard Portland cement. Special cements. Mineral aggregates, admixtures, and water. Theories of proportioning. Applied proportioning. Factors affecting concrete strengths. Making of concrete. Placing, finishing, and curing concrete. Durability, workability, and dampproofness. Field control of concrete. Specifications. Sampling. Testing. Part II. Instructions for performance of laboratory tests. Appendixes. Index.

Note: (1443) A standard engineering college textbook on plain (as contrasted to reinforced) concrete. It is a combination of descriptive material and fundamental engineering information. The descriptive matter gives the book some value as a general reference book on the subject for home owners, small contractors, etc. In the present edition discussions of several new important developments have been introduced. A considerable part of the older matter has been revised, and many new illustrations have been added. Revised specifications have been substituted for those which have been superseded.

DALZELL, JAMES RALPH AND GILBERT TOWNSEND

Concrete block construction for home and farm. Illustrations by Arthur E. Burke. Chicago, American Technical Society, 1952. 216 p. illus. 22 cm. $2.75 1894

Contents: Mortar types, properties, and uses. Concrete characteristics and mixing. Concrete formwork. Design and construction of footings. Foundations and waterproofing. Concrete masonry. Index.

Note: (1417*) A simple manual for farmers and other persons who desire practical information on the building of farm buildings, dwelling houses, and other small structures of concrete blocks. It is based on the authors' more comprehensive *Masonry simplified*, Chicago, 1948, 2 v. The numerous illustrations include reproductions of many drawings showing structural details in three dimensions. Specific information is given on proportioning mortar, waterproofing, etc., as well as on laying up the blocks.

KOMENDANT, AUGUST E.

Prestressed concrete structures. New York, McGraw-Hill Book Company, Inc., 1952. 261 p. illus. 24 cm. $6.00 1895

Contents: General considerations. Physical properties of materials used for prestressed concrete structures—steel—concrete—deformations. Theory of design of prestressed structures—changes of forces and stresses in prestressed structures due to shrinkage and plastic flow—method of design—illustrative problems—prestressed trussed beams—illustrative problems—prestressed trussed girders—prestressed shells—illustrative problems. Representative prestressed structures. Appendix. Index.

Note: The heart of this book is the 130-page third chapter, in which the design of prestressed concrete structures is presented in a practical manner for the use of graduate engineers. The two preliminary chapters present background information, and the final chapter contains illustrations and descriptions of prestressed concrete structures of various types such as bridges, dams, and tanks. There are 150 figures and occasional footnote references to the source literature, mostly German.

LARGE, GEORGE ELWYN

Basic reinforced concrete design: a problems method approach. New York, The Ronald Press Company, 1950. 340 p. illus. 24 cm. (A volume of a series in civil engineering, Advisory editorial committee: Lorenz G. Straub and others) $5.50 1896

Contents: Introduction. Beams. Bond, shear, diagonal tension and anchorage. Columns. Continuity. Buildings—design of beam and girder floors. Two-way and flat slab floors. Footings. Appendix. Index.

Note: An introductory textbook for college students of civil engineering, which is organized for easy comprehension. In most of the chapters terms such as "bending moment" are explained not only briefly but clearly, and the definition is followed by a series of worked examples of typical problems in reinforced concrete design. Problems for students to solve are included. The illustrations include portraits of engineers who have made substantial advances in reinforced concrete design. The author is Professor of Structural Engineering in Ohio State University.

UNITED STATES. BUREAU OF RECLAMATION

Canal linings and methods of reducing costs. Washington, D. C., Government Printing Office, 1952. 69 p. illus. 23 cm. Paper $0.25. 1897

Contents: Introduction. Types of canal linings. Concrete linings. Shotcrete linings. Asphaltic linings. Earth-material linings. Miscellaneous linings. Standardization of canal sections. Justification for canal lining. Seepage investigations. Appendix: Canal linings installed by the Bureau of Reclamation since 1946. Appendix: Summary of seepage tests.

Note: Methods of reducing costs of concrete canal linings and development of new types of lining are notable technical achievements of the United States Bureau of Reclamation. This bulletin gives the earliest and brings up to date all available information on the lower cost canal lining program, presents the results of laboratory research, field installations, economic studies, and investigations of seepage measuring devices, describes new developments in equipment and methods of constructing lined canals, particularly those of small size, and gives several conclusions and recommendations as to the use of various types of linings and their suitability for use under various field conditions.

SOIL MECHANICS AND FOUNDATIONS

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on consolidation testing of soils. Presented at the fifty-fourth annual meeting, American Society for Testing Materials, Atlantic City, N. J., June 18, 1951. Philadelphia, American Society for Testing Materials, 1952. 109 p. illus. 23 cm. (Special technical publication no. 126) Paper $1.75 1898

Contents: Introduction, by D. M. Burmister. Report of consolidation tests with peat, by L. R. Thompson and L. A. Palmer. Consolidation and related properties of loessial soils, by W. G. Holtz and H. J. Gibbs. Settlement of a railroad embankment crossing the Morganza floodway, Louisiana, by W. G. Shockley and C. I. Mansur. Aids in the interpretation of the consolidation test, by R. Moduck and R. F. Dawson. A rapid technique of consolidation characteristics, by R. H. Karol. The effect of temperature on the consolidation characteristics of remolded clay, by F. H. Finn. Observed settlements of highway structures due to consolidation of alluvial clays, by E. S. Barber. The application of controlled test methods in consolidation testing, by D. M. Burmister.

Note: These papers describe and evaluate the various tests currently employed to determine the consolidation characteristics and behavior of soils under stress. The material has been prepared by professional civil engineers and is based both on laboratory research and practical experience in the field. As with most of the American Society for Testing Materials symposia, the discussions following each paper constitute a vital part of the presentation.

and moving structures. An introduction to the science of foundations. The White House. Appendices: Specifications (including payments). Legal aspects of underpinning and foundation work. Rates of pay. Glossary of terms used in underpinning. Index.

Note: (1447) This work has been the standard engineering treatise on the support of buildings and other existing structures while adjacent construction is going on since the publication of *Modern underpinning* in 1917. The title was changed to *Underpinning* in the edition published in 1931. The major change in the present edition is the addition of the chapter on the raising and moving of existing structures.

SOWERS, GEORGE B., AND GEORGE F SOWERS

Introductory soil mechanics and foundations. New York The Macmillan Company 1951 284 p illus. 24 cm. $4 75 1909

Contents: The nature of soils. The physical properties of soils. Soils and soil deposits. Seepage, drainage, and frost action. Foundations. Deep foundations. Problems in earth pressure. Construction of fills and subgrades. Stability of earth masses. Underground investigation. Index.

Note: A short, simplified treatment suitable for engineering college students and graduate engineers who want only a general working knowledge of the subject. Little mathematics is used and applications are stressed. The chapters are supplemented by good lists of references for those who need further information on specific topics.

SPANGLER, MERLIN GRANT

Soil engineering. Scranton International Textbook Company 1951 458 p illus. 24 cm. $7.00 1910

Contents: Introduction. The origin and nature of soil. The soil profile. Soil structure and texture. Soil density. Soil surveying and sampling. Soil water. Hygroscopic moisture and the colloidal fraction. Capillary water. Gravitational water and seepage. Flow nets and seepage forces. Soil-water consistency. Engineering soil classification. Frost action in soil. Granular soil stabilization. Thickness of flexible pavements. Stress distribution in soil. Consolidation and settlement of structures. Shearing resistance and strength. Stability of slopes. Embankments, levees, earth dams. Pressure on retaining walls. Bearing capacity. Piles and pile-driving formulas. Underground conduits. Index.

Note: A comprehensive introduction to soil topics that are of interest in civil engineering. The scope is wider than is usually embraced in soil mechanics, and the style is less technical than is typical of the basic works on soil mechanics. The book is organized as a college text. However, some practicing engineers may find it useful as a simple introduction to such topics as permafrost, especially in view of the selected reference lists that accompany the chapters. The author is Research Professor of Civil Engineering at Iowa State College.

TREFETHEN, JOSEPH MUZZY

Geology for engineers New York D Van Nostrand Company Inc. 1949 620 p. illus. 24 cm. $6 00 1911

Contents: Geology and engineering. Minerals. Rocks, an introduction. Igneous rocks. Rock weathering and the regolith. The consolidated sediments. Metamorphism and the metamorphic rocks. Geological structures. Geological field work. Geophysical exploration in engineering. Earth history. Geologic maps. The atmosphere. Subsurface water. Earth movements. Earthquakes. Streams. Dam sites and reservoirs. Soil erosion. Shorelines. The work of glaciers. Geologic interpretation of topographic maps and airplane photographs. Appendices: Sources of geologic information. The physical properties of some common rock types. Tables for the identification of some of the common minerals. Author index. Subject index.

Note: In this college textbook the aim is to give the student a broad background which will enable him to understand the geological problems involved in excavation work, foundation design, etc.; hence the highly developed geological applications of engineering, such as soil mechanics, are touched upon only incidentally. The book is well organized and clearly written. The illustrations are as effective as the text in relating geology to engineering.

TSCHEBOTARIOFF, GREGORY P

Soil mechanics, foundations and earth structures: an introduction to the theory and practice of design and construction. New York McGraw Hill Book Company, Inc. 1952 655 p. illus. 24 cm. (Civil engineering series, Frederic T Mavis, consulting editor) $7.50 1912

Contents: Special features of foundation and soil engineering. The formation of soils, geology, agricultural soil science, and civil engineering. Definitions and tests related to the properties of the solid soil particles. Definitions and tests related to the density and to the consistency of soils. Capillary phenomena. Permeability of soils. Ground-water movements. Frost action. The consolidation of soils. The shearing strength and the shearing deformation of soils. The stability of vertical cuts and of slopes. The stress distribution in soils. The bearing capacity of soils. Lateral earth pressures. The compaction and the stabilization of soils. Exploration and classification of soils. The selection of a suitable type of foundation. Spread foundations. Excavations. Pile and caisson foundations. Sheet piling. Underpinning. Earth-retaining structures. Cofferdams. Tunnels and conduits. Some soil engineering aspects of dam construction. Effects of vibratory and of slow repetitional loading of soils. Machinery foundations. Some soil engineering aspects of highway and airport construction. References. Name index. Subject index.

Note: An engineering college textbook in which the theoretical knowledge of soil mechanics gained in the last few decades is applied directly to practical problems in civil engineering. Although the main theme is practical application of the theoretical knowledge, the author makes it clear that the theoretical knowledge is not complete and that many problems in foundation design must still be solved empirically. Much attention is given to the techniques of field and laboratory testing. Many instances of structural failures due to the vagaries of soils are mentioned. The style is exceptionally clear and the book is well illustrated. The bibliography runs to 448 references. The author is Professor of Civil Engineering at Princeton University.

BUILDING

ARCHITECTURAL RECORD

Time-saver standards: a manual of essential architectural data for architects, engineers, draftsmen, builders and other technicians. Edition no 2 New enlarged edition. New York F W Dodge Corporation, 1950 884 p illus. 28 cm. $12.50 1913

Contents (abridged): Dimensions of the human figure. Mathematics. Weights of materials. Steel framing details. Fireproof floor systems. Brick masonry. Wood factory construction. Dry wall construction. Windows. Fireplace design. Stairs. Residential furniture sizes. Household kitchens. Bathrooms. Household closets. Apartment planning. Hotel bedrooms. Restaurant and bar design. Office and loft buildings—planning and equipment. Retail shops. Laundry equipment. Railroad station details. Bus terminal design. Cinema planning. Theater lighting. Community building planning. Hospitals. School design. Neighborhood shopping centers. Architectural acoustics, air conditioning and design data. Uniform plumbing code for housing. Residential lighting systems. Stage lighting. Escalators for department stores. Index.

Note: (1634a) A standard reference book of data useful to architects, draftsmen, builders, etc. Specific information is given on dimensions, planning and other architectural or engineering aspects of hundreds of building elements, types, techniques, etc. The material included ranges in complexity from dimensional outlines of household furniture to complete floor plans of hospitals. It is arranged under specific small subheadings, of which a few typical ones are given in the abridged contents above. The first edition was published in 1946. This edition contains all of the material published in the original edition and 241 pages of added material. All of the latter has been previously published in *Architectural record*.

BURBANK, NELSON LINCOLN

House construction details. Third edition. New York Simmons-Boardman Publishing Corporation, 1952 378 p. illus. 28 cm. $4 95 1914

Contents: Floor plans—sets of house plans. Excavations—foundation forms—foundations. Sills—girders—joists—sub-flooring. Outside

wall construction. Inside walls—wall sheathing—ceiling joists. Roof construction—lay construction—roofing. Cornices and porches. Exterior wall covering. Interior wall covering—interior trim. Stair construction. Windows. Doors. Hardware. Closets—shelves—built-in equipment. Finished flooring. Chimneys and fireplaces. Scaffolds and hoists. Garages. Insulation. Heating—air conditioning. Paints and finishing. Modern building materials. Prefabrication. Farm buildings—equipment. Better detail plates. Index.

Note. (3418) The outstanding feature of this practical manual for professional and amateur builders is the numerous scale drawings, diagrams, and photographs which illustrate typical methods, typical equipment, details, and construction. The word text is concise and is more or less limited to explanations of general principles. The book is intended to serve as a guide and idea book in the construction of new houses, the alteration of stock plans, and home remodelling. In this edition new material on prefabrication methods, building materials, heating, and insulation has been added. Approximately 70 plates of construction details have been added to the illustrative matter.

BURKE, ARTHUR E. AND OTHERS

Architectural and building trades dictionary by Arthur E. Burke J Ralph Dalzell, and Gilbert Townsend. Edited by Pearl Jenison. Chicago American Technical Society 1950. 377 p. illus. 22 cm. $6.00. 1915

Contents Preface. Dictionary. Memory refresher. Appendix. Abbreviations. Styles of home architecture. Legal terms.

Note An illustrated dictionary for architects, builders, carpenters, and contractors. Words and terms are defined briefly and clearly; pronunciation is indicated for selected words. The 344 pages of the dictionary proper contain 411 detailed illustrative figures, some of them full page size, as for example those for bolts, chimney lining, door designs. A useful book for those needing practical definitions of words, terms, and phrases in the building trades.

FRANKL, LEE

How to expand and improve your home the complete step-by-step illustrated guide for expanding altering and modernizing your home. By Training Thru Sight Associates Lee Frankl. New York Simmons-Boardman 1951 245 p. illus. 28 cm. $5 95 1916

Contents (abridged) Analysis of family needs. Finance. Finish the attic. Build shed dormer. Create storage areas. Divide room. Build porch and sun deck. Enclose the porch. Modernize the kitchen. Finish the cellar. Build garage and breezeway. Flashing with metal. Heating. Add wing and bathroom. Sound absorbing window treatment. Glossary of common building terms. Index.

Note A book of "projects" rather than comprehensive work on house remodeling. Its outstanding quality is an exceptionally high number of illustrations. The jacket blurb claims 1,225 drawings. Most of the illustrations are reproductions of line drawings, but few have been made from photographs. The book is intended mainly for persons planning to do the work on their own homes. There is no bibliography.

GRAF DON

Data sheets thousands of simplified facts about building materials, planning, and construction. Second edition revised and enlarged. New York Reinhold Publishing Corporation, 1949 809 p illus. 18 cm. $8.50 1917

Note: (3433) A manual of concise descriptions and tabulations of data on building materials and practices. Among the new entries in this edition are sheets on radiant heating, fluorescent and radiant-heat panels, fiber block insulation, magnesium oxychloride plastic flooring, asphalt shingles, cork block insulation, noise reduction, current uses of glass block, and underwater lighting of swimming pools. The layout of the pages has been changed and manufacturers' names have, in the main, been moved to a list of acknowledgements at the front of the book. The index has been expanded, but it has not yet been made according to good indexing principles.

HAUF, HAROLD DANA, AND HENRY A. PFISTERER

Design of steel buildings. Third edition. New York John Wiley & Sons, Inc., 1949 280 p. illus. 22 cm. $5.50 1918

Contents General considerations. Reactions, shear and bending moment. The design of beams. Riveted connections. Plate girders. Columns and struts. Roof trusses. Wind stresses in tall buildings. Welded construction. Building design project. Appendices. Index.

Note: An introduction to the basic principles of structural steel design written for students of architectural engineering and for the guidance of the beginning architect or engineer. The book deals specifically with the structural design of such types of buildings as apartment houses, offices, schools, etc. The treatment assumes a knowledge on the part of the reader of the elements of mechanics and strength of materials. Little change has been made in the scope or arrangement of this new edition. However a chapter on welded construction has been added, codes of practice and specifications have been brought up to date and the chapter on the design of beams has been extensively revised.

KELLY, BURNHAM

The prefabrication of houses a study by *the Albert Farwell Bemis Foundation* of the prefabrication industry in the United States. New York The Technology Press of the Massachusetts Institute of Technology and John Wiley & Sons Inc. 1951 466 p. 23 cm. $7 50 1919

Contents: Definitions. The development of the industry 1945–1947: great expectations and disappointments. The future of prefabrication. Introduction. Management. Design. Procurement. Production. Marketing. Conclusions. Appendices: Procedure. Companies and people visited. List of prefabricators. Annotated bibliography. Index.

Note An authoritative and detailed analysis of the history and contemporary status of the prefabricated housing industry in the United States of America. The main emphasis is on the managerial and business aspects of the industry rather than on manufacturing and structural details. Nevertheless, enough is included on structure to make the book worth reading by anyone interested in the technical aspects. A considerable part of the material in the volume is based on a field survey of the industry in the United States after World War II.

PHELAN VINCENT BALDWIN

Care and repair of the house. Washington, D C Government Printing Office, 1950. 209 p. illus. 23 cm. (United States. National Bureau of Standards. NBS circular 489) Paper $0.50. 1920

Contents: Inspection of the house. Foundation walls and basements. Exterior walls. Interior walls. Roofs. Floors and floor coverings. Doors and windows. Weatherproofing and insulating. Heating and ventilating. Plumbing and water system. Painting and varnishing. Electricity. Appendices: Closing the house. Minor items. List of tools and supplies. Check list. Selected references. Index.

Note Superseding publication BH15, this circular is both an enlargement and a complete revision of the original edition. It takes into consideration the introduction of new building materials and construction methods and advances in the design of mechanical equipment since the earlier edition was published in 1931. The purpose of the work is to assist homeowners and other persons who are responsible for the care and repair of dwelling houses. Maintenance, repair and improvement operations are covered. Regular inspection of all parts of the house is recommended, and a guide for such inspection is provided.

PLUMMER HARRY CUSTER

Brick and tile engineering handbook of design. Washington D C. Structural Clay Products Institute, 1950 392 p. illus. 24 cm. $5 00. 1921

Contents: Origin and manufacture. Modular coordination. Classification, size, color and texture. Properties of structural clay products. Mortar. Properties of brick and tile walls. Design of brick and tile walls. Brick and tile wall sections and details. Design of chimneys and fireplaces. Fireproofing and furring. Construction of brick and tile walls. Bonds and patterns. Bibliography. Index.

Note. A manual of descriptive and engineering data on brick and structural tile. Manufacturing operations are outlined in the first chapter but all the remaining chapters are devoted to discussion and to data useful to architectural engineers, architects, building contractors, and other persons who have practical interests in building with brick and structural tile. There is a fair number of illustrations, the majority of which depict standard structural details. The bibliography covers building codes, specifications and standards, as well as a selection of books and articles.

RAMSEY CHARLES GEORGE AND HAROLD REEVE SLEEPER

Architectural graphic standards for architects, engineers decorators builders and draftsmen. Fourth edition. New York John Wiley & Sons, Inc., 1951 614 p. illus. 30 cm. $11.50. 1922

Note: Since 1932, when the first edition appeared, this reference book has been accepted among architects, builders and draftsmen in the U S. A. and elsewhere as a standard authority on the structural details, symbols, and dimensions of contemporary building materials, building details, and furniture. In this edition it has been almost completely revised. About 63 percent of the plates are new and of the remainder 27 percent have been revised. The index alone now runs to 48 three-columned pages.

RICHEY, HARRY GRANT

A reference handbook for construction engineers, architects, builders, superintendents of construction and building construction foremen New Orleans, La. H. G Richey 1951 Distributed by Simmons-Boardman Publishing Corporation. 1640 p. illus. 18 cm. $9 95 1923

Contents (abridged) Personality and duties. Foundations. Waterproofing. Building stones. Stone, marble and tile work. Brickwork, architectural terra cotta, brick paving. Limes and cements. Mortar and concrete. Concrete construction. Fireproofing and fire prevention. Iron, steel, sheet metal, and roof work. Carpentry and woodwork. Timber and lumber. Lathing and plastering. Painting, varnishing, glazing, and paper hanging. Plumbing, piping, sewage disposal. Heating and ventilation. Electric wiring and various mechanical equipment. Hydraulics, strength etc., of materials. Drawing, laying out work. Squares, cubes, roots, mensuration. Useful information, receipts, etc. Glossary of engineering, architectural and trade terms. Index.

Note. A relatively new compilation that includes some information not found in the older handbooks of the kind. Although much of the information is what might be called "standard data," some of it is unusual in a handbook of this type. The miscellaneous material covers such matters as how to clean paint, how to hang window sashes with one weight, the best height for plumbing fixtures, and how to remove stains from concrete floors. The author was formerly associated with the United States Treasury Department in the construction of public buildings.

SEELYE ELWYN EGGLESTON

Data book for civil engineers—Design. Second edition. New York John Wiley & Sons Inc., 1951 521 p. illus. 30 cm. $10.00 1924

Contents (abridged) Structural—general—concrete—rigid frames—steel—aluminum—welding—wood—plywood—foundations—beam formulas. Soils. Earthwork. Roads. Railroad. Airports. Bridges. Dams. Docks and piers. Drainage. Sewage treatment. Industrial wastes. Water supply. Grandstands. Athletic fields. Outdoor swimming pools. Index.

—— —— Specifications and costs. Second edition. New York John Wiley & Sons, Inc., 1951 506 p. illus. 30 cm. $13.00. 1925

Contents (abridged) Contract documents. Site investigation. Structural specifications. Industrial buildings. Airports, roads, and railroads. Bridges. Docks. Dams. Drainage, sewers, sewage treatment and water supply. Swimming pool. Athletic fields. Costs. Glossary. Specifications index. Costs index. Glossary index.

Note. (1640*) A valuable reference book for the office libraries of civil engineers and for technical libraries frequented by civil engineers. It provides a wide range of information useful in the design of buildings and engineering structures and in the preparation of bids and contracts on engineering projects. The first edition appeared in 1945–46 and consisted of three volumes, the third of which was devoted to field practice. A fair amount of new material —fully noted in the prefaces—has been added in the second edition of the present volumes.

SHIMMONS, EARL W , compiler

Home building and repair short cuts. New York Simmons-Boardman Publishing Corporation 1952 201 p. illus. 28 cm. $4.50 1926

Contents: Staking out, form construction and foundations. Sills, girders, joists and subflooring. Walls and floor framing. Roof framing and bay construction. Brickwork, masonry and chimneys. Flashing, sewerage and gas fitting. Electric wiring. Exterior finish. Roofing. Cornices and porches. Interior finish. Stairs and step construction. Trimming windows. Fitting and hanging doors. Finishing floors. Closets, shelves and built-ins. Painting and varnishing. Screening. Garage and barn doors. Scaffolds, ladders and hoists. Short cuts in laying out work. Work benches and shop equipment. Portable equipment. Measuring and layout tools. Hammers, drills, planes and chisels. Hand and power saws. Miscellaneous tools. Index.

Note: This useful collection of construction and repair ideas first appeared in 1916 under the title *Kinks for the builder*. The edition preceding the present one appeared in 1940 and had the title *Practical job pointers*. The latest change in title indicates somewhat more emphasis on ideas of interest to the amateur builder and home mechanic. However there is still plenty of material for carpenters and other men who make their living in the building trades. As in the preceding edition the material has been selected from the "Technical guide" department of the *American-builder*. Many of the items in the present edition appear in the book for the first time, and some of those which appeared in the preceding editions have been dropped because they have become obsolete. There are approximately five illustrations per page and a detailed index.

TOWNSEND GILBERT AND J RALPH DALZELL

How to plan a house. Second edition. Chicago American Technical Society 1952 587 p. illus. 23 cm. $6 95 1927

Contents. Types of house architecture. Building lots. Orientation. Styling the house. Foundations and footings. Types of materials for walls, partitions, floor, roofs. Designing I beams and other steel support members. Strength of floors, roofs, walls. Standard sizes of materials and spacing parts. Working drawings required for a house. Planning various rooms. Planning floor plans. Designing elevations. Mechanical considerations. Details. How to keep plans within financial budget. Specifications. Illustrative example. Index.

Note. This book is both a text for practical students and a guide for those prospective homeowners who like to work out all the details of planning their own houses. Most aspects of the subject are at least touched upon, but the book is valuable chiefly for its wide range of information on structural details and the technical aspects of planning and construction. The first edition appeared in 1943. A fair amount of material has been added in this edition especially on the currently popular single-story house and on recently developed materials. Three chapters have been dropped. The number of illustrations has been increased.

WALKER, FRANK RABOLD

The building estimator's reference book a practical and thoroughly reliable reference book for contractors and estimators engaged in estimating the cost of and constructing all classes of modern buildings. Eleventh edition —illustrated. Chicago Frank R. Walker Company 1950 1780 p. illus 17 cm. $12.00 1928

Contents (abridged) Excavating, backfilling, trenching, well drilling, hauling, caissons, wood and concrete piles, sheet piling and bracing. Concrete breaking, pneumatic excavating, wrecking, drilling and rock blasting. Concrete footings, foundations and retaining walls. Reinforced and architectural concrete construction. Concrete masonry. Integral and membrane waterproofing. Brick masonry, glass blocks. Rubble stone, cut stone, granite and terra cotta. Rough carpentry and timber framing, hardwood and wood block flooring, wood roof trusses. Mill work and interior finish, wood stairs. Wallboard, insulation, sound deadening, building board and sheathing, corkboard insulation, weather strips. Painting, enameling and decorating, paper hanging. Glass and glazing, structural glass, metal store fronts. Roofing. Interior marble and structural slate. Tile floors, wainscoting and mosaics, terrazzo and composition floors and base, rubber tile and linoleum floors. Sheet metal work. Steel and aluminum windows, screens, storm windows and light industrial doors. Structural iron and steel. Electric freight and passenger elevators. Heating and air conditioning, furnace steam, hot water and vapor systems. Plumbing, sewerage and gas fitting, refrigeration. Electric wiring. Index.

Note The first edition of this book was published in 1913 and it has been a standard manual in the building trades in the United States of America since that time. It covers the estimating of the quantities and costs of materials and the hours of labor and wages for projected building operations. The field is covered in detailed fashion; for instance, there is information on such procedures as the backing and chipping of old concrete which must be removed—not a building operation but one which enters into the cost of numerous building modernizations. Aside from its main use the book is a source of information on the forms and dimensions of building materials. In comparison to the preceding edition published in 1947 this edition represents a very extensive revision in which many building materials are considered for the first time and the great increase in wage rates and other costs since World War II have been taken into account.

BUILDING ALLIED TOPICS

Babbitt Harold Eaton

Plumbing. Second edition. New York McGraw Hill Book Company Inc. 1950 644 p. illus. 24 cm. $6 50 1929

Contents Elements of plumbing. Hydraulics and pneumatics. Water supplies. Pumps and storage tanks. Water supply pipes in buildings. Hot-water, chilled water, gas, compressed air and vacuum supplies. Interior fire protection. Design and layout of drainage pipes, vent pipes, and traps. Installation of drainage and vent pipes. Sewage and drainage pumps and drains. Valves, faucets, meters, and other appurtenances. Materials, dimensions, and types of pipes, fittings, and equipment. Bathrooms, and bathroom and toilet room fixtures. Bathing, kitchen, laundry and other fixtures. Water treatment and sewage disposal. Maintenance and repairs. Heating. Appendixes. Glossary of plumbing terms.—Extracts from and references to standard specifications for plumbing materials and equipment.—Problems and drawings of incorrect plumbing for correction. Index.

Note A treatise on plumbing which is written on the engineering college level. The basic theory is covered in such chapters as that on hydraulics and pneumatics, but most of the space is given to descriptions of the elements of plumbing systems, and to practices which are in line with such codes as the *Plumbing manual* of the National Bureau of Standards and the *Housing code* of the Housing and Home Finance Agency of the United States Government. In connection with the descriptions of practices much engineering data are presented chiefly in the forms of graphs and tables. Although addressed more to sanitary engineers who will be responsible for the design of plumbing systems in public buildings, dwellings, etc., and to college students preparing for careers in sanitary engineering than to practical plumbers, the book does include much information of value to the latter group. The first edition was published in 1938. In preparing this edition the author thoroughly revised the book and added more than 200 pages of material.

Barrows William Edward

Light, photometry and illuminating engineering. Third edition. New York McGraw Hill Book Company Inc. 1951 415 p. illus. 24 cm $7.50 1930

Contents Light and vision. Photometric standards, units, and nomenclature. Sources of light. Gas, vapor and fluorescent lamps. Principles of photometry and photometers. Photometric measurements and illumination surveys. Light flux calculations and spherical photometry. Principles of interior lighting. Illumination calculations and design. Light control and application. Interior lighting practice. Lighting for sports and recreation. Principles of street and highway lighting. Lighting streets, highways, and airways. Problems. Index.

Note (4405) An engineering college textbook with a worldwide usage. It traces back to the author's *Electrical illuminating engineering* published in 1908. However in counting editions the publisher has started with that published in 1938. Each new edition has usually represented an extensive revision of the preceding one, and the edition at hand is no exception. A considerable part is new or extensively revised in comparison to the preceding edition (1938). The book is now an introductory and fairly comprehensive treatment on the engineering-college level. A good share of the text is descriptive and practical. A large group of the book's contents should prepare the reader to design common types of lighting systems.

Burbank Nelson L.

House carpentry and joinery. Fifth edition. New York Simmons-Boardman Publishing Corporation 1952 219 p. illus. 29 cm. $4 75 1931

Contents Tools and equipment. House plans. Excavations. Foundation forms. Foundations. Sills. Girders. Floor joists. Sub flooring. Outside framed walls. Inside framed walls. Framing framed work. Sheathing walls. Ceiling joists. Roof framing. Roof sheathing. Cornices. Roofing. Porch and bay framing. Exterior wall covering. Interior wall covering. Stairs. Interior trim. Windows. Doors. Hardware. Closets, shelving and built-in equipment. Finished flooring. Garage doors. Insulation. Finishing. Glossary. Ten practices for construction. Index.

Note (1437) A revision of the book formerly entitled *Carpentry and joinery work*. In its earlier editions it was designed primarily as a trade school textbook. In the present edition the emphasis has been changed somewhat in favor of the layman and amateur mechanic in search of practical information about building. Passages and sections addressed directly to students and apprentice carpenters—for instance, the chapter on tool lore—have been omitted and the book has been converted to a compendium of simple information on the structural details of dwelling houses, especially houses with wooden frames. A wide variety of illustrations occupies more than half of the space in the book.

Close Paul Dunham

Building insulation principles and application of heat and sound insulation for buildings. Fourth edition. Chicago American Technical Society 1951 407 p. illus. 22 cm. $4 95 1932

Contents Introduction. Types of thermal building insulation. Methods of application. Fundamentals of heat transfer through building materials. Transmission coefficients and tables. Calculating heat losses. Effect of heating loss alone on heating plant size. Fuel saving. Economics of insulation. Insulating efficiencies and expenses of fuel. Preventing condensation on interior surfaces. Preventing condensation within walls and ceilings. Insulation and comfort. Pipe and duct insulation. Sound insulation. Machinery isolation. Architectural acoustics and noise quieting. Insulating farm structures. Appendix: questions pertaining to building insulation. Index.

Note (1456) A standard reference book for the information of builders, engineers, architects, homeowners, etc. Also it is used to some extent as a textbook in trade school courses. In it are discussed the various kinds of heat and sound insulating materials, their uses and methods of application, trade names, names of manufacturers and related topics such as the economics of heat insulation. The third edition was published in 1946. In this edition much of the text is unchanged, but important revisions have been made in such parts as the chapters on condensation and in the lists of manufacturers and trade names.

Close Paul Dunham

How to insulate homes and farm buildings. Chicago American Technical Society 1952. 204 p. illus. 22 cm. $3 00 1933

Contents Introduction. Types of thermal building insulation. Methods of application. Fundamentals of heat transfer through building materials. Preventing condensation on interior surfaces. Preventing condensation within walls and ceilings. Insulation and comfort. Sound insulation. Insulating farm structures. Index.

Note A practical book addressed to homeowners and farmers rather than to architects and contractors. Adequate descriptions of

the types and varieties of insulating materials are given. Methods of application are also described, and in most instances the descriptions are detailed enough to serve the needs of readers who intend to apply the insulating themselves. However methods which require specialized equipment are described in general terms only. An example is the blowing of loose insulation into the walls of existing buildings. The book contains little if any information that has not been published before, but it is a handy compilation for its intended readers.

DUNLAP MATTHEW ELBRIDGE

Condensation control in dwelling construction, by Forest Products Laboratory Forest Service, U S Department of Agriculture in collaboration with the Division of Standardized Building Codes and Materials, Office of the Administrator Housing and Home Finance Agency Washington, D C. Government Printing Office, 1949 73 p illus. 23 cm. Paper $0.25 1934

Contents: Introduction. Factors in the condensation problem: Vapor barriers. Sheathing paper or sheathing. Ventilation. Thermal insulation. Good practice recommendations: Condensation control zones. Sizes of ventilators. Crawl spaces. Walls. Lofts or attics. Condensation control details. Appendixes: Methods for computing recommended amounts of insulation. Literature cited. Glossary of condensation and housing terms.

Note: How moisture condensation in the frames of dwelling houses may be controlled by means of vapor barriers and proper ventilation is the subject of this pamphlet. The methods described are based upon studies and observations made over a period of years on buildings involved in moisture problems. Pages 13–64 are occupied by drawings and specifications drawn by J. C. Killebrew covering various building details involved in condensation control. The publication is of interest to architects, builders, and home owners.

ILLUMINATING ENGINEERING SOCIETY

IES lighting handbook, the standard lighting guide. Second edition. New York Illuminating Engineering Society 1952 977 p illus. 23 cm. $8 00 1935

Contents: The physics of light. Light and vision. Standards, nomenclature, abbreviations, and symbols. The measurement of light. Color. Light control. Daylighting. Light sources. Lighting calculations. Interior lighting. Exterior lighting. Sports lighting. Street and highway illumination. Aviation lighting. Transportation lighting. Miniature lamp applications. Photographic, reproduction, projection, television and radar screen lighting. Miscellaneous applications of radiant energy. Appendix: Conversion factors for lighting units. Conversion equations for angular measure, temperature, power and pressure. Greek alphabet. Glare factors. Procedure for obtaining I.C.I. specifications from spectrophotometric curves. Central Munsell notations for each I.S.C.C.-N.B.S. color-name block. Tristimulus values of the spectrum. Brightness of various light sources. Procedure for computing coefficients of utilization. Constants for use in zonal method of computing luminaire flux from candlepower data. Nomograms for determining angle of incidence. Nomogram for obtaining zonal lumens from average zonal candlepower. Constants for converting beam candlepower of projector-type luminaires into lumens. Coefficient of utilization computation sheet. Multiplying factors for direct components of utilization coefficients. Calculations with line and surface sources. Complete aspects analysis. Equations of common curves. Areas of plane figures. Properties of the circle. Trigonometric formulas. Specular and diffuse reflection factors of common papers and ink. Manufacturers' data. Index.

Note: (1647*) A manual which provides essential information on light and lighting in simple terms and condensed style for the practical use of engineers, architects, contractors, and manufacturers. This edition is the result of a detailed review and revision of the first edition published in 1947. The work of revision was carried on largely by technical committees of the I.E.S. Over three-fourths of the material is new or revised. Two new sections are included, these on street and highway illumination and aviation lighting. A feature is the 172 page section of manufacturers' reference data containing data from 85 manufacturers on products supplied by them, the contents of which comply with the specifications and standards established by the Illuminating Engineering Society for such information.

KNUDSEN, VERN OLIVER, AND CYRIL M HARRIS

Acoustical designing in architecture. New York. John Wiley & Sons, Inc., 1950 457 p. illus. 22 cm. $7.50. 1936

Contents: Properties of sound. How we hear. Speech and music. Reflection and diffraction of sound in rooms. Open-air theaters. Sound-absorptive materials. Special sound-absorptive constructions. Principles of room acoustics. Acoustical design of rooms. Noise control. Reduction of air-borne noise. Reduction of solid-borne noise. Control of noise in ventilating systems. Sound amplification systems. Auditoriums. School buildings. Commercial and public buildings. Homes, apartments, and hotels. Church buildings. Radiobroadcasting, television, and sound-recording studios. Appendix: Coefficients of sound absorption. Tables of sound insulation data. Conversion factors and physical constants. Index.

Note: A practical guide intended for architects, students of architecture, and others who wish a non-mathematical but comprehensive treatise on the subject. The authors cover the technological principles of architectural acoustics and show how to apply these principles in practice. They emphasize that acoustical designing begins with the preliminary sketches on the drafting board and continues throughout all stages of planning and construction. Design data are presented in such a manner that the book can serve as a convenient reference in the solution of most problems encountered in architectural acoustics.

KRAEHENBUEHL, JOHN OTTO

Electric illumination. Second edition. New York John Wiley & Sons Inc. 1951 446 p illus. 24 cm. $8.00. 1937

Contents: Introduction. Objective specification of illumination. *Subjective specification of illumination. Color and shadow.* Illumination from point, line, and surface sources. Electrical incandescent and gaseous vapor-light sources. Light control. General illumination design (lumen method). Luminous architectural elements (lumen method). Floodlighting (lumen method). Novelty lighting. Maintenance and economics—automatic control. Wiring. Appendix. Index.

Note: (4411) A college textbook that is useful also to architects and other non-specialists whose work requires the understanding of the principles of illumination and the specifications of lighting systems. Commercial, industrial, and theatrical, rather than residential, lighting, are dealt with. In addition to discussions of the general principles of the subject, there is a wide variety of tabulated engineering data useful in design and specification work. There are numerous lists of references to other literature. The book has been rearranged, the type reset, and there is a substantial amount of new material in this edition.

MARCH C A.

Building operation and maintenance. New York McGraw Hill Book Company Inc. 1950 384 p. illus. 24 cm. $7.00 1938

Contents: Building management. Renting and collecting. Accounting. Purchasing and stock room control. Building organization. Making space layouts. Cleaning. Cleaning materials. Disinfectants and insecticides. Equipment and supplies. Elevator operation. Floors. Furniture and metalwork. Housekeeping. Fire prevention and protection. Safety precautions. Decorating. Electrical system. Elevator maintenance. Heating. Ventilation and air conditioning. Plumbing. Roofs. Structural maintenance. Landscaping. Index.

Note: A general introductory treatise in which the many aspects of operating and maintaining commercial buildings are covered in fair but not elaborate detail. The point of view is that of building superintendents or other persons in charge of operation and maintenance. There is considerably more emphasis on maintenance than on the accounting and legal aspects. The treatment of specific topics such as plumbing is much broader than can be found in books on these individual topics, but enough information is included for the orientation and general information of the intended readers. There is no bibliography.

MATTHIAS ARTHUR JOHN, JR.

How to design and install plumbing: materials and methods of standard practice. Revised by Esles Smith, sr Third edition Chicago American Technical Society 1952 444 p. illus. 22 cm. $3 95 1939

Contents (abridged): Municipal sewage disposal. Private sewage disposal. Materials used for sewer pipe and fittings. Joints in clay and iron sewer-waste and vent. The house sewer. The house drain. House drain appliances. Storm drainage. Soil pipe. Waste pipe. Traps used on plumbing systems. Ventilation. Soil, waste and vent pipe principles. Inspection and test. Water supply. Materials used for water distribution. The house water supply. Pumps and lifts. Cold water distribution systems in tall buildings. Domestic hot-water supply. Hot-water distribution systems. Cross-connections. Fire line installation. Plumbing fixtures. Questions pertaining to plumbing. Index.

Note: (4433) A practical book that has been widely used as a vocational school text and general source of information about plumbing practices since the appearance of the first edition in 1940. It covers both the plumbing of residences and of industrial buildings. A considerable range of material has been added in this edition. However it is obvious that the revision was handled so that as many as possible of the plates that were used to print the second edition could be used again. The result has been the retention of some outdated material.

MILLER, SAMUEL C.

Neon signs and cold-cathode lighting. Second edition. New York McGraw Hill Book Company Inc. 1952 395 p. illus. 24 cm. $6.00 1940

Contents (abridged): Part I, Fundamentals of luminous-tube manufacture. The luminous tube. Materials used in constructing tubes. Electrical equipment. The types of signs. Part II, Shop practice: Designing the sign. Glass bending. Pumping systems. Bombarding. Filling, testing, aging. Flashers and time switches. Radio and television interference. Installation and maintenance. Part III, Fluorescent lighting: Fundamentals and production of fluorescent tubes for lighting. Illumination design for fluorescent installations. Appendixes: Underwriters' Laboratories requirements for electric signs. Signs and outdoor display structures. Index.

Note: An established book for practical signmakers. The scientific principles of rare-gas luminous tubes are explained in a few pages, then the rest of the space is devoted to the materials and operations in signmaking. The writing is explicit and clear. The book is suitable for use as a self-instruction and as a shop reference book. The first edition was published in 1935. There are many changes in this edition, and two new chapters on fluorescent lighting.

PAINTING AND DECORATING CONTRACTORS OF AMERICA

Painting and decorating craftsman's manual and textbook. New York Theo Audel & Co 1949 430 p. illus. (part col d) 17 cm. $2 00 1941

Contents (abridged): Book one, Materials: Composition and properties of basic materials. Synthetic resins. Modern paint formulations. Other basic coatings and finishes. Book two, Brushes, equipment, safety, health: Brushes and bristles. Spray painting. Ladders, scaffolds and rigging. Mechanical appliances. Health. Book three, Painting specifications—practical procedure: Preparation of the surface. New exterior work. New interior work. Refinishing previously coated surfaces. Practical painting procedure. Marbleizing and graining. Wood finishing. Book four, Paint failures and their remedies: Factors that cause paint failures. Seasons for painting. Book five, Color: Color harmony. Color mixing and matching. Color and light. Psychology of color. Styling with painted color. Book six, Wallpaper. Book seven, Estimating. Book eight, Dictionary of trade terms. Book nine, Historical supplement.

Note: An official textbook of the sponsoring organization. It is designed for the instruction of apprentices who are learning the trade by combining classroom study with practical work. The discussions of some topics are rather brief, probably because they are intended to be supplemented by the personal instruction, but as a whole the book offers a wide range of practical information on materials and techniques. It should be useful not only to apprentices but to anyone who desires practical information about painting. It is patterned on *Painting and decorating working methods* (1932) but it has been so thoroughly revised and expanded that it is essentially a new work.

RAY, JESSE EDGAR

The art of bricklaying. Peoria, Illinois Charles A. Bennett Company 1950 240 p. illus. 22 cm. $4.00. 1942

Contents: The story of brick. Composition of brick. Lime, cement, mortars. Tools. Spreading mortar. Corners: raising a four inch corner. Raising an eight-inch American bond corner. Raising an eight-inch Flemish bond corner. Layout of corners in the various bonds. Important suggestions for the apprentice. Wall—speed exercises. Bonds and patterns in brickwork. Chimney construction. Special aspects of brickwork. Arch layout and construction. Brick details and construction. Advanced problems in ornamental brickwork. Photographs of excellent brickwork. Laying cement block. Scaffolding. Glossary of trade terms. Index.

Note: An introductory book written by a man with many years' experience in bricklaying. It is designed mainly for students in vocational classes and for apprentices, but the amateur can also pick up many points in it. The discussion is compact and is couched in the language of the bricklayer's craft. The short chapter on concrete blocks is designed for student bricklayers, and is not full enough to meet the needs of the beginning mechanic who does not know bricklaying first.

ROGERS TYLER STEWART

Design of insulated buildings for various climates. By Tyler Stewart Rogers assisted by Paul A. Siple Elmer Queer Howard T Fisher and John Hancock Callender New York F W Dodge Corporation 1951 119 p. 31 cm. $5 50. 1943

Contents: Part 1 Principles: Climate. Heat control. Vapor control. Ventilation. Part 2, Practice: Design data. Roofs or ceilings. Walls. Floors. Design calculations.

Note: An authoritative and up-to-date discussion of heat insulation for buildings. The author has made liberal use of charts, cutaway type drawings, and photographs. His text is lively and simple, but it contains the essential facts. The book is designed for architects and builders rather than for engineers, and should be very useful to its intended audience. Much of it is also within the grasp of laymen who wish to know the facts about home insulation.

SHARP HOWARD M

Introduction to lighting. New York Prentice-Hall Inc., 1951 334 p. illus. 22 cm. $6.65. 1944

Contents: Nomenclature. Basic concepts. Electric lamps. Ballasts, transformers, and starters. Control of light. Luminaries. Measurements of light and lighting. Candlepower distribution curves. Coefficients of utilization. Principles of lighting design. Vision. Offices and schools. Factories. Stores. Lighting design—specialized applications. Lighting cost analysis. Index.

Note: A practical book suitable for engineering college students and practicing engineers who desire only a working knowledge of lighting principles and design. A good deal of the text is descriptive, but the mathematics that might be needed by a practicing engineer or architect in designing lighting systems is included. The chapters are supplemented by literature references. There are a large number of illustrations and numerous tables of engineering data. The author is a member of the faculty of the University of Buffalo.

SIEGELE, HERMAN HUGO

The steel square. A practical treatment of the steel square and how it is used. Wilmette Ill. Frederick J Drake & Company 1951 184 p. illus. 23 cm. $2 50 1945

Contents (abridged): Roof framing table. Square and circle. Polygons. Simple roof framing cuts. Framing hips and valleys. Irregular plan roof. Irregular pitch roof framing. Backing hips and valleys. Various roof framing problems. Hopper boards. Determining cuts of steps. Service stairs. Rough horses. Hand railing. Winding and circular stairs. Concrete steps. Stair and other problems. Miter and squaring problems. Squares. Index.

Note: The steel square is a versatile instrument and few carpenters fully master it. This book, for all craftsmen who wish to extend their knowledge of the square, describes several hundred techniques in roof framing, stair layout, etc. For the most part the descriptions are explicit and detailed. There are 446 figures, each one of which is tied in with the textual discussion.

WILKES GORDON BALL

Heat insulation New York John Wiley & Sons, Inc., 1950 224 p. illus. 21 cm. $5.00. 1946

Contents: Purposes of heat insulation. Fundamental formulas. Methods of determining heat transfer coefficients. Factors affecting the coefficient of thermal conductivity Types of insulating materials. Reflective insulation. Specific heat of insulating materials. Moisture in insulation. Economics of insulation. Appendix: Coefficients of thermal conductivity Specific heat and thermal diffusivity Emissivity and reflectivity of various substances. Coefficients of heat transmittance for building walls. Calculated U values. Water-vapor permeability of various materials. Bibliography List of figures. Index.

Note: A compact summary of useful information on various aspects of heat insulation. The information included has application not only to the insulation of dwelling houses but to the insulation of refrigeration storage rooms and other structures where the insulation demands are more severe. The book is particularly valuable for the data it provides on such topics as reflective insulation, the effects of moisture, and the control of water vapor

ROAD AND RAILROAD BUILDING

American Association of State High way Officials

Standard specifications for highway materials and methods of sampling and testing. Sixth edition. Washington, D C. Published by the Association, 1950 2 vol. illus. 24 cm. $6.00 1947

Contents (abridged) Volume 1, Specifications: Hydraulic cement. Bituminous materials. Soils. Aggregates. Brick. Expansion joint fillers and asphalt plank. Culvert and sewer pipe. Bridge paints. Reinforcing steel and wire rope. Metallic materials for bridges. Miscellaneous. Volume 2, Methods of sampling and testing: Hydraulic cement. Bituminous materials. Soils. Aggregates. Concrete. Brick. Joint filler pipe, and asphalt plank. Metallic materials. Miscellaneous. Index.

Note: (1675*) A standard compendium revised periodically The previous edition appeared in 1947 Some of the specifications included are identical with those of the American Society for Testing Materials.

American Society for Testing Mate rials

Triaxial testing of soils and bituminous mixtures. A compilation of papers presented at the first Pacific Area national meeting, San Francisco Calif., October 10 1949 and fifty third annual meeting, Atlantic City N J., June 28 1950 of the American Society for Testing Materials. Philadelphia American Society for Testing Materials, 1951 303 p. illus. 23 cm. (American Society for Testing Materials. Special technical publication no. 106) Paper $3.50 1948

Contents: Introduction, by W G. Holtz. The history and theory of triaxial testing, and the preparation of realistic test specimens. report of the Triaxial Institute, by V A. Endersby Some concepts concerning triaxial compression testing of asphaltic paving mixtures and subgrade materials, by F N. Hveem and H. E. Davis. Application of the triaxial test to bituminous mixtures California Research Corporation method, by V R. Smith. Application of triaxial testing to the design of bituminous pavements, by N. W McLeod. Triaxial design correlated with flexible pavement performance in Kansas, by H. E. Worley Triaxial testing adapted to soils, flexible base, and foundations, by R. J. Hank. A triaxial apparatus for testing large soil specimens, by K. B. Hall. Shear testing at the Waterways Experiment Station, by S. J. Johnson. A triaxial shear investigation on partially saturated soil, by D. W Taylor. Shear characteristics of remolded earth materials, by A. A. Wagner. Application of triaxial compression test results to highway soil problems, by K. S. Barber and C. L. Sawyer The importance of natural controlling conditions upon triaxial compression test conditions, by D M. Burmister. Interpretation of triaxial compression tests on granular mixtures, by W S. Housel. General discussion.

Note: The method of testing which forms the central theme of this book is defined in Endersby's paper as follows: "the word 'triaxial' is applied to a form of mechanical test under which a load is applied axially to a cylindrical specimen, while a supporting pressure is maintained against its sides by water, air or other means. The stress-resistant properties of the material tested triaxially are derived from the relation between the testing load and the supporting pressure. Taken together the papers present the current status of this method of testing as applied to road materials in the United States of America.

Bruce, Arthur Garfield, and John Clarkeson

Highway design and construction. Third edition. Scranton Pa. International Text book Company 1950 734 p. illus. 23 cm. (International textbooks in civil engineering- Benjamin A. Whisler consulting editor) $7.50 1949

Contents (abridged) Highway administration. Highway location. Design of roads. Design of intersections. Low-cost roads. Bituminous surface treatments. Bituminous-macadam pavements. Portland-cement concrete pavements. Brick and block pavements. General highway and street maintenance. Estimates, contracts, and specifications. Control and testing of construction materials. Transportation surveys. Airport design. Appendixes: Bureau of Public Roads soil groups. Highway Research Board soil classifications. Classification of soils for airport construction—Civil Aeronautics Administration. Index.

Note: (1491) A standard engineering college textbook which has been thoroughly revised and modernized in this edition—the first on which Clarkeson appears as co-author. It is introductory but comprehensive enough to be of reference value in libraries. The presentation is only semi-technical, hence the greater part of the book can be readily understood by lay readers seeking information on highway engineering. Each chapter ends with a list of pertinent advanced literature. It should be noted that maintenance operations such as periodic oiling of dirt roads are covered, as are strictly engineering operations.

Crum Roy Winchester, and others, editors

Symposium investigations of the design and control of asphalt paving mixtures and their role in the structural design of flexible pavements by Corps of Engineers, Depart ment of the Army Presented at the twenty eighth annual meeting 1948 of the Highway Research Board Division of Engineering and Industrial Research, National Research Coun cil. Editorial staff R. W Crum, Fred Burg graf W N Carey jr Washington, D C. Highway Research Board, 1949 115 p illus. 25 cm. (Highway Research Board. Research report no 7 B) Paper $1.80 1950

Contents Introduction, by G. McFadden and W C. Ricketts. Selection of test equipment, by J. M. Griffith. Laboratory study of asphalt paving mixtures, by W K. Boyd. Asphalt stability test section, by C. R. Foster. Correlations of laboratory and field data, by W G. Shockley Detailed test procedures for design and field control of asphalt paving mixtures, by J. M. Griffith. The practical application of the design method of asphaltic mixtures to pavement construction, by W K. Boyd. Design of asphalt mixes as related to other features of flexible pavement design, by W J. Turnbull. List of references. Glossary of terms. Discussion by V R. Smith. Discussion by J T Pauls. Discussion by H. M. Rex. Discussion by R. C Herner. Discussion by W H. Campen.

Note: The papers here published present the results of an extensive study of asphalt paving mixtures by the Corps of Engineers, U S Army and comments thereon by highway engineers and other technicians. Most of the experimental work, including laboratory study field investigations, traffic tests, and the establishment of pavement criteria, was carried on by the Corps of Engineers Flexible Pavement Laboratory located at the U S. Waterways Experiment Station, Vicksburg, Mississippi. While the reported projects were directed toward the design of airfield pavements, the results obtained are also applicable to the design of road and street pavements, particularly those subjected to considerable traffic of heavy vehicles.

DISNEY, CHARLES P, AND ROBERT F LEGGET

Modern railroad structures. New York McGraw Hill Book Company Inc. 1949 213 p. illus. 26 cm. $6.00. 1951

Contents: Introduction. The application of soil mechanics in railroad work. Steel pile bridge piers and abutments. Rigid frame bridges. Precast concrete bridges. Solid-deck bridges and track details. Turntable design and redesign. Repair of concrete and masonry structures. New methods in concrete construction. Conclusion. Index.

Note: In this clearly-written, well-illustrated book a number of topics important to engineers who are concerned with the building and maintenance of railroad tracks and related structures are discussed. The discussions are brief, but they convey the modern approach to right-of-way engineering. Each chapter is accompanied by a list of selected references. Repair and rebuilding of existing structures occupies about 50 pages, the remainder are devoted to new construction.

IVES HOWARD CHAPIN

Highway curves. Fourth edition highway surveying, location, geometric design, and earthwork, by Philip Kissam. New York John Wiley & Sons Inc., 1952 197 389 p illus. 18 cm. $7.00 1952

Contents: Part I, Text The location procedure. The preliminary survey The location survey Simple curves. Compound curves. Reversed curves. Vertical curves. Spirals, superelevation, and widening. Cross sections. Volume computation. Haul and the mass diagram. Surveys for interchanges. Part II, Tables: Curves of even radius. Curves of even degree, arc definition. Searles spiral. Logarithms. Natural trigonometric functions. Functions of numbers. Conversions. Trigonometric formulas. Explanation of tables. Index.

Note: (1494) A standard work used both as an engineering college text and a field book. It presents the practices followed by the Highway Departments of the state governments and by the national government in laying out highway routes. The third edition appeared in 1941 This is the first edition by Professor Kissam, and it is a thorough revision in which important changes have been made in both the expository text and in the tables.

LABATUT JEAN AND WHEATON J LANE editors

Highways in our national life a symposium. Princeton New Jersey Princeton University Press, 1950 506 p illus 25 cm. $7.50 1953

Contents (abridged) Part 1 Historical The highway and the anthropologist, by J. O. Brew The highway system in the Near East from 3000 B.C. to 500 A.D. by E Herzfeld. The Roman Empire highway system, by M P Charlesworth. The early highway in America, to the coming of the railroad, by W J Lane. History of the modern highway in the United States, by S Miller Jr Part 2 Analytical The highway and social problems, by F R. Merrill. The fusion of urban and rural, by W Firey and others. The Pan American highway by J. L. Harrison. The highway from the point of view of the economist, by S. Peterson. The motor vehicle and the highway: some historical implications, by G. Rowney The relation of the highway to rail transportation, by J. H. Parmelee and R. E. F Moore. Freight transportation on the highway by W A Bromelein. Mass transit on the highway by L. Williams. The planning of the highway by G. D. Kennedy The design of highway intersections, by R. H Baldock. The highway as parkway by H. J. Keefe. Highway engineering, by L. I. Hewes. Highway construction, by H. C. Coons. Maintenance of the highway by S. O. Linzell and H. D. Metcalf. Visibility and highway lighting, by S. G. Hibben. Automotive safety on the highway by M Dawson. The service of the highway, by O L. Kipp. Summation, by J Labatut. Selected references. Biographical sketches of contributors. Index

Note In this book, prepared under the sponsorship of the Bureau of Urban Research of Princeton University the highway is viewed as an important element in the social structure Altogether there are forty-one chapters and the majority of them deal with historical or sociological aspects On the other hand, there are valuable chapters on technical aspects. These chapters that bear on highway engineering are limited more or less to practices in the U S. A., but the historical and sociological articles are of international interest. There is an extensive but not comprehensive list of references arranged by chapters.

RITTER, LEO JOHN, JR., AND R. J PAQUETTE

Highway engineering. New York. The Ronald Press Company 1951 721 p. illus. 24 cm. (A volume of a series in civil engineering, Advisory editorial committee Lorenz G Straub and others) $7.50 1954

Contents: Introduction. Highway administration. Highway economics and finance Highway planning. Geometric design of highways. Highway soil engineering. Drainage and drainage structures. Surveys and plans. Contractual documents and supervision of construction. Earthwork operations and equipment. Bituminous materials. Thickness design of flexible pavements and bases. Stabilized soil roads. Macadam roads. Bituminous surface treatments—and asphalt pavements. Road mix and intermediate-type bituminous plant-mix surfaces. High-type bituminous pavements. Portland cement concrete pavements—design—construction—brick and block pavements. Highway maintenance. Bibliography Index.

Note A textbook for junior and senior civil engineering students for colleges. Various phases of highway engineering are covered with some emphasis on the economic, legal, and administrative aspects. The nature and function of many major pieces of modern construction equipment are described. The bibliography lists 314 references.

SEARLES, WILLIAM HENRY, AND HOWARD CHAPIN IVES

Field engineering a handbook of the theory and practice of railway surveying, location and construction Twenty-second edition, by Philip Kissam. New York John Wiley & Sons Inc., 1949 2 v in 1 illus. 18 cm. $7.00 1955

Contents Volume 1, Text: The location of transportation lines. Reconnaissance. The preliminary survey and projecting location. The location survey Simple curves. Compound curves. Reversed curves. Turnouts and crossings. The spiral curves. Cross sections. Calculation of earthwork. Earthwork tables. Earthwork diagrams. Haul and the mass diagram. Construction. Track laying. String lining curves. Theory of maximum economy in grades and curves. Leveling under unusual conditions. Adjustment of instruments. Highway curves. Volume II Tables.

Note (1499) The first edition of this handbook was published in 1880, hence in its various editions it has served the needs of both students and practicing engineers for almost seventy years. Early editions dealt mainly with the location and building of railroads, and the emphasis is still on this subject; but the special problems of highway location and surveying are also covered. This is the first edition revised by Professor Kissam. The first chapter has been added, and important additions having to do with such topics as the preliminary survey aerial mapping, the two-base method for stadia altimetry the center-line method of staking out turnouts and yards, and vertical curves are found in other chapters.

APPLIED HYDROLOGY

AMERICAN SOCIETY OF CIVIL ENGINEERS. HYDRAULICS DIVISION HYDROLOGY COMMITTEE

Hydrology handbook. Prepared by The Hydrology Committee of the Hydraulic Division. Hydrology Committee Merrill Bernard, chairman. Subcommittees Precipitation. Merrill Bernard chairman. Infiltration S. W Jens, chairman. Runoff W B Langbein, chairman. Evaporation and transpiration. Adolph F Meyer chairman. Ground water storage Donald M. Baker chairman. New York American Society of Civil Engineers,

1949 184 p. illus. 23 cm. (American Society of Civil Engineers. Manuals of engineering practice. No. 28) $3.00 1956

Contents. Historical summary Foreword. Precipitation. Infiltration. Runoff. Evaporation and transpiration. Ground water storage. Bibliography

Note: A manual of technical information and data on the behavior of water as it occurs in the atmosphere, on the surface, and underground. It was published as an aid to engineers concerned with the regulation, control, and utilization of water. The five chapters were prepared by five subcommittees of the Hydrology Committee, each covering a phase of the "hydrologic cycle." The 12-page bibliography is arranged to correspond to the chapters. The handbook should be of especial value to engineers planning flood control and water supply projects and designing land drainage and storm sewers. It is useful also as a source of information on the character and scope of hydrology for engineers outside this field.

JOHNSTONE, DON, AND WILLIAM P CROSS
Elements of applied hydrology New York The Ronald Press Company 1949 276 p. illus. 24 cm. $5.00 1957

Contents: Introduction. Collecting and presenting precipitation data. Collecting and presenting runoff data. Elementary relationships between precipitation and runoff. The role of the land. Analysis and synthesis of the hydrograph by unitgraph methods. Flood routing. Infiltration theory and the analysis of the hydrograph. The hydrograph as a function of drainage basin characteristics Applications of statistical analysis to hydrology Problems, questions, and special assignments. Subject index. Index of names

Note: A well-planned textbook designed for students of civil or other branches of engineering who do not plan to specialize in hydrology but who recognize the need of some knowledge of the subject. It provides a good general view of the field with emphasis on its applications and basic methods. A good part of the book is devoted to methods of recording, analyzing and synthesizing data, and to the application of statistical methods The unitgraph is discussed as a means for predicting time distribution of flow during flood periods.

LINSLEY RAY K. JR., editor
Annotated bibliography on hydrology 1941–1950 (United States and Canada) Prepared by the American Geophysical Union, National Research Council of the National Academy of Sciences, in cooperation with the Subcommittee on Hydrology Federal Inter Agency River Basin Committee. Washington, D C. Superintendent of Documents, 1952 408 p. 25 cm. (United States. Federal Inter Agency River Basin Committee. Subcommittee on Hydrology Bulletin no 5) Paper $1 75 1958

Note: A complete guide to the hydrologic literature published in the United States and Canada within the years 1941–1950. It is a continuation of the annual bibliography on hydrology issued by the American Geophysical Union from 1934 to 1940. The arrangement is by author; title, publication data, and brief annotation are given for each entry

LINSLEY RAY K JR. AND OTHERS
Applied hydrology by Ray K. Linsley, Jr., Max A. Kohler and Joseph L. H. Paulhus. New York McGraw-Hill Book Company Inc., 1949 689 p illus 24 cm. (Civil engineering series Frederick T Mavis consulting editor) $9.00 1959

Contents: Introduction. Climate Temperature in the atmosphere. Atmospheric humidity Winds Precipitation. Snow ice, and frost. Evaporation and transpiration. Streamflow The basin. Surface retention and detention and overland flow Soil physics. Sedimentation. Groundwater Hydrograph analysis. Runoff relations. Runoff distribution. Waves. Streamflow routing. Design criteria. Design and operation of water-control works. River forecasting. Appendices: Graphical correlation. Sources of hydrologic and meteorological data. Physical constants, conversion tables, and equivalents. Index.

Note: A rather inclusive work which is designed for use both as a text in engineering courses and as a reference book for engineers concerned with the design of highways, airports, storm-sewers, water supply projects, etc. Basic theory methods of collecting data, and equipment used are discussed, but emphasis is placed on the interpretation of data and practical applications. The treatment requires knowledge of simple statistical methods and of elementary calculus. The authors are associated with the Division of Climatological and Hydrologic Services of the U S. Weather Bureau.

MEAD DANIEL WEBSTER
Hydrology the fundamental basis of hydraulic engineering. Second edition, revised and enlarged, by Mead and Hunt, Inc., consulting engineers. Chapter on drought by Henry J Hunt. New York McGraw Hill Book Company Inc., 1950 728 p. illus. 23 cm. $8.00. 1960

Contents. Introduction. Water—its occurrence, utilization and control. Some fundamental theories. Winds and storms. Hydrography Atmospheric moisture and evaporation. Precipitation. Rainfall measurements and records. Annual rainfall in the United States and its variation. Seasonal rainfall in the United States and its variation. Great rainfalls. Droughts. Rainfall and altitude. Geological agencies and their work. Geology Ground water. Stream flow or runoff. Variations in runoff or stream discharge. Estimating runoff. Floods and flood flows. The application of hydrology Index.

Note: The general scope and arrangement of this text for engineering students differ little from the first edition published in 1919. Its purpose, now as then, is to provide a comprehensive review of the facts and principles regarding the properties and phenomena of water which must be considered in building dams, irrigation projects, public water works, and the like. Most of the illustrations and charts of the first edition have been retained, but the tabulated data have been brought up to date. A chapter on drought has been added and discussions of such topics as the Bergeron analysis of meteorological phenomena, evaporation theory artificial rainfall, and ground water are introduced. Some new references have been added to the chapter bibliographies.

MORGAN ARTHUR ERNEST
The Miami Conservancy District. New York McGraw Hill Book Company Inc., 1951 504 p. illus. 24 cm. $7 00 1961

Contents: The Miami valley The Miami river flood of March, 1913. Relief. Emergency government. Flood control. The Ohio conservancy act. Organization of the Miami Conservancy District. The official plan. The engineering staff. The appraisal and assessment. Preparing for construction. By-products and incidentals. Methods and policies of construction. Industrial relations. The construction period. As the years pass. The influence of the Miami Conservancy District. Bibliography Index of names. Index.

Note: The complete history of a major engineering undertaking is told in this book written by one of its chief engineers. The Miami Conservancy District, organized following the disastrous 1913 flood, has since that date protected the citizens of Dayton, Ohio, and vicinity from a repetition of flood conditions in the Miami river valley. The engineering, social, and legal aspects of this great flood-control project are all treated in full detail. A feature of the table of contents is that the author has there indicated the sections of the book of most interest to the general reader. The work is well illustrated with photographs, maps, plans, and tabulations. A comprehensive bibliography and adequate indexes conclude the book.

SUTTON JOHN G
Design and operation of drainage pumping plants. Washington D C. Government Printing Office, 1950 81 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1008) Paper $0.25 1962

Contents (abridged) Conditions for pumping. Relation of pumping plant to general plan of drainage Location of pumping plants. Foundation conditions—soil borings. Storage at suction bay Determination of static lifts. Determination of runoff to be pumped: Formula for maximum plant capacity Plant capacity for Louisiana and Texas. Plant capacity for Florida. Minimum runoff pumped. Selection of pumps: Priming equipment. Selection of power equipment. Design of building and accessory structures. Farm pumping plants. Tests of pumping plants. Operation of the pumping plant. Literature cited. Appendix.

Note: Superseding *Technical bulletin* no. 390 this bulletin provides recommendations for the design and operation of drainage pumping plants for all parts of the United States. Attention is given both to plants of larger size, as for drainage and levee districts, and of smaller size, useful for installation on individual farms either to drain low areas or to supplement irrigation systems. Included in the illustrations are tables and figures presenting technical data, photographs, drawings, and plans of pumping systems.

WISLER, CHESTER OWEN, AND E. F BRATER
Hydrology New York John Wiley & Sons, Inc. 1949 419 p. illus. (part col'd) 22 cm. $6.50 1963

Contents Introduction. The hydrograph. The drainage basin. Precipitation. Water losses. Infiltration. Ground water. Runoff. Floods. Stream flow records. Index.

Note: Knowledge of the basic principles and methods for obtaining data regarding fluctuation in stream flow flood conditions, rainfall and runoff, and of the processes governing the depletion and replenishment of water resources have become increasingly important in the fields of civil engineering, forestry and agriculture. This volume, planned for use as a college text and based on courses given at the University of Michigan, provides a comprehensive and up-to-date discussion of these principles and methods. The treatment assumes a knowledge of simple statistical methods and of the fundamentals of calculus. No formal bibliography is included, but pertinent literature is cited in footnote references.

SANITARY ENGINEERING

AMERICAN WATER WORKS ASSOCIATION

Water quality and treatment a manual prepared by the American Water Works Association. Second edition. New York American Water Works Association, Inc., 1951 451 p. illus. 24 cm. $5.00. 1964

Contents: Characteristics of available water sources. Organisms in water. Standards of quality. Pollution and self purification of surface water supplies. Control of impounding reservoirs. Aeration of water. Coagulants and coagulation. Mixing and sedimentation basins. Chlorination and other disinfection practices. Taste and odor control. Filtration. Scale and corrosion control. Softening. Occurrence and removal of iron and manganese. Treatment of water for steam generation. Chemical treatment of water for physiological benefits. Treatment plant control. Appendixes: The water supply library. American Water Works Association code of practice. Chemicals used in water treatment. Conversion equivalents for water. Index.

Note: (1100a) An authoritative treatment and reference book sponsored by the chief society in the water supply field in North America. Contemporary standards and practices are compactly described, and the descriptions are supplemented by selected references to the literature. The work is intended for water supply engineers and others who are professionally concerned with water purification and standards of quality for potable water. Important revisions and additions have been made in the present edition.

BABBITT, HAROLD EATON

Engineering in public health. New York McGraw Hill Book Company, Inc., 1952 582 p. illus. 23 cm. (McGraw Hill civil engineering series, Frederic T Mavis consulting editor) $8 00. 1965

Contents: Engineering in public health. Values and costs in public health. Public health administration. Disease and immunity. Epidemiology of communicable diseases. Biostatistics. Diseases transmitted by insects, the lower animals, and birds. Disinfection. Pesticides, poisons, and fumigants. Food sanitation. Milk. Water and the public health. Housing. Plumbing. Ventilation and heating. Light, sound, and odor. Sanitation of hospitals. Sanitation of city air. The city streets. The collection and disposal of municipal refuse. Industrial hygiene. Swimming pools and bathing places. Sewage and industrial wastes treatment. Pollution of surface waters. Rural and camp sanitation. Sanitary engineering in disasters. Index.

Note: This work is intended for the professional engineer practicing in fields related to public health. Although written for persons with basic education in civil engineering and with knowledge of water works and sewerage principles, little in the text would not be comprehensible to others with basic training in mathematics and the sanitary sciences. The book was developed principally from notes, references, and lectures used in graduate classes conducted by the author at the University of Illinois over a period of twenty years. It is a complete and detailed exposition of the subject, emphasizing the breadth of knowledge required by the sanitary or public health engineer. For the sake of brevity, discussions have been omitted of fundamentals in the major branches of professional engineering, such as the procurement of water and the collection of sewage. References are given at the ends of the chapters.

BABBITT HAROLD EATON AND JAMES J DOLAND

Water supply engineering. Fourth edition. New York McGraw Hill Book Company Inc., 1949 637 p. illus. 24 cm. $7.50. 1966

Contents: Introduction. Hydraulics. Demand for water. Ground water. Location, construction, and maintenance of wells. Rainfall and runoff. Dams. Intakes. Aqueducts. Stresses in pipe. Impounding reservoirs. Pumping stations. Steam and reciprocating pumping machinery. Electrical equipment. Centrifugal pumps. Well pumps. Miscellaneous engines and pumps. Materials for and the design of pipes. Valves, gates, hydrants, and meters. Metallic corrosion. Distributing reservoirs. Design of distribution systems. Construction and maintenance of distribution systems. Quality of water supplies. Interpretation of water analyses. Plain sedimentation. Coagulation. Sand filtration. Water softening. Disinfection. Miscellaneous methods of water purification. Appendixes. Outline of report on waterworks design. Problems. Index.

Note: (1502) An inclusive textbook on water supply engineering for use in civil engineering courses in engineering schools and colleges. Each topic is presented in detail with suitable examples and illustrations. Formulas are given where pertinent. 717 problems for solution are grouped by chapters in a section of 24 pages in the appendix. In this fourth edition the book has been revised, rearranged, and in part rewritten. Functional rather than structural procedures and practical applications rather than theoretical design are now emphasized; hence some of the theoretical material which appeared in the preceding edition has been dropped.

BESSELIEVRE EDMUND BULKLEY

Industrial waste treatment. New York McGraw Hill Book Company Inc., 1952 391 p. illus. 23 cm. $7.50. 1967

Contents: What constitutes a waste problem? Who starts a waste-treatment problem? The first steps to take in the solution. The place of the engineer or specialist. Cooperation between enforcing agencies, industrialist, and technicians. Factors in the solution of waste problems. The interests concerned in industrial-waste problems. Districts for industrial waste treatment. Sampling and analysis of wastes. Combining wastes from several plants to reduce costs. The pollutional effect of various wastes. Methods of waste treatment. Equipment for waste treatment and its selection. Coagulants and chemicals. Handling industrial wastes in municipal systems and charges therefor. Factors in the development of low-cost plants. Reuse of wastes and recovery of values. Appendixes. Author index. Subject index.

Note: Liquid wastes produced in industrial processes are discussed in this book primarily from the viewpoint of executives and engineers who are concerned with the disposal of wastes so as not to violate the law, pollute streams, and adversely affect public relations. There is of course some discussion of the public health aspects but this is subordinate. The general phases of the problems and the general methods of solving them are given most of the space, but the treatment of specific types of waste is described in the chapters entitled "Methods of waste treatment" and Reuse of waste and recovery of values. Bibliographies are included. Considerable attention is given to the reclaiming of water from liquid wastes for re-use in manufacturing processes and in cooling. The author is Chief Sanitary Engineer on the staff of the Dorr Company.

EHLERS, VICTOR MARCUS AND ERNEST W STEEL

Municipal and rural sanitation. Fourth edition. New York McGraw Hill Book Company Inc., 1950 548 p. illus. 23 cm. $6.50. 1968

Contents (abridged): Communicable diseases. Excreta disposal without water carriage. Excreta disposal with water carriage. Treatment of water. Protection of water supplies. Refuse disposal. Mosquito characteristics. Fly control. Rodent control. Milk sanitation. Food sanitation. Plumbing. Ventilation and air conditioning. Light. Housing. School sanitation. Industrial hygiene. Disinfectants and insecticides. Vital statistics. Public-health organization. Appendixes: How to make good concrete. Maximum allowable concentration values for various industrial poisons. Index.

Note: (1804) A successful college textbook. The first edition was published in 1927 and each revised edition has included improvements and additional material. A broad view is taken of the scope of sanitation; hence the inclusion of chapters on ventilation and lighting is appropriate. Besides its intended use, the book is suitable for reference use by practicing engineers, public health officials, and

in libraries. Many of the discussions have direct application to sanitation problems in rural areas and small villages. In preparing this edition the authors made many changes. New matter has been introduced at numerous places, and the total length of the work has been substantially increased.

HARDENBERGH, WILLIAM ANDREW

Sewerage and sewage treatment. Third edition. Scranton Pa. International Textbook Company, 1950 467 p. illus. 23 cm. (International textbooks in civil engineering, Benjamin A. Whisler, consulting editor) $6 50 1969

Contents (abridged) Hydraulics of sewers. Pipe sewers. Sewers built in place. Sewer appurtenances. Planning of sewerage systems. Design of sanitary sewers. Design of storm and combined sewers. Pumping of sewage. Construction of sewers. Records and estimates. Fundamentals of sewage treatment. Dilution and irrigation. Grit removal and screening. Sedimentation. Chemical treatment of sewage. Activated sludge process. Sludge digestion and disposal. Chlorination of sewage. Industrial wastes. Institutional waste treatment. Selecting the method of treatment and designing the plant. Operation of sewage-treatment plants. Typical design of sewage treatment plant. Index.

Note (1507) A standard text written by the editor of *Public works* magazine. The treatment is compact, and much attention is given to such practical matters as basic engineering data and construction details of sewer systems. The book has special application to the design of small plants. In this edition there are revised discussions of industrial wastes, trickling filters, and a few other topics. Citations to recently published literature have been added to some chapter bibliographies.

HARDENBERGH, WILLIAM ANDREW

Water supply and purification. Third edition. Scranton Pa. International Textbook Company 1952 516 p illus. 21 cm. $6 50 1970

Contents General considerations in planning water-supply systems. Consumption of water. Rainfall, evaporation, percolation, and absorption. Surface water. Ground water. Storage reservoirs. Distributing reservoirs. Gravity conduits. Pipe conduits. Pipe appurtenances. Laying pipe and maintaining lines. Planning the distribution system. Hydraulics of flow. Design of dead-end distribution system. Design of continuous-flow system. Pumps and pumping. Factors in water purification. Physical tests of water. Chemical analyses of water. Bacteriological examinations of water. Microscopical examination. Screening. Sedimentation and coagulation. Filtration. Disinfection. Removing dissolved minerals. Control of corrosiveness. Taste and odor control. Fluoridation of water. Water for industrial uses. Typical design of a treatment plant. Appendices. Index.

Note (1499*) An established textbook for engineering college students. It has a strong practical slant and is therefore used also by beginning engineers and operators of water plants. Operations such as the laying of pipe lines are described specifically and the descriptions usually include detailed procedures for sub-operations such as the testing of new lines for leaks. The preceding edition was published in 1945. In the present edition, the chapter on fluoridation of water is new and certain other chapters—for instance those on laying pipe, on maintaining lines, and on filtration—have been extensively rewritten. Recent literature has been added to the selected lists of references which appear at the ends of many of the chapters.

MOULTON, FOREST RAY AND FLORENCE HITZEL

Limnological aspects of water supply and waste disposal. Washington American Association for the Advancement of Science, 1949 87 p. illus. 24 cm. o.p. 1971

Contents: Microbiota of sewage treatment plants and polluted streams, by J. H. Wilson. Some epidemiological and biological problems in water-borne amebiasis, by S. L. Chang. Biotic response to stream pollution during artificial stream reaeration, by A. F. Bartsch and W. S. Churchill. A study of kraft pulping wastes in relation to the aquatic environment, by W. M. Van Horn. Plankton as related to nuisance conditions in surface water, by J. B. Lackey. Preliminary studies on the viability and dispersal of coliform bacteria in the sea, by B. H. Ketchum and others. The algologists' part in city and industrial water supply problems, by C. E. Taft. The use of copper sulphate for algal control and its biological implications, by J. B. Moyle.

Note A collection of original papers on topics that are of mutual interest to biologists and to sanitary engineers. The papers are limited, of course, to the specific topics named in their titles, but they are illustrative of areas within sanitary engineering where basic biological knowledge and techniques are of value. A majority of the papers are accompanied by literature references.

NORDELL, ESKEL

Water treatment for industrial and other uses. New York Reinhold Publishing Corporation, 1951 526 p. illus. 24 cm. $12.00. 1972

Contents. Industrial water supplies. Dissolved mineral matter. Dissolved gases. Turbidity, sediment, color, organic matter, tastes, odors and microorganisms. Water requirements. Boiler feed water. Cooling water. Aeration. Deaeration. Chemical feeders. Sedimentation, coagulation, settling, and filtration. Iron and manganese removal. Zeolite (sodium cation-exchanger) water softening process. Hydrogen cation-exchanger processes. Demineralization and deionization. Cold lime-soda water softening processes. Hot lime-soda water softening process. Silica removal. Appendix section. Index.

Note The treatment of natural waters in order to render them more suitable for industrial and domestic uses is a subject of wide interest. This is a comprehensive work on the subject with 120 tables of reference data, approximately the same number of illustrations, and long bibliographies. It is written on a professional level, and it is of interest to chemists, process engineers, and many others whose work involves the use of water in industry. The author is associated with the Permutit Company

PHELPS, EARLE B

Public health engineering a textbook of the principles of environmental sanitation. Volume II The food contact in collaboration with Walter D Tiedeman New York John Wiley & Sons Inc., 1950. 213 p. illus. 22 cm. $4.50. 1973

Contents The relation of food to disease. Food control administration. Milk production. Pasteurization of milk. Auxiliary processes and equipment. Plant layout. Milk plant inspection and control. Shellfish production and control. Public eating and drinking places. The handling and disposal of garbage, refuse, and municipal wastes. Rodent control. Index.

Note (1497*) The present volume is limited to the food sanitation phases of public health (the air and water phases were treated in volume I) and it may be read independently. The entire field of food in relation to public health is not covered. Instead, a considerable part of the book is devoted to the handling and control of such products as milk and shellfish. Particular attention is given to such matters as the design and sanitation of plants in milk handling plants. The work is of primary interest to professional workers in public health, especially those in charge of the inspection and regulation of places where food is processed and of restaurants.

MECHANICAL ENGINEERING

GENERAL

AMERICAN SOCIETY FOR METALS

Interpretation of tests and correlation with service a series of four educational lectures *presented to members of the ASM during* the thirty-second National Metal Congress and Exposition Chicago, October 23 to 27 1950 Cleveland The American Society for Metals, 1951 198 p. illus. 24 cm. $5.00 1974

Contents: Correlation of laboratory tests and service performance, by M. F Garwood and others. Limitations of mechanical testing, by M. [illegible]. Wear tests and service performance, by J. T Burwell. Corrosion tests and service performance, by F L. LaQue. Index.

Note: The papers in this book relate to the very important topic of correlations between laboratory tests and service performance. For example, in the first paper there are reports of detailed investigations of automobile steering knuckles, front suspension coil springs, and axle shafts. The lectures were addressed to professional metallurgists, but they are also of interest to mechanical engineers concerned with the design of machine parts. Each of the papers is accompanied by a list of references.

BURWELL JOHN T JR. editor

Mechanical wear being the proceedings of a summer conference on this subject held in June, 1948 at the Massachusetts Institute of Technology Cambridge, Mass Cleveland American Society for Metals 1950 287 p illus. 23 cm. $6 50 1975

Contents. Dimensional considerations in friction and wear, by C. F Taylor. Wear in diesel engines, by C. G. A. Rosen. Wear of automotive engines—cylinders and rings, by P S. Lane. Fuel and lubrication factors in piston ring and cylinder wear by A. G. Cattaneo and E. S. Starkman. Chemical aspects of wear and friction, by R. G. Larsen and G. L. Perry The vapor-lubrication of graphite in relation to carbon brush wear by R. H. Savage. The wear and damage of metal surfaces with fluid lubrication, no lubrication and boundary lubrication, by F P Bowden and D Tabor. Wear in steam turbines, by M. L. Mochel. The need for studies of "real" hydrodynamic lubrication, by R. W Dayton The dielectric strength of oil film in plain bearings, by C. M. Allen. Gear wear as related to the viscosity of the gear oil, by H. Blok. Surface deterioration of gear teeth, by J. O Almen. Recent roll tests on endurance limits of materials, by E. Buckingham and G. J Talbourdet. Hardness and its influence on wear, by E. Holm. Wear of metals against smooth refractory materials, by L. H Milligan. Friction and wear of some powder metallurgy bronzes, by J. Dedrick and J. Wulff. Summary of factors in the wear process, by J T Burwell, jr. Bibliography Index.

Note: The papers in this volume present a broad survey of research methods and current knowledge regarding the causes and control of wear of metals. The authors are specialists associated with universities, research institutions, and industrial corporations; and the material has been drawn from reports of laboratory investigations and studies of machines in actual service, as well as from published literature The book is generously illustrated, and there is a ten-page bibliography It is of interest to mechanical engineers in general and to lubrication experts and machine designers in particular.

DAYTON RUSSELL WENDT editor

Sleeve bearing materials. A series of educational lectures on sleeve bearing materials presented to members of the A. S. M during the twenty-eighth National Metal Congress and Exposition Atlantic City Cleveland American Society for Metals, 1949 256 p. illus. 23 cm. $5.00. 1976

Contents: Part I, The characteristics of bearing materials: Fundamental considerations concerning the behavior of bearings, by R. W Dayton. Some general comments on bearings, by C. E. Swartz. British thought and practice; how they differ from American, by W H. Tait. Discussion of paper by W H. Tait, by R. D. Hanna. Part II, Specific bearing materials: Newer bearing materials, by L. C. Knight and L. W Kirk. Aluminum alloy bearings—metallurgy, design and service characteristics, by H. Y Hunsicker. Porous metal bearings, by A. J. Langhammer Morlube Durex-100 engine bearings, by J. A. Lignian. Cast bronze bushings, by L. M. Long. Discussion of babbitt metal, by K. J. Shoemaker. Discussion of wrought (or rolled) bushings and bushing materials, by H. F Cash and others. Discussion of cast bronze bearings, by J. R. Tweeney Part III, Bearing structures and fabrication methods: Mechanical features of steel-backed bearings, by R. Crankshaw Lubrication, by E. Crankshaw and J. Mesarch. Bronze-backed bearings, by R. J. Kerry. Electroplated bearings, by R. A. Schaefer. Preparing cast iron surfaces for bonding, by J. H. Shoemaker Part IV Factors involved in the application of bearings The selection of bearing materials, by A. F Underwood. Aircraft engine bearings, by J. Palsulich and R. W Kerr. Selection of bearing materials in the electrical industry by D F Wilcock. Railroad journal bearings, by K. S. Pearce. Index.

Note. The papers collected in this book are addressed to metallurgists, engineers, and other men who have a practical interest in bearings and bearing materials. Several of them are supplemented by summaries of the discussion that followed their original presentation. Six of them contain lists of related literature.

KENT WILLIAM

Kent's Mechanical engineers' handbook *twelfth edition. Power volume* prepared by a staff of specialists J Kenneth Salisbury editor Design and production volume prepared by a staff of specialists Colin Carmichael, editor New York John Wiley & Sons, Inc., 1950. 2 vol. $8.50 per volume. 1977

Contents (abridged) Power volume Air by J. Kaye and others. Heat and heat exchange, by C. O. Mackey and others. Steam, water and ice, by J. K. Salisbury and others. Hydrodynamics, hydraulics, and pumps, by G. E. Barnes and others. Piping, by R. J Wiseman and others. Steam-generating units, by R. M. Powell and others. Steam turbines and engines, by A. G Christie and W Trinks. Condensers and cooling equipment, by K. S. Brundige and J. G. De Flon. Combustion gas turbines, by W A. Wilson. Refrigeration and ice-making, by B. H. Jennings. Heating, ventilating, and air conditioning, by J. W James and others. Internal-combustion engines, by E. W Anderson and others. Electric power by D. L. Beeman and others. Atomic power, by D Cochran. Instrumentation, by D. P Eckman. Index. Design and production volume: General properties of materials, by H. B Pulsifer and H. W Gillett. Corrosion and corrosion resistance, by F M Speller and H. H. Uhlig. Nonmetallic materials, by C. E. Austin and others. Mechanisms, mechanics, and machine elements, by V L. Doughtie. Vibration and noise control, by R. O. Fehr. Fasteners, by C. Carmichael. Mechanical springs, by A. M. Wahl. Machine hydraulics, by L. S. Linde-

rath, Jr. Gearing, by E. L. Crosthwait. Control mechanisms, by E. S. Smith and others. Metal melting and casting processes, by C. K. Donoho and others. Plastic working of metals, by K. C. Clarke and others. Joining of materials, by C. W. Obert and others. Dimensional control, by H. S. Slaer and others. Working of nonmetallic materials, by T. D. Perry and J. E. Fulson. Materials handling, by M. W. Potts. Index.

Note: (1526) A long-established reference book in mechanical engineering. The titles given above are those of sections. Each section contains several parts in which the fundamentals of a specific area of mechanical engineering are stated concisely and are supplemented with engineering data. This edition represents a thorough revision. Older material which has been carried over has been systematically revised and there is newly added material on such subjects as atomic power, gas turbines, jet propulsion, heat pumps, plastic materials, and statistical quality control.

LITTLETON, CHARLES T.

Industrial piping. Special chapter on estimating by R. A. Dickson. New York, McGraw-Hill Book Company, Inc., 1951. 394 p. illus. 23 cm. $9.00 1978

Contents: Flow sheets, plot plans, and design procedure. Steam piping. Valves. Water piping. Oil piping and the flanging formula. Gas, air, and instrument piping. Alloy piping. Miscellaneous piping materials. Insulation. Piping cost estimation, by R. A. Dickson. Index.

Note: A textbook and guidebook for industrial piping presenting the technical information on the subject needed by practicing pipe designers, erection foremen, and engineering students. The author has not attempted to cover the theoretical aspects of hydraulics, thermal expansion, and radiation, but sets forth practical methods commonly in use for solving such problems as the sizing of pipes and the determination of pressure drop. Much information is presented in tabular form. It is assumed that the user of the book has command of algebra and elementary physics.

MARKS, LIONEL SIMEON, editor

Mechanical engineers' handbook. Fifth edition. New York, McGraw-Hill Book Company, Inc., 1951. 2236 p. illus. 24 cm. $15.00. 1979

Contents: Mathematical tables. Weights and measures. Mathematics. Mechanics of solids. Friction. Mechanics of fluids. Thermal properties of bodies and thermodynamics. Transmission of heat by conduction, convection, and radiation. Mechanical properties of materials. Mechanics of materials. Vibration problems. Iron and steel. Non-ferrous metals. Fuels. Gas producers and gas cleaning. Industrial furnaces. Machine elements. Gearing. Bearings. Pipes and pipe fittings. Steam engines and turbines. Internal-combustion engines and turbines. Hydraulic turbines. Hoisting and conveying. Automobiles. Railway engineering. Marine engineering. Aeronautics. Building construction. Heating, ventilation, and air conditioning. Illumination. Machine-shop practice. Industrial management and cost accounting. Statistical quality control. Pumps, compressors, and fans. Electrical engineering. Electron tubes and radio. Measuring instruments. Automatic control. Surveying. Mechanical refrigeration. Index.

Note. (1527) One of the outstanding engineering handbooks published in the United States of America. More than 60 specialists in the various branches of mechanical engineering have written or revised the signed sections and subsections. Generally speaking, each section includes theory and factual information presented in easy form and also reference data presented in tables. In this edition the general scope and arrangement are the same as in the preceding edition, but the format has been improved by the use of larger type and pages. The inclusion of new or expanded material on such topics as aerodynamics, aircraft jet propulsion, solar heating, heat pumps, dust explosions, elastomers, silicones, and atomic power accounts for approximately 400 additional pages.

OBERG, ERIK, AND F. D. JONES

Machinery's handbook for machine shop and drafting room. A reference book on machine design and shop practice for the mechanical engineer, draftsman, toolmaker and machinist. Fourteenth edition. New York, The Industrial Press, 1951. 1911 p. illus. 18 cm. $8.00 1980

Note: (1702) The scope and arrangement of this useful compilation of reference information and data relating to machine design and machine shop practice have been altered little since the first edition in 1914. However, with each succeeding edition the material has been revised, expanded, corrected and brought up to date to meet the current needs of machinists and designers of machinery and tools. The present edition was first published in 1948 and then reprinted in 1949, 1950 and 1951. It carries the same pagination as the thirteenth edition.

PLANT ENGINEERING HANDBOOK. Prepared by a staff of specialists. William Staniar, editor-in-chief. New York, McGraw-Hill Book Company, Inc., 1950. 2007 p. illus. 24 cm. (McGraw-Hill industrial organization and management series. L. C. Morrow, consulting editor) $15.00 1981

Contents (abridged): Basic industrial costs and cost reduction. Management engineering. Foundations and reinforced concrete. Materials of construction. Industrial water purification and treatment. Power plants. Refrigeration. Industrial instrumentation and control. Industrial piping. Welding. Industrial-plant power distribution and lighting. Mechanical power transmission. Antifriction bearings. Electrical speed control. Hydraulic power systems. Lubrication. Mechanical packings. Materials handling. Industrial process air conditioning. Crushing and grinding. Drying. Trade waste disposal. Hygienics in the industries. Graphical mathematics. Vibration control and noise silencing. Industrial containers and packaging equipment. Plastics. Patents and copyrights. Index.

Note: A one-volume encyclopedia for plant engineers and others who are responsible for the organization, construction, operation or maintenance of factories and other industrial establishments. Most of the chapters are devoted to engineering and mechanical phases of the large field. However, costs, work simplification, administration of job evaluation plans, etc., are given some space. The treatment of each subject is compact, but in general there is enough information under each heading to orient the plant engineer and to provide him with the basic facts about the subject under discussion. Literature references are appended for those who wish to read further. The sections and sub-sections of the book are signed, and the authors, recognized authorities, are affiliated with universities or industrial organizations.

UNITED STATES. UNIFORM PLUMBING CODE COMMITTEE

Uniform plumbing code. Report of the Uniform Plumbing Code Committee. Issued jointly by United States Department of Commerce, Office of Domestic Commerce, Construction Division, and House and Home Finance Agency, Office of the Administrator, Division of Standardized Building Codes and Materials. Washington, D. C., Government Printing Office, 1949. 83 p. illus. 23 cm. (United States. Department of Commerce. Domestic commerce series no. 13) o.p. 1982

Contents: Definitions. General regulations. Materials, weight, and quality. Joints and connections. Traps, cleanouts, interceptors, and backwater valves. Plumbing fixtures. Indirect waste piping and special wastes. Water supply and distribution. Drainage system. Vents and venting. Storm drains. Inspection, tests, and maintenance. Appendices: Individual water supply. Individual sewage-disposal system. Air gaps, backflow preventers, and drinking fountain standards. Sizing the water supply system. Administration.

Note: The Uniform Plumbing Code Committee is composed of representatives of the Housing and Home Finance Agency, the United States Department of Commerce, the National Association of Master Plumbers, the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada, the United States Public Health Service, and the National Bureau of Standards. The code presents recommended practices for plumbing in residential, commercial, industrial, institutional, and other types of installations. It is based both on practical experience and on research performed at the National Bureau of Standards under the sponsorship of the Housing and Home Finance Agency. Also considered and used by the Committee were tests made at other laboratories, the findings of other research groups, and correspondence

from interested persons. The chief purpose of the code is to serve as a technical guide for public health officials and others responsible for the preparation or revision of local plumbing codes.

MECHANISM AND MACHINE DESIGN

BUCKINGHAM, EARLE

Analytical mechanics of gears. New York McGraw Hill Book Company Inc., 1949 546 p. illus. 23 cm. $10.00. 1983

Contents: Conjugate action on spur gears. Conjugate action on internal gears. Trochoids, tooth fillets, and undercut. The involute curve and its properties. Involutometry of spur gears. Involutometry of internal gears. Conjugate action on helical gears. Involutometry of helical gears. Involutometry of spiral gears. Helicoid sections. Contact on worm-gear drives. Design of worm-gear drives. Hourglass-worm drives. Conjugate tooth action on bevel gears. The octoid form on bevel gears. Spiral bevel gears. Skew bevel or hypoid gears. Gear teeth in action. Efficiencies of gears. Analysis of dynamic loads on spur-gear teeth. Dynamic loads on gear teeth. Beam strength of gear teeth. Surface-endurance limits of materials. Limiting loads for wear on gears. Index.

Note: An important contribution to the literature of gears. The author is widely known for his books on gear design. However, this one deals not with practical design but with the basis of design. In it are presented chiefly mathematical analyses of the actions of gears of the main types which are mentioned in the chapter titles. Related topics such as the ways in which gears wear and the function of lubricants under various conditions also are discussed. The book is based largely on the author's own work and there are no literature citations.

HORTON HOLBROOK LYNEDON editor

Ingenious mechanisms for designers and inventors. Volume III. New York Industrial Press, 1951 536 p. illus. 24 cm. $6 00. 1984

Contents: Cam applications and special cam designs. Intermittent motions from gears and cams. Intermittent motions from ratchet and Geneva mechanisms. Overload, tripping, and stop mechanisms. Locking, clamping, and locating devices. Reversing mechanisms of special design. Reciprocating motions derived from cams, gears, and levers. Crank actuated reciprocating mechanisms. Variable stroke reciprocating mechanisms. Mechanisms which provide oscillating motion. Mechanisms providing combined rotary and linear motions. Speed changing mechanisms. Speed regulating mechanisms. Feed regulating, shifting, and stopping mechanisms. Automatic work feeding and transfer mechanisms. Feeding and ejecting mechanisms for power presses. Hoppers and hopper selector mechanisms for automatic machines. Miscellaneous mechanisms. Index.

Note: (1544) The first two volumes of this series were edited by Franklin D. Jones, and they have been invaluable to machine designers and inventors. The present volume contains only mechanisms that did not appear in the first two volumes; otherwise its organization and scope are identical. The mechanisms are not only described but their essential and unique elements are diagramed in line drawings. The material has been reprinted from *Machinery*.

HRONES, JOHN ANTHONY AND GEORGE L. NELSON

Analysis of the four-bar linkage its application to the synthesis of mechanisms. New York Technology Press of the Massachusetts Institute of Technology and John Wiley & Sons, Inc., 1951. 730 p. 44 cm. $15 00 1985

Note: The 730 large-scale charts comprising this volume show the trajectories of various points on the connecting rod of four-bar linkages as the driving crank of the linkage rotates through 360°. For each set of link ratios there are five charts from which the displacement and velocity of points on given linkage may be read directly. Introductory pages explain how the charts were compiled and the manner of their use. The book is of interest to mechanical engineers and machine designers.

JEFFERSON, THEODORE BREWSTER, AND WALTER J BROOKING

Introduction to mechanical design. New York The Ronald Press Company 1951 612 p. illus. 24 cm. $6.50 1986

Contents: Glossary. Abbreviations. Machine types and their functional design. Fundamental concepts and terminology. Engineering materials and their properties. Forming and fabrication in design. Bolted and riveted connections, screws. Welded fastenings and joints. The machine frame and its elements. Shafting, keys, and couplings. Bearings and lubrication. Friction gearing, brakes and clutches. Gears and flywheels. Belt, rope, and chain drives. Cams, linkages, and miscellaneous devices. Springs. Piping and containers for machines. Styling, streamlining, and finishing of machines. Standard machine elements and standardizing agencies. Appendix. Index.

Note: An outstanding textbook in which the authors have made special effort to present the subject so that the reader will get clear picture of actual problems and operations in the professional designing of machines. The book won the first award in the Machine Design Division of the Competitive Program for Modernized Textbooks on Design sponsored by the James F. Lincoln Arc Welding Foundation. Recently developed machine elements such as ball-bearing sleeve bearings are covered, as well as the expected order elements. The book is exceptionally well illustrated and there are approximately 100 tables of engineering data.

LIPSON CHARLES, AND OTHERS

Stress and strength of manufactured parts, by Charles Lipson, G. C. Noll, and L. S Clock. New York McGraw Hill Book Company Inc. 1950 259 p. illus. 23 cm. $6 00 1987

Contents: Part I, General principles General approach to structural problem. Consideration of stress. Consideration of strength. Balance between stress and strength. Part II, Charts: Geometric stress concentration factors. Fatigue stress concentration factors for annealed steels. Fatigue stress concentration factors for quenched and drawn steels. Allowable stresses for infinite life. Allowable stresses for limited life. Appendix: Reference and supplementary data for charts. References. Author references.

Note: An unusual reference book of special interest to design engineers and metallurgists. General considerations are covered in the first part. The heart of the book is the second part. Here are given 175 charts on which are shown such information as effects of holes, grooves, keyways, etc., on the strength of parts subjected to bending, torsion, and tension. The charts are supplemented by notes and references to the papers on which they are based.

SAHAG LEON MARR

Kinematics of machines. Revised printing. New York The Ronald Press Company 1952 249 p. illus. 24 cm. $4.50. 1988

Contents. Fundamental conceptions. Motion in mechanisms. Instant centers. Linear and angular velocities. Accelerations in machines. Velocity and acceleration diagrams. Cams. Rolling friction surfaces. Gears. Gears on intersecting and nonintersecting shafts. Gear trains. Flexible links. Other useful mechanisms. General instructions for drawing room problems. References. Index.

Note: (1712*) A text designed for use in introductory but thorough courses offered to mechanical engineering students. The treatment takes into account the present-day demands upon the basic knowledge of machine designers due to the increasing use of complex and high-speed machinery. Problems in accelerations and velocities are solved graphically rather than by analytical methods. The major change in this "revised printing" is thorough rewriting of the chapter on accelerations. This chapter is now 12 pages longer. The additional pages have been inserted without alteration in the page numbers in the balance of the book.

SHAW MILTON C., AND E. FRED MACKS

Analysis and lubrication of bearings. New York McGraw-Hill Book Company Inc., 1949 618 p. illus. 24 cm. (McGraw Hill publications in aeronautical science, Jerome C. Hunsaker consulting editor) $10.00 1989

Contents: Principal notation. Introduction. Bearing load analysis. Dimensional analysis. Aircraft-engine bearing loads. Hydrodynamic lubrication. Dynamically loaded bearings. Journal bearings. Hydrodynamic thrust bearings. High speed considerations. Rolling-contact bearings. Boundary considerations. Bearing evaluation. Appendix. Problems. References and selected bibliography. Index.

Note: A comprehensive technical treatise designed for use both by advanced students of engineering and practicing engineers. Instead of assuming [a] bearing rotating at constant speeds under ideal dynamic conditions, the authors hav[e] endeavored to present an analysis of bearing conditions as they actually exist in operating machinery. The analysis of bearing loads in reciprocating aircraft engines is especially detailed. Many subtopics, such as testing machines for bearing, and special kinds of lubricants, are discussed though not mentioned in the table of contents. The selected bibliography runs to nearly 400 entries and contains references to books, periodicals, and [a] few patents.

VALLANCE, ALEX., AND VENTON LEVY DOUGHTIE

Design of machine members. Third edition. New York McGraw Hill Book Company Inc., 1951 500 p. 24 cm. $6.00. 1990

Contents: Introduction. Engineering materials. Stresses in elementary machine members. Design stresses and factor of safety. Cylinders, pipes, and tubes. Metal fits and tolerances. Flat plates and cylinder heads. Riveted joints. Welded joints. Threaded fasteners and power screws. Keys, cotters, and knuckle joints. Shafts. Sliding bearings. Roller and ball bearings. Couplings and clutches. Brakes. Springs. Spur gears. Bevel and screw gears. Belts and belt conveyors. Rope drives. Hoisting and power chains. Miscellaneous machine members. Index.

Note: (3555) A standard engineering college textbook. The discussions of some topics are full enough to make it useful also to men out of college [w]ho are not professional machine designers but who must occasionally design [a] machine part. The present edition is 59 pages shorter than the preceding edition. This change has been accomplished chiefly by resetting the [t]ype so that the typical page contains more matter. New material has been added on such topics as stresses, riveted joints, threaded fasteners, and gears.

YORK, JOHN EDMUND

Methods of joining pipe standard and special joints for different classes of pipes and pipe materials including steel cast iron dur iron brass, copper lead, chemical tile, vitreous tile synthetic resin plastic, concrete glass, transite and wood. New York The Industrial Press 1949 236 p. illus. 22 cm. $3 00
1991

Contents: Screwed joints for ferrous and brass pipe. Flanged pipe joints. Welded and brazed pipe joints. Methods of joining cast iron pipe. Joints for thin wall tubes. Joints for plumbing and chemical-resistant pipe. Joints for vitreous tile and concrete pipe. Joints for transite pipe. Joints for wood pipe. Joints to permit movement. Index.

Note: Not all of the methods which have been devised for joining pipe are described in this book, but most of the practical ones are here. The larger part of the space is devoted to joints for metal pipes, but non-metallic piping systems, such as transite, wood, and glass, are adequately covered. Each type of joint is discussed as to design, construction, advantages and disadvantages. Numerous line drawings show details of joints. American Water Works Association, Society of Automotive Engineers, and American Petroleum Institute specifications are frequently cited.

CONTROLS AND SERVO-MECHANISMS

AHRENDT WILLIAM ROBERT AND JOHN F TAPLIN

Automatic feedback control. New York McGraw Hill Book Company Inc., 1951 412 p. illus. 24 cm. $7.50 1992

Contents: Introduction. Dynamical analysis of physical systems. The operational approach to feedback control. Frequency spectrum analysis. Feedback control loops. Multiple-loop feedback control systems. Design considerations. Nonlinearity and discontinuity in servomechanisms. Pneumatically operated controllers. Temperature regulation. Speed governing. Pressure, flow and liquid level. Glossary. Appendix. Index.

Note. A practical treatment on the engineering level. The theoretical fundamentals ar[e] outlined, and mathematical methods of analysis of controlling systems are presented. However, the mathematical aspects ar[e] not pursued to the advanced regions, characteristic of many books on the feedback principle. Much attention is paid to practical aspects that would be of concern to engineers designing controls and servomechanisms. Though intended mainly for engineering students, the book is potentially useful to graduate engineers and others in industry [who] find themselves in need of an inclusive introductory treatment.

CHESTNUT, HAROLD, AND ROBERT W MAYER

Servomechanisms and regulating system design. Volume 1. New York John Wiley & Sons, Inc. 1951 505 p. illus. 22 cm. $7.75.
1993

Content[s] The automatic control problem. Manipulation of complex [n]umbers. Solution of linear differential equations. Laplace transforms for the solution of linear differential equations. Steady-state operation with sinusoidal driving functions. Methods of determining system stability. Typical control elements and their transfer functions. Types of servomechanism and control systems. Complex plane representation of feedback control system performance. Design use of complex plane plot to improve system performance. Attenuation concepts for use in feedback control system design. Application of attenuation-phase diagrams to feedback control design problems. Multiple-loop and multiple-input feedback control systems. Comparison of steady state and transient performance of servomechanisms. Bibliography. Problems. Index.

Note This work is an introduction to the subject, but an introduction for trained engineers [w]ho will make practical use of the knowledge. The necessary mathematical background is covered in chapters 2 to 6. After these chapters, the authors discuss the analysis of servomechanisms by the complex plane method; then they show that some of the difficulties in using this method in the synthesis of feedback control systems are [a]voided by the attenuation frequency theorems of Bode. This approach to design is emphasized and examples of its application are given. The authors are associated with the General Electric Company and the book appears in the publisher' "General Electric series." The discussions are full enough and enough examples are included to make the book suitable for self instruction. The second volume, still to be published, will deal more particularly with design.

CHUTE GEORGE M

Electronic motor and welder controls. New York McGraw Hill Book Company, Inc., 1951 348 p. illus. 24 cm. $7 00. 1994

Contents (abridged) Part I, Resistance welding controls: Basic welding controls. G-E sequence weld timers. G-E high-speed sequence combinations. Synchronous timing. G-E synchronous combinations. Slope control, temper welding and forge timing. G-E seam-welding controls. Westinghouse synchronous combinations. Welding with limited power supply. Three-phase welding controls. Part II, Motor controls: Function controls. Photoelectric register controls. Motor-generator control of motor speed. The electronic amplidyne. The photoelectric tracer. Rubber calender control. Multicolor printing. Paper-machine control. Index.

Note: (3437 1847) A practical book suitable for shop electricians, plant engineers, and others whose work includes the selection, installation, or maintenance of electronic controls for resistance welders and motor-operated machines. The general principles of such controls are discussed briefly but most of the book is devoted to specific descriptions of the mechanisms, circuits, and operation of standard commercial controls. More recent types of controls and, generally speaking, more explicit descriptions of them are provided in this book than in the author's *Electronic control of resistance welding* (1943) and *Electronics in industry* (1946). Many readers will still need the earlier books for background information.

DIEBOLD JOHN

Automation The advent of the automatic factory New York D Van Nostrand Company Inc. 1952 181 p. 22 cm. $3.00. 1995

Contents. Note on the word automation. The problem of automation. Control and the computer. The redesign of product and process. Making machinery automatic. Automatic handling of information. What will automation mean to business? Some social and economic effects of automation. Index.

Note: A study of the possibilities, limitations, and social and economic consequences of the revolutionary new machines of the electronic age and what they will mean in terms of jobs, cost of goods and services, standards of living, and increased leisure time. The author considers the effects upon engineering, education, management, and labor of the new electronic machines, some of them already available and in operation in offices and factories.

DRAPER CHARLES STARK AND OTHERS

Instrument engineering. By Charles Stark Draper, Walter McKay and Sidney Lees Volume I Methods for describing the situations of instrument engineering. New York McGraw Hill Book Company Inc., 1952 269 p. illus. 29 cm. (McGraw Hill publications in aeronautical science, Jerome C. Hunsaker consulting editor) $7.00 1996

Contents: The operating system. Diagrams for describing operating systems. Performance operators and performance functions for operating systems. Static and dynamic operating conditions—static sensitivity. Static performance. Dynamic performance. Derivation of performance equations. Dimensional analysis. Concepts and notation for the comparison of physical quantities. Concepts and notation for the description of generalized operating system performance. Applications of statistical methods to instrument engineering. Representation of physical situations by mathematical forms. Description of performance in terms of sinusoidal response characteristics. Bibliography. Index.

Note: The first volume published of a three-volume work which promises to be a substantial contribution to the literature on indicating, measuring, and control instruments. The treatment—in this first volume at least—is analytical and generalized. The work is addressed to graduate students and to engineers in industry who will be or are concerned with the design, installation, or use of instrument systems. It has been based on the activities and experience of the Aircraft Instrument Section and the Instrumentation Laboratory of the Aeronautical Engineering Department of Massachusetts Institute of Technology.

ECKMAN DONALD P

Industrial instrumentation. New York John Wiley & Sons, Inc. 1950 396 p. illus. 21 cm. $5.50 1997

Contents: Qualities of measurement. Expansion thermometers. Thermoelectric temperature measurement. Resistance thermometers. Radiation temperature measurement. Methods for composition analysis. Mechanical measurements. Measurement of pressure and vacuum. Measurement of head and level. Flow-metering. Process instrumentation. Appendix. Index.

Note: Although this book is essentially a text for upperclass engineering students, it can be used also by industrial and chemical engineers as an introductory guide to the principles and methods of measurement which are of use in the processing and manufacturing industries. Emphasis is placed on instruments used in measuring temperature, pressure, rate of flow and composition. Each class of instrument is preceded by a review of the physical principles involved; and the construction, operation, and applications of selected instruments are described. Schematic diagrams and review problems are included.

ERNST WALTER

Oil hydraulic power and its industrial applications. New York McGraw-Hill Book Company Inc. 1949 366 p illus. 24 cm. $8 00 1998

Contents: Fundamental units of measurement. Properties of hydraulic fluids. Hydrostatics. Hydrodynamics. Viscous flow. Viscous and turbulent flow. The generation of oil hydraulic power. The utilization of oil hydraulic power. The transmission of hydraulic power. The control of oil hydraulic power. The application of oil hydraulic power. Industrial applications of oil hydraulic power. Index.

Note: The utilization of confined oil to transmit power has application in a wide variety of mechanisms, from the simple hydraulic brake to highly complicated gun turret machinery. This book deals primarily with the industrial uses of this mode of power transmission and its applications in the design and construction of servomechanisms and heavy machine tools. In the early chapters the fundamentals of fluid mechanics are stated concisely; the remainder of the book is devoted to fairly detailed descriptions of methods and mechanisms.

MECHANICAL DRAWING

FARMER, J HAROLD, AND OTHERS

Illustrating for tomorrow's production by J Harold Farmer Abbott J Hoecker, and Francis F Vavrin. New York The Macmillan Company 1950 199 p illus. 24 cm. $5 75 1999

Contents (abridged) Part I, Preliminary to production illustration: The purpose of production illustration. Isometric and oblique drawing. Method for making true-scale perspective drawings. Mechanical method for exploding views. Freehand drawing based on the mechanical construction principle. Part II, Making production illustrations: The rough layout. Rendering. Mounting and presentation of drawings. Reproduction of illustrations. Part III, Aircraft illustrating. Part IV The production illustrator in advertising and industrial design. Bibliography

Note. A short but practical introduction to the technique of making perspective drawings of such things as machines and machine parts for use in manufacturing and also for reproduction in publications such as instruction manuals. Approximately half of the space is devoted to reproductions of illustrations, all of which either depict the making of production illustrations or show finished illustrations. The book is potentially useful to draftsmen and artists who wish to prepare for practical work in the field. The fourth part is only eleven pages long and hence is little more than an outline of the use of production illustrations in advertising and industrial design

GIESECKE FREDERICK ERNEST AND OTHERS

Technical drawing by Frederick E. Giesecke, Alva Mitchell and Henry Cecil Spencer Third edition New York The Macmillan Company 1949 851 p. illus. 24 cm. $7.50 2000

Contents: Introduction Instruments and materials. Instrumental drawing Geometry of technical drawing Lettering. Projections. Multiview projection. Sectional views. Auxiliary views. Revolutions. Axonometric projection. Oblique projection. Perspective. Technical sketching. Intersections and developments. Dimensioning. Fasteners. Shop processes. Working drawings. Gearing and cams. Pipe, fittings, and valves. Welding Shading. Patent drawing. Graphs. Architectural drawing Structural drawing Topographic drawing. Aeronautical drafting. Reproduction of drawings. Appendix Index.

Note. (1546) The clarity and thoroughness with which many aspects of technical drawing are presented in this volume make it of value both as a text in colleges and vocational schools, and as a basic reference book. The techniques of making technical drawings are explained in detail, but the emphasis is on fundamental principles. The many excellent drawings and illustrations constitute a large and important part of the text. This edition has been enlarged and revised. In particular, chapters dealing with such topics as dimensioning, axonometric projection, shop processes, and architectural drawing have been rewritten and expanded and a new chapter on aeronautical drafting has been added.

KATZ, HYMAN H.

Technical sketching and visualization for engineers. New York The Macmillan Company 1949 163 p. illus. 26 cm. $5 00 2001

Contents: Introduction Technical sketches. Straight lines. Curved lines. Proportion. Lettering—symbols—practice—problems. Orthographic sketching. Pictorial sketching. Shading Measurements from the model Non-graphical visualization Appendix. Index.

Note: A good exposition of the techniques of freehand pictorial sketching which are useful in visualizing mechanical ideas and designs. There is also some discussion of clay and cardboard models. Methods which can be followed to produce the fairly precise sketches which are most useful in the representation of machines and machine parts are emphasized. The book is intended for draftsmen and engineers already familiar with mechanical drawing.

LENT, DEANE

Machine drawing. New York Prentice-Hall, Inc. 1951 523 p illus. 24 cm. (Prentice-Hall engineering design series, John A Hrones, editor) $7 75 2002

Contents: Part I, The design phase: The design of machines. Part II, The detail phase Detail drawings. Shape description. Technical sketching. Auxiliary and partial views. Sectional views. Symbols and conventional representation. Size description—dimensioning. Manufacturing processes. Control of manufacturing accuracy. Techniques of precision drawing. Finished detail drawings. Part III, The assembly phase: Assembly drawings. Standard parts. Problems. Appendix. Index.

Note: A textbook organized so that it may be used in either vocational school or college courses offered to students who are preparing to become draftsmen or to work in machine design. Only those aspects of mechanical drawing which are useful in the drawing of machine parts are covered. The documents are clear and full enough so that in most parts they can be understood without the assistance of an instructor. The author is a member of the faculty of Massachusetts Institute of Technology

LUZADDER, WARREN JACOB

Technical drafting essentials for vocational and technical students. Architectural drafting section, by William S. Hornung. New York Prentice-Hall, Inc., 1950 326 p illus. 24 cm. $4.00 2003

Contents (abridged) Drawing instruments and equipment. Engineering geometry Technical lettering. Multiview drawing. Freehand drafting. Sectional views. Conventional practices and representations in orthographic drawing Auxiliary views. Revolution. Ink work and tracing Dimensioning. Screw threads, fasteners, and welding. Working drawings. Piping drawings. Gears and cams. Pictorial drawing. Sheet metal drafting. Map drafting Structural drafting. Architectural drafting. Appendix Index.

Note (1571) A revision of the author's well known *Fundamentals of engineering drawing* for use in courses in high schools and trade schools and for self-instruction. It contains considerably less material than the earlier book but is full enough to prepare students for practical work. There are 415 figures, many of which include reproductions of more than one drawing.

RULE, JOHN THOMAS AND EARLE F WATTS

Engineering graphics. New York McGraw Hill Book Company Inc., 1951 298 p. illus. 24 cm. $4.50 2004

Contents The straight line and circle The construction of the conic sections. Projective constructions. Roulettes, glissettes, and spirals. Vector geometry Graphical scales Empirical curves. Periodic curves. Graphical calculus. The geometry of projection drawing. Axonometry Conventions of practical drafting Appendices American drafting standards. Geometric proofs. Table of chords. Table of logarithms. Table of natural trigonometric functions. Table of exponentials. Values of e^x—hyperbolic logarithms. Index.

Note In this college textbook on engineering drawing the use of graphic methods in the analysis of engineering problems is given considerably more emphasis than are the techniques of making representational drawings Both aspects are well covered as to theory and to basic techniques, but there is comparatively little in the book on the drawing of machine parts, lettering, etc. On the other hand, such chapters as that on graphical calculus cover a phase of the subject that is omitted entirely from some of the older texts.

TURNER, WILLIAM WIRT AND OTHERS

Basic engineering drawing a text integrating engineering drawing descriptive geometry machine drawing. By William Wirt Turner Carson P Buck, and Hugh P Ackert. New York The Ronald Press Company 1950 669 p. illus. 23 cm. $5.50 2005

Contents Drafting equipment. The use and care of drafting instruments. Conventional lines and their application. Lettering. Orthographic projection Freehand sketching. Auxiliary views. True length. True size. Piercing points. Perpendicular relationships. Revolution. Intersections and developments. Pictorial drawing. Sections and conventions. Dimensioning. Fasteners, piping, and welding. Working drawings. Gears and cams. Graphs. Drafting as it applies to various types of engineering. Appendix. Index.

Note: A textbook for use in full-length introductory courses in engineering colleges. As indicated in the subtitle, it includes certain allied subjects, such as descriptive geometry which are often taught as separate courses. Also there is more emphasis on perspective and other types of pictorial drawings than is found in some of the long established texts. This aspect reflects the wide use of such drawings in American industry where they have been found easier for beginning machinists and other mechanics to follow than conventional plane drawings. The appendix includes a useful glossary. The authors are members of the faculty of the Department of Engineering Drawing of the University of Notre Dame.

LUBRICANTS

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on functional tests for ball bearing greases. Presented at the fifty-first annual meeting American Society for Testing Materials, Detroit, Michigan June 23 1948. Philadelphia American Society for Testing Materials 1949 103 p illus. 23 cm. (Special technical publication no 84) Paper $1.00. 2006

Contents. Introduction, by R. C. Adams. Development of functional grease test methods for the aircraft industry by D. H. Moreton. Grease—an oil storehouse for bearings, by D. F. Wilcock and M. Anderson. Laboratory performance tests for antifriction bearing greases, by M. Herbst and others. Service experience with greases, by W T Everitt and C. L. Pope. Factors affecting simulated service tests of greases, by S. M. Collegeman and J. R. Belt. General discussion.

Note The papers in this symposium are written for manufacturers and users of antifriction bearing greases. Prepared by authors who represent both points of view they describe the methods and apparatus used for evaluating and selecting lubricating greases. Discussions of the results and conclusions derived from each type of test are included.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on methods of measuring viscosity at high rates of shear Presented to the API Committee on Petroleum Products, Chicago Ill., November 7 1949 and to Research Division VII on Flow Properties ASTM Committee D 2 on Petroleum Products and Lubricants Washington D C., February 24 1950. Philadelphia Pa. American Society for Testing Materials 1951 47 p. illus. 22 cm. (Special technical publication no. 111) Paper $1.35 2007

Contents. Introduction, by J. C. Geniesse. Viscosity-shear behavior of two non-Newtonian polymer blended oils, by M. R. Fenske and others. The Kingsbury tapered plug viscometer for determining viscosity variations with temperature and rate of shear, by S. J. Needs. The comparison of viscosity-shear data obtained with the Kingsbury tapered plug viscometer and the PRL high shear capillary viscometer.

Note These papers report on a series of studies which were made to determine the viscosity of special oils and lubricants under various rates of shear. Resulting data are tabulated, and the techniques and equipment employed in the tests are described in detail. Of particular interest to lubrication experts and mechanical engineers.

THOMSEN THOMAS CHRISTIAN

The practice of lubrication an engineering treatise on the origin, nature and testing of lubricants, their selection application and

use. Fourth edition. New York McGraw Hill Book Company Inc., 1951 617 p. illus. 24 cm. $8.50 2008

Contents (abridged) Mineral lubricating oils. Fixed oils and fats. Engine-oil additives. Solid lubricants. Testing lubricants. The laws of friction. Lubricating appliances. Bearings. Ring-oiling bearings. Electric generators and motors. Flat thrust bearings. Ball and roller bearings. Michell and Kingsbury journal bearings. Steam turbines. Bearing lubrication of high-speed enclosed-type steam engines. Crankchamber explosions. Bearing lubrication of marine steam engines. Railway rolling stock. Transmission shafting. Machine tools. Textile machinery Mine-car lubrication. Blowing engines and air compressors. Refrigerating machines. Gas engines. Gasoline engines. Diesel engines, land and marine. Oil recovery and purification. Oil storage and distribution. Cutting lubricants and coolants. Index.

Note: A practical review of lubrication from the engineering viewpoint rather than that of the petroleum industry The general chapters on lubricants at the front of the book give background information to the engineer, but they are somewhat less valuable than the compact discussions of lubrication of specific types of bearings and machines that constitute the bulk of the book. New material in this edition includes the chapter on additives, short discussion of the lubrication of aircraft engines, and discussions of newly developed types of bearings, such as fabric bearings for the roll necks of rolling mills, rubber and fiber bearings. There is no bibliography and the index fails to do justice to the contents of the book.

TOOLS

AMERICAN SOCIETY OF TOOL ENGINEERS

Tool engineers handbook a reference book on all phases of planning, control, design tooling, and operations in the mechanical manufacturing industries. Frank W Wilson editor in-chief New York McGraw Hill Book Company Inc., 1949 2070 p illus. 23 cm. $15.00 2009

Contents (abridged) Tool engineering economics. Production analysis and cost estimating. Job planning and control. Quality planning and control. Time study and rate setting. Plant layout. Identifying codes and numbering systems Drafting room standards and practices. General structure and properties of metals. Heat-treating and hardening. Principles of metal cutting and machinability. Properties and workability of woods. Properties and workability of plastics. Sand casting. Metal mold casting. Plaster casting. Investment casting. Powder metallurgy Extrusion of metals. Single-spindle automatic lathes. Single-spindle automatic screw machines. Multiple-spindle automatic bar and chucking machines. Vertical boring mills and turret lathes. Planing Shaping and slotting. Gear milling and hobbing. Thread grinding. Nibbling. Power hacksawing. Circular-saw friction cutting. Grinding. Superfinishing. Press-brake bending. Metal spinning. Rotary swaging. Drop, machine, and press forging. Pressworking of metals. Oxygen (flame) cutting. Resistance welding. Assembly methods for bolts, screws, and rivets. Wire stapling and stitching. Gluing. High-frequency dielectric heating. Plastic joining of materials. Shot peening Static and dynamic balancing Allowances and tolerances for cylindrical fits. Inspection equipment and methods. Non-destructive testing and inspection. Master tooling Limited production tooling. Hydraulic equipment. Pneumatic equipment. Electronic drives and controls. Ball and roller bearings. Springs. Mathematics. Reference tables. Index.

Note: An encyclopedic compendium of information useful in tool engineering. Because tool engineering touches upon most of the processes employed in the forming of metals and other materials, the book is also virtually an encyclopedia of machine shop techniques. There are 115 sections, each one the work of an outstanding authority The sections are signed and, furthermore, the name of the specialist who reviewed each section is given. The book is generously illustrated. There is an exceptionally detailed index. Various parts of the book have been issued separately by the same publisher.

BAKER, WARREN AND JOSEPH S KOZACKA

Carbide cutting tools how to make and use them. Chicago American Technical Society 1949 416 p. illus. 22 cm. $5.50. 2010

Contents: Machine tools and the carbides. Converting to carbides. Tool angles, machinability Tipping carbide tool. Grinding single-point tools. Cutting power, speeds, feeds. Carbide tool design. Coolants and carbide tools. Carbide forming tools. Carbide milling cutters. Sharpening milling cutters. Multiple-edge carbide tools. Cutting speeds, feeds, forces. Multiple-edge tool design. Selection of carbide. Tool materials, assembly Grinding and use of tools. Index.

Note: An impressive compendium of information on carbide cutting tools. It was written for use as text in vocational schools, and as self-instruction book by practicing machinists and tool designers. It provides an inclusive treatment of the subject from the practical viewpoint. The educational value of the text is increased by very liberal number of illustrations, which show tools and machining operations, and by numerous tables of reference data. Review questions and helpful lists of references are appended to the chapters.

DOYLE, LAWRENCE EDWARD

Tool engineering analysis and procedure. New York Prentice-Hall, Inc. 1950 499 p illus. 22 cm. $6 65 2011

Contents: The nature and scope of tool engineering. Principles of economics. Problems of economy Planning and tooling for economy Principles of estimating. Short cuts and variations in estimating. Manufacturing principles applicable to process and tool planning. Planning practices. Principles of dimensioning. Determination of the requirements and conditions of process. Determining the operations of process. Determining the sequence of operations of process. Principles of locating. Tool design. Clamping principles. Dimensional analysis. Index.

Note: One of the essential preliminary steps in the manufacture of new metal product is "tooling up." If the article is to be manufactured economically in commercial quantities, not only must it be so designed that it can be produced without waste of material or labor but special tools—such things as fixtures, jigs and dies—must be designed and made so as to render rapid and accurate manufacturing possible. This book provides an overall introductory view of the problems and methods of these operations. There is no attempt to show how the special tools are made by the tool maker The book will be useful to students preparing for tool engineering, production and tool engineers, and machinists who wish to gain promotion into tool engineering. It is suitable either for classroom use or home study

GWIAZDOWSKI ALEXANDER PETER

Tool engineering. Appleton, Wisconsin C. C. Nelson Publishing Company 1951 306 p. illus. 24 cm. $6 00. 2012

Contents: The engineer—creator of abundance. Industrial organization. Limits, tolerances, and allowances. Measuring and gaging. Procedure used in tool design. Grinding and honing process. Milling process and fixtures. Work-holding fixtures. General rules for the design of jigs and fixtures. The broaching process. The drilling process. The reaming and tapping processes. The extrusion of metals. The stamping process. Gear calculations and shop drawings of gears. Cutting fluids. High-speed and commercial tool steels. Heat treatment of ferrous alloys Jigs and fixtures made by welding process. Jig boring and jig-boring methods. Review questions and assignments References for further reading. Names and addresses of manufacturers who supplied illustrations. Index.

Note: An introductory textbook for engineering students, especially students who are preparing for careers in the manufacturing of interchangeable parts. The design of tools for the manufacture of particular part—a connecting rod cap for an internal combustion engine—is used as thread on which to string the exposition. However, the student is introduced to wide range of topics which are of concern to the tool engineer Many illustrations of modern machine tools are included. The author is Professor of Industrial Engineering in Tri-State College.

HINE, CHARLES R.

Machine tools for engineers. New York McGraw Hill Book Company Inc., 1950 355 p. illus. 23 cm. $4 00 2013

Contents: The engineer and the machine tool. Cutting tools. Measurement. The lathe. Threads and threading. Hole making and the drill press. The shaper. The planer The milling machine. Broaching. Abrasives and grinding. Microfinishing. Boring machines. Gear making. Jig boring. Sawing. Turret lathes. Appendix. Index.

Note: An introductory work designed primarily for students of engineering. It describes the major machine tools, their principles of operation, uses, and limitations. Certain operations and processes such as measuring and superfinishing are described in conjunction with the description of the instruments or the machines used

in the operations. Numerous reproductions of photographs of present-day machine tools are included. The material is presented from the engineer's rather than the machine tool operator viewpoint. The author is member of the faculty of Rensselaer Polytechnic Institute.

ST CLAIR, LEO J

Design and use of cutting tools. New York McGraw Hill Book Company Inc., 1952 437 p. illus. 24 cm. $8.00 2014

Contents. The single-point cutting tool. The side relief angle. How to measure angles. The end relief angle. The nose radius and point angle relief. The angle of clearance. Peripheral grinding. The side rake angle. The back rake angle. The side cutting edge (SCE) angle. The end cutting edge angle. The nose radius and the point angle. The cutting rake angle. The proper choice of cutting tools. The cutting edge and chip formation. Chip breakers. Speeds and feeds. Grinding cutting tools. Appendix. Index.

Note: An exceptionally detailed treatment of cutting tools used in the machining of metals. As the chapter titles indicate, much attention is given to such points as relief, clearance, rake and cutting-edge angles. These matters and other pertinent ones are discussed in detail and are shown in numerous illustrations. Full consideration is given to differences in tools made of the various cutting materials such as the tool steel, stellite and cemented tungsten carbide. The book will be valuable both to practical machinists and to mechanical engineers in charge of machine shop operations.

STANLEY, FRANK ARTHUR

Punches and dies layout construction and use. Fourth edition New York McGraw Hill Book Company Inc. 1950 583 p illus. 24 cm. $6 75 2015

Contents (abridged) Section I, Blanking and piercing dies and other tools: Types and applications of press tools. Dies for piercing and blanking. Carbide dies and their uses. Section II, Compound dies and other cutting dies. Principles of compound dies. The sub press and its dies. Section III, Dies for shaving and trimming. Section IV Drawing processes and tools: Drawing dies and drawing methods. Combination dies and compound dies. Section Bending and forming tools and operations: Methods of bending and forming. Side-operating tools. Section VI, Horn dies, embossing and indexing dies, and mechanisms. Section VII, Presses and dies for large parts. Section VIII, Tool standards, layout and construction methods: Punch and die standards. Laying out and making templets and dies. Locating holes accurately in die work. Contour machines on die work. List of references. Index.

Note (1399) A well known handbook written for the guidance of machinists and tool designers. It is competently written and fully illustrated. Technical developments which have occurred since 1943 have been incorporated into the text of this edition, and new chapters have been added on carbide dies, drawing dies, and contour machines. The chapter arrangement has been altered and the data previously found in "wartime supplement" is now included in the appropriate sections.

METALWORKING AND MACHINE SHOP PRACTICE

AMERICAN SOCIETY FOR METALS

Machining—theory and practice. A series of thirteen educational lectures presented to members of the A.S.M during the thirty first National Metal Congress and Exposition Cleveland. Cleveland American Society for Metals 1950 504 p illus. 23 cm. $6.50 2016

Contents Metal cutting art to science, by H. Ernst. Metal cutting research—theory and application, by M. E. Merchant. Cutting fluid theory, by M. C. Shaw. Materials and machinability by F W Boulger. Development of the microstructure of metals by machining, by L. M Clarebrough and G. J Ogilvie. Metallurgy and machinability of steels, by J D. Armour. Tool steels, by G. A. Roberts. Cemented carbide tool materials, by J. C. Redmond. Heat in metal cutting, by A O Schmidt. Evaluation of machinability of rolled steels, forgings and cast irons, by M. Field and N. Zlatin. Tool life testing, by O. W Boston. Some metallurgical aspects of grinding, by L. P Tarasov. Economics of machining, by W W Gilbert.

Note: The keynote of this volume is the application of the findings of research to practical metal-cutting techniques. The great advances which have been made in recent years in the understanding of what happens when metals are machined and what factors affect machinability are evaluated and interpreted for the benefit of engineers and metallurgists. The papers are addressed primarily to graduates already at work in metal working industries. They are supplemented by illustrations and references to related literature.

AXELROD AARON

Machine shop mathematics. Second edition. New York McGraw Hill Book Company Inc. 1951 359 p. illus. 24 cm. $3.60. 2017

Contents Shop arithmetic. Measuring tools of the machine shop. Weights and measures. Practical measurements. Percentage and its applications. Ratio and proportion. Geometric constructions. Shop trigonometry. Speeds of pulleys and gears. Speeds and feeds. Lathe work. Gears. Milling machine work. Appendix. Index.

Note (1604) A standard elementary text for use in vocational school courses and for home study purposes. Emphasis is placed on the practical applications of mathematical procedures at the high-school level. Numerous illustrative exercises and review problems constitute an important feature of the exposition. In this edition new chapters have been added on basic arithmetic operations, ratio and proportion, and percentage.

BASTIAN EARL L. H

Metalworking lubricants their selection, application and maintenance. New York Mc Graw Hill Book Company Inc., 1951 357 p. illus. 24 cm. $6 00. 2018

Contents An introduction to metalworking lubricants. Types of metalworking lubricants. Cutting fluids. Drawing fluids and compounds. Extrusion and extrusion lubricants. Mold coatings. Forging and forging lubricants. Rolling oils. Metal-casting processes. Heat treating—quenching and tempering mediums. Machine-tool lubrication. Lubrication of presses, drawbench, and large equipment. Application of lubricants. Lubricant quality control. Lubricant test methods and specifications. Appendixes. Index.

Note This book covers not only cutting oils but all varieties of lubricants used in metal working, as well as some material on the lubricants in the working of such non metallic materials as plastics. The treatment is practical, and the book is suitable for such men as engineers in charge of metalworking processes. Compact discussions of the processes are included, along with discussions of appropriate lubricants. The text is generously illustrated, selected references are appended to the chapters, and there are numerous tables of engineering data.

BEGEMAN MYRON LOUIS

Manufacturing processes. Third edition. New York John Wiley & Sons, Inc., 1952. 608 p. illus. 24 cm. $6.00 2019

Contents (abridged) Foundry practice. Pattern work. Metal casting. Special casting methods. Heat treatment of steel. Welding and allied processes. Hot forming of metals. Cold forming of metals. Powder metallurgy. Plastic molding. Inspection. Lathes and lathe tools. Turret and automatic lathes. Threads and thread cutting. Shapers and planers. Drilling and boring machines. Milling machines and cutters. Gears and gear-cutting machines. Metal sawing. Broaching machines and tools. Abrasives, grinding wheels, and grinding machines. List of tables. Index.

Note: (1749*) A comprehensive, descriptive survey of present-day manufacturing methods and machines. Its purpose is to inform upper-class engineering students and also engineers and management personnel in industry about the available processes and their application. Most of the book is devoted to manufacturing with metals, but the author has included one chapter on plastics. The previous edition appeared in 1947. Although a good deal of matter has been carried over to this edition, the amount of revision appears to be adequate. The type has been reset and the book given a more attractive format.

BLUM WILLIAM, AND GEORGE B HOGABOOM

Principles of electroplating and electroforming (electrotyping) Third edition. New

York McGraw Hill Book Company Inc., 1949 455 p. illus. 24 cm. $7.00 2020

Contents (abridged) Principles of chemistry Principles of electricity and electrochemistry Factors that govern the character and distribution of electrodeposits. Analysis of solutions. Preparation for electroplating. Electrical equipment. Tanks and their equipment. Types of metals and solutions. Alloy deposition. Appendix. Author index. Subject index.

Note: (3404c) In the twenty years that passed between the second and third editions of this well known book the basic knowledge of electroplating was greatly extended and the techniques of plating considerably modified. These developments are adequately reflected in this edition. The book is designed for practical workers in the industry and for chemists and engineers who are not specialists in plating but who need, on occasion, a concise and reliable description of plating principles and techniques. Chapters 12 to 21 the titles of which are not listed above, discuss specific metals. Numerous formulas are incorporated in the text, and a selection of pertinent literature is cited in footnotes.

BOSTON ORLAN WILLIAM

Metal processing. Second edition. New York John Wiley & Sons, Inc., 1951. 763 p. illus. 24 cm. $7.50 2021

Contents (abridged) An introduction to the study of machines, tools, and processes. Lathes. Shapers. Planers. Nomenclature and materials for single-point tools. Cutting fluids. Machinability Milling. Sawing. Drilling, boring, reaming, and threading. Turret lathes, screw machines, and hand-controlled production turning machines. Automatic turning machines. Broaching. Gears and their manufacture. Grinding, polishing, buffing, honing, and lapping. Presses, punches and dies, and formed parts. The quality of surface finish. Drives for machine tools. Accounting and costs. Index.

Note: (3607) A treatise on machine tools, machinability and metal cutting written for college students of engineering. For the noncollege reader the book's special virtue is that it gives a more comprehensive view of the subject from the engineer's viewpoint than is provided in books written for men who operate the machine tools. In this edition there is a fair amount of new material including the chapter on surface quality

BRUCE LEROY FOWLER

Sheet metal shop practice. Chicago American Technical Society 1951 251 p illus. 22 cm. $4 00. 2022

Contents: Sheet metal working tools and machinery Sheet metal materials and supplies. Using patterns and cutting metal. Punching, drilling, and riveting. Folding edges. Forming, crimping, beading, and grooving. Notching, clipping, and wiring Soldering. Tinning, burring, and raising. Basic principles of pattern development. Parallel line development. Radial line development. Triangulation. Welding. Index.

Note: A simply-written, well-illustrated book which is suitable for use as a text in vocational courses and as a manual for mechanics in need of specific information on how to do a particular metal-working operation. Each chapter is complete in itself (or nearly so) and therefore can usually be used without reading the others. All of the basic sheetmetal-working tools and operations performed in small shops are described in the text and shown in the illustrations.

CHASE, HERBERT

Handbook on designing for quantity production. Second edition. New York McGraw Hill Book Company Inc., 1950 564 p. illus. 23 cm. $7.50 2023

Contents (abridged) Part I: Design of die castings. Design of sand castings Design of permanent mold castings. Design of screw-machine products. Design of stampings. Design of impact extrusions. Design of die-forged parts. Notes on and accomplishments in hot heading. Notes on the design of cold-headed parts. Design of wire forms. Design of sintered metallic powder compacts. Design of plastic moldings. Part II: Die-cast or sand-cast? Permanent mold and die castings compared. Which type of nonferrous casting? Die-cast or stamped? Die-cast or screw-machine product? Cold-headed or screw machine products? Die castings and plastic moldings compared. Malleable-iron castings vs wrought parts. Index.

Note: (3521) A manual of useful information for engineers who design machine parts and other metal and plastic products. The advantages, disadvantages, and limitations of the various processes mentioned in the chapter titles are all discussed, and the designer is told how to design parts so as to take the fullest advantage of each process. There are six new chapters in this edition, and chapters carried over from the older edition have also been revised where revision was needed. Numerous additions have been made to the bibliographies. Certain of the chapters have been authored or co-authored by specialists other than Mr. Chase.

CLAPP, WILLIAM HOWARD AND DONALD SHERMAN CLARK

Engineering materials and processes metals and plastics. Second edition. Scranton Pa. International Textbook Company 1949 526 p illus 24 cm. (International textbooks in mechanical engineering, Charles Fayette Taylor consulting editor) $7 00 2024

Contents. Part I, Materials: Properties of engineering materials. The structure of metals and alloys. Cooling curves and equilibrium diagrams. Metallurgy properties, and uses of ferrous metals and alloys—the manufacture of iron and steel—control of properties—the alloy steels and cast iron. Metallurgy, properties, and uses of non-ferrous metals and alloys. Plastics, rubber, and synthetic elastomers. Part II, Processes: The production of castings. Hot-working of metals. Cold-forming of metals. Joining of metals. Machine shop production methods. Lathes, boring mills and screw machines. Milling and drilling operations Shapers, slotters, planers, broaching machines, and saws. Gears, gear cutting and gear-cutting processes. Abrading, grinding, and finishing processes. Index.

Note. (3411) A standard engineering college textbook. Its compact but clear descriptions of standard materials, machine tools, and manufacturing methods give it some value as a reference book. The changes made in preparing the second edition were not major but they include descriptions of a fair number of new processes and a completely rewritten chapter on plastics and synthetic rubber. The authors are members of the faculty of the California Institute of Technology

COLVIN FRED HERBERT, AND FRANK A. STANLEY

Gear cutting practice methods of producing gears for commercial use. Third edition. New York McGraw Hill Book Company Inc., 1950 532 p. illus. 23 cm. $6 75 2025

Contents (abridged) Introduction to gear cutting. Cutting spur gears with circular cutters. Shaping external and internal gears. Cutting small pinions. Types of bevel gears. Helical gears, and hobs and cutters. Worms and worm gearing. Involute and straight-sided splines. Finishing gear teeth and burrs. Heat treatment of gears. Gear-inspection methods and equipment. Index.

Note (3518) A well known book for practical mechanics. It is planned for beginners in gear cutting, but the discussions of practice are carried far enough to make the book of interest to many men with substantial experience in the field All of the standard practices are covered and, in addition, there are good descriptions of the principal gear-cutting machines In this edition the length of the book has been increased very substantially New machinery is described and there are additional data on many topics such as carbide-tipped hobs, hobbing speeds, new methods of cutting and finishing gears, and new standards.

COLVIN, FRED HERBERT, AND FRANK A. STANLEY

Grinding practice typical machines and methods used in a wide variety of work. Third edition. New York McGraw Hill Book Company Inc. 1950 419 p. illus. 24 cm. $5.00. 2026

Contents: The grinding machine in industry Typical grinding machines Automatic and semiautomatic equipment. Cylindrical grinding in general External and internal grinding. The centerless grinder. Centerless-grinding operations Size control in precision grinding Examples of precision grinding. Surface grinders and their work. The magnetic chuck. Grinding crankshafts and other motor work Grinding heavy rolls. Cutter and tool grinding methods Types and uses of grinding wheels. Mounting and dressing wheels. Lapping and honing machines. Polishing and buffing. Index.

Note. (3617) This standard text for vocational school courses provides a general view of the machines and methods used in modern grinding practice. The more widely used machines are described and illustrated, and typical grinding operations are discussed in detail. Data regarding operating speeds, sizes, and types of wheels are tabulated throughout the book. The general scope and purpose of this edition remain the same as in the previous edition, but the chapters have been rearranged and the Wartime supplement of the 1943 edition has been incorporated into the body of the text. Revisions and additions account for 70 additional pages.

FELKER, CHARLES AURAND

Machine-shop technology Milwaukee Bruce Publishing Company 1952 491 p. illus. 23 cm. $4.80 2027

Contents Hand tool operations. Power saw The drill press. Center drilling and straight turning on the lathe. *Facing* and other lathe operations. Turning and boring tapers. Cutting screw threads. The shaper The planer The milling machine. Milling machine indexing. *Helical milling. Gears and gear cutting. Grinding machines. Metals* used in the machine shop. Appendix. Index.

Note. An introductory text for use in practical courses in vocational schools, general high schools, industrial training programs, etc. Except for the first chapter it is devoted to machine tools and basic operations on them. A considerable number of the 339 illustrations are photographs; the others are reproductions of line drawings. Both are well reproduced. The author is Head of the Department of Vocational Education in the University of Toledo.

HINMAN CHAUNCEY WEED

Pressworking of metals a reference book illustrating and describing the uses of metal working presses and many types of press tool designs. Second edition New York McGraw Hill Book Company Inc. 1950 551 p. illus. 24 cm. $9.00. 2028

Contents Standard types of power presses. Pressworking commonly used materials. Press accessories and feeding equipment. Designing chutes, magazines, and hoppers. Automatic stops and die accessories. Blanking and cutting dies. Two-step or tandem dies. Progressive dies. Blank and scrap strip developments. Perforating and piercing. Shaving, burnishing, and trimming Sectional dies and inserts. Bending, forming, and embossing Dies for assembling work parts. Swaging, coining, and cold sizing. Dies for drawing and redrawing. Unusual dies and novel operations. Formulas and reference tables. Index.

Note (3591) A clearly written and practical guide to the art of pressworking ferrous and nonferrous metals. The workability of various materials and the selections of machines are discussed, but the book deals mainly with the design, construction, use, and operation of presses and dies. This edition has been largely rewritten and includes information regarding press tools, accessories, and new operating practices which have been developed since 1941 Progressive dies and machines are described in more detail, and a chapter on perforating and piercing has been added. Again, numerous photographs and diagrams of equipment are included.

JONES FRANKLIN DAY

Die design and diemaking practice. Third edition New York Industrial Press [1951] 1014 p. illus. 24 cm. $7 00 2029

Contents (abridged) Dies for cutting blanks from flat stock. Laying out blanking dies and general diemaking practice Materials used in diemaking. Punch and die details. Sectional punch and die construction. Piercing and perforating dies. Sub-press or self guiding dies. Bending and forming dies. Classes of drawing dies and general designing information. Dies for drawing shallow cups or shells. Dies for drawing deep shells. Drawing dies for conical or tapering forms. Drawing dies for spherical and oval shapes. Drawing square and rectangular shapes. The use of rubber in conjunction with press tools. Dies for special operations. Heat-treatment of die steels. Designing dies for powdered metal parts. Index

Note (3604) A practical and fairly comprehensive manual for beginners in diemaking and also for those who have had some experience in the craft. The third edition has been printed from the same type (or plates) as the second edition Nevertheless, a considerable amount of new material has been added. Four new chapters, three at the end of the book and one at the end of the third chapter deal with diemaking materials, special pointers on the design of stampings, heat treatment of die steels, and dies for powdered metal work. In addition, there are several insertions of additional pages in other chapters.

LYTLE, CHARLES WALTER, AND ARTHUR F GOULD

Manufacturing equipment and processes. Third edition. Scranton International Text book Co., 1951 759 p. illus. 24 cm. $7.00. 2030

Contents (abridged): Equipment policy in manufacturing. Designs, models, patterns. Casting in sand and loam molds. *Permanent* molds, die casting, plastics, powder metallurgy Hot-working of metals. Cold working of metals. Soldering, brazing, plastic welding. Fusion welding of metals. Heat treating of metals. Turning. Boring. Drilling. Planing, shaping, slotting, keyseating. Broaching, sawing, filing. *Milling. Gear cutting and finishing. Screw-thread* cutting and finishing. Grinding of metals. Controlling quality Selection of equipment. Index.

Note: (3393) Readers and technical librarians know the earlier editions of this book under the title *Factory equipment*, by J. W Roe and C. W Lytle. The scope of the book has not been changed. It is still essentially a descriptive treatment of the processes and machines employed in the manufacture of metal articles, with the emphasis somewhat on the machine. Considerable attention is paid to modern machines developed for special jobs. A good part of the text of the present edition is new Though primarily a college textbook, the book is also useful to readers out of school who want a readable survey of present-day machine tools and processes or description of a particular type of tool.

MILNE, LORUS JOHNSON

Machine shop methods. New York Prentice-Hall Inc. 1950. 376 p. illus. 23 cm. $5 00 2031

Contents: Shop machinery Drawings and specifications. Handwork related to machining. The lathe. Turning work between centers. Work supported chiefly by the headstock. Outside machining. Inside machining. Threads and thread cutting. Drills and drilling. The drill press. The shaper. The miller. The grinder. Holding the workpiece: a summary Other shop machines. Useful tools and fixtures. Gears and gear cutting. Cutting speeds and feeds. Accuracy in machining. Assembling machined parts. Processing and finishing metal. Materials. Bibliography Appendix tables. Index.

Note. An introductory text suitable for use in trade-school classes and also as a self instruction book or elementary reference for home mechanics. All of the common machine tools and the chief operations performed on them are discussed. Numerous special techniques which are of particular interest to the basement machinist, such as the production of crackle finishes, the cutting of circular holes in sheet metal, and the cutting of glass, are discussed in addition to the expected material. A fair number of illustrations is included, and there is a bibliography of more advanced and specialized books for machinists.

RUSINOFF SAMUEL EUGENE

Forging and forming metals. Chicago American Technical Society 1952 279 p. illus. 22 cm. $3 95 2032

Contents: Introduction. Metal quality Hand forging. Power-hammer forging. Impact-die or drop forging. Typical examples of impact-die forging. Press forging. Machine or upset forging. Other forging methods. Cleaning and finishing forgings. Heat treatment of forgings. Inspection and testing of forgings. *Forging dies* and tools. Product design for forging. Safety in forging operations. Standard practices, tolerances, impression die forgings. Bibliography Glossary of forging terms. Appendix of useful tables. Index.

Note A comprehensive but simple treatment of all aspects of modern forging techniques that are of concern to the practical worker. It is suitable for use in trade school classes and it will also serve the needs of some machine designers and engineers who desire an informative and quickly read survey of current techniques. Metallurgical aspects such as would concern the metallurgical engineer only are of course not covered. There is a generous number of illustrations. The author is Associate Professor of Mechanical Engineering and Manufacturing Processes at the Illinois Institute of Technology.

RUBINOFF, SAMUEL EUGENE

Manufacturing processes Chicago American Technical Society, 1949 2 v illus. 22 cm. Vol. I $4.50 Vol. II, $5.00. 2033

Contents [Volume I, Materials.] The foundry and sand molding. Production of sand castings. Other casting processes. Hot forming of metals. Cold forming of metals. Welding, brazing, and soldering. Heat treatment of metals. Powder metallurgy. Plastics and plastic molding. Index. [Volume II, Production.] The machine shop and metal processing. Lathe operations and thread cutting. Lathes and screw machines. Milling machines. Drilling, boring, and reaming machines. Shapers, slotters, and planers. Metal-sawing and metal-filing machines. Broaching machines and broaching operations. Gears and gear manufacturing. Grinding and finishing machines. Inspection and quality control. Index.

Note: A practical survey of the major manufacturing techniques. The materials volume is concerned with the processes which generally precede fabricating techniques. The production volume describes the chief machine tools and the principal fabricating and finishing techniques. The work is liberally illustrated, and the chapters are supplemented by review questions and bibliographies. It is suitable for vocational school students and engineering college students who need an overall introduction to modern manufacturing.

SACHS, GEORGE

Principles and methods of sheet-metal fabricating. New York Reinhold Publishing Corporation 1951 526 p. illus. 24 cm. $11.00 2034

Contents (abridged) Part I, Sheet metal and sheet-metal parts Part design and metal properties. Formability tests. Sheet metals. General properties of sheet metals. Part II, Principles of forming various part types: Bending and straight flanging. Contour forming of sections. Forming of deep recessed parts. Forming of shallow recessed parts. Part III, Principles of deep drawing: Drawing of thin walled cylindrical cups. Redrawing of tubular parts (sinking). Drawing of thick walled cylindrical cups. Drawing of box shaped parts. Part IV Press-die forming of sheet-metal parts. Press-die forming of parts from developed blanks. Press die forming of recessed parts. Cartridge case fabricating. Impact extrusion and tubing. Part V Various sheet metal forming methods: Drop hammer forming of sheet metal parts. Rubber forming of sheet metal parts. Stretch forming of smoothly contoured sheet metal parts. Contour forming and roll bending. Spinning and roller flanging. Index.

Note: A treatise written on a higher level than the typical text in the field. The main theme is the metallurgical bases for particular techniques. The book is therefore of more interest to engineers in charge of design and production methods in large manufacturing establishments than to workers in small shops. Nevertheless, the treatment is eminently practical, and fabricating techniques are described in explicit detail. There is a liberal number of illustrations and the chapters are accompanied by selected bibliographies.

SCHLARMAN H.

Manual of die-head thread cutting. New York McGraw Hill Book Company Inc., 1949 266 p. illus. 21 cm. $4 50 2035

Contents Producing threads—equipment and methods. Unusual die-head adaptations. Types of die heads and chasers. Die-head troubles and maintenance. Chaser facts for the thread man. Principles and methods of sharpening the radial chaser. Principles and methods of sharpening the tangent chaser. Principles and methods of sharpening the circular chaser. General information on chaser usage. Gaging external threads. Thread troubles. Thread samples and analysis. The draftsman and the thread. Appendix. Index.

Note: A detailed description of the basic principles and methods of cutting threads by the use of self-opening die heads and chasers. The manual is intended to serve as a practical guide for the man on the job, and deals largely with the construction and operation of the machines and thread-gaging instruments. Special attention is given to methods of locating and eliminating the causes of poor workmanship, and to the proper maintenance of machines and tools. The book is well illustrated with numerous photographs and diagrams; thread formulas and pertinent standards and specifications are included in the appendix.

SCHULZE R. BURT

Aluminum and magnesium design and fabrication. New York McGraw Hill Book Company Inc., 1949 589 p. illus. 23 cm. $9.00 2036

Contents Characteristics and forms of the materials. Material properties and theory of forming. Machining operations. Experimental production forming methods. Limited-production forming—router, shaper, press brake—rubber hydraulic press. Limited-production forming methods—hydraulic press—mechanical press—drop hammer—contour roll former and stretch press. Mass-production forming methods, assembly procedures and tooling. Mechanical fastenings. Fastenings—welded and bonded. Cost analysis. General design principles. Design applications. Index.

Note: This book furnishes more information than has hitherto been available in book form on a number of metal-forming processes which are particularly adapted to the fabrication of light metals. For example, the chapter on forming with rubber on hydraulic presses is 74 pages long and contains 84 illustrations. The treatment of cost analysis also is comparatively full. Although the author is associated with the Glenn L. Martin Company and much of the information given is based on experience in airplane manufacture, the author has made a special effort to present the material so that it will be useful in other kinds of manufacturing.

SMITH ROBERT ERNEST

Machining of metal. Revised edition. Bloomington Illinois McKnight & McKnight, 1949 224 p. illus. 27 cm. $3.50 2037

Contents (abridged) Safety. Measurements and measuring instruments. The tool grinder and its operation. Drills and drilling. The lathe and its operation. The shaper and its operation. The milling machine and its operation. The power hack saw and its operation. Metal cutting band saws and their operation. Surface grinding machines and grinding. Appendices: Reference list. Projects. Appendix. Index.

Note: An introductory textbook designed for use in trade schools and vocational courses in high schools. It combines descriptions of standard metal working tools with explicit instructions for carrying out operations with them. Machine tools rather than hand tools are emphasized. There are more than 380 illustrations.

WOLDMAN NORMAN EMME, AND ROBERT C GIBBONS

Machinability and machining of metals. New York McGraw Hill Book Company Inc. 1951 518 p. illus. 24 cm. $8 00. 2038

Contents Principles of machining. The mathematics of machining. Cutting tools and tool design. Steel—general. Ingot iron, wrought iron, and low-carbon steel. Plain medium- and high-carbon steels. Alloy steels. Tool and die steels. Stainless steels. Cast iron. Aluminum alloys. Magnesium alloys. Copper alloys. Nickel alloys. Zinc alloys. Special metals and alloys. Nonmetallic materials. Cutting fluids. Appendix. Index.

Note: In this book the fundamentals of metal cutting are surveyed, first from the standpoint of the physical principles and second from the standpoint of the characteristics of specific metals or groups of metals, including alloys. In a typical chapter on a group of metals the following points are covered: a general description of the group with information on composition and properties, the effects of alloying elements on machinability, the effects of microstructure, the effects of physical conditions of the metal, suitable cutting tools, practical machining practices, recommended tools, and cutting fluids. Finally there is a bibliography of references to the literature.

FOUNDRY WORK

AMERICAN FOUNDRYMEN'S SOCIETY

Foundry sand handbook. Sixth edition. Chicago American Foundrymen's Society 1952 265 p. illus. 24 cm. $5.25 2039

Contents (abridged) Introduction. Mode of occurrence of sands and clays. Methods for sampling foundry sands and clays. Preparing foundry sand mixtures for testing. Methods for determining fineness of foundry sands—standard. Determining moisture in foundry sand mixtures—standard. Determination of permeability of foundry sands. Strength of foundry sand mixtures. Method for determination of green surface hardness—standard. Determining the sintering point

of sand mixtures. Elevated temperature tests on foundry sand mixtures. Chemical analysis of sand—non-standard tests. Tentative method of testing core binders (tensile strength). Mechanical properties of core sand mixtures. Method for determining strength of core paste—tentative standard. Non-standard tests. Interpretation of room temperature sand tests. Comments on maintenance of testing equipment. Foundry molding sand mixtures. Conversion tables. Terms used in foundry sand work. Bibliography on sand testing and control. Subject index.

Note: (1673) A standard manual of sand testing methods, tests, and testing equipment. The previous edition appeared in 1944. The present edition is an extensive revision which includes both new and revised tests. The useful bibliography contains chronological arrangement of papers and reports which have appeared in the Transactions of the sponsoring society, bibliography of the sand resources of the states of the United States and Canada, and an international bibliography arranged by country of publication on sand and sand testing.

AMERICAN FOUNDRYMEN'S SOCIETY

Symposium on interpretation and application of sand test data for the production of quality steel castings. Sponsored jointly by the A. F. S. Sand and Steel Divisions. Chicago. American Foundrymen's Society. 1951. 73 p. illus. 28 cm. Paper $5.25 2040

Contents: Introduction, by E. C. Troy. Room temperature tests: Room temperature tests, by J. H. Lowe. Statistical control of green sand properties, by W. J. Dowsey. High temperature tests: Properties of steel sands at elevated temperatures, by P. E. Kyle. Use of high temperature testing in control of steel foundry sand, by R. H. Jacoby and J. W. Mitchell. Interpretation and application of sand test data for the production of quality steel castings, with reference to the expansion test, by H. W. Meyer. Relationship of elevated temperature sand test results to hot tear occurrence in steel castings, by J. A. Rassenfoss. The dip test, by J. B. Caine.

Note: A collection of original papers on several aspects of the current status of sand testing in American foundries. It is pointed out that the techniques of testing sand and interpreting the test data have not yet reached the stage where sand tests can be correlated with castings quality. However, some progress toward this goal has been achieved and these papers describe it.

CAMPBELL, JAMES S., JR.

Casting and forming processes in manufacturing. New York. McGraw-Hill Book Company, Inc., 1950. 536 p. illus. 23 cm. $6.50 2041

Contents (abridged): Molding materials and equipment. Molding techniques. Making the larger molds. Solidification and risering. Gating. Sand testing. Pattern equipment. Molding machines. Cores and coremaking. Metals for sand casting. Melting. Cleaning and finishing. Mechanization. Inspection. Sand-casting design. Centrifugal casting. Precision investment casting. Permanent mold casting. Die casting. Plastics, molding and forming. Powder metallurgy. Rolling. Forging. Sheet-metal working. Punch press work. Index.

Note: A condensed survey of modern foundry processes and certain alternative processes such as forging. Substantially more than half of the space is devoted to the casting of metals and to the finishing of cast-metal products. Rolling, forging, sheet metal working, etc. are given less space, but enough is said about each technique to convey a fair idea of it and its uses. The book is designed chiefly as a general introduction for upperclass engineering students. A generous number of illustrations has been used, and the chapters conclude with short bibliographies. The book is intended as a companion to *Machine tools for engineers*, by C. R. Hine (see Index).

DOE, EDWIN W.

Foundry work. Prepared in cooperation with the Textbook Committee of the Educational Division, American Foundrymen's Society. New York. John Wiley & Sons, Inc. 1951. 109 p. illus. (part col'd) 24 cm. $1.76 2042

Contents: The foundry industry. Fundamental foundry processes. Foundry tools and equipment. Patterns. Sand molding. Baked sand cores. Melting and pouring metals and alloys. Cleaning and finishing castings. Occupational advantages in the foundry. Glossary of foundry terms. References and visual aids. Index.

Note. A textbook especially prepared for use in high schools and vocational schools. It contains a clear description of the common foundry processes and techniques. There are about 100 illustrations, a high proportion of these being reproductions of photographs of operations in foundries. The author is a member of the faculty of the Brooklyn Technical High School.

DOEHLER, H. H.

Die casting. New York. McGraw-Hill Book Company, Inc., 1951. 502 p. illus. 24 cm. $8.50. 2043

Contents. Die-casting machines. Die-casting dies. Theoretical and practical aspects of die casting. Design of die castings. Comparison of die casting with other production processes. Die sizes. Die-casting alloys. Finishing of die castings. Machining of die castings. Trimming and piercing of die castings. Inspection of die castings. Estimating the cost of die castings. Safety in the die-casting plant. Glossary of terms used in die casting. Index.

Note: A comprehensive manual written by one of the outstanding authorities on the subject. In addition to full discussions of the main aspects named in the chapter titles, there are discussions of such topics as spectrographic control of alloy composition, ultrasonic inspection of die parts, and inspection procedures for finished castings. There are literature references and an adequate number of illustrations.

HANEL, ALEXANDER V.

Text in patternmaking. Milwaukee. The Bruce Publishing Company. 1949. 314 p. illus. 24 cm. $2.96 2044

Contents (abridged): Molding and pattern allowances. Tools. Lumber. Pattern supplies and their use. Machinery. Pattern layout. Pattern joinery. Segmental and stave construction. Core prints and core boxes. Gear patterns. Cast construction. The foundry. Job: Hexagonal block. Cylinder. Link. Surface plate. Anvil base. Base bearing. Bracket bearing. Angle bracket. Bearing caps. Double bearing. Tapered column. Quadrant. Screw propeller. Glossary of patternmaking and molding terms. Index.

Note: A clearly written, well illustrated text on wood pattern making. It is designed for use in a full year course in vocational high schools. Also, it can be used for information by beginning workers in foundries. All of the fundamental tools and processes are covered, and the "Job" section gives detailed directions for the construction of the patterns for 40 typical castings.

HERB, CHARLES OLIVER

Die-casting: the die-casting process and its application in modern manufacture; die-casting machines; design of different types of dies; composition and properties of die-casting alloys; and the die-casting of zinc, aluminum, brass, and other non-ferrous alloys. Second edition. New York. The Industrial Press, 1952. 310 p. illus. 24 cm. $4.50. 2045

Contents. The die-casting process and its applications. Die-casting machines and their development. Alloys for die-casting. Die-casting dies and their operation. Multiple cavity dies for duplicate castings. Dies with auxiliary slides for outside cores. Sliding cores in movable and stationary dies. Adjustable dies for parts of different dimensions. Standards for designing die-casting dies. Steels for die-casting dies. Die-casting with semi-automatic machines. Die-casting finishing. Die-casting by the vacuum process. The unit system of die-casting. Die-casting cast iron. Index.

Note: A standard descriptive treatment, written by the editor of the periodical *Machinery*. It is a useful survey of the die-casting process and of die-casting machines and dies. There are many excellent illustrations, most of which show details of equipment. The first edition appeared in 1936. Although the titles of several chapters have been reworded, no new chapters have been added in this edition. Parts of the book, for instance the chapter on die-casting machines, have been revised to bring them up to date. The book is only ten pages longer, but somewhat more than ten pages of new material has been added because certain obsolete material has been dropped.

HULL, DANIEL R.
Casting of brass and bronze some practical aspects of brass and bronze casting in America, 1900 to 1950 Cleveland The American Society for Metals 1950 186 p. illus. 23 cm. $3.50 2046

Contents: Things as they were. Melting. Pouring. The brasses. Oxygen, hydrogen and deoxidizers. The mold. The mold dressing. Random observations. Conclusion. Index.

Note: An expert, very readable review of brass and bronze foundry practice. Although changes in the industry are sketched briefly in the first chapter most of the text deals with current practices. The author is Assistant Technical Manager of the American Brass Company and his book reflects long experience with brass and bronze casting.

MAREK, CLARENCE THOMAS
Fundamentals in the production and design of castings. New York John Wiley & Sons, Inc. 1950 383 p. illus. 20 cm. $4.50 2047

Contents: Casting processes. Green sand molding. Foundry sands and sand control. Patterns and related equipment. Cores and their applications. Foundry production equipment. Production planning. Physical and metallurgical properties of cast metals. Properties and uses of ferrous cast metals. Properties and uses of nonferrous cast metals. Melting of cast metals. Cleaning and inspection. Design for economical molding. Design to eliminate defects. Bibliography. Appendix. Index.

Note: A general introductory survey of the metalcasting processes, written for engineering students and graduate engineers who need some knowledge of these processes but are not directly concerned with foundry practices or management. All the commercially used processes are described, including shell molding, the lost wax process, etc., but most of the space is given to casting in sand molds and to the products of this process. The book is well organized and admirably illustrated. Its purpose is to enable engineers to design cast parts so that they can be produced economically.

SCHWARTZ, HARRY ADOLPH
Foundry science fundamentals underlying foundry practice. New York Pitman Publishing Corporation 1950. 286 p. illus. 24 cm. $6.50 2048

Contents (abridged): Structure of fluids and the phase rule. Structure of the solid state. Specific heat. Changes of state and latent heat. Free energy and binary equilibrium. Supercooling. Electric furnaces and heat losses in steady state. Carbon and hydrogen combustion. Heat transfer in unsteady state. Heating of furnace charges. Measurement of high temperatures. Direction of reactions. Rate of reactions. Origin and control of carbon in ferrous alloys. Microstructures of iron-carbon alloys. Effect of alloying elements on microstructure of iron-carbon alloys. Fluid mechanics of casting. Gating and feeding. Statistical control of processes. Supplementary reading. Name index. Subject index.

Note: Rather than a text on foundry practice, this book is an exposition of fundamental chemical and physical phenomena and principles that affect metal-casting processes. It is based on a series of lectures on theoretical metallurgy and foundry physics given by the author at the Case Institute of Technology. Although the original lectures were addressed to graduate engineering students, the material has been somewhat simplified in the book, and can now be studied at home by foundry engineers and supervisory personnel as well as by engineering students.

STEEL FOUNDERS SOCIETY OF AMERICA
Steel castings handbook. 1950 edition. Prepared under the direction of the SFSA Handbook Committee. Charles W Briggs, editor Cleveland, Ohio Steel Founders' Society of America, 1950. 511 p. illus. 23 cm. $4.00 2049

Contents: A brief history of the steel casting industry. Classes and advantages of steel castings. Commercial applications and industrial uses of steel castings. Steel casting design. The manufacture of steel castings. Heat treatment. Variables affecting the mechanical properties of steel castings. Mechanical properties of carbon cast steels. The properties of low alloy cast steels. Heat and corrosion resistant cast alloys. Austenitic manganese cast steel. Physical values pertaining to cast steel. Engineering properties of cast steel. Recommendations to purchasers of steel castings. Steel casting specifications. Definitions of foundry terms. Appendix: Chemical compositions of standard steels. Index.

Note: A reference manual and practical treatise for foundry workers, engineers, and others whose work requires technical knowledge of steel castings. A factual text is supplemented by many excellent photographs of castings and equipment, and by tabulated data regarding the composition and properties of various steels. This edition has been revised to include the technological developments which have occurred since 1941. The chapters on low alloy cast steels and heat treatment, in particular have been rewritten, and material has been added on pattern making and new types of alloys. The chapter bibliographies have also been brought up to date.

WOOD, RAWSON L., AND DAVIDLEE VON LUDWIG
Investment castings for engineers. New York Reinhold Publishing Corporation 1952 477 p. illus. 23 cm. $10.00 2050

Contents: History and description of investment casting. The master pattern and pattern die. Making soft metal dies. Wax versus plastic patterns. Frozen mercury for disposable patterns. Gating, clearing, clustering, venting wax and plastic patterns. Investment materials and techniques. The ceramic shell mold or precoat process. Melting and casting methods. Selection of low temperature nonferrous alloys for investment casting purposes. Selection of ferrous and refractory alloys. Foundry finishing investment castings. Foundry inspection operations. How to machine investment castings. Product design development by means of investment castings. Castings to replace fabricated parts. Design suggestions for investment castings. Investment castings for chemical and high temperature resistant applications. Some metallurgical observations of investment cast alloys. Some machinability tests on stainless steel. Bibliography. Index.

Note: The special slant of this treatise is indicated by the title. In other words, the book is written not from the viewpoint of founders but of engineers who design products to be cast or are responsible for the finishing of them after casting. The various investment processes, including not only "the lost wax" process but those in which other materials are used for the disposable pattern, are fully described, and particular attention is given both to their advantages and their limitations. Supplementary topics such as the selection of alloys for products to be made by investment castings are adequately covered. The text is supplemented by a substantial number of tables of engineering data. The book is based on a series of articles written by the authors and published in *Iron age* and other journals from 1948 through 1951. Only a short bibliography is included.

WELDING

ALTHOUSE, ANDREW DANIEL AND CARL H. TURNQUIST
Modern welding practice. With the collaboration of George E. Tabraham and Burl E. Ott. Second edition. Chicago Goodheart Willcox Company Inc., 1951 498 p. illus. (part col'd) 22 cm. $5.00 2051

Contents: Oxy-acetylene welding theory and practice. Oxy-acetylene welding equipment and supplies. Electric welding theory and practice. Electric direct current arc welding practice, equipment, and supplies. Alternating current arc welding. Electric resistance welding practice, equipment and supplies. Inspecting and testing welds. Soldering and brazing. Non-ferrous welding. Pipe and tube welding. Cast iron welding. Special ferrous metal welding. Cutting. Special forms of welding. Manufacture of metals. Properties and identification of metals. Heat treatment of metals. The welding shop. Modern welding, brazing and soldering applications and equipment. Technical data. Index.

Note: This book is used both as a text in vocational schools and as an elementary reference book. All types of welding are covered in a simple, practical style and the discussions are supplemented by 149 figures and numerous tables of data. The coverage is not encyclopedic but is adequate for beginners. The first edition appeared in 1942. One entirely new chapter has been added in this edition, and there are other useful revisions.

AMERICAN WELDING SOCIETY WELDING HANDBOOK COMMITTEE

Welding handbook. Third edition. New York American Welding Society 1950 1651 p. illus. 24 cm. $12 00 2052

Contents (abridged) Fundamentals of welding: Standard welding terms and their definitions. Physics of welding. Fundamentals of welding metallurgy Gas welding processes. Arc welding processes. Resistance welding processes. Miscellaneous welding processes: Forge welding. Thermit welding. Induction welding. Surfacing and metallizing. Brazing. Soft soldering. Cutting processes. Metals: Iron, wrought iron and carbon steels. Chromium irons and steels. Aluminum and aluminum alloys. Magnesium and magnesium alloys. Copper and copper alloys. Nickel and high nickel alloys. Lead and zinc. Clad steels. Design and cost considerations. Inspection and quality control. Applications. Buildings. Bridges. Machinery construction. Pressure vessels and boilers. Railroads. Automotive products. Aircraft. Transmission pipe lines. AWS standards: Standard welding symbols. Standard methods for mechanical testing of welds. Author index. Subject index.

Note A standard encyclopedia of information about welding. Pictures of equipment and techniques are included, as are bibliographies of pertinent literature. In this edition the work has been substantially revised with much added material. The type was reset, and the book is now printed two columns to the page. The subject index alone runs to 69 pages.

AUSTIN JOHN BENJAMIN

Electric arc welding. Chicago American Technical Society 1952 280 p illus 22 cm. $3 90 2053

Contents: History and scope of welding. Arc welding machines. Electric arc-welding accessories. Fundamentals of arc welding. Lessons in electric arc welding. How to weld common metals and alloys. Hard facing. Pipe welding. Arc welding symbols. Machinery welding. Structural welding. Common methods of testing welds. Special metal arc processes. Index.

Note A simply-written, practical text for vocational school students and beginning welders. In addition to the descriptions of arc-welding equipment and general techniques, information is included on a number of specialized techniques such as bell hole welding in pipeline construction. The book is generously illustrated. The author is a welding engineer on the staff of the Republic Structural Iron Works, Cleveland, Ohio.

CHURCHILL HARRY D AND JOHN B AUSTIN

Weld design New York Prentice-Hall, Inc. 1949 216 p illus. 22 cm. $6.65 2054

Contents Introduction Construction materials of machine bases. Stress-analysis and design data. Designing arc-welded machine bases. Application of welded-design principles. Welding specifications. Welding procedure. Welding processes. Flame cutting and flame hardening. Forming of metals. Estimating welded machine-base costs. Appendices: Stress-design data Bibliography Index.

Note Although this book is concerned with one subject only the fabrication of bases for machines by welding, it presents an exceptionally thorough treatment of this subject. Furthermore, many of the techniques described are applicable to the welding of other articles. The book is well illustrated, and the text is supplemented by an extensive bibliography It won an award of The James F Lincoln Arc Welding Foundation.

HEATING PIPING AND AIR CONDITIONING CONTRACTORS NATIONAL ASSOCIATION

Standard manual on pipe welding. [Second edition] New York Heating, Piping and Air Conditioning Contractors National Association, 1951 506 p illus. 23 cm. $7 50. 2055

Contents Welding—a tool of the contractor Description of welding processes Welding equipment maintenance. Selection and training of operators. Scope of pipe welding Materials and filler metals. Testing and inspection. Code welding—procedures—specifications. Templets and jigs. Layout and fabrication details. Estimating pipe welding costs. Co-ordination of facilities. Fabricating shop organization. Field welding shop organization. Alloy steels—chrome moly—stainless Aluminum and aluminum alloys. Copper and copper alloys. Nickel and nickel alloys. Cast iron. Lead welding and burning. Hard facing materials. Welding terms. Welding symbols. Tables and formulas. Index.

Note: A standard work in which the fabrication of piping installations in factories, office buildings, etc., by the use of welding techniques is treated primarily from the viewpoint of contractors who build piping systems. Techniques of fabrication in the shop and on the job are both described. Most of the space is given over to descriptions of materials and techniques, but other phases such as selling welded installations in competition with those put together with mechanical joints, selection of welding operators, etc., are covered as well. As a source of information on the welding of pipe the book is potentially useful to anyone concerned with the subject, whether he is a contractor architectural engineer or practical welder.

HENRY OTTO HAZELTON, AND G E. CLAUSSEN

Welding metallurgy, iron and steel revised by G E. Linnert. Second edition. New York. American Welding Society 1949 505 p. illus. 20 cm. $2 50 2056

Contents Metallurgy of welding. Types of steel and their manufacture. Welding methods and processes. Temperature changes in welding. The structure of metals. The mechanical properties of metals. Effects of alloying elements. Fluxes and slags. Simple welds in iron and steel. Shrinkage in welds. Preheating and postheat treatment. Difficulties and effects. Welding plain-carbon and low-alloy steels. Welding stainless and heat resisting steels. Welding tests. Appendices: Metallurgical data. Questions and problems. Abbreviations and chemical symbols. Index.

Note: (1939) A practical discussion for welders of the structure, properties, and composition of steels and other ferrous alloys. The material in the previous edition has been consolidated, rearranged, and amplified. A new chapter on welding tests has been included and an index has been added. Other additions are the suggested readings given at the end of each chapter, 60 new figures throughout the text, and new review questions. In accordance with general usage the Fahrenheit temperature scale has been substituted for the Centigrade.

MORRIS, JOE LAWRENCE

Welding principles for engineers. New York Prentice-Hall Inc. 1951 511 p. illus. 22 cm. $7.35 2057

Contents: Welding metallurgy A survey of the welding processes characteristics and applications. Testing and inspection of welds. Welding of commercial metals. Braze welding, brazing, soldering. Surfacing. Metal spraying. Filler materials. Flame heat-treatment. Oxygen cutting. Stress and distortion. Design for welding. Factors affecting welding production economy Index.

Note. The special viewpoint of this book is evident from the title and table of contents. Welding is treated as a technique of metal fabrication. All of the practical welding processes are described. Welding techniques are discussed in some detail but the discussions are directed to design and production engineers rather than to welders. The book was written for use as a text in engineering colleges, but it is suitable also for engineers in industry who desire an overall view of the subject. There are 53 tables and 245 figures.

PLUMLEY STUART

Oxyacetylene welding and cutting a course of instruction. Revised and rewritten by T B. Jefferson. Fourth edition. New York Mc Graw Hill Book Company, Inc., 1949 356 p. illus. 29 cm. $7.50 2058

Contents: The flame with many uses. Setting up oxyacetylene welding equipment. The welding gases, oxygen and acetylene. Welding torches and regulators. Acetylene generators. Welding sheet steel. Flame-cutting steel and cast iron. Welding and cutting small-diameter pipes. Pipe-line welding. Welding heavy gauge steel. Bronze welding. Fusion-welding cast iron. Brazing. Welding light metals. Welding monel, nickel, copper and brass alloys. Lead welding. Hard facing. Miscellaneous welding in the job shop. Tank welding. Boiler and Architectural welding. Welding news. The business side of welding. Appendix. Index.

Note: A textbook of concise, easy-to-understand instructions in welding and cutting techniques and their application in the fields of manufacture, construction, and repair. The present revision, by me-

use of its rearrangement of topics and additional material, has notably improved the book both as text for beginning welders and reference manual for members of the industry. The discussions on pipe welding, cutting, and hard facing have been considerably enlarged, as also those on the newer techniques of silver brazing and the welding of alloy steels, aluminum, and magnesium. A new chapter has been added on the systematizing of job shop operations and shop management. A glossary has been included, and the index refurbished.

SLOTTMAN, GEORGE V., AND EDWARD H. ROPER

Oxygen cutting. New York McGraw Hill Book Company, Inc., 1951 407 p. illus. 24 cm. $6.50 2059

Contents: Historical review. Fundamentals of the oxygen cutting process. The preheating flame. The effects of oxygen purity. The effect of metal temperature on the cutting action. The effect of alloying elements on the cutting action. The effect of oxygen cutting on ferrous alloys. Plant facilities for the cutting process. Oxygen cutting equipment. The oxygen lance. Fundamentals of hand cutting. Fundamentals of machine cutting. Types of cutting machines. Tracing devices and templets. Electronic tracing devices. Factors affecting the accuracy of machine cutting. Multiple and stack cutting. Heavy cutting. Flame machining. Flame scarfing. Cutting high alloy steels and nonferrous materials. Underwater cutting. Economics of cutting. The future of oxygen cutting. Index.

Note: This authoritative book is intended for use, not as an instruction manual for the technician, but as source of background information for engineers and research workers in the field of oxygen cutting. It thus includes detailed discussions of the underlying theory and the factors which affect the flame-cutting operation, together with descriptions of the techniques and equipment used in the various applications of the process. Both authors are associated with the Air Reduction Company Inc.

STANLEY, WALLACE ARTHUR

Resistance welding, designing tooling, and applications. New York McGraw Hill Book Company Inc., 1950 329 p. illus. 28 cm. $8.00 2060

Contents: Background for resistance welding. Resistance welding explained. Resistance welding versus other joining methods. Resistance welding with standardized equipment. Portable welding equipment. Special purpose machines for resistance welding. Designing "welded products" versus welding "designed products." Design considerations in resistance welding. Design considerations for spot welding. Design considerations for projection welding. Design considerations for seam welding. Design considerations for flash butt welding. Evaluation of weld quality. Tooling, handling, and material control for resistance-welding operations. Getting the most out of your resistance-welding equipment. Some techniques helpful with resistance welding. Index.

Note: A practical survey of an important technique in the manufacture of metal products. It is designed specifically for engineers concerned with manufacturing, but it is so clearly written and fully illustrated that it should be useful to anyone concerned with the type of welding from machine operators upwards. Besides the discussions of general principles and standard techniques, information is given on scores of small points, such as the effect of air pressure on machine speed. There are almost 800 illustrations but no references to the related literature. The author is associated with the Progressive Welder Company of Detroit.

INDUSTRIAL INSPECTION

AMERICAN SOCIETY FOR TESTING MATERIALS

Papers on radiography Presented at the fifty-second annual meeting, American Society for Testing Materials, Atlantic City N J., June 27 1949 Philadelphia American Society for Testing Materials 1950 95 p. illus. 23 cm. (Special technical publication no 96) Paper $1 75 2061

Contents: Introduction, by L. W. Ball. Recent progress in flash radiography by J. C. Clark. 10 mev X-ray techniques, by D. T O'Connor and others. Radiography and autoradiography by photoelectrons, by D. T. O'Connor and W. R. Maddy. Mobilizing the Van de Graaff generator for precision radiography by E. A. Burrill. A universal exposure calculator for radium radiography and its application to current radiographic films and techniques, by M. A. Kahn and others. A discussion of radiographic sensitivity by C. H. Hastings. A revised procedure for establishing radiographic standards, by L. W. Ball. An investigation of radiography in the range from 0.1 to 2.5 million volts, by W. W. Buechner and others.

Note: A collection of reports on new developments in the application of X-rays to the observation of internal structures of engineering parts and to non-destructive testing techniques. Descriptions are given of the apparatus and methods used by the authors in their research work carried on at such points as the Naval Ordnance Laboratory and the Massachusetts Institute of Technology. Written for metallurgists, physicists, and manufacturers of engineering materials.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on the rôle of non-destructive testing in the economics of production. Presented at the fifty third annual meeting, American Society for Testing Materials Atlantic City N J., June 27 1950 Philadelphia American Society for Testing Materials, 1951 157 p illus. 23 cm. (Special technical publication no. 112) Paper $2.50 2062

Contents: Introduction, by H. H. Lester. A basic guide for management's choice of non destructive tests, by R. C. McMaster and S. A. Wenk. Discontinuities in cast and wrought products that can be revealed by non-destructive tests, by K. R. Van Horn. The rôle of non-destructive testing in the economics of castings, by J. W Juppenlatz. The economics and practical application of cobalt 60 in the radiographic inspection of steel weldments, by W. L. Schwenn. The economics of wrought steel inspection, by C. D. Moriarty. Management's responsibility for insistence on nondestructive testing in the development of new engineering products and processes, by L. W Ball.

Note. The essential purpose of this symposium was to acquaint production and management engineers with the value of non-destructive testing in improving the quality of manufactured products. Specific tests and their fields of application are described and discussed in each paper. However the bulk of the material is contained in the first paper where the basic principles and features of twelve test methods are summarized. Included are tabulation of 110 patented methods and bibliography of approximately 500 references.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on ultrasonic testing, presented at the fifty-second annual meeting of the American Society for Testing Materials, Atlantic City N J., June 28 1949 Philadelphia American Society for Testing Materials 1951 133 p. illus. 23 cm. (American Society for Testing Materials. Special technical publication no. 101) Paper $2.00 2063

Contents: Introduction, by H. C. Antsberg. Ultrasonic wave propagation in materials guide to theoretical results, by L. Gold. Inspection, processing, and manufacturing control of metals by ultrasonic methods, by C. H. Hastings and S. W Carter. Basic principles of practical ultrasonic testing, by J. C. Smack. Ultrasonics in the heavy forging industry by J. C. Hartley The application of ultrasonics to the fabrication of aluminum, by J V Carroll. Ultrasonic testing in railroad work, by E. D. Hall Ultrasonics in the electrical industry by D. M. Kalmon. Ultrasonic testing of heavy forgings and ingots, by A. Pitch. Pulse techniques applied to dynamic testing, by J R. Leslie. The measurement of dynamic modulus in adhesive joints at ultrasonic frequencies, by A. G. H. Dietz and others. General discussion.

Note: The technique of ultrasonic testing employs ultra high frequency sound waves to detect internal or external flaws or foreign bodies in otherwise homogeneous media. The papers and discussions in this technical publication present summary of the history theoretical aspects, basic principles of practical testing, and practical

applications for the ultrasonic testing of materials. Two of the papers were presented at the meeting, and two at the 1950 annual A.S.T.M. meeting under the sponsorship of Committee E-7 on Non-Destructive Testing. The paper by Hastings and Carter is more extensive than the rest and contains a bibliography of 142 references, each reference being classified as to its general subject content.

CLAUSER, H. R.

Practical radiography for industry New York Reinhold Publishing Corporation 1952 301 p. illus. 24 cm $7 50 2064

Contents: Introduction. Nature, characteristics and properties of X-rays. The generation of X-rays and X-ray equipment. Procedures and radiograph interpretation. Exposure factors and technique. Sensitivity and radiograph quality. Films and film processing, screens and filters. Gamma ray radiography. Radiography of welds. Radiography of castings. Fluoroscopy. High voltage radiography. Other techniques and applications of radiography. Protection and safety. General index.

Note. The use of X-rays and gamma rays in the inspection of manufactured articles is presented in this book for metallurgists, inspectors, and other technical personnel directly concerned with radiographic inspection. The two background chapters are short and most of the space is given to descriptions of techniques and equipment. Technical terminology such as a person engaged in radiographic inspection would have to be familiar with is used freely but otherwise the presentation is simple and practical. The discussions are generously supplemented by graphs and pictures. Fairly extensive lists of references accompany the chapters.

KENNEDY CLIFFORD W

Inspection and gaging a training manual and reference work. New York Industrial Press, 1951 502 p. illus. 24 cm. $7.50. 2065

Contents: The need and function of inspection. How specifications aid the inspector. Tolerances and allowances. How standards aid the inspector. Basic principles and techniques of measurement. Fixed gages. Surface plate methods and equipment. Mechanical indicating equipment. Electrical and air indicating equipment. Optical measuring and inspection equipment. Gaging and inspection of screw threads. Special measuring and inspection problems. Gage checking and calibration. 100 per cent inspections. Quality control and sampling. Process inspections. Hints for making a good job better. Index.

Note. A clearly written introduction to the inspection procedures and instruments used in present-day precision manufacturing. For an introductory work it is unusually comprehensive. For example, the reader is told not only how to use gages but how to check their accuracy. However subjects such as quality control are only outlined. The book is well illustrated. It can be recommended to anyone from vocational school student to factory executive who is making his first acquaintance with inspection. It is well suited to home study.

MICHELON, LENO CENO

Industrial inspection methods. Revised edition. New York Harper & Brothers, 1950. 566 p. illus. 24 cm. $6 00 2066

Contents (abridged): Section I, Basic concepts in industrial inspection. Section II, Dimensional control: Nonprecision measurement. Precision measurement: micrometers and verniers. Plug, ring, and snap gages. Precision gage blocks. Comparison measurement: dial indicators and indicating gages. Precision angle measurement. Screw threads and thread gages. Comparators and automatic gages. Optical instruments. Surface plates and toolroom specialties. Statistical methods of quality control. Section III, Testing for physical and mechanical properties: Mechanical properties and destructive testing. Hardness testing. Industrial radiography. Section IV, Superficial inspection methods. Section V, Inspection organization and personnel. Section VI, Appendix: Bibliography. Manufacturers' catalogs and technical bulletins. Tables. Index.

Note (1944) A practical introduction to modern inspection instruments and methods. The first edition proved to be very useful in training new recruits in war plants. This edition is largely new in content. The work now includes good accounts of all the instruments commonly used in factory inspection, of the chief testing methods, and a concise description of quality control from the inspector's viewpoint. It is organized as a textbook and undoubtedly its chief use will be in conjunction with organized courses in technical institutes and other schools. However it is suitable for the beginning worker and others who want to instruct themselves.

THOMPSON, JAMES EDGAR

Inspection, organization, and methods. New York McGraw Hill Book Company Inc., 1950 369 p. illus. 24 cm. (Industrial organization and management series, L. C. Morrow consulting editor) $5.50 2067

Contents: Objectives and plan. Operation. Organization. Personnel. Standards. Records. Equipment. Measuring instruments. Gages. Test equipment. Receiving. Fabrication and assembly. Salvage. Shipping. Tools and tooling. Experimental and laboratory. Appendix: Typical inspection job evaluations. Typical inspection questionnaire. Index.

Note A practical survey of the organization, procedures, and human relation aspects of inspection systems in factories. In it are presented practicable methods of controlling and recording the results of inspection so as to maintain the quality of the product and to maintain harmonious relations between the inspection department and other factory departments. The main basis for the book was a personal survey on the part of the author of the organization of inspection in about 30 American industrial concerns. The book is written from the management viewpoint and the descriptions of gages and other instruments used in inspection are addressed to management and supervisory personnel.

ELECTRICAL ENGINEERING

GENERAL

BISHOP CALVIN C.

Electrical drafting and design. Third edition. New York. McGraw Hill Book Company Inc., 1952 267 p illus. 24 cm. $4.50 2068

Contents: General instructions for mechanical and electrical drafting. Circuit diagrams. Switchboard for direct-current generator. Switchboard for 2300-volt service. Outdoor substation. Residence wiring. Laying out wiring. Illumination. Industrial plant. Appendix. Index.

Note: (3700) An established text and reference manual on the making of drawings of circuit diagrams and wiring installations. It is addressed chiefly to student draftsmen enrolled in vocational schools, but it is suitable also as reference or refresher for working draftsmen in need of particular information on electrical drawings. The 125 page appendix consists mainly of tables of reference data useful to electrical draftsmen. The second edition was published in 1931. For this edition the work was very substantially revised and enlarged.

CORCORAN, GEORGE FRANCIS

Basic electrical engineering for students of electrical engineering. New York John Wiley & Sons, Inc., 1949 449 p. illus. 23 cm. $5.50 2069

Contents: Classification of physical quantities. Versatility of electrical charge. Voltage, current, and power. Electrical resistance and resistivity Joule's law—heating effects. D-c circuit analysis (lumped-bilateral circuit elements) The electric field. The magnetic field. Magnetic forces. Magnetically generated voltages. Ferromagnetic circuits. Inductance. Capacitance Boundary electromotive forces (Faraday's laws of electrolysis) Non-linear circuit elements. Appendices. Index.

Note: (3707) The fundamental concepts and some of the basic techniques of present-day electrical engineering are explained in this introductory textbook. As indicated in the title, it is designed for students who plan to pursue the subject beyond an introductory course. The emphasis is on basic concepts and techniques such as the vector properties of electric field intensity and practically no space is given to descriptive material. Rationalized MKS units are used throughout. A small amount of material has been carried over from *Electrical engineering fundamentals*, by the author and K. R. Kurtz (New York, Wiley 1941) but this is essentially a new work, although intended for the same class of reader.

DAWES CHESTER LAURENS

A course in electrical engineering. Volume I Direct currents. Fourth edition. New York McGraw Hill Book Company Inc., 1952 736 p. illus. 24 cm. (Electrical engineering texts, Harry E. Clifford, consulting editor) $7.00. 2070

Contents: Resistance. Ohm's law and the electric circuit. Battery electromotive forces—Kirchhoff's laws. Primary and secondary batteries. Electrical instruments and electrical measurements. Magnetism and permanent magnets. Electromagnetism. The magnetic circuit. Self- and mutual inductance. Electrostatics; capacitance. The generator. Generator characteristics. The motor. Losses; efficiency operation. Transmission and distribution of power Appendices. Questions and problems. Index.

Note. (3710) A successful introductory text. It is designed particularly for such persons as trade school students and electricians who do not plan to become professional electrical engineers but who need, nevertheless, a broad survey. Basic matters such as the properties of magnetic fields are not omitted but are treated in a simple manner. Although calculus is used in some parts, most of the text can be comprehended with a knowledge of mathematics no higher than elementary algebra. Extensive and useful revisions are found in this edition. There is more emphasis on fundamental aspects, and descriptions of new devices such as the Ruben cell.

ERICKSON, WILLIAM H., AND NELSON H. BRYANT

Electrical engineering: theory and practice. New York John Wiley & Sons Inc., 1952 523 p. illus. 24 cm. $6.00. 2071

Contents (abridged) Resistance. Electric circuit laws and d-c circuits. Magnetics and magnetic circuits. Electromagnetic induction. Inductance and capacitance. Alternating currents. Single-phase a-c circuits. Polyphase a-c circuits. Electrical instruments and measurements. The d-c machine. D-c motor control. Transformers. The three-phase induction motor. Three-phase synchronous machines. Single-phase motors. Introduction to electronics. Gas discharge tubes. Single-phase rectifiers. Thyratrons. Power rectifiers. Phototubes. Electronics in communications. Electronic control. Appendixes. Index.

Note. An introductory textbook designed for students majoring in other fields of engineering than electrical. A considerable range of basic machines and circuits is covered with the emphasis on basic principles. Some mathematics appears in certain parts of the exposition but, generally speaking, the treatment is essentially descriptive, or as the authors describe it "physical." The authors are members of the faculty of Cornell University

FICH SYLVAN

Transient analysis in electrical engineering. New York Prentice-Hall Inc., 1951 306 p. illus. 22 cm. (Prentice-Hall electrical engineering series, W L. Everitt, editor) $7 65 2072

Contents: General theory Classical solution of linear differential equations. Classical solution of single-energy transients. Classical analysis of double-energy transients. Systems defined by second-order equations. The Laplace transformation. Applications of the Laplace transformation. Solution of higher-degree algebraic equations. Circuits involving higher-order equations. Representation and transformation of periodic and nonperiodic functions. Elements of complex-variable theory Applications of contour integration Systems having distributed parameters. Electrical analogues of engineering systems. Appendix: Table of Laplace transforms. Specific functions. Index.

Note: This textbook for electrical engineering students extends transient analysis to include modern operational methods and at the same time presents classical theory No previous knowledge of differential equations is needed. The chapters include summaries, illustrative examples with complete solutions, and over 300 problems, many of them with answers.

HARRIS FOREST KLAIRE

Electrical measurements. New York John Wiley & Sons, Inc., 1952 784 p. illus. 24 cm. $8.00. 2073

Contents: The art of measurement. Electrical units. Direct-current galvanometers. Indicating instruments. Direct-current ammeters and voltmeters. Potentiometers. Resistors and resistance measurements. Ballistic galvanometers. Magnets and magnetic testing. Alternating-current ammeters and voltmeters. The measurement of power. Energy measurements. Instrument transformers. Wave-form and frequency measurements. Alternating-current bridges. Index.

Note: This book is limited to direct-current and low-frequency measurements, but within this area it provides a very substantial treatment for laboratory workers and advanced students of physics. The operating principles and circuits of the chief instruments are described, and the limitations of each instrument are covered specifically. The main emphasis is on the use of available instruments so as to obtain results of the accuracy desired for the measurement in hand. The author is a physicist on the staff of the National Bureau of Standards and a faculty member of George Washington University.

KNOWLTON, ARCHER EBEN, editor in-chief

Standard handbook for electrical engineers prepared by a staff of specialists. R. M. Shoop assistant editor. Eighth edition. New York McGraw-Hill Book Company Inc. 1949 2311 p. illus. 23 cm. $17.00. 2074

Contents: Units and conversion factors, by A. E. Knowlton and J. H. Park. Electric and magnetic circuits, by H. B. Dwight and D. G. Fink. Measurements, by G. Thompson and others. Properties of materials, by L. F. Hickernell and others. Circuit elements, by C. R. Underhill and others. Transformers, regulators, and reactors, by V. M. Montsinger and W. M. Dann. Alternating-current generators and motors, by S. H. Mortensen and others. Direct-current generators and motors, by C. Lynn. Rectifiers and converters, by O. K. Marti and C. Lynn. Prime movers, by G. A. Gaffert and others. Power economics, by J. G. Tarboux. Power system electrical equipment, by C. M. Gilt and others. Power transmission, by W. W. Woodruff and others. Power distribution, by H. R. Gear, revised by H. G. T. Arnold. Wiring design—commercial and industrial buildings, by E. A. Brand, revised by W. T. Stuart. Illumination, by P. S. Millar and others. Industrial and commercial power, by L. W. Hutchenreuter and others. Electric heating and welding, by N. R. Stansel. Electricity in transportation, by S. Withington and others. Electrochemistry and electrometallurgy, by F. A. Lowenheim and N. R. Stansel. Batteries, by J. L. Woodbridge and W. M. Schlecher. Wire telephony and telegraphy, by W. L. Everitt, revised by F. T. McNamara. Electronics and electron tubes, by D. G. Fink. Radio, radar and carrier communication, by D. G. Fink and others. Codes and standard practices, by W. R. Smith and others. Electrophysics, by K. B. McEachron and others. Index.

Note: (3711) The practical value of this reference book has been maintained since its first edition in 1907 by the publication of new editions at frequent intervals. Its purpose is to bring together in readily accessible form a vast amount of technical data in the electrical engineering field, including the most frequently used fundamental theory, systems of measurements, and formulas. In addition to the changes necessitated by the development of new standards and specifications, other changes in this edition include a description of new magnetic and insulating materials, new sections on rotary regulators, induction heating, and radar, and a rewriting of the sections on generators, transformers, conductors, and interior wiring. The bibliographies given in each section have been brought up to date.

KUEHN, MARTIN H.

Mathematics for electricians. Third edition. New York McGraw-Hill Book Company Inc. 1949 372 p. illus. 21 cm. $4.50 2075

Contents (abridged): Solution of simple equations. Solution of series circuits. Fractions. Radical quantities. Multiplication and division of polynomials. Factoring. Solution of quadratic equations. The slide rule. Graphs. Parallel circuits. Generator and motor problems. Solution of literal and simultaneous equations. Kirchhoff's laws. Ratio and proportion. Exponents and logarithms. Fundamental alternating-current ideas. Vectors. Complex quantities. Three-phase circuits. Appendix: Answers to problems. Index.

Note: (3720) An elementary text in applied mathematics for use either in vocational school courses or for home study purposes. Emphasis is of course on the solution of electrical problems by means of arithmetic, but explanations of basic electrical principles are also included. As in the previous editions, numerous illustrative exercises and review problems constitute an important feature of the text. The major changes in this edition include new chapters on basic arithmetic operations, logarithms, and alternating-currents, and a rewriting of the chapter on power.

NADON, JOHN M., AND BERT J. GELMINE

Industrial electricity: the fundamentals of electricity, machines, electronics, illumination, and controlling equipment. Second edition. New York D. Van Nostrand Company Inc., 1951 710 p. illus. 24 cm. $6.50. 2076

Contents: Electrical algebra. Fundamentals of electricity. Wiring. Magnetism. Armature winding. Generators. Motors. Controllers. Geometry and trigonometry. Alternating current. A-c circuits. Transformers. Polyphase systems. Alternators. Alternating-current motors. Stator winding. Multispeed induction motors. A-c controllers. Electrical instruments. Electron tubes. Welding systems. Illumination. Electrical drawing. Index.

Note: (3725) A practical introductory text designed for use in vocational and industrial schools. It is especially slanted for students who are preparing to become electricians in industrial plants. Although some space is devoted to fundamental electrical theory, the main emphasis is on typical methods of application of electricity and electronics to present-day industrial machines, controls, and other electrical devices such as welders. It is simply yet clearly written. The chapters are logically developed and well illustrated with numerous original diagrams and drawings. Only simple arithmetic is used in the exposition and no previous introduction to electrical science or mathematics has been assumed. The authors are instructors in the Training Department of the Ford Motor Company where the book was developed. The first edition was published in 1939. In the present edition the book is about 100 pages longer and contains a considerable amount of revised and newly added material, particularly in the chapters on electron tubes, welding systems, and illumination.

PENDER, HAROLD, AND WILLIAM A. DEL MAR, editors

Electrical engineers' handbook: Electric power. Fourth edition. New York. John Wiley & Sons Inc. 1949 [1700 p.] illus. 23 cm. $8.50 2077

Contents (abridged): Mathematics, units, and symbols. Electric circuits and electric lines. Measurements and measuring apparatus. Batteries. Direct-current machines and rotary energy converters. Alternating-current generators and motors. Transformers. Power rectifiers and inverters. Switchgear and control equipment. Power transmission and distribution. Lighting and heating. Transportation. Electrochemical and electrothermal processes. Rural electrification distribution systems. Index.

PENDER, HAROLD, AND KNOX MCILWAIN, editors

Electrical engineers' handbook: Electric communication and electronics. Fourth edition. New York John Wiley & Sons, Inc., 1950. [1618 p.] illus. 23 cm. $8.50. 2078

Contents (abridged): Mathematics, units, and symbols. Resistors, inductors, and capacitors. Electron tubes. Electric circuits, lines, and fields. Fixed circuit elements. Vacuum tube circuit elements. Frequency modulation. Pulse techniques. Transmission circuits. Electrical measurements. Acoustics. Electromechanical-acoustic devices. Electro-optical devices. Sound reproduction systems. Telephony. Telegraphy. Facsimile transmission and reception. Television. Electronic control equipment. Medical applications of electricity. Index.

Note: (3716) A standard handbook of electrical engineering. The titles given in the short tables of contents are "section" titles. Each of the sections contains several chapters in which fundamentals and current practice pertaining to a specific topic such as X-ray tubes are concisely presented. The work has been widely revised in its fourth edition. Numerous topics such as electrolytic polishing of metals, permanent magnet materials, the heat pump, frequency modulation, pulse techniques, and electro-optical devices are either newly added or the discussion of them has been completely rewritten. All of the bibliographies have been revised and in some sections a bibliography has been inserted where none was before. The volumes have separate indexes and may be used independently.

REED, MYRIL BAIRD, AND GEORGIA B. REED

Mathematical methods in electrical engineering. New York Harper & Brothers, 1951. 338 p. 24 cm. $5.00. 2079

Contents: Imaginary numbers and hyperbolic functions. Linear algebraic equations—determinants. Matrix algebra. Zeros of polynomials—Graeffe method. Partial and continued fractions. Vector analysis. The Fourier series. Linear differential equations with constant coefficients. Transients in one-mesh electrical networks. Transients in multimesh networks. Bessel functions. Partial differential equations. Analytic functions of complex variable. Index.

Note: A textbook in which the authors has made special effort to present in compact form the mathematical knowledge essential to professional work in present-day electrical engineering. Mathematical concepts and techniques no longer in such use have been eliminated. On the other hand, such methods as matrix algebra are discussed at some length. The exposition includes numerous worked examples.

SCHILLING, EUGENE WASHBURN

Theory and application of electrical engineering. Scranton Pa. International Text book Company 1951 402 p. illus. 23 cm. $6.50. 2080

Contents: Abbreviations. Electricity. Resistance. Electric circuits. Energy and power. Magnetism and magnetic circuits. Induced electromotive force. Direct-current instruments and meters. Capacitance. The direct-current motor. Alternating currents. Alternating-current instruments and meters. Polyphase alternating currents. Transformers. Polyphase induction motors. Single-phase motors. Motor applications. Alternating-current generators. Synchronous motors and parallel operation of alternators. Electronics and electronic equipment. Electric tubes. The D-C generator. Storage batteries. Illumination. Transmission and distribution. Appendix. Index.

Note: An introduction to the fundamentals of electrical engineering for use in all types of college engineering courses. The coverage is more inclusive and less detailed than is typical of books that were written specifically for electrical engineering students. Although the basic theories of electricity are outlined, background knowledge of that subject is assumed together with grounding in advanced algebra. Review problems conclude each chapter. The author is Dean of Engineering in Montana State College.

STOUT MELVILLE BIGHAM

Basic electrical measurements. New York Prentice-Hall, Inc., 1950 504 p. illus. 22 cm. $7 75 2081

Contents: Development of the electrical units. Experimental procedures, errors. Aids to computation. Measurement of resistance. Galvanometers, shunts. Standard cells. Potentiometers. Applications of potentiometers. Alternating-current bridges: principles; bridge circuits. Additional measuring circuits. Measurement of mutual inductance. Shielding; shielded bridges. Characteristics of bridge components. Bridge accessories. Instrument transformers. Magnetic measurements. Electrical indicating instruments. Appendices: Sensitivity of Wheatstone bridge. Wye-delta transformations. Summary of a-c bridge circuits. Index.

Note: A fairly inclusive introduction to the basic electrical measurements and to standard measuring instruments is provided in this textbook. Although much descriptive material has necessarily been included, the emphasis is on fundamental matters, such as selection of appropriate methods, achievement of the desired degree of accuracy in observations and computations, and the principles of measuring instruments. The chapter on indicating instruments covers such devices as voltmeters, ammeters, wattmeters, varmeters, power-factor meters and cathode-ray oscillographs. The primary purpose of the book is to train college students who are majoring in physics or electrical engineering in the fundamentals of electrical measurements; but electricians, graduate engineers, and other technical workers who need occasional information on methods or instruments find it useful for reference.

TIMBIE, WILLIAM HENRY AND OTHERS

Principles of electrical engineering. By William H. Timbie, Vannevar Bush, assisted by George B Hoadley Fourth edition. New York John Wiley & Sons, Inc., 1951 626 p. illus. 23 cm. $7.00 2082

Contents: Some fundamental considerations. Kirchhoff's laws. Electric power and energy. Simplification of electric networks. Conductors and resistors. Conduction in solids and liquids. Transients in electric circuits. Alternating-current circuits. The magnetic circuit. Interactions between electric circuits and magnetic fields. The magnetic properties of iron and steel. Steady magnetic fields. Steady electric fields. Electronics. Electromagnetic waves. Appendix. Index.

Note: (1711) An introductory text, widely used in first-year college engineering courses. The treatment stresses basic principles and requires background knowledge of calculus and physics. Although retaining the general scope and arrangement of the previous editions, this revision has been extensively rewritten to relate the fundamental theories to recent practical developments in the field. The chapters on conductors and conduction and transients, in particular have been expanded, and chapter on a-c circuits has been added. These changes and the inclusion of new material on alternators, dry-rectifiers, acceleration of electrons, electron guns, etc., account for almost 130 additional pages.

VINAL, GEORGE WOOD

Primary batteries. New York John Wiley & Sons, Inc., 1950. 336 p. illus. 21 cm. $5.00. 2083

Contents: Historical introduction. Elementary theory of electric cells. Dry cells—materials and production. Operating characteristics of dry cells. Effect of low temperatures on dry cells, and low-temperature types. Standard cells, standards of electromotive force. Air-depolarized and other batteries. Copper and copper oxide cells. Silver oxide and chloride batteries. Lead cells having soluble reaction products. Mercuric oxide and vanadium dry cells. Fused-electrolyte cells. Index.

Note: A thorough treatise on topic which is almost devoid of book literature. Most of the discussion has to do with the chemical and electrical principles and the operating characteristics of primary batteries. Although descriptions and diagrams of commercial cells are included, the book is less suitable for the occasional user of dry batteries than it is for engineers who need to understand primary batteries in connection with the design of specification of electrical apparatus. The literature of the subject is cited in footnotes.

WESSON L. G

Tables of electric dipole moments, compiled by L. G Wesson. Cambridge, Massachusetts The Technology Press, 1949 90 p. 24 cm. $2.50 2084

Note: A tabulation of more than 2,500 compounds whose molecules are unsymmetrical and for which the dipole moment has been calculated. The inorganic compounds are listed alphabetically, the organic by formula, and each entry includes the solvent used, the temperature at which the substance was measured, the dipole moment value, and the literature references. The values, which are important in determining the dielectric properties of gases, liquids, and solids, were compiled by the Laboratory for Insulation Research at Massachusetts Institute of Technology.

CURRENTS FIELDS AND CIRCUITS

ATTWOOD STEPHEN STANLEY

Electric and magnetic fields. Third edition. New York John Wiley & Sons, Inc., 1949 475 p. illus. 24 cm. $6.00 2085

Contents: Part I, The electric field: The electrostatic field. Electric fields of simple geometries. Electric polarization and induction. Electric current. Solutions by method of images. Space charge—Laplace and Poisson equations. Mapping electrical fields. Energy and forces in condensers. Part II, The magnetic field: The magnetostatic field. Magnetic fields of simple geometries. Magnetic production of voltage. Energy and forces in an inductance. Part III, The ferromagnetic field: Ferromagnetism. Permanent magnets. Imaging and mapping magnetic fields. Part IV Combined electric and magnetic fields: Interactions of electric and magnetic fields. Appendices. Index.

Note: (904) An introduction to the principles and theories of electricity and magnetism for students in advanced electrical engineering courses. The book is intended to aid the student in applying his knowledge of mathematics, mechanics, and physics to the calculation and expression of fundamental electrical concepts. The revisions made in this edition include rewriting of the chapter on the source of magnetic effect and the addition of magnetization curves for various materials, and discussion of dia-, para- and ferromagnetism. As in the previous editions, emphasis is placed on the study of fields and field mapping methods rather than circuits. Each chapter concludes with review problems.

Boast, Warren Benefield

Principles of electric and magnetic circuits. New York Harper & Brothers 1950 367 p. illus. 24 cm. $5.00 2086

Contents: Part I, Basic electric circuits: Fundamental concepts of electric circuits. Voltage-current characteristics of passive circuits. Joule's law. Kirchhoff's laws and basic applications. Sources of electric energy. Basic electric measurements. Computation of conductance and resistance. Distribution circuits. Graphic methods applied to simple d-c circuits. Part II, Basic magnetic circuits: Fundamental concepts of nonferrous magnetic circuits. Magnetic properties of ferrous materials. Methods of solution for simple magnetic circuits. Graphic solutions of magnetic circuits. Hysteresis effects and permanent magnets. Part III, Basic electromagnetic circuits: Electromagnetic induction and generation. Inductance. Basic magnetic measurements. Part IV, Electric network analysis: General network methods. Graphic solutions of electric networks. Loop-current and node-voltage methods. Network theorems and their application. Part V, Supplementary aspects of electric and magnetic circuits: Currents in irregular-shaped conductors. Capacitance and its effect in electric circuits. General circuit equations of resistance-capacitance-inductance systems. Appendix. Index.

Note: This engineering college textbook covers in logical order the underlying principles of electric and magnetic circuits, including electromagnetic induction, electric network analysis, conduction circuits with irregular boundaries, capacitance and systematic methods of writing equations for circuits. Graphical interpretations of the mathematical laws are provided as a means of aiding the student in visualizing the relationships being considered.

Clarke, Edith

Circuit analysis of a-c power systems. Vol. II. New York John Wiley & Sons Inc., 1950 396 p. illus. 24 cm. $9.00 2087

Contents: Introduction and summary of equations. Impedances of electric circuits. Electrical characteristics of insulated cables. Transformers and autotransformers. Transformers in system studies. Induction machines. Synchronous machines. αβ0 components in synchronous-machine analysis. System protection—relays. Appendixes: Tables. Development of equations—rotating machines. Reciprocals of equations for circles and straight lines. Index.

Note: (3746) The first volume of this work was published in 1943. Either volume can be used independently but subjects covered at length in Volume I—for example overhead transmission lines—are of course not covered again in the second volume. The book is addressed primarily to graduate engineers, especially those who are just beginning to work with the analysis and design of a-c power systems. In both volumes power systems and their main elements are analyzed by means of components. The author was formerly associated with the General Electric Company

Goldman, Stanford

Transformation calculus and electrical transients. New York Prentice-Hall, Inc., 1949 439 p. illus. 22 cm. (Prentice-Hall electrical engineering series, W. L. Everitt, editor) $8.65 2088

Contents: Introduction. Determinants. Properties of electrical circuits. Transient solutions of circuit problems by means of the Laplace transformation. Some fundamental concepts and relations in circuit theory. Theory of functions of a complex variable. Loci of complex functions. The inversion theorem and related topics. Gamma and error functions. Bessel functions. Transients in transmission lines—solution of partial differential equations. Solutions in series. Some additional applications to electrical engineering. Appendixes: Table of integrals. Table of identities involving hyperbolic functions. Some theory of transmission lines in the steady state. Table of Laplace transforms. Fourier integral analysis. Index.

Note: An introductory book for electrical engineers in which the equations and theorems of transformation calculus are developed from the level of simultaneous equations. It is written at the level of seniors or graduate students in electrical engineering, and is not intended for persons without knowledge of calculus, some knowledge of engineering and an elementary knowledge of complex quantities and differential equations. The author has coined the phrase "transformation calculus," as differentiated from Heaviside's operational calculus, to cover the emphasis upon the question of transformations between the time axis and the p plane. The subject is of particular importance to development and research workers in electrical engineering.

Guillemin, Ernst Adolph

The mathematics of circuit analysis: extensions to the mathematical training of electrical engineers. A publication of The Technology Press, Massachusetts Institute of Technology. New York John Wiley & Sons, Inc., 1949 590 p. 24 cm. (Principles of electrical engineering series) $7.50. 2089

Contents: Determinants. Matrices. Linear transformations. Quadratic forms. Vector analysis. Functions of a complex variable. Fourier series and integrals. Index.

Note. The series of which this volume is a part is the result of a planned cooperative effort by the staff of the Department of Electrical Engineering of the Massachusetts Institute of Technology to develop an adequate presentation of the basic technological principles of electrical engineering. The series includes *Electric circuits* published in 1940 and in 1943, *Magnetic circuits and transformers* published in 1943. The present volume has been published because it became apparent that extension of the mathematical material contained in the three volumes just mentioned would be useful to electrical engineers. The various mathematical concepts and techniques covered are treated from the standpoint of engineers rather than that of mathematicians, therefore the presentation is lacking in rigorous proof. A wide selection of problems to be worked by students is included.

Johnson, Walter C.

Transmission lines and networks. New York McGraw Hill Book Company Inc., 1950 361 p. illus. 23 cm. (McGraw Hill electrical and electronic engineering series, Frederick E. Terman consulting editor) $5.50. 2090

Contents: Part I, Transmission lines: Distributed constants and traveling waves. The a-c steady state—lines with no reflections. The constants of two-conductor lines. Lines with reflections. Transmission line charts. Special considerations for radio-frequency lines. Radio-frequency lines—measurements and impedance matching. Special considerations for telephone and telegraph lines. Special considerations for power lines. Part II, Four-terminal networks: A review of elementary network analysis. The characteristics of four-terminal networks. The lattice and iterative operation of four-terminal networks. Insertion loss and reflection factors. Filters. The design of ladder filters. Index.

Note: An engineering textbook which has been developed from material used by the author in courses given to advanced electrical engineering students at Princeton University. It is designed to serve the needs of students who are majoring in either power or communications engineering with the basic principles of transmission lines and four-terminal networks. Most of the elementary methods of analyzing four-terminal networks. Some space is given over to mathematical analyses of specific phenomena and characteristics, but some qualitative or descriptive material is introduced into the discussions of such phenomena as the skin effect and such special engineering problems as those presented by telephone lines.

Jordan, Edward Conrad

Electromagnetic waves and radiating systems. New York Prentice-Hall, Inc., 1950. 710 p. illus. 22 cm. (Prentice-Hall electrical engineering series, W. L. Everitt, editor) $10.35 2091

Contents: Fundamentals of electromagnetic engineering. Electrostatics. The steady magnetic field. Maxwell's equations. Guided waves. Poynting vector and the flow of power. Directional plane waves. Transmission lines. Wave guides. Radiation. Impedance. Characteristics of antennas. Impedance characteristics of antennas. Antenna practice and design. Secondary sources and aperture antennas. Ground wave propagation. Sky wave propagation. Appendixes. List of symbols. Index.

Note: An introductory but substantial treatment of field theory for upperclass and graduate students majoring in physics or electrical engineering, especially those who are preparing for research or design in communications. The field vectors E and H are introduced on the first page of exposition and are used throughout the remainder of the book. The material on antennas is comprehensive enough to make it of interest to practicing communications engineers. Throughout the book there are footnote references and chapter bibliographies.

KEISTER, WILLIAM AND OTHERS

The design of switching circuits. By William Keister Alistair E. Ritchie and Seth H. Washburn. New York D Van Nostrand Company Inc., 1951 556 p 24 cm. (Bell Telephone Laboratories series) $8.00 2092

Contents: Fundamental control concepts. Switching apparatus. Basic relay control paths. Relay contact network configurations. Switching algebra, and manipulation of relay contact networks. Design of combinational relay circuits. Time charts, sequence diagrams, simplified schematics, and graphic descriptions of relay circuits. Design of sequential relay circuits. Elementary switch control circuits. Elementary electronic switching circuits. Circuits for counting. Codes and translating circuits. Circuits for selecting. Circuits for connecting. Circuits for lockout. Circuits for finding and hunting. Circuits for timing. Circuits for pulse generation. Circuits for checking. Circuits for registration. Circuits for calculating. General principles of multifunctional circuit design. Planning a multifunctional circuit. Detailed design of a multifunctional circuit. Index.

Note: Switching circuits constitute a highly developed area in telephone engineering, and the subject is becoming important in such other fields as the design of electronic computers. This book, written by members of the staff of the Bell Telephone Laboratories, Inc., is based upon telephone experience, but is a general and somewhat theoretical treatment adapted for use outside the telephone field. Though organized as a textbook and designed for upperclass engineering students as well as for practicing engineers, not much mathematics is employed. The greater part of the text can be understood by anyone with a moderate knowledge of electrical circuits and terminology

KIMBARK, EDWARD WILSON

Electrical transmission of power and signals. New York John Wiley & Sons, Inc. 1949 461 p illus. 24 cm $6.50 2093

Contents: Introduction. Parameters of simple two-conductor lines. Parameters of multiconductor lines. Parameters of stranded and miscellaneous conductors. Parameters of ground-return lines. Steady-state phenomena on transmission lines. Lossy lines. Transient phenomena on transmission lines. Transmission-line charts. Electric power transmission. Impedance matching. Telephone and telegraph transmission. Radio-frequency transmission lines. Filters. Skin effect. Wave guides. Appendixes: Characteristics of conductors for open-wire power transmission lines. Characteristics of transmission lines for power and signals. Index

Note: An engineering college textbook designed for courses offered to students who have had an introduction to circuits with lumped parameters. It is an introduction to circuits with distributed parameters. The theory of this type of circuit has application in both power transmission and communication engineering. The chapters are supplemented by fairly long lists of references. The author is Professor of Electrical Engineering at Northwestern University

KRAYBILL EDWARD KREADY

Electric circuits for engineers. New York The Macmillan Company 1951 212 p. illus. 25 cm. $3.85 2094

Contents: Part I, Basic considerations. General background. Part II, Causes: Electromotive force. Part III, Oppositions: Resistance. Inductance. Capacitance. Part IV Effects: Current flow through R, L, C. Effective values, vector representation. The algebra of complex numbers. Part [illegible] Application of (effect-cause/opposition) to electric circuits: Series circuits. Energy and power. Parallel circuits. Networks. Polyphase circuits. Appendixes. Index.

Note: A very compact presentation of the fundamentals of steady-state electric circuit theory is given in this book, which is intended chiefly for engineers specializing in fields other than electrical engineering. Except for the first two chapters, there is little descriptive material. Instead, such concepts as networks are carefully defined, then the reader is shown how to analyze typical examples and how to make the necessary mathematical computations involved in the analysis. Analogies with other physical systems, for example between capacitors and mechanical springs, are used frequently in the exposition.

LEPAGE WILBUR R.

Analysis of alternating-current circuits. New York McGraw Hill Book Company Inc. 1952 444 p. illus 24 cm. (McGraw Hill electrical and electronic engineering series, F E. Terman, consulting editor) $6 50 2095

Contents: Alternating-current systems. Introductory concepts. Metering and effective value. Symbolic treatment of sinusoids. Some integrodifferential equations. Sinusoidal excitations. Power. Applications of complex quantities. Network terminology and notation. Analysis of networks. Magnetic coupling. Polyphase systems. Variable-response networks. Nonsinusoidal periodic waves. Fourier series. Appendixes: Calculation of circuit parameters. D-c network analysis. Some trigonometric identities. Index.

Note: An introductory textbook for students of electrical engineering who have completed college courses in calculus, basic electrical engineering, and d-c circuit analysis. It covers the analysis of the steady state in lumped linear networks. Carefully worded definitions, rather full discussions, and a summary at the end of each chapter are features designed to aid comprehension on the part of the reader

LEPAGE, WILBUR R., AND SAMUEL SEELY

General network analysis. New York Mc Graw Hill Book Company Inc., 1952 516 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series Frederick E. Terman consulting editor) $8 00. 2096

Contents. Complex quantities. Generalized network analysis. Network theorems. Magnetic coupling. Four-terminal networks. General properties of lumped networks. Selective networks. Polyphase systems and symmetrical components. Circuits with distributed properties. Impedance and admittance charts. Fourier series in circuit analysis. Transients in linear systems. The Fourier integral. Operational calculus. References. Appendixes. Index.

Note: A textbook designed for use in engineering colleges. It is introductory to the subject and so written that it is suitable for both students of communications engineering and power engineering. The authors are members of the Department of Electrical Engineering in Syracuse University

RYDER, JOHN DOUGLAS

Networks lines and fields. New York Prentice-Hall, Inc., 1949 462 p illus. 22 cm. (Prentice-Hall electrical engineering series, W L. Everitt, editor) $7 65 2097

Contents: Network transformations and theorems. Resonance. Impedance transformation and coupled circuits. Filters. The general transmission line. The high frequency line. Equations of the electromagnetic field—radiation. Transmission and reflection of plane waves at boundaries. Guided waves between parallel planes. Wave guides. Appendices. Index.

Note: An engineering college textbook written by the Head of the Department of Electrical Engineering of the University of Illinois.

SKILLING HUGH HILDRETH

Electric transmission lines distributed constants, theory and applications. New York McGraw Hill Book Company Inc., 1951 438 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series F E. Terman, consulting editor) $7.00. 2098

Contents: Part I, Theory. The basic equations. Traveling waves. Standing waves on low-loss lines. Lines with loss. Line parameters. Line constants: inductance and capacitance. Line constants: resistance, skin-effect, and insulation loss. Artificial lines. Part II, Applications: Application of transmission-line theory to telephone lines. Introduction to filters. Application to power lines. Application to radio-frequency lines. Introduction to wave guides. Part III, Transient traveling waves: Traveling waves. Appendixes. Index.

Note: An engineering college textbook in which all types of electric transmission lines from power lines to coaxial cables and hollow wave guides are treated. Somewhat more attention is given to lines designed for transmission and microwave frequencies than to other types of lines. The treatment is introductory to transmission lines, but familiarity on the part of the reader with ordinary circuit theory involving lumped constants has been assumed. According to the

author the material has been thoroughly tested in his own classes at Stanford University

SUNDE, ERLING DITLEF

Earth conduction effects in transmission systems. New York D Van Nostrand Company Inc., 1949 373 p illus. 24 cm. (The Bell Telephone Laboratories series) $8.50 2099

Contents. Basic electromagnetic concepts and equations. Earth resistivity testing and analysis. Resistance of grounding arrangements. Mutual impedance of insulated earth-return conductors. Propagation characteristics of earth return conductors. D-c earth conduction and corrosion protection. Power system earth conduction and inductive interference. Surge characteristics of earth-return conductors. Lightning protection of cable and transmission lines. Appendix: Definitions and tables of functions. References. Index.

Note: Circuit disturbances in communication and power systems and the corrosion of buried metallic structures arise in some measure from the fact that in such systems the earth is utilized as return conductor. This volume discusses the basic principles and methods of analysis of earth conduction effects as they may be applied in the solution of problems relating to the prevention of these disturbances and corrosive effects. The treatment, which is highly theoretical and based largely on experimental studies conducted at the Bell Telephone Laboratories, is intended for professional communication engineers and graduate electrical engineering students. A selected seven-page bibliography is included.

TANG KWAN YAU

Alternating-current circuits. Second edition. Scranton Pennsylvania International Textbook Company 1951 605 p. illus. 24 cm. (International textbooks in electrical engineering Erwin E. Dreese, consulting editor) $6 00 2100

Contents. Alternating current and voltage. Vector representation of sine waves. Elementary circuit concepts. Hypothetical circuits—sinusoidal current and voltage. Series circuits. Complex quantities. Parallel circuits. Series-parallel combination of elements. Real and apparent power. Network theorems. Mutual induction and coupled circuits. T sections of modified or equivalent coupled circuits. Impedance transformation. Polyphase circuits. Power measurements in three-phase circuits. Symmetrical components. Non-sinusoidal waves. Circuits with non-sinusoidal voltages and currents. Differential equations. Direct current transients. Alternating-current transients. Transmission line calculations. Appendices. Index.

Note. (3744) An introductory textbook in the analysis of alternating current circuits. It is designed for use in upperclass undergraduate courses offered to students of both power and communication engineering. Completion of courses in calculus and algebra at the college level is prerequisite, but the student is introduced to differential equations in the book itself. In this edition numerous revisions and additions are apparent, most of them directed towards facilitating comprehension on the part of the student. Also, the chapter on impedance transformation is new addition.

WEBER, ERNST

Electromagnetic fields theory and applications. Volume I Mapping of fields. New York John Wiley & Sons, Inc. 1950 590 p. illus. 22 cm. $10.00 2101

Contents. The electrostatic field. The magnetostatic field. General field analogies. Fields of simple geometries. Experimental mapping methods. Field plotting methods. Two-dimensional analytic solutions. Three-dimensional analytic solutions. Appendices: Letter symbols for electrical quantities. Conversion tables for units. Review of fundamentals of vector analysis. General bibliography. On Bessel functions. On Legendre functions. Index.

Note. Although primarily an engineering college textbook written at the postgraduate level, this work is comprehensive treatment of field plotting in which mathematical, graphical, and experimental methods all are covered. Literature references are given as footnotes and in the general bibliography. The present volume deals with the mapping of static fields. second volume still to be published will cover the dynamic interaction of fields.

POWER SYSTEMS

BEWLEY, LOYAL VIVIAN

Traveling waves on transmission systems. Second edition. New York John Wiley & Sons, Inc. 1951 543 p. illus. 24 cm. $12.00. 2102

Contents (abridged). Part 1. The origin, characteristics, and behavior of traveling waves. The line equations. The shape, attenuation, and distortion of waves. Reflection of traveling waves. Lightning. Traveling waves on multiconductor systems. Transition points on multiconductor circuits. Multivelocity waves. Theory of ground wires. The counterpoise. Induced lightning surges. Switching surges. Protection of transmission systems against surges. Part 2. High frequency oscillations and terminal transients of transformers. Ideal two-winding transformers. Waves of arbitrary shape applied at one or both terminals. Terminal transients. Suppression of internal oscillations by electrostatic shielding. Appendix. Index.

Note. (3741) An important work for electrical engineers concerned with the protection of electric power transmission lines and transformers against lightning and voltage surges caused by switching. Theories and design procedures are covered from the standpoint of their practical use. The book is organized so that it may be used as textbook. However the writing is essentially on graduate level and is addressed to advanced students of electrical engineering and beginning graduate electrical engineers. The second edition contains about twice as much matter as the first edition.

BLOOMQUIST WALTER CARL, editor

Capacitors for industry their selection, application, and economics for power-factor improvement of industrial plants, by W C. Bloomquist C. R. Craig R. M Partington and R. C. Wilson. New York John Wiley & Sons, Inc., 1950 246 p. illus. 24 cm. $4.50. 2103

Contents (abridged). Capacitor facts and fallacies. Power-factor fundamentals. Instruments and measurements for power-factor studies. Release of power system capacity. Voltage improvement. Power system losses. Power-factor rate studies. Application of capacitors to motors and generators. Harmonics and resonance; switching. Automatic-control equipment. Series capacitors. Capacitor standards and operating characteristics. Capacitor ratings, estimating prices, types of equipment. Capacitor installation and maintenance. Selected bibliography. Appendix. Index.

Note. A practical document for plant electrical engineers, electricians, and others who are concerned with the electric power installations in factories and other industrial establishments. The economic and engineering aspects of capacitors in such systems are discussed compactly and authoritatively. Problems, such as occur in designing power systems with capacitors or installing capacitors in an established system, are worked out in step-by-step detail. Much engineering data are presented in tables and graphs. There is useful annotated bibliography. Three of the authors are associated with the General Electric Company.

EARP UNUS F

Rural electrification engineering. New York McGraw Hill Book Company Inc., 1950 313 p. illus. 24 cm. $4.50. 2104

Contents. Introduction. Electrical fundamentals. Rural distribution systems. Types of construction. Materials of construction. Fundamentals of rural distribution line design. Layout and design of rural distribution lines. Mechanical design for rural lines. Electric motors. Switches and controls. Heat. Radiation. Electronics. Electrical measurements. Financial considerations. Organization and administration. Index.

Note. A book designed primarily for college students in agricultural engineering or for administrators studying for careers in agricultural engineering or for administrative and engineering positions with rural electrical cooperatives. It covers selected aspects of power system administration and electrical engineering which are of special importance in rural electrical distribution and the use of electrical power on farms. A moderate amount of previous education in engineering fundamentals is assumed, but in its own area the book is introductory. Nevertheless, the discussions of such topics as the design of rural distribution lines are complete enough to prepare the reader for practical work.

KIMBARK EDWARD WILSON
Power system stability Volume II Power circuit breakers and protective relays. New York John Wiley & Sons Inc. 1950 288 p. illus. 24 cm. $8.50 2105

Contents: Fault clearing—power circuit breakers. Fault clearing—protective relays. The influence of reclosing and out-of-step operation upon protective relays. Rapid reclosing. Index.

Note: (1814) The second volume published of projected three-volume work. Volume I, published in 1948, was devoted to fundamental problems and methods of calculating stability and instability characteristics, and to related topics such as alternating-current calculating boards. Volume II covers the topics noted above. Volume III will deal with synchronous machines, excitation systems, etc. The work is development of lectures given at Northwestern University in evening courses offered to graduate engineers, and the clear concise style of the lectures has carried over to the book. Extensive bibliographies appear in the present volume.

LEWIS, WALTER WALLACE
The protection of transmission systems against lightning. New York John Wiley & Sons Inc., 1950 418 p illus. 24 cm. $10.00 2106

Contents: The accumulation of electricity in clouds. The mechanism of the lightning stroke. Voltage caused by lightning and switching. Current in the lightning stroke. Wave shape of lightning voltages and currents. Shielding by overhead ground wires and masts. Means for obtaining low tower footing resistance. Insulation and spacing of conductors. Alternative methods of protecting transmission lines. Protection of stations and rotating machines. Grounding the neutral. Appendixes: Effect of altitude and humidity on flashover. Calculation of capacitance of transmission lines. Index.

Note: A compact presentation of information about lightning and how electrical transmission systems are protected against it. It is addressed mainly to graduate electrical engineers who are concerned with the design or maintenance of power lines and systems. The important theoretical knowledge is stated concisely and the operating principles of the chief protective devices are clearly explained. Each chapter is supplemented by lists of related literature. The author, now Professor of Electrical Engineering at Cooper Union, was associated with the Central Station Engineering Division of the General Electric Company for twenty-five years.

LOVELL ALFRED HENRY
Generating stations economic elements of electrical design. Fourth edition. New York McGraw Hill Book Company Inc., 1951 431 p. illus. 24 cm. $6.50 2107

Contents: Elementary principles of corporate finance. Cost of stations. Economic decay. Power-plant load curves. Economic conductor section—power distribution systems. Power plant location. Bus systems and current limiting reactors. Generating station auxiliaries. Circuit breakers and their applications. Introduction to single-phase short circuits. Protective relays and their applications. Transmission lines with synchronous condensers.

Note: An engineering college textbook in which the student preparing for career in power plant design is introduced to the economic aspects of this field. Corporate finance is discussed briefly in the first chapter, but the remainder of the book deals with matters that are of more direct concern to engineers—such as the economics of load curves, the economics of conductor sizes, etc. Not all of the text has been changed, but revisions have been made wherever required as in the discussion of holding companies, fuel, circuit breakers, etc.

MARBURY R. E.
Power capacitors. New York McGraw-Hill Book Company Inc., 1949 205 p. illus. 24 cm. $4 50 2108

Contents: Capacitor materials and characteristics. Capacitor rating, design, and manufacture. Industrial, high-frequency and d-c power capacitors. Application of shunt capacitors to industrial power circuits. Application of shunt capacitors to utility systems. Fuses, switches, and connectors used with shunt capacitors. Automatic control of capacitor bres. Series capacitors for line-reactance compensation. Series capacitors directly applied to specific industrial loads. Capacitor installation and maintenance. Index.

Note: A review of the uses and applications of large-scale capacitors or condensers in electric power systems. The design, construction and operation of capacitors are described; but the author—who is on the staff of the Westinghouse Electric Corporation—is concerned primarily with showing how power capacitors may be selected and utilized to solve various power problems.

PETERSON HAROLD A.
Transients in power systems. New York John Wiley & Sons, Inc., 1951 361 p. 24 cm. $8.50 2109

Contents: Overvoltages during power system faults. Effect of saliency on overvoltages during faults. System voltage recovery characteristics—fundamental concepts. System voltage recovery characteristics—miniature-system approach. Effects of arc restriking on recovery voltage. Switching surges—capacitance circuits. Switching surges and overvoltage arrester discharge requirements. Overvoltages caused by sudden loss of load. Overvoltages caused by open conductors. Some additional non-linear circuits. Appendix: Nomenclature. Equations for differential analyzer. Equations for calculation of overvoltages. Equivalent circuits for various types of faults. Bibliography. Index.

Note: An advanced book for graduate students preparing for work in the design of power systems and for graduate engineers already at work in this field. Modern methods of analysis including the transient analyzer and the differential analyzer are covered. According to the author considerable part of the information included has not been published before. The long bibliography includes an author index to the cited papers and also chronologically arranged list of references beginning with 1900 and including two publications in 1951.

RÜDENBERG REINHOLD
Transient performance of electric power systems phenomena in lumped networks. New York McGraw-Hill Book Company Inc., 1950 832 p illus. 23 cm. (McGraw Hill electrical and electronic engineering series F E. Terman consulting editor) $12 00. 2110

Contents (abridged): A. Transient performance of lumped linear circuits. Part I, Simple electric circuits: Switching on and off self-inductive circuits. Charging and discharging capacitive circuits. General laws of switching. Transient state of oscillatory circuits. Part II, Magnetically linked circuits: Mutual induction in circuits at rest. Switching of transformers. Commutation flux in rotating machinery. Mechanical and thermal short-circuit effects. Part III, Inertia effects of rotating masses: Acceleration of machinery. Starting of induction motors. Mechanical oscillations in alternating current machinery. Impacts on synchronous machines from switching. Part IV, Influence of the earth: Ground fault currents in insulated systems. Atmospheric fields above the line. Electrostatic induction on adjacent lines. Return currents under transmission lines. Inductive interference with communication lines. B. Performance of circuits of non-linear characteristics. Part V, Variable resistances: Heating of cooled conductors. Melting of fuse wires. Part VI, Interruption by electric arcs: Interruption of alternating current. Three-phase interruption. Natural oscillations sustained by arcs. Part VII, Magnetic saturation in circuits at rest: Switching of saturated direct-current circuits. Higher harmonics. Nonharmonic oscillations. Part VIII, Saturated rotating machinery. Bibliography. Index. Tables of functions.

Note: A thorough treatment of phenomena resulting out of short circuits, lightning, and many other varieties of disturbances in electric power distribution systems. The original edition, published in Germany before World War II, gained an international reputation among engineers. This edition, which has been written directly in English by the author, is more comprehensive than the German edition and covers the developments since 1933. Mathematical parts of the exposition are well buttressed with narrative discussion and illustrative matter. The book is addressed to advanced students of electrical engineering and practicing electrical engineers.

ELECTRIC MACHINERY

ALGER PHILIP LANGDON
The nature of polyphase induction machines. New York John Wiley & Sons, Inc. 1951 397 p. illus. 24 cm. $7.50. 2111

Contents Basic principles. Circuit analysis. The revolving magnetic field. The polyphase induction motor. Polyphase induction motor performance calculations. Design of induction machines. Reactance calculations. Speed-torque-current relations. Crawling and locking. Magnetic noise and voltage ripples. Rating and application of polyphase induction motors. Generalized equivalent circuit. Index.

Note The polyphase induction motor—aptly described as the workhorse of American industry—is the main topic in this book. Its elements, characteristics, and performance are studied from the standpoint of engineering analysis and design. All aspects that are of concern to the designer of motors are discussed, including such tangential topics as frames and motor noise. The book will be of interest mainly to advanced engineering students who are preparing for careers in motor design and to graduate engineers beginning work in the field.

BEWLEY LOYAL VIVIAN

Alternating current machinery New York The Macmillan Company 1949 376 p illus 24 cm. $3.50 2112

Contents General principles and common features. The transformer. General principles of rotating machines. The polyphase induction motor. Single phase induction motor. Alternating current commutator machines. The synchronous generator and motor. The synchronous converter. Appendices. The distribution summations. Armature reaction. Permeances and flux density. Induced voltages. Index.

Note The chief types of alternating current machines are treated analytically in this rather unusual textbook. Various methods of analysis are presented although the author derives general equation of voltage and general equation of armature reaction which offer comparatively simple ways of analyzing any electrical machine. These equations are the high point of the presentation, but the book has a number of other features not often encountered in introductory textbooks. It was developed at Lehigh University where the author is Professor and Director of the Curriculum in Electrical Engineering.

BLUME LOUIS FREDERICK AND OTHERS

Transformer engineering a treatise on the theory operation and application of transformers by the late L. F Blume A Boyajian G Camilli T C Lennox S Minneci V M Montsinger Second edition New York John Wiley & Sons Inc. 1951 500 p illus. 24 cm. $7.50. 2113

Contents (abridged) The general nature of transformer problems. Excitation characteristics of the transformer exciting current and core loss. Non-triple harmonic phenomena due to transformer exciting current. Impedance characteristics of transformers. Impedance characteristics of multicircuit transformers. Short-circuit currents and voltages by the method of symmetrical components. Transformer connections. Auto transformer connections. Thermal characteristics of transformers. Characteristics of transformer circuits for changing ratio under load. Automatic operation of voltage-control equipments. Phase-angle control. Characteristics of insulations. Voltage stresses in auto-transformers in Y-connection. Transient voltage characteristics of transformers. Insulation coordination of transformers. Index.

Note (3782) A substantial, detailed treatise designed for electrical engineers and other technically trained men whose work involves the specification, selection, or operation of transformers. The emphasis is on basic matters rather than descriptive data. The authors are all associated with the Transformer Engineering Division of the General Electric Company. Although most of the text of the present edition has been carried over from the first edition, important changes have been made, particularly in the discussions of thermal characteristics and insulation.

BRAYMER, DANIEL HARVEY AND A C ROE

Rewinding small motors practical details of repair shop practice with step-by-step procedure for rewinding all types and designs of fractional-horsepower direct and alternating current motors. Third edition. New York McGraw Hill Book Company Inc. 1949 422 p. illus. 24 cm. $6 00 2114

Contents (abridged): Part I. General data and direct-current armatures. Recording winding data and stripping direct-current armature. Back lead and machine loop windings. Special chorded split pitch loop winding. Parallel two-coil loop winding. How to determine the position of the commutator on the shaft. Connecting up hand-wound armatures. Part II. Rewinding procedure for small alternating current single-phase motors: Information to record for small alternating-current motors before stripping them. How to make up a skein and wind it in small alternating-current stators. Rewinding small universal motors. Rewinding compensated series motor. Single-phase fan motor windings. Three special alternating-current motors. Part III. Rewinding procedure for small alternating-current three-phase motors: Rewinding small three-phase stators. Diamond to round end coils. Chord factors for three-phase windings. Overlap windings. Round end overlap alicone winding. Index.

Note (3784) One of the standard shop books for motor repairmen and armature winders. In its present edition it is intended as a companion volume to C. G. Veinott's *Fractional horsepower electric motors* (3104). Together the two books provide thorough coverage of small motors, such as are commonly used to drive vacuum cleaners, fans, domestic water pumps, etc. Revisions in the third edition of the present title are important and have to do with such matter as the newly developed insulating materials. As in previous editions, rewinding operations are described in specific detail.

CONCORDIA, CHARLES

Synchronous machines theory and performance. New York John Wiley & Sons, Inc., 1951 224 p. 23 cm. $5.50. 2115

Contents. Physical description of a synchronous machine. Mathematical description of a synchronous machine. Steady-state, balanced, synchronous operation. Three-phase short-circuit current. Single phase short-circuit current. Double-line-to-ground short circuit and sequential faults. Short-circuit torques. Starting torque. Voltage dip. Appendixes. References. Bibliography. Index.

Note Most of the world's electric power is generated by synchronous generators and is turned back into work by other synchronous machines ranging in size from the small motors in electric clocks to the largest alternating-current motors in use in industry. This book is devoted to the theory of the transient performance of such machines, that is their behavior under short circuits, starting loads, etc. The subject is treated mathematically and the book's chief purpose is to aid graduate engineers in finding solutions by means of mathematics to new problems encountered in the design and operation of synchronous machines.

CROUSE, WILLIAM HARRY

Electrical appliance servicing. New York McGraw Hill Book Company, Inc., 1950. 854 p. illus. 24 cm. $8.50. 2116

Contents (abridged) Section 1, Fundamentals. Principles of electricity. Physical principles. Magnetism and motors. Transformers, generators, and batteries. House wiring. Section 2, Resistance-heating appliances: Electric heaters. Automatic electric waffle bakers. Electric coffee makers. Electric irons. Electric toasters. Electric water heaters. Electric broilers and roasters. Electric ranges. Section 3, Motor-driven appliances. Fans and blowers. Electric water pumps, home motors. Vacuum cleaners and floor waxers. Food mixers. Electric clocks. Electric dishwashers. Electric ironers. Garbage disposers. Electric and gas clothes dryers. Automatic washing machines. Automatic electric and gas clothes dryers. Section 4 Refrigeration and air conditioning: Refrigerator service. Air conditioners. Appendixes. Index.

Note A comprehensive book on the repair of household electrical appliances. It is written primarily for men who are in the business of repairing such appliances and for students who are preparing to enter the business. Its arrangement suits it for use either as a textbook in organized vocational courses or as a reference book. As might be expected, the information on any particular type and make of appliance is not as detailed as would be provided in a manufacturer's manual. However, a better picture is given of general servicing procedures and in many cases enough information is supplied to enable the service man to make repairs without consulting the manufacturers' manual.

CROW LEONARD R.

Saturating core devices operating principles and applications. Vincennes, Indiana The Scientific Book Publishing Company 1949 373 p. illus. 22 cm. $4.20. 2117

Contents: Fundamentals of saturable-core reactor devices. Applications and modifications of d-c controlled saturable-core reactors (non-electronic applications). Saturable-core reactor applications involving special and advanced theories of operation. Permanent magnet controlled saturable-core reactor. The a-c controlled saturable-core reactor. Peaking transformers and voltage waveforms. A-c voltage regulators applying magnetic regulation. Saturable-core frequency multiplier apparatus. Flux gates or valves. Saturable-core type servomechanisms. Magnetic amplifiers. Electronics and the saturable-core reactor.

Note: An introductory book in which the subject is treated descriptively and mathematics is largely avoided. Readers need basic knowledge of electrical terminology. Considering the book's level, the bibliography is exceptionally extensive and includes books, papers, and patents.

DUSENBERY, H. SYRIL

Direct current motor manual. New York The Macmillan Company 1950 275 p. illus. 22 cm. $4.50 2118

Contents: Basic principles. Frames and enclosures. Motor bearings. The motor field. The armature. Armature windings. Commutation. Commutator care. Motor brushes. Installing and maintaining brushes. Insulating materials. The series motor. The shunt motor. The compound motor. Selection and application. Testing motors. Motor troubles. Reconnecting direct current motors. Starting the motor. Motor protection. Stopping the motor. Reversing the motor. Basic speed control. The direct current generator. Variable voltage speed control. Regulating exciters. Electronic rectifiers. Electronic speed control. Control maintenance. Resistors and rheostats. Mechanical drives. Code requirements. Appendix of useful information. Glossary. Index.

Note: A practical book for persons who are active in the installation, operation, and maintenance of modern direct current motors and associated control equipment. It contains, in addition to the material on motors, a good descriptive treatment of new electronic devices for rectification and speed control which have recently increased interest in direct current motors. Very little mathematics is employed. Tables of the physical properties of materials used in motors should be convenient for electricians and others employed in the practical end of the field.

FITZGERALD ARTHUR EUGENE AND CHARLES KINGSLEY JR.

Electric machinery an integrated treatment of a-c and d-c machines. New York McGraw Hill Book Company Inc., 1952 492 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick E. Terman, consulting editor) $8.50 2119

Contents. Physical aspects of electromechanical energy conversion. Electromechanical-energy-conversion principles. Basic concepts of machine performance. Introduction to machine analysis. D-c machines—analysis of performance. D-c machines—application aspects. Synchronous machines—analysis of performance—effects of saturation and salient poles. Polyphase induction machines. Fractional-horsepower a-c motors. Control type generators and self-synchronous machines. Electrical transients in machines and systems of machines. Dynamics of electromechanically coupled systems. Appendix: Basic theory of transformers. Table of constants and conversion factors. Index.

Note: A new textbook designed for use by advanced undergraduate students of electrical engineering. In it is presented an analytical study of rotating machines based on the concept of interaction between the magnetic fields of stator and rotor. Steady-state conditions in the machine and its system are assumed in most of the book, but in the final chapter the reader is introduced to electromechanical transients such as arise in the starting of motors, the oscillations of synchronous machines, etc. The authors are members of the faculty of the Massachusetts Institute of Technology.

GRAHAM, KENNARD COLVILLE

Small commutator motors. Chicago American Technical Society 1952 283 p. illus. 22 cm. $4 90. 2120

Contents: General theory of repulsion—motor operation. Armature windings. Winding hand-wound armatures. Repairing motors with form wound coils. Types of repulsion motors. Accessory features of repulsion motor construction. Theory of direct-current motors. Winding direct-current motors. Assembly—trouble shooting direct-current motors. Index.

Note: A new book for practical students studying in organized vocational courses or at home. It covers both a-c and d-c motors with commutators. The basic theory of such motors is explained simply but the main emphasis is on armature winding and other repair operations. The text is clearly written in simple language and is supplemented by a generous number of illustrations. Mathematics is almost wholly absent.

HARWOOD PAISLEY B

Control of electric motors. Third edition. New York John Wiley & Sons Inc. 1952 538 p. illus. 24 cm. $8.00. 2121

Contents. Introduction. Wiring diagrams. Construction of control apparatus. Pilot devices and accessories. Direct-current contactors and relays. Automatic accelerating methods for direct-current motors. The direct-current shunt motor. Shunt field relays and rheostats. Adjustable-voltage controllers. Automatic regulating systems. The direct-current series motor. Two-motor drives. Dynamic lowering hoist controllers. Alternating-current contactors and relays. Automatic accelerating methods for alternating-current motors. The polyphase squirrel-cage motor. The wound-rotor motor. Single-phase motors. The synchronous motor. Magnetically operated brakes. Resistor design. Tables. Index.

Note: (1790) A standard work which is used both as a text in engineering colleges and as a practical survey for engineers and other technical personnel in industry whose work requires a knowledge of controlling devices for motors. Information is included on the design, construction, and applications of controllers and on controlling elements and systems for various types of motors. The second edition was published in 1944. Many changes were made in both the text and illustrations and much new matter was added in preparing this edition. The author is Vice-president in charge of engineering of Cutler-Hammer, Inc.

JAMES HENRY DUVALL AND LEWIS EDWIN MARKLE

Controllers for electric motors a treatise on the modern motor controller with typical applications to the industries. Second edition. New York McGraw Hill Book Company Inc. 1952 426 p. illus. 24 cm. $7 00. 2122

Contents. Function and types of control. How to read controller diagrams. How to make controller diagrams. Magnetic contactors. Starting characteristics of motors with different methods of control. Methods of accelerating motors. Methods of speed control. Control for cranes, hoists, and other special applications. Mechanical and dynamic braking. Regeneration. Voltage control for direct-current motors. Amplifiers used for motor control. Magnetic amplifiers. Series-parallel control and the electro pneumatic contactor. Adjustable-speed alternating-current motors of the wound-rotor type. Resistors. Manual controllers. Direct-current magnetic-contactor controllers. Alternating-current controllers. Synchronous-motor control. Electron-tube control. Remote and supervisory control. Protective devices. National codes, installation, and maintenance. Past and future control developments. Index.

Note: (1811°) A standard book for electrical engineers and other technically trained persons who select or maintain motor control equipment. It does not cover the analysis of control problems but is, instead, devoted to descriptions of types of controllers, their characteristics and applications. Although numerous examples of current U.S.A. makes of controllers are shown in the illustrations, the authors have not described the details of specific makes. For this edition the chapter on the control of crane and hoist motors was rewritten, and numerous additions covering recent developments in motor control were added in other chapters.

KRON GABRIEL

Equivalent circuits of electric machinery New York John Wiley & Sons Inc. 1951 278 p. illus. 24 cm. (General Electric series) $10.00 2123

Contents: Prologue—The philosophy of equivalent circuits. The physical model. The primitive machine at standstill. The primitive machine at constant speed. The transformation of reference frames. Induction machines. Synchronous machines. Commutator machines. Stationary networks. Interconnected machines. Space harmonics. Time

harmonics. Sudden short circuits and load variations. Epilogue—The electrodynamics of equivalent circuits. Appendixes: Reestablishment of the transient dynamical equations from the equivalent circuits. Design constants of the shaded-pole motor. Visualizable and nonvisualizable physical vectors.

Note. A book of interest to designers of electric machines and to other engineers who must have a fundamental knowledge of them. In it the electrical properties of rotating electric machines and groups of machines are reduced to stationary electric circuit models, which the author terms equivalent circuits. How the stationary models are constructed is shown step by step for most types of machines. Uncommon machines such as the Scherbius are covered, as well as more common types. The book is both original and important. The author is associated with the General Electric Company and the book appears in the "General Electric series."

KUHLMANN JOHN HENRY HELWIG

Design of electrical apparatus by John H. Kuhlmann assisted in the preparation of the third edition by N F Tsang New York John Wiley & Sons Inc. 1950 512 p. illus. 24 cm. $7.00 2124

Contents: Section I. Direct current machines. Construction. Voltage formula and output equation. Armature windings and insulation. The magnetic circuit. Armature reaction and field winding design. Commutation and commutating pole design. Losses, efficiency and temperature rise. Sample design. Section II. Synchronous machines. Construction. Voltage formula and output equation. Armature winding and insulation. Magnetic circuit. Armature reactions in synchronous machines. Losses, efficiency and temperature rise. Sample design of synchronous motor. Section III. Induction motors: Construction. The stator. The rotor. Motor characteristics. Fractional-horsepower single-phase motor design. Section IV. Transformers: Construction. Core and windings. Operating characteristics. Sample transformer designs. Appendix. List of symbols. Index.

Note. (1793) A standard book of practical design methods. It is used primarily as a textbook in engineering colleges, but it is suitable also as a guide for graduate engineers who are preparing to enter the field of design. Basic theory, practical procedures, and design limits are all covered. The exposition includes numerous sample calculations. The second edition was published in 1940. Changes made in preparing this edition include an extensive revision of the section on induction motors and numerous but less extensive changes in other sections.

LIWSCHITZ GARIK MICHAEL

D-c and a-c machines based on fundamental laws. By Michael Liwschitz-Garik, assisted by Robert T Weil, Jr New York D Van Nostrand Company 1952 508 p. illus. 24 cm. $5.00 2125

Contents (abridged): The fundamental laws. D-c armature windings. The magnetic circuit. The d-c generator. The d-c motor. Some special d-c machines. Transformer construction. The phasor diagram and equivalent circuit of the transformer under load. Determination of parameters from no-load and short-circuit test. Parallel operation of transformers. A-c armature windings. The polyphase induction motor as a transformer. Circle diagram of the polyphase induction motor. Determination of parameters from no-load and locked-rotor test. Starting and speed control of the polyphase induction motor. Some special induction machines. The single-phase induction motor. Starting the single-phase motor. Equivalent circuit of the synchronous machine. Small synchronous motors. Hunting of synchronous machine. The synchronous converter. The d-c armature in an alternating magnetic field. The single-phase series commutator motor. The repulsion motor. The 3-phase shunt commutator motor (The Schrage motor). Appendices. List of symbols. Conversion table. References. Answers to problems. Index.

Note. A textbook for engineering courses. The importance of four fundamental laws, Faraday's law of induction; Kirchhoff's law of the electric circuit; circuital law of the magnetic field (Ampère's law); and law of force on a conductor in a magnetic field (Biot-Savart's law) is constantly emphasized. The author's method of instruction is to guide the student in the selection of those laws that apply to a particular problem, to derive the fundamental equations for the machine in question, and then to demonstrate the derivation of the machine characteristics from these equations. The book is written in a direct, easily-read style, and the discussions are adequately detailed. The author is a member of the faculty of the Polytechnic Institute of Brooklyn.

LIWSCHITZ GARIK, MICHAEL

Winding alternating-current machines a book for winders, repairmen, and designers of electric machines. By Michael Liwschitz Garik assisted by Celso Gentilini. New York D Van Nostrand Company Inc., 1950. 766 p. illus. 24 cm. $8.50 2126

Contents: Classification of a-c windings and some fundamental conceptions. Types and insulation of polyphase windings. Integral-slot lap windings. Balanced fractional-slot lap windings. Unbalanced fractional-slot lap windings. Integral-slot and (integral + 1/2)-slot 3-phase wave windings. Balanced fractional-slot wave windings. Unbalanced fractional-slot wave windings. Two and more speed polyphase windings. Reconnecting an old polyphase winding for new conditions and rewinding an old core. Single-phase windings and diagrams. Electrical faults in a-c windings. Appendixes: Balanced fractional-slot lap windings laid out with respect to the main wave. Balanced fractional-slot lap windings laid out with respect to harmonics (windings with cyclic coil shift and doubly chorded windings). Balanced fractional-slot wave windings with single and double chording. Unbalanced, fractional-slot lap and wave windings. Distribution and pitch factors of integral and fractional-slot windings. List of symbols. Bibliography. Index of diagrams. Index of tables. General index.

Note. A practical instruction and reference book. It includes numerous varieties of lap and wave windings not covered in the older books on winding. A considerable part of the space is devoted to reproductions of diagrams and other illustrative material. Extensive tables show all possible series and parallel connections for pole numbers between two and thirty. The main part is addressed to winders and electricians and includes no mathematical theory. The appendixes contain mathematical analyses of the various types of windings and are of interest to designers of a-c machines.

McDOUGAL, WYNNE LUTHER, AND K. C. GRAHAM

Small non-commutator motors. Chicago American Technical Society, 1951 265 p. illus. 22 cm. $4.25 2127

Contents: Theory of motor operation. The use of inductance in motor operation. Operations preliminary to rewinding stator. Rewinding split-phase motor. Rewinding with formed coils. The capacitor motor. Essential features of motor construction. Special types of split-phase motors. Deviations from split-phase type. Testing motors and locating trouble. Index.

Note. A simplified treatise on alternating current motors that have no commutator and that are less than 1 horsepower in size. Such motors range from the simple low-power ones used in driving household electric clocks to capacitors and shaded-pole motors used in such applications as office machinery and household refrigerators. The basic principles and the elements of such motors are described as fully as possible without the use of mathematics. The book is designed for use in vocational courses in high schools and trade schools and for home study by apprentice electricians and others with practical interest in the subject.

MUELLER GEORGE VERNON

Alternating-current machines. New York McGraw Hill Book Company Inc., 1952 502 p. illus 24 cm. $7.50 2128

Contents. Construction details and no-load relations in transformers. Relations in a loaded transformer. Parallel operation of transformers. Special types of transformers. Transformer connections in polyphase systems. Polyphase induction motors. Speed control of induction motors. Further induction machine topics. Synchronous generators. Synchronous motors. Single-phase motors. Synchronous converters. Rectifiers. Appendix. Index.

Note: The author of this text is Professor of Electrical Engineering in Purdue University and the book is intended for use in introductory courses in a-c machines offered to electrical engineering students who are majoring in machines and power circuits. There is some emphasis on those aspects of the subject which are useful in design. The illustrations include a number of oscillograms of the wave forms of currents in a-c machines.

PESTARINI JOSEPH MAXIMUS

Metadyne statics. New York Published jointly by The Technology Press of Massa-

chusetts Institute of Technology and John Wiley & Sons, Inc., 1952 415 p. illus. 24 cm. $9.50 2129

Contents: Part I, General rules valid for all metadynes Introduction. Commutated currents. Electromotive force induced in an isotropic metadyne. Main characteristics of an isotropic metadyne—the case of absolutely constant speed. Principal characteristics of an isotropic metadyne—the case of approximately constant speed due to a regulating device. The metadyne with substantially variable speed. Metadynes complete with their external connections. Quasi-static characteristics and static stability. Consideration of the anisotropic metadyne and of the saturated iron. On commutation. Part II, Special cases of metadynes: Introduction. The cross transformer metadyne at substantially constant speed. Some transformer metadynes of degree m = 4. Some generator metadynes of degree m = 4. Some motor metadynes of degree m = 4. Some applications using metadynes previously described. Special metadynes of degree m = 4. Some applications of the metadynes already described. Hyperstatic metadynes—the "eight" transformer metadyne. Some metadynes of degree different from 4; m ≠ 4. The remotor transformer metadyne. Pliodynes. Glossary of nomenclature. Index.

Note: The author of this book discovered the class of direct current electric machines now known as metadynes in the course of making an analytical study of commutation in direct-current machines. Since his original discovery numerous patents have been issued to him and a number of metadynes have been designed and built for specific applications. However the potentialities of the metadynes are still largely unexplored. The greater part of this book is devoted to the theory and analysis of the steady-state characteristic of metadynes. Included also are descriptions and analyses of a variety of metadyne installations. At present the author is lecturer at the Massachusetts Institute of Technology and Columbia University

ROBERTSON BURTIS LOWELL AND LEONARD J BLACK

Electric circuits and machines. New York D Van Nostrand Company Inc., 1949 434 p. illus. 24 cm. $5 75 2130

Contents: Electrical power. Generation of electrical power Circuit constants. Single-phase, alternating-current circuits. The single-phase transformer. Polyphase systems. Transformer connections. Electrical machines. Machine windings. Synchronous machines. Polyphase induction motors. Single-phase motors. Direct-current machines. Some basic aspects of electronics. Vacuum tubes and their characteristics. Amplifiers and oscillators. Gas-filled tubes and power supplies. Electrical instruments. Appendixes. Index.

Note: A textbook specifically designed for college students of mechanical rather than electrical engineering. The principles and chief types of circuits and machines are covered with the main emphasis on single phase alternating current machines. A special feature is an unusually large selection of problems for the student to solve. The book was developed over a period of many years at the University of California.

SISKIND CHARLES SEYMOUR

Alternating-current armature windings theory practice, and design. New York Mc Graw Hill Book Company Inc., 1951 236 p. illus. 24 cm. $5.00 2131

Contents: General comparisons between d-c and a-c armature windings Elementary principles of a-c machines The single phase concentric (spiral) winding Windings for repulsion-type motors. Windings for split-phase motors. Two-speed windings for split-phase motors. Winding types and coils for polyphase machines. Concentric chain windings. Wave windings. Lap windings. Winding connections for different voltages. Fractional-pitch lap windings Fractional-slot lap windings Windings for multispeed motors. Equalizer connections in polyphase windings. Winding changes and calculations in polyphase induction motors. Winding troubles: causes, symptoms, locations, remedies. Appendixes. Index.

Note: A simplified, practical introduction. The basic principles of alternating-current machines are discussed briefly; then the main types of windings are described. There is somewhat more attention to the principles and characteristics of the various windings than there is to winding and rewinding techniques. Nevertheless, the book is designed for students and electricians who are preparing to do practical winding. It is a companion volume to the author's *Direct-current armature winding* (below)

SISKIND, CHARLES SEYMOUR

Direct-current armature windings theory and practice. New York McGraw-Hill Book Company Inc. 1949 149 p. illus. 26 cm. $4.00 2132

Contents (abridged) The generator—principle of construction. Types of winding. Back pitch for lap windings. Progressive and retrogressive windings. Parallel paths in lap windings. Armatures with more bars than slots. Wave windings. Simplex-wave-winding problems. Multielement wave coils for wave windings. Dummy elements in wave windings. Parallel paths in simplex-wave windings. Multiplex-wave windings. Circulating currents in lap windings. *Frog-leg windings.* Voltage, speed and armature-winding calculations. Winding troubles—causes, symptoms, locations, remedies. Formulas. Wire tables. Index.

Note: In this excellent introductory presentation the author has simplified the problem of understanding direct-current windings by pointing out that all of them can be analyzed into two fundamental types: the lap and the wave. Both the exposition and the drawings are based on this analysis. Although written from a practical standpoint, the book is not a complete manual of d-c armature winding practices. Apparently the author's chief purpose was to make certain that his readers understand the principles of d-c windings rather than to give them details of shop operations. No discussion of rewinding techniques is included.

TIMBIE, WILLIAM HENRY, AND FRANK G WILLSON

Industrial electricity Volume II Alternating-current practice. New York John Wiley & Sons, Inc., 1949 781 p. illus. 22 cm. $5 96 2133

Contents: Alternating currents; *fundamental ideas.* The use of vectors in computing a-c currents and pressures—series, parallel and polyphase circuits. Power, power factor single-phase circuits. Circuits containing reactance and impedance. Power in polyphase circuits. The alternator construction and armature windings. The alternator performance and operation. The transformer. The polyphase induction motor. Single-phase induction motors—commutator type motors. The synchronous motor. Short transmission and distributing lines Long transmission lines—capacitive reactance. Converters and rectifiers. Appendixes. Index.

Note: (1806) The authors of this elementary text have achieved a suitable balance between the basic principles of alternating-currents and their application to electrical machinery Each chapter includes a detailed discussion of how and why a particular type of machine performs, its characteristics and capabilities, description and diagrams of the circuits involved, numerous review problems, and finally a useful summary of the preceding material. The book is a companion volume to the senior author's *Industrial electricity; direct current practice,* and the treatment assumes a sound knowledge of the fundamental principles of electricity as set forth in the earlier volume.

ELECTRIC WIRING

ABBOTT ARTHUR LAURIE

National electrical code handbook. Seventh edition, based on the 1951 edition of the National Electrical Code. New York McGraw-Hill Book Company Inc., 1952 652 p illus. 20 cm. $6.00 2134

Contents (abridged) Part I, Definitions; general provisions. Part II, Approved types of wiring Part III, Installations of materials and apparatus: Conductors Open wiring on insulators. Cable assemblies. Raceways. Outlet, switch, and junction boxes and fittings. Switches, panelboards, switchboards. Lampholders, lighting fixtures. Electrical appliances. Motors. Capacitors. Part IV General requirements for wiring installations: Services. Grounding. Overcurrent protection. Design of wiring installations. Part V Special cases: Outside wiring. Hazardous locations. Garages. Theaters. Motion-picture studios. Elevators. Signs and outline lighting. Circuits and equipment operating at more than 600 volts between conductors. Radio equipment. X-ray equipment. Part VI, Construction of materials, devices, fittings and equipment. Tables. Cross index. Subject index.

Note: (1334*) In this work the National Electrical Code is explained and interpreted for the benefit of architects, engineers, electricians, and others who will make practical use of the knowledge. Where rearrangement or rewording was necessary in order to clarify

code sections, the author has rearranged and reworded; but in most instances he has quoted code sections verbatim and has followed them with discussion and comment. The work has been a standard reference book since the appearance of the first edition in 1932. New editions follow closely upon publication of new editions of the National Electrical Code. Each new edition is a revision extensive enough to make the book conform fully to the current code.

RICHTER, HERBERT P

Practical electrical wiring residential farm and industrial. Based on the 1951 National Electrical Code. Fourth edition. New York McGraw Hill Book Company Inc., 1952 602 p illus. 22 cm. $6 75 2135

Contents (abridged) Part 1. Theory and basic principles: Underwriters and codes. Electricity—basic principles and measurements. Basic devices and circuits. Overcurrent devices. Types and sizes of wire. Wire connections and joints. Outlet and switch boxes. Different wiring methods. Branch circuits and service entrance. Adequate wiring. Good lighting. Residential and farm motors. Part 2 Actual wiring—residential and farm: Planning an installation. Installation of service entrance and ground. Installation of specific outlets. Old work. Farm wiring. Isolated and standby power plants. Wiring apartment houses. Code requirements with respect to wire. Part 3 Actual wiring—nonresidential projects: Planning nonresidential installations. Nonresidential lighting. Wiring for motors. Wiring schools and churches. Wiring offices. Wiring stores. Wiring miscellaneous occupancies. Bibliography. Appendix. Index.

Note (3412) A standard practical manual, useful primarily to the working electrician but intelligible also to the home mechanic who wants to learn how a particular operation in wiring should be done. In comparison to the preceding edition published in 1947 it has been rather extensively revised. The changes made necessary by the publication of a new edition of the National Electrical Code have of course been made. However in addition, the author has revised both the text and illustrations of sections unaffected by code revisions.

SEGALL BEN Z

Electrical code diagrams Based on the 1951 edition of the National Electrical Code. New York McGraw Hill Book Company Inc., 1952 2 v illus. 29 cm Each volume, $12.50 2136

Contents Volume I Wiring design and protection. Wiring methods and materials. Index Volume II Equipment for general use. Special occupancies.

Note In this work all of the rules of the National Electrical Code, 1951 which lend themselves to illustration are represented by diagrams. The arrangement within the chapters is numerical, in accordance with the numbered rules in the code; there are always legend and often some discussion for each diagram, but the book must be used with a copy of the Code. It should prove useful to all who are concerned in a practical way with the installation of electrical wiring, including electricians, electrical contractors, and inspectors.

UHL ALBERT AND OTHERS

Interior electric wiring and estimating residential, including farm buildings. By Albert Uhl, Carl H. Dunlap and Frank W Flynn. Fourth edition. Chicago American Technical Society 1951 312 p illus. 22 cm. $3 95 2137

Contents How to read drawings for electrical construction. Electrical fundamentals applying to wiring. How to make electrical connections. Installing service switch and metering equipment. Wiring outlets and wall switches. Installing knob-and-tube wiring. How to do cable wiring. Wiring residences. Conduit wiring materials. Conduit wiring, tools, and methods. Electric ranges and water heaters. Residential furnace controls. Estimating electrical wiring. Electrical power for the farm. Index

Note (3414) A well-established trade school textbook. It is written clearly and is generously illustrated. There are several features such as questions and detailed answers that suit it to home study. However the book is not a substitute for the more comprehensive works on electric wiring. This edition is a thorough revision with many new illustrations, new review questions, new text in many parts, etc. The chapters on apartment building and factory wiring that appeared in the earlier edition have been dropped and three new chapters have been added. The index is about three times as long.

ELECTRONICS

ADVANCES IN ELECTRONICS. Volume IV Edited by L. Marton. Editorial board T E. Allibone and others. New York Academic Press, Inc., 1952 344 p. illus. 24 cm. $7.80. 2138

Contents: Electron scattering in solids, by H. S. W Massey. The scintillation counter by G. A. Morton. Fluctuation phenomena, by A. van der Ziel. Electronic digital computers, by C. V L. Smith. Modulation of continuous-wave magnetrons, by J. S. Donal, jr. The magnetic airborne detector by W E. Frosen. Multichannel radio telemetering, by M. G. Pawley and W E. Tolles. Author index. Subject index.

Note: The most recent volume in a series organized on a now-familiar pattern. Each of the papers is essentially a resume of the literature pertinent to the topic named in its title. Statements and data are carefully referenced to the source articles. The style is technical and the series is designed as an aid to professional workers in electronics and related fields who wish to keep abreast of progress in areas in which they do not specialize. The papers are well organized for facility in reading and are accompanied by good lists of the related literature.

BLACKBURN, JOHN FRANCIS editor

Components handbook. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company Inc., 1949 626 p. illus. 24 cm. (Massachusetts Institute of Technology Radiation Laboratory series. Louis N Ridenour editor-in-chief Vol. 17) $8.00. 2139

Contents. Foreword, by L. A. DuBridge. Wires and cables. Fixed composition resistors. Fixed wire-wound and miscellaneous resistors. Iron-core inductors. Piezoelectric devices. Electromagnetic delay lines. Supersonic delay lines. Potentiometers. Special variable condensers. Rotary inductors. Instrument motors and tachometers. Power supplies. Relays and related devices. Receiving tubes. Index.

Note This volume is essentially a compilation of descriptive and tabulated technical data regarding the construction, operation, specifications, and standards of various electrical devices used in radar and related electronic equipment or as adjuncts to such equipment. Like other volumes in the series, it is based largely on work carried out at the M.I.T. Radiation Laboratory during World War II. The book is planned as a reference manual to be used in conjunction with volumes XVIII through XXIII of the above series.

CAGE JOHN M.

Theory and application of industrial electronics. With the assistance of C. J Basbe. New York McGraw Hill Book Company Inc. 1951 290 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick Emmons Terman, consulting editor) $4 75 2140

Contents Polyphase rectifiers. Grid-control circuits for gas tubes. Amplifiers for industrial electronics. Regulators and servomechanisms. Dynamics of closed-loop systems. Electronic control of motors and generators. Basic timing circuits. Ignitrons and thyratrons as line switches. Resistance-welder controls. Induction heating. Dielectric heating. A survey of electronic measurements. Oscillators and pulse techniques. Miscellaneous principles and applications. Appendix. Index

Note In this text for advanced and graduate electrical engineering courses the purpose is to present the basic principles and circuits of electronic devices used in industry. The space is about evenly divided between fundamental theories and their applications to problems in measurement, control, and power conversion. Although ar-

sweep circuits are described and illustrated, no attempt is made to deal with the instruments of specific manufacturers. Review problems and brief lists of references are included in each chapter. The author is Professor of Electrical Engineering in Purdue University

CHANCE, BRITTON, AND OTHERS, editors
Electronic time measurements. Edited by Britton Chance, Robert I. Hulsizer Edward F MacNichol, Jr., and Frederick C. Williams. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company, Inc., 1949 538 p. illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series, Louis N Ridenour editor in-chief. Vol. 20) $7.50. 2141

Contents: Introduction. Radio distance and speed measurements. Techniques of pulse time measurements. Generation of fixed indices. Generation of movable indices—single-scale circuits. Generation of movable indices—circuits. Manual measurements. Techniques of automatic time measurement. Systems for automatic time and position measurement. Special data-transmission systems. Relay radar systems. Delay and cancellation of recurrent wave trains. Glossary. Index.

Note. In this volume the problems and techniques of measuring precisely very small intervals of time are considered. Methods invented before the development of radar are mentioned, but mainly the book deals with the special circuits and devices that were developed in the Radiation Laboratory and elsewhere during the intensive development of radar before and during World War II. However, the emphasis is not on military applications but on methods that are more generally useful.

CHANCE, BRITTON, AND OTHERS editors
Waveforms edited by Britton Chance, Vernon Hughes, Edward F MacNichol David Sayre, and Frederick C. Williams. Office of Scientific Research and Development, National Defense Research Committee. New York. McGraw Hill Book Company Inc., 1949 785 p. illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series Louis N Ridenour editor-in-chief. Vol. 19) $10.00 2142

Contents: Introduction. Operations on waveforms with linear circuit elements. Operations with nonlinear circuit elements. Sinusoidal waveform generators. Generation of fast waveforms. Blocking oscillators and delay-line pulse generators. Generation of triangular waveforms. Generation of special waveforms. Amplitude, selection, comparison and discrimination. Time selection. Electrical amplitude modulation. Electromechanical modulators. Time modulation. Amplitude and time demodulation. Sinusoidal frequency multipliers and dividers. Pulse-recurrence-frequency division. Counting. Mathematical operations on waveforms. Oscilloscopic techniques in waveform measurement. Storage tubes. Electrical delay lines. Supersonic delay devices. Bibliography. Appendixes. Glossary. Index.

Note: Another in the series of books based largely on work done at M.I.T. Radiation Laboratory during World War II. The volume serves as "comprehensive survey of basic circuit techniques used in the generation and manipulation of voltages and currents by linear and nonlinear circuit elements. It is intended to provide the designer of circuits and electronic devices with knowledge of those techniques which have proved successful in the development of radar timing, and with practical description of the characteristics, design problems, and applications of wide variety of circuits. The circuits are grouped according to function rather than type.

COCKRELL, WILLIAM D
Industrial electronic control a guide to the understanding of electronic control circuits for industrial uses. Second edition. New York McGraw Hill Book Company Inc., 1950 385 p. illus. 21 cm. $5.50. 2143

Contents (abridged): Section I, Electron tubes: The vacuum rectifier. Gas-filled rectifiers. Special tube types. The mechanical construction of tubes. Section II, Circuit components: Instruments and meters. Transformers and miscellaneous components. Combinations of component elements. Section III, Basic electronic circuits: Rectifier circuits and filters. Timing and wave-shaping circuits. A-c phase-shift and switching circuits. Oscillator circuits. Section IV, Closed-cycle control systems: Regulating or closed-cycle control systems. Bode diagrams and their use in system stabilization. Section Industrial electronic circuits: Direct-current photoelectric circuits and motor control. Alternating-current relay and power circuits. Resistance-welder controls and welder current regulating. Appendix. Index.

Note: (1st ed.) A useful manual for plant engineers, electricians, maintenance men, and others whose work involves the operation or repair of electronically controlled machinery and systems. Although intended for men with technical backgrounds, the treatment is largely nonmathematical. Basic elements and circuits are considered from the standpoint of characteristics and uses. Typical wiring diagrams are included. Important additions have been made in this revision, including the section on closed-cycle control systems.

DOW, WILLIAM GOULD
Fundamentals of engineering electronics. Second edition New York John Wiley & Sons Inc., 1952 627 p. illus. 23 cm. $8.50 2144

Contents: Potential distribution diagrams. Electron ballistics. Cathode-ray devices. Electrostatic fields in space-charge control tubes. Space-charge control of current. Triodes, tetrodes, pentodes. Thermionic cathodes. Electrons in metals and semiconductors. Amplifier circuit principles. Amplifier coupling; oscillators. Introduction to microwave electron tube principles. Random velocities of gas particles. Ionization and excitation of atoms. Photosensitive devices. Current flow in gases. Plasma boundary regions. Arc and glow transient phenomena. Gaseous-conduction rectifying devices. Tables. Bibliography. Index.

Note: (1937) To use the words of the author, this book deals with "the internal functioning of the electron devices that serve as the active elements in electronic circuits." The subject is treated essentially from the standpoint of engineers who are concerned with design of these electronic elements, such as tubes, and it covers not only the main points but also numerous smaller problems such as how to calculate the effect of space-charge-limited current of potential variations along the cathode. Primarily it is text for electrical engineering students, but it is also useful for fundamental information and reference to graduate engineers. This edition incorporates considerable range of material not in the preceding edition, but as the author has deleted material the length of the book is approximately the same. Recent literature has been added to the bibliography.

EASTMAN AUSTIN VITRUVIUS
Fundamentals of vacuum tubes. Third edition. New York McGraw Hill Book Company Inc., 1949 644 p. illus. 24 cm. (McGraw-Hill electrical and electronic engineering series, F E. Terman consulting editor) $7.50. 2145

Contents: Part I, Basic concepts: Electronic emission. Construction of vacuum tubes. High-vacuum tubes. Gas-filled tubes. Photoelectric tubes. Special types of tubes. Part II, Applications and circuits: Rectifiers. The vacuum tube as control device. Audio-frequency amplifiers. Radio-frequency amplifiers. Oscillators. Fourier series analysis of vacuum-tube performance. Modulators. Demodulators. Appendixes. Author index. Subject index.

Note: (1937) An introduction to the basic principles of vacuum tubes used in radio and industry. Applications of such tubes and the circuits in which they are employed are also discussed at some length. The book is intended primarily for senior electrical engineering students, but it is also of value to practicing electrical engineers. Readers are expected to have knowledge of mathematics through elementary calculus. This edition has been revised to include recent developments in the field. The chapter on audio-frequency amplifiers has been largely rewritten, and provides more detailed treatment of video amplifiers and of low- and high-frequency compensation circuits. The discussion of modulation and demodulation has also been expanded to form two chapters.

HILL, WILLIAM RYLAND
Electronics in engineering. New York McGraw-Hill Book Company Inc., 1949 274 p.

24 cm. (McGraw Hill electrical and electronic engineering series, F E. Terman, consulting editor) $4.50 2146

Contents (abridged) Practical emitters and diodes. Single-phase rectifier circuits. Grid-controlled vacuum tubes. Gas-filled tubes. Photosensitive devices. Electronic control circuits. Polyphase rectifiers. Practical amplifier circuits. Feedback. Resonance and tuned amplifiers. Oscillators. Amplitude modulation and demodulation. Transducers. The vacuum tube voltmeter Appendix The R-C discharge. Index.

Note: A relatively short introduction to basic electronic principles and devices. It is intended for advanced engineering students who do not intend to specialize in the field but who wish a fundamental understanding of it. Despite the brevity of the book, the discussion of important points is adequate and the exposition is usually illustrated by a worked example. Besides its intended use, the book should be of value to graduate engineers who wish to acquire information about electronics by home study

KNOLL M AND B KAZAN

Storage tubes and their basic principles New York John Wiley & Sons Inc., 1952 143 p. illus. 23 cm. $3.00. 2147

Contents: Equilibrium potentials acquired by an insulating surface under electron bombardment and the action of light. Definitions. Methods of writing and reading. Signal-converter storage tubes (electrical-electrical) Viewing storage tubes (electrical-visual). Computer storage tubes (electrical-electrical) Television-camera storage tubes (visual-electrical) Bibliography Index

Note Electronic storage tubes such as are used in television cameras and electronic computers are covered in this book. The treatment is largely descriptive but on a level which makes the book useful to technically trained persons who have an interest in the subject although not specialists in electronic tubes. Writing methods (charging) and reading methods (discharging) are precisely described in technical terms. The authors next describe the main types of tubes which have been developed to the commercial stage and also some which are under development. The following points are given for each type of tube elements and operating principles, writing and reading principles and characteristics, half-tone characteristics and (in some cases) the method of erasing and other outstanding features. The descriptions are not specifically to tubes manufactured by specific manufacturers. There is an extensive bibliography in which many of the entries have short annotations.

KOHL, WALTER HEINRICH

Materials technology for electron tubes. New York Reinhold Publishing Corporation, 1951 493 p. illus. 24 cm. $12 50 2148

Contents Physics of glass. The annealing of glass. Strain analysis of glass. Glass-to-metal seals. Electrical conduction in glass. Glass in radiation fields. Electrons, atoms, crystals, and solids. Tungsten. Molybdenum. Tantalum. Nickel. Copper Carbon and graphite. Joining metals by soldering and brazing. Ceramics and mica. Ceramic-to-metal seals. The phase rule High-vacuum techniques. Thermionic emission. Author index. Subject index.

Note: A systematic survey of the physical properties of the materials used in electron tubes. Considerable information is included on the manipulation and fabrication of these materials, but the book is not a treatise on manufacturing techniques. The treatment is technical, and the work is intended for scientists doing research in connection with the design and manufacture of electron tubes as well as for physicists interested in tube phenomena. The text is well documented with literature references and is supplemented by many tables of chemical, physical, and mechanical data.

KRAMER, ANDREW WILLIAM

Industrial electronics elementary principles & applications. New York Pitman Publishing Corporation 1949 311 p illus. 24 cm. $6.00. 2149

Contents: Electron behavior. Fundamental principles of the electron tube. The simplest thermionic tube—the diode. The triode. Triode characteristics and operation. Electronic generation of electrical oscillations. Multielement tubes. Effect of gas in tubes. Types and characteristics of gas-filled tubes. Mercury-pool tubes. Photoelectric tubes and cells. Cold-cathode tubes. Special-purpose tubes. What tubes can do. Electronic control and regulation. Application of electron-tube rectifiers. Electronics in instrumentation and measurement. Industrial applications of electronic control. Applications of electronic regulation. Electron tubes in heat production. Electron tubes in light production. Miscellaneous electronic applications. Index.

Note: This book provides nonmathematical explanations of the fundamental principles of electronics and clear descriptions of typical industrial applications of electron tubes and related devices. It is especially suited to the needs of workers who come in contact with industrial applications of electronics in the course of their work and desire to acquire an understanding of them by means of home study. Although elementary and intended for persons who probably will not undertake formal study of the subject, the writing is factual and the author has not gone out of his way to simplify terminology

MARKUS JOHN AND VIN ZELUFF

Electronics for communication engineers. New York McGraw Hill Book Company Inc. 1952 610 p. illus. 28 cm. $10.00. 2150

Contents (abridged) Amplifiers. Antennas. Audio. Cathode-ray tubes. Components. Electronic music. Filters. Measurements. Microwaves. Oscillators. Power supplies. Propagation. Pulses. Receivers. Transmission lines. Transmitters. Index.

Note. A collection of 1[illegible] outstanding articles which appeared in the periodical *Electronics* during the period April, 1940 to November, 1951. The articles are grouped under the headings given above, and the general index to the volume covers all of them. In some instances the original text has been abridged, but usually the full text and all of the illustrations are reprinted. The date of publication of the original article is always given. The book is a useful compilation of reference material for engineers in the electronics and communications fields.

MILLMAN JACOB AND SAMUEL SEELY

Electronics. Second edition. New York. McGraw Hill Book Company Inc., 1951 598 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series F E. Terman consulting editor) $7 50. 2151

Contents Introduction. Motion of charged particles in electric and magnetic fields. Applications of the motion of particles in applied fields. Electronic phenomena in metals. Statistical electron theory of metals. Characteristics of thermionic cathodes. Diode characteristics. The kinetic theory of gases. Fundamental processes in gases. Electrical discharges in gases. Commercial gas tubes. Rectifiers. Filters for rectifiers. Polyphase rectifiers. Photoelectricity and photoelectric cells. Triode characteristics. Triodes as circuit elements. Multielectrode tubes. Appendixes. Index.

Note (721) A well-established textbook in which adequate attention is paid both to theory and applications of electronics. It is suitable for engineering students who are preparing for careers in communications engineering, industrial electronics, and electronic equipment design. Although the present edition is 1[illegible] pages shorter than the first edition, the book has been well revised and considerable amount of new matter added. The shortening has been accomplished largely by the elimination of two chapters and by resetting the type so that there are three more lines to the page.

PIERCE JOHN ROBINSON

Theory and design of electron beams. New York D Van Nostrand Company Inc. 1949 197 p. illus. 24 cm. (The Bell Telephone Laboratories series) $4 00. 2152

Contents. Properties of electric and magnetic fields. Forces and equations of motion. Simple electron motions. Some general equations. Some typical special problems. The paraxial ray equation. Magnetic and electric lenses—analytical and numerical solutions. The effect of thermal velocities. Space charge in electron beams. Electron guns. About designing electron beam devices. Appendixes Vector relations. Table of physical constants. Index.

Note. A text and reference book in which is presented theoretical material necessary for an understanding of electron flow and electron focusing in devices other than electron microscopes and image tubes, that is electron flow and electron focusing in amplifier and oscillator tubes and especially in microwave tubes. Although the book is not called a book on electron optics, much of the elementary material of such books is included, with more material and more emphasis on space charge and thermal velocities than is usual in books on electron optics. A selected bibliography is given as part of the preface, with occasional other references appearing in footnotes. A

feature of the book is the inclusion of a set of problems, included not only to suit the needs of those who will use the work as a textbook but also because they provide an extension of the text by pointing out important material which the reader can work out himself with the help of the book.

PIERCE, JOHN ROBINSON

Traveling wave tubes. New York D Van Nostrand Company, Inc., 1950 260 p illus. 23 cm. (Bell Telephone Laboratories series) $4.50. 2153

Contents (abridged) Simple theory of traveling wave tube gain. The helix. Filter-type circuits. General circuit considerations. The circuit described in terms of normal modes. Equations for traveling-wave tube. The nature of the waves. Discontinuities. Noise figure. Backward waves. Power output. Transverse motion of electrons. Field solutions. Magnetron amplifier. Double-stream amplifiers. Appendixes: Propagation of a helically conducting sheet. Stored energy of circuit structures. Evaluation of space-charge parameter Q. Diode equations of Llewellyn and Peterson. Evaluation of impedance and Q for thin and solid beams. How to calculate the gain of a traveling-wave tube. Bibliography Index.

Note. The traveling wave tube has several advantages over other types of electronic tubes, but the chief one is a very wide band width. This first book on the subject was written by a member of the technical staff of the Bell Telephone Laboratories, and it is addressed to graduate engineers in the communications field. It provides a detailed treatment of the theory of traveling-wave amplifiers and some indication of their potential uses. Magnetrons and double-stream amplifiers, viewed as related devices, are discussed more briefly. Apparently the bibliography lists all of the articles that had appeared up to August, 1949

RIDER, JOHN FRANCIS

Vacuum-tube voltmeters. Second edition. Revised by John F Rider and Alfred W Barber New York John F Rider Publisher Inc., 1951 422 p. 21 cm. $4.50. 2154

Contents: Fundamentals of vacuum-tube voltmeters. Diode vacuum-tube voltmeters. Triode vacuum-tube voltmeters. Rectifier-amplifier vacuum-tube voltmeters. Tuned vacuum-tube voltmeters. Amplifier-rectifier vacuum-tube voltmeters. Slide-back vacuum-tube voltmeters. Vacuum-tube voltmeters for D-C voltage, current, and resistance measurements. Probes for RF and DC. Design and construction of vacuum-tube voltmeters. Calibration and testing of vacuum-tube voltmeters. Applications of vacuum-tube voltmeters. Commercial vacuum-tube voltmeters. Maintenance and repair of vacuum-tube voltmeters. Bibliography Index.

Note: The present revision of this useful manual, like its predecessor, is intended primarily for radio engineers and radio servicemen. Theoretical considerations have been kept to a minimum, and emphasis is placed on the practical aspects of V-T voltmeter design, construction, operation, and use. In this edition, which has been expanded by more than 100 pages over the first edition (1941) the operating characteristics of new types of V-T voltmeters are described, and the circuits and specifications of most commercial meters are now included. A chapter on maintenance and repair has been added, and the extensive bibliography has been brought up to date.

RIDER, JOHN FRANCIS AND SEYMOUR D USLAN

Encyclopedia on cathode-ray oscilloscopes and their uses. New York John F Rider Publisher Inc. 1950 992 p. illus. 29 cm. $9.00 2155

Contents: Introduction. Principles of electrostatic deflection and focusing. Principles of electromagnetic deflection and focusing. Mechanical characteristics. The electron gun. Deflection systems in cathode-ray tubes. Screens. Spot displacement. Linear time bases (sweep circuits). The basic oscilloscope and its modifications. *Synchronization. Phase and frequency measurements.* Nonlinear time bases. Auxiliary equipment. Testing audio-frequency circuits. Visual alignment of A-M, F-M, and television receivers. Waveform observation in television receivers. Transmitter tests. Electrical measurements, scientific and engineering applications. Complex waveform patterns. Special purpose cathode-ray tubes. Commercial oscilloscopes and related equipment. Appendixes: Characteristics of cathode-ray tubes. RMA cathode-ray-tube basing. Photography Bibliography Index.

Note: A successor to Rider's *The cathode-ray tube at work* first published in 1935. It contains approximately six times as much material as the earlier work. It is designed primarily for users of cathode-ray oscilloscopes, particularly radio and television servicemen; however, it contains a good deal of material which is basic and not directly applicable to them. The chapter on commercial oscilloscopes gives the wiring diagrams and other information for most if not all of the American instruments recently or currently manufactured. The bibliography is extensive.

RUITER JACOB H. JR.

Modern oscilloscopes and their uses. New York Murray Hill Books, Inc. 1949 326 p. illus. 24 cm. $6.00. 2156

Contents: Introduction. History of the oscillograph. Brief history of development of the cathode-ray tube. Fundamental principles of cathode-ray tube operation. Details of the modern cathode-ray tube. The general purpose oscilloscope. Power-supply circuits. Amplifiers, attenuators, and positioning circuits. Time base circuits. Operation of the oscilloscope. Interpretation of basic patterns. Auxiliary equipment. *Typical applications in the electronics industry. Servicing* a-m radio receivers. Servicing f-m radio receivers. Servicing television receivers. Use at the radio transmitter. Using the oscilloscope in teaching. Additional industrial applications of the oscilloscope. Photographing cathode-ray patterns. Glossary Index.

Note: This volume, written for radio repairmen, electrical engineers, students, and others whose work involves the use of oscilloscopes, provides a clear and practical account of the construction, operation, and industrial uses of oscilloscopes. Because of the importance of these instruments in the field of radio, considerable space is devoted to the use of oscilloscopes in servicing radio and television receivers. The book requires a background knowledge of electricity and general physics. It is intended for users of oscilloscopes rather than specialists in the field. The author is associated with the Allen B. DuMont Laboratories, Inc.

RYDER, JOHN DOUGLAS

Electronic engineering principles. Second edition. New York Prentice-Hall, Inc. 1952 505 p. illus. 22 cm. $9.00. 2157

Contents: The fundamental particles of electronics. The movement of charged particles in fields. The cathode-ray tube. Emission of electrons. Space charge in vacuum tubes. Vacuum diode rectifiers. The vacuum triode. Multi-element tubes. Small-signal amplifiers, feedback. Large-signal amplifiers—class A and B. Gaseous conduction. Gas diodes. Gaseous control tubes and circuits. Photoelectric cells. Solid-state electronics. Appendix: Selected vacuum tube characteristic curves and data. Index.

Note: An engineering college textbook in which electronics is treated as an engineering specialty in its own right rather than as a subdivision of communications engineering or radio. In other words, the primary emphasis is on the electron and on the forms and characteristics of electron tubes rather than on the devices in which they are employed. Nevertheless, there is a good deal of discussion of basic circuits in which electron tubes are used. The first edition was published in 1947. For this edition the work was substantially revised and augmented. Changes were made in the text, illustrations, and bibliographies, and the final chapter was added so as to incorporate the advances represented by the development of the transistor.

RYDER, JOHN DOUGLAS

Electronic fundamentals and applications. New York Prentice-Hall, Inc., 1950 806 p. illus. 22 cm. (Prentice-Hall electrical engineering series, W L. Everitt, editor) $10.00 2158

Contents (abridged) Fundamental particles. Electron ballistics. The cathode-ray tube. Emission of electrons. Space charge in vacuum tubes. The vacuum triode. Small-signal amplifier circuits. The audio-frequency amplifier. Vacuum-tube oscillators. Modulation systems. Demodulation. Wave-shaping circuits. Gaseous conduction. Gas diodes. Gas control tubes and circuits. Photoelectric cells. Solid-state electronics. Appendixes. Index.

Note: (1947?) A substantial textbook for upperclass students of physics or electrical engineering. It is based on the author's *Electronic engineering principles* (1947), but much new material has been added. Basic physical principles, tube characteristics, and

fundamental circuits are now all covered. The author is Head of the Department of Electrical Engineering in the University of Illinois.

SEELY, SAMUEL

Electron-tube circuits. New York McGraw-Hill Book Company Inc., 1950 529 p. illus. 23 cm. (McGraw Hill electrical and electronic engineering series, F E Terman consulting editor) $6.50. 2159

Contents (abridged) Vacuum tubes as circuit elements. Basic amplifier principles. Untuned voltage amplifiers. Special amplifier circuits. Electronic computing circuits. Untuned power amplifiers. Tuned voltage amplifiers. Tuned power amplifiers. Oscillators. Rectifiers. Amplitude modulation. Demodulation. Frequency modulation and detection. Relaxation oscillators. Gas tly biased relaxation circuits. Sweep generators. Electronic instruments. Appendices: Millman theorem. Plate characteristics of receiving type tubes. Characteristics of transmitting tubes. Table of Bessel functions of the first kind. Index.

Note. Although primarily a textbook for upperclass and graduate students in electronics, this book holds potential interest also for electronic engineers out of college and even for mature amateurs. A wide range of circuits is covered, not only in radio but also in radar television, electronic control, and electronic computers. Special attention is given to the characteristics of circuit elements and circuits so as to prepare the reader for practical design of electronic apparatus. Some material from *Electronics* by J. Millman and the author (New York, 1944) has been incorporated in this work.

SHOCKLEY, WILLIAM

Electrons and holes in semiconductors with applications to transistor electronics. New York D Van Nostrand Company Inc., 1950. 588 p. illus. 24 cm. (Bell Telephone Laboratories series) $9 75 2160

Contents. Part I Introduction to transistor electronics. The bulk properties of semiconductors. The transistor as a circuit element. Quantitative studies of injection of holes and electrons. On the physical theory of transistors. Part II Descriptive theory of semiconductors: Quantum states, energy bands, and Brillouin zones. Velocities and currents for electrons in crystals. Electrons and holes in electric and magnetic fields. Introductory theory of conductivity and Hall effect. Distributions of quantum states in energy. Fermi-Dirac statistics for semiconductors. Mathematical theory of conductivity and Hall effect. Applications to transistor electronics. Part III, Quantum-mechanical foundations. Introduction to part III. Elementary quantum mechanics with circuit theory analogues. Theory of electron and hole velocities, currents and accelerations. Statistical mechanics for semiconductors. The theory of transition probabilities for holes and electrons. Appendices. Name index. Subject index.

Note The development of the transistor and the recognition of its many potential applications in electronic devices have resulted in increased interest in the conduction of electricity by the solid semiconductors. The subject is scientifically interesting not only because of possible practical applications but because of the light the associated phenomena shed upon the nature of solids. In this important work by a member of the technical staff of Bell Telephone Laboratories, Inc. the subject is treated from the standpoint of statistical physics. The concept of the excess electron and its counterpart, the "hole" with a positive charge, is explained in terms of the quantum theory but is nevertheless related to practical work in transistor electronics.

TERMAN FREDERICK EMMONS AND JOSEPH MAYO PETTIT

Electronic measurements Second edition. New York McGraw Hill Book Company, Inc. 1952 707 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick E Terman consulting editor) $10 00 2161

Contents Voltage and current. Power. Circuit constants of lumped circuits. Circuit constants in systems involving distributed constants. Measurement of frequency. Waveform, phase and time-interval measurements. Characteristics of triodes, pentodes and similar tubes. Amplifier measurements. Receiver measurements. Antennas. Radio waves. Laboratory oscillators. Generation of special waveforms. Reactance and resistance standards and devices. Attenuators and signal generators. Author index. Subject index.

Note. (1244) The first edition of this book was titled *Measurements in radio engineering* and it was well received as a text for college students of radio engineering and a reference book for radio technicians. In this edition the scope has been extended to include measurements in the higher frequencies used in television, radar, etc., hence the change in title. It now contains about twice as many words and more than twice as many illustrations as it did in the first edition. However, it is still addressed to essentially the same audience; that is, advanced students in engineering courses and graduate engineers who are interested in the principles and techniques of measurements in radio and electronics. The laboratory experiments that were outlined in the appendix of the first edition have been dropped. The literature citations have been much extended and the names of authors of cited papers are now included in a separate index.

YOUNG, MILTON GABRIEL, AND HARRY S. BUECHE

Fundamentals of electronics and control. New York Harper & Brothers 1952 525 p. illus. 25 cm. $6 00. 2162

Contents: Electron theory. Basic circuit components and control. Principles of electron emission. High vacuum (hard) tubes. Tubes utilizing gas (soft tubes). Mercury pool tubes. Amplifiers. Oscillators. Modulation and demodulation. Rectifiers. Appendices. Index.

Note. A textbook for use in engineering college courses. Although introductory it provides an adequate coverage of theory and includes also discussions of standard electronic devices including such recently developed ones as the transistor. Enough information is included on many topics to meet the needs of the nonspecialist engineer at work in industry. For example, the chapter on mercury pool tubes is 33 pages long and includes 11 references to related literature.

ZELUFF, VIN, AND JOHN MARKUS

Electronics manual for radio engineers. New York McGraw Hill Book Company Inc., 1949 879 p. illus. 28 cm. $14.00. 2163

Contents. Antennas. Audio. Circuit theory. Components. Dc amplifiers. Filters. Ionosphere. Measurements. Microwaves. Power supplies. Production. Receivers. Television. Transmission lines. Transmitters. Tubes. Index.

Note (1849*) A collection of 259 articles which appeared in the periodical *Electronics* during the period 1940–1948 and which have been in demand for reference use by men in radio and other communications fields. It is similar in nature to *Electronics for communications engineers* (New York, 1945) and in fact there is a slight amount of duplication. Some editing is apparent, but generally speaking the texts of the articles are unaltered from the periodical form. Citations are given to the original publications. An extensive subject index makes the volume a reference manual of considerable usefulness.

ZWORYKIN, VLADIMIR KOSMA, AND E. G RAMBERG

Photoelectricity and its application. New York John Wiley & Sons, Inc., 1949 494 p. illus. 24 cm. $8.50. 2164

Contents Historical introduction. General theory. Photoemissive surfaces. Materials and apparatus for making photocells. General methods of preparing photocells. The vacuum photocell. The gas-filled phototube. The multiplier phototube. The image tube. Photoconductive cells. Photovoltaic cells. Photocell circuits and amplification. The measurement of small photocurrents. Photoelectric counting devices. Phototubes in sound reproduction. Phototubes in picture transmission. Photosensitive camera tubes in television. Light beam signaling and infrared detection. Miscellaneous applications of photoelectricity. Photocells in the future. Appendix. Author index. Subject index.

Note (717) A comprehensive but largely descriptive survey. Somewhat more than half of the book is given over to describing the operating principles, characteristics, and uses of photoelectric devices. The coverage is wide, including not only apparatus already in commercial use but also inventions still in the experimental stage. An example of the latter is a photoelectric reading machine for the blind. The work will be useful to engineers, machine designers, and inventors. Extensive bibliographies are appended to the chapters. The book supersedes V. K. Zworykin and E. D. Wilson, *Photocells and their application* second edition, New York, 1932.

COMMUNICATIONS ENGINEERING

GENERAL

ALBERT, ARTHUR LEMUEL

Electrical communication. Third edition. New York John Wiley & Sons, Inc., 1950. 593 p. illus. 23 cm. $6.50. 2165

Contents: Early history of electrical communication. Fundamentals of acoustics. Electrical fundamentals of communication. Electroacoustic devices. Electric networks. Transmission lines. Cables and wave guides. Electronic applications in communication. Telegraph systems. Telephone exchange service and systems. Telephone toll service and systems. Radio wave propagation and antennas. Radio systems. Interference and noise. Index.

Note: (1419) A standard work used both as a textbook in engineering colleges and a reference book in libraries. Although typical apparatus is described, most of the exposition has to do with the physical and electrical principles. The chapters are supplemented with good bibliographies. In this edition the text has been rearranged and matter has been added on developments since the last edition, including a much fuller treatment of dial telephone systems.

ALBERT, ARTHUR LEMUEL

The electrical fundamentals of communication. Second edition. New York McGraw Hill Book Company Inc., 1952 531 p illus. 24 cm. $7 00. 2166

Contents: The fundamentals of electronics. Direct voltages and currents. Conductors, resistors, and insulators. Direct-current electric power and energy. Alternating voltages and currents. The magnetic field and inductance. The electric field and capacitance. Electric measuring instruments. Alternating-current circuits. Algebraic representation of vectors. Electric networks. Bridge circuits. The transmission of electromagnetic waves. Fundamental principles of electron tubes. Electron tubes as circuit elements. Electroacoustics. Appendix. Natural trigonometric functions. Index.

Note: (1420) A successful introductory text for students at the trade-school level and for practical workers in the communications industries. It provides a simplified treatment of the fundamental electric and electronic theories and phenomena upon which telegraphy, telephony, radio, and television are based. It is not a descriptive work devoted primarily to devices. The first edition appeared in 1942. The purpose and scope of the book were not changed in revising it for the present edition; nevertheless, it has been extensively revised and many parts completely rewritten.

BREAZEALE, WILLIAM MCSWAIN, AND LAWRENCE R. QUARLES

Lines, networks and filters. Scranton International Textbook Company 1951. 293 p. illus. 24 cm. $6.50. 2167

Contents. Fundamental relations. Fundamental transmission-line quantities. General transmission-line equations. Open and short-circuited lines. The line with any termination; reflection losses. Telephone and telegraph lines. U-H-F and microwave lines; transmission diagrams. Resonant and tapered lines. Filter networks. Tuned circuits. Impedance transforming networks, equalizers, and attenuators. Line and network applications. Appendices. Index.

Note: A college textbook devoted chiefly to the phenomena and mathematical calculations of wave communications circuits. It deals not only with telephone and telegraph lines but also with submarine cables, coaxial cables, etc., and is limited largely to those aspects that would be of interest in the design of such circuits. The authors have made extensive use of vectors in order to keep the mathematics as simple as possible. The reader will need previous college courses in introductory physics and mathematics.

CREAMER, WALTER JOSEPH

Communication networks and lines. New York Harper & Brothers, 1951 353 p. illus. 24 cm. $6 00. 2168

Contents: Part I: Network configurations. Network impedances. Transmission constants. Network transformations and reductions. Attenuators. Network theorems. Miscellaneous circuits. Transformers. Losses. Transmission equalizers. Electric wave filters. Part II: General transmission equations. Open- and short-circuited lines. Lines with terminal impedances. Cable circuits. Composite lines. Line impedances. Transmission lines at carrier frequencies. Lossless lines. Appendices. Index.

Note: The first part of this textbook for advanced electrical engineering students deals entirely with networks and consists largely of network analysis and problems in the design of attenuators, filters, and equalizers. The second part contains the theory of communication lines with applications to cables and open-wire circuits at audio and carrier frequencies. The presentation is largely algebraic with liberal use of hyperbolic functions of complex angles. Tables and charts of hyperbolic functions appear among the appendices. Students beginning the book should have a general understanding of telephone apparatus and systems, as well as a knowledge of elementary hyperbolic function theory.

CUCCIA, C LOUIS

Harmonics sidebands, and transients in communication engineering as studied by the Fourier and Laplace analyses. New York McGraw Hill Book Company Inc., 1952 465 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick E. Terman, consulting editor) $9.00. 2169

Contents: Elementary functions of a complex variable. Periodic-wave analysis—the Fourier series. Nonperiodic waves—the Fourier transform. The Laplace transform. Complex waves in radio, television, and radar. Linear-network analysis. Harmonic distortion—amplifier operation. Grounded-cathode-tube circuits. Harmonics and transients in filter networks. Harmonics and transients in amplifiers. Integrating, differentiating, and scanning systems for television. Reactance tubes, frequency stabilization, and phase synchronization. Modulation systems in electrical communications. Amplitude-modulated waves. Single-tone frequency modulation. Single-tone phase modulation. Indirect frequency modulation and wave interference. Multitone frequency-modulated waves and pulse-width modulation. Spectral analyses of finite wave trains. Wave transmission through linear networks. Traveling waves in communication systems. Exceptions in electrical communications. Appendix: Bessel functions of the first kind. Name index. Subject index.

Note. In this useful work the mathematics of harmonic and transient analysis are explained for communications engineers, and the mathematical methods are applied to a variety of engineering problems in the communications field. The nature and typical uses of Fourier and Taylor's series and the Laplace transformation in important subfields of communication engineering are fully covered. Selected literature references are included. The book is of interest not only to graduate students of communication engineering but also to engineers at work in research and design. The author is Research Engineer on the staff of the David Sarnoff Research Center of RCA Laboratories Division.

Hund August

High-frequency measurements. Second edition. New York McGraw Hill Book Company Inc., 1951 676 p. illus. 24 cm. (International series in pure and applied physics G P Harnwell consulting editor) $11.00. 2170

Contents. Fundamental relations and circuit properties. High-frequency sources and other useful laboratory apparatus. Apparatus and systems for measuring high frequency minute tube and insulation currents. Determination of voltage. Determination of frequency. Determination of capacitance. Determination of self-inductance. Determination of mutual inductance and coupling. Determination of effective resistance. Determination of high-frequency power and losses. Determination of logarithmic decrement, power factor phase difference, and sharpness of resonance. Ferromagnetic measurements. Tube measurements. Modulation measurements. Measurements on lines and aerial systems. Determinations on wave propagation. Miscellaneous measurements. Appendix. Index.

Note (5738) An established work that is used both as textbook for advanced college students of radio engineering and as reference book in radio and electronics laboratories. In its present edition it presents thorough coverage of measurement methods throughout the band of radio frequencies that are now in use including UHF and super-high frequencies. Familiarity with radio terminology and engineering mathematics is assumed in the treatment. Important changes and additions were made in preparing the present edition.

Hund August

Short wave radiation phenomena. New York McGraw Hill Book Company Inc., 1952 2 v illus. 24 cm. (Radio communication series Beverly Dudley consulting editor) $20.00 2171

Contents Volume I, Fundamental concepts and relations of currents and electromagnetic fields Space electromagnetic fields of elementary electric and magnetic dipoles. Fundamental methods used in electromagnetic theory Propagation characteristics. Transmission lines and radiation Unobstructed space radiation Volume II, Space radiation in the presence of electromagnetic obstructions. Electromagnetic diffraction Wave guides and cavities. Appendix. List of references. Name index Subject index

Note An intermediate-level text or treatise, addressed both to students in formal courses and to radio experimenters and graduate engineers studying by themselves. The typical chapter is a self-contained monograph on a specific area of the field, containing the pertinent theory and the useful mathematical formulas and computations. The treatment is analytical and is adequately detailed for self-instruction. The work as a whole presents a wide range of information, together with references to the original literature. The subject index runs to 73 two-columned pages.

Jones Charles Reed

Facsimile. New York Murray Hill Books, Inc. 1949 422 p. illus. 24 cm. $6 00 2172

Contents Introduction, by W G H Finch Part I, What facsimile is: Facsimile in the past. Modern facsimile equipment. Facsimile services. Facsimile broadcasting Other facsimile devices. Part II, How facsimile works Facsimile transmitters. Facsimile transmission facilities. Facsimile reception. Facsimile synchronization and phasing Tape facsimile. Facsimile standards. Part III, Present-day facsimile systems. Facsimile makers. Acme telectronals. Alden Products Company The American Telephone and Telegraph Company Finch Telecommunications, Inc. Radio Inventions, Inc. Times Facsimile Corporation. Western Union Telegraph Company Part IV Servicing. Servicing facsimile equipment. Detailed service notes. Glossary Index.

Note. A descriptive rather than analytical work on the principles of transmission by wire and radio of facsimiles of photographs, printed material, etc. Specific, fairly detailed descriptions of facsimile apparatus now in production and use in the United States of America are included. Although there is some emphasis on matters that concern operating and maintenance personnel, the book is so written that it can serve as a general source of information on the subject.

Kerr, Donald E., editor

Propagation of short radio waves. Office of Scientific Research and Development, National Defense Research Committee. Editorial staff Donald E. Kerr S. A. Goudsmit, Leon B Linford and Albert M Stone. New York. McGraw Hill Book Company Inc., 1951. 728 p. illus 24 cm. (Massachusetts Institute of Technology Radiation Laboratory series, Louis N Ridenour editor in-chief Volume 13) $10.00 2173

Contents: Elements of the problem, by J. E. Freehafer and D. E. Kerr Evolution of the present problems. Tropospheric refraction. Atmospheric scattering and attenuation. Theory of propagation in horizontally stratified atmosphere, by J. E. Freehafer and others: Fundamental concepts. Geometrical optics. Physical optics. The linear modified index profile. Methods for calculating field strength with standard refraction. The bilinear modified index profile. Nonlinear modified index profiles. Meteorology of the refraction problem, by R. A. Craig and others: Humidity and refractive index. Vertically homogeneous air and adiabatic changes. Representation and description of soundings. Eddy diffusion. Vertical distributions in neutral and unstable equilibrium. Vertical distributions in stable equilibrium. Other atmospheric processes and their effect on M profiles. Instruments to measure temperature and humidity in the lower atmosphere. Meteorological constants. Experimental studies of refraction, by P. J. Rubenstein and others: One-way transmission over water. One-way transmission over land. Radar transmission. Space variations in field strength. Angle measurements on short optical paths. Reflections from the earth surface, by D. E. Kerr and others: Theory of specular reflection. Reflection coefficient of the ocean. Reflection coefficient of land. Errors in radar height measurements. Radar targets and echoes, by D E. Kerr and H. Goldstein The radar cross section of isolated targets. Complex targets. Sea echo. The origins of echo fluctuations. The fluctuations of clutter echoes. Meteorological echoes, by H. Goldstein and others: Origin of the echo. The intensity of meteorological echoes. General properties of precipitation echoes. Precipitation echo properties and meteorological structure. Atmospheric attenuation, by J. H. Van Vleck and others: Properties of the complex dielectric constant. Theory of absorption by uncondensed gases. Measurement of atmospheric absorption. Attenuation by condensed water Appendix, by D E. Kerr and others: Application of the Lorentz reciprocity theorem to scattering. Coherent and incoherent scattering from assemblies of scatterers. Name index. Subject index.

Note A cooperative volume by a team of scientists associated with radar research during World War II. It summarizes knowledge gained in many laboratories in the United States of America and abroad during this period. The authors state in the Preface, dated July 1947 "There has been no attempt to produce either a handbook or textbook, but only an interim report on a rapidly changing subject An attempt has been made to survey all relevant information that was available [illegible] and to summarize as much of it as was feasible." For descriptions of other volumes in the series see the author indexes of *Scientific, medical and technical books published in the United States of America* [illegible] *Supplement of books published 1945–1948* and of the book in hand.

King Donald D

Measurements at centimeter wavelength. New York D Van Nostrand Company Inc., 1952 327 p illus 24 cm. (Van Nostrand series in communications engineering, Herbert J Reich, editor) $5.50 2174

Contents: Introduction. Transmission of power at centimeter wavelength. Measurement of centimeter-wave power. Frequency wavelength and waveform measurement. Generators. Impedance measurement. Radiation measurements. Glossary of symbols. Subject index. Author index.

Note. Measurements of power and frequency in the wavelength range from about three meters to about ten millimeters are the subject of this book. Both the theory and technique of such measurements are covered. The importance of transmission line theory is stressed, but a considerable part of the space is devoted to techniques of measurements. Included in the discussions are descriptions of instruments and related circuits and indications of the applications and limitations of each method. The author is Assistant Director of the Radiation Laboratory of the Johns Hopkins University The book is of interest to graduate communications engineers and students already at work in communications research and design.

LAWSON, JAMES LLEWELLYN, AND GEORGE E. UHLENBECK, editors
Threshold signals. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw-Hill Book Company Inc. 1950 388 p. illus. 24 cm. (Massachusetts Institute of Technology Radiation Laboratory series. Board of editors Louis N Ridenour editor in-chief, and others) $5 00 2175

Contents: Introduction. Types of signals and methods for their reception. Theoretical introduction. Basic origins of internal noise. Receiver noise. External noise sources—clutter. The detectability of signals in the presence of noise. Pulse trains in internal noise. Pulse trains in internal noise—other methods of presentation. Modulated pulse trains. Threshold pulsed signals in clutter. Threshold signals in electronic interference. Threshold modulations for amplitude-modulated and frequency-modulated continuous wave systems. Index.

Note: A treatise on the problems of detecting signals in the presence of electrical and electronic noise. As are the other books in the series, it is based largely on work done at MIT Radiation Laboratory during World War II. After an introductory discussion of types of signals and of kinds of noise, the various aspects of the problem are discussed from both the theoretical and experimental standpoints. Many of the illustrations are drawn from investigations of noise problems in radar. The book is addressed to graduate electronic and communications engineers.

LE CORBEILLER PHILIPPE
Matrix analysis of electric networks. Cambridge, Mass. Harvard University Press [and] New York John Wiley & Sons Inc. 1950 112 p. 22 cm. (Harvard monographs in applied science. No. 1) $3.00. 2176

Contents: Preliminary concepts. The mesh method of Kron. The node pair method. The mixed method. Index.

Note: In this short book the methods of analysis of rotating electrical machinery originated by Gabriel Kron and expounded in his *Application of tensors to the analysis of rotating electrical machinery* (Schenectady 1938 2. ed., 1942) and in his *Tensor analysis of networks* (New York, 1939) are presented in simpler form for the benefit of communications engineers who are not specialists in mathematics. The presentation relies upon matrix algebra and topology and the essential concepts of these two areas of mathematics are presented in the first chapter. In the succeeding chapters the author shows how to apply the techniques of matrix algebra and topology to the analysis of the fundamental types of stationary electric networks.

MARCUVITZ, NATHAN, editor
Waveguide handbook. New York Mc Graw Hill Book Company Inc., 1951. 428 p. illus. 24 cm. (Massachusetts Institute of Technology Radiation Laboratory series, Louis N Ridenour editor-in-chief. Vol. 10) $7.50 2177

Contents. Transmission lines. Transmission-line modes. Microwave networks. Two-terminal structures. Four-terminal structures. Six-terminal structures. Eight-terminal structures. Composite structures. Appendix. Glossary Index

Note: A systematic presentation of microwave field problems viewed as problems in microwave networks. As are the other volumes in the series, this one is based on intensive work carried out at the M.I.T Radiation Laboratory during the years 1942–46. It is designed for graduate communications engineers working in the microwave field. The basic general material is presented in the first three chapters. The remaining chapters are devoted to specific varieties of microwave radiating structures. In these chapters much useful information is presented graphically.

MARTIN, THOMAS LYLE, JR.
Ultrahigh frequency engineering. New York Prentice-Hall, Inc., 1950 456 p. illus. 22 cm. $8.00 2178

Contents: Wave-shaping circuits. Trigger circuits. Amplification for UHF systems. Introduction to transmission lines. UHF applications of transmission lines. Parallel plane waveguides. Waveguides and cavity resonators. UHF triodes and oscillators. Klystrons. Magnetron oscillators. Propagation of radio waves. Appendixes: Fundamental constants. Solution of the cylindrical waveguide. Index.

Note: As the chapter titles indicate, this book is devoted mainly to the circuits and other components of UHF systems in general. Radar, television, and other complete circuits in which UHF radiation is applied to specific uses are not considered. The book is outstanding for clear and rather full discussions of basic circuits and circuit elements. The author has assumed that his readers will be familiar with basic radio and engineering mathematics. The work is principally a textbook for upperclass college students majoring in physics or electrical engineering. It is suitable also for college graduates who possess the requisite basic scientific education and desire an introduction to this field for independent reading.

MOSKOWITZ, SIDNEY, AND JOSEPH RACKER
Pulse techniques. New York Prentice-Hall, Inc., 1951 300 p. illus. 23 cm. (Prentice-Hall electrical engineering series W L. Everitt, editor) $6.65 2179

Contents. Characteristics of pulses. Transient response of linear networks. Design of pulse networks. Linear pulse amplifiers. Pulse-shaping and clamp circuits. Pulse generation. Pulse measurements and instruments. Pulse communication systems. Aerial navigation aids. Appendixes: Review of complex-variable theory. Pulse response of cascaded wave filters. Pulse response of transmission lines. Index.

Note: The term "pulse techniques" designates systems of radio communication in which signals are broadcast in pulses or "bursts" of radiated energy rather than in modulated continuous waves. Continuous waves are the basis of standard radio, but pulses, the basis of radar, are finding more and more uses in other systems of communication, such as television and the microwave radio relays in telegraph and telephone circuits. This short book is designed as an introduction to the field for readers possessing knowledge of basic communication engineering and standard radio. The main viewpoint is practical, in other words, the purpose is to prepare the reader for work in the field.

MUCHMORE, ROBERT B
Essentials of microwaves. New York John Wiley & Sons, Inc., 1952 236 p illus. 23 cm. $4.50. 2180

Contents: The electromagnetic laws of Maxwell. Characteristic waves and wave guides. Cavity resonators and filters. Characteristic waves and antennas. Typical microwave antennas. Waves and electron streams; grid-control tubes. Klystrons. Traveling-wave and multiple-stream tubes. Magnetrons. Electrical noise. Microwave radio systems; relays. Radar. Applications of microwaves to physical research. Microwave measurements. Appendixes. Index.

Note: A simple, straightforward introduction. Some familiarity with radio terminology is necessary in order to understand it, but it is not addressed to readers who are studying the field because they plan to enter it professionally. Instead, it is an ideal book for such readers as electrical engineers specializing in, say, power system design, who desire to know something about microwaves for the sake of rounding out their store of information. The author emphasizes the fundamental simplicity of the subject and he has covered it in lucid style and more than 200 clearly drawn illustrations.

SLATER, JOHN CLARKE
Microwave electronics. New York D Van Nostrand Company Inc., 1950 406 p. 24 cm. (The Bell Telephone Laboratories series) $6.50 2181

Contents: The wave guide with perfectly reflecting walls. Reflection and standing waves. Power and energy relations. The theory of resonant cavities. The resonant cavity with one output. The cavity with two outputs. The cavity with several outputs, and coupled cavities. The periodically loaded wave guide. *Fundamental principles of electronic devices.* The klystron. The linear accelerator. The travelling wave amplifier. The magnetron oscillator. The cyclotron and synchrotron. Appendixes: Properties of bilinear transformations. Group velocity. Bibliography. Index.

Note: An essential book for engineers at work in the field of radar design and physicists concerned with the phenomena of electromagnetic waves in the millimeter and centimeter ranges. Mainly it is a mathematical treatment based on the theory of orthogonal func-

tions. This mathematical method is developed so that it can be applied generally to the prediction of microwave behavior. The author was one of the pioneer researchers during World War [illegible] he worked at the Bell Telephone Laboratories and the Radiation Laboratory at Massachusetts Institute of Technology on radar design and particularly on the magnetron. The book is [illegible] development of this work, and it embraces not only the author's contributions but those made by others to the mathematical solution of microwave problems.

SOUTHWORTH, GEORGE CLARK

Principles and applications of waveguide transmission. New York D Van Nostrand Company Inc., 1950 689 p illus. 23 cm. (The Bell Telephone Laboratories series) $9.50. 2182

Contents. Introduction. Principles of networks. Principles of transmission lines. The nature of electromagnetic waves. Waveguide theory. A descriptive account of electrical transmission. Waveguide transmission lines. Waveguide [illegible] (impedors). Waveguide components. Waveguide radiators. Electronic devices for waveguide use. Modulation and demodulation by waveguide methods. Appendixes: Ratios frequently used in waveguide calculations. RMA standard rectangular waveguides. Properties of certain dielectrics. References. Index.

Note: A substantial treatment of the current knowledge and practice of waveguides in the transmission of microwave radiation. The author [illegible] he is on the staff of Bell Telephone Laboratories, is one of the outstanding investigators of waveguide transmission. The first five chapters deal with the fundamental and historical aspects. Rather advanced mathematics is used in these, and they are addressed primarily to graduate students and practicing engineers. Although there are numerous graphs in the remaining chapters, these chapters are by comparison descriptive in nature and can be understood by readers [illegible] do not possess the mathematical training required for the reading of the first part of the book. There is 10-page list of references.

WARE, LAWRENCE ALBERT AND HENRY R. REED

Communication circuits. Third edition. New York John Wiley & Sons, Inc., 1949 403 p. illus. 24 cm. $5 50. 2184

Contents. Transmission-line parameters. Networks, T and [illegible] sections. Network theorems. The line composed of finite sections. The line having uniformly distributed parameters. Open-circuit and short-circuit lines. Reflection losses. The power-transmission line—efficiencies. Constant K filters. M-derived and composite filters. Impedance transformation. Ultrahigh frequency transmission in wave guides—general. Ultrahigh frequency rectangular wave guides. Ultrahigh-frequency cylindrical wave guides. Electromagnetic theory of coaxial lines. Transmission-line experiments. Appendixes. Index.

Note. (1932) In this college text for electrical engineering students the basic principles of communication transmission lines for all frequencies are presented, but the ultrahigh frequencies are discussed in the greatest detail. The treatment assumes [illegible] knowledge of calculus and elementary a-c theory. More advanced mathematics which may be required is included in the appendix. In this edition the chapters on transmission-line parameters and impedance matching have been rewritten and enlarged; the treatment of attenuation in wave guides is now based on Poynting's theorem; and the [illegible] number of review problems given at the end of each chapter has been increased.

SOUND RECORDING

FRAYNE, JOHN GEORGE, AND HALLEY WOLFE

Elements of sound recording New York John Wiley & Sons, Inc. 1949 686 p. 24 cm. $9.50. 2185

Contents (abridged) Nature of sound, sound waves, and their perception. Electrical, acoustical, and mechanical circuits. Microphones and their uses. Vacuum tubes. Audio amplifiers. Network theory. Attenuators. Filters. Equalizers. Compressors and limiting. Recording systems. Principles of disk recording. Fundamental principles of variable-density recording. Variable-intensity modulators. Principles of variable-area recording. Variable-area modulators. Noise-reduction methods. Flutter and its measurement. Film and disk drive mechanisms. Film laboratory processes. Rerecording. 35-mm motion-picture reproducing systems. 16-mm sound film systems. Magnetic recording. Loudspeaker systems. Acoustics of stages and theaters. Stereophonic recording. Index.

Note. A comprehensive presentation of the principles and basic techniques of the recording of sound. It had its origin in material collected for presentation to students at the University of California at Los Angeles; but in its present form it is intended for both students and practicing sound engineers. Although considerable space is given over to description of equipment, especially equipment used in commercial studios, the work is not in any sense a descriptive treatment. The authors' method is exemplified by the chapter on magnetic recording where the theory is explained, the two chief methods of magnetic recording are described, and the characteristics of the chief bias and erase methods are discussed from the engineering standpoint. Wire-recording systems and tape-recording systems are then discussed chiefly from the same viewpoint, but there is only one illustration of [illegible] recorder and no detailed description is given of it. The chapters are supplemented by short lists of references. Both authors are associated with the Western Electric Company

READ, OLIVER

The recording and reproduction of sound. Revised and enlarged second edition. Indianapolis Howard W Sams & Co., Inc., 1952 790 p. illus. 24 cm. $7 95 2186

Contents. Behavior of sound waves. History of acoustical recording. Basic recording methods. Lateral disc recording. Disc recorders. Microgroove recording. Recording (cutting) styli. The decibel. Phono reproducers (pickups). Tone arms and reproducing styli. Magnetic (tape and wire) recording. Magnetic tape recorders. Magnetic film recorders. Microphones. Loudspeakers and enclosures. Dividing networks and filters. Tone control (equalizers). Attenuators and mixers. Amplification. Preamp-equalizers. Music systems. PA sound systems. Acoustics. Tuners (AM FM). Speech input systems. Complete recording systems. Record manufacture (pressings). Audio measurements. Recording and reproducing standards. Appendix. Index.

Note: A comprehensive and useful manual about the theory, construction, and characteristics of present-day sound-recording and reproducing apparatus. The treatment is technical, and the book is adapted to the needs of most technical personnel in the industries concerned with sound recording and reproduction. It is addressed particularly to sound engineers and to men [illegible] who are responsible for the setting up and maintaining of sound apparatus. The first edition appeared in 1949. This edition contains about twice as much matter and is much improved in content and organization. The author is editor of *Radio and television news* and *Radio-electronic engineering*.

ANTENNAS

BAILEY ARNOLD B

TV and other receiving antennas (theory and practice) New York John F Rider Publisher Inc., 1950. 606 p. illus. 22 cm. $6.90. 2187

Contents: Review of definitions and terminology. The television signal and its bandwidth. Problems of television reception. The electromagnetic wave. The radio path. The theory of signal interception. The center-fed zero-db half-wave antenna. Comparison of zero-db half-wave antennas. Parasitic-element antennas. Horizontally polarized antennas and special types. Practical aspects of TV receiving antennas. Review questions. Index.

Note. A treatise on practical antenna engineering. The author has had [illegible] long experience in antenna design which is reflected in the book. Nevertheless, the work is designed not so much for specialists in antenna theory as for television installers and others who desire [illegible] relatively full treatment from the practical viewpoint. The characteristics of all of the current types of antennas that are useful in TV and other communications fields employing ultra high frequency radiation are described fully. Hundreds of special points, such as connecting an antenna by adding extra components, are discussed. A special feature is the inclusion of [illegible] "data sheets" for specific varieties of antennas.

KRAUS JOHN DANIEL

Antennas. New York McGraw Hill Book Company Inc. 1950 553 p. illus. 24 cm. (McGraw Hill electrical and electronic engi-

neering series F E. Terman, consulting editor) $8.50. 2188

Contents: Introduction. Point sources. The antenna as an aperture. Arrays of point sources. The electric dipole and thin linear antennas. The loop antenna. The helical antenna. The biconical antenna and its impedance. The cylindrical antenna: its current distribution and impedance. Self- and mutual impedances. Arrays of linear antennas. Reflector-type antennas. Slot, horn, and complementary antennas. Lens, long wire, and other types of antennas. Antenna measurements. Books for reference. Appendix. Index.

Note: A systematic treatment of antenna theory written in the form of a textbook for upperclass engineering students. Acquaintance with elementary electromagnetic theory the fundamentals of transmission lines and wave guides, and with mathematics through vector analysis is required for understanding the treatment. All the species of antennas which are of current interest are considered. Besides its intended use, the book should prove useful to graduate electrical engineers whose formal education did not include a course in antenna theory

LAPORT, EDMUND A.

Radio antenna engineering New York Mc Graw-Hill Book Company Inc., 1952 563 p. illus. 24 cm. $10.00. 2189

Contents: Low-frequency antennas. Medium-frequency broadcast antennas. High-frequency antennas. Radio-frequency transmission lines. Graphical synthesis of impedance-matching networks. Logarithmic potential theory Appendices. Index.

Note: A treatise designed for radio engineers who are not specialists in antenna theory but who must nevertheless design (and sometimes build) radio antennas. It is limited to antennas made of wires, masts, and towers for frequencies up to about 30 megacycles and to transmission lines used in the feeding of signals to such antennas. Major aspects, such as the calculation of radiation patterns, and minor aspects, such as the design of aircraft obstruction lighting, are both covered. Graphical methods are illustrated for the solution of many problems. The illustrations include a number of photographs of construction details. Selected bibliographies are included with the chapters, and in the appendix there is a general bibliography for the convenience of engineers in need of more detailed or more rigorous treatments of specific aspects. The author is Chief Engineer of the International Division of Radio Corporation of America.

SCHELKUNOFF SERGEI ALEXANDER

Advanced antenna theory New York John Wiley & Sons, Inc., 1952 216 p. 24 cm. (Applied mathematics series edited by I. S. Sokolnikoff) $6.50 2190

Contents: Spherical waves. Mode theory of antennas. Spheroidal antennas. Integral equations. Cylindrical antennas. Natural oscillations. Appendices. Index.

Note: Contemporary antenna theory at an advanced level of research is presented in this valuable monograph. The methods of other contributors, particularly E. Hallén, J A. Stratton, and L. J. Chu, to the modern theory are described, but the heart of the book is the 79 page second chapter in which the author's own method of dealing with the problems of thin antennas is covered more fully than in his previously published work. The treatment is largely mathematical and the mathematics is rigorous. The book is of primary interest to advanced graduate students and graduate engineers engaged in antenna research.

SCHELKUNOFF SERGEI ALEXANDER, AND HARALD T FRIIS

Antennas theory and practice. New York John Wiley & Sons, Inc., 1952 639 p. illus. 24 cm. (Applied mathematics series, edited by I. S. Sokolnikoff) $10.00. 2191

Contents. Physical principles of radiation. Maxwell's equations. Plane waves. Spherical waves Directive radiation. Directivity and effective area. Waves over ground. Antenna current. Impedance, reciprocity equivalence. Small antennas. Self-resonant antennas. General theory of linear antennas. Impedance of dipole antennas. Rhombic antennas. Linear antenna systems. Horns. Slot antennas. Reflectors. Lenses. Appendices. Index.

Note: This authoritative work is best described as a treatment of basic antenna theory for engineering students who are interested in the subject because they may eventually be concerned with practical antenna design. Construction details are not covered but the theory and mathematical computations that the practical engineer must know in order to design an antenna with specified characteristics are thoroughly covered. A knowledge of general physics and elementary calculus is a prerequisite. The authors have taken special pains to keep the mathematics in the book within the reach of undergraduate students. The discussions of most points are unusually full and clear. The book should be valuable also to a fair number of engineers not enrolled in colleges.

SILVER, SAMUEL, editor

Microwave antenna theory and design. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company Inc., 1949 623 p. illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series, Louis N Ridenour editor in-chief Vol. 12) $8.00 2192

Contents: Survey of microwave antenna design problems. Circuit relations, reciprocity theorems. Radiation from current distributions. *Wave fronts and rays. Scattering and diffraction. Aperture illumination* and antenna patterns. Microwave transmission lines. Microwave dipole antennas and feeds. Linear array antennas and feeds. Waveguide and horn feeds. Dielectric and metal-plate lenses. Pencil-beam and simple fanned beam antennas. Shaped-beam antennas. Antenna installation problems. Antenna measurements—techniques. Antenna measurements—equipment. Index.

Note. A comprehensive survey of the fundamental theories and principles of design for various types of microwave transmitting and receiving antennas. Like other books in the series, the material is based largely on work done at M I T Radiation Laboratory during World War II. The treatment is technical and mathematical, and includes a review of those elements of electromagnetic theory and physical optics essential to an understanding of the subject. Two chapters dealing with the methods utilized in determining antenna characteristics have been included.

RADIO

DREW CHARLES EDWARD

How to pass radio license examinations. Third edition—revised. New York John Wiley & Sons, Inc. 1952 406 p. illus. 24 cm. Stiff paper $5 75 2193

Contents: Basic law. Basic operating practice. Basic radiotelephone. Advanced radiotelephone. Radiotelegraph operating practice. Advanced radiotelegraph. Appendices: Federal Communications Commission, rules governing commercial radio operators (revised to June 27 1950) Extracts from radio laws. Q code and abbreviations. Abbreviations available for all services. Miscellaneous abbreviations and signals. International Morse code. Miscellaneous: Frequency vs. wavelength. Symbols. Abbreviations. Greek alphabet. Signs. Bibliography Aircraft radiotelegraph for flight radio operator, by John P Kennelly Ship radar techniques, by John J. Cameron. Bibliography

Note: (2188a) The third edition of this work, like the first and second, presents a large number of questions and answers to help students prepare themselves for Federal Communications Commission radio license examinations. The questions are numbered to correspond with the numbers in the F.C.C. study guide and many of the questions are accompanied by large, easily-read diagrams. New to this edition are the sections covering F.C.C. Element 7 (Aircraft radio telegraph for flight radio operator) and Element 8 (Ship radar techniques) The book is intended to be used in conjunction with standard textbooks.

ENNES HAROLD E.

Broadcast operator's handbook. Second edition. New York John F Rider Publisher Inc., 1951 440 p. illus. 22 cm. $5 40. 2194

Contents (abridged) Part 1, Operating in the control room and studio What you're up against. Keeping sound "out of the mud." Studio and control room. Part 2 Operating the master control. Part

3 Operating outside the studio. Remote control problems. Remote musical pickups. Eye-witness pickups and mobile transmitters. Field facilities. Part 4, Operating the transmitter: Operator's duties. Programs are entertainment. Measuring noise and distortion. Part 5, We're off the air: Emergency shutdowns. Preventive maintenance instructions. Part 6, Technically speaking: Control room and studio equipment. The broadcast studio. Selecting the broadcast transmitter location. Bibliography. Index.

Note: (1951) A thorough book on the work of engineers and other technical personnel concerned with the broadcasting of radio programs and the maintenance of broadcasting equipment. Such aspects of radio broadcasting as the placing of microphones, the arrangement of equipment for out-of-studio pickups, etc., are covered in detail. Forty-six pages are given to the important subject of preventive maintenance. The author is Staff Engineer for WIRE, in Indianapolis. The first edition of the book was published in 1947. The present edition is 175 pages longer and contains much new material.

FISCHER, BERNHARD

Radio and television mathematics: a handbook of problems and solutions. New York The Macmillan Company 1949 484 p. illus. 21 cm. $6 75 2195

Contents: Section I, Problems and solutions: Circuit components. Direct-current circuits. Alternating current circuits. Vacuum tube fundamentals. Amplifiers. Oscillators. Transmitters. Receivers. Power supplies. Antennas and transmission lines. Television. Measurements. Industrial and control circuits. Section II, Problems for further practice. Section III, Some important tools for radio mathematics: Powers of 10. Introduction to the slide rule. The *j*-operator. Polar vectors. Section IV, Formulas and tables: Electronic formulas. Tables. Appendix. Reference list. Answers to Section II. General index. Mathematical index.

Note: As the chapter titles indicate, the scope of this book is more advanced than some of the texts which have been written on the mathematics used in radio and television. It has been developed from material used in classes given by the author and is designed primarily as a textbook for use in organized classes. However, it is somewhat suitable for self-instruction, especially for advanced students who have had a course in college algebra. Much of the exposition is expressed in the form of worked solutions of typical problems. Several hundred practice problems for the student are given in the second section of the book. An extended section of useful formulas and tables at the end of the book has some reference value.

GHIRARDI ALFRED A.

Radio and television receiver circuitry and operation by Alfred A. Ghirardi assisted by J Richard Johnson New York Rinehart Books Inc. 1951 669 p. illus. 24 cm. $6 00 2196

Contents: Amplitude modulation and AM signals. Frequency modulation and FM signals. R F amplifiers and T R F receivers. AM superheterodyne receivers. AM detector and AVC systems. FM receivers. Push-button tuning and AFC systems. A-F amplifiers. Loudspeakers. Radio receiver power-supply systems. TV principles and the TV receiver. Receiving antenna systems. Home recorders. Phono pickups and record players. Automatic record changers. Mechanical construction of receivers. Glossary. Answers to odd numbered review questions. Index.

Note: An introduction written primarily for practical students who are preparing for or are already engaged in radio and television installation and servicing. Also, there is some appeal to radio amateurs. For an introductory book the treatment is unusually full. The chief aim of the authors was apparently to impart a basic understanding of the principles of circuit elements and typical complete circuits. Full circuit diagrams of specific makes and models of receivers are, of course, not included. The first named author has written the widely used *Radio physics course* and other books.

GHIRARDI ALFRED A. AND J RICHARD JOHNSON

Radio and television receiver troubleshooting and repair New York Rinehart Books Inc. 1952 822 p. illus. 24 cm. $6 75 2197

Contents (abridged): Receiver components and their troubles. The importance of a systematic troubleshooting procedure. Basic troubleshooting methods. Practical direct approach troubleshooting. Special troubleshooting problems in a-c d-c and three-way portable receivers. Special troubleshooting problems in battery-powered receivers. Servicing communications receivers. Troubleshooting television receivers. Taking receiver performance data. Realigning AM receivers. Realigning FM receivers. Realigning TV receivers. Replacement of defective resistors. Replacement and repair of R F and I F inductors and transformers. Replacement and repair of defective power, A-F and deflection-frequency inductors and transformers. Replacement and repair of defective capacitors. Servicing defective tuning-drive mechanisms. Testing, replacement, and repair of loudspeakers. Repair and replacement of record-playing equipment. Servicing home recorders. Appendix. Index.

Note: (1951) A comprehensive textbook for use in vocational courses offered to men who are preparing to become radio and television servicemen, and for men already in this service industry who wish to extend their knowledge by home study. The discussions are practical and detailed. Many operations are described step by step. No mathematics is used but the writing is in the terminology of the industry. The book replaces the senior author's popular *Modern radio servicing*.

HENNEY, KEITH, editor in-chief

Radio engineering handbook. Fourth edition. New York McGraw Hill Book Company Inc., 1950. 1197 p. illus. 23 cm. $10.00 2198

Contents: Basis of radio communication, by B. Dudley. Resistance, by Jesse Marsten. Inductance, by F. G. Weber. Magnetic materials, by R. L. Sandford. Capacitance, by E. L. Hall. Combined circuits of L, C and R, by W. F. Lawrence. Electrical measurements, by R. F. Field and J. H. Miller. Power-supply systems, by R. C. Hitchcock. Audio-frequency amplifiers, by O. Koehler. Radio-frequency amplifiers, by K. S. Glasgow. Vacuum-tube oscillators, by R. I. Sarbacher and D. C. Felden. Modulation and detection, by L. F. Curtis. Radio-wave propagation, by D. Pollack. Electron tubes, by G. D. O'Neill. Antennas, by E. A. Laport. Wave-guides and cavity resonators, by T. Moreno. Loud speakers and room acoustics, by H. S. Knowles. Recording systems, by C. E. Dean. Radio broadcasting, by C. G. Dietsch. Television, by D. G. Fink. Facsimile, by R. E. Mathes. Radio aids to aviation, by H. Diamond. Code transmission and reception, by J. B. Moore and D. S. Rau. Index.

Note: (1941) A standard reference book in which "easy" type of exposition and tabulated engineering data are combined. It is suitable for advanced students of radio engineering, advanced radio amateurs and, of course, practicing radio engineers. In the present edition the type has been completely reset and the format altered to give a larger page size. Enough material has been added to occupy 200 more pages. The chapter on wave-guides treats a topic that was not mentioned in the third edition. The titles of the other chapters are the same or are changed slightly but examination shows that the contents of a substantial number are essentially new.

HENNEY KEITH AND GLEN A. RICHARDSON

Principles of radio. Sixth edition. New York John Wiley & Sons, Inc., 1952. 655 p. illus. 22 cm. $5 50. 2199

Contents: Fundamentals. Direct-current circuits. Electrical units and measurements. Magnetism and electromagnetism. Inductance. Capacitance. Properties of alternating-current circuits. Resonance. Properties of coils and condensers. Vacuum tubes. The tube as an amplifier. Rectifiers and power supply apparatus. Audio amplifiers. Detection of amplitude-modulation signals. Amplitude-modulation receiver systems. Oscillators. Amplitude-modulation transmitters. Transmission lines, antennas, and electromagnetic radiation. Frequency modulation and detection. Ultra-high frequency phenomena. Electronic instruments. Transients and wave shaping circuits. Television. Radar. Index.

Note: (1945*) A popular self-instruction and vocational school text since the appearance of the first edition in 1929. Only simple mathematics is used and the discussions of fundamental topics are exceptionally full. Numerous worked examples and procedures for a few experiments requiring a minimum of apparatus are included. The present edition represents an extensive revision with many pages of new material and many new illustrations.

HORNUNG, J L., AND ALEXANDER A. MC KENZIE

Radio operating questions and answers. Eleventh edition. New York McGraw Hill Book Company, Inc. 1952 557 p. illus. 21 cm. $6 00. 2200

Contents (abridged) Radio laws, regulations, and operating practice. General theory transmitters, receivers. Power supplies, batteries, motors, motor-generators, indicating instruments. Special endorsements. Appendix. Index to question numbers. Index of diagrams and illustrations. Index of subjects.

Note: ([illegible]) Since its first appearance in 1921 this book has been widely used as review of radio theory and practice by persons studying for government examinations for radio operator licenses. Its wide scope together with the detailed indexes makes it *useful also as desk reference book for both amateur and professional* operators and amateurs. In preparing this edition the material was extensively rearranged, numerous revisions in the questions and answers were made, new illustrations were drawn, and the text was reset in new typography

KIVER, MILTON SOL

F M *simplified* Second edition. New York D Van Nostrand Company Inc. 1951 453 p. illus. 21 cm. $6.50. 2201

Contents: Introduction to frequency modulation. F M from phase modulation. F-M and interference. Propagation, reception, and transmission of F M signals. R.F tuners for F M receivers. High frequency oscillators. I.F amplifiers. Limiters. F-M detectors. Audio amplifiers and high fidelity. F-M receiver alignment. Commercial F-M receivers. *Servicing F-M receivers.* Commercial F-M transmitters. Index.

Note: ([illegible]) A standard text for radio servicemen and laymen who are familiar with the principles and terminology of amplitude modulation and wish to extend their knowledge to f-m. It is written so that it may be used in organized classes at the trade-school level or as self-instruction manual. The advantages of frequency modulation are discussed and the similarities and differences between a-m and f-m systems are covered. F-m circuit elements and circuits are described in sufficient detail to make the basic principles clear. Numerous explanatory charts and some wiring diagrams, typical of the circuits of f-m equipment produced for the U.S.A. market, are included. The first edition was published in 1947. In this edition the book is approximately 100 pages longer and contains considerable material that did not appear in the 1947 edition.

MACLAURIN WILLIAM RUPERT

Invention & innovation in the radio industry with the technical assistance of R. Joyce Harman with a foreword by Karl T Compton. New York The Macmillan Company 1949 304 p. illus. 22 cm. (Massachusetts Institute of Technology Studies of innovation) $3 95 2202

Contents: The scientific pioneers of radio. The impact of new scientific advances on established industry. The process of invention and innovation—Marconi and the wireless telegraph 1896–1900—Fessenden, De Forest and the early wireless telephone. The role of the large electrical firms in wireless: *1912–1921. The struggle over* patents: 1921–1928. The perennial gale of competition 1928–1941. The rise of industrial research—Radio 1900–1941—Television. Government regulation and technical progress—*FM* and television 1900–1941. Conclusions. *Appendixes: The elements of modern radio communications.* Radio patent litigation. Bibliography. Index.

Note: Essentially history of the radio and television industry from an economic-technical point of view. This book portrays the complicated interrelationships of basic inventions, patents and patent litigation, and the policies and organizational activities of large corporations which have figured in the developments of this industry especially in the United States of America. Technical details of vacuum tubes, radio circuits, and related apparatus are discussed but the main interest is in the influence of the important inventions and patents. Thus the book covers an aspect of technical development which is often ignored in writing the history of invention. It is heavily documented with references to both published and unpublished material.

THE RADIO AMATEUR'S HANDBOOK. Twenty ninth edition. West Hartford, Conn. The American Radio Relay League, 1952 549 p. illus. 24 cm. $3 00 2203

Contents: Amateur radio. Electrical laws and circuits. Vacuum-tube principles. High-frequency communication. High-frequency receivers. High-frequency transmitters. Power supplies. Keying and break-in. Speech amplifiers and modulators. Amplitude modulation. Frequency and phase modulation. Reduced-carrier and single-sideband transmitting techniques. Transmission lines. Antennas. Above V.H.F. V.H.F receivers. V.H.F transmitters. V.H.F antennas. U.H.F and microwave communication. Mobile equipment. Measuring equipment. Assembling station. BCI and TVI. Construction practices. Operating station. Miscellaneous data. Vacuum-tube data. Catalog section. Index.

Note: ([illegible]) A long established reference work written primarily for the amateur radio enthusiast. Material on theory and design *fundamentals is included, but the main emphasis is on functions,* characteristics, and details of apparatus. In this edition special attention is given to problems of radio amateur interference with television transmission; the information regarding new equipment has been brought up to date; and chapter on amplitude modulation has been added. Such useful reference features as circuit diagrams, symbols, and tube characteristics have been retained. An advertising or catalogue section runs to 143 pages.

RIDER JOHN FRANCIS, AND SEYMOUR D USLAN

F M transmission and reception. Second edition. New York John F Rider Publisher Inc. 1950 426 p. illus. 22 cm. $4 95 2204

Contents. Part I: *Fundamental considerations.* Frequency modulation. *Essentials of F-M transmitters.* Transmitters of today. The transmission of F-M signals. *Part II:* Receiving antennas. The F-M receiver. Alignment of F-M receivers. Servicing F-M receivers. *F.M. in* television receivers. Appendix. Bibliography. Index.

Note. ([illegible]) A practical introduction for radio amateurs, radio repairmen, and other persons who already have knowledge of amplitude modulated radio and of the technical terminology of radio. *It is suitable for use in organized classes at trade schools and also* as self-instruction text for men studying the subject at home. The text of the present edition is the same as the first, except that the chapter on FM in television receivers has been added. Also the review questions that were added in the sixth printing of the first edition have been retained.

SHEINGOLD ABRAHAM

Fundamentals of radio communications. New York D Van Nostrand Company Inc. 1951 442 p. illus. 24 cm. (The Van Nostrand series in communications engineering edited by Herbert J Reich) $5.25 2205

Contents: General principles of radio communication. Electric circuit fundamentals. Basic radio circuit components. Basic radio circuits. Transfer of power in radio systems. Generation and propagation of radio waves. Fundamental principles of electron tubes. Operational characteristics of electron tubes. Amplification of small alternating voltages. Amplification of large alternating voltages. Rectifiers and rectifier-filter d-c sources. Sine-wave oscillators. Amplitude modulation—A-M transmitters. Detection—reception of A-M signals. Frequency conversion—the superheterodyne receiver. Frequency modulation. Basic pulse circuits. Ultra high-frequency techniques. Image-transmission systems. Special communication techniques. Radar and radio navigation systems. Index.

Note: A new textbook written by member of the faculty of the *United States Naval Postgraduate School. It is suitable for students* who have an advanced technical interest in the field but lack knowledge of mathematics beyond college algebra. No previous education in radio has been assumed. The book is especially good for discussions of elements such as "squelch" circuits which are omitted from typical introductory books on radio.

SLURZBERG, MORRIS, AND WILLIAM OSTERHELD

Essentials of electricity for radio and television. Second edition. New York McGraw-

Hill Book Company Inc. 1950 533 p. illus. 24 cm. $6.00 2206

Contents: Communication. Basic theory of electricity. Batteries. Electric circuits. Magnetism. Meters. Electrical power apparatus. Inductance. Capacitance. Alternating-current circuits. Resonance. Basic electronic circuits. Appendix. Index.

Note: (1860) An introductory book designed for the instruction of men who are preparing for practical work in radio and television installation and maintenance. Although the treatment is essentially descriptive and mathematics beyond elementary algebra is not employed, it is somewhat more substantial book than the conventional practical text. The first edition was published in 1944. Important changes and additions were made in preparing this edition. Electric circuit phenomena are now explained in terms of electron flow; the scope has been extended to include the elements of television and the discussion of sound has been expanded.

STERLING GEORGE EDWARD AND ROBERT B MONROE

The radio manual. Chapter on television by Thomas T Goldsmith Jr Fourth edition. New York D Van Nostrand Company Inc., 1950. 890 p. illus. 26 cm. $12.00. 2207

Contents: Elementary electricity and magnetism. Motors and generators. Batteries. The electron tube. Amplifiers and oscillators. Amplitude modulation. Frequency modulation systems. Radio-frequency measurements and monitors. Broadcast studio and control room audio facilities. Standard broadcast transmitters. FM broadcast transmitters. Television. Marine radio equipment. Lifeboat radio equipment. Marine navigational aids. Radio wave propagation. Antennas. Radio equipment for the emergency services. Important extracts from the Communications Act of 1934 as amended by Public 97 approved May 20, 1937. F C C. rules and regulations. International telecommunication convention of Atlantic City and radio regulations, 1947. Index.

Note: (1861) A long-established and widely used textbook and reference manual. It is aimed for the student and operator with occupational interests in the field, and is standard work for those who are studying to pass examinations so as to obtain licenses as commercial operators. However it serves also as small encyclopedia of the field for radio amateurs and for engineers. The third edition was published in 1940. For the fourth edition revisions were made to cover developments of the decade 1940–1950 and to cover the latest regulations and standards of the Federal Communications Commission. New chapters and sections have been added on such topics as radio wave propagation, antennas, and radar. Numerous schematic wiring diagrams of commercial equipment are included.

WATSON HERBERT M AND OTHERS

Understanding radio a guide to practical operation and theory by Herbert M Watson Herbert E. Welch and George S Eby Illustrated by Herbert E. Welch. Second edition. New York McGraw Hill Book Company Inc. 1951 716 p. illus. 24 cm. $6 50 2208

Contents (abridged): Radio waves and wave travel. Something about electricity. Magnetism and direct-current meters. Ohms' law by simple mathematics and by meters. How to build and wire the tube circuit board. Principles of the vacuum tube. W ve-form pictures. Alternating currents in radio circuits. Resonance and tuning. Receiving sets using direct-current tubes. The dynamic loudspeakers. Power supplies. Alternating-current receiving tubes. The superheterodyne receiver. Short-wave sets. Public-address units. Power oscillators and amplifier circuits. Radio-telephone transmitters. Antennas. The very high frequencies. Frequency modulation. Looking ahead in radio. Index.

Note. One of the more successful introductions for students with no previous education in mathematics or electricity. In it the fundamentals of electricity are explained in simple terms and with the aid of numerous experiments. Very little mathematics is used, and the special terminology of radio is introduced gradually. The book is suitable for use both in organized classes with laboratory facilities and in home study. A considerable share of the simple apparatus can be constructed at home. In this edition there are many new illustrations, and material has been added on modern tubes, power supplies, public address units, etc.

TELEVISION

ANNER GEORGE E

Elements of television systems. New York Prentice-Hall Inc. 1951 804 p. 22 cm. $10.35 2209

Contents: Part I, Closed television systems: Transmission of pictures. Picture standards. Scanning methods. Scanning generators. Scanning and picture reproduction. Camera tubes. Video amplification. Closed television systems. Part II, The commercial telecasting system. Special problems of telecasting. The optimum number of lines. Synchronization. Vestigial sideband transmission. The video transmitter. Receivers. Stagger-tuned amplifiers. The receiving antenna. Televising motion pictures. Part III, Color television systems. Appendix. Dot systems of television transmission. Problems. Index.

Note: This work by faculty member of the College of Engineering of New York University is treatment from the communication engineer's viewpoint. Though planned for the college student of engineering, it is full enough and the treatment mature enough to make the book useful to such readers as graduate engineers who have been working in radio and are preparing to switch to television. The detailed treatment of closed systems in Part is unusual. The 64-page chapter on color television contains general discussion of the subject and specific descriptions of the leading systems. There is no systematic bibliography but there are occasional footnote references to related articles.

DEUTSCH SID

Theory and design of television receivers. New York McGraw Hill Book Company, Inc. 1951 536 p. illus 24 cm. (McGraw Hill television series Donald G Fink, consulting editor) $7.50. 2210

Contents: Television standards. Characteristics of amplifier and rectifier circuits. Properties of tuned coupling circuits. Antenna and R-f section. Video I-f section. Detector and automatic gain control. Sync circuits. Video amplifiers and D-c restorers. The sound section. Sweep circuits. Video amplifiers and D-c restorers. The sound section. Magnetic deflection and focusing. Power supplies. Automatic frequency control. Intercarrier sound reception. Direct- and projection-viewing systems. Television receiver servicing. Index.

Note: A notable contribution to the literature of television. It is designed for advanced students and other readers primarily interested in the engineering aspects. The emphasis is on established standards, the basic circuits, and the practical design of television receivers. The mathematics essential to the engineering approach is, of course, not avoided. An understanding of standard radio is the main prerequisite.

DOME ROBERT B

Television principles. New York McGraw Hill Book Company Inc., 1951 291 p. illus. 24 cm. (McGraw Hill television series, D G. Fink consulting editor) $6.00. 2211

Contents: Early history of television and some fundamental conceptions. Electronic methods of scanning and reproduction. Television frequency amplifiers. Radio transmitting apparatus. Antennas for transmission and reception. Radio-frequency input circuits and second detectors. Intermediate-frequency amplifiers. Picture second detector. The scanning system. Miscellany. Propagation and relays. Index.

Note: An introductory treatment for engineers who have had no previous acquaintance with the subject. Since it was developed for an audience already familiar with calculus and the fundamentals of electrical engineering, the author has devoted the space entirely to television. Much of the text is descriptive, but mathematics has not been avoided. The book was developed from lectures that formed an after-hours educational course offered by the General Electric Company to its own employees and also to graduate engineering students in Syracuse University. There is an occasional bibliographical footnote.

FINK DONALD G

Television engineering. Second edition. New York McGraw Hill Book Company Inc. 1952 721 p illus. 24 cm. (McGraw Hill television series Donald G Fink, consulting editor) $8.75 2212

Contents: The television system. Analysis and synthesis of images. Camera and picture tubes. Scanning and synchronization methods. Transmission of the video signal. Video amplification. Carrier transmission of picture and sound signals. Color fundamentals. Color television systems. Television broadcasting equipment. Television receiving equipment. Appendix: Standards of good engineering practice. Name index. Subject index.

Note: (1946) The chapter titles fail to indicate the richness of this book's content. The author has included not only good discussions of main points of the subject but also full discussions of subtopics such as the principles of the iconoscope mosaic. His chapter on color television systems runs to 64 pages and describes in detail the various systems that have been developed in laboratories. The book is organized as a textbook for upperclass engineering students, but it is suitable also for graduate electrical engineers in need of an introductory survey of television. There are good bibliographies. The first edition appeared in 1940 under the title *Principles of television engineering*. In this edition the work has been largely rewritten and contains much new material.

Grob, Bernard

Basic television—principles and servicing. New York McGraw Hill Book Company Inc., 1949 596 p. illus. 23 cm. (McGraw Hill television series D G Fink, consulting editor) $7.50. 2213

Contents (abridged): The television system. Camera tubes. Scanning and synchronizing. The composite video signal. The picture carrier signal. Frequency modulation. Television receivers. Picture tubes. Power supplies. Video amplification. Brightness control and d-c reinsertion. Video detector and automatic gain control. Separation of the synchronizing signals. Deflection generators. Deflection circuits. Picture I F stages. The R-F tuning section. Antennas and transmission lines. The associated sound signal and FM receivers. Receiver servicing. Television broadcasting. Color television. Light. Appendixes. List of visual aids materials. Index.

Note: A much fuller treatment of television principles and operation is given in this book than is provided by most elementary texts. The material is almost wholly descriptive, but the discussions are detailed and precise. The work is intended for use in the training of technicians, especially men preparing for occupations associated with the installing and servicing of television receivers. A knowledge of standard radio equipment and terminology is assumed. The author is on the teaching staff of RCA Institutes, Inc.

Helt Scott

Practical television engineering. New York Murray Hill Books, Inc., 1950 708 p. illus. 23 cm. $7.50 2214

Contents: The fundamentals of picture transmission. The cathode-ray tube. The cathode-ray oscillograph. Electron tubes for image pickup. The synchronizing generator—timing, shaping and deflection circuits. The video amplifier and cathode follower. The voltage-regulated power supply. The television receiver. The television camera chain. The television transmitter. Television broadcasting techniques. Glossary. Index.

Note: A detailed presentation of television transmission and reception from the engineering viewpoint. Most of the space is given to matters which are of interest to engineers associated with television broadcasting, but enough is included on television reception to make the picture complete. The work is aimed primarily at practicing engineers at work for broadcasting stations, but it is suitable also for students who are preparing for such work. It is outstanding for its brief discussions of such matters as the special problems of "local remotes" and the routine procedures which are essential to maintaining a television transmitter in peak operating condition. The useful glossary runs to thirty pages and there are plenty of illustrations and reference lists. The author is on the staff of the Research Division of Du Mont Laboratories, Inc.

Kiver, Milton Sol

Television and F M receiver servicing. Second edition. New York D Van Nostrand Company Inc., 1950. 248 p. illus. 28 cm. Paper $3.25 2215

Contents (abridged): The antenna system—operation and installation. Television receiver installation. Television test equipment. The television receiver—operation and servicing. Television receiver alignment. Intercarrier television sound receivers. Trouble shooting television receivers. F M fundamentals. Commercial F M receiver circuits. F-M receiver alignment. F-M receiver servicing. Index.

Note. (1951) A practical guide to the installation and servicing of television receivers and FM radio receivers for men experienced in the servicing of AM radio receivers. Theory and design are discussed only where needed to clarify servicing problems. The scope and arrangement of this revision remain the same as in the previous edition, but new circuits introduced since 1948 are described and analyzed. A chapter on the intercarrier sound television system has also been added.

Kiver, Milton Sol

Television simplified. Third edition. New York D Van Nostrand Company Inc., 1952 608 p. illus. 22 cm. $6.50. 2216

Contents: The television field. U.H.F. waves and the television antenna. Wide-band tuning circuits—R.F. amplifiers. The H F oscillator, mixer and I.F. amplifiers. Diode detectors and A G.C. circuits. Video amplifiers. D-c reinsertion. Cathode-ray tubes. Synchronizing circuit fundamentals. Deflecting systems. A typical television receiver—analysis and alignment. Frequency modulation. Intercarrier television sound system. Servicing television receivers. Color television. Questions. Glossary. Appendix. Index.

Note: (1952) An introductory text addressed to readers with elementary practical interests, particularly men who are preparing for the occupation of repairing home television receivers. Basic principles and standard circuits and circuit elements are described and explained in semi-technical style. Major changes apparent in this edition include a newly added chapter on intercarrier television sound systems and an expanded section on television color systems. The book is more than 150 pages longer.

Lytel, Allan

TV picture projection and enlargement. New York John F Rider Publisher Inc., 1949 179 p. illus. 22 cm. $3.30 2217

Contents: Properties of light: reflection and mirrors. Refraction and lenses. The television picture. Commercial applications of the modified Schmidt projection system. Commercial receivers using refractive projection. Television and motion pictures. Appendix. Bibliography. Index.

Note: Considered from the standpoint of optical systems, there are two basic types of television receivers: those in which the viewer sees the picture directly on the large end of the picture tube, and those in which the picture is enlarged or projected by means of lenses and mirrors so that it appears larger or in a different position. This book is concerned with the optics of the systems of lenses and mirrors used in the second kind of receiver. It is written for such groups as television servicemen who must understand the principles and details of these optical systems in order to repair and adjust them. The book is rather generously illustrated with both diagrams and reproductions of photographs. It is suitable either for use in organized courses or home study.

Mandl Matthew

Mandl's television servicing. New York The Macmillan Company 1952 421 p illus. 24 cm. $5.50. 2218

Contents (abridged): Television receiver fundamentals. Localizing the trouble. Master index to common television troubles. The picture tube and associated components. R-F mixer-oscillator stages. The sound section. Video I F video amplifiers, video detector, and D-C restorer. The sync separator stages. The vertical sweep system. The horizontal sweep system. The power supplies. Repairing and improving antenna systems. Projection television. Test equipment and color receiver sections. The oscilloscope as a modern servicing tool. The sweep generator. The marker and other servicing equipment. Color television servicing. Appendix. Index.

Note: A compactly written, practical book for men in the trade of installing and servicing television receivers. Its chief intended use is as a textbook in trade school classes, but it contains enough specific information on everyday servicing to make it useful to men already at work in the industry. The reference type of use is facilitated by the "Trouble Index" on pages 41 to 51. Most of the book is taken up with the descriptions of systems and other elements of television receivers and with testing and servicing operations. The author is associated with the Technical Institute of Temple University.

RADAR

BELL TELEPHONE LABORATORIES

Radar systems and components. By members of the technical staff of Bell Telephone Laboratories. With an introduction by Mervin J Kelly New York D Van Nostrand Company 1952 1042 p. illus. 23 cm. (The Bell Telephone Laboratories series) $8.50. 2219

Contents (abridged) Early fire-control radars for naval vessels. The magnetron as a generator of centimeter waves: Part I—The magnetron oscillator Part II—Developmental work on the magnetron oscillator at the Bell Telephone Laboratories, 1940–1945. High-vacuum oxide-cathode pulse modulator tubes. Coil pulsers for radar. Spark gap switches for radar The gas-discharge transmit-receive switch. The radar receiver. Reflex oscillators. Development of silicon crystal rectifiers for microwave radar receivers. Characteristics of vacuum tubes for radar IF amplifiers. Radar antennas. Techniques and facilities for microwave radar testing. High Q resonant cavities for microwave testing. End plate and side wall currents in circular cylinder cavity resonator Some results on cylindrical cavity resonators. Index.

Note The Bell Telephone Laboratories, Inc. played a large part in the development and manufacturing of radar and radar devices for use by the United States of America and its allies during World War II. Although this book is not based entirely upon the work of the Bell Telephone Laboratories and its subsidiary the Western Electric Co., all of the authors are or were associated with the BTL. The various chapters are essentially separate essays devoted to the history description, and applications of particular radar components or systems. Electromagnetic fundamentals and component characteristics are discussed in detail at the level of graduate students and graduate engineers in the electronics field. Much of the matter included is of practical use in the design of radar components and systems. Each of the chapters is accompanied by a bibliography

LUCK, DAVID G C

Frequency modulated radar New York McGraw Hill Book Company Inc., 1949 466 p. illus. 24 cm. $6.50 2220

Contents. Part I, Principles and techniques: Introduction. Principles of operation. Radio apparatus used in f-m radar systems. Apparatus for utilization of f-m radar data. Motion of aircraft and missiles. Part II, Applications: Single target f-m radar systems. Accessory circuits and methods of calibration. Developmental single-target systems. Multiple target systems. Index.

Note Conventional radar is based on the principle of pulsed signals. However, a considerable amount of research has been done on the use of frequency-modulated signals in radar The present book is essentially a comprehensive report of this work. It was prepared originally as a report to the Navy under a government contract. It is addressed to graduate engineers who are familiar with the terminology of radio and of pulsed radar.

NATIONAL DEFENSE RESEARCH COMMITTEE

Radio wave propagation Consolidated summary technical report of the Committee on Propagation of the National Defense Research Committee. Charles R. Burrows, chairman. Stephen S Attwood editor New York. Academic Press Inc., 1949 548 p. illus. 28 cm. $12.00. 2221

Contents (abridged) Volume I, Technical survey—Part 1, Summary: Standard propagation. Meteorological measurements. Transmission experiments. Scattering and absorption of microwaves. Part 2 Conference reports on standard propagation: A graphical method for the determination of standard coverage charts. Theoretical analysis of errors in radar due to atmospheric refraction. Siting and coverage of ground radars. Part 3, Conference reports on nonstandard propagation Tropospheric propagation and radio meteorology Incipient leakage in a surface duct. The solution of the propagation equation in terms of Hankel functions. Perturbation theory for an exponential M curve in nonstandard propagation. First order estimation of radar ranges over the open ocean. Volume II, Radio wave propagation experiments—Part 1, Meteorology. Part 2 Miscellaneous experiments: Reflection coefficients. Dielectric constant, absorption and scattering. Echoes and targets. Angle-of-arrival measurements. Volume III, The propagation of radio waves through the standard atmosphere Antennas. Factors influencing transmission. Calculation of radar gain. Coverage diagrams. Diffraction by terrain. Targets. Glossary Bibliography

Note As the subtitle indicates, this volume brings together in condensed form the three-volume report prepared by the Committee on Propagation of the National Defense Research Committee, of which only 210 copies were printed. The report is a technical account of problems relating to radio wave propagation in the atmosphere at frequencies above thirty megacycles, and is written for college-trained radio and electrical engineers. The fundamental principles of propagation, the effect of earth and atmosphere characteristics on radio waves, and the properties of antenna systems are discussed in detail. It will thus be of particular value to engineers responsible for designing, locating, and operating radar systems and countermeasure equipment. The appendix includes an extensive bibliography of technical reports prepared by various governmental and civilian organizations.

REINTJES, J FRANCIS, AND GEOFFREY T COATE

Principles of radar By members of the staff of the Radar School, Massachusetts Institute of Technology Third edition. New York McGraw Hill Book Company Inc., 1952 985 p. illus. 24 cm. $7 75 2222

Contents: Pulsed radar. Timing circuits. Modulators. Indicators. Synchros and servomechanisms. Receivers. Radio-frequency transmission lines. Waveguides. Resonant lines and cavities. High-frequency triode oscillators. Klystrons and magnetrons. Radio-frequency transmitting and receiving systems. Antennas. Propagation. Index.

Note (1952) An authoritative work developed originally for use in the basic course given to selected Army and Navy personnel at the M.I.T Radar School during World War II. The book is concerned primarily with the basic principles and techniques of radar and is not intended to instruct in the operation of particular types of radar equipment. In this revision the general scope and purpose of the previous editions have been retained, but the subject matter has been extensively reorganized and rewritten. The chapters on antennas and propagation, transmitting and receiving systems, wave guides and cavity resonators, have been thoroughly revised and new material added on sweep generators, klystrons, switching operations in transmission-line circuits, and applications of synchros. Many new illustrations have also been included.

CHEMICAL ENGINEERING

BENEDICT MANSON AND CLARKE WILLIAMS editors

Engineering developments in the gaseous diffusion process. New York McGraw Hill Book Company Inc., 1949 127 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division II—Vol. 16) $2.00. 2223

Contents: Part 1, Special plant instruments and devices: Recording mass spectrometer for process analysis, by A. O. Nier and others. Recording ionization chamber for traces of radioactive gases, by A. O. Nier and others. Magnetic gear for torque transfer to closed system, by T. A. Abbott and J. K. Packard. Part 2, Vacuum engineering: Mass spectrometers for leak detection, by A. O. Nier and others. New developments in vacuum engineering, by R. B. Jacobs and H. F. Zuhr. Part 3, Development of heat-transfer equipment: Theory of heat and mass transfer in batch condensation of solids, by W. L. Thompson. Part 4, Absorption of UF and fluorine: Absorption in high-molecular-weight nonaqueous system—uranium hexafluoride in heavy oil, by R. Landau and others. Continuous fluorine-disposal plant, by R. Landau. The reaction of fluorine oxide with sodium hydroxide, by R. Simons and others. Subject index. Author index.

Note: A variety of devices and techniques developed in the course of the engineering design of gaseous diffusion plants for separating uranium isotopes are described in this book. Most of the inventions and developments have potential applications in other fields. An example is the magnetic gear which was developed for transferring motion through the wall of totally enclosed system. Literature references are included for some of the chapters. The book is addressed to graduate engineers.

BROWN, GEORGE GRANGER, AND OTHERS

Unit operations. New York John Wiley & Sons, Inc., 1950 611 p illus. 28 cm. $9 00 2224

Contents (abridged): Part I, Solids: Screening. Handling of solids. Part II, Fluids: The flow of solids through fluids. Flotation. Sedimentation. Transportation of fluids. Pumping and compressing. Gas flow at high velocity. Flow of fluids through porous media. Filtration. Centrifugation. Fluidization of solids. Part III, Separation by mass transfer—the ideal stage concept: Solid-liquid extraction. Liquid-liquid extraction. Vapor-liquid transfer operations. Adsorption. Part IV, Energy and mass transfer rates: Heat transfer. Evaporation. Crystallization. Agitation. Simultaneous heat and mass transfer. Nomenclature. Appendix. Index.

Note: Twelve authors, all members of the Faculty of Chemical and Metallurgical Engineering in the University of Michigan, have collaborated in writing this text in chemical engineering. Each of the chapters is a briefly written exposition of a specific topic. There is much emphasis on mathematical calculation in the solution of practical problems in chemical engineering, and the similarity of the basic principles of many processes is constantly stressed. The exposition is supplemented by numerous illustrations of present-day chemical apparatus and substantial bibliographies.

CHU JU CHIN, AND OTHERS

Distillation equilibrium data, by Ju Chin Chu Robert J Getty Llewellyn F Brennecke and Rajendra Paul. New York Reinhold Publishing Corporation, 1950 304 p. 24 cm. $7.00. 2225

Contents: Binary systems. Ternary systems. Multiple component systems. Bibliography. Index.

Note: A compilation of vapor-liquid equilibrium data which probably includes all of the data published through December 1948. Altogether 176 systems are covered, and full references are given to the sources of the data. The book will be especially useful to chemical engineers.

FLOSDORF EARL WILLIAM

Freeze-drying [drying by sublimation] New York Reinhold Publishing Corporation 1949 280 p. illus. 24 cm. $7.00. 2226

Contents: Introduction. Basic principles. Applications. Changes in products during desiccation from the frozen state and in storage. Equipment used for medical products. Equipment for foods. Appendices: List of U. S. patents. Sherwood's studies with penicillin. Data tables. Imbedding with acrylic plastic. Bibliography. Author index. Subject index.

Note: The drying of selected substances while they are in a frozen state has become important in chemical manufacturing. For example, certain biological materials such as blood plasma, vaccines, antibiotics, bacterial and viral cultures cannot be dried by ordinary methods, but they can be dried with little or no loss in potency by sublimation under vacuum. This book, by one of the leading workers in the field, states the basic theories, describes the chief applications and some of the important "know-how" and provides other useful information. It is addressed to research workers, manufacturers, and other persons with technical backgrounds. There are extensive bibliographies.

GROGGINS PHILIP HERKIMER, editor in-chief

Unit processes in organic synthesis. Fourth edition. New York McGraw Hill Book Company Inc. 1952 937 p illus. 24 cm. (McGraw-Hill chemical engineering series) $12.50 2227

Contents: Nitration, by P. H. Groggins. Amination by reduction, by P. H. Groggins. Diazotization and coupling, by H. E. Woodward. Halogenation, by P. H. Groggins and H. P. Newton. Sulfonation, by P. H. Groggins. Amination by ammonolysis, by P. H. Groggins. Oxidation, by L. F. Marek. Hydrogenation, by M. R. Fenske. Hydroformylation (oxo reaction), by M. Orchin and W. C. Schroeder. Esterification, by E. E. Reid. Hydrolysis, by E. J. Lloyd and W. F. Hamner. Polymerization, by W. P. Hohenstein and H. Mark. Alkylation, by R. N. Shreve. The Friedel-Crafts reaction, by P. H. Groggins. Name index. Subject index.

Note. (XXI*) A widely used textbook of chemical engineering techniques in manufacturing processes that involve organic syntheses. It covers basic principles, operating conditions and factors, typical plant equipment, and contains flow sheets. The information given on many points is detailed enough to make the book of interest to graduate chemical engineers. The previous edition appeared in 1947. In this edition there are many important changes including one completely new chapter.

GUMZ WILHELM

Gas producers and blast furnaces—theory and methods of calculation. New York John Wiley & Sons, Inc. 1950. 316 p illus. 21 cm. $9.00. 2228

Contents (abridged): Part one, Gas producers: Gasification reactions. Gas compositions at equilibrium. Gas composition at incomplete equilibrium. Applications of the nomographical method for associated problems. Mathematical treatment of gas-producer performance. Part two, Blast furnaces: Composition of gas in furnaces. Method of computation. Part three, Reaction kinetics. Appendix. Name index. Subject index.

Note: In this book the processes which take place in gas producers and blast furnaces are treated as problems in chemical engineering which can be solved largely by mathematical methods. These

is necessarily considerable discussion of the chemical sections, but the author's chief contribution is the presentation of the apparently complex purification process as one to which the concepts and techniques of physical chemistry and chemical engineering are applicable. The book is of interest primarily to engineers associated with the steel industry

INDUSTRIAL AND ENGINEERING CHEMISTRY

Modern chemical processes a series of articles describing chemical manufacturing plants By the editors of Industrial and Engineering Chemistry in conjunction with the technical staffs of the cooperating organizations. New York Reinhold Publishing Corporation, 1950 222 p. illus. 29 cm. $5.00 2229

Contents Contact sulfuric acid from sulfur Modern production of chlorine and caustic soda. Iodine from oil well brines. Continuous superphosphate production. Barium potassium chromate pigment. Fine chemicals from coal. Liquid fuel from coal. Synthetic methanol production. Alcohols by sodium reduction. Low temperature manufacture of chemical rubber Carotene and chlorophyll—commercial chromatographic production. Chloroquine manufacture. Paint and varnish manufacture. Petroleum base protective coatings. Drier soap manufacture Continuous distillation of gum turpentine. Selective extraction of vegetable oils with furfural. Solvent extraction of oil from soybeans. Phenolic resin glues for plywood. Oxidation of cellulose. Manufacture of basic refractory brick. Paving asphalt from California crude oil Citrus fruit processing. Index.

—— —— Volume II New York Reinhold Publishing Corporation, 1952 299 p. illus. 29 cm. $5.00. 2230

Contents. Chemicals from fats. Amyl compounds from pentane. Phenol by sulfonation. TNT into phloroglucinol. Commercial development of glyoxal. Bacitracin—product of biochemical engineering. Reagent grade chemicals Lithium and its compounds. Calcium cyanamide. Cyanides from the coke oven. Pioneer surfactant. Edible oils. Cane sugar refining Brewing Food yeast from sulfite liquor Modern winemaking. Platinum reforming of gasoline. Liquid fuels from oil shale. Modern sulfur mining. Sulfur from sour gases. Magnesia-base sulfite pulping Kraft pulp production. Kraft paper making. Rubber reclaiming. Index.

Note In these two volumes, which are the first of a planned series, forty-seven articles that appeared originally in the periodical *Industrial and engineering chemistry* beginning in February 1949 have been collected. Each article is a detailed and specific description of a present-day method of manufacturing the chemical product named in its title. In most instances the method followed in a specified plant is described fully with briefer descriptions of variations followed in plants of other manufacturers Some historical and economic information is included in most of the articles and all are supplemented by photographs, flow sheets, and lists of pertinent literature The chief aim of the work lies in its presentations of methods that are currently in use, thus they supplement the older and more theoretical material available in treatises. The publishers plan to issue an additional volume every two years.

LAUER, BYRON ELMER AND RUSSELL F HECKMAN

Chemical engineering techniques. New York Reinhold Publishing Corporation 1952 496 p. illus (part col d) 24 cm. $6.00. 2231

Contents (abridged) Section i, The assembly of materials: Interplant transportation. Intraplant transportation Storage of materials. Section ii, The preparation of materials for reaction Size reduction. Size classification. Section iii, The production and distribution of energy: Energy sources The storage, distribution and conservation of energy Section iv Conditions affecting the chemical reaction Measuring and proportioning materials. Mixing of materials. Reaction vessels. Section v The separation and purification of materials: Separation of solid from solid Separation of liquid from solid. Separation of gas from solid. Separation of solid from liquid. Separation of liquid from liquid Separation of liquid from gas. Separation of gas from gas. Section vi, Further treatment of products for sale, shipment, storage, or other use. Preparation of materials for marketing. Measurement of physical and chemical qualities. Packaging Index.

Note An unusual treatment in which methods and equipment for handling materials, measuring and proportioning them, separating them, and packaging them are covered rather than unit processes. The expository matter is practically all descriptive and almost devoid of mathematics and chemical formulas. Types of equipment are described in general and selected few are shown in the illustrations, but the authors have not attempted to describe particular makes or even typical installations. The book is suitable for use as a supplementary text in college courses and as a general survey for manufacturers and graduate chemical engineers. There are 100 figures but no literature references.

LEE, JAMES A.

Materials of construction of chemical process industries. New York McGraw Hill Book Company Inc. 1950 468 p. illus. 24 cm. (McGraw Hill chemical engineering series) $7.00. 2232

Note A handbook designed to aid chemical engineers in selecting materials for equipment used in the production and handling of corrosive substances. The arrangement of the book is alphabetical according to substance; for example, under B are found barium carbonate barium chloride, beer benzene benzaldehyde, benzoic acid, benzotrifluoride, etc. Under each substance most of the [illegible] is concerned with the material but in many cases there is also a brief outline of the manufacturing process together with references to one or more periodical articles or books where the manufacturing process is described more fully At the end of the book a directory identifies the trade-names of corrosion-resistant alloys and other materials, gives the manufacturers' name, and the chemical description. Much of the material has been drawn from *Chemical engineering* and its predecessor *Chemical and metallurgical engineering*.

LEVA, M AND OTHERS

Fluid flow through packed and fluidized systems By M Leva, M. Weintraub, M. Grummer M Pollchik, and H. H. Storch. Washington D C. Government Printing Office 1951 149 p illus. 26 cm. (United States. Bureau of Mines. Bulletin 504) Paper, $1.00. 2233

Contents: Introduction. Literature survey Pressure drop through packed tubes, turbulent flow: General correlation. Effect of surface roughness. Prediction of voids in packed tubes. Comparison between tower packings. Pressure drop through packed tubes, viscous flow: General correlation. Generalized pressure-drop equation. Shape-factor estimations. Fluidization of solids: Vesicular and nonvesicular particles. Fluidization of nonporous particles. Fluidization of [illegible]. Fischer Tropsch catalyst. Fluidization of mixed materials. Solid-liquid systems. Fluidization of porous material. Channeling. Fluidized beds. Summary of design equations. Nomenclature. Appendix (tables)

Note. The first five pages of this bulletin report the results of an extensive literature search which was made following the development of new processes for the production of synthetic liquid fuels. This search showed that considerable uncertainty existed in the correlation of the operating variables of these new types of converters with the pressure drops which could be expected through packed and fluidized systems. Since the pressure-drop correlations reported in the literature were found to be too inaccurate for use in calculating the energy required to pass fluids through packed beds, the original study reported in the remainder of the bulletin was carried out in order to develop correlations that would be suitable for the design of new equipment in which fluids are brought into contact with granular materials. To arrive at general relationships, systems were chosen that did not involve chemical reactions, and correlations are given only in terms of quantities that are ordinarily available from general process and design specifications.

MANTELL CHARLES LETNAM

Adsorption. Second edition. New York. McGraw Hill Book Company Inc. 1951. 634 p illus. 24 cm. (McGraw Hill chemical engineering series) $9 00 2234

Contents (abridged) The unit operation of adsorption. Theories of adsorption. Fuller's earth and activated clays. Aluminum oxide base materials. Bone char and related materials. Decolorizing carbons, water-treatment carbon. Gas-adsorbent carbons. Silica gel. [illegible]

exchangers. Magnesia base materials. Solvent recovery and concentration. Odor removal, air purification and recovery. Gas masks. Fractionation of liquid hydrocarbons. Fractionation of gases. Fractionation of ions. Adsorbents in refining of sugar and related substances. Water treatment. Adsorbents in medicine and pharmacy. Chromatographic adsorption. Inspection, specifications, and testing of adsorbents. Appendix. Index.

Note: ([illegible]) Adsorption, the concentration of gases, vapors, etc., on the surfaces of solids where they are held by surface forces, is employed in a wide range of industrial chemical processes. This standard book is devoted mainly to descriptions of adsorbents and discussions of the employment of adsorption and adsorbents in industrial chemical processes. It is of particular interest to chemical engineers, but parts are of interest to men in other fields such as air conditioning. In this edition there is much new material on industrial applications that have been developed since the first edition was prepared. Selected patents and papers are cited in footnotes.

Nachod, Frederick C, editor
Ion exchange, theory and application. New York Academic Press, Inc., 1949 411 p. illus. 24 cm. $9.50 2235

Contents: Introduction, by F C. Nachod. Ion exchange equilibria, by H. F Walton. The kinetics of fixed-bed ion exchange, by H. C. Thomas. Fundamental properties of ion exchange resins, by W C. Bauman. Ion exchange equipment design, by M. E. Gilwood. Ion exchange in water treatment, by C. Calmon. Multistage systems in ion exchange, by A. F Reid. Desalting sea water by H. L. Tiger and S. Sussman. Applications of ion exchange to the separation of inorganic cations, by J. Schubert. Ion exchange as a tool in analytical chemistry by W Rieman III. Metal concentration and recovery by ion exchange, by S. Sussman and F C. Nachod. Catalytic application of ion exchangers, by S. Sussman. The use of ion exchange adsorbents in biochemical and physiological studies, by M. Applezweig. The separation of amino acids by ion exchange chromatography by R. J. Block. Sugar refining and by-product recovery by A. B. Mindler. Ion exchange recovery of alkaloids, by N. Applezweig and F C. Nachod. Miscellaneous applications of ion exchange, by F K. Lindsay and D. G. Braithwaite. Appendix. Author index. Subject index.

Note: This volume is essentially a symposium, prepared by experts, on present-day applications of ion exchange in various branches of research and industry. Theoretical aspects of the subject are discussed at some length but the emphasis is upon methods, techniques, and equipment. References to periodical articles and patents are cited at the end of each chapter.

Perry, John Howard, editor
Chemical engineers' handbook, prepared by a staff of specialists. Third edition. New York McGraw Hill Book Company Inc., 1950 1942 p illus. 25 cm. (McGraw-Hill chemical engineering series) $17.00. 2236

Contents: Mathematical tables and weights and measures. Mathematics. Physical and chemical data. Physical and chemical principles. Flow of fluids. Heat transmission. Evaporation. General theory of diffusional operations. Distillation and sublimation. Gas absorption. Solvent extraction and dialysis. Humidification, dehumidification, and cooling towers and spray ponds. Drying. Adsorption. Mechanical separations. Size reduction and size enlargement. Mixing of materials. High pressure technique. Process control. Movement and storage of materials. Materials of construction. Fuels. Furnaces and kilns. Power generation and mechanical power transmission. Refrigeration. Plant location. Electricity and electrical engineering. Electrochemistry. Accounting and cost finding. Safety and fire protection. Index.

Note: ([illegible]) A standard reference handbook for chemical engineers, industrial chemists, executives of companies manufacturing chemicals, and students. The titles of the various sections are given above. The typical section is composed of several compact papers which cover theory, equipment, practices, and a range of technical data. In this edition the page size has been increased and the text is now printed two columns to the page. The new size permits a larger scale in the illustrations which is a definite advantage. The organization and scope are essentially the same but eight new sections have been added and four sections that appeared in the preceding edition have been dropped. Extensive revisions are evident in most of the sections carried over from the second edition.

Pierce David E
Chemical engineering for production supervision. Second edition. New York McGraw Hill Book Company Inc. 1950 290 p illus. 23 cm. (McGraw Hill chemical engineering series, S D Kirkpatrick, consulting editor) $5 00 2237

Contents: General principles of chemistry and physics. Transformation of energy. Heat transfer. Evaporation. Distillation. Drying. Flow of fluids. Absorption. Appendixes. Answers to problems. Index.

Note: ([illegible]) A book designed to serve chemical-plant production supervisors as a memory refresher, reference book, and guide. In it the essential facts and principles of the unit operations of chemical engineering are concisely presented with the mathematical treatment limited to the use of, rather than the derivation of, formulas. Illustrative examples included in each chapter show the way calculations may be made, and many unsolved examples are provided for practice in using these methods. The first seven chapters of this edition are the same except for minor emendations as the same chapters in the first edition ([illegible]). The eighth chapter entitled Absorption is new

Robinson Clark Shove, and Edwin R. Gilliland
Elements of fractional distillation. Revised and rewritten by E. R. Gilliland. Fourth edition New York McGraw Hill Book Company Inc., 1950 492 p. illus. 24 cm. (McGraw Hill chemical engineering series) $7.50 2238

Contents (abridged) Determination of vapor-liquid equilibria. Calculation of vapor-liquid equilibria. General methods of fractionation. Simple distillation and condensation. Rectification of binary mixtures. Special binary mixtures. Rectification of multicomponent mixtures. Extractive and azeotropic distillation. Batch distillation. Vacuum distillation. Fractionating column design. Fractionating column auxiliaries. Appendix. Index.

Note: ([illegible]) As in the previous editions of this standard text for advanced chemical engineering students, approximately equal attention is given to basic principles and to the application of these principles in the solution of distillation problems and the design of distillation apparatus. In this edition, however, more emphasis is placed on methods involving the calculation and use of vapor-liquid equilibria. Such topics as batch and vacuum distillation have been expanded to chapter length, and the detailed description of fractionating column design and performance now covers three chapters. The book as a whole has been doubled in size and so extensively rewritten as almost to constitute a new work.

Sherwood Thomas Kilgore and Robert Lamar Pigford
Absorption and extraction Second edition. New York McGraw Hill Book Company Inc. 1952 478 p illus 24 cm. (McGraw-Hill chemical engineering series, S D Kirkpatrick, consulting editor) $7 50 2239

Contents. Diffusion. Eddy diffusion. Transfer of material between phases. Simultaneous heat and mass transfer. Principles of the design of absorption equipment. Design principles for multicomponent systems. Gas absorption equipment. Performance of absorption equipment. Simultaneous absorption and chemical reaction. Solvent extraction. References. Index.

Note ([illegible]) A rather full treatment of two fundamental and important operations in chemical engineering. The emphasis is on fundamental notions and typical equipment rather than on specific applications. However, numerous applications are mentioned in passing. The book is primarily a text for upperclass students of chemical engineering, but some parts are full enough to be useful to graduate engineers. There is a bibliography of [illegible] references. This edition consists largely of material that did not appear in the original edition.

Treybal, Robert Ewald
Liquid extraction. New York McGraw Hill Book Company Inc., 1951 422 p. illus. 23 cm. (McGraw Hill chemical engineering series) $8.00 2240

Contents: Introduction. Liquid equilibria. Prediction of distribution. Choice of solvent. Diffusion and mass transfer. Methods of

calculation—stagewise contact with single solvent—stagewise contact with mixed and double solvents—continuous countercurrent contact. Equipment for stagewise contact. Equipment for continuous countercurrent contact. Liquid-extraction processes. Problems. Name index. Subject index.

Note: A treatise on the application of liquid extraction techniques to industrial operations. It is organized so that it may be used in courses offered to graduate students of chemical engineering. It is also suitable as survey of the subject for working chemists whose academic education did not include course in the subject. Basic principles and techniques are emphasized rather than details of particular applications and equipment. Even in the chapters on equipment the emphasis is on types rather than on specific installations. Numerous graphs and tables of engineering data are included. Statements in the text are key-numbered to the extensive list of references. The author is Professor of Chemical Engineering in New York University

VILBRANDT, FRANK CARL

Chemical engineering plant design Third edition. New York McGraw Hill Book Company, Inc., 1949 608 p. illus. 23 cm. (McGraw Hill chemical engineering series) $7.50. 2241

Contents: Introduction. Foundations. Drainage. Piping installation. Pumps and pumping. The building. Power and power transmission. Development of the design project. Flow diagrams. Selection of process equipment. Plant layout and elevation. Locating the chemical plant. Preconstruction cost estimating. Appendices. Index.

Note: (1444) A well-known work used as text in engineering college courses and as desk book by practicing chemical engineers. It is introductory to the subject of plant design but it is intended for readers who have fundamental knowledge of chemical engineering. Although important additions and revisions were made in preparing the present edition, the greater part of the text is unchanged. Approximately half of the increase in pages is accounted for by major expansion of the chapter on estimating of cost before construction. Other changes are widely scattered throughout the work and have to do with numerous topics such as the size of the steam pipes, safety and the design of pilot plants. The lists of collateral reading have been revised.

APPLIED CHEMISTRY

GENERAL

BENNETT H., editor-in-chief

The chemical formulary a collection of valuable, timely practical, commercial formulae and recipes for making thousands of products in many fields of industry Volume IX. New York. Chemical Publishing Company Inc., 1951 648 p. 22 cm. $7.00 2242

Contents (abridged) Adhesives. Cosmetics and drugs. Ceramics, glass, and cement. Colloids. Farm and garden products. Food. Ink and marking compounds. Insecticides, fungicides, and weed killers. Leather, skins, and furs. Lubricants and oils. Metals and their treatment. Paint, varnish, lacquer and other coatings. Paper. Photography. Polishes. Pyrotechnics and explosives. Rubber resins, plastics, and waxes. Soaps and cleaners. Textiles. Tables. Trade-mark chemicals. Chemicals and supplies: where to buy them. Sellers of chemicals and supplies. Index.

Note: (1933) The present volume of well-known reference set contains formulas and recipes that have not appeared in the previous volumes. Of interest to small manufacturers, industrial chemists, and also to the amateur mechanic looking for such information as how to plate plastics.

ENCYCLOPEDIA OF CHEMICAL TECHNOLOGY edited by Raymond E. Kirk and Donald F Othmer Volumes 3–9 Carbon to penicillin. New York The Interscience Encyclopedia, Inc., 1952 944 p illus. 27 cm. $25.00 per volume. 2243

Note: (1938*) A valuable reference work, Volume 1 of which was published in 1947 Originally announced for completion in ten volumes, it is now scheduled for completion with Volume 14. Volumes 3 to 9 continue the pattern set by the earlier volumes, and contain entries which range in length from short definitions to long encyclopedic articles, most of which are signed and include selective but extensive bibliographies. A few of the longer, more important articles in this run of volumes are: Catalysis, 26 p.; cement products, 43 p.; chlorine and chlorine compounds, 100 p.; cyanides, 67 p.; dairy products, 67 p.; diffusion, 37 p.; dyes, 119 p.; fatty acids, 128 p.; hormones, 73 p.; indexes, 41 p.; literature of chemical technology 46 p.; and paint, 34 p.

HAYNES WILLIAMS

American chemical industry Volume IV The merger era 1923–1929 Volume VI, The chemical companies. New York D Van Nostrand Company Inc., 1948–49 2 v 24 cm. $12.00 per volume. 2244

Contents (abridged) Volume IV Part one, The booming twenties: The return to normalcy. The state of trade. American chemical mergers. Foreign cartels and trusts. Part two, Inorganic chemicals: Contact acid from brimstone. Nitric acid from ammonia. Phosphorus compounds. Electrolytic competition in alkalies. Other industrial chemicals. Part three, Organic chemicals: Alcohol under prohibition. Wood chemicals meet synthetic competition. Solvents lead organic progress. Crudes and intermediates. American dyes build firm base. Part four, Medicinal and other fine chemicals: Coal-tar medicinal chemicals. The fine chemicals. Drug products and pharmaceuticals. Scents and flavors—synthetic and natural. Part five, The consuming industries: Fertilizers. New pest-control chemicals. From plastics to resins. Oils and pigments. Rayon and other textiles. Petroleum and tetraethyl lead. Chemicals in industry. Broadening chemical horizons. Appendix. Book titles. Company and personal name index. Subject index. Volume VI Company histories: Abbott Laboratories. Air Reduction Company Inc. American Aniline Products, Inc. American Cyanamid Company. American [illegible] Chemicals Corporation. J T Baker Chemical Company. Binney & Smith Company. Burroughs Wellcome & Co. (U.S.A.) Inc. Celanese Corporation of America. Colgate-Palmolive-Peet Company. The Davison Chemical Corporation. Durez Plastics & Chemicals, Inc. Eaton Chemical and Dyestuff Company. Fisher Scientific Company. General Ceramics and Steatite Corporation. General Electric Company. Johns-Manville Corporation. Masonite Corporation. National Dairy Research Laboratories, Inc. Pittsburgh Coke & Chemical Company. The Quaker Oats Company. Shell Development Company. Union Carbide and Carbon Corporation. United States Rubber Company. [illegible] & Company Inc. Name index. Products index.

Note. (1940*) These volumes form part of comprehensive history begun in 1945 with volumes II and III, and planned for completion in six volumes. The material is based both on published data and on first-hand information gained from men who took part in the events described. Volume IV follows the pattern set by volumes II and III, and includes in the appendix much statistical data on prices, production, imports, and tariffs. Also included are portraits of leading figures and extensive bibliographies. Volume VI departs from the chronological arrangement of the previous volumes, and provides brief histories of 219 companies which have played leading part in the development of the American chemical industry. Volumes and covering the periods 1800–1910 and 1930–1939 are in preparation.

LESSER, MILTON A.

Modern chemical specialties. New York Mac Nair Dorland Company, 1950 514 p. illus. 24 cm. $7.25 2245

Content (abridged) Detergents and cleaners: Dishwashing detergents. Industrial hand cleaners. Medicated soaps. Dog soaps. Carpet, rug and upholstery cleaners. Cleaning and polishing cloths. Paint, varnish and wall paper cleaners. Rust removers. Polishes: Furniture polishes. Glass cleaners, polishes and antimists. Aluminum cleaners. Metal polishes. Auto polishes. Floor care products: Floor soaps and cleaners. Wax floor polishes. Floor oils and sweeping compounds. Crack fillers. Textile products: Laundry bluings. Laundry starches. Laundry sours. Laundry bleaches. Mildew preventatives. Moth products. Products for leather care: Leather cleaners and renovators. Saddle and leather soaps. Colored shoe polishes. Industrial and household specialties: Washroom sanitation specialties. Cooling system cleaners. Boiler compounds. Paint and varnish removers. Water softeners. Air deodorizers. Index.

Note: A practical compendium of information about the manufacture of household and industrial products of the kinds mentioned in the chapter titles. In each section there is generalized discussion of the nature and uses of the class of product, discussion of some aspects of its manufacture, and variety of formulas. Literature references are provided for each chapter.

MCCORD CAREY PRATT, AND WILLIAM N WITHERIDGE

Odors physiology and control. New York McGraw-Hill Book Company Inc., 1949 405 p. illus. 23 cm. $7.00 2246

Contents: The anatomy of the olfactory system. The physiology of the olfactory sense. Chemical constitution and odors. Odor classification. Odor detection and measurement. The pathology and perversions of the olfactory system. The influence of odors on health and comfort. Human body odors in health. Human body odors in disease. Odors in the diagnosis of disease. Household odors. Odors of wastes and foods. Industrial odors. The offensive trades. Air conditioning and odors. Chemical and physical destruction of odors. Odor masking. Odor cancellation and counteraction. The sorption of odors. Odors as warning agents. Odor repellents and odor attractants. The making of an odor survey. The legal aspects of odor nuisances. Bibliography. Index.

Note: In the main this substantial work is concerned with offensive odors, and the subject is treated from the viewpoint of persons concerned with ventilation of buildings, public health, etc.

However allied topics such as the use of [illegible] as means of [illegible] in [illegible] emergencies are included. There is also [illegible] able amount of discussion of the use of chemical agents in the control of human body odors. Although comprehensive and written in the style of monograph, the work is readable and the presentation of facts is sometimes flavored with humor. The bibliography runs to 115 pages and is classified though not annotated. It includes more than seven pages of citation of legal cases involving odors.

MANTELL, CHARLES LETNAM
Industrial electrochemistry Third edition New York McGraw Hill Book Company, Inc., 1950. 781 p illus. 23 cm. (McGraw Hill chemical engineering series) $9 00. 2247

Contents (abridged) Part I, Theoretical electrochemistry: Electrolytic dissociation and conductance. Electromotive force and energy relations. Part II, Technical electrochemistry: Electrochemical analysis. Electrolytic reduction and oxidation. Corrosion. Colloid electrochemistry. Primary cells. Rectifiers and lightning arresters. Part III, Electrolytic: Metal deposition and solution. Electroplating and electroforming. Electrorefining of metals. Electrolysis of alkali halides and sulfates. Electrolysis [illegible] fused salts. Part IV Electrothermics: Electric furnaces for metal making. Metallic electrothermal products. Calcium carbide and cyanamide. Nonmetallic electrothermal products. Part [illegible] Electrochemistry of gases Electrical discharges in gases. Electronics. Part VI, Engineering Materials of construction. Power generation and economics. Appendix. Name index. Subject index.

Note. (1951) An established text and reference book suitable for its treatment of electrochemistry as [illegible] branch of chemical engineering. The basic theories are covered in the first eighty pages. The remainder of the book is devoted to the industrial processes in [illegible] electrochemistry plays [illegible] part. The inclusion of such topics as corrosion and lightning arresters indicates the breadth of view of the field taken by the author. There are no new chapters in this edition, but matter has been added throughout the book, usually in the form of new paragraphs. Additions have been made to the bibliographical footnotes, and there [illegible] many new illustrations.

MELLAN IBERT
Industrial solvents Second edition New York Reinhold Publishing Corporation 1950 758 p. illus. 24 cm. $12.00. 2248

Contents The nature of solution. Solvents, latent solvents, nonsolvents. Vapor pressure, evaporation rate, boiling point. Viscosity. The industrial application of solvents. Safe handling of solvents. Hydrocarbon solvents. Halogenated hydrocarbons. Nitroparaffins. Amines. Alcohols. Furfural. Ketones. Acids. Ethers. Esters. Selected bibliography. Author index. Subject index.

Note (1951) This comprehensive work is [illegible] basic reference tool in chemical manufacturing. It contains in textual, graphical, and tabular form [illegible] vast amount of information regarding the physical and chemical properties and applications of commercially useful solvents. Extensive rewriting and the inclusion of new data account for almost 300 additional pages in this edition. More specifically the former appendix on nitroparaffins has been expanded to chapter length; there are new chapters on amines and furfural, and the chapter on alcohols has been considerably enlarged. Chapter references have been brought up to date and an extensive bibliography has been added.

RIEGEL EMIL RAYMOND
Industrial chemistry an elementary treatise for the student and general reader with the support of a large number of collaborators Fifth edition. New York Reinhold Publishing Corporation 1949 1015 p illus. 24 cm. $8.00 2249

Contents (abridged) Sulfuric acid. Nitric acid. Salt, hydrochloric acid, bromine. Sodium sulfide, sodium hyposulfite. Caustic soda and chlorine. Synthetic nitrogen products. Phosphates. Fertilizers. Portland cement. Ceramic industries. Fuels. Chemical utilization of wood. Industrial gases. Processes based on the activity of yeasts and bacteria. Synthetic textile fiber. Sugars. Synthetic and semi-synthetic organic chemicals. Manufacture of dyes. Animal and vegetable oils, fats, and waxes. Pigments, paints. Soap, synthetic detergents. Chemical explosives. Synthetic resins. Photographic films, plates, and papers. Insecticides and fungicides. Rubber. Appliances used by the chemical engineer. Pig iron. Steel. Copper lead, zinc, tin, mercury. Gold, silver platinum, radium, uranium, thorium, and cerium. Appendix. Index.

Note (1953) As in earlier editions of this standard work, [illegible] range of information is included on the major chemical industries and the major industrial chemicals. The chemical engineering aspects are stressed, but there is also considerable information on the economic aspects. In this edition the chapter headings and general scheme of the book are unchanged from the 1942 edition. However, the many advances in industrial chemistry during World War [illegible] made extensive revisions necessary and many of the chapters have been radically changed. Among these are the chapters on glass, water and sewage, sugar, petroleum, and photography. Some of the material which appeared in the fourth edition was deleted. As in earlier editions each chapter is accompanied by [illegible] list of references to the literature.

SNELL, FOSTER DEE, AND CORNELIA T SNELL
Chemicals of commerce. Second edition. New York D Van Nostrand and Company Inc., 1952 587 p. 22 cm. $6.50. 2250

Contents Introduction. Inorganic acids. Bases or alkalies. Sodium salts of inorganic acids. Potassium salts of inorganic acids. Organic [illegible] compounds of sodium and potassium. Ammonium and lithium compounds. Calcium compounds. Barium, strontium and magnesium compounds. Compounds of nickel, cobalt, manganese and zinc. Compounds of aluminum, chromium and iron. Arsenic, antimony [illegible] and tin. Copper cadmium and bismuth. Lead, silver [illegible] and mercury. Miscellaneous metals and compounds. Carbon and [illegible] cellulosic materials with their esters and related compounds. Hydrocarbons, other than those from petroleum, and their simple halogen derivatives. Petroleum hydrocarbons and related products. Alcohols and mercaptans. Phenols and their derivatives. Aldehydes and ketones and their derivatives. Organic acids and closely related [illegible] compounds. Amines, nitro compounds, and various organic nitrogen compounds. Organic dye derivatives. Esters. Fats and fatty oils. Waxes. Ethers. [illegible] Tanners, lakes and pigment colors. Natural plant and animal [illegible] Extracts of natural products. Alkaloids, glucosides, and [illegible] Essential oils and oleoresins. Natural gums, resins and balsams. Synthetic resins and synthetic [illegible]. Carbohydrates. [illegible] Vitamins, sterols, antibiotics and hormones. Appendix.

Note A reference book of general and technical information on chemicals of commercial importance. Miscellaneous materials such as borax lumber are described as to chemical nature, commercial grades, and uses. Chemicals of more precise composition are described in terms of chemical properties, solubility, method of preparation, and chief uses. The descriptions range from [illegible] few lines to half [illegible] page in length. The book is addressed to purchasing agents and other persons who need commercial and practical information rather than to chemists. The lack of an index hampers somewhat the use of the book as [illegible] quick reference manual.

STORCH HENRY HERMAN AND OTHERS
The Fischer Tropsch and related syntheses including a summary of theoretical and applied contact catalysis. By Henry H. Storch, Norma Golumbic and Robert B Anderson. New York John Wiley & Sons, Inc., 1951. 610 p illus. 23 cm. $9 00. 2251

Contents Structure and reactivity of hydrogen, carbon monoxide [illegible] iron, cobalt, and nickel and the thermodynamics of the hydrogenation of carbon monoxide and related processes. An introduction to heterogeneous catalysis. Development of Fischer-Tropsch catalysts. Fischer-Tropsch process development. Processes related to the Fischer-Tropsch. Kinetics and reaction mechanism of the Fischer-Tropsch synthesis. Name index. Subject index.

Note The synthesis of aliphatic hydrocarbons from carbon monoxide is [illegible] chemical process of great potential use. This book is [illegible] substantial addition to the literature of the subject. It is based primarily on investigations of German progress and practice in the field that were made by teams of British and American investigators just after the close of World War II. Essentially it is [illegible] digest of papers pertaining to the subject that were obtained in Germany by the investigating teams. This material has been supplemented to some extent by the results of work done in the United States of America in more recent years. The authors are all associated with the Office of Synthetic Liquid Fuels of the United States Bureau of Mines. The book is addressed to industrial chemists and chemical engineers.

PLASTICS

SCHILDKNECHT CALVIN EVERETT

Vinyl and related polymers, their preparations properties, and applications in rubbers, plastics, fibers and in medical and industrial arts. New York John Wiley & Sons Inc. 1952 723 p. illus. 24 cm. $12.50. 2252

Contents: Styrene polymerization. Styrene copolymerization. Styrene derivatives and related polymers. Methacrylic and acrylic ester polymers. Acrylonitrile, acrylic acid and related polymers. Polymers from vinyl acetate and related monomers. Vinyl chloride polymers. Vinylidene chloride and fluorovinyl polymers. Ethylene high polymers and copolymers. High polymers and copolymers of isobutylene. Vinyl ether polymers. Sulfur-vinyl compounds. Nitrogen-vinyl polymers. Vinyl ketones and miscellaneous polymers. Appendix: Abbreviations of publications frequently cited. Companies and organizations cited. Dates of British, French, German and U. S. patents. Index.

Note: The compounds discussed in this book include not only many of the well-known plastics but also ion exchange resins, synthetic fibers, *finishing materials, and adhesives. The treatment is* organized in families or groups as indicated by the chapter titles. Each chapter is mainly an organized critical digest of the pertinent literature, with references to the original publications. Both patents and Allied Intelligence reports were included in the surveyed literature. European and U. S. A. trademarks and names are mentioned at appropriate points and are included in the index.

SIMONDS, HERBERT RUMSEY, AND OTHERS

Handbook of plastics by Herbert R. Simonds Archie J Weith and M. H. Bigelow Second edition. Based in part on first edition by Herbert R. Simonds and Carleton Ellis. New York D Van Nostrand Company Inc., 1949 1511 p. illus. 24 cm. $25.00. 2253

Contents: Survey of the industry. Properties of plastics. Commercial materials. Primary ingredients. Characteristics of the various plastics. Textile fibers. Rubbers and elastomers. Natural resins. Films and sheetings. *Laminates and plywoods.* Coatings. Adhesives. Manufacturing processes. Plant equipment. Processing and fabricating. Finishing operations. Molds. The chemistry of plastics. Analytical methods. Applications. Designing molded parts. Operating practice. Choice of plastic. Cost accounting in the industry. Patents in plastics. World plastics. Bibliography. General index.

Note: (1919) A comprehensive reference book prepared under the auspices of an advisory committee composed of leading figures in the plastics manufacturing and fabricating industries. Its purpose and scope have not been materially changed in this edition, but it has been extensively rewritten and expanded. All of the chapters have been revised—some of them very substantially—and new chapters on adhesives, cost accounting, the plastics industry throughout the world, and patents have been added. The bibliography, glossaries, lists of trade-marks and names, and the extensive tabulations of technical data have all been revised.

CERAMICS

KOENIG JOHN HENRY AND W H. EARHART

Literature abstracts of ceramic glazes. Philadelphia College Offset Press, 1951 395 p. 24 cm. $7.50 2254

Contents: American. Journal of the American Ceramic Society. Bulletin of the American Ceramic Society. Transactions of the American Ceramic Society. Ceramic Industry. Ceramic age (and Ceramist). British: Transactions of the British Ceramic Society. Pottery gazette. Foreign publications. Berichte Deutsche keramische Gesellschaft. Sprechsaal. Keramische-Rundschau. Tonindustrie-Zeitung. Keramos. Ceramique. Miscellaneous foreign and American publications. Transactions of Indian Ceramic Society. Journal, Canadian Ceramic Society. General. National Bureau of Standards. Engineering experiment station publications. Patents. Reference books. Dinnerware bibliography. China specifications. List of references and periodicals. Index.

Note: (1942) A review of the literature of glazes through 1950. As in the previous edition (1942) papers are abstracted in varying lengths depending on their value and on their general accessibility but all important claims, successful glaze formulas, and practices are included. *Each of the sixteen periodicals listed above is treated* separately with the abstracts arranged chronologically beginning with the most recent. There is a subject index but no author index.

NATIONAL RESEARCH COUNCIL. COMMITTEE ON CHEMICAL DATA FOR CERAMISTS

Data on chemicals for ceramic use, formulas, molecular weights, colors, crystal forms, densities refractive indices, melting points, boiling points transition points, decomposition temperatures. Based on report of the Committee on Chemical Data for Ceramists, Division of Chemistry and Chemical Technology National Research Council. Alexander Silverman, chairman. Pittsburgh, Pa. *Published by the University of Pittsburgh for* the National Research Council, National Academy of Sciences Washington, D C. 1949 193 p. 23 cm. (National Research Council. Bulletin Number 118 June 1949) Paper $5 00. 2255

Note: The scope of this work is indicated by the title. The arrangement is alphabetical by names of elements and compounds. Source articles are cited for the data, and the main part of the work is supplemented by an extensive bibliography. Data published in the literature from 1943 to May 1949 have been added in this edition. Citations of the articles have been added to the bibliography

NORTON FREDERICK HARWOOD

Elements of ceramics. Cambridge Mass. Addison Wesley Press, Inc. 1952 246 p illus. 25 cm. $6.50. 2256

Contents: Clay minerals. Origin and occurrence of clays. Properties of clays. Silica and feldspar. Magnesite, lime, dolomite, and chromite. Other nonclay minerals. Mining and treatment of the raw materials. Flow properties of ceramic pastes and slips. Plastic masses. Casting slips. Forming methods. Drying of ceramic ware. Thermochemical reactions. Types of ceramic bodies. Thermochemical changes in clays and bodies. Kilns and settings. Glassy state. Glasses. Glazes. Enamels on metal. Color formation in glasses and glazes. Ceramic stains and colors. Decorative processes. Cements and plasters. Appendix. Index.

Note: An introductory book but a substantial one. It is well organized in short chapters that are supplemented by excellent illustrations and well-chosen references. The appendix contains a variety of information, from detailed directions for constructing small *kilns to calibration data for thermocouples. The work is suitable for* use in introductory college courses, as a desk reference book in the libraries of potteries, and as a source of information for advanced students.

PARMELEE, CULLEN WARNER

Ceramic glazes Second edition edited and revised by E D Lynch and A. L. Friedberg. Chicago Industrial Publications, Inc., 1951 322 p. illus. 24 cm. $8.00 2257

Contents: Definition of glazes. Glaze materials. Calculations. Mixing and milling. Application. Conversion of the batch to the glaze. Leadless glazes. Fritted glazes. Raw lead glazes. Engobes, slips, and underslips. Underglaze and overglaze colors. Glaze defects. Index.

Note: (1975*) A standard comprehensive treatise designed for practical use in the ceramic industries. The first edition appeared in 1948 and contained the same number of pages. The revisions in the present edition are not extensive, however, some important information has been added and detected errors have been corrected. Apparently the type for a considerable number of pages was reset. Before his death the author was associated with the Department of Ceramic Engineering of the University of Illinois and the revisers of the second edition are associated with the same school.

PETROLEUM CHEMISTRY

AMERICAN CHEMICAL SOCIETY

Progress in petroleum technology a collection of the papers presented at the Symposium on Twenty Five Years of Progress in Petroleum Technology held by the Division of Petroleum Chemistry of the American Chemical Society at the Diamond Jubilee meeting in New York, September 3 to 7 1951 Symposium chairman Robert E. Wilson. Washington D C. American Chemical Society 1951 392 p. illus. 24 cm. (American Chemical Society Advances in chemistry series edited by the staff of Industrial and engineering chemistry No. five) Cloth $5 00 paper, $3.00 2258

Contents. Scope of the symposium, by R. E. Wilson. The mechanism of catalytic cracking, by B S. Greensfelder Catalytic cracking in fixed- and moving-bed processes, by D R. Ardern and others. Fluid catalytic cracking process, by E. V Murphree. Intermittent and fixed catalytic reforming of naphthas, by H. G. McGrath and L. R. Hill. Fluid hydroforming, by E. V Murphree. Comparison of platforming and thermal reforming, by V Haensel and M. J. Sterba. Development of reforming catalysts, by M. J Fowle and others. Polymerization of hydrocarbon gases to motor fuels, by P A. Mavity and L. M. Henderson. Commercial alkylation of isobutane, by A. V Mrstik and others. Isomerization, by E. C. Gunness. Synthesis of liquid fuels from natural gas, by J. H. Arnold and P C. Keith Liquid fuels from coal and oil shale, by H. H. Storch. Desulfurization and sweetening, by T Tait. Dewaxing and deasphalting, by W P Gee and H. H. Gross. Solvent extraction in the petroleum industry by G. C. Gester Jr Petroleum distillation, by W E. Bradley and G R. Lake. Internal combustion engine fuels, by R. E. Albright. Tetraethyllead, by G Edgar Petroleum lubricants, by R. J. S Pigott and H A. Ambrose. Domestic fuel oil, by J R. Hill. Natural gas liquids, by B R. Carney Asphalts and waxes, by E C. Hughes and H. F Hardman. Petroleum coke and coking, by C L. Thomas. Aliphatic chemicals, by G. A. Cullen and A. Jonard. Aromatics from petroleum, by R. M. Love and R. F Pinnelp. Elastomers and plastics, by W B Reynolds and W W Crouch. Synthetic detergents from petroleum, by W K. Griesinger and J A. Nevison. Composition of petroleum, by F D Rossini and B. J Mair Relation of properties to molecular structure for petroleum hydrocarbons, by C. E Boord. Physical chemistry in the petroleum industry by B H. Sage. Analyses of petroleum, by H. Levin

Note: Many of the papers in this collection cover concisely advances made during the past 25 years, while others describe the current status of specific area of petroleum technology Literature references accompany each paper The papers are original and their authors include many contemporary leaders in petroleum research.

BONDI ARNOLD AARON

Physical chemistry of lubricating oils. New York Reinhold Publishing Corporation 1951 380 p. 24 cm. $10 00 2259

Contents: Pressure-volume-temperature (P V T) properties. Rheology Surface phenomena. Optical and electrical properties. The hydrocarbon type analysis of lubricating oils. Phase equilibria. Reaction kinetics. Synthetic lubricants. Index.

Note. An authoritative survey of the present status of the physical chemistry of the hydrocarbons used chiefly for lubrication. The main emphasis is on the relation between chemical structure and physical properties and on the means for measuring these properties. There is also some discussion of the chemical reactions of lubricating oils and greases with such substances as oxygen and sulfuric acid since these reactions affect the properties that are important in lubrication. The chapter on synthetic lubricants—that is, compounds designed as substitutes for the traditional petroleum products—will be of considerable interest to both lubrication chemists and machine designers. The text is supplemented by much tabulated data, and each chapter is accompanied by fairly extensive bibliography that includes patents as well as books and articles. The author is associated with the Shell Development Company

FARKAS, ADALBERT, editor

Physical chemistry of the hydrocarbons. Volume 1. New York Academic Press, Inc., 1950 453 p illus. 24 cm. $8.50. 2260

Contents: The chemical bond in hydrocarbon molecules, by G. W Wheland. The molecular structure of hydrocarbons as determined by spectroscopy and electron and X-ray diffraction, by M. K. Wilson. Mass spectroscopy in hydrocarbon analysis, by J. J. Mitchell. Optical properties of hydrocarbons; infrared absorption, raman, and ultraviolet absorption spectroscopy, by N D. Coggeshall. Optical methods of hydrocarbon analysis, by N D Coggeshall. Electrical properties of hydrocarbons, by A. Gemant. Solvent extraction of hydrocarbons; solubility relations between liquid hydrocarbons and other liquids, by A. W Francis. Solid-liquid equilibria of hydrocarbons, by M. R. Cines. Chemical thermodynamic equilibria among hydrocarbons, by F D Rossini. Author index. Subject index.

Note A systematic presentation of physical and chemical knowledge pertaining to the properties and behavior of the hydrocarbons. It is addressed primarily to graduate chemists. Of the nine authors represented in the present volume, seven are associated with industrial research; nevertheless, their papers deal more with basic than applied knowledge and techniques. There are numerous tabulations of physico-chemical data, and each paper is supplemented by an extensive bibliography Volume II which will complete the work will be devoted to such matters as density surface tension, viscosity critical properties, optical activity and chemical manipulation of hydrocarbons. The work is of interest not only to the petroleum industry itself but to all industries based upon hydrocarbons.

HUNTINGTON RICHARD LEE

Natural gas and natural gasoline. New York McGraw Hill Book Company Inc., 1950 598 p. illus. 23 cm. (McGraw Hill chemical engineering series) $8.00. 2261

Contents. Introduction. Estimation of gas and gasoline reserves. Elements of plant location and design. Gathering of raw gas and return of residue gas. Determination of cycling efficiencies in the Cotton Valley (Louisiana) gas-condensate reservoir. Elements of natural gasoline processing. Absorption. Distillation and fractionation. Gas dehydration. Storage and transportation. High-pressure pipe-line research. Appendixes. Index.

Note An engineering college textbook which offers broad introduction to the natural gas industry with emphasis on the phases which are primarily of interest to chemical engineers. The processes of removing natural gasoline from the raw gas are covered and so are the other aspects of natural gas processing. The chapters on storage and transportation and high pressure pipe line research are together 125 pages long and present fairly inclusive survey of basic engineering principles. Aside from its intended use in colleges, the book should be of interest to graduate engineers whose formal education did not include course in natural gas but find themselves in need of information about the field.

MAXWELL J B

Data book on hydrocarbons application to process engineering. Second printing. First published February 1950. Reprinted March 1951 New York D Van Nostrand Company Inc., 1951 259 p. illus. 26 cm. $5.00. 2262

Content Physical data: Physical constants. Characteristics of petroleum fractions Molecular weight. Vapor pressure. Fugacity Critical properties. Thermal properties. Density Viscosity Combustion. Unit operations: Flow of fluids. Flow of heat. Equilibrium flash vaporization. Fractionating towers. Conversion factors. Index.

Note Earlier editions of this work produced by the Standard Oil Development Company proved of such value to technical personnel in the Company and its affiliates that the Company decided to make it available for general use. It contains (1) basic data on hydrocarbons and petroleum fractions, (2) methods of applying these data to process engineering, including illustrative examples and some fundamental theory and (3) applications of few of the unit operations of chemical engineering used extensively in the petroleum industry The presentation is largely in the form of graphs and tables.

MEYER, ERICH

White mineral oil and petrolatum. New York Chemical Publishing Co., Inc. 1950. 135 p. illus. 22 cm. $4 75 2263

Contents: Technical aspects of white mineral oil and petrolatum. Applications of white mineral oil and petrolatum. Methods of testing white oil and petrolatum. Shipping and handling of white mineral oil and petrolatum. Index.

Note: The heart of this rather short reference book is the second chapter in which data are provided on the uses of petrolatum (including white mineral oil) in a wide range of industries and products. Typical of the arrangement of this part is the matter presented under "Household-type insecticides." Here the variety of oil and its use are stated briefly; the ingredients and proportions of typical sprays are given; then the requirements to be met by the oil and the requirements expressed in standard tests taken from Army and Navy specifications are tabulated.

NELSON WILBUR LUDINE

Petroleum refinery engineering. Third edition. New York McGraw Hill Book Company Inc., 1949 830 p. illus. 24 cm. (McGraw Hill chemical engineering series S. D Kirkpatrick, consulting editor) $10.00. 2264

Contents: Chemical engineering and petroleum engineering. History and development of refining. Composition of petroleum. Refinery products and test methods. Evaluation of oil stocks. Physical properties of petroleum oil. Introduction to processing. Refinery corrosion and metals. Refinery and distillation processes. Auxiliary processes and operations. Conventional chemical treatments. Solvent treating or extraction processes. Dewaxing. Fluid mechanics. Combustion. Vaporization and condensation. Fractionation and towers. Heat transfer and exchangers. Tube-still heaters. Thermal cracking and decomposition processes. Rebuilding hydrocarbons. Catalytic cracking. Natural gas and natural gasoline. Economics of design. Typical design calculation. Appendix. Author index. Subject index.

Note. (3030) In its third edition since 1936 this work has been almost completely rewritten. It contains about one-third more material than was in the second edition. It is now more than ever a reference book for practicing engineers. Most of the fundamental material which is included in general textbooks has been omitted and its place taken by discussion of current processes and practices in petroleum refining. All of these which are of interest in the design of refineries are discussed in fair detail. There are both footnote references and extensive chapter bibliographies.

SMITH N A. C AND OTHERS

The Bureau of Mines routine method for the analysis of crude petroleum (in three parts) I. The analytical method, by N A. C. Smith, H. M. Smith, O C. Blade, and E L. Garton. Washington, D C. Government Printing Office, 1951 82 p. illus. 26 cm. (United States. Bureau of Mines. Bulletin 490) Paper $0.50. 2265

Contents: Introduction. Distillation (Bureau of Mines routine method) Distillation at atmospheric pressure. Distillation at reduced pressure (40 mm. of mercury) Treatment of unusual crude-oil procedures. The analytical report. Sampling and sample handling: Sample information. Sample inspection and identification. Property determination. Specific gravity Viscosity Sulfur. Color. Cloud test. Pour point. Carbon residue. Aniline point. Preparing the report of an analysis: Approximate summary. Correlation index. Outline of Bureau of Mines routine method for the analysis of crude petroleum. References. Appendix: Bibliography of reports containing analyses of crude oils by Bureau of Mines routine method. Finding list for crude-oil analyses.

Note: The method of analysis described in this bulletin has been used in analyzing thousands of samples of crude oil since it was developed during the period 1915 to 1920. It was first described in Bureau of Mines Bulletin 207 1922, of which the present bulletin is largely a revision. Details of the procedure, a description of the apparatus, and brief descriptions of ancillary methods are all included. The appendix includes a bibliography of reports which contain analyses of crude oils by this method and a finding list of analyses arranged by oil fields in the respective states of the United States and in other countries.

WILEY, J L., AND H. C ANDERSON

Bibliography of pressure hydrogenation. Washington, D C. Government Printing Office, 1930–52 646 p. 26 cm. (United States. Bureau of Mines. Bulletin 485) Part I, o.p. Part II, paper $1.00 Part III, paper, $0.25 2266

Note: This work contains abstracts of the world's technical literature bearing on the history, development, and commercial application of the Bergius and related processes for the hydrogenation, under greater than atmospheric pressures, of liquid and solid carbonaceous materials such as coal, lignite, their distillation and extraction products, pitches and tars, and petroleum and its distillation residues. Part I contains 2301 abstracts of journal articles; Part II, 3348 abstracts of patents, and Part III contains a subject index to Parts I and II and a numerical patent index.

PAINT AND VARNISH

BIDLACK, VERNE C. AND EDGAR W FASIG editors

Paint and varnish production manual. New York John Wiley & Sons, Inc., 1951. 288 p. illus. 24 cm. $6.50 2267

Contents: Physical facilities. Paint plant. Varnish plant. Products. Engineering. Manufacturing operations. Personnel. Factory cost accounting. Research, development and control. Fire protection, safety and health. Index.

Note: In this book—sponsored by the Federation of Paint and Varnish Production Clubs—plant layout, equipment, materials handling, and many other topics of interest in the organization and management of plants for the manufacture of paint and varnish are discussed by experts. The work appears to be addressed to management and production staff of small plants, but there is material in it that is of potential interest to the personnel of larger plants also. Good bibliographies are included.

DENISTON GEORGE LOWELL

The science of modern wood finishing. A digest of modern materials and methods for industrial finishers and home craftsmen seeking to secure finer finishes at lower costs. With an introduction by Robert F Olmer Dayton, Ohio Research Press Inc., 1949 386 p. illus. (part col d) 21 cm. $6.00. 22[illegible]

Contents. Cabinet, furniture and other woods. Glues and [illegible] Sanding. Bleaches and bleaching. Staining—materials and [illegible] Aniline dyes for Clinchfield non grain-raising stains. Organic [illegible] used in making Clinchfield NGR stains. Fillers and filling. [illegible] surfaces. Patching up practice. Finishing with varnish. [illegible] synthetics and their application. Rubbing and polishing of [illegible] coatings. Novelty finishes and other special finish effects. [illegible] techniques. Representative finishing schedules. [illegible] finishing practice. Repairing and refinishing. Appendix [illegible] figures for finishers. Bibliography Glossary of terms.

Note: A technical survey of present-day materials and [illegible] which is especially valuable for information on developments of recent years. Transparent and semi-transparent finishes are [illegible] while paints and other opaque materials that conceal the [illegible] wood are not included. Preliminary operations, such as [illegible] refinishing operations, such as the repairing of [illegible] together with the application of original finishes [illegible] material is presented which is potentially of interest [illegible] craftsmen, the book is addressed primarily to persons [illegible] furniture manufacturing and to others with technical [illegible] interests in the field. The bibliography and glossary are [illegible] but there is no index.

SODERBERG GEORGE A.

Finishing materials and [illegible] ington Illinois McKnight & [illegible] lishing Company 1952 320 [illegible] $4 00

Contents (abridged) Section I, Finishing [illegible] varnishes and enamels Synthetic [illegible] varnish. Paint. Metallic paint. [illegible] paint. Volatile finishing material. [illegible] Stains. Woodfiller. Bleaches [illegible]

Coated and polishing abrasives. Waxes. Pressure-sensitive tapes. Section II, Finishing methods: Brushing. Spraying. Dipping and flocoating. Roller coating. Tumbling. Methods of procedure. Recommended and safe practices in the finishing department. Opportunities in the painting industry. Index.

Note. Although this book is primarily a textbook for practical students enrolled in vocational courses, it contains such a wide range of information that its usefulness extends to readers and craftsmen not enrolled in schools. A number of topics not usually treated in practical texts are covered. For example, there is a chapter on how paint brushes are made. It is supplemented by a list of pertinent literature. The discussions of most topics are short, but they contain much useful information. There are 180 illustrations of good quality. The author is Assistant Professor of Industrial Education at the Stout Institute.

WALDIE, W. A.

The science of wrinkle finishing: the manufacture and application of the "one coat" finish. Introduction by Paul Kennedy. Dayton, Ohio, Research Press Inc. 1949. 204 p. illus. (part col'd) 21 cm. $5.00 2270

Contents: Part I, The characteristics and application of "wrinkle" finishes: Origin of "wrinkle" finishes. "Wrinkle" pattern, texture and gloss. Color in "wrinkle" finishes. Physical characteristics of "wrinkle" finishes. Surface preparation of "wrinkle" finishing. Application of "wrinkle" finishes. Baking of "wrinkle" finishes. Flexible and air dry "wrinkles." Part II, The formulation and manufacture of "wrinkle" finishes. Ingredients and processing equipment. Tung oil formulations. Castor oil formulations. Oiticica oil formulations. Linseed oil formulations. Perilla, fish and soy bean oil formulations. Synthetic resin formulations. Asphaltum and blown "wrinkle" formulations. Special pattern formulations. Air dry and flexible formulations. Pigmentation. Appendixes: Outline for study of polymerization in the drying of oils. Summary of "wrinkle" patents. New Wrinkle, Inc. ... Bibliography. Glossary of terms.

Note. "Wrinkle" finishes are widely used on metals, especially in the finishing on the cases or housings of office machines, measuring instruments, cameras, etc. This book is a comprehensive summary of the subject in which their development, types, and formulations are covered. The chemistry of "wrinkle" finishing is discussed in practical detail, and there are 11 photographs illustrating various finishes. Also the patent aspect including both patents issued and notable patent litigation is covered.

VARIOUS SUBSTANCES

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on aging of rubbers. Chicago Spring meeting American Society for Testing Materials March 2 1949. Philadelphia, Pa. American Society for Testing Materials, 1949. 72 p. illus. 23 cm. (Special technical publication no. 89) Cloth, $2.40; paper $1.75 2271

Contents. Introduction, by G. C. Maassen. The mode of attack of oxygen on rubber, by A. M. Neal and J. R. Vincent. Oxygen-absorption methods—their utility and limitations in the study of aging, by J. Reid Shelton. Chemical changes in elastomers and antioxidants during aging, by John O. Cole. Physical aspects of the aging of rubbers, by M. C. Throdahl. The effects of light and ozone on rubber, by John T. Blake. The effect of temperature on the air aging of rubber vulcanizates, by M. O. Schoch, Jr. and A. E. Juve.

Note. The papers comprising this symposium have been prepared by industrial chemists actively engaged in rubber research. They provide a description of methods employed in conducting accelerated aging tests on natural and synthetic rubbers and a review of present-day knowledge concerning the physical and chemical changes which occur during the aging process. Discussions and bibliographies are included.

ANDERSON, CARL CLAUDE AND H. H. HINSON

Helium-bearing natural gases of the United States: analyses and analytical methods. Washington, D. C. Government Printing Office, 1951. 141 p. illus. 26 cm. (United States. Bureau of Mines. Bulletin 486) Paper $0.70. 2272

Contents: Survey of helium resources. Methods of collecting samples. Methods of analysis. Apparatus and method for determining helium by measuring volume. Improved apparatus and procedure for determining helium in natural gas by measuring pressure, by E. M. Frost, Jr. Orsat apparatus. One-cut apparatus. Limits of combustion. Well data submitted with gas samples. Tables. Samples from gas and oil wells. Samples from pipe lines. Miscellaneous samples.

Note. The results of the Bureau of Mines survey of helium resources are given in this report, which comprises gas analyses and accompanying data on more than 2100 samples that have been collected in 30 states. The survey to determine the nation's helium resources has been carried on in all natural gas-producing areas of the United States since the inception of the Government's helium program in 1917, and the primary purpose of the report is to present the results of this work in tabulated form. Two types of apparatus and two methods are described for determining helium in gas samples. By the older of these methods helium is determined by volume measurements, and in the newer method, which is more precise, the analytical procedure employs pressure measurements.

BAILEY, ALTON EDWARD

Industrial oil and fat products. Second completely revised and augmented edition. New York, Interscience Publishers, Inc., 1951. 967 p. illus. 23 cm. (Fats and oils: a series of monographs on the chemistry and technology of fats, oils, and related substances. Editorial board: A. E. Bailey and others) $15.00. 2273

Contents (abridged): Part A, The nature of fats and oils: Structure of fats and fatty acids. Physical properties of fats and fatty acids. Role of fats in diet of man. Part B, Raw materials for oil and fat products: Sources, utilization, and classification of oils and fats. Composition and characteristics of individual fats and oils. Part C, Industrial utilization of fats and oils: Cooking and salad oils. Plastic shortening agents. Butter and margarine. Bakery products and confections. Soap and other surface-active agents. Paints, varnishes, and related products. Part D, Unit processes in oil and fat technology: Handling, storage and grading of oils and oil-bearing materials. Extraction of fats and oils. Refining and bleaching. Hydrogenation. Deodorization. Fat splitting, esterification, and interesterification. Soapmaking. Fractionation of fats and fatty acids. Polymerization, isomerization, and related processes. Solidification, homogenization, and emulsification. Author index. Subject index.

Note. A comprehensive monograph on the fats and oils used in industry and the technology of extracting and using them. In addition to natural products, information is included on "spans," "tweens" and others of these materials used in association with fats and oils, especially in food products. The treatment is on a professional level, and the book is intended for graduate students and graduate chemists already at work in industry. Processes, extraction, refining, hydrogenation, etc., are explicitly described. Related literature is cited in footnotes and the authors' names are brought out in the 19-page author index. In comparison to the first edition (1945) the work has been extensively rewritten and much expanded.

BAILEY, ALTON EDWARD

Melting and solidification of fats. New York, Interscience Publishers, Inc., 1950. 357 p. 23 cm. $7.50. 2274

Contents: General and theoretical considerations. Laboratory techniques. Melting and solidification of pure compounds. Melting and solidification of mixtures. Solubility. Practical melting and solidification processes. Author index. Subject index.

Note: Both the theoretical and practical aspects of the melting and solidification of fats are covered in this book. The presentation is on a professional level, and the work is designed for chemists and other technologists in industry and industrial laboratories. Phase diagrams and other graphical and tabular presentations of useful data appear frequently throughout the book. The related literature is cited in footnotes. The names of the authors of the papers referred to are gathered together in the author index.

BEDOUKIAN, PAUL Z.

Perfumery synthetics and isolates. New York, D. Van Nostrand Company, Inc., 1951. 488 p. illus. 24 cm. $8.50 2275

Contents: Introduction. Acetophenone and homologs. Aliphatic alcohols. Aliphatic aldehydes. Amyl cinnamic aldehyde. Anisic aldehyde (aubepine). Anthranilates. Benzaldehyde. Benzophenone. Benzyl alcohol and its esters. Borneol and iso-borneol. Cinnamic acid and its esters. Cinnamic aldehyde. Cinnamyl alcohol. Citral. Citronellal. Citronellol (rhodinol). Coumarin. p-cresol derivatives. Cyclamen aldehyde. Dimethyl benzyl carbinol. Diphenyl oxide. Eugenol and iso-eugenol. Geraniol. Heliotropin. Hydratropic aldehyde. Hydrocinnamic alcohol. Hydroxycitronellal. Indole and its homologs. Ionones. Alkyl gamma lactones. Linalool. Methyl heptine carbonate and homologs. Beta naphthyl ethers. Artificial nitro musks. Macrocyclic musk compounds. Nerol. Phenylacetaldehyde. Phenyl acetic acid and esters. Phenyl ethyl alcohol. Phenyl methyl carbinol. Salicylates. Terpineol. Vanillin. Analytical section. Vapor pressure graphs. Index.

Note: A reference book of information on synthetic perfumery and flavoring compounds. In most instances the following information is given for each compound chemical name, chemical formula, structural diagram, general description covering uses and other points, occurrence, methods of preparation, chemical properties, physical constants, methods of manufacture, methods of purification and analysis, statistical data on production and sales, and literature references. The last-mentioned are international in scope and include some patents. The analytical section at the end of the book covers general analytical methods. The book is an invaluable one for chemists in the perfume industry and is of some interest to organic chemists in other lines.

Brauns Friedrich Emil

The chemistry of lignin. New York Academic Press Inc., 1952 808 p 24 cm. $14.50 2276

Contents: Introduction. The evolution of lignin chemistry. The definition and distribution of lignin. Color reaction of lignified materials. The isolation of lignin. The determination of lignin. The physical properties of lignin. The elementary composition and constituent groups of lignin. The acylation and acylysis of lignin. The alkylation of lignin. The halogenation of lignin. The nitration of lignin. The sulfonation of lignin. The hydrolysis of lignin. The alcoholysis of lignin. The mercaptolysis of lignin. The phenolysis of lignin. Reduction, hydrogenation, and hydrogenolysis of lignin. The oxidation of lignin. The alkali fusion of lignin. Special reactions with lignin. The thermal decomposition of lignin. The biological decomposition of lignin. Theories on the structure of lignin. The linkage of lignin in the plant. Theories on the formation of lignin. Synthetic lignins. Author index. Subject index.

Note: A comprehensive monograph of the current knowledge of the chemistry of lignins, written for professional chemists. It is based upon literature surveys; but, unlike some books that are similarly derived, the text does not lean on the original articles but is full enough to be useful in itself. The preface is not dated and the author has included no statement as to the date to which he covered the literature. A perusal of dozens or so of the chapter bibliographies indicates that comprehensive coverage ended with 1948, though few entries for publications issued in 1949 and 1950 are included. The book is of primary interest to chemists in the paper industry and of secondary interest to chemists in the plastics industry and to botanists. The author is associated with the Institute of Paper Chemistry

Curme, George Oliver, jr., editor

Glycols. George O Curme, jr., editor Franklin Johnston, associate editor New York Reinhold Publishing Corporation 1952 389 p illus. 24 cm. (American Chemical Society monograph series) $12.00. 2277

Contents: Glycols—an introduction. Ethylene glycol production, by F. R. Rector and W. J. Toussaint. Physical properties of ethylene glycol, by W. S. Jones and W. S. Tamplin. Commercial applications of ethylene glycol. Ethylene oxide, by H. C. Schultze. Derivatives of ethylene glycol, by A. B. Boese, jr., and others. Ethylene glycol condensation polymers. Propylene glycol production, by F. R. Rector and W. J. Toussaint. Physical properties of propylene glycol, by W. S. Jones and W. S. Tamplin. Commercial applications of propylene glycol. Propylene oxide, by R. F. Holden. Derivatives of propylene glycol, by R. F. Holden. Propylene glycol condensation polymers, by R. F. Holden. Higher glycols, by S. M. Livengood. Physiological aspects of the glycols and related compounds, by H. F. Smyth, jr. Analyses and test methods, by E. F. Hillenbrand, jr. Author index. Subject index.

Note: Essentially this is a reference book for the use of industrial chemists. The properties of the various glycols and glycol derivatives are adequately described but the emphasis is on manufacturing methods and applications. The presentation is technical and concise. However, all important points in the text are cross-referenced to the source articles cited in the bibliography. Patents and books are cited in the bibliographies along with papers in periodicals. The authors and editors are all associated with the Carbide and Carbon Chemicals Company

Guenther, Ernest

The essential oils. Volumes II–VI. New York D Van Nostrand Company Inc., 1949–52 illus. 24 cm. $12 00 per volume. 2278

Contents (abridged) (1951*) Volume two The constituents of essential oils; co-author, Darrell Althausen. Hydrocarbons. Alcohols. Aldehydes. Ketones. Phenols. Quinones. Acids. Esters. Lactones, coumarins, and coumarones. Furan derivatives. Oxides. Compounds containing nitrogen and sulfur. Terpenes, sesquiterpenes, and derivatives of unknown constitution. The preparation of derivatives of essential oil constituents, by F. S. Sterrett. Index. Volume three. Essential oils of the plant families Rutaceae and Labiatae. Index. Volume four. Essential oils of the plant families Gramineae, Lauraceae, Burseraceae, Myrtaceae, Umbelliferae, and Geraniaceae. Index. Volume five. Essential oils of the plant families Rosaceae, Myristicaceae, Zingiberaceae, Piperaceae, Anacardiaceae, Santalaceae and Myoporaceae, Zygophyllaceae, Leguminosae, Hamamelidaceae, Dipterocarpaceae, Annonaceae, Oleaceae, Amaryllidaceae, Rubiaceae, Magnoliaceae, Caprifoliaceae, Violaceae, Resedaceae, Saxifragaceae, Caryophyllaceae, Primulaceae, Tiliaceae, and Compositae. Index. Volume six. Essential oils of the plant families Ericaceae, Betulaceae, Valerianaceae, Verbenaceae, Cistaceae, Cruciferae, Liliaceae, Iridaceae, Araceae, Palmae, Cyperaceae, Moraceae, Aristolochiaceae, Chenopodiaceae, Ranunculaceae, Euphorbiaceae, Malvaceae, Ulmaceae, Podocarpaceae, Pinaceae, Taxodiaceae, and Cupressaceae. Botanical classification of essential oil plants. Index. Volume VI. Index, Volumes I–VI.

Note. (1951) These five volumes bring to completion one of the most comprehensive and authoritative works on the essential oils. Volume one, published in 1948, dealt with the chemistry and manufacturing procedures in general. Volume two provides data on the occurrence, methods of isolation, and properties of the natural constituents of essential oils. The remaining four volumes discuss the individual oils under such headings as history botany, producing regions, climatic and soil requirements, planting, harvesting, properties, composition, and total production. The numerous footnote references constitute an extensive bibliography of the subject.

Hassler, John W

Active carbon. Brooklyn, N Y Chemical Publishing Company Inc., 1951 384 p. 23 cm. $7 00 2279

Contents (abridged) Part 1, Preparation and properties. Preparation of active carbon. Theories of adsorption. Chemical and physical properties of adsorbable compounds. Adsorption from mixtures. Electrophoresis and peptization. Theories of contact catalysis. Chemistry and physics of the active-carbon surface. Desorption. *Part 2,* Applications Liquid systems. Sugars and syrups. Fats and oils. Alcoholic beverages. Water purification. Organic chemicals. *Biochemistry and pharmacology. Analytical* applications. Protection against toxic gases. Recovery of solvent and other vapors. Applications as catalyst. Part 3, Experimental methods: General principles of experimental studies with active carbon. Gas adsorption. Liquid-phase adsorption. Index.

Note. A monograph in which the whole field is compactly covered and references are given to the pertinent literature. The bibliographies include not only books, periodicals, and patents, but also some references to unpublished information. The excellent discussions of applications in specific fields account for about one-third of the book. The author is Director of Active Carbon Research for the West Virginia Pulp and Paper Company

Jacobs, Paul Burke

Industrial alcohol. A study of the technology production, and uses of alcohol in relation to agriculture. Washington, D C Government Printing Office, 1950 101 p. illus. 23 cm. (United States. Department of Agriculture. Miscellaneous publication no 695) Paper $0.30. 2280

Contents Ethyl alcohol: Origin and chemistry Taxation and legal definition. The alcohol-distillation industries. History of production. Industry organization. Corporate financing and control. Alcohol imports. Sources of alcohol: Fermentation. Saccharine materials. Starchy

materials. Cellulosic materials. Fermentation procedures. Synthetic alcohol. Anhydrous alcohol. Butanol acetone plants. Summary of origins and applications. Financial aspects of alcohol production. Alcohol markets. Literature cited. Sources of additional information.

Note: The chemistry, manufacture, and uses of ethyl alcohol presented chiefly from the viewpoint of its production from agricultural products, are treated in this pamphlet by an industrial specialist on the staff of the Bureau of Agricultural and Industrial Chemistry of the Agricultural Research Administration.

KERR, RALPH WALDO editor

Chemistry and industry of starch. Second edition revised and enlarged. New York Academic Press Inc., 1950 719 p. illus. 23 cm. $12.50 2281

Contents (abridged) Section I, Occurrence in nature. Section II, Preparation: The manufacture of corn starch. Manufacture of tapioca and arrowroot starches. Manufacture of wheat, potato, and other industrial starches. Evaluation of modified starches in practice. Section III, Properties. Section IV Reactions The hydrogen bond in starch as basis for interpreting its behavior and reactivity. Derivatives of starch. Oxidation of starch. Dextrinization. Acid hydrolysis of starch. The amylases, properties and production. Modification of starch by enzymes. Section [illegible] Uses and analyses Uses of starch in paper manufacture. Uses of starch and starch products in the fermentation industries. Use of starch and starch products in foods. Use of starch products in the textile industry. Starch adhesives. Methods of analysis for starch. Author index. Subject index.

Note (1944) A comprehensive survey of current starch chemistry and industrial uses of starch. It is designed mainly for the industrial chemist who is concerned with starch in one or more manufacturing processes. Important statements and data in the text are keyed to the extensive reference lists. In the present edition—which is the product of eight authors in addition to the editor—the work has been very substantially revised and amplified. The increase in the length is almost 180 pages, [illegible] reflection of the substantial growth of the patent and periodical literature.

KERTESZ, ZOLTAN IMRE

The pectic substances New York Interscience Publishers, Inc. 1951 628 p. illus. 24 cm. $13.50. 2282

Contents (abridged) Part one. The chemistry of pectic substances: D-galacturonic acid. Composition and structure of pectic substances. Heterogeneity of pectic substances. Preparation and purification of pectic substances in the laboratory. Detection, determination and characterization of pectic substances. Part two, The botany of pectic substances: Occurrence and distribution of pectic substances in plants. Proportions of and changes in pectic components in some plants. Part three. The biochemistry of pectic substances: Commercial pectic enzymes. Behavior of pectic substances in the animal body. Part four Manufacture of pectic substances: Apple pectin. Citrus pectin. Beet pectin. Control of setting time. Pectins of commerce. Part five, Some functions and applications of pectic substances and pectic enzymes: Pectic substances in foods. Applications of pectic substances in nonfood products. Applications of pectic enzymes. Author index. Subject index.

Note: Probably the most comprehensive treatise on this subject that will be published in many years. It is essentially [illegible] digest of the complete literature. There are 2024 footnote references. The work should serve well as [illegible] reference book in libraries devoted to organic chemistry and in the personal libraries of food chemists, particularly those chemists concerned with the large-scale manufacture of jams and jellies. The author is associated with the New York State Agricultural Experiment Station at Cornell University.

KUNIN ROBERT AND ROBERT J MYERS

Ion exchange resins New York John Wiley & Sons Inc., 1950 212 p illus. 23 cm. $4 75 2283

Contents Introduction and historical review The theory and mechanism of ion exchange. Cation exchange resin characteristics. Anion exchange resin characteristics. The synthesis of ion exchange resins. Applications, general considerations. Water softening by ion exchange. Deionization of water and other electrolyte solutions. Ion exchange in analytical chemistry. Miscellaneous applications. Methods of studying ion exchange resins. The design of ion exchange units. References. Appendix. Author index. Subject index.

Note. A compact survey of current knowledge and practice. The authors have been leaders in the development of commercial ion exchange resins. They have included not only the information from published literature but also unpublished data based on their own work. The book is addressed to trained chemists and is useful both as an introduction and as a reference book. There are about [illegible] illustrations, numerous tables, and [illegible] bibliography of more than [illegible] entries.

LAWRENCE, CARL ADAM

Surface-active quaternary ammonium germicides. New York Academic Press, Inc., 1950 245 p. illus. 24 cm. $6.00 2284

Contents (abridged): Historical. Chemistry. Physical properties. Biology. Pharmacology and toxicology. Practical applications for surface-active agents and germicides. References. Author index. Subject index.

Note A survey of the accumulated knowledge of [illegible] group of synthetic compounds [illegible] hich are effective germicides under [illegible] wide variety of conditions. It is based on the published literature, and references are carefully made throughout the work from statements in the text to the numbered entries in the bibliography. The author has organized and summarized the reported results, and he has also added [illegible] moderate [illegible] umber of critical comments of his own. The book is of interest to persons concerned with disinfection in connection with medicine and surgery, public health, foods, restaurants, dairies, laundries, etc. It is phrased in technical terminology. A directory of products trademarked in the United States of America is included.

McCUTCHEON JOHN WELLAND

Synthetic detergents. New York MacNair Dorland Company, 1950. 435 p. illus. 24 cm. $7.00. 2285

Contents. Introduction. Fundamentals of surface activity. Evaluation methods and analytical examination of detergents. Enumeration of surface active agents and synthetic detergents by class and type. Manufacturing processes and raw materials. Trade names, products. Manufacturing processes and raw materials. Boundary between and processes. Applications and uses. Appendix. Boundary between by prominent design. A.O.C.S. methods. Surfactant classification list. Industrial classification index. List of surface active agents. Index.

Note In this work the primary emphasis is on the practical aspects of the synthetic detergents. Applications and methods of evaluation are covered rather thoroughly but manufacturing methods and some other aspects are covered briefly. Typical formulas for products ranging from insecticides to cleaners, in [illegible] hich [illegible] detergent is [illegible] principal ingredient are included. The appendix includes [illegible] tabulation of trade names under which detergents are sold. For each trademarked product the name of the manufacturer, class, formula, uses, etc [illegible] are given. The book is useful to purchasing agents and to technical personnel in charge of processes in which detergents are used—for instance, textile dyeing.

NIVEN WILLIAM W JR.

The fundamentals of detergency Under the sponsorship of the American Institute of Laundering. New York Reinhold Publishing Corporation, 1950. 256 p. illus. 24 cm. $6.50. 2286

Contents (abridged) Part I, Fundamental considerations of the detergent process. Introduction and historical review. Nature and properties of detergents. Chemistry of unbuilt detergent solutions. Nature and properties of detergents. Surface activity of unbuilt detergent solutions. Nature and properties of builder solutions. Electrical phenomena in detergency. Influence of builders on the nature and surface activity of detergent solutions. Part II, Practical considerations of the detergent process. Separation of soil from fabric. Dispersion of soil in the detergent solution. Stabilization of dispersed soil. Present knowledge of detergency vs. present washroom practice. Appendix: The theory of Cassie and Palmer on the effect of electrolytes on surface activity. Author index. Subject index.

Note In this new book the chemical and physical principles [illegible] hich underlie surface activity and detergent action are discussed for the benefit of chemists and other personnel in such industries as laundering, textiles, and printing inks. Theory is presented concisely but adequately for the purpose. The relations between theory and application are carefully drawn, with many illustrations taken from the laundry industry. Although the book is not for chemists alone, some knowledge of fundamental chemistry including physical chemistry is necessary to follow the exposition. There are many footnote references to related literature.

POST HOWARD WILLIAM

Silicones and other organic silicon compounds. New York Reinhold Publishing Corporation, 1949 230 p illus. 23 cm. $6 00. 2287

Contents: Introduction. Halogenated silanes. The work of Frederick S. Kipping and others. Organic compounds of silicon prepared at moderate temperatures (journal literature) Organic compounds of silicon prepared at moderate temperatures (patent literature). Organic compounds of silicon prepared at higher temperatures. The uses of polymerized organosilanes. Silico organic compounds analogous to ethers and amines. Nomenclature. Physical properties. Bibliography Author index. Subject index.

Note: The scope of this work is "those compounds of silicon which contain carbon of such character as definitely to impart organic properties to the molecule. Its purposes are to provide brief descriptions of the properties and uses of the silicones and other compounds of silicon that fit this definition, and to summarize the various methods which have been developed for their synthesis. It is based on an extensive survey of the international literature including patents, and the bibliography of original sources constitutes one of the most useful features. In the final chapter are tabulated the formula, name, melting point, and boiling point for more than 1,000 compounds.

ROCHOW EUGENE GEORGE

An introduction to the chemistry of the silicones. Second edition. New York John Wiley & Sons, Inc. 1951 205 p illus. 24 cm. $5.50 2288

Contents. The simple covalent compounds of silicon. The carbon-silicon bond. Synthesis of organosilicon compounds. The organosilicon monomers. Types of organosilicon polymers. Properties of the specific silicone polymers. The physical chemistry of silicones. Water-repellent films and protective coatings from organosilicon materials. Some production considerations. Analytical methods. Tables of physical properties of organosilicon compounds. References. Author index. Subject index.

Note: (333*) A useful survey written mainly for the information of industrial chemists and others in need of technical guide. There is some discussion of general chemistry and properties, and fairly explicit information on the various classes of these compounds. Especially useful features from the standpoint of those who will use the volume chiefly for reference are the eleven tables of properties and the bibliography of 518 literature references. Patents are included in this bibliography. There is substantial amount of new material in this edition, including three chapters that did not appear in the first edition.

ROOT HUBER H

Beeswax, its properties testing production and applications. Brooklyn N Y Chemical Publishing Co., Inc. 1951 154 p. illus. 23 cm. $4 75 2289

Contents: Introduction; The origin and discovery of the nature of beeswax. The production of beeswax. The honeycomb. Extracting beeswax from combs or cappings. Testing beeswax. Bleaching beeswax. Uses of beeswax. Beeswax in cosmetics. Beeswax candles. Comb foundation; *Future trends. Glossary* Index.

Note: A compact survey that is of about equal interest to apiarists whose chief product is extracted honey and to manufacturers who use beeswax in such products as polishes and cosmetics. The various commercial uses for beeswax are described; and the chapter on cosmetic uses contains several formulas, most, if not all, of which are reprinted from other books.

SCHWARTZ ANTHONY MAX, AND JAMES W PERRY

Surface active agents their chemistry and technology New York Interscience Publishers Inc. 1949 579 p. illus. 24 cm. $12 00 2290

Contents (abridged) Introduction. General considerations. Part I, Processes for synthesizing and manufacturing surface active agents: Anionic surface active agents—Carboxy acids—Sulfuric esters—Alkyl aromatic sulfonates. Cationic, non-ionic, and miscellaneous surface active agents: Amphotytic surface active agents. Special compositions and mixtures. Part II, The physical chemistry of surface active agents in theory and practice: Surface and interfacial relationships of pure liquids. Bulk properties of surface active solutions. Gross effects and technical evaluation of surface active agents. Relationship of surface activity to chemical constitution. Part III, Practical applications of surface active agents: Applications in the textile industry Cosmetics and personal use. Pharmaceutical, germicidal, fungicidal, and disinfectant uses. Household, laundering, dry cleaning, and general cleaning uses. Metal technology Leather technology Ore flotation. Author index. Subject index.

Note A comprehensive treatment. Theoretical considerations and practical applications share the space about equally The work is based on an extensive literature survey including patents; and it is of interest not only to chemists working in the field but to chemists and manufacturers in all of the industries in which surface active agents and detergents are used.

SPEEL, HENRY C., editor

Textile chemicals and auxiliaries. New York. Reinhold Publishing Corporation, 1952 493 p. 24 cm. $10.00 2291

Contents: Part I, The nature and processing of fabrics: The physical and chemical nature of fibers, by R. R. Roberts. Preparation of fibers and fabrics, by S. M. Edelstein and others. Chemical aspects of textile dyeing and printing. Technology of pigment application, by W W Chase. Textile finishing, by H. H. Mosher Fabric stabilization, by R. C. Pfeifer, Jr. Coated fabrics, by E. W K. Schwarz and J. A. Bennett. Part II, Raw materials in fabric processing: Water, by V J Calise. Fats, oils, and waxes, by F P Greenspan. Starches, gums and glues. Solvents and other organic chemicals, by C. P McClelland. Surfactants, by K. D Langley and H. L. Bernstein. Soap, by G. W Leffingwell. Sulfated oils and fats, by R. A. Pingree. Anionic surfactants (sulfates, sulfonates and others), by J. W McCutcheon and H. C. Speel. Non-ionic condensates, by H. C. Speel. Cationic finishing agents, by R. W Ackley Synthetic resins, by J. R. Lynn and A. R. Nyquist. Cellulose finishes, by J A. Clark. Water resistant treatments, by R. A. Pingree. Flameproofing, by R. W Little. Mothproofing and mothproofing agents, by H. Lettinghaus. Miscellaneous auxiliaries, by H. C. Speel. Author index. Subject index.

Note: A handbook of basic and practical information with the emphasis on the latter. In both the chapters on processes and those on materials the presentation is descriptive and concise. However each chapter is supplemented by an extensive bibliography Citations of patents are included in some of the bibliographies. The book is useful as survey for technically trained persons who are beginning work in the textile industry and as desk reference book for technologists already established in this industry or in the chemical manufacturing industry

THOMSSEN EDGAR GEORGE, AND JOHN W MCCUTCHEON

Soaps and detergents. New York Mac Nair Dorland Company 1949 511 p. illus. 24 cm. $9.00. 2292

Contents: Raw materials, definitions, general considerations. Machinery and equipment. Soap making methods—soap manufacture classified and described according to processes. Soap products—soap manufacture classified and described according to uses and characteristics of the products. Perfuming and coloring soaps. Glycerine recovery Synthetic detergents. Process and analytical control methods. Appendix. Index.

Note: Primarily technical treatise on contemporary processes of soap manufacture and on the chief kinds of soaps. Soap manufacturing processes are described in considerable detail and there are many pictures of soap-making machinery and of important steps in the manufacturing processes. The chapter on synthetic detergents is only 22 pages in length. The appendix contains tabulated reference data on the glycerine content of common oils, the fatty acid content of common oils, fat constants, soap-making properties of oils and fats, and list by trade name of synthetic detergents. This list identifies the manufacturer of each trade-marked product, states its class and formula, and principal uses.

VAIL, JAMES GARRETT

Soluble silicates their properties and uses. Volume 1 Chemistry By James G Vail, assisted by John H. Wills. New York Reinhold Publishing Corporation, 1952 357 p. illus. 24

cm. (American Chemical Society Monograph series) $9.00 2293

Contents: The beginnings. Present practices. The homogeneous systems. The heterogeneous systems. Complex systems. Author index. Subject index.

——— Volume 2 Technology By James G Vail assisted by John H Wills, New York Reinhold Publishing Corporation, 1952 669 p illus. 24 cm. (American Chemical Society Monograph series) $15.00 2294

Contents. Interfaces modified by silicate solutions. New surfaces—coatings and films. Bonded surfaces. Sols, gels, and polymers in industry. Physiological behavior. Toward the future. Author index. Subject index.

Note: A new work which supersedes the author's well known *Soluble silicates in industry* New York, 1928 (ACS monograph no. 46). The text is essentially [illegible] all-organized literature digest with cross-references from statements and data to citations of original sources. Patents, especially United States patents, are included among the sources. The author index lists the names of authors of the cited articles and patents. The presentation is technical, but it is not too theoretical for the average industrial chemist.

VOET ANDRIES

Ink and paper in the printing process New York Interscience Publishers 1952 213 p. illus. 24 cm. $5 90. 2295

Contents. Part I, Ink and press: The function of ink. Measurement of the flow of inks. Flow of dispersions. Flow of ink between parallel plates. Flow of ink on the press. Separation of ink films. Part II, Ink and paper: Characteristics of discontinuous reproduction. Microscopy of halftone printing. Contrast and coverage of ink. Uniformity of ink films. Penetration of ink into paper. Print-through. Ink transfer. Picking of paper. Offset. Physical drying of ink. Chemical drying of inks. Properties of lithographic inks. Author index. Subject index.

Note. The main emphasis in this treatise is on the physics of ink. Paper and the chemistry of ink are discussed chiefly from the standpoint of their relations to the behavior of printing inks when applied to paper and exposed to the atmosphere. The style of presentation is technical and readers need some previous introduction to the fundamentals of printing inks and to the graphic arts processes dependent upon them. The illustrations include [illegible] number of reproductions of microphotographs of cross sections of ink on paper. Literature references are given in footnotes. The [illegible] author is Director of Ink Research on the staff of the J M. Huber Corporation.

WAGGAMAN WILLIAM HENRY

Phosphoric acid phosphates and phosphatic fertilizers. Second edition New York Reinhold Publishing Corporation 1952 683 p. illus. 23 cm. (American Chemical Society monograph series) $15 00 2296

Contents: Introduction. Phosphoric acid in animal and plant life. Sources of phosphoric acid and their classification. Florida hard rock phosphate. Florida pebble phosphate, by J M Laborn. The phosphates of Tennessee, by G C Chapman. Western phosphates, by K. M. Norris. Phosphates of South Carolina, Kentucky, Arkansas and Virginia. Phosphates of foreign countries, by C. A Fulton. Elemental phosphorus and its manufacture. Manufacture of phosphoric acid from elemental phosphorus. The manufacture of phosphoric acid by the wet process, by W. C. Weber. Comparison of sulfuric acid and thermal reduction processes for manufacturing phosphoric acid. Purification of phosphoric acid and its salts, by W. H. Waggaman and W T Gross. Superphosphate, its manufacture and properties, by Wm H. Waggaman and V Sauchelli. Concentrated or triple superphosphate. Ammonium phosphates and ammoniated superphosphates, by E W Harvey and G. L. Frear. Other water-soluble phosphatic fertilizers. Bone ash, degreased bones and dicalcium phosphate. Calcined, fused and defluorinated phosphates, by W T Whitney and C. A Hollingsworth. Calcium and potassium metaphosphates and miscellaneous products. Complete fertilizers and their preparation. Phosphate leavening agents, by H W Easterwood. Phosphate water-softening and cleansing products, by C. R. McCullough. The esters of phosphorus acid and their industrial applications, by L. S. Harris. Phosphating of metals, by G. C. Romig. Phosphates in the manufacture and refining of cane sugar, by V R. Deitz and G. F. Meade. Phosphates in flame-resistant products. Miscellaneous industrial uses of phosphoric acid and its derivatives. Appendix. Index.

Note: Each of the chapters in this comprehensive treatise is a concise, up-to-date survey of the particular aspect of the subject which is named in its title and it is supplemented—as is common in this series—by a substantial list of references. Essentially the work is [illegible] reference book for the information of graduate chemists and others [illegible] ho are associated with the phosphate-producing and -using industries. The appendix includes [illegible] wide range of useful material including [illegible] table of phosphoric acid conversion factors, descriptions of analytical tests, and a classified list of pertinent United States patents. Chapters for [illegible] hich an "other" name is not shown in the above table of contents were written by William H. Waggaman. The first edition appeared in 1927. The present edition is an extensive revision and substantial expansion of the original work.

WEST, CLARENCE JAY

Alkaline processes. Part II Black liquor. Appleton, Wisconsin The Institute of Paper Chemistry 1952 377 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 178) Paper $10.00. 2297

Contents. Books. General articles. Analytical methods. Evaporation. Combustion. Causticizing. Lime sludge. Soda and sulfur losses. Detoxification. Purification methods. Uses. Stream pollution. Instrumentation. Odors. Author index. Patent index.

Note. An extensive listing of books and periodical articles which describe the various methods employed for the recovery and utilization of waste liquors produced in the manufacture of pulp. The 1261 references are annotated and grouped according to the above indicated subjects.

WEST CLARENCE JAY

Chemical testing methods. Part I, Viscosity of cellulose. Appleton, Wisconsin The Institute of Paper Chemistry 1952 85 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 179) Paper $5.00. 2298

Note. The limitations on the scope of this bibliography have been stated by the compiler as follows: "Many articles dealing with the viscosity of cellulose have not been included because the work was carried out by known methods. Further articles concerned with factors influencing viscosity will not be found in the following pages." More than 260 articles selected from the international literature are listed. The entries are annotated.

WILSON, PHILIP JOHNSON AND JOSEPH H. WELLS

Coal coke, and coal chemicals. New York McGraw Hill Book Company Inc., 1950. 509 p illus. 23 cm. (McGraw Hill chemical engineering series) $10 00. 2299

Contents (abridged): Introduction—the nature and scope of coal carbonization. Fuels and combustion. Characteristics of coal for carbonization. Preparation and cleaning of coal for coking. The coking process in byproduct coke ovens. High-temperature coke. Gas. Ammonia and ammonium salts. Light oil. Coal tar. Coal carbonization for gas manufacture. Some low-temperature carbonization processes and the Curran-Knowles process. Economics of the coal-carbonization industries. Trends in the coal-carbonization industry. Appendix. Select bibliography. List of plants for the carbonization of coal in the United States. Index.

Note. As the chapter titles indicate, this is [illegible] treatise on the coking process, its products and by-products. Although many of the topics are discussed from the chemical engineering viewpoint, the effect of the whole work is that of [illegible] good general treatment of the present technology and economic importance of the industry. The book is of interest to the personnel of the coking industry and to executives and engineers in allied industries.

WISE LOUIS ELSBERG AND EDWIN C JAHN

Wood chemistry Second edition. New York Reinhold Publishing Corporation, 1952 2 v illus. 24 cm. (American Chemi-

cal Society monograph series. No. 97) Each volume, $15.00. 2300

Contents: Volume 1 Introduction, by L. E. Wise and E. C. Jahn. Part I, The growth, anatomy and physical properties of wood: Origin and anatomy of wood, by H. P. Brown. The mechanical and physical properties of wood, by C. C. Forsaith. Part II, Components and chemistry of the cell wall: The chemistry of the cell walls of wood, by W. M. Harlow. Cellulose—chemical evidence regarding its constitution, by L. E. Wise. Cellulose—physical evidence regarding its constitution, by H. Mark. Chemically modified celluloses, by C. B. Purves. Cellulose solvents and the properties of cellulose in solution, by A. J. Stamm. Cellulose compounds and derivatives, by E. C. Jahn. The hemicelluloses, by L. E. Wise. The chemistry of lignin, by F. E. Brauns. Part III, The extraneous substances: Extraneous materials of wood—introduction, by L. E. Wise. The volatile oils, by E. F. Kurth. Wood resins, by G. C. Harris. The tannins and coloring matters, by M. A. Buchanan. Miscellaneous extraneous components of wood, by L. E. Wise. Phenolic and other extraneous components of coniferous heartwoods—their relation to taxonomy, by H. Erdtman. Index, by C. J. West. Volume 2. Part IV, Surface properties of cellulosic materials: Surface properties of cellulosic materials, by A. J. Stamm. Part V, Industrial wood chemistry: Combustion of wood, by L. F. Hawley. The thermal decomposition of wood, by A. W. Goos. Wood hydrolysis, by E. E. Harris. The chemical behavior of wood, by E. C. Jahn. Alkaline delignification of wood, by W. F. Holzer. Sulfite delignification of wood, by H. Erdtman. The lesser delignification processes, by E. C. Jahn. Bleaching of wood pulp, by F. H. Yorston. Part VI, Decomposition of wood by microorganisms: The biological decomposition of wood, by W. G. Campbell. Part VII, The chemical analysis of wood: Introduction and miscellaneous determinations, by B. L. Browning. The polysaccharide fraction of wood—isolation of cellulose preparations and the determination of cellulose, by B. L. Browning—The analyses of non-cellulose polysaccharides, by B. L. Browning. The determination of functional groups, by B. L. Browning. The determination of lignin, by B. L. Browning. The evaluation of cellulose preparations, by B. L. Browning. Analytical data and their significance, by B. L. Browning and I. H. Isenberg. Index, by C. J. West.

Note: (1990) A standard treatise which covers wood and its chief components, such as lignin and cellulose, from the chemical viewpoint. Its lineage goes back to Wise and Hawley's *Chemistry of wood*, New York, 1926. The first edition in which there were chapters written by sixteen contributors appeared in 1944, but in the present edition the work has been extended to two volumes, and the number of contributors substantially increased. The various chapters are literature digests and are carefully keyed to citations in the source articles. The scope is comprehensive for scientific information, but the technological aspects of wood utilization are not covered.

WOLFE, HERBERT JAY

Printing and litho inks. Fourth and completely revised, edition. New York Mac Nair Dorland Company 1949 478 p illus. 24 cm. $7.50. 2301

Contents: The history of printing ink. General characteristics of inks. Printing ink vehicles. Solvents for inks. Pigments. Natural mineral pigments. Manufactured mineral pigments. Organic pigments. Black pigments. Resins. Driers and drying. Ink compounds. Addition agents. Typographic printing inks. Planographic inks. Intaglio printing inks. New types of printing inks. Special inks. Physics of printing inks. Factory equipment. Testing. Ink troubles and remedies. Appendix. Index.

Note: (1971) A standard self-instruction book designed to help young men entering the printing-ink manufacturing industry and technicians already employed in it. It serves also as a semi-reference book for journalists and others who occasionally need background information. Emphasis is placed on basic principles and techniques, and the industry is covered from the preparation of inks from raw materials to the testing of the finished product. Numerous formulas for specific types of inks are included. This edition gives more attention to the theory of the subject and includes a chapter on the physics of printing inks. New techniques and the preparation of new types of inks, such as moisture-set and pressure-set typographic inks, are described.

HEAT AND POWER ENGINEERING

APPLIED THERMODYNAMICS

DUSINBERRE, G M

Numerical analysis of heat flow New York McGraw Hill Book Company Inc. 1949 227 p. illus. 24 cm $5 00 2302

Contents. Thermal properties. Elementary combinations. Analytical solutions. Steady state, physical subdivisions. Some alternative methods. A multidimensional system. Steady state—geometrical systems—one dimension. Two-dimensional square networks. Two dimensions—networks other than square. Steady state—two dimensions—body convection. Transient flow—physical subdivisions—geometrical subdivisions—one dimension—two dimensions. Cyclic transients. Variable properties. Miscellaneous problems and topics. Bibliography Index.

Note: The traditional approach to heat flow problems is by means of calculus, method hich requires that the heat-transfer medium be considered as homogeneous. The alternati approach in hich the material of the heat-transfer medium is considered as finite series of points is expounded in this book. The numerical method, which has special application to such complicated heat-flow problems as the transmission of heat through laminated glass and heat conduction from end to buried pipes, is fully developed and many worked examples of problems are included. Frequent comparisons between the analytical method and the numerical method are made.

ECKERT ERNST R. G

Introduction to the transfer of heat and mass. With an appendix on property values by Robert M. Drake Jr New York Mc Graw-Hill Book Company Inc. 1950 284 p. illus. 23 cm. $6 00 2303

Contents Fundamental principles of heat transfer. Heat conduction. Heat transfer by convection Basic conceptions of the flow theory Forced convection in laminar flow Forced convection in turbulent flow Free convection. Condensation and evaporation. Thermal radiation. The exchange of mass. Appendix. Index.

Note. In this relatively brief treatise the reader is shown how to obtain mathematical solutions to complex problems in heat transfer which will check with the results of empirical observations. Prandtl's boundary-layer theory is the basis of most of the work. In the final chapter transferals of mass such as occur when moist material is dried by moving stream of air are shown to be boundary-layer phenomena analogous to the transfer of heat. The book is of interest in many branches of engineering where fairly precise calculations of heating and cooling are essential.

HAWKINS GEORGE ANDREW

Thermodynamics. Second edition. New York John Wiley & Sons Inc., 1951 563 p. illus. 22 cm. $6 50 2304

Contents: Fundamental concepts The first law of thermodynamics. Solids, liquids, and gases. The ideal or perfect gas. Equations of state for real gases. Specific heat of gases. The use of tables for computing the properties of vapors. Frictionless or reversible nonflow ideal gas and vapor changes. The second law of thermodynamics and the Carnot cycle Available energy unavailable energy and entropy Entropy changes for reversible ideal gas and vapor processes Mixtures of ideal gases and vapors. Combustion. The flow of gases and vapors through nozzles and orifices. Ideal cycles of internal combustion engines. Air compressors and air engines. The gas turbine and jet propulsion. Vapor cycles. Mechanical refrigeration. General thermodynamic equations. Introduction to heat transfer Appendix. Index.

Note (2011) An introductory textbook for students in engineering colleges. While the chapter arrangement and general approach remain the same as in the first edition, the new edition has been revised by the author and considerably enlarged. Six of the chapters have been completely rewritten. Many minor changes have been made in other chapters, and additions have been made to the lists of references.

HOTTEL, HOYT CLARKE, AND OTHERS

Thermodynamic charts for combustion processes. Part I and II, by H. C. Hottel, G. C. Williams and C. N Satterfield. New York. John Wiley & Sons, Inc., 1949 2 v illus. 29 cm. Part I $2 60 Part II, $2 40. 2305

Contents. Part I, Text Introduction. The modified air chart. The burned mixture charts. Generalized thermodynamic charts. Appendix A: Basic thermodynamic data. References. Author reference index. Index. Part II, Charts Appendix B: Some equilibrium gas compositions. Appendix C: Generalized thermodynamic data. Modified-air chart. Burned mixture charts.

Note. A reference book for engineers who are concerned with the combustion processes in gas turbine, jet propulsion unit, and rocket. In the text portion the principles of cycle calculation are explained in detail. Older methods are reviewed, and new method devised by the authors is explained. Among the devices whose cycles are analyzed in the first part are turbo-compressor power plant, the compression ignition (Diesel) engine, the ignition engine (Otto cycle) the ram jet, and single- and two-fluid rockets. The second part contains, in addition to the appendix material, one chart for modified air and seven charts hich show the proportions of products of combustion and other properties for various mixtures of hydrocarbons and air under various conditions of pressure.

HUTCHINSON, FRANCIS WILLIAM

Industrial heat transfer New York Industrial Press 1952 326 p. 24 cm. $6.00. 2306

Contents (abridged) Conduction. Radiation. Convection. Combined heat transfer. Forced convection. Appendix. Bibliography Index to graphs. Subject index.

Note. The heart of this work is series of graphs—113 in number—that provide direct solutions for wide variety of problems in heat transfer The make-up of the book places each graph on left-hand right-hand page with explanatory matter on the facing page. This matter includes the title of the chart, the equation on which it is based, reference to the section of the text where the relationships expressed by the equation are discussed, statement of assumed conditions, an example problem and its solution. A useful reference book for chemical engineers and others whose work includes heat transfer computations.

JAKOB MAX

Heat transfer Volume I. New York John Wiley & Sons, Inc. 1949 758 p. illus. 24 cm. $12.00. 2307

Contents (abridged) The basic equation of heat conduction. The basic equations of heat convection. The basic equations of heat radiation. Viscosity Thermal conductivity Emissivity (absorptivity). Heat conduction in steady state without heat gains or losses. Heat conduction in steady state, including internal heat generation. Heat conduction in non periodic temperature changes without heat losses or gains. Heat conduction in periodic temperature changes without

heat losses or gains. Heat conduction at variable temperature, including internal heat generation and heat dissipation to the environment. Special mathematical methods used in heat conduction. Numerical methods for the solution of heat-conduction problems. Graphical methods for the solution of heat-conduction problems. Experimental analogy methods for the solution of heat-conduction problems. Analytical solutions of the convection equations. Similarity relations for heat convection. Experiments on free convection and their correlation. Experiments on forced convection and their correlation. *Optical methods of determining heat transfer by convection.* Similarity between heat convection and mass exchange. Heat transfer in evaporation. Heat transfer in condensation. Appendixes: Problems. Nomenclature. Conversion factors. Bibliography and author index. Subject index.

Note: The first volume published of treatise of considerable importance. The treatment is historical in the sense that the development of each important step in the understanding of heat transfer phenomena is traced back to its origin, but the account is brought down to the present time, and the final effect is statement of heat transfer knowledge as it exists today. The physical properties of matter which influence heat transfer are emphasized, and important experiments and useful experimental techniques are described in detail. The space is about evenly divided between the presentation of empirical knowledge and mathematical analysis. However, the author has avoided any advanced mathematical techniques; hence the work is not beyond the level of advanced engineering students and graduate engineers. The bibliography although extensive is not well organized.

JAKOB MAX, AND GEORGE A. HAWKINS

Elements of heat transfer and insulation. Second edition. New York John Wiley & Sons, Inc., 1950 230 p. illus. 23 cm. $4 00. 2308

Contents (abridged) Conduction of heat in the steady state. Conduction of heat in the unsteady state. Steady-state heat conduction in bodies with heat sources. *Introduction to the dimensional analysis* of convection. Heat transfer by free convection. Heat transfer by forced convection. Heat transfer in condensing and boiling. Experimental determination of conductivities and emissivities. Heat transfer in temperature measurements. Heat transfer and fluid friction. Index.

Note: (443) An introductory textbook designed for use in undergraduate courses in engineering colleges. Technically trained persons who are out of college sometimes find it useful as an introduction or refresher because of its elementary discussions. Although still intended for undergraduate use, few advanced topics have been added in this edition, and the level of difficulty of the problems has been raised somewhat.

JOHNSTON, ROBERT M., AND OTHERS

Elements of applied thermodynamics. By Robert M. Johnston, William A. Brockett [and] Arthur E. Bock. Annapolis The United States Naval Institute, 1951 v p. 24 cm. $5.00 2309

Contents: Introduction and the first law of thermodynamics. Basic concepts and the general non-flow process. Characteristics of gases and the non-flow gas processes. Properties and characteristic behavior of steam. Elementary steady flow processes. Air compression. Cycles, available energy and the second law of thermodynamics. Gas power cycles. Steam power cycles. Refrigeration cycles. Reciprocating steam engines. Nozzles. Steam turbines. Heat transmission. Heat transfer equipment. Properties of mixtures. Air conditioning. Fuels and combustion. Appendices. Index.

Note: An introductory text for college engineering students. Basic principles of thermodynamics are presented with particular attention given to their application in the design and operation of turbines, internal combustion engines, refrigerating machinery, boilers, and the like. Illustrative exercises and problems are freely used to further emphasize the practical aspects of the subject. The treatment requires knowledge of *physics and elementary calculus.*

KERN DONALD QUENTIN

Process heat transfer New York Mc Graw-Hill Book Company Inc., 1950 870 p. illus. 24 cm. $10.00. 2310

Contents (abridged) Process heat transfer. Conduction. Convection. Radiation. Temperature. Counterflow—double-pipe exchangers. 1-2 parallel-counterflow—shell-and-tube exchangers. Flow arrangements for increased heat recovery. Gases. Streamline flow and free convection. Calculations for process conditions. Condensation of single vapors. Condensation of mixed vapors. Evaporation. Extended surfaces. Direct-contact transfer—cooling towers. Batch and unsteady state processes. Furnace calculations. The control of temperature and related process variables. Appendix of calculation data. Author index. Subject index.

Note: An advanced engineering college textbook in which practical problems in heat transfer are directly related to industrial processes *and industrial heat transfer apparatus. Though the fundamentals* of thermodynamics are never lost sight of, the valuable and unique parts of the book are those which are devoted to discussions and calculations pertaining to such apparatus as shell-and-tube heat exchangers and to such processes as the heating or cooling of batches of materials. These apparatus calculations" are brought out in special index preceding the text. The book will be valuable not only to chemical engineers but to all engineers in industry who are concerned with heat transfer problems.

SOLBERG, HARRY LELAND AND OTHERS

Elementary heat power By Harry L. Solberg, Orville C. Cromer and Albert R. Spalding. Second edition New York John Wiley & Sons Inc., 1952 624 p illus. 24 cm. $6.50 2311

Contents: Matter and energy Fuels and combustion. Internal-combustion engines. Fuel-burning equipment. Steam generation. Steam power-plant cycles. Steam turbines. Steam engines. Pumps. Drafts, fans, blowers, and compressors. Feed-water heaters and condensers. The gas-turbine power plant. Mechanical refrigeration. Appendix. Index.

Note: (2015*) An introductory textbook written so that it may be used both by college students who will take no further work in the subject and by students of mechanical engineering who will pursue advanced courses. It covers both the fundamental theory and the operating principles of the chief heat power devices. The first edition appeared in 1946 and was an outgrowth of wartime needs. The increased length of the present edition is due both to added descriptions of such devices as the heat pump and to an expansion of the theoretical material. The authors are members of the faculty of Purdue University

STOEVER, HERMAN JULIUS

Engineering thermodynamics. New York John Wiley & Sons Inc. 1951 458 p. illus. 24 cm. $5 75 2312

Contents: Part I, The first law of thermodynamics: Pressure, specific volume, and temperature. Mechanical work and heat. The first law of thermodynamics. *The internal energy and enthalpy of fluids.* The analysis of simple processes. Part II, The second law of thermodynamics: Power cycles and refrigeration cycles. The second law of thermodynamics. The thermodynamic scale of temperature. Entropy Part III, Applications: Steam power plants. Internal-combustion engines. Refrigeration. Compressors. Nozzles and turbines. Venturi meters, flow nozzles, orifices, and pitot tubes. Air conditioning. Appendix. Index.

Note: An introductory textbook for engineering college students. It is arranged so as to emphasize basic thermodynamic principles rather than characteristics of systems. The author is Professor of Mechanical Engineering at Iowa State University

TRINKS WILLIBALD

Industrial furnaces. Volume I. Fourth edition. New York John Wiley & Sons Inc., 1951 526 p. illus. 24 cm. $10.00 2313

Contents: Introduction. The heating capacity of furnaces. The fuel economy of furnaces. Heat-saving appliances with particular reference to industrial furnaces. Strength and durability of furnaces. *Movement of gases in furnaces. Appendices.*

Note: (2464) The outstanding work on the design of furnaces used for such purposes as heat-treating and annealing of metals. Furnaces used for the melting of metals are not included. Methods of calculating heat capacities and heat losses are covered in detail. There are also valuable discussions of such topics as methods of conserving heat, furnace materials, and the design of foundations and roofs. There is considerable amount of new material in the present edition. *An accurate and fairly detailed* account of the changes made is given in the book's preface. For the present, complete set contains fourth edition of volume and second edition of volume II. The two volumes can be used independently

YOUNG VINCENT WILLARD

Basic engineering thermodynamics. New York McGraw Hill Book Company, Inc., 1952 558 p. illus. 24 cm. $6.50 2314

Contents: Fundamental definitions and concepts. The first law and the closed system. The first law and the open system. The reversible process and the reversible cycle. The second law of thermodynamics. Entropy property of the system. The pure substance. General thermodynamic equations for the pure substance. The perfect gas. Mixtures of gases and vapors. Steady flow of fluids—the turbine. Power—gas systems. The reciprocating steam engine. Power—vapor systems. Refrigeration. The evaluation of irreversibility. The steady flow of fluids in pipes and ducts. Real gases. Thermodynamics of combustion. The transmission of heat. Appendix. Index.

Note: An introductory treatment designed for use in college courses offered to undergraduate students of mechanical engineering. The basic theory is adequately covered, and is related to familiar engineering applications. The discussions of most points are explicit and fairly full, hence more of the text can be comprehended by the student without the assistance of an instructor than of texts written in condensed style. The author was formerly Professor of Mechanical Engineering in Oklahoma Agricultural and Mechanical College.

STEAM ENGINEERING

CHURCH EDWIN FAYETTE JR.

Steam turbines. Third edition. New York McGraw Hill Book Company Inc. 1950 531 p. illus. 24 cm. $6 50 2315

Contents: Types and characteristics. Steam-turbine cycles. Flow of steam in nozzles. Nozzle proportions and tests. Impulse-blading velocity diagrams. Impulse-blading proportions. Reaction-blading velocity diagrams and blading proportions. Effects of size, capacity, speed, and steam conditions on the arrangement of turbine elements. Aerodynamic considerations. Elements of supersonic flow. Vibrations. Structural elements, materials, and stresses. Losses. Efficiency, reheat factor and condition line. Output variation and governing. Turbine performance. Design. Problems. References. Index.

Note. (3909) A standard engineering college textbook. In this edition much new material, both textual and pictorial, has been added, and some of the material in the earlier editions has been discarded. The level of treatment has been raised somewhat so that the book is now suitable for use in graduate as well as advanced undergraduate courses. Also, it will now be more useful to engineers out of school who are in need of an introductory and up-to-date survey. The bibliography, seven pages long, consists mainly of periodical articles published in the last decade

GAFFERT GUSTAF A.

Steam power stations. Fourth edition. New York McGraw Hill Book Company Inc. 1952 637 p. illus. 24 cm. $8.00 2316

Contents: Introduction. Equipment of power station. Steam engines. Steam turbines. Heat transfer. Condensers. Feed-water heaters and evaporators. Feed-water treatment. Fuels and combustion. Steam-generating units. High pressure and binary-cycle boilers. Dust collectors. Economizers and air heaters. Superheaters and reheaters. Fuel-burning equipment. Ductwork and piping. Draft systems. Coal and ash handling. Pumping equipment. Steam-station costs. Load curves and plant location. Selection of prime movers and steam-generating equipment. Cycle arrangement. Binary vapor cycles. Station design. Index.

Note. An engineering college textbook which has been widely used since the publication of the first edition in 1937. It provides thorough introductory treatment in which theory and description are combined. Steam-operated prime movers, steam generating equipment, power house auxiliary machinery, steam power economics, power station layout, etc. are covered, but the structural design of power houses and electrical machinery are omitted. In other words, the scope is steam-generating machinery and the machines which are auxiliary to steam generation. In comparison to the third edition, the book has been rather extensively revised.

POTTER, PHILIP JOHN

Steam power plants. New York The Ronald Press Company 1949 503 p illus. 24 cm. (A volume of a series in mechanical engineering. Burgess H. Jennings editor) $7.00. 2317

Contents: Introduction. Flow of fluids. Pumps. Theory of heat transfer. Fuels and combustion. Steam generators. Boiler auxiliaries—fuel burning equipment—draft equipment—feedwater treatment. Heat exchangers—condensers—feedwater heaters—evaporators and miscellaneous heat exchangers. Steam turbines. Steam engines. Heat balances. Economics of steam power plants. Appendix. Index.

Note. An engineering college textbook in which the emphasis is on the fundamental principles of fluid flow, heat transfer, etc., rather than on the description of a large range of power-plant equipment. However the operating principles and characteristics of a considerable range of typical equipment are described. There is also a fair amount of material on the classification and analysis of fuel. The chapters are supplemented by good lists of problems and by short bibliographies.

SALISBURY, JOHN KENNETH

Steam turbines and their cycles. New York John Wiley & Sons Inc. 1950. 645 p. illus. 23 cm. $9.00 2318

Contents (abridged): Part I, Fundamentals of turbine design: Power-plant cycles. Flow of fluids. Turbine external characteristics. Stage efficiency. Design of turbine stages. Steam path design. Part II, The regenerative cycle: Regenerative and non-extraction performance. Modern heat-balance practice. Conventional heat balance. Shortcut to turbine-cycle heat rate. Part III, Cycle analysis: Heater cycle losses. Cycle equations for homogeneous arrangements. Single heater formulas. Other heater arrangements. Distribution loss. Distribution loss in flashed heaters. Terminal difference and pressure drop loss. Miscellaneous cycle corrections. Part IV, Application engineering. Design details. Estimating steam rates. Estimating heat rates. Appendix. Index.

Note. A substantial treatise on the engineering aspects of steam turbines. The subject is treated mainly from the standpoint of design, but much of the information is of interest also to engineers who are concerned with the specification of turbines for specific applications or with general supervision of power plant operation and maintenance programs. Adequate attention is paid to thermodynamics and fluid flow, and much emphasis is given to cycle analysis. The section on the regenerative cycle is [illegible] a paper which, when presented before the American Society of Mechanical Engineers in 1943, won the Melville medal for the best original contribution of the year. There is a [illegible] selected bibliography

WOODRUFF, EVERETT BOWMAN AND HERBERT B LAMMERS

Steam-plant operation. Second edition. New York McGraw Hill Book Company Inc. 1950. 543 p. illus. 25 cm. $8 00. 2319

Contents. Boilers. Construction of boilers. Combustion of fuels. Settings, combustion equipment, and heating surfaces. Boiler accessories. Operation and maintenance of steam boilers. Pumps. Reciprocating steam engines. Valve-operating mechanisms. Operation and maintenance of steam engines. Construction of steam turbines and auxiliaries. Operating and maintaining turbines and auxiliaries. Auxiliary steam-plant equipment. Appendixes. Index.

Note. (4003) A standard work for stationary engineers and firemen. It provides a fairly comprehensive description of present-day steam plant equipment, together with clear expositions of such matters as the principles of combustion and the practices of handling and stoker operation. This edition has been extensively revised and enlarged to cover advances since 1933. Particular attention is given to the operation of new types of equipment; thus the chapters on boilers and boiler construction now include discussions of heat-recovery equipment, steam separators, new types of stokers, dust-collecting systems, etc. The chapter on fuel combustion has been doubled in length, and the description of steam turbines now runs to two chapters. Review questions and problems are again included.

ZERBAN ALEXANDER HAMILTON AND EDWIN P NYE

Steam power plants. Scranton International Textbook Company 1952 524 p. illus. 24 cm. $7.50 2320

Contents: An introduction. The steam power plant cycle. Fuels. Combustion. Steady state heat transfer. Furnace heat transfer. Steam generators. Steam prime movers. Fluid handling. Instruments and controls. Care of heat transfer surfaces. Power plant economics. I-c power plants. Appendices. Index.

Note: A book designed primarily for use as text for upperclass college students of mechanical or electrical engineering. It provides thorough and reliable statement of the fundamental aspects of steam power and detailed description of typical steam generators and related devices. Construction and maintenance also are covered. The building and subsequent cleaning of large modern boiler are described in detail. *The chapter on the care of heat transfer surfaces* (that is, boiler water treatment, boiler maintenance, etc.) is one of the longer ones in the book. The authors are members of the faculty of Pennsylvania State College.

GAS AND OIL ENGINES

ADAMS ORVILLE LEWIS, SR.

Elements of Diesel engineering. Second edition. New York The Norman W Henley Publishing Co., 1949 367 p illus. 21 cm. $5.00 2321

Contents: Diesel definitions. Diesel engine mathematics. Fundamental engine cycles. Fuel injection systems. Combustion and heat distribution. Rating, testing and performance. Air intake and supercharging. Interpretation of Diesel indicator diagrams. Diesel fuel and lubricating oils. Fuel properties and engine performance. Appendices: Nomenclature, units and elementary theory. The mathematics of elementary engine cycles. Combustion and heat distribution in the internal combustion engine. Fuels. Tests in specifying lubricating oils. Index.

Note: Nominally revision of the author's previous study published under the same title in 1936, this work is practically new text. It retains only small part of the former discussion, rewritten, and offers much new material in addition to advances in the field to date. The whole has been organized into lucid, more compact exposition.

ANDERSON JOHN WALLACE

Diesel engines. Second edition. New York McGraw Hill Book Company Inc. 1949 556 p. illus. 23 cm. $8.50 2322

Contents: Introduction. History Theory Design characteristics. Design details. *Automotive engines. Industrial-power engines.* Marine engines Stationary engines Railway engines Scavenging, charging, and supercharging Combustion chambers Fuel injection system. Governors, control, and *safety* equipment. Cooling and water-cooling systems. Lubrication and lubricating systems. Fuels and fuel systems. Starting systems. Waste-heat utilization. Installation. Operation and maintenance. Performance and cost of operation. Aids to the selection of an engine. Index.

Note: A survey in which the chief engineering problems and practices in contemporary Diesel engines, the chief uses of these engines, and the features of the chief makes are all covered. These subjects are treated from the viewpoint of American engineering. Much of the material is descriptive, but it is written for engineers who are concerned with the selection and maintenance of Diesel engines. There is considerable emphasis on design problems. A large amount of rearrangement and rewriting is evident in this edition. The number of illustrations has been increased from 314 to 436.

DUSINBERRE, G M

Gas turbine power Scranton Pa. International Textbook Company 1952 256 p illus. 24 cm. (International textbooks in mechanical engineering, C. *Fayette Taylor* consulting editor) $6 00 2323

Contents: An introduction. Thermodynamics. The basic gas turbine cycle. Variations on the basic cycle. Gas flow. Turbines. Compressors. Combustion. Heat transfer. Part-load operation. Further variations of the basic cycle. Appendix: Tables. Bibliography. Index.

Note: Thermodynamic and heat balance aspects of the gas turbine are emphasized in this book. Design aspects such as the stiffness of turbine blades are covered also. Applications to small turbines such as are used in airplane engines are not predominant; instead, the book is written so that most of its contents are as applicable to large stationary turbines as to the smallest ones in use. The treatment is introductory to the subject and the book is designed primarily for students in engineering colleges who have completed basic courses in thermodynamics, heat transfer, strength of materials, etc. The bibliography contains about 130 references.

GEORGI, CARL W

Motor oils and engine lubrication. New York Reinhold Publishing Corporation 1950 514 p. illus. 23 cm. $9 50 2324

Contents (abridged): Classification, definitions and specifications. Specification tests and their significance. Viscosity and viscosity index. Evaluation of performance characteristics of motor oils. Oil refining. Motor oil additives. Synthetic oils. Motor oil consumption characteristics. Engine sludge deposits. Aircraft engine lubrication. Stationary, marine, and two-cycle engine lubrication. Subject index.

Note: A comprehensive survey of the current knowledge of lubrication requirements and problems in internal combustion engines. About half of the volume is devoted to discussions of the production, evaluation, and testing of lubricating oils produced for engine lubrication. The remainder is devoted to performance of oils in engines, especially automotive engines, although there is some discussion of stationary engines. The book is written for engineers and other persons with technical training. The text is supplemented by 100 tables, 190 illustrations, and selected references to pertinent literature.

GILL PAUL W., AND OTHERS

Fundamentals of internal combustion engines as applied to reciprocating, gas turbine, and jet propulsion power plants, by Paul W Gill, James H. Smith, Jr., and Eugene J Ziurys. Second edition. Annapolis, Md. The United States Naval Institute, 1952 535 p. illus. 24 cm. $5.00. 2325

Contents: Introduction to reciprocating engines. Engineering thermodynamics. Power cycles. Engine power Fuels. Carburetion. Spark ignition. Combustion in the SI engine. Cooling. Spark ignition engine performance. The compression ignition engine and fuel injection. Combustion in the CI engine. Compression ignition engine performance. Comparison of SI and CI engines. Lubrication. Theory and fundamentals of gas turbine engines. Theory and fundamentals of jet propulsion engines. Hydrogen peroxide for propulsive power Nuclear power for ship propulsion. Bibliography Appendixes: Example problems. Air charts. Development of equations. Aircraft manufacturers. Index.

Note. This textbook was prepared primarily for use in course given to first year midshipmen at the U S. Naval Academy It is presentation of the basic theory, fundamental principles, and performance characteristics of the three major categories of internal combustion engines, covering the nomenclature of the various component parts of these engines, the capabilities and limitations of the various types of power plants, current developments, and future applications. The text is *arranged in two parts. The first* covers the reciprocating types of internal combustion engines, and the second is devoted to the gas turbine, particularly as applied to shipboard installations and the jet propulsion field. The latest types of propulsion plants, namely hydrogen peroxide and nuclear power, are covered briefly At the ends of the chapters are bibliographical references and problem exercises.

LICHTY LESTER CLYDE

Internal-combustion engines. Sixth edition. New York McGraw Hill Book Company Inc., 1951 598 p. illus. 24 cm. $7 00 2326

Contents: The internal-combustion-engine process. Thermodynamics for engine analysis. The combustion process. Air-standard cycle analyses. *Internal-combustion-engine-process* analysis. Deviations from ideal processes. Fuels. Combustion knock and knock rating. Carburetion and fuel injection. Manifolds and mixture distribution. Valves and valve mechanisms. Ignition of the charge. Combustion-chamber design. Engine lubrication. Heat transfer and engine cooling. Engine performance. Mechanics of principal moving parts. Engine vibration and balance. Engine design. Appendix. Index.

Note: (4014) A long-established engineering college textbook. Its coverage of specific topics, such as engine vibration and balance, is sufficiently inclusive to make the book useful to graduate engineers who find themselves in need of an introductory discussion. A special feature is the inclusion of charts that depict the results of numerous laboratory experiments and measurements on

internal-combustion engines. Although this edition is a few pages shorter than the preceding edition, the work has been substantially revised. New material on such topics as throttling, supercharging, icing, and combustion chamber design has been added.

OBERT, EDWARD FREDERIC

Internal combustion engines analysis and practice Second edition Scranton Pa. International Textbook Co 1950 596 p illus. 23 cm. $7.50 2327

Contents: Basic engine types and their operation. Engine testing. Thermodynamics. Theories of combustion and detonation. Pressure and pressure measurement. Idealized cycles and processes. Combustion charts. Fuels. Knock and the engine variables. Exhaust gas and the air-fuel ratio. Carburetion. Injection. Engine characteristics and valve timing. Spark-ignition engines. Compression-ignition engines. Lubrication. Compressors, gas turbines, and jet propulsion. Appendix. Index.

Note: (4013) A standard textbook for use in engineering colleges. Basic phenomena and principles are discussed rather thoroughly. Engine types and systems are described, but the author has not attempted to include descriptions of specific makes of engines. The discussion of selected topics—of which fuels is an example—is full enough to be useful to graduate engineers reading outside the field of their own specialty. The first edition of the book was written by Burgess Jennings and the present author. Much new material has been incorporated in this second edition.

SCHWEITZER PAUL HENRY

Scavenging of two-stroke cycle Diesel engines. New York The Macmillan Company 1949 268 p illus 26 cm. $4 00 2328

Contents: Present status of the Diesel engine. Peculiarities of the two-stroke cycle engine. Terminology. Effect of scavenging on brake mean effective pressure. Scavenging arrangements. Porting. Inlet ports. Exhaust ports. Superchargers. Compromise. Intake system. Exhaust system. The Kadenacy system. Complete porting calculation. High supercharging of two-stroke cycle engines. Experimental investigation of scavenging. Constructional features of representative two-stroke cycle Diesel engines. Tabulation of porting data. Bibliography. Abbreviations. Index.

Note: The key to greater efficiency in two-stroke cycle Diesel engines lies in the improvement of scavenging, which is the removal of the products of combustion from the cylinder between the combustion and the recharging parts of the cycle. This book is a thorough discussion of scavenging and of scavenging systems. It deals with all of the problems in detail and describes systems and elements of systems which have been used in both experimental and commercial engines. It is written for engine designers who are already engaged in practical engine design. Portions of it were published in the periodical *Diesel power and Diesel transportation* in 1943 and 1945.

SORENSEN HARRY A

Gas turbines. New York The Ronald Press Company 1951 460 p illus. 23 cm. $6.50 2329

Contents: Introduction. Principles of thermodynamics. Simple open-cycle gas turbines. Variations of the basic cycle. Closed-cycle gas turbine plants. The axial-flow compressor. Centrifugal and positive displacement compressors. Axial-flow turbines. Combustion systems. Structural design. Plant performance. Miscellaneous plants. Appendix: Properties of air and combustion gases. Index.

Note: A well-rounded introductory exposition of gas turbine theory and current practice. The book is designed chiefly as a college textbook for the use of upperclass engineering students. However it is so organized and written that it can serve equally well as a first book on the subject for engineers out of college who have the requisite knowledge of basic thermodynamic concepts and terminology. The whole range of gas turbine practice is covered from the small turbines used in current aircraft to the largest stationary units.

VINCENT EDWARD THOMAS

The theory and design of gas turbines and jet engines. New York McGraw Hill Book Company Inc. 1950 606 p illus. 23 cm. $8 50 2330

Contents: Some thermodynamic principles. Fundamentals of gas flow. Jet propulsion. Power plant cycles. Jet propulsion devices. The turbine power plant. The fundamental principles of rotating machines. The centrifugal compressor. The design of centrifugal compressors. The axial flow compressor. Design of axial compressors. Turbine theory. Turbine design. Combustion chambers, fuel systems, and fuels. Materials. Regenerators. Bibliography. Index.

Note: A textbook intended chiefly for upperclass undergraduate and graduate students in engineering schools. Its purpose is to present the theory which is essential in practical design of turbines and to relate this theory to the solution of specific design problems. The principles and characteristics of the chief types of gas turbines and jet units are described in engineering terminology including mathematical equations and graphs.

JET PROPULSION

FIOCK ERNEST FRANK, AND CARL HALPERN

Bibliography of books and published reports on gas turbines jet propulsion, and rocket power plants. Washington, D. C. Government Printing Office 1951 64 p. 23 cm. (United States. National Bureau of Standards. Circular 509) Paper, $0.20. 2331

Contents: Introduction. Classification of recent power plants. Rating of jet engines. Scope and arrangement of the bibliography. Bibliography: Books, 1910–1950. Gas turbines and jet power plants. Atomic energy. Periodical reports, 1940–1950: Development and future use. Theory and performance. Turbojet and propjet engines. Other types of gas turbines. Intermittent or pulsejets. Ramjets. Compounding and thrust augmentation. Rockets. Jet propelled helicopter rotors and propellers. Compressors and their components. Turbines and their components. Combustion and combustion chambers. Thermal properties of working media. Aerodynamic factors. Metallurgy, machining and welding. Ceramic materials in gas turbines. Miscellaneous. Research programs. Nomenclature. Atomic energy. Miscellaneous.

Note: A bibliography of books and periodical articles in English. The works listed are classified, and within each classification are arranged by year of publication. Periodical references prior to 1940 are not included because the development of practical power plants occurred primarily after that date. Some references to nuclear fission are included because of the possibility in the future of the jet engine utilizing energy from that source. *Circular 509* is a revision of *Circular 482*. The latter was issued in 1949 and listed publications through 1948.

LEY WILLY

Rockets, missiles and space travel. New York The Viking Press 1951 436 p. illus. 24 cm. $5 95 2332

Contents: The beginnings of an idea. The decades of the great dreams. "The rockets' red glare." Prophets with some honor. The battle of the formulas. Success, failure, and politics. The return of the war rocket. Peenemünde. White Sands. The rocket into cosmic space. The spaceship. Terminal in space. Appendixes: Rocket airplanes and rocket-assisted take-off. Notes and tables. Bibliography. Index.

Note: (2572*) The first edition of this book, published in 1944, bore the simple title *Rockets* and ran to only 287 pages. The second edition, published in 1947, was entitled *Rockets and space travel* and was 374 pages long. Now we have *Rockets, missiles and space travel*. One counts with interest and some apprehension the appearance of the 1955 edition. The book remains a rather solid but quite readable survey for general readers and rocket enthusiasts, and it still contains many reference features including a full account of early rocket work in Germany (in which the author played an important part), historical accounts of the leading rocket societies of the world, and an annotated international bibliography of works on rockets.

SUTTON GEORGE PAUL

Rocket propulsion elements an introduction to the engineering of rockets. New York John Wiley & Sons, Inc. 1949 294 p. illus. 22 cm. $5 00. 2333

Contents: Classification and definitions. Rocket history. Nozzle theory and thermodynamic relations. Rocket propellant performance calculations. Liquid rocket propellants. Liquid rocket motor. Liquid propellant feed systems. Flight performance. Rocket testing. Solid propellant rockets. Index.

Note: Engineering students and graduate engineers who are preparing for work in connection with rocket and jet engine development are the intended audience for this book. The author has assumed that his readers will have knowledge of basic physics, thermodynamics, and chemistry. The basic principles and considerations of rocket design are presented, and there are numerous descriptions and illustrations of rockets and rocket parts. Reference lists to the related book and periodical literature accompany the chapters.

WIMPRESS, R. N

Internal ballistics of solid fuel rockets—military rockets using dry-processed double-base propellant as fuel. New York McGraw Hill Book Company, Inc. 1950 214 p. illus. 24 cm. $5 00 2334

Contents: Nomenclature. Relation of internal to external ballistics. Characteristics of propellant gases. Burning properties of propellants. Steady-state flow of compressible fluids. Nozzle performance. Flow of gas inside rocket motors. Determination of reaction pressure in rocket motors. Design of propellant grains. Characteristics of burning in perforations. Ignition. Effect of physical properties of propellant on ballistic performance. End burning grains. Static testing equipment. Heat transfer. Index.

Note: The contents of this book were developed largely in experimental investigations at the California Institute of Technology under contract with the Office of Scientific Research and Development during World War II. They pertain chiefly to the types of rockets fired from lightweight rocket launching equipment in the course of land and naval operations. No attempt was made to incorporate knowledge obtained by workers outside the project and there is no bibliography; nevertheless, the book represents significant contribution to the subject.

ATOMIC ENERGY

GLASSTONE SAMUEL AND MILTON C EDLUND

The elements of nuclear reactor theory New York D Van Nostrand Company Inc. 1952 416 p. illus. 24 cm $4.80. 2335

Contents: Nuclear structure and stability. Nuclear reactions. Production and reactions of neutrons. The fission process. The diffusion of neutrons. The slowing down of neutrons. The bare homogeneous thermal reactor (sources determined by Fermi age theory). Homogeneous reactor with reflector—the group-diffusion method. Heterogeneous (natural uranium) reactors. Time behavior of bare thermal reactor. Reactor control. General theory of homogeneous multiplying systems. Perturbation theory. Transport theory and neutron diffusion. Index.

Note: An introduction designed specifically for the instruction of graduate engineers and physicists who are preparing for practical work in connection with the design or operation of nuclear reactors. It was based upon the course of lectures originally given by M. C. Edlund at the Oak Ridge School of Reactor Technology. The first four chapters cover background information on nuclear reactions. The rest of the book is largely mathematical exposition of nuclear chain phenomena and reactions and of reactor control. Although not the first work for scientists and engineers in this field, it does contain range of information which was still classified when the earlier publications were written and therefore is not represented in them.

GOODMAN CLARK, editor

The science and engineering of nuclear power Cambridge Addison-Wesley Press, Inc. 1949-52 2 v illus. 27 cm. $15 00 2336

Contents: Volume 1, Introduction to pile theory: Fundamentals of nuclear physics, by R. D. Evans. The fission process, by M. Deutsch. Neutron diffusion, by V. F. Weisskopf. Nuclear chain reactions, by E. P. Wigner. Elementary pile theory, by F. L. Friedman. The application and experimental basis of pile theory, by R. T. Feld. Chemistry of the fission process, by C. D. Coryell. Control and operation of piles, by W. J. Overall. Construction of nuclear reactors, by C. Goodman. Heat transfer, by R. R. Gilliland. Heavy elements and nuclear fuels, by J. W. Irvine, Jr. Appendices: Table of precise masses. Loss of energy in elastic collisions. Neutron cross sections of the elements, by R. K. Adair. List of illustrations. Index. Volume II, Source materials for nuclear power, by R. D. Parks. Isotope separation, by K. Cohen. Vacuum techniques in nuclear engineering, by F. C. Armistead. Theoretical basis of some measurements useful in pile design, by F. L. Friedman. Research in neutron physics at Chalk River, by B. W. Sargent. Calculation of neutron distribution in heterogeneous piles, by A. M. Weinberg. The concept of albedo in elementary diffusion theory, by G. Placzek. Pile kinetics, by H. Soodak. Statistical aspects of pile theory, by F. de Hoffmann. Heat removal from nuclear reactors, by E. R. Gilliland and others. Rockets and other thermal jets using nuclear energy, by Hsue-Shen Tsien. The shielding of nuclear reactors, by M. L. Goldberger. Effects of radiation on materials, by A. O. Allen. Production of radionuclides, by J. W. Irvine, Jr. Pile materials—metals, alloys, and compounds, by A. R. Kaufmann. Health physics—instrumentation and hazard evaluation, by R. D. Evans. Future developments in nuclear energy, by C. Goodman. Appendices. Index.

Note: (III) The first volume of this work was originally published in 1947 and appeared in second edition in 1952. The second volume was published in 1949. The main change in the second edition of Volume I is in the addition of the third appendix, reprinted from *Reviews of modern physics*, July 1950. Both volumes are comprised of material that was presented in series of seminars at the Massachusetts Institute of Technology. The style is advanced and the books are addressed to graduate students and graduate engineers. The books were approved for publication by the Declassification Office of the United States Atomic Energy Commission.

SOODAK HARRY AND EDWARD C CAMPBELL

Elementary pile theory New York John Wiley & Sons Inc. 1950 73 p. 23 cm. $3.00 2337

Contents: Cross sections. Slowing down of neutrons. Slowing-down density. Slowing down with absorption. Introduction to diffusion theory. Solutions of diffusion equations—boundary conditions. The albedo. Space distribution of slowing-down density. The pile equations—solutions. Critical pile dimensions for simple pile shapes. The neutron cycle. Pile with reflector—group theory. Two-group theory. Pile control. Time-dependent pile equations. Pile kinetics—transient behavior. Index.

Note: A brief presentation of knowledge pertaining to the design and the phenomena of radioactive piles constructed for the production of radioactive isotopes and fissionable elements. It is based on series of lectures which were delivered by Dr. Soodak in connection with training program for staff members at the Oak Ridge National Laboratory (Clinton Laboratories) during 1946 and 1947. Only the declassified portion of the lectures is contained in the book, but this portion is potentially useful to graduate physicists and other scientists in need of basic outlines.

AUTOMOBILES

ASHBURN ANDERSON

Automotive trouble shooting and maintenance. New York McGraw Hill Book Company Inc. 1950 305 p. illus. 24 cm. $4 75 2338

Contents: General procedure. Electrical system. Fuel system. Cooling system. The engine. The power train. The chassis. List of visual aids. Index.

Note: A fairly detailed guide to "trouble shooting" of faults in automobiles intended for the instruction of students in vocational school courses. The whole range of common troubles and repairs is covered, but the book is short on information about automatic transmissions, although it does contain good discussion of overdrives. The book is revision of *Automotive trouble shooting*, an official text of the Ordnance School of the United States Army.

ATHANSON WILLIAM T

Automobile body repair and paint guide New York D Van Nostrand Company Inc., 1952 95 p. illus. 19 cm. $2.00 2339

Contents: Book 1, Automobile sheet metal repair guide: Glossary—terms used in automobile body and fender repair trade. Common names of automobile body panels and sections. Techniques in auto-

mobile body repair. Book II, Automobile paint guide: Glossary—terms used in automobile painting trade. Automobile panel guide. Helpful hints, short cuts, time saving methods. Subject index.

Note. A brief book of elementary information and practical suggestions. Terms, tools, and practical techniques are described for beginners in the trade. The author is General Manager of the Parts and Refinishing Materials Division of the Briggs Manufacturing Company

CROUSE, WILLIAM HARRY

Automotive electrical equipment, its operation and maintenance. Second edition. New York McGraw Hill Book Company Inc. 1950 330 p. illus. 24 cm. $4 50 2340

Contents (abridged) The language of electricity The storage battery Cranking motor fundamentals. Theory of regulator operation. Generator service. Horns. The gasoline engine and fuel requirements. The ignition system. Ignition testing instruments. Switches. Indicating devices. Headlights. Accessories. Appendix. Index.

Note. (4024) A practical guide to the servicing and maintenance of automotive electrical systems for automobile mechanics and students preparing for this occupation. The instructions for testing, adjusting, and repairing electrical systems and devices of motor cars, trucks, and buses are described clearly and in detail, and the descriptions are accompanied by numerous diagrams and photographs. The book is written in simple concrete style that makes it suitable for self-instruction as well as for study in organized classes. In this edition the basic principles of electricity are discussed in more detail, and chapters have been added on the servicing of direction signals, electric windshield wipers, radios, convertible top lifters, heaters, and defrosters. As an aid for self study review questions are now included in each chapter.

CROUSE, WILLIAM HARRY

Automotive mechanics. Second edition. New York McGraw Hill Book Company Inc., 1951 774 p illus. 24 cm. $6 50 2341

Contents (abridged) Introduction, by C. F Kettering The engine. Fuel system. Engine lubrication system Engine cooling system. The electric system Engine service. Clutches. Clutch service. Transmissions Propeller shaft and universal joints. Rear axles and differentials. Springs and shock absorbers. Steering system. Brakes. Tires. Car frame and body Accessory equipment. Shop practice. Appendixes Exhaust gas analyzers. Electrical service procedure for passenger cars with Delco-Remy electrical equipment. Wiring harness and color codes Index.

Note (3035*) A basic yet comprehensive text for apprentice mechanics covering the construction, operation, maintenance, disassembly and repair of automobiles. The detailed servicing and repair procedures are based on manufacturers' shop manuals, and are supplemented with numerous illustrations. The scope and arrangement of this treatise have not been changed, but the material has been brought up to date to include equipment and servicing methods developed since 1944. This is particularly true of the chapters on transmissions here the number of pages has been almost doubled.

EVERETT RALPH JAY

Motor tune up manual. New York The Macmillan Company 1949 355 p illus 22 cm. $6 00 2342

Contents The field of motor tune-up Basic principles Storage batteries Battery maintenance Ignition Spark plugs Fuel pumps. Carburetors. Fuels. Engine principles. Starters Generators Voltage regulators Motor tune-up procedure Glossary of trade terms. Index.

Note A practical book on "tune-up," or the adjustment of present-day automobile engines so that they will render maximum performance. It is intended for the use of automobile mechanics and students in trade schools The various elements of systems that affect engine operation such as the carburetor are discussed concisely from the mechanic's viewpoint with, of course, the major emphasis on the correction of troubles The final chapter includes brief directions on the use of various instruments that have been developed to facilitate engine tune-up

FRAZEE IRVING AND OTHERS

Automotive electrical systems. By Irving Frazee William Landon and Ernest Venk. Contributors Raymond Jonassen Bennie Mirkin and Edward D Spicer Co-ordination of illustrations by Arthur E. Burke. Chicago American Technical Society 1952 436 p. illus. 22 cm (Automotive series, edited by Irving Frazee and Earl L. Bedell) $4 90. 2343

Contents Electricity and magnetism. Storage batteries. Generators. Generator cutouts and regulators. Generating system trouble shooting. Starting systems. Lighting systems. Horns and shoes. Instruments and gauges. Index.

Note A book which is suitable for use as text in vocational courses and as self-instruction guide for beginning mechanics. No previous knowledge of electrical principles is assumed, hence background facts and terminology are included along with practical and adequately full discussions of present-day automotive electrical systems, test instruments, and maintenance and repair procedures. There is a generous number of well-reproduced illustrations. The authors are prominent men in technical writing and vocational teaching.

FRAZEE IRVING AND OTHERS

Automotive fundamentals by Irving Frazee Ernest Venk George Hafferkamp, William Landon and John H. Zich. Co-ordination of illustrations by Arthur E. Burke. Chicago American Technical Society 1949 538 p. illus. 22 cm. (Automotive series, edited by Irving Frazee and Earl L. Bedell) $4 90. 2344

Contents Part I, Fundamentals of science. Part II, Operating principles Automotive vehicles. Engines. Fuel systems. Ignition systems. Electrical systems and instruments. Power trains. Brake systems. Suspensions and steering. Steering control, wheel alignment, and tires. Index.

Note A well planned, generously illustrated textbook for use in vocational schools and other organized courses offered to students preparing for practical work in automobile maintenance. The authors and editors are prominently connected either with automobile manufacturing or with technical education.

FRAZEE IRVING AND OTHERS

Automotive maintenance and trouble shooting. By Irving Frazee William Landon and Ernest Venk Co-ordination of illustrations by Arthur E. Burke. Chicago American Technical Society 1952 414 p. illus. 22 cm. (Automotive series edited by Irving Frazee and Earl L. Bedell) $4 75 2345

Contents: Maintenance, by I. Frazee and E. Spicer. Electrical systems, by I. Frazee and R. Jonassen. Gasoline engines, by I. Frazee and B. Mirkin. Gasoline fuel systems, by I. Frazee and B. Mirkin. Magneto Mirkin. Battery ignition, by I. Frazee and B. Mirkin. Magneto ignition, by I. Frazee and E. Venk. Cooling systems, by I. Frazee and W Landon. Steering and B Mirkin. Instruments, by I. Frazee and B. control and tire wear by I. Frazee. Brakes, by I. Frazee and B. Mirkin Index.

Note. Another volume in carefully planned series for vocational school students and beginning automobile mechanics. It is written in simple style and is organized so as to facilitate both self-instruction and reference use. The text is supplemented by numerous clearly reproduced illustrations. Although not addressed to the individual automobile owner who attends to his own automobile repairs, the book is suitable for this series of mechanic also.

FRAZEE IRVING AND OTHERS

Automotive suspensions steering and wheel alignment. By Irving Frazee, William Landon and George Hafferkamp. Co-ordination of illustrations by Arthur E. Burke. Chicago American Technical Society 1951 330

p. illus. 22 cm. (Automotive series edited by Irving Frazee and Earl L. Bedell) $4.50 2346

Contents: Springs. Shock absorbers. Axles. Independent front suspension. Steering gears and linkages. The factors of wheel alignment. Effects and influences. Measurement of wheel alignment factors. Diagnosis of wheel alignment. Corrections and adjustments. Wheel alignment specifications. Index.

Note: As with other units in the series, this volume has been prepared in close collaboration with the manufacturers of the various types of equipment under discussion. The treatment is detailed and the descriptions of maintenance, inspection, and repair procedures are supplemented with many excellent illustrations. Emphasis is placed on wheel alignment techniques and extensive tables of specifications are included. The book is intended to serve young automobile mechanics both as a reference manual and as a self-instruction text.

KUNS, RAY FOREST

Automatic transmissions, principles and maintenance. Milwaukee The Bruce Publishing Company, 1951 466 p. illus. 24 cm. $5.00. 2347

Contents: Automatic transmissions—hydraulic drives. Buick dynaflow automatic transmission. Chevrolet automatic transmission—power-glide torque converter. Chrysler automatic transmission—fluid drive. Ford-Mercury automatic transmission. Oldsmobile hydra-matic drive. Packard ultramatic drive—torque converter design. Studebaker automatic transmission. Index.

Note: The automatic transmissions now used on a considerable number of American automobiles are described in this book. Operating principles are explained and the various makes of transmissions are described specifically and in detail. Maintenance and repair instructions are included for most of the transmissions. The book is useful as background information for automobile mechanics. It may be used as a text to be studied for preparation for work on automatic transmissions or as a supplement to manufacturers' repair manuals. There are more than 330 illustrations and most of these are reproductions of photographs of transmission parts or of repair operations on transmissions.

PACKER, CLARENCE EDWARD

Automotive body and fender repairs. Third edition. Chicago The Goodheart Willcox Company Inc., 1951. 354 p. illus. 23 cm. $3.50. 2348

Contents (abridged): Locating and laying out a shop. Choosing the equipment. Fundamentals of metal working. Principles of soldering. Use of oxyacetylene welding. Arc and spot welding. Shrinking sheet metal. Fender repairing. Panel replacement. Servicing doors. Servicing locks. Cleaning upholstery. Servicing folding tops. Flock coating. Estimating the cost of repair jobs. Infra-red paint drying. Surface preparation. Priming and surfacing. Spraying lacquer and synthetic enamel. Painting over old finishes. Refinishing commercial vehicles. Principles of glass service. Fundamentals of upholstery work. Frame straightening. Index.

Note: A successful instruction manual designed for use in vocational school courses and also as a reference book for beginners in the trade. It is limited to descriptions of practical techniques and to "pointers" on the management of automobile body repair businesses. The techniques of operations such as the restoring of dented fender are described explicitly but there is no discussion of the background metallurgy. There are 710 figures, practically all of which depict rebuilding or refinishing operations.

PURVIS, JUD

Auto mechanic's manual on brakes and steering including wheel alignment. Chicago The Goodheart Willcox Company Inc., 1951 175 p. illus. 22 cm. $3.50. 2349

Contents: Part I: Brakes and why they brake. Brake construction. Hydraulic brakes. Brake types. Power brakes. Brake service and adjustment. Trouble shooting. Part II: Steering control and wheel alignment. Front wheel angularity. Adjustment and correction. Power steering. Index.

Note: A practical manual in which the fundamental principles of automobile brake and steering systems are given equal emphasis with specific instructions on adjustment and repair operations. It is introductory and complementary to the repair manuals issued by automobile and brake manufacturers for specific models. The terminology is relatively simple and there are many clear illustrations, well-reproduced in large scale. The author is technical editor of *Motor service*.

TOBOLDT, WILLIAM KING

Automobile body rebuilding and refinishing. Scranton, Pa. International Textbook Company, 1950 464 p. illus. 21 cm. $5.00 2350

Contents (abridged): Part 1. The rebuilding shop and its basic operations: Planning the layout. Repairs to damaged metals. Repair methods. Welding. Part 2, Rebuilding methods: Repairs to wrecked automobiles. Repairing damaged frames. Part 3, Repairing individual parts: Miscellaneous repair operations. Station-wagon bodies. Part 4, The paint shop. Part 5, Preparation for spray painting: Cleaning and paint-removal. Masking. Part 6, Spray painting: Types of finishes. Causes of spray-painting troubles. Index.

Note: All of the operations in rebuilding and refinishing of damaged automobile bodies are covered in sufficient detail for practical use in body shops. Uses of modern tools such as dinging hammers and hydraulic straightening equipment are described. The text descriptions are supplemented by numerous photographs and line drawings. The sections on painting account for approximately four-ninths of the book's length and are outstanding for their many practical points.

VENK, ERNEST, editor

Automotive engines maintenance and repair. Co-ordination of illustrations by Arthur E. Burke. Chicago American Technical Society 1951 381 p. illus. 22 cm. (Automotive series, edited by Irving Frazee and Earl L. Bedell) $4.50 2351

Contents: Operating principles. Cleaning and measuring. Disassembly. Cylinder heads and oil pans. Cylinder block and crankcase. Crankshafts and flywheels. Pistons and connecting rods. Valves and valve-operating mechanisms. Engine lubrication, cooling, and mounting. Assembly. Remachining. Index.

Note: A well-organized and admirably illustrated textbook. It has been prepared with the aid of a considerable body of leaders in vocational education and the automotive service industries. It is designed principally for use in vocational school courses offered to young men who are studying to become automobile mechanics. A special advantage over older books on the same subject is the inclusion of full descriptions of present-day methods of repairing and maintaining modern high precision engines.

WOHLFEIL, THEODORE A., AND OTHERS

Automobile body reconditioning. New York McGraw Hill Book Company Inc. 1952 157 p. illus. 26 cm. $3.60. 2352

Contents: Basic hand tools and their application. Welding equipment and methods of application. Basic metal-straightening techniques. Types of body-panel aligning. Use of hydraulic body jacks. Body-panel straightening. Body-panel removal and replacement. Painting equipment and techniques. Upholstery replacement. Damage estimating. Index.

Note: A well-organized and thoroughly illustrated textbook for students in vocational schools and technical courses in high schools and for apprentice mechanics in the automobile body rebuilding trade. All procedures are described in numbered steps. The book is very generously illustrated. The illustrations are reproductions of line drawings or of photographs, and they have been well chosen.

FUELS AND COMBUSTION

AYRES, EUGENE AND CHARLES A. SCARLOTT

Energy sources—the wealth of the world. New York McGraw Hill Book Company Inc., 1952 344 p. illus. 24 cm. $5.00 2353

Contents (abridged) Energy our priceless heritage. How much petroleum. How much coal. How much of other fossil fuels. Patterns of energy use. Waste. Life expectancy The [illegible]. Power from the sun. Windows. How much vegetation. Rain. Wind and tide. Energy balance sheet. Appendixes. Bibliography Index.

Note. A very readable study of the energy resources available to mankind. Discussions of coal, oil, and natural gas take up about half of the space and the rest is devoted to such topics as radioactive materials, direct use of solar energy the use of vegetation as fuel, and the power in [illegible] and waves. The authors come to the conclusion that mankind' energy needs will have to be met sooner than is generally supposed by the use of solar energy They imply that more research could well be done in this field. A wide range of data on fuel resources and other energy topics is included.

BURKHARDT CHARLES H.

Domestic oil burners installation and servicing. New York McGraw Hill Book Company 1951 359 p. illus. 24 cm. $6.25 2354

Contents (abridged) High-pressure gun type burners. Low-pressure atomizing burners. Rotary burners. Vaporizing burners. Determining the gallon-per-hour rate of the oil burner Short methods of calculating gallon-per hour rates for con [illegible] installations. Combustion chambers. Installation of tanks and piping. Automatic oil-burner controls. Control systems. Zone control. Adjusting for higher combustion efficiency (CO_2 and stack temperature) Adjusting for higher combustion efficiency (draft) Fixing the new oil burner. Combustion problems. Excess fuel-oil consumption. Servicing vertical rotary wall flame burners. Basic oil-burner service methods. Index.

Note Men just entering the oil burner servicing field and students preparing for [illegible] the audience for this book. The chief types of oil burners, residential types of controls, and the common servicing operations are described practically and simply There are many descriptions of the mechanisms of specific burners and controls, but the author has not attempted to describe the mechanisms of all such devices on the market. The book is based on [illegible] series of articles that appeared in the *Sheet metal worker* and the *Plumbing and heating journal* from 1947 to 1950.

COWARD H. F AND G W JONES

Limits of flammability of gases and vapors. Washington D C Government Printing Office 1952 155 p illus 26 cm. (United States. Bureau of Mines Bulletin 503) Paper $0.60 2355

Contents Determinations of limits. Some theoretical considerations. Limits of individual gases and vapors. Limits of mixed flammable gases and vapors. Summary of limits of flammability Bibliography Index of authors cited Index of subjects.

Note The results of investigations of certain chemical and physical factors connected with the initiation and propagation of flame in different gases under various conditions are presented in this reference work. This [illegible] the fourth edition of it. It includes 113 different substances in the summary of flammability limits in air and in oxygen as compared with 24 in the first edition.

FIELDNER ARNO CARL AND W A. SELVIG

Methods of analyzing coal and coke Washington D C Government Printing Office 1951 51 p illus 26 cm. (United States. Bureau of Mines. Bulletin 492) Paper $0.50 2356

Contents Introduction Preparation of laboratory sample with preliminary drying. Method of calculating and reporting analyses Preparation of laboratory sample without preliminary air-drying Relative merits of the two methods Total moisture determination for lump coke Methods of analyses Determination of the calorific value of coal. Fusibility of coal ash. Tolerances. Determination of agglomerating index of coal. Classification of coals by rank. Determination of true specific gravity of coal and coke substance Determination of apparent specific gravity Shatter test for coke Tumbler test for coke Determination of free-swelling index of coal. Determination of agglutinating value of coal. Analysis of coal and coke ash Determination of ferric oxide, ferrous oxide, and metallic iron in coal-ash slags and clinkers.

Note Information is here provided on the methods currently used in the laboratories of the Bureau of Mines for analyzing coal and coke and determining their heating values.

HANDBOOK OF OIL BURNING. Frank H. Faust, editor in-chief, G Theodore Kaufman editor New York Oil-Heat Institute of America, 1951 978 p. illus. 24 cm. $10 00. 2357

Contents. Section I, Oil as [illegible] fuel. Section II, Combustion of fuel oil. Section III, Preparing oil for combustion. Section IV Oil burning equipment. Section [illegible] Elements of the heating system. Section VI, Controls. Section VII, Selection of eq[uip]ment. Section [illegible], Application, installation and maintenance of oil burners. Section IX, Standards. Biographies of [a]uthors and editors. Index.

Note. A comprehensive work designed not only for the use of engineers but also for heating contractors and others with practical interest in oil burners and heating. In most parts the presentation is less compact and considerably easier to understand than is typical of engineering handbooks. Detailed descriptions of the various types of oil burners, the various types of heating systems and of related matters such as the method of calculation of heat losses from buildings. Full directions are given for both the installation and servicing. [illegible] tenance of the [v]arious types of residential burners. Though the book's lineage includes the *Handbook of oil burning,* published by the American Oil Burner Association in 1931, no matter has been carried over from that book.

JOHNSON, ALLEN JAQUITH editor

Fuels and combustion handbook. Editor Allen J Johnson associate editor George H. Auth. New York McGraw Hill Book Company Inc. 1951 915 p. illus. 24 cm. $14.00. 2358

Contents (abridged) Section 1 Solid fuels: Fuel sources, trends and reserves in the United States and abroad. Pennsylvania anthracite and other anthracite coals. Bituminous coal, subbituminous coal, and lignite. Peat, wood, wood wastes, charcoal, and agricultural wastes. Section 2, Liquid and gaseous fuels and miscellaneous sources of heat and power: Petroleum and petroleum derivatives. Gaseous fuels. Section 3 Combustion Determination and calculation of heat balances. Drafts and chimneys. Smoke, fine particles and other combustion rejects, including slags. Section 4, Selection of [illegible] fuel. Section 5, Preparation of coal for utilization. Section 6 Fuel-handling methods. Section 7 The transfer and generation of heat Heat transfer and insulation. Boilers and steam generators. Methods of firing solid fuels. Firing liquid and gaseous fuels. Some specific non-steam making uses of fuel. Section 8, General: Boiler measurements and tests. Index.

Note A new handbook of interest in several fields. It provides in handy form not only [illegible] wide range of data useful to engineers and operating personnel in powerplants but also much data on relatively minor fuel topics. Examples of the latter include information on the fuel value of bark and wet wood, descriptions of the techniques of manufacturing briquettes and pellets from fine sizes of coal, discussions of electric heating, solar heat, thermal springs, atomic energy and uses of fuel in the manufacture of metals, ceramic products, etc. There are footnote references to related literature but no attempt at [illegible] systematic bibliography

LEWIS BERNARD, AND GUENTHER VON ELBE

Combustion flames and explosions of gases. New York Academic Press, Inc. 1951. 795 p. 24 cm. $13.50. 2359

Contents (abridged) Part I, Chemistry and kinetics of the reactions between fuel gases and oxygen. Theoretical foundations. The reaction between hydrogen and oxygen. The reaction between carbon monoxide and oxygen. The reaction between hydrocarbons and oxygen. Part II, [illegible] in flames. Emission spectra and ionization in flames. Flame propagation Flame photography and pressure recording. Combustion waves in nonturbulent explosive gases. Combustion waves in turbulent explosive gases. Mixing and combustion in fuel jets Detonation waves in gases. Flames in electric fields. Part III, State of the burned gas: Temperature, pressure, and volume of the burned gas. Temperature and radiation of the burned gas. Industrial [illegible] Part IV Problems in technical combustion processes. Data for thermochemical calculations. Limits of inflammability Flame temperatures. Internal combustion engines. Appendixes: Data for [illegible] heating. Author index. Subject index.

Note. A substantial contribution on the professional level written by two staff members of the Explosives and Physical Sciences Division of the United States Bureau of Mines. The treatment is mainly from the standpoint of physical chemistry with much emphasis on the theory of reaction [illegible] and chemical kinetics. However, [illegible]

pirical knowledge gained from experiments is introduced and given its due in those areas in which the theoretical knowledge is still incomplete. The title of the book is the same as that of another work on the subject written by the same authors and published in 1935. However, the content is almost entirely new.

SCHMIDT, PAUL FRANK
Fuel oil manual. New York Industrial Press, 1951 160 p. 23 cm. $3.50. 2360

Contents: Introduction. Chemistry of petroleum. Petroleum refining processes. Grades and types of fuel oils. Gravity. Heat of combustion. Viscosity. Water and sediment. Carbon. Ash and salt residues. Flash and fire points. Pour point. Sulphur. Color. Distillation. Preheating of oils. Sampling storage tanks. Stability of fuel oils. Fuel oil treatments. Reclaimed fuel oils. Blending of oils. Transportation and storage. Fuel oil specifications. Complaints and causes of trouble. Index.

Note: A compilation of useful and clearly stated information for stationary engineers and other persons who are concerned with purchasing or burning fuel oil. The book is by no means exhaustive, but it includes practically all of the information that may be needed by purchasing agents, building superintendents, and engineers responsible for the handling of fuel oil in large heating installations and power plants. There are 34 tables of data on such matters as temperature volume corrections, kinematic and Saybolt viscosity conversions, heating values in relation to A.P.I. gravity, salt content of fuel oils, and fuel oil specifications.

SMITH MARION L., AND KARL W STINSON
Fuels and combustion. New York Mc Graw Hill Book Company Inc. 1952 340 p. illus. 24 cm. $6.50 2361

Contents: Fuels. Stoichiometric analysis. Thermochemical analyses. The process of combustion. Physical properties of fuels. Gas and oil burners. Coal-burning equipment. Combustion in engines. Index.

Note: A college textbook in which is combined a description of the common fuels, an exposition of the chemical and physical bases of combustion, and descriptions of the chief fuel-burning devices including internal combustion engines. The authors have assumed familiarity with basic engineering and chemical terminology and with elementary engineering mathematics on the part of their readers. Problems for the student to solve and literature references are included. The authors are members of the faculty of Ohio State University.

STEINER, KALMAN
Oil burners. Second edition. New York McGraw Hill Book Company Inc., 1950 502 p. illus. 23 cm. $6.50 2362

Contents: Hydrocarbons and petroleum. Fuel oil. Combustion of fuel oil. Comparative fuel data. Problems of oil burner design. Shell- and pot-type burners. Domestic oil burners. Horizontal rotary burners. Industrial oil burners. Fans and electric motors. Electric control devices. Electric control systems. Ignition methods. Fuel-oil pumps. Oil piping, strainers, and flow regulators. Capacity of boilers and warm air furnaces. Refractories. Draft and combustion control. Oil preheating. Oil storage tanks and gauges. Service and maintenance. Control of the heating system. Appendix. Index.

Note: (4012) A comprehensive survey of practical and engineering aspects of oil fuel and oil burners. A wide range of equipment is described, but the descriptions are incidental to the presentation of fundamental principles and data. Both residential and industrial burners are covered, but somewhat more attention is given to industrial types. Although the book contains material of interest to oil burner repairmen, it appeals particularly to engineers and power plant supervisory personnel. It is also useful as a reference book for architects, builders, and others who need technical information. The present edition represents a thorough revision.

HEATING VENTILATING AND AIR CONDITIONING

ADLAM THOMAS NAPIER
Radiant heating: a practical treatise on American and European practices in the design and installation of systems for radiant, panel, or infra red heating, snow melting and radiant cooling, including step-by-step procedure, with typical problems solved by the application of simplified working data, charts *and tables. Second edition, revised and enlarged.* New York The Industrial Press 1949 504 p. illus. 24 cm. $6.00. 2363

Contents (abridged): Theory of heat radiation. Artificial heating as related to bodily heat losses. The measurement of comfort. Temperature studies in radiant heated rooms. Radiant heating with ceiling panels. Radiant heating with floor panels. Wall, baseboard, electrical, and metal panels. Controls for radiant heating. Areas and surface temperatures of radiant heat panels. Determining panel pipe size, spacing and heat input. Radiant cooling and air conditioning. Snow melting by embedded pipes. Step-by-step procedure in radiant heating design. Index.

Note: A comprehensive manual designed for architects and heating engineers in need of technical information relating to the design of radiant heating systems. The present edition is 32 pages longer than the first edition published in 1947. New material is found on the design and construction of ceiling, floor, and wall panels, and there are several new coil-dimensioning charts. There is no bibliography.

ADLAM THOMAS NAPIER
Snow melting. New York The Industrial Press 1950. 224 p. illus. 23 cm. $4.50. 2364

Contents (abridged): Feasibility and cost of removing snow by melting. Snow melting test data and test set-ups. Calculating the heat required for snow melting. Pipe friction and expansion in snow melting systems. Antifreeze solutions and their use in snow melting systems. Automatic controls for starting system when snow begins to fall. Air venting and flow adjusting. Snow melting systems applied to roads and driveways. Snow melting systems applied to sidewalks. *Special and dual-purpose* applications of snow melting. Costs to install and operate snow melting systems. Design procedure and charts for pipe sizing and spacing. Index.

Note. The use of embedded hot water coils and electric cables for melting snow on driveways and sidewalks was briefly discussed by the author in his work *Radiant heating* (see above). In this volume he provides detailed information regarding design, construction, and installation and operating costs of such installations. These data, and the methods of calculating heat requirements, should be of value to anyone contemplating the installation of such a system, but the book is intended primarily for engineers. A considerable variety of systems already built and operating are described and illustrated.

CARRIER, WILLIS HAVILAND AND OTHERS
Modern air-conditioning heating and ven tilating by Willis H. Carrier Realto E. Cherne and Walter A. Grant. New York Pitman Publishing Corporation, 1950. 574 p illus. 26 cm. $10.00 2365

Contents: Introduction. Psychrometrics and comfort. Estimating requirements. Economics. Heat producing equipment. Heat-distributing equipment. Steam heating systems. Hot-water heating systems. Automatic controls and zoning for heating. Fans, heaters, and ventilators. Air-cleaning devices and humidifiers. Design of air-duct systems. Cooling and dehumidification. Central and unit systems. Refrigeration systems and equipment. Refrigeration piping. Air distribution and zoning. Automatic controls for air conditioning. Noise and vibration. Application practice. Residential heating and air-conditioning systems. Appendix. Air-conditioning glossary. Index.

Note: (4030) A standard treatment from the practical standpoint. It is suitable for use as a self-instruction text as well as a reference manual for practicing engineers, architects, and others in the field. The most obvious change in the present edition lies in the improved format of the volume. The page size is larger and the typographical design of text, tables, and charts is more pleasing. Revisions in contents include a new section on radiant and panel heating and expanded discussions of oil burners and air-cleaning devices, and the rewriting of the chapter on psychrometrics.

DALLA VALLE JOSEPH MARIUS
Exhaust hoods. Second edition revised and enlarged. New York The Industrial Press, 1952 146 p. illus. 24 cm. $3.50. 2366

Contents: Theory of flow of gases into an opening. Velocity characteristics of common types of unobstructed openings. Velocity contours of hoods with special boundary conditions. Criteria for determining hood effectiveness. Canopy type hoods. Hoods for dust and mist control—total enclosures and screening. Hoods for dust control—partial enclosures for grinding. Hoods for dust control—miscellaneous. Hoods for control of fumes, vapors and gases. Booth-like structures for fumes, vapors and gases. Grille-type openings under suction. Hoods for woodworking machinery. Examples of hood design calculations. Hood entrance losses. Essentials of hood construction. Index.

Note. A practical work on the design and uses of hoods and canopies used to carry off dusts, fumes etc. generated during manufacturing and other processes. It is based on laboratory research and practical design experience and includes discussions of both the aerodynamic aspects and the practical ones. Typical hoods for a variety of applications are illustrated. The first edition appeared in 1943. Substantial revisions, several new chapters, and a number of new illustrations have been incorporated in this edition.

EMERICK, ROBERT HENDERSON

Heating design and practice. New York McGraw Hill Book Company Inc. 1951 453 p. illus. 24 cm. $9.00 2367

Contents: Terms and definitions. How heating loads are calculated. Designing a steam heating system. Heating boilers and steam generators. Designing a hot water heating system. Boiler firing equipment. Water heaters and how to size them. Designing a warm air heating system. Panels, baseboards, and wall heaters. Fans and filters. Space heaters, domestic and industrial. District steam heating. The heat pump. Fuels and fuel handling. Combustion. Chimneys, stacks and flues. Heat insulation and refractories. Fireplace design and performance. How to choose a heating system. Instruments and instructions. Specifications and the analysis of bids. Index.

Note. A practical, largely descriptive book for such readers as vocational school students and men who design or install heating systems. Residential heating equipment such as is currently used in the United States of America is emphasized, but there is some discussion of larger equipment. A special feature is the inclusion of information on new developments such as the heat pump and panel heating. A range of data useful in practical design is included. There are many illustrations but no bibliography.

HOLMES, RICHARD E.

Air conditioning in summer and winter. Second edition. New York McGraw Hill Book Company Inc. 1951 352 p. illus. 24 cm. $6.00 2368

Contents. Air conditioning and the atmosphere. Psychrometry. Requirements for comfort. Air-conditioning systems. Winter air conditioning load—air-infiltration heat loss—heat transmission loss—total heating and humidifying load. Heating systems. Humidifiers. Air filters. Application of winter air-conditioning equipment. Introduction to refrigeration principles. Refrigerants and refrigerant tables. Refrigeration systems. Compressors. Condensing equipment. Low-side equipment. Dehumidifiers. Field-assembled systems. Self-contained air conditioners. Summer air-conditioning load. Application of summer air-conditioning equipment. Temperature and humidity controls. Index.

Note. (4048) A textbook and self-instruction book written for installers, maintenance men, salesmen, and other persons who need an elementary practical treatment. The fundamentals of the subject are covered and typical apparatus is described. The first edition was published in 1938. Many changes and additions were made in preparing this edition, including a somewhat more technical treatment of such topics as the refrigeration cycle.

JENNINGS, BURGESS HILL, AND SAMUEL R. LEWIS

Air conditioning and refrigeration. Third edition. Scranton Pa. International Textbook Company 1950 606 p. illus. 23 cm. $7.50 2369

Contents (abridged). Fundamental definitions: heat and thermodynamics. Air and humidity calculations. Air conditioning for human comfort. Heat transfer and transmission coefficients. The heating load. Cooling load computations. Steam heating. Hot-water heating. Warm-air heating. Heat-transfer elements. Boilers, fuels, and combustion. Air cleaning. Principles of refrigeration and refrigerants. Control of air-conditioning refrigerating apparatus. Industrial air conditioning. Radiant or panel heating. Index.

Note. (4048a) A successful textbook for upperclass engineering students. The presentations of theory and practice are well balanced. There is special emphasis on data and procedures that are useful in the practical design of heating, air-conditioning, and refrigerating installations. The authors' style is simple and direct enough to make the book suitable for reference and home study by practical men at work in the industry. Many new data have been added in this edition, and there are new or amplified discussions of such topics as the heat pump and radiant heating.

KEMLER, EMORY NEUDECK, AND SABERT OGLESBY, JR.

Heat pump applications. New York Mc Graw Hill Book Company Inc., 1950. 300 p. illus. 24 cm. $6.50. 2370

Contents. Introduction. Commercial heat pump installations. Industrial heat pump installations. Residential installations. Thermodynamics of refrigerants and cycles. Heat pump cycles. Heat sources. Compressors. Fans and ducts. Electric motors. Heat exchangers. Accessories. Temperature and design data. Storage and hot-water units. Patent abstracts. Index.

Note. A technical survey of the status of heat pump engineering, especially in applications to commercial and residential heating, as of the year 1949. It is addressed to such readers as refrigeration and heating engineers. It is drawn partly from the literature and partly from the authors' own work in the field. Particular attention is given to describing the solutions which have been attempted to such problems as the capacity control of compressors under the conditions imposed on heat pumps in average installations. Short bibliographies are included in the chapters. The chapter on patents contains abstracts of 34 United States patents.

NORRIS, JOHN W.

Warm air heating and winter air conditioning. Second edition. New York McGraw-Hill Book Company, Inc., 1950 320 p. illus. 18 cm. $8.50 2371

Contents (abridged). Different types of heating systems described. Measuring heat losses from buildings. Designing a gravity warm air heating system. Winter air conditioning of residences. Adjusting, balancing and servicing winter air conditioning systems. Humidity and the properties of air. Air cleaning. Thermostatic control of warm air heating. Coal furnaces—their installation, operation and care. Gas furnaces—adjustment, operation and service. Oil furnaces and oil burners. Converting gravity furnaces to winter air conditioning. Converting coal furnaces to automatic fuel. Industrial and commercial warm air installations. Solid fuels and their combustion. Chimneys and flues. Useful tables. Index.

Note. An excellent practical manual on this popular type of residential heating. It is addressed to heating contractors, furnace installers and other persons, such as salesmen, who are connected with the heating business. Although it is rather large and detailed volume for the average homeowner who merely wants to know how to operate a heating plant efficiently, information on efficient operation is included. The authors' style reads easily and his discussions are appropriately full. There are hundreds of illustrations, and more than 50 tables of data useful in the heating field. The author is president of the Lennox Furnace Company and the first edition of the book was published by that firm.

SEVERNS, WILLIAM HARRISON, AND JULIAN R. FELLOWS

Heating ventilating and air-conditioning fundamentals. Second edition. New York John Wiley & Sons, Inc., 1949 666 p. illus. 24 cm. $6.50. 2372

Contents (abridged). Essential definitions, laws, and properties of various media. Psychrometric properties of air—humidification and dehumidification. Factors affecting human comfort. Heat transmission and heat losses from buildings. Heating with warm-air furnaces. Heating with steam. Heating boilers and appurtenances. Heating and distribution, heat with hot water. Panel heating. Air conveying and distribution. Mechanical duct design, and diffusion. Ventilation and air purification. Estimation of [illegible] to cooling and heating [illegible] cooling loads. All-year air-conditioning methods and equipment. Automatic controls—pressure, temperature, and humidity. Appendix. Index.

Note: (4071) Primarily this work is an engineering college textbook. Besides its textbook use, it has some value as reference book for such persons as heating contractors, architects, and engineers. For this audience it provides concise and authoritative descriptions of modern design procedures and typical present-day heating and cooling equipment. Very substantial changes, including large amount of newly added material, appear in this second edition.

REFRIGERATION

ALTHOUSE, ANDREW DANIEL, AND CARL H. TURNQUIST

Modern electric and gas refrigeration. Fifth revised and enlarged edition. Chicago The Goodheart Willcox Company Inc., *1950 945* p. illus. (part col d) 20 cm. $5.00 2373

Contents: Fundamentals of refrigeration. The compression system. The absorption system. Conventional domestic compression cycle refrigerators. Domestic rotary and hermetic compression cycle refrigerators. Domestic absorption refrigerators. Domestic automatic controls. Domestic refrigerator electric motors and gas supply. Domestic refrigerator cabinets. Domestic refrigerator installations. Domestic refrigerator servicing. Service tools and the refrigerator service shop. Commercial refrigeration cabinets and mechanisms. Commercial refrigeration calculations and heat loads. Commercial refrigeration installation and servicing. Refrigerants. Technical characteristics. Air conditioning. Domestic refrigerator specifications. Hermetic units. Frozen food refrigerators. Answers to review questions. Index.

Note: (4071) Since 1933 when the first edition was published this book has been used in vocational schools and elsewhere as text for men who are preparing to work at the maintenance and repairing of small refrigerators such as are used in homes and small commercial units. The emphasis is on the residential or domestic types, but the three chapters on commercial types are sufficiently inclusive to enable repairmen experienced in domestic types to perform at least elementary operations on commercial types. In the present edition the two chapters on hermetic units and frozen food refrigerators are new. However, it appears that the chapters that precede these have not been revised. For instance, the table of the properties of refrigerants on page 193 does not include Freon 22 even though there is table of the properties of this newer refrigerant on page 779.

KING GUY R.

Basic refrigeration principles, practice operation a simplified presentation of the fundamentals of refrigeration giving equal treatment to all common refrigerants. Design, operation, and servicing of the apparatus and system. Chicago Nickerson & Collins Co., 1951 526 p. illus. 24 cm. $6 00 2374

Contents. Fundamentals Compression system of refrigeration. Refrigerants. Expansion valves Evaporators. Compressors. Condensers. Flow equipment. Electric controls and control valves. Lubrication. Defrosting methods. Compressor drives. Food preservation. Operating. Servicing. Refrigerated enclosures Instruments and meters. Heat calculations. Humidity in refrigeration. Compressor calculations. Refrigerant lines—pressure drops. Brine in refrigeration. Liquid cooling Complete systems. Carbon dioxide—dry ice. Altitude and its effect. Absorption systems. The refrigeration code. Appendix: Tables. Calculating overall heat leakage factors. Answers to problems in questions. Index.

Note: An introductory textbook designed for use in vocational schools and for home study by men interested in the trade of installing and maintaining refrigerating systems. Although both commercial installations and small household refrigerators are discussed, the larger systems are emphasized. The types and properties of refrigerants, the elements of refrigerating systems, such as condensers, and special problems, such as the exclusion of moisture from insulation, are all discussed clearly. Typical calculations are worked out. Numerous helpful tables of data are included.

MCCORMACK, ALEXANDER A.

Cold logic (refrigeration principles) Chicago Nickerson & Collins Co 1949 212 p. illus. 24 cm. $3.50 2375

Contents: The "how" and "how much" of heat. Refrigeration as the removal of heat. The refrigeration cycle. The story of refrigerants. Evaporators (often called coils or boilers). Lubrication. Compressors. Condensers, receivers, interchangers and valves. Insulation. Introduction to air conditioning. Air conditioning calculations. Electricity's contribution to refrigeration. Applying theory to service work. Topical index. Index to illustrations.

Note: A self-instruction aid for men working in the refrigeration maintenance trade. The author endeavors to make the principle of refrigeration and the behavior of refrigerating machines clear to such readers. His explanations are clear without being oversimplified. Each chapter is supplemented by review questions and helpful discussions of them. The book is useful supplement to full scale introductory texts and to the service manuals issued by manufacturers.

MACINTIRE, HORACE JAMES AND F W HUTCHINSON

Refrigeration engineering. Second edition. New York John Wiley and Sons, Inc. 1950 610 p. illus. 23 cm. $6.50. 2376

Contents (abridged) Part I, Thermodynamics of reversed cycles: Energy relationships in refrigeration. Simple refrigeration cycles. Thermodynamic refinements of the simple refrigeration cycle. Special systems—the heat pump. Adsorption and absorption systems—diffusion refrigeration. Refrigerants and properties of saturated and superheated vapors. Part II, Load determination: Steady-state load calculation. Transient loads. Radiation—panel cooling. Psychrometric loads—air conditioning methods. Part III, Refrigeration equipment: Compression refrigerating machines. Automatic refrigerating machines—household machines. Erection, operation, testing. Cold storage. Ice manufacture—dry ice. Special applications of refrigeration engineering. Index.

Note. An engineering college textbook which is introductory in the sense that no previous education or experience in refrigeration on the part of the reader has been assumed. However, it is designed to prepare students for practical work in refrigeration engineering, and the treatment is full enough for this purpose and also to make the book useful to graduate engineers. Most of the text is devoted to discussions that practicing engineers would be concerned with in the selection or design of refrigeration equipment. In deference to the professional use of the book, the range of data presented in graphs and tables has been greatly extended in this edition. Other new matter includes treatment of the heat pump and practical design procedure for panel cooling systems.

SHARPE, NORMAN

Refrigerating principles and practices. New York McGraw-Hill Book Company, Inc., 1949 398 p. illus. 23 cm. $7.00 2377

Contents. The refrigeration load. Properties of refrigerants. Refrigeration cycles. Compressors and their lubrication. Heat transfer equipment. The expansion valve and the accumulator. Accessories. Piping for refrigerating systems. Motors and their controls. Refrigeration applications. Appendixes: Commercial storage of fruits and vegetables. Internal energy of fluid. Transferred heat. Pressure and volume relations for adiabatic compression. Work required for adiabatic compression. American standard safety code for mechanical refrigeration. Index.

Note: An introductory textbook for use in undergraduate engineering courses. It is designed so as to prepare the student for practical work in refrigeration engineering. Thorough explanations of theory are integrated by means of the text and problems with illustrations of practical applications. The discussions of modern refrigeration practices include such minor details as various methods of defrosting. Although much of the general material is applicable to household refrigerators, there is no specific discussion of that type of refrigerating plant, such as there is of larger plants used for cold-storage cooling and commercial ice-making.

MINING ENGINEERING

GENERAL

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Coal preparation. Edited by David R. Mitchell. Sponsored by the Seely W Mudd Memorial Fund Second edition. New York The Institute, 1950. 830 p. illus. 23 cm. $8 00. 2378

Contents. Economics of coal preparation, by J. R. Morrow and D. H. Davis. Characteristics of coal and its associated impurities, by H. F Yancey and others. Sampling, by T W Guy and R. E. Zimmerman. Use specifications for coal, by J. H. Kerrick and others. Screening, by T Fraser and J R. Johnson. Breaking and crushing, by C. S. Jenkins and H. W Riley. Preparation at the face, by J. D. Connor and M. H. Forester. Hand picking, by D H. Davis. Principles of gravity concentration, by R. D. Thomas. Coal washers of the chamber type, by J. Griffen. Launder washers, by C. P Proctor and J. T Crawford. Jigs, by B M. Bird and D R. Mitchell. Concentrating tables, by R. W Gandrud. Dense-media processes, by B. M. Bird and D. R. Mitchell. Pneumatic coal cleaning, by R. C. Carns and D R. Mitchell. Flotation, by R. E. Zimmerman. Miscellaneous processes, by D. R. Mitchell and R. B. Hoven. Slurries, sludges, slimes and water treatment, by F P Lounder and others. Dewatering and thermal drying, by O. R. Lyons. Dedusting and dust collection, by T L. Garwood and F C. Mank. Treatment of coal surfaces, by R. A. Sherman and J. M. Pilcher. Plant control and efficiencies, by R. E. Zimmerman. Loading, by D R Mitchell and T Fraser. Index.

Note. (4111a) A comprehensive treatise on the processing of coal from the time it is separated from the native seam to its loading for delivery to the consumer. American methods are described almost exclusively. The book is useful to advanced students of mining engineering who are preparing for the coal industry and to men actively engaged in this industry. Many illustrations of equipment and many tables of data supplement the discussions. In the present edition two entirely new papers have been substituted for two papers that appeared in the original edition published in 1943. Most of the other papers have been revised somewhat, and about half a dozen of them have been revised extensively. Some, but not all, of the bibliographies have been brought down to date.

BATEMAN, ALAN MARA

The formation of mineral deposits. New York John Wiley & Sons Inc. 1951 371 p. illus. 24 cm. $5 50. 2379

Contents. Introduction. Materials of mineral deposits. Brief history of evolution of ideas on the origin of mineral deposits. Relation of mineral deposits to igneous activity. The primary mineralizing solutions. The processes of formation of mineral deposits. Magmatic processes. Contact metasomatic processes. Hydrothermal processes. Sedimentary processes and cycles. Weathering processes. Metamorphic processes. Ground-water processes. Controls of mineral localization. Exploration and exploitation of mineral deposits. Mineral resources. Additional general references. Appendix. Geological time table. Glossary. Index.

Note. In this new book the author has covered much of the same ground and used some of the same material as in his *Economic mineral deposits*, described there. However here he has written for adult general readers rather than advanced college students and specialists. What is known about the origin of mineral deposits is presented in clear nontechnical style. There is also some discussion of the economic importance of minerals.

CRAIN HARRY M editor

Economics of the mineral industry Golden Col. Colorado School of Mines, 1950 47 p. illus. 23 cm. (Quarterly of the Colorado School of Mines. Vol. 45 no. 1A) Paper $0.50 2380

Contents: Mineral resource appraisal by the U. S. Geological Survey, by S. G. Lasky. Oil and human welfare, by M. W Ball. Gold, our most strategic mineral, by D. H. McLaughlin.

—— Industrial minerals. Golden, Col. Colorado School of Mines, 1950 44 p. illus. 23 cm. (Quarterly of the Colorado School of Mines. Vol. 45 no. 4B) Paper $0.50. 2387

Contents: Industrial minerals of Colorado, by G. O Argall, Jr The consumption of balls in wet ball milling, by C. H. Knight and Donald Dyrenforth. Ground water in Nevada, by T W Robinson. Searles Lake development, by R. W Dyer.

Note: Together the volumes listed above constitute the seventy-fifth anniversary volume of the Quarterly and they bear collective title "Mineral resources in world affairs. The papers contained in them are original, and were written by outstanding geologists and other men who are associated with geology mining, and petroleum in the United States of America. Generally speaking the articles do not contain reports of original research but are, instead, summaries of modern developments or descriptions of the current state of affairs.

HARRINGTON DANIEL AND OTHERS

Safety in the mining industry by D Harrington J H. East, jr., and R. G Warncke. Washington D C. Government Printing Office, 1950. 102 p. illus. 26 cm. (United States. Bureau of Mines. Bulletin 481) Paper $0 40. 2388

Contents: Introduction. Coal mining. Bituminous coal and lignite. Anthracite Metal and nonmetallic-mineral mines. Quarrying. Petroleum industry Health of miners. Trend of fatal accidents in the mining industries. Résumé and conclusions.

Note: The mining industry of the United States has been severely criticized because of its high rate of accident occurrence, both in comparison with other industries in the United States and in comparison with the mining industries of other nations. This bulletin gives annual figures in various categories, some of them going back to 1906, to show trends and improvements Information is provided concerning some accidents and their causes. The effects of new mining methods, mechanization, and other advances in mining are reflected in the statistics, which are shown on both tonnage and man-hours of exposure bases where possible.

JOHNSON, JESSE HARLAN

An introduction to the study of organic limestones. Revised edition. Golden, Colorado Colorado School of Mines, 1951 185 p. illus. 23 cm. (Quarterly of the Colorado School of Mines. Vol. 46 no 2) Paper, $2.00. 2389

Contents: Foraminifera. Porifera-sponges. Coelenterata. Echinoderma. Bryozoa. Worms and worm limestones. Brachiopoda. Mollusca. Arthropoda. Calcareous algae.

Note: An illustrated guide designed to serve as an introduction to the study of organic limestones. For each of the ten groups discussed there are introduction and list of bibliographical references, together with notes as to chemical composition, structures, chief divisions, and descriptions of the major deposits. A feature of the publication is the set of 104 photographic plates showing the various types of calcareous organic debris to assist in recognition.

LEROY LESLIE WALTER, editor

Subsurface geologic methods (a symposium) Second edition Golden Colorado School of Mines, Department of Publications, 1950 1156 p illus. 24 cm. $7.00 2390

Contents (abridged) Introduction. Stratigraphic, structural and correlation considerations. Comments on sedimentary rocks. Subsurface laboratory methods. Subsurface logging methods. Miscellaneous subsurface methods. Secondary recovery of petroleum. Valuation and subsurface geology Duties and reports of the subsurface geologist. Graphic representations. Subsurface maps and illustrations. Subsurface methods as applied in mining geology Subsurface methods as applied in geophysics. Geologic techniques in civil engineering. Sources of well information. Author index. Subject index.

Note: A collection of more than 80 papers, written by 50 authors, on such geological techniques as microanalysis of rock, X-ray analysis, sampling of well cuttings, electric logging, radioactivity in well logging and on related non geological subjects such as oil well surveying, design of rock bits, oil well cementing, and oil field valuation. Some of the material has been published previously but considerable part was prepared especially for this volume. The first edition was published in 1949 Several papers have been added to this edition and the index is new feature that will be much appreciated in libraries.

STALEY WILLIAM WESLEY

Mine plant design Second edition. New York McGraw Hill Book Company Inc. 1949 540 p. illus. 24 cm. $8 00. 2391

Contents: Graphical solution of simple beams and roof trusses. Review of simple design principles. Roof trusses, columns, and footings. Headframes. Ore bins. Skips and cages. Safety catches. Mine hoists. Handling of water for mining purposes. Compressed air. Mine hoisting. Power plant. Mine ventilation. Index.

Note (4097) A standard work which is used both as textbook in engineering colleges and as guide for mine operators and engineers, particularly those located in isolated areas who must design structures and equipment with little aid from other sources. Only equipment used above and below ground in mining and handling ores is covered. Ore crushing and concentrating machinery are not discussed. In this edition chapters have been added on ore bins, skips, cages, and other topics, and the chapter on headframes has been revised to include the design of wooden structures. The chapters are supplemented by fairly extensive lists of references, and some of these have been revised.

STEIDLE EDWARD

Mineral forecast 2000 A.D State College, Penn. The Pennsylvania State College, 1952 216 p. illus. 24 cm. $3.00. 2392

Contents (abridged) Part one, Minerals and posterity Part two, Mineral forecast 2000 A.D.: Mineral fuels. Metallic minerals. Nonmetallic minerals. Geology group. Metallurgy Mineral economics. Mineral extraction. Mineral preparation. Water supplies. Atomic energy Mineral industries education. Mineral policies. Conclusions.

Note A readable account of the present state and the possible future of our mineral supplies. The first part, originally published as Circular 37 by Pennsylvania State College, points out the dependence of the United States on other countries for many of the most strategic minerals and suggests the need for "down-to-earth mineral policies. The second part, published as Circular 39 is intended to show how education and research can help offset the shortage by developing new methods for utilization or even of synthesis of the important minerals. Each mineral is treated separately and, while Pennsylvania's part is emphasized from time to time, the national picture is clearly delineated.

TAGGART, ARTHUR FAY

Elements of ore dressing. New York John Wiley & Sons Inc., 1951 595 p illus. 24 cm. $11.00. 2393

Contents: What ore dressing is and does. Hand picking. Screening and filtration. Electrical concentration. Introduction to sedimentation. Acceleration in free-settling. Introduction to gravity separation. Hindered-settling. Sink-float. Jigging. Film and trough concentrators. Shaking concentrators. Organic chemicals in flotation. Flotation: collection—activation and depression—bubble attachment—flotation machines and reagents—operation. Miscellaneous methods of concentration. Primary crushing. Secondary crushing. Grinding. Transport and controls. Flowsheets. Appendix. Abbreviations in bibliographies. Index.

Note. (3085*) Professor Taggart's *Handbook of mineral dressing* serves as basic reference manual covering all phases of ore and mineral separation and concentration. This new work is less exhaustive treatment of the same subject, and is designed to introduce mining engineering students to current methods of ore processing and preparation. Theory and practice are closely integrated, and descriptions of machines and processes are interwoven with discussions of the fundamental principles underlying the design and operation of each type of equipment. The appendix includes series of laboratory experiments which have been used in ore dressing courses at Columbia University

VACQUIER V AND OTHERS

Interpretation of aeromagnetic maps. By V Vacquier Nelson Clarence Steenland Roland G Henderson, and Isidore Zietz. New York The Geological Society of America, 1951 151 p illus. 26 cm. (Geological Society of America. Memoir 47) $2.25 2393a

Contents. Foreword. General principles. Results of interpretation of six aeromagnetic surveys. Calculation of total magnetic intensity anomalies due to idealized bodies. Tables and charts for computations of magnetic effects. References cited. Index.

Note: In this work practical method for the interpretation of aeromagnetic maps based on data gathered with the airborne magnetometer is described and the application is illustrated by applying it to the interpretation of the maps of six different aeromagnetic surveys. The book is addressed to professional geologists and is of special interest to those who are associated with prospecting for mineral deposits including petroleum. The illustrated material includes reproductions of variety of aeromagnetic maps.

ECONOMIC GEOLOGY

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Industrial minerals and rocks (nonmetallics other than fuels) Second edition completely revised. New York The American Institute of Mining and Metallurgical Engineers, 1949 1156 p illus. 24 cm. (The Seeley W Mudd series) $7.00. 2394

Contents Introduction, by R. H Dolbear Abrasives, by R. B Ladoo. Asbestos, by O F Jenkins. Barium minerals, by F J Williams. Bauxite, by E. C. Harder Bentonite, by P Bechtner Bleaching clay by A. D. Rich. Borax and borates, by G. A Connell. Cement materials, by W M. Myers. Chalk and whiting, by H. Wilson. Chromite, by W D. Johnston, Jr and T P Thayer Clay by H Ries. Crushed stone, by A. T Goldbeck. Diatomite, by A B Cummins and H Mulryan. Dimension stone, by O Bowles. Feldspar, by B. C. Burgess. Secondary fertilizer minerals, by J. W Turrentine. Fluorspar and cryolite, by H T Mudd. Corundum, by G. W Josephson. Graphite, by G. E Cruikshank. Gypsum, by T. R. Lippard. Heat and sound insulators, by J. E Lamar and J A Machin Lime, by M. C. Rockwood. Lithium minerals, by R W Mumford Magnesite and related minerals, by R E Birch and O. M Wicken. Manganese ore, by G. H. Chambers. Mica, by E H Dawson. Mineral fillers, by A B Cummins. Mineral pigments, by C. L. Harness. Minor industrial minerals, by P M Tyler Monazite, by J R. Martin, Jr. Native bitumens, by A. H. Redfield. Nitrates and nitrogenous compounds, by H. R. Graham Phosphate rock, by C. A Fulton. Potash, by H. I. Smith Pumice stone, by S. H. Ball Pumice and pumicite, by J. A. Barr Jr Pyrophyllite, by R. C. Burgess. Quartz crystal, by R. B. McCormick. Refractories, by P M. Tyler and R. F Heuer Salt, by W C. Phalen. Sand and gravel, by R. Newberg. Sillimanite group—andalusite, kyanite, sillimanite, dumortierite, topaz, by F H. Riddle and W R. Foster. Slate, by C. E. Behre, Jr. Natural sodium carbonate and sodium sulphate, by G. C Ralston. Special sands, by H. Ries. Strontium minerals, by C. L. Harness. Sulphur and pyrites, by W T Lundy. Talc and ground soapstone, by A. E. J Engel. Titanium, by J. L. Gillson. Tripoli, by R. W Metcalf. Vermiculite, by J. R. Myers. Index.

Note: A standard reference book. For each of the materials named in the contents, the following points are, in general, covered: composition, properties, origin and mode of occurrence, world distribution of deposits, political and commercial control, production and consumption, prospecting and exploration, mining and quarrying methods, preparation for market, uses, and price history. Each chapter is supplemented by an extensive bibliography. Much revision and rewriting went into the preparation of this edition. All of the statistical and economic data have been brought down to date, and the bibliographies have been revised and extended to include recent literature.

BATEMAN, ALAN MARA

Economic mineral deposits. Second edition. New York John Wiley & Sons, Inc., 1950. 916 p. illus. 23 cm. $8.00. 2395

Contents (abridged) Part I, Principles and processes: Brief history of the use of minerals and of the development of economic geology. Magmas, rocks, and mineral deposits. Processes of formation of mineral deposits. Controls of mineral localization. *Folding* and faulting of mineral deposits. Classification of mineral deposits. Geophysical prospecting, exploration, development, and valuation of mineral properties. Extraction of metals and minerals. Part II, Metallic mineral deposits. The precious metals. The nonferrous metals. Iron and ferroalloy metals. Part III, Nonmetallic mineral deposits. The mineral fuels. Ceramic materials. Structural and building materials. Metallurgical and refractory materials. Chemical minerals. Ground-water supplies. General references on economic geology. Index.

Note (4103) Although this book contains wide variety of information on minerals of economic importance, it is written mainly from the standpoint of ore genesis. In the first part the processes of formation of ore bodies are discussed at length. In the second and third parts, known mineral deposits are concisely described except in cases of minerals too widely distributed, such as lime. The descriptions include both mineralogical and economic data. The book is useful both as textbook and reference book. In this edition the reference lists have been brought down to the end of 1948 and the text has been revised in numerous places; but there is less emphasis on statistical data, especially statistics of mineral production. The author's *The formation of mineral deposits*, New York, Wiley, 1951 371 p., $3.50, is a less technical presentation for lay readers and nonspecialists.

BROWN GLEN FRANCIS AND OTHERS

Geologic reconnaissance of the mineral deposits of Thailand prepared in cooperation with the Royal Thai Department of Mines, under the auspices of the Technical Cooperation Administration of the United States Department of State by Glen F Brown Saman Buravas Jumchet Charaljavanaphet Nitipat Jalichandra, William D Johnston, Jr Vija Sresthaputra, and George C. Taylor Jr Washington D C. Government Printing Office, 1951 183 p. illus. 23 cm. (Geologic investigations of Asia. United States. Geological Survey Bulletin 984) Paper $2 50. 2396

Contents Introduction. Geography: Political divisions. [illegible] available. Climate. *Physiography:* Land forms. Drainage pattern. Physiographic provinces. Geology: Rock units. Geologic structure and history. Metallic mineral deposits: Antimony. Copper. Gold. Ilmenite. Iron. Lead and zinc. Manganese. Molybdenum. Monazite. Tin and tungsten. Nonmetallic minerals: Asbestos. Barite. Building stone and road metal. Cement materials. Clay. Diatomite. Fluorite. Gemstones. Graphite. Gypsum. Quartz and feldspar. Salt. [illegible] (pegmatite). Fuels: Coal. Oil shale. Petroleum. Hot springs. References cited. Index.

Note A report of the results of reconnaissance geologic investigation of the mineral deposits of Thailand made by three geologists of the U. S. Geological Survey and four geologists of the Royal Thai Department of Mines. The work was done under the auspices of the Technical Cooperation Administration of the Interdepartmental Committee on Scientific and Cultural Cooperation of the United States Department of State. Some of the basic data in the report were obtained in field work from October 1949 through March, 1952; other parts of the report are based upon earlier fieldwork by Thai geologists and engineers. Twenty diagrams and maps are folded in the pocket in the back of the bulletin.

KELLEY VINCENT COOPER

Geology and economics of New Mexico iron-ore deposits. Prepared in coöperation with the Geological Survey U S Department of the Interior Albuquerque The University of New Mexico Press, 1949 246 p. illus. (part col d) 23 cm. (University of New Mexico publications in geology No two) Paper $3 00 2397

Contents (abridged) Part I, General aspects. Part II, Iron-ore deposits. Bibliography Index.

Note A comprehensive study of iron-ore deposits and mining in a state which is one of the chief suppliers of ore to the iron and steel industry of the southwestern United States. In the first part such aspects as stratigraphy mineralogy classification, reserves, uses, mining, marketing, and economic features are discussed. The second part is a detailed description by region of known deposits. The whole study represents a detailed picture of iron-ore mining in a region where both the mineralogical and economic conditions are comparatively unfavorable.

LADOO, RAYMOND BARDEEN AND W M. MYERS

Nonmetallic minerals. Second edition. New York McGraw-Hill Book Company Inc., 1951 605 p. 24 cm. $11 00 2398

Note. A useful reference book of information about such materials as asbestos, asphalts, borax, clays, feldspar fuller's earth, gypsum, limestone, mica, phosphate rock, sand and gravel, slate, uranium minerals, and vermiculite. Altogether ninety minerals and groups of minerals are considered. The information given on a typical mineral or group includes chemical composition, general description, physical properties, known deposits, mining methods, statistics of production for recent years, uses, prices, and bibliography. The first edition of the book appeared in 1925. This edition contains largely new material.

SELVIG, WALTER ALFRED AND OTHERS

American lignites geological occurrence, petrographic composition, and extractable waxes, by W A. Selvig, W H. Ode B C. Parks, and H. J O'Donnell. Washington D C. Government Printing Office 1950 63 p illus. 26 cm. (United States. Bureau of Mines. Bulletin 482) Paper $0.35 2399

Contents (abridged) Occurrence and geology of lignite deposits in the United States. General nature and use of montan wax. Commercial production of montan wax in Germany and Czechoslovakia. Commercial production of domestic montan wax. Investigation of waxes extractable from British lignite. Investigations of waxes extractable from peat. Waxes extractable from American lignites: Published reports on laboratory investigations of American and Canadian lignites. Laboratory extraction method. Extraction yields. Petrography of lignite coal. Petrographic characteristics of attrital and xyloid lignitic coal. Petrographic composition of lignite from Arkansas, Texas, North Dakota, and California. Investigation of petrographic components contributing to extraction yields. Appendix: Description of coal samples.

Note. Because of the shortage of montan wax at the close of World War and the fact that industry in the United States has had to rely on imported wax in the past, an investigation was started in 1943 to determine probable yields of wax from domestic lignite. Results of the investigation and the proportion of extractable waxes are described in this bulletin. Also discussed are the occurrence and geology of lignite deposits of the United States from which samples were obtained for wax extraction and the petrographic composition of lignites, particularly in respect to those components that contribute to wax yields.

SYMPOSIUM ON MINERAL RESOURCES OF THE SOUTHEASTERN UNITED STATES

1949 *proceedings. Sponsored by* Department of Geology and Geography the University of Tennessee. Edited by F G. Snyder Knoxville, Tennessee The University of Tennessee Press, 1950 236 p. illus. 24 cm. $4.00 2400

Contents: Geologic investigations and exploration in southeastern United States, by R. A. Laurence. Tectonic framework of the southeastern states, by Philip B. King. Problems of the genesis of mineral deposits of the southeastern states, by C. H. Behre, Jr. Feldspar and mica deposits of southeastern United States, by J M. Parker III. Geology of the titanium-bearing deposits in Virginia, by A. A. Pegau. Occurrence of tungsten minerals in the southeastern states, by G. H. Espenshade. Recent geological investigations in the Ducktown mining district, Tennessee, by W W Simmons. Zinc deposits of the southeastern states, by C. R. L. Oder and J. W Hook. Barite deposits southeast of the Appalachian plateau, by T L. Kesler. Kyanite and sillimanite in the southeastern states, by A. S. Furcron. Talc, soapstone, and pyrophyllite in the southeastern United States, by J. L. Stuckey Vermiculite of the southeastern states, by C. E. Hunter. Brown phosphate rock in Tennessee, by H. B. Burwell. Notes on the land-pebble phosphate deposits of Florida, by J. B. Cathcart. Manganese deposits of the southeastern states, by H. D. Miser. Bauxite deposits of the southeastern United States, by J. Bridge. Economic minerals in the beach sands of the southeastern United States, by H. B. Cannon. Ground-water geology in the southeastern states, by V T Stringfield. Ground water in relation to mining in the southeastern states, by G. D. DeBuchananne. Index.

Note: The papers in this volume are devoted—as the title indicates—mainly to resources of specific minerals occurring in economically important deposits in the Southeastern states of the United States of America. The authors are professional geologists and the papers are addressed to geologists and to members of other professions interested in mineral resources of this region. Although most of the authors give some attention to the historical development of the field covered by their papers, the typical paper is a concise summary of the contemporary status with emphasis on the geological and mineralogical aspects rather than the economic. Substantial lists of references are included.

PETROLEUM

AMERICAN ASSOCIATION OF PETROLEUM GEOLOGISTS

Possible future petroleum provinces of North America. A symposium conducted by the American Association of Petroleum Geologists. Papers presented at the thirty-fifth annual meeting of the Association at Chicago Illinois, April 24–27 1950 Edited by Max W Ball and others. Tulsa The Association 1951 358 p. illus. 24 cm. $4 00 2401

Contents (abridged) Alaska, by G. Gry and others. Western Canada, by Alberta Society of Petroleum Geologists. Pacific Coast states and Nevada, by Pacific Section of American Association of Petroleum Geologists. Rocky Mountain region, by Rocky Mountain Association of Geologists and others. Mid-continent region, by Tulsa Geological Society West Texas and eastern New Mexico, by West Texas Geological Society Fort Worth basin and Muenster Arch, north-central Texas, by Fort Worth Geological Society Dearville Mesozoic rocks of south Texas, by South Texas Geological Society Mexico, by Manuel Alvarez, Jr. Western Gulf coast, by Houston Geological Society Continental shelf of Gulf of Mexico, by Paul Weaver Southeastern United States, by Committee of Geologists from the Southeastern United States. Northeastern United States, by Judson L. Anderson. Appalachian region, by Appalachian Geological Society Eastern Canada, by J F Caley and others. Eastern interior basin, by Illinois Geological Society and others.

Note: (4134) In a sense this book is a sequel to the Association's *Possible future oil provinces of the United States and Canada*, which was published in 1941 and contained 154 pages. Again a group of outstanding petroleum geologists discuss the chances of finding oil in selected regions of the U. S. A. and Canada. More territory has been covered in the present volume, and most of the discussions are based on more geological knowledge. Also, many of the papers outline the experience in particular oil fields and particular geological formations since the 1941 volume was composed.

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Petroleum conservation. Sponsored by the Henry L. Doherty Memorial Fund. Edited by Stuart E. Buckley New York American Institute of Mining and Metallurgical Engineers, 1951 304 p. illus 24 cm. 2402

Contents: Elements of conservation. Petroleum resources. The petroleum reservoir. Characteristics of reservoir fluids. Fundamentals of oil recovery. Efficient operation of petroleum reservoirs. Secondary recovery. Pressure maintenance. Conservation and state regulation. Cooperative development and unit operation. Index.

Note. Fourteen experts in the field of petroleum technology have cooperated to prepare this review of the basic principles and methods of petroleum conservation. The material is primarily a description of the techniques employed in the efficient recovery of petroleum, and the reasons behind these practices. However, since the book is written for the petroleum industry as a whole, it also includes discussions of the status of our oil supply and of the steps which must be taken by the industry and governmental agencies to achieve still greater conservation.

AMERICAN PETROLEUM INSTITUTE

Secondary recovery of oil in the United States. Second edition. Prepared by members of the Standing Subcommittee on Secondary-Recovery Methods of the Topical Committee on Production Technology of the Central Committee on Drilling and Production Practice. New York American Petroleum Institute, 1950 838 p. illus. 28 cm. $8.50. 2403

Contents. Part I, General considerations. A review of secondary recovery of oil in the United States, by P. D. Torrey. Magnitude of secondary-recovery operations in the United States, by E. G. Dahlgren. The economics of secondary oil recovery, by W. B. Berwald. Statutes relating to secondary-recovery operations, by R. E. Hardwicke and W. L. Summers. 1947 report of Legal Committee of Interstate Oil Compact Commission with respect to secondary recovery. Formation and operation of unit projects in secondary recovery, by K. E. Beall. The formation and operation of cooperative projects in secondary recovery, by D. V. Carter. Part II, Criteria for determining oil fields' susceptibility to secondary-recovery methods: Schedule of pertinent information for study of secondary-recovery possibilities, by P. D. Torrey. Fundamental data pertinent to secondary-recovery studies, by T. H. Arms and others. Control and prediction of secondary recovery, by W. L. Horner. Prediction of secondary recovery from core analyses, by R. C. Earlougher and J. M. Robinson. The prediction of oil recovery by water flood, by H. Dykstra and R. L. Parsons. Theoretical considerations involved in secondary-recovery operations, by G. H. Fancher. Electrical-model studies of secondary recovery, by W. L. Horner and W. A. Bruce. Influence of geological factors on secondary recovery of oil, by C. R. Fettke. Effects of permeability on secondary recovery of oil, by J. C. Calhoun, Jr. and others. Influence of field saturation on secondary recovery of oil, by P. A. Dickey. Influence of viscosity of crude oil on secondary recovery, by W. A. Heath. Capillary and surface phenomena in secondary recovery, by K. H. Andresen and others. Interactions between interstitial and injected water, by A. J. W. Headlee. Gas requirements in gas-drive recovery, by S. T. Yuster and R. I. Day. Preliminary field tests for determining required injection volumes and pressures, and plant capacity, by J. C. Funk and P. C. Dunn. Part III, The development and operation of secondary-recovery projects: The utilization of old wells, by W. A. Heath. Selective exclusion of water in secondary-recovery operations, by K. H. Andresen and others. Spacing in water flooding, by S. T. Yuster. Use of explosives in water flooding, by S. T. Yuster. Source and purification of water supply, by G. W. Holbrook and A. E. Elsenberger. Design and construction of water-pumping plants, by G. W. Holbrook. Flowing water-flood production, by T. F. Lacey. The behavior of water-input wells, by P. A. Dickey and K. H. Andresen. Increasing and maintaining injection rates of water-input wells, by P. A. Dickey and others. The importance of injected gas as a driving medium in limestone reservoirs as indicated by recent gas-injection experiments and reservoir-performance history, by L. E. Elkins. Source and purification of gas supply, by L. L. McWilliams. The design and construction of compressor plants, by P. D. Torrey. Part IV, Description of secondary-recovery operations in the United States: Water flooding in the state of New York, by W. H. Young, Jr. and G. W. Holbrook. Water flooding in Pennsylvania, by C. R. Fettke. Oil recovery by air and gas repressuring in Pennsylvania, by P. A. Dickey and R. B. Bossler. Secondary recovery in West Virginia. A cooperative report by Eastern District members—in Ohio, by J. Coshell and E. Y. O'Rourke—in Kentucky by N. H. Wilder et al.—in Indiana, by V. R. Gallagher—in Illinois, by F. Squires and others—in Kansas, by Z. Z. Hunter and others—in Oklahoma, by W. A. Heath and R. L. Belser. Water flooding in Texas, by R. K. Guthrie and J. W. Amyx. Results of water injection in Woodbine reservoir of the East Texas field, by W. S. Morris. Gas repressuring in Texas, by R. Goolsby and R. F. Dalgren. Secondary recovery in Arkansas, by L. F. Dauforth and D. K. Mackey—in Louisiana, by A. L. Viner, Jr. and J. C. Phillips—in New Mexico, by M. R. Large and R. L. Orr—in the Rocky Mountain states, by C. M. Nickerson and others—in California, by K. and Winsor. Part V, Mining for petroleum: Mining for oil—a review, by H. C. Miller and C. L. Moore. Part VI, Bibliography on secondary recovery. Part VII, Addenda: Appendices.

Note: A comprehensive and authoritative account of the various methods employed in recovering petroleum "after reservoirs have approached the economic production limit by primary-recovery methods." This edition supersedes the first edition and its two supplements published in 1942, 1944, and 1947 respectively. The information contained in these earlier volumes has been brought up to date and many papers dealing with new developments and practices have been added. The bibliography, which covers the literature since 1876, has been expanded and now includes more than 2000 references.

AMERICAN PETROLEUM INSTITUTE. ADVISORY COMMITTEE ON FUNDAMENTAL RESEARCH ON OCCURRENCE AND RECOVERY OF PETROLEUM

Report of progress—fundamental research on occurrence and recovery of petroleum, 1950–1951 [New York American Petroleum Institute 1952] 263 p. illus. 28 cm. $6.00. 2404

Contents (abridged). Volumetric behavior of hydrogen sulfide, by H. H. Reamer and others. Phase equilibria in hydrocarbon systems—volumetric and phase behavior of the methane-propane system, by H. H. Reamer and others. Application of automatic digital computing methods to the prediction of phase behavior, by T. J. Connolly and others. Phase equilibria in hydrocarbon systems—volumetric and phase behavior of the methane-hydrogen sulfide system—of the propane-carbon dioxide system—methane-ethane-decane system—of the propane-carbon dioxide system, by H. H. Reamer and others. Bacterial activities and the origin of oil, by C. E. ZoBell. Assimilation of hydrocarbons by microorganisms, by C. E. ZoBell. Hydrogen-utilizing, sulfate-reducing bacteria, by C. E. ZoBell. Nitrogen in marine sediments, by F. D. Sisler and C. E. ZoBell. Nitrogen fixation by sulfate-reducing bacteria indicated by nitrogen/argon ratios, by F. D. Sisler and C. E. ZoBell. Hydrogen utilization by some marine sulfate-reducing bacteria, by F. D. Sisler and C. E. ZoBell. Studies of the effect of radioactivity in the transformation of marine organic materials in petroleum hydrocarbons, by W. L. Whitehead. The origin of petroleum—effects of low temperature pyrolysis on the organic extract of a recent marine sediment, by W. L. Whitehead and I. A. Breger. Vacuum differential thermal analysis, by W. L. Whitehead and I. A. Breger. The decomposition of fatty acids by alpha particles, by W. L. Whitehead and others. Radioactivity and the origin of petroleum, by I. A. Breger and W. L. Whitehead. Carbon content and radioactivity of marine rocks, by V. L. Burton and G. R. Sullivan. Steady flow of two-phase single component fluids through porous media, by F. O. Miller. Fluid saturations in porous media by X-ray technique, by A. D. K. Laird and J. A. Putnam. Study of near-shore recent sediments and their environments in the northern Gulf of Mexico, by A. R. Denison. Appendices.

Note. "This volume is the fifth in a series which presents the publications arising from fundamental research and the reports of the directors of the several projects, sponsored by the American Petroleum Institute during 1950 and 1951, in the field of occurrence and recovery of petroleum. Altogether there are six reports and 31 papers. Many of the papers were published originally in periodicals.

Dix, C. Hewitt

Seismic prospecting for oil. New York Harper & Brothers 1952 414 p. 21 cm. (Harper's geoscience series, Carey Croneis editor) $7.50 2405

Contents: Introduction and general orientation. Summary of exploration methods commonly used. Summary of seismic methods commonly used. Routine seismic crew operation—cost reduction. Efficient exploration programs. Routine seismology: Basic technical tools. Datum corrections. Velocity measurements. Depth and dip computations. Strike-dip determinations. Presentation of results. Interpretation: Picking reflections. Refraction prospecting: Line refraction work. The physical processes involved: Basic physics assumed. Propagation of seismic pulses. Recording. Bibliography. Index.

Note: Scientific knowledge and practical know-how have been expertly synthesized in this work. Although other methods are described, most of the space is devoted to seismic prospecting by the reflection method. Field techniques are described, but the main emphasis is on the interpretation of the records of the field work. No previous acquaintance with seismic prospecting has been assumed. However there is much in the book that is of interest to persons of considerable experience with seismic prospecting. An unusual feature is the inclusion of mathematical formula and computations on the illustrations themselves. This makes substantial part of the work available to readers who do not know English. A comprehensive bibliography is included.

Dobrin Milton Burnett

Introduction to geophysical prospecting. New York McGraw Hill Book Company Inc., 1952 435 p. illus. 24 cm. $7 00 2406

Contents: General introduction. Gravity prospecting—fundamental physical principles. The earth's gravity and the concept of isostasy. Instruments for measurement of gravity. Gravity field measurements and reductions. The interpretation of gravity data. Magnetic prospecting—fundamental principles and instruments. The magnetism of the earth. Magnetic field measurements and their interpretation. Prospecting with the air-borne magnetometer. Basic physical principles of seismic wave propagation. Earthquakes and the earth's internal constitution. Seismic instruments and the organization of seismic surveys. The seismic refraction method. The seismic reflection method. Electrical prospecting methods. Prospecting for radioactive minerals. Integration of geophysical methods as illustrated by case histories. Geophysical well-logging methods. Radar position location for geophysical surveys. Current research in geophysical exploration and the relation of geophysics to geology. Index.

Note: Current techniques in geophysical prospecting for petroleum and minerals are described in this book for advanced students in geology and mining engineering and for graduate engineers in these fields who find themselves in need of an introductory survey. Even though the work is an introduction, wide range of material is included on scientific principles, instruments, methods of making observations and of interpreting them for the various established geophysical techniques. In addition, literature references to more extended treatments of particular phases are furnished. The author is Senior Research Technologist on the staff of the Magnolia Petroleum Company

Fanning Leonard M. editor

Our oil resources. Second edition. New York McGraw-Hill Book Company Inc., 1950 420 p. illus. 24 cm. $6.00 2407

Contents: The role of private enterprise in the development of oil resources, by W. S. Farish. A national oil policy for the United States, formulated by the National Petroleum Council. American oil companies in foreign petroleum operations, by E. Holman. Conservation of our oil and gas resources, by H. M. Dow. Technology the great multiplier: Exploration technology by O. D. Donnell—Production technology by J. M. Lovejoy. Our oil and natural gas resources: The earth's petroleum resources, by W. E. Pratt—Estimate of United States oil reserves and natural gas liquids reserves, by the American Petroleum Institute—Estimate of United States natural gas reserves, by the American Gas Association—More oil for America, by L. F. McCollum—Long term availability of petroleum report, by the American Petroleum Institute—How the oil-supply problem was licked, by R. E. Wilson. Our supplemental petroleum reserves, by E. Ayres. The Bureau of Mines demonstration plants in the synthetic-fuels picture, by L. L. Hirst and others. Capital employed in the petroleum industry by J. E. Pogue and F. G. Coqueron. A case history of oil-shortage scares, by L. M. Fanning. Appendix. Index.

Note. A reference book of economic, production, and conservation data. The majority of articles were written by executives of corporations and other organizations of the oil industry and the industry side is presented. The last chapter particularly demonstrates that there have been many oil-shortage scares but no oil shortage. The first edition was published in 1945. In this edition there is much new material, and statistical data have been brought down to the end of 1948.

Hager, Dorsey

Practical oil geology Sixth edition. New York McGraw Hill Book Company Inc. 1951 589 p. illus. 19 cm. $8.00. 2408

Contents: Petroleum—its origin and accumulation. Chemical composition of petroleum—physical constituents—commercial values. Stratigraphy. Fossils and their uses. Structural geology—the broad continental features. Discussions of gas and oil traps. Searching for new gas and oil fields. Geological field methods and instruments in use. Geophysics. Applications of geology to drilling for gas and oil. Geological factors in oil-well drilling. Well logging. Geological factors in oil production. Methods of estimating oil recoveries. Water and its relationship to oil. Natural gas—natural gasoline. Oil shales. What the geologist has done for the oil business. Appendix. List of books on oil and general geology. Index.

Note: (4130) The word "practical" in the title of this book has not been idly used. The book is intended for men who are making their living as oil geologists and for students who are preparing to do so. It covers the whole scope of petroleum geologist's work including such minor points as how to behave when called as an expert witness in law suits. In the sixth edition there are two new chapters, one on well logging and the other on estimating the methods of oil recoveries. The book has been reorganized and the type reset. There are five new tables in the appendix, and the bibliography has been expanded to include the recent literature.

Interstate Oil Compact Commission Engineering Committee

Oil and gas production an introductory guide to production techniques and conservation methods. Norman, Okla. University of Oklahoma Press, 1951 128 p illus. 24 cm. $2 75 2409

Contents: Petroleum geology. Reservoir fluids. Reservoir mechanics. Field examples. Measurement in the production of oil and gas. Regulatory practices affecting oil recovery. Appendix: Major types of reservoir traps. Index.

Note. The Interstate Oil Compact Commission, comprising twenty oil and gas producing states, was organized to promote the cause of petroleum conservation. In this book the Commission has provided for laymen and non-technical employees of the oil industry simple and concise account of the basic principles and methods of oil and gas production. Emphasis is placed on techniques which result in maximum recovery and minimum waste. The descriptive material is further clarified with numerous charts and illustrations.

Lalicker Cecil Gordon

Principles of petroleum geology New York Appleton-Century-Crofts, Inc. 1949 377 p. illus. 24 cm. (The Century earth science series Kirtley F Mather editor) $5.00 2410

Contents: Introduction. Geographic and stratigraphic distribution of petroleum. Chemical and physical properties of petroleum and related substances. The origin of petroleum. Migration and accumulation of petroleum. Reservoir rocks. Classification of oil and gas pools. Origin of structures. Anticlines, domes, and synclines. Reservoirs caused by faulting. Salt dome oil fields. Buried hills. Stratigraphic and porosity type fields. Petroleum discovery methods. Geological considerations in recovery methods. Valuation of oil and gas properties. Index.

Note: A useful, well-organized survey of the current knowledge of petroleum geology. Outstanding features are the tabulations by region and geological strata of known petroleum deposits, the review of the prevailing theories of the origin and accumulation of petroleum, the detailed descriptions of the features of considerable number of developed fields, and the thorough outline of discovery methods. Footnote references to related literature are included. The author has assumed that the reader will understand geological concepts and terminology; however, the presentation is not highly technical.

LANDES, KENNETH KNIGHT

Petroleum geology New York John Wiley & Sons Inc., 1951 660 p. illus 24 cm. $10.00 2411

Contents: The profession of petroleum geology Part I, Techniques of the petroleum geologist: Exploration. Exploitation. Part II, Geologic occurrence of petroleum Physical and chemical properties of oil and gas. Origin and evolution of oil and gas. Migration of oil and gas. Accumulation; reservoir rocks—traps. Part III, Present and future oil supplies: Distribution of oil and gas fields—United States. Distribution of oil and gas fields—exclusive of the United States. Future oil supplies. Appendix. Index.

Note: This book is both college textbook for upperclass students preparing to specialize in petroleum geology and reference book. The third part of the book—which is the part having the most reference value—accounts for about one-half of the space. In this part the main oil fields of the world are discussed from the geological viewpoint. The discussions are fairly detailed and are accompanied by maps and in many cases diagrams of the geological formations. Throughout the book the related literature is cited in footnotes, and at the end there is useful annotated list of important books and documents.

LOZO, FRANK EDGAR, editor

The Woodbine and adjacent strata of the Waco area of central Texas. A symposium edited by Frank E. Lozo with the assistance of Bob F Perkins. Dallas Southern Methodist University Press 1951 183 p. illus. 27 cm. (Fondren science series. No 4) $7 50. 2412

Contents. The Grand Prairies of Texas, by F Bryan. History of discovery and development of Woodbine oil fields in east Texas, by C. L. Alexander Comparative status of the Woodbine in oil production, by G. J Loetterle The South Bosque field, McLennan county, Texas, by J C. Price Geology of Belton Reservoir area, Leon river Bell county Texas, by J. Colligan Geology of Whitney Reservoir area, Brazos river Bosque-Hill counties, Texas, by A. M. Hall. Stratigraphic notes on the Maness (Comanche Cretaceous) shale, by F E Lozo. Woodbine sandstone dikes of northern McLennan county Texas, by J W Monroe. Stratigraphy of the Woodbine and Eagle Ford, Waco area, Texas, by W S. Adkins and F E. Lozo. References. Plates. Index.

Note Together the original papers in this volume constitute detailed study of the geology of one of the most important petroleum producing areas in the world. The volume was prepared by members of the East Texas Geological Society The illustrative matter includes not only series of geological maps of the area but also several plates of photographs of fossil specimens.

MUSKAT MORRIS

Physical principles of oil production. New York McGraw Hill Book Company, Inc., 1949 922 p. illus. 24 cm. (International series in pure and applied physics G P Harnwell, consulting editor) $15.00 2413

Contents Introduction. The physical properties and behavior of petroleum fluids. The properties of oil bearing formations pertaining to oil production core analysis Basic dynamical equations for homogeneous-fluid-flow systems. Individual well problems in uniform strata with homogeneous-fluid flow. Strata of nonuniform or anisotropic permeability with homogeneous-fluid flow Dynamical foundations for heterogeneous fluid flow phenomena. Steady-state heterogeneous-flow systems the productivity index. General reservoir mechanics. Gas-drive reservoirs. Complete-water-drive reservoirs. Secondary recovery Condensate reservoirs. Well spacing, recovery factors, and recoverable reserves. Appendices. Index.

Note A notable presentation of the current knowledge bearing on the behavior of oil, water and gas in natural underground reservoirs. The author has endeavored to keep as closely as possible to hydrodynamic and other principles that are scientifically sound. The theoretical material is amply buttressed by facts gathered from experience in oil fields, especially oil fields in the United States of America. The book is addressed to petroleum engineers, conservation officials, and other technically trained personnel associated with oil field exploitation and regulation. Related literature is cited in footnotes.

NETTLETON, LEWIS LOMAX, editor

Geophysical case histories. Volume I—1948 A collection of 60 papers by 61 authors, assembled from papers published by the Society of Exploration Geophysicists, The American Association of Petroleum Geologists, and The American Institute of Mining and Metallurgical Engineers together with much new material. Tulsa Okla. Society of Exploration Geophysicists 1949 671 p illus. 25 cm. $7.00. 2414

Contents (abridged) Section I, General and historical papers Publication of geophysical case histories, by H. C. Cortes. The history and development of seismic prospecting, by E. E. Rosaire A brief history of the gravity method of prospecting for oil, by E. A. Eckhardt. Section II, Salt dome case histories. Section III, Midcontinent case histories. Section IV Rocky Mountain case histories. Section Californian case histories. Section VI, Foreign case histories: Geophysical history of the Tucupita oil field, Venezuela, by W. S. Olson. Geophysical history of the Reitbrook salt dome and oil field near Hamburg, northwest Germany by R. R. Schramm. Geophysical exploration and discovery of the Budafapuszta (Lispe) oil field in Hungary by D. C. Ebasin and E. Valk. Geophysical operations in Kuwait, by P H. Boots and A. H. McKee. Index. Map and figure index.

Note A series of papers dealing with the preliminary geophysical reconnaissance of various oil fields, principally in the central and western United States. Detailed case histories are given of many noted fields. About one-third of the papers were written for the volume and the rest were reprinted from various sources. All papers except the first are illustrated, some of them with folding maps or diagrams. The purpose of the case history program of the Society of Exploration Geophysicists is to provide material by which geophysical surveys can be judged in the light of later development of the surveyed area as an aid in the interpretation and evaluation of other geophysical work. The papers are concerned primarily with geophysics rather than geology but geological factors are given varying attention in the articles, ranging from none to considerable, depending upon the individual author. The authors presumed that the book' readers would have an understanding of the general principles and instrumentation by which seismic, gravity and magnetic surveys are carried out.

PIRSON SYLVAIN JOSEPH

Elements of oil reservoir engineering. New York McGraw Hill Book Company, Inc., 1950 441 p. illus. 23 cm. $7.50. 2415

Contents: The reservoir rocks and structures (microscopic study). The reservoir rocks and structures (megascopic study) The reservoir fluids. Reservoir forces and energies. The fundamental equations of reservoir engineering. Fundamental production processes. Analysis of field data. Appendix: Abbreviations and symbols. Name index. Subject index.

Note: The management of underground petroleum reservoirs so as to obtain the maximum yield of petroleum and gas is complex subject which requires detailed knowledge of geology petroleum physics, and associated topics. In this book, designed primarily for graduate petroleum engineering students, the subject is treated comprehensively with the emphasis on the fundamental principles and on sound analytical and forecasting methods. Considerable attention is given to the experimental methods which have advanced the knowledge of oil reservoir behavior

PRATT WALLACE EVERETT AND DOROTHY GOOD editors

World geography of petroleum. Published for the American Geographical Society by Princeton University Press, 1950. 464 p. illus. 26 cm. $7 50 2416

Contents (abridged) Part I, Petroleum in the ground, by E. Stebinger. Part II, The functional organization of the petroleum industry by W. E. Henry Part III, The world's petroleum regions [illegible], by W. E. The Western hemisphere The Caribbean area [illegible], by A. J. Pratt. Venezuela, by G. Zuloaga. Trinidad, by A. J. [illegible] by G. B. Knight Colombia, by G. Barrow North America, by A. I. [illegible] Levorsen. The Eastern hemisphere The Middle East [illegible] by G. M. Lees. Saudi Arabia and Bahrein, by M. [illegible]

M. P Yackel. The Union of Soviet Socialist Republics, by E. Steiniger. Europe west of the U. S. S. R., by L. C. Reed. Indonesia, British Borneo, and Burma, by I. Swaain. The world at whaler: Petroleum in the polar areas, by W E. Pratt. Petroleum on the continental shelves, by W E. Pratt. Part IV Aspects of utilization: The availability of petroleum—today and tomorrow, by K. F Mather Geographical aspects of petroleum use in World War II, by the Office of the Army-Navy Petroleum Board of the Joint Chiefs of Staff. World patterns of civilian utilization, by J. W Frey A statistical survey by A. Van Burkalow Appendix. Bibliography Abbreviations. Note on glossaries. Conversion factors. Index.

Note: In this work geography petroleum geology economics, and utilization have been combined in a successful synthesis. The result is an important background book that reads as easily as any standard work on economic geography and is suitable for both geographers and general readers. Original maps and much other reference material is included.

RISTER, CARL COKE

Oil! Titan of the Southwest. Norman University of Oklahoma Press 1949 467 p. illus. 24 cm. $5.00. 2417

Contents: Foreword, by E. DeGolyer. Texas' oil-spring era. The Red Man's hidden wealth. From Paola to Neodesha, Kansas. Corsicana, the curtain raiser. Queen of the Neches. Exploiting other salt domes. Red Fork, Cleveland, and Glenn pool. Louisiana in the news. Exploring the Red River uplift. Oklahoma steals the show. The Ranger oil boom. Desdemona and Breckenridge. Along the Mexia fault zone. Competition in oil. An Osage Monte Carlo. Arkansas' El Dorado. Texas forges ahead. Greater Seminole. Oklahoma City's bonanza field. Panhandle oil and gas. Permian basin discoveries. Fabulous East Texas. Finding new horizons. Oil at war. Oil conservation and control. An era of specialization. The impacts of petroleum. Appendix. Glossary Bibliography Index.

Note. A well-documented history of the petroleum industry in the southwestern United States of America from its beginnings to the present. In addition to historical descriptions the author gives much information about the financial and economic aspects. The names of individuals and companies connected with the development occur frequently Many interesting illustrations are included

STANDING MARSHALL BURTON

Volumetric and phase behavior of oil field hydrocarbon systems. New York Reinhold Publishing Corporation, 1952 123 p. illus. 29 cm. $10.00. 2418

Contents: Introductory phase behavior and fluid flow concepts. Sampling methods and apparatus. Behavior of gases. Behavior of liquids. Vapor-liquid equilibria. Gas-condensate systems. Dissolved gas systems. Material balances. Glossary relating to hydrocarbon behavior. List of symbols. References. Appendix: General correlations of hydrocarbon behavior Index.

Note: Pressure-volume-temperature relations of the hydrocarbon systems actually found in underground oil and gas reservoirs are covered in this book which was addressed not to chemists or other laboratory service but to petroleum engineers and geologists. The applications of laboratory tests to field conditions are the main theme. Problems such as good procedures in sampling are thoroughly discussed. There are 31 tables, 69 figures, practically all of which are graphical representations of PVT relationships, and a bibliography of 53 references. The author is on the staff of the California Research Corporation.

ZABA, JOSEPH AND W T DOHERTY

Practical petroleum engineers handbook. Third edition, revised and enlarged. Houston, Texas Gulf Publishing Company 1949 654 p. illus. 23 cm. $10 00 2419

Contents General engineering data. Steam. Power transmission. Tubular goods Drilling. Production. Transportation. Index.

Note (4142a) A reference work for operators, engineers, superintendents, foremen, and others engaged in petroleum production. The book consists primarily of charts, tables, formulas, and other engineering data relating to the design of shafting, working pressures, connecting operations, gas lift and flow measurements, pump data, and pipelines. No attempt is made to deal with the chemistry and refining of petroleum. In this edition new charts and tables and revised specifications account for more than 140 additional pages.

METALLURGY AND METALLOGRAPHY

GENERAL

AMERICAN SOCIETY FOR METALS

Atom movements a seminar on atom movements held during the thirty-second National Metal Congress and Exposition Chicago October 21 to 27 1950 sponsored by the American Society for Metals. Cleveland The Society 1951 240 p. illus. 23 cm $5 00 2420

Contents: Formal basis of diffusion theory by L. S. Darken. Chemical techniques and analysis of diffusion data, by C. Wells. Tracer and other techniques of diffusion measurements, by R. E. Hoffman. Mechanisms of diffusion, by H. B. Huntington. Diffusion in alloys and the Kirkendall effect, by J. Bardeen and C. Herring. Volume diffusion—an empirical survey by C. E. Birchenall. Grain boundary and surface diffusion, by D. Turnbull. Diffusion and high temperature oxidation of metals, by C. Wagner. Gas-metal diffusion and internal oxidation, by F. N. Rhines. Diffusion in sintering, by P. Duwez. The migration of grain boundaries, by J. E. Burke. Summary by R. F. Mehl. Subject index.

Note The term "atom movements" as employed in the papers comprising this volume has reference to the phenomenon of diffusion, particularly diffusion in metals and alloys. Each paper has been prepared by an expert in the field and is based on a review of the literature of the subject and on investigations conducted at research laboratories operated by the United States Steel Co., the General Electric Co. the Massachusetts Institute of Technology and similar organizations. Extensive bibliographies and an index are included. The book is addressed to professional metallurgists.

AMERICAN SOCIETY FOR METALS

Cold working of metals A seminar on the cold working of metals held during the thirtieth National Metal Congress and Exposition Philadelphia, October 23 to 29 1948 sponsored by the American Society for Metals. Cleveland American Society for Metals 1949 364 p illus. 23 cm. $5.00 2421

Contents Introduction, by M. Gensamer. Strain hardening—effects of alloying elements and microstructure, by G. V. Smith. Macroresidual stresses in metals resulting from plastic deformation, by W. M. Baldwin, Jr. Structure of slip bands and cold-worked metal, by R. D. Heidenreich. The crystallographic mechanisms of translation, twinning and bending, by C. S. Barrett. Deformation textures, by R. M. Brick. Recrystallization textures, by C. G. Dunn. Dislocation theory by W. Shockley. Mechanism of deformation, by J. H. Hollomon. The effect of strain histories on the work hardening of metals, by T. E. Tietz and J. E. Dorn. Dynamics of slip bands, by C. Zener. Plastic after-effects, by J. O. Lasham. Work hardening under combined stresses, by L. R. Jackson. Creep of metals, by J. D. Lubahn. Cold work and fatigue, by A. M. Freudenthal. The effect of plastic deformation on solid reactions, by B. L. Averbach and M. Cohen. The fracture stress of metals as affected by plastic deformation, the stress system, and size, by D. J. McAdam, jr.

Note In spite of the practical implication in the title of this book, most of the papers contained in it are devoted to fundamental theories and research. Some of the information presented has been derived from recent investigations and is here published for the first time. The papers are addressed to professional metallurgists, particularly those who are concerned with research or with the fundamental aspects of metal forming processes. They are accompanied by references to related literature.

AMERICAN SOCIETY FOR METALS

Grain control in industrial metallurgy A series of four educational lectures on grain control in industrial metallurgy presented to members of the A.S.M during the thirtieth National Metal Congress and Exposition, Philadelphia, October 23 to 29 1948. Cleveland American Society for Metals 1949 279 p. illus. 23 cm. $5 00 2422

Contents: The fundamentals of recrystallization and grain growth, by J. E. Burke. Recrystallization and grain control in ferrous metals, by R. L. Kenyon. Recrystallization and grain size control in copper and copper alloys, by H. Burghoff. Grain control in wrought aluminum and magnesium products, by J. T. Hobbs, jr. Glossary of terms used. Index.

Note In this volume four experts associated with fundamental research in metallurgy discuss a subject of the highest importance in metallurgical design and metal working. The papers are addressed to practical metallurgists and are essentially [illegible] in technical terminology of the current knowledge of the subject. They are supplemented by graphs, tabulated data, illustrations, and bibliographies.

AMERICAN SOCIETY FOR METALS

High temperature properties of metals a series of five educational lectures presented to members of the A.S.M during the thirty-second National Metal Congress and Exposition Chicago October 23 to 27 1950. Cleveland The American Society for Metals, 1951 176 p. illus. 24 cm. $4 00 2423

Contents. Creep of metals, by E. R. Parker. Stress rupture testing, by N. J. Grant. High temperature fatigue testing, by H. J. Grover. Methods of high temperature oxidation testing and evaluation of observations, by C. Wagner. Some experiences in service (power and chemical plants) by J. J. B. Rutherford. Index.

Note. The papers in this book were addressed originally to professional metallurgists, but they are of interest also to engineers working on machine design, especially the design of gas turbine parts and other mechanisms that must operate at extremely high temperatures. In general, each paper is a summary of recent research, but all of the authors have also examined the literature and incorporated the pertinent material. Each paper is accompanied by list of references.

AMERICAN SOCIETY FOR METALS

Metal interfaces A seminar on metal interfaces held during the thirty third National Metal Congress and Exposition, Detroit, October 13 to 19 1951 sponsored by the American Society for Metals Cleveland American Society for Metals 1952 335 p illus. 24 cm. $5 00 2424

Contents: The electronic theory of metallic surfaces, by C. Herring. Theory of internal boundaries, by H. Brooks. Grain shapes and other metallurgical applications of topology, by C. S. Smith. Measurement of solid: gas and solid: liquid interfacial energies, by J. H. Udin. Measurement of solid: solid interfacial energies, by K. T. Aust [illegible] Energies and structure of grain boundaries, by [illegible]

and B. Chalmers. Boundary migration during grain growth, by R. L. Fullman. Interface migration in recrystallization, by P. A. Beck. Stress relaxation across interfaces, by A. S. Nowick. Phase transformations at interfaces, by A. H. Geisler. Mechanical effects of interfaces, by B. Chalmers. Metal surface phenomena, by H. H. Uhlig.

Note: This volume contains original papers on topics which is of interest not only in metallurgy but also in physics and chemistry. They deal with the pertinent fundamental theory, techniques of quantitative measurements, the effects of interface phenomena on stress relaxation, mechanical properties, etc. Although addressed primarily to metallurgists, the presentation in most of the papers is on a level that assumes familiarity on the part of the reader with the fundamentals of current atomic physics. Extensive lists of references are included. Most of the authors are associated with teaching and research in United States of America universities and industrial research laboratories.

AMERICAN SOCIETY FOR METALS

Properties of metals in materials engineering. A series of eight educational lectures on properties of metals in materials engineering presented to members of the A.S.M. during the thirtieth National Metal Congress and Exposition, Philadelphia, October 23 to 29 1948 Cleveland American Society for Metals, 1949 177 p. illus. 23 cm. $5.00 2425

Contents: Introduction, by R. L. Templin. Fundamental concepts, by M. Gensamer. Behavior of metals under direct or nonreversed loading, by J. R. Low jr. Application of fatigue data to machine design, by R. E. Peterson. Determination of the state of stress, by W. M. Murray. Analysis of stress in aircraft engines, by W. T. Bean, jr. Testing to specific deflections (buckling) by E. C. Hartmann. Design for energy absorption, by W. P. Roop. Index.

Note: The lectures collected in this volume were addressed to practical metallurgists. Each of the lectures presents a compact review of the current knowledge of the specific topic mentioned in its title. The text of each is supplemented by graphical and tabular presentations of engineering data and by references to the pertinent literature.

AMERICAN SOCIETY FOR METALS

Residual stress measurements. A series of four educational lectures on residual stress measurements presented to members of the ASM during the thirty-third National Metal Congress and Exposition Detroit, October 15 to 19, 1951 Cleveland American Society for Metals, 1952 210 p illus. 24 cm. $4.50 2426

Contents: The nature, origin, and effects of residual stresses, by R. G. Treuting. The measurement of residual stresses, by J. J. Lynch. Residual stress states produced in metals by various processes, by H. R. Wishart. Relief and redistribution of residual stresses in metals, by D. G. Richards. Index.

Note: The four lectures assembled in this volume are not limited to residual stress measurements as the book title indicates—but include also discussions of such aspects as the nature and origin of residual stresses, their beneficial use in such well-known processes as hardening by heat treatment and by shot peening and their relief in instances where they are undesirable. The book as a whole is essentially a first course in the subject for men who are thoroughly familiar with metallurgical terminology and basic concepts. Although it is primarily of interest to metallurgists who are concerned with the working of metals, it holds some interest for technical men in other fields such as structural engineering and machine design.

AMERICAN SOCIETY FOR METALS

Thermodynamics in physical metallurgy a seminar on thermodynamics in physical metallurgy held during the thirty first National Metal Congress and Exposition Cleveland October 15 to 21, 1949 sponsored by the American Society for Metals. Cleveland The American Society for Metals, 1950 317 p. illus. 23 cm. $5 00. 2427

Contents. The principles of thermodynamics, by P. W. Bridgman. The role of statistical mechanics in physical metallurgy, by C. Zener. Application of thermodynamics to heterogeneous equilibria, by L. S. Darken. Application of electromotive force measurements to phase equilibria, by F. J. Dunkerley. On equations of state and the phase diagrams of simple binary alloys, by A. W. Lawson. The thermodynamics of liquid metallic solutions, by J. Chipman. Physical factors affecting order in metallic systems, by C. E. Birchenall. Heterogeneous nucleation, by J. H. Hollomon. Phenomena accompanying precipitation from solid solutions of C and N in alpha-iron, by C. Wert. Eutectoid decompositions, by J. C. Fisher. Thermodynamics of the martensitic transformation, by M. Cohen and others. A nucleation problem in ferromagnetism, by L. J. Dijkstra. Principles of solidification, by D. Turnbull. Contributions of thermodynamics to metallurgical research and operations, by J. B. Austin. Subject index.

Note A collection of papers on advanced topics in metallurgy. Although the papers are addressed primarily to professional metallurgists, they deal less with the everyday work of such folk than with the advancing fundamental knowledge from which industrial practices are eventually derived. Most of the papers are accompanied by excellent lists of references to related literature, and in a few cases a transcript of discussion is included. The volume is of interest not only to metallurgists but to physical chemists and physicists as well.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on corrosion of materials at elevated temperatures. Presented at the fifty third annual meeting American Society for Testing Materials, Atlantic City N J., June 26 1950 Philadelphia, Pa. American Society for Testing Materials 1951 121 p. illus. 23 cm. (Special technical publication no 108) Paper $2.25 2428

Contents: Introduction, by C. T. Evans, jr. Coal ash corrosion of metals at elevated temperatures, by C. T. Evans, jr. Stress corrosion tests on turbo-supercharger materials in the products of combustion of leaded gasoline, by G. B. Wilkes, jr. Creep as a surface dependent phenomenon, by M. R. Pickus and E. R. Parker. The effect of environment on the stress-rupture properties of metals at elevated temperatures, by G. Cutler Shepard and Willis Schalliol. Preliminary studies of the effect of oxidizing sulfurous atmospheres on the rupture strengths of Inconel "X" and Inconel, by A. M. Talbot and E. N. Skinner. Hydrogenating effect of steam on ferrous alloys at elevated temperatures, by C. A. Zapffe and F. K. Landgraf. Oil ash corrosion of materials at elevated temperatures, by C. T. Evans, jr. The growing rôle of protective coatings for metals in high-temperature service, by W. N. Harrison.

Note These original papers were written for the information of metallurgists and engineers engaged in the design and construction of machines and industrial equipment subject to extremely high temperatures. Based on investigations conducted by experts in the field, they provide technical information regarding the behavior of various engineering materials under elevated temperatures. Discussions are included, and the paper on oil ash corrosion contains an extensive bibliography.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on deformation of metals as related to forming and service. Presented at the fifty-first annual meeting American Society for Testing Materials Detroit, Mich., June 22 1948 Philadelphia, Pa. American Society for Testing Materials, 1949 117 p. illus. 23 cm. (Special technical publication no 87) Paper $2 00. 2429

Contents: Introduction, by L. L. Wyman. Tests of ductility in ship structure, by Wendell P. Roop. Notch sensitivity of ship plate—correlation of laboratory-scale tests with large-scale plate tests, by Noah A. Kahn and Emil A. [illegible]. Measurement of ductility in sheet metals, by John R. Low jr. and Thomas A. Prater. Hy-

draulic bulge testing of sheet metals, by W T Lankford. Notched bar tension tests on annealed carbon steel specimens of various sizes and contours, by M. L. Fried and G. Sachs.

Note: A collection of original papers by outstanding research metallurgists. It reflects the new fundamental knowledge of plastic deformation and flow of metals and contains descriptions of new tests which are useful in relating this knowledge to metallurgical and structural design. There is some emphasis on metallurgical problems in shop design, but the usefulness of the material is not limited to this field. The papers are accompanied by abstracts of the discussions at the meeting, illustrations, and selected lists of references.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on metallography in color 1948 *Presented* at the fifty first annual meeting American Society for Testing Materials, Detroit, Mich., June 21 1948 Philadelphia, Pa. American Society for Testing Materials, 1949 64 p. illus. (part col d) 23 cm. (Special technical publication no. 86) Paper $4.50 2430

Contents: Introduction, by L. V Foster Metallography in color by R. P Loveland. Microscope optics for color metallography by James R. Benford. Quality and quantity of illumination in color metallography by R. P Loveland Insert plates to x, four-color process illustrations. Color metallography simplified, by Mason Clogg, Jr Some applications of color metallography by W D. Forgeng. The application of color photography to the study of nonmetallic inclusions, by A. M. Hall and E. E. Fletcher.

Note: In these papers are described various techniques which have been developed for making photomicrographs in color of metal specimens. The procedures are based on the research and experience of the authors, all of whom are experts in the fields of metallurgy and metallography The illustrations include reproductions in color of 37 microphotographs. Lists of references and discussions of the papers are included.

BARRETT CHARLES S

Structure of metals crystallographic methods principles and data. Second edition. New York McGraw Hill Book Company Inc., 1952 661 p illus. 24 cm. (Metallurgy and metallurgical engineering series Robert F Mehl consulting editor) $10.00 2431

Contents: The fundamentals of crystallography The stereographic projection. X-rays. Diffraction of X-rays by crystals. Laue and fixed-crystal methods. Rotating-crystal methods and the reciprocal lattice. The powder method. The determination of crystal structure. Pole figures and orientation determinations. Determination of constitution diagrams with X-rays. Structure of metals and alloys. Superlattices. The electron theory of metals and alloys. Stress measurement by X-rays. The plastic deformation of metals. Dislocation theory The structure of cold-worked metal. Preferred orientations resulting from cold work. Preferred orientations after annealing. Orientations in castings and in deposited films. Anisotropy Age hardening and transformations. Diffraction of electrons, atoms, and neutrons. Appendices. Index.

Note (4141) A substantial work which is used both as text in crystallography for advanced students of metallurgy and as reference tool by metallographers. It presents from the standpoint of metallurgy and metallography the fundamental knowledge and the techniques of crystallography and shows applications not only to the study of metals and alloys but also to their reactions to cold working and other treatments It is well documented with footnote citations to pertinent literature The appendices contain variety of basic information on crystal structure, the intensity of X-ray reflections, etc The first edition was published in 1943. The work was extensively revised for this edition, particularly in the discussion of such matters as creep, dislocation ferromagnetism, and insulators and semiconductors Literature references and tables have also been revised.

BRICK, ROBERT MAYNARD AND ARTHUR PHILLIPS

Structure and properties of alloys the application of phase diagrams to the interpretation and control of industrial alloy structures. Second edition. New York McGraw Hill Book Company Inc. 1949 485 p. illus. 23 cm. (Metallurgy and metallurgical engineering series, Robert F Mehl, consulting editor) $7 00 2432

Content Requisite tools of the metallurgist. Commercially pure metals. Solid solutions: copper base alloys. Cold working and annealing. Cast eutectic alloys: lead-base systems. Age-hardening cast- and wrought aluminum alloys. Alloys of magnesium. Phase transformations two-phase copper alloys. Iron-carbon alloys: normalized and annealed steels. Theory of heat treatment of steels. Heat-treated engineering steels, plain carbon and alloy types. Carbon and alloy tool steels. Special corrosion- and heat-resistant alloys. Cast irons. Monotectics, sintered metal powders. Generalizations. Index.

Note (4146) A concise presentation of the knowledge from the field of physical metallurgy which is important to the understanding of alloys. The authors' theme is that alloys can be studied and understood only against background of knowledge of the significance of phase diagrams, microstructures, the characteristic properties of the structures, and the effects of metal treating processes upon all three. The first edition of the book was comparatively brief. It has been greatly expanded in order to suit it for use in college courses and also to increase its value as reference book for men concerned with the specifications and uses of alloys in industry The illustrative matter now includes large number of excellently reproduced micro-photographs.

BRIDGMAN PERCY WILLIAMS

Studies in large plastic flow and fracture, with special emphasis on the effects of hydrostatic pressure. New York McGraw Hill Book Company Inc., 1952 362 p. illus. 24 cm. (Metallurgy and metallurgical engineering series Robert F Mehl consulting editor) $8.50 2433

Contents (abridged) Part I, Tests under hydrostatic pressure The tension of steel under pressure. Two-dimensional tension under pressure. Tension tests under pressure on materials other than steel. Simple compression under hydrostatic pressure. Punching under pressure. The collapse of thick, hollow cylinders of steel under external pressure. The effect of external pressure on cavities in brittle materials. Wire drawing and extrusion under pressure. Part II, Other tests involving large deformations: Simple compression. Two-dimensional compression. Torsion combined with simple compression. Part III, Plastic flow combined with approximately hydrostatic pressure. Simple tension after prestraining. Simple tension after prestraining in simple compression. Simple compression after prestraining in two-dimensional compression. Torsion after prestraining in tension under pressure. Index.

Note In this new book Professor Bridgman, whose experiments in the domain of high pressure are internationally known, has systematized and interpreted the results of an extensive series of experiments "made with the explicit purpose of understanding better the nature of both the phenomenon of fracture under conditions of high stress and the phenomenon of the large plastic flow which often precedes such fracture." Although the book is in the nature of an interim report rather than statement of conclusions, it contains many interesting observations some of which can undoubtedly be turned to practical account in industry It is potentially of interest to several groups including professional physicists working in crystallography and the physics of metals and research metallurgists.

CLARK, DONALD SHERMAN, AND WILBUR R. VARNEY

Physical metallurgy for engineers. New York D Van Nostrand Company Inc., 1952 567 p. illus. 24 cm. $6.50 2434

Contents. Metallurgy in engineering. Metals and alloy systems. Iron-carbon alloys. Heat-treatment of steel. Plain carbon steels. Case-hardening. Function of alloying elements in steel. Low-alloy steels. Principles of corrosion and surface treatment. Tool steels. Principles of corrosion. Corrosion- and scale-resistant steels. High-strength heat-resistant alloys. Cast irons. Precipitation hardening and precipitation-hardening alloys. Copper- and nickel-base alloys. Light metals and their alloys. Metal

lurgy of casting. Metallurgy of mechanical working. Metallurgy of soldering, brazing, and welding. Appendixes: AISI-SAE carbon steel compositions—1951. AISI-SAE free-cutting steel compositions—1951. AISI-SAE alloy steel compositions—1951 Typical heat treatments for AISI-SAE alloy steels. Hardenability bands for alloy steels. Typical end-quench and tempered end-quench curves. Approximate hardness conversion table. Index.

Note: A textbook on physical metallurgy as it applies to the selection, treatment, and use of metals and alloys in engineering practice with emphasis throughout upon principles. The authors are professors of mechanical engineering at the California Institute of Technology where the subject-matter of the text has been presented over period of many years in course on physical metallurgy for engineering students. A list of references and set of questions conclude each chapter.

CLARK, FRANCES HURD

Metals at high temperatures New York Reinhold Publishing Corporation, 1950 372 p. illus. 23 cm. $8.50. 2435

Contents: Introduction and theoretical aspects. Test methods and equipment for elevated temperatures. Plain-carbon and low alloy steels. Chrome irons, moderately alloyed austenitic steels. Highly alloyed austenitic steels. Cobalt-base alloys. Nickel-base alloys. Noncommercial alloys. Manufacturing processes. Lower melting alloys. Scaling. Subject index.

Note: In the first chapter of this book the author presents critical digest of the present knowledge of the plastic flow of the metals. The second chapter is devoted to test methods, but the remaining chapters are largely compilations of data gathered from the published literature. As might be expected, the greater part of the cited literature has been published in the past decade. About half of the text is made up of tabular and graphical presentations of data. The rest is concise discussion. Statements in the text and most of the tables and graphs, also, are related by means of key numbers to citations of the source articles.

CURTIS FRANK W

High-frequency induction heating. Second edition. New York McGraw Hill Book Company Inc., 1950 389 p. illus. 21 cm. $7.00. 2436

Contents: Principles of induction heating. Induction-heating equipment. Design of induction-heating coils. Brazing, soldering, and joining. Hardening and heat-treatment. Fixtures for induction heating. Miscellaneous induction-heating applications. Designing for induction heating. Dielectric heating. Index

Note: (4166a) A survey of the applications of high-frequency induction heating in industrial processes. Though the chapter titles are essentially the same as in the first edition, the book has been thoroughly revised and now contains much material that did not appear in the original edition. A considerable part of that material relates to new fixtures and assemblies which have been developed as the applications of induction heating have been extended. However the chapter on dielectric heating is still essentially an outline of the subject and is not intended to be comparable in thoroughness to the rest of the book. The book is of wide practical interest in manufacturing industries.

GEIL, GLENN W , editor

Mechanical properties of metals at low temperatures. Proceedings of the NBS Semicentennial Symposium on Mechanical Properties of Metals at Low Temperatures held at the NBS on May 14 and 15, 1951 Washington, D C. Government Printing Office, 1952 206 p illus. 24 cm. (United States. National Bureau of Standards. Circular 520) $1.50. 2437

Contents: Recent European work on the mechanical properties of metals at low temperatures, by H. P Allen. Manufacture of steels for low-temperature service, by J R. Austin. Development and application of chromium-copper-nickel steel for low-temperature services, by W Crafts and C. M. Offenhauer. Tensile properties of copper, nickel, and some copper-nickel alloys at low temperatures, by G. W Geil and N L. Carwile. Application of metals in aircraft at low temperatures, by J. R. Johnson and D A. Sitler. Properties of austenitic stainless steels at low temperatures, by V N Krivobok. Dimensional effects in fracture, by C. W MacGregor and N Grossman. Mechanical properties of high-purity iron-carbon alloys at low temperatures, by R. L. Smith and others. Brittle fractures in ship plates, by M. L. Williams.

Note Printed in this book are nine papers delivered first at one of the symposia sponsored by the National Bureau of Standards in connection with its semicentennial in 1951 Each monograph is followed by transcription of the discussion that followed at the symposium and by bibliographical references.

GILLETT, HORACE WADSWORTH

The behavior of engineering metals. New York John Wiley & Sons, Inc., 1951 395 p. illus. 24 cm. $6.50. 2438

Contents (abridged) General considerations. Tests and specifications. Simulated service. Notches and surface stress, external and internal. The statistical approach. Chemical and physical properties. Tonnage steels. Wrought steels of intermediate strength. Heat-treated steels. Cold worked metals. Ferrous castings. Steel, cast and malleable irons. The graphitic family. Important nonferrous cast alloys and their idiosyncrasies. Alternate casting methods. Light wrought alloys; titanium and zirconium. Some less common and some precious heavy metals. Metal behaviors as affected by hydrogen. Machinability. Inhomogeneous, clad, and coated metals. Metal films and surfaces. Powders and objects made by powder metallurgy. Bearing metals. Surfaces in severe service. Severe service at high and low temperatures. Alternate materials, cost, conservation, codes. Appendix: Sources of more detailed information. Author index. Subject index.

Note: Here the special knowledge of the physical metallurgist is interpreted for the users of metals who do not have special training in metallurgy. The book can well be used by such persons as complement to the standard compilations of engineering data about metals. It is in no sense reference book of data; but it does contain lucid discussions of such topics as the properties of structural steel and what affects these properties, methods of testing the properties of metals, magnetic properties of metals, and the effects of cold working. Many special points and "tricks of the trade" are included that would be hard to find assembled elsewhere. Good selected lists of references accompany the chapters.

GUY ALBERT G

Elements of physical metallurgy Cambridge Addison Wesley Press, Inc., 1951. 293 p. illus. 25 cm. $6 50 2439

Contents. Introduction. A survey of metallurgy Atomic structure. Crystal structure. Equilibrium diagrams. Structure of alloys. Physical properties. Elasticity of metals. Plasticity of metals. Corrosion. Diffusion in metals. Recovery recrystallization and grain growth. Age hardening. Heat treatment of steel. Appendix Literature of metallurgy Index.

Note: An introductory work for college students who have completed courses in basic physics, chemistry and calculus. The treatment includes considerable emphasis on phase diagrams and has other up-to-date features A short bibliography is appended to each chapter and in addition there is discussion of the principal guides to metallurgical literature and of methods of searching them for information on problem. The author is member of the faculty of the University of North Carolina.

GWIAZDOWSKI, ALEXANDER PETER

Engineering metallurgy Appleton, Wisconsin C. C. Nelson Publishing Company 1950 247 p. illus. 24 cm. $4.00 2440

Contents Metals and their properties. The static properties of metallic materials. Structures and compositions of ferrous alloys. The metallic elements, properties, alloy compositions, and uses. Steels, ingot and wrought irons. Rolling processes. Applications of S. A. E. steels. Heat treatment of ferrous alloys. High-speed and commercial tool steels. Corrosion and heat resisting steels. Processing of rolled steels. Cast ferrous alloys. Cast steels. Light non-ferrous alloys. Heavy non-ferrous alloys Bearing metals. Finished steel products by states. Review questions. References for further reading. Index.

Note. A compact presentation of metallurgical information useful to engineers who are concerned with the selection of metals for manufactured parts. It is designed for use as textbook in engineering college courses, but it is suitable also as survey of selected, practical information for graduate engineers, purchasing agents, etc.

HAYWARD, CARLE REED

An outline of metallurgical practice. Third edition This edition sponsored by American Smelting and Refining Company New York D Van Nostrand Company Inc. 1952 728 p illus. 24 cm. $10.00 2441

Contents. Introduction. Copper Lead. Zinc. Aluminum. Nickel. Tin. Mercury Antimony Arsenic. Bismuth. Cadmium. Cobalt. Magnesium. Beryllium. Gold. Silver Platinum. Chromium. Tungsten. Manganese. Vanadium. Molybdenum. Zirconium. Titanium. Uranium. Iron and steel. Non-ferrous alloys. Index.

Note (4175) This book meets a two-fold need: for engineers it is a reference book giving modern practices in extracting and refining metals and giving general information regarding the sources, uses, and important alloys of the metals; for students beginning the study of metallurgy it is a textbook covering metallurgical practice in outline. Because of advances in the field of metallurgy since the second edition was published in 1940, some sections of the book have been entirely rewritten for the third edition, and new chapters on titanium and uranium have been added. Also certain old time processes, such as copper blast-furnace smelting and the puddling process for wrought iron, have been dropped. The 65 tables have been brought up to date. A special feature is made of the illustrations, of which there are more than 400, about one-third of them entirely new. The author advises a careful study of the illustrations, as in many instances they are substitutes for printed descriptions of processes or apparatus.

HOYT SAMUEL L

Metal data. Revised edition of *Metals and alloys data book* New York Reinhold Publishing Corporation 1952 526 p. illus. 26 cm. $10 00. 2442

Contents: Test specimens. Hardness tests. The wrought steels. Heat treated steels. Cast steels. The cast irons. Stainless steels. Heat and corrosion-resistant casting alloys. Super-alloys. The nonferrous alloys. Additional metals. General data. Index.

Note. (4175) A standard reference handbook for the use of advanced engineering students, graduate engineers, and metallurgists. The information contained is given primarily in the form of charts and tables classified under the headings listed above. The chapter entitled "General data" contains a variety of useful information on such topics as the properties of the chemical elements, the heat content of metals, pyrometric cones, weights of sheets and plates, and various compilations of conversion tables. The first edition was published in 1943. In the present edition the nature of the book is the same but the contents have been much extended. More than 120 tables have been added. The number of figures has been increased from 40 to 173 and there are almost 200 more pages.

HULTGREN RALPH

Fundamentals of physical metallurgy New York Prentice-Hall, Inc. 1952 395 p. illus. 22 cm. $9.35 2443

Contents (abridged) Introduction. The metallic state. Phases and simple equilibrium phase changes. Non-equilibrium phase changes. Decomposition of austenite. Ternary phase diagrams. Deformation of metals. Recovery and recrystallization. X-ray metallography. Crystal chemistry of metals. The casting of metals. Hot working of metals. Heat treatment of steel. Surface hardening of steel. Powder metallurgy Welding metallurgy Oxidation and corrosion. Metallography of alloying elements in steel. Properties of steel. Cast iron. Copper and copper alloys. Light metals. Preparation and examination of microscope sections. Hardness testing. Pyrometry Macroscopic examination—radiography Index.

Note An introductory textbook for college courses. It represents the approach to physical metallurgy which stresses the physical and chemical principles common to all alloys rather than the description of specific alloys. Phases and phase changes, for instance, are discussed at considerable length. Except for those parts which are intended to be coordinated with laboratory work, the book is also suitable for home reading by engineers out of college and other persons who have the necessary technical background. The author is Professor of Metallurgy in the University of California.

KEHL GEORGE LOUIS

The principles of metallographic laboratory practice. Third edition. New York McGraw Hill Book Company Inc., 1949 520 p. illus. 24 cm. (Metallurgy and metallurgical engineering series Robert F Mehl consulting editor) $6 75 2444

Contents. Preparation of specimens for microscopic examination. Etching of specimens for microscopic examination. Metallurgical microscopes and photomicrography. The principles of photography. Macroscopic examination of metals. Hardness testing. Special metallurgical tests. The principles of pyrometry and pyrometric practice. Thermal analysis. Appendix. Index.

Note. (4177) Although designed and used as a textbook, this work is also a useful and comprehensive treatise on metallography. It includes no laboratory experiments but, instead, describes how things are done, and why, in laboratories set up for the study of the physical and mechanical properties of metals and alloys. The exposition is compact, but is sufficiently full for most purposes. It is supplemented by excellent lists of references and by more than 300 illustrations and 41 tables. Substantial revisions were made in preparing this edition.

KEYSER, CARL A.

Basic engineering metallurgy, theories, principles and applications. New York Prentice-Hall Inc., 1952 384 p. illus. 22 cm. $7.65 2445

Contents (abridged) The structure of metals. The solid state—freezing, solutions, diffusion. Mechanical properties and metal failure. Equilibrium diagrams. The hardening of metals. Annealing—recovery, recrystallization, and grain growth. *Phase* changes in iron and steel. Heat-treating equipment and operations. The alloying elements in steel. The light metals. Copper and brass. Miscellaneous metals. Primary methods of fabrication—casting—powder metallurgy Electroplating and electroforming. Secondary methods of fabrication—mechanical working—joining and associated operations—machining and finishing. Index.

Note An introductory textbook for college students of engineering. Approximately one-third of the space is devoted to theoretical aspects such as the physics of the solid state. The remainder is divided between discussions of heat treatment, the engineering properties of particular metals, and the chief processes of metal fabrication. The discussions are necessarily somewhat generalized, but in most parts they are sufficiently detailed to inform engineering students and engineers who are not specializing in engineering metallurgy. The book is adequately illustrated and contains occasional footnote references to related literature.

LORD JAMES OSBORN

Alloy systems an introductory text. New York Pitman Publishing Corporation, 1949 380 p illus. 24 cm. (Pitman metallurgy series. Frank T Sisco advisory editor) $5.50. 2446

Contents (abridged) The metallic state defined. How conditions of solidification affect metal structure. The use of the equilibrium diagram in the interpretation of microstructures. The phase rule and its application to alloys. Deviations from equilibrium. The iron-carbon alloys. The equilibrium relations of iron and carbon. Structures of slowly cooled iron-carbon alloys. Methods of [illegible] of iron and steel. The thermal critical points of steel. The structures of heat treated steels—theories of hardening. The chemistry of the carburizing process and controlled furnace atmospheres. Heat treatment of carburized steel Liquid-bath carburizing. The McQuaid Ehn test—hardenability Specific characteristics of chromium steels and manganese steels. Specific characteristics of tungsten steels and molybdenum steels. Specific characteristics of Copper steels and of [illegible] and tool [illegible] high speed steels. Copper manufacture and properties—metallography The copper alloys. Aluminum bronze and other bronzes. Aluminum and aluminum alloys. Magnesium and magnesium alloys. Appendices: Crystallography of metal crystal lattices. A derivation of the phase rule. A selected book list for collateral reading. The use of periodical literature in teaching physical metallurgy Index.

Note. The pertinent aspects of physics and physical chemistry are stressed in this textbook. There is much emphasis on thorough understanding of thermochemical equilibria and the interpretation of phase diagrams. The theoretical and basic material is followed by specific discussions of alloy systems and related metallurgical topics. The book is designed to give undergraduate students a working knowledge of the physico-chemical bases of alloys and also some acquaintance with the properties of specific alloys of outstanding engineering importance.

LYON, RICHARD N., AND OTHERS

Liquid-metals handbook a guide to the use of liquid metals as heat transfer media. Editor in-chief Richard N Lyon. Sponsored by The Committee on the Basic Properties of Liquid Metals, Office of Naval Research Department of the Navy in collaboration with The Atomic Energy Commission and The Bureau of Ships, Department of the Navy Second edition. Washington, D C. Government Printing Office, 1952 269 p. illus. 26 cm. Navexos P–733 rev) Paper $1 00. 2447

Contents: Industrial utilization of liquid metals, by D. L. Katz. Physical properties of liquid metals, by R. R. Miller. Chemical properties and laboratory techniques, by C. B. Jackson and R. M. Adams. Corrosion of materials by liquid metals, by R. C. Miller. Liquid-metal heat transfer, by R. N. Lyon and H. F Poppendiek. Experimental liquid-metal heat-transfer systems, by T Trocki. Liquid metal experimental heat-transfer system components, by T Trocki. Availability of liquid metals, by L. R. Kramer. Index.

Note: A handbook of discussions and data on all metallic elements and those alloys which melt at 450° C. or below and are potentially useful as heat-transfer media. This new edition is considerably enlarged and revised from the original edition of 1950.

MURRAY WILLIAM M., editor

Fatigue and fracture of metals a symposium held at the Massachusetts Institute of Technology June 19–22, 1950 Edited by William M. Murray With a foreword by Jerome C. Hunsaker New York Published jointly by the Technology Press of the Massachusetts Institute of Technology and John Wiley & Sons, Inc. 1952 313 p illus. 24 cm. $6.00 2448

Contents: General survey of the problem of fatigue and fracture, by M. Gensamer The fatigue problem in airplane structures, by H. L. Dryden and others. Brittle fracture and fatigue in ships, by F Jonassen. Brittle fracture and fatigue in machinery by R. E. Peterson. Internal stresses and fatigue, by O. J. Horger and H. R. Neifert. Designing for fatigue, by R. L. Templin. Fundamentals of brittle behavior in metals, by E. Orowan. Experimental study on temper brittleness of slightly alloyed carbon steel, by P A. Jacquet and A. R. Weill. The statistical aspect of fatigue failure and its consequences, by W Weibull. A review of cumulative damage in fatigue, by M. M. Newmark. Significance of transition temperature in fatigue, by C. W MacGregor. The influence of metallographic structure on fatigue, by P L. Teed. Fatigue at elevated temperatures, by N. J. Grant. The techniques of physical metallurgy for studying fatigue damage, by J. T Norton.

Note. A collection of original papers which were presented first at conference which was planned to focus attention upon the fatigue and fracture of metals as an engineering problem. Together, they convey picture of the developed knowledge and practical experience, summarize recent advances, and point out problems still in need of basic research.

SAMANS CARL HUBERT

Engineering metals and their alloys. New York The Macmillan Company 1949 913 p. illus. 24 cm. $10 75 2449

Contents: General characteristics of the metallic engineering materials. The pure metal. Metallurgical methods. Production of the metals—magnesium, aluminum, and zinc—from their ores. The production of pig iron and cast iron. Iron and steel making. Production of the metals—copper nickel, lead, and tin—from their ores. The theory of alloys. The principles of heat-treatment. Shaping and forming the metallic materials. Corrosion, its effects and control. Protecting metals against corrosion. Alloys used largely because of ease of fabrication. Pipe, tubing, and coatings resistant to water corrosion. Alloys resistant to chemical corrosion and the action of heat. Alloys for applications requiring high strength and toughness. Alloys resistant to general wear and abrasion. Tool materials. Bearing alloys. Alloys used because of their special physical properties. Index.

Note: Although intended primarily as textbook, the comprehensiveness of this work makes it suitable for use also as reference tool by practicing engineers. All phases of metallurgy are treated but about three-fourths of the space is devoted to engineering metallurgy The book is especially outstanding for an extensive range of technical data relating to the properties of the eight major engineering metals and their alloys. As the chapter titles indicate, alloys are grouped and discussed from the standpoint of their uses. There are 551 figures, many of which are reproductions of photomicrographs. Selected references to additional literature are appended to the chapters.

SCHUHMANN REINHARDT, JR.

Metallurgical engineering Volume I Engineering principles Cambridge, Mass. Addison Wesley Press Inc. 1952 390 p illus 25 cm. (Addison Wesley metallurgy series, Morris Cohen consulting editor) $7.50. 2450

Contents. The unit processes of chemical metallurgy Stoichiometry The heat balance. Metallurgical fuels. Combustion of fuels and heat utilization. Fluid flow Steady heat flow Unsteady heat flow Phases in pyrometallurgical systems. Refractory materials. Appendix. Index.

Note. A college textbook in which the traditional approach to the teaching of extractive metallurgy has been discarded in favor of teaching the basic principles and unit processes. The importance of physical chemistry is demonstrated, and analytical and quantitative solutions of engineering problems are emphasized. In this first volume basic principles common to the unit processes of extractive metallurgy together with discussions of metallurgical fuels and refractory materials, are covered. The second volume, which will complete the work, will be devoted to the unit processes themselves. The book is based on experience in teaching at Massachusetts Institute of Technology where the author is Associate Professor of Metallurgy

SHRAGER, ARTHUR M.

Elementary metallurgy and metallography New York The Macmillan Company 1949 297 p. illus. 24 cm. $3.00 2451

Contents The structure of metals. Slip, plastic deformation, and recrystallization. Alloys and constitutional diagrams. Structures of iron and steel in the solid state. Iron ore. Chemistry involved in the metallurgy of iron and steel. Production of pig iron. Cast iron and wrought iron. Steel. Bessemer steel. The open-hearth process. The electric arc furnace. Ingot practice. Working, shaping, and joining of iron and steel. Principles of heat treatment of steel. Annealing, hardening, and tempering steel. Surface hardening of steel. Alloy steels. Copper and copper alloys. Aluminum and aluminum alloys. Magnesium and magnesium alloys. Zinc. Control and testing. Foundry practice. Bibliography Tables. Glossary Index.

Note: An excellently written and unexpectedly inclusive introduction to metallurgy and metallography The main facts of each topic named above are presented in semi-technical terminology The book is intended for use in vocational high-school courses and other courses attended by practical workers. It is also good book for lay reading and elementary reference work. The twenty-page bibliography adds to the reference value.

SMITH GEORGE V

Properties of metals at elevated temperatures. New York McGraw Hill Book Company Inc. 1950 401 p illus. 23 cm. (Metallurgy and metallurgical engineering series Robert F Mehl, consulting editor) $8.00 2452

Contents (abridged) Plastic deformation of single crystals. Plastic deformation of polycrystalline metal. Creep of polycrystalline metals. The fracture of metals Theories of flow and fracture. Tests and test equipment. Effect of chemical composition on creep. Effect of melting and deoxidation practices, heat-treatment, and grain size. Effect of varying temperature and load and of the state of stress. Changes during service-aging and microstructural changes. Design for elevated-temperature service. References. Appendix. Name index. Subject index.

Note This book is a comprehensive presentation of the knowledge which has been accumulated in the last quarter-century pertaining to the effects of high temperature upon metals and to the design of metals and alloys for high temperature service. It is devoted to basic knowledge rather than applications, and is intended for graduate metallurgists and physicists. The statements in the text are keyed to a bibliography of 433 references The author is on the staff of the Research Laboratory of the U S. Steel Corporation.

SPELLER, FRANK NEWMAN

Corrosion causes and prevention Third edition. New York McGraw Hill Book Company Inc., 1951 686 p. 24 cm. $11 00. 2453

Contents (abridged) Nature and mechanism of corrosion—theories of corrosion Influence of methods of manufacture and treatment. Influence of factors internal to the metal—composition. Influence of factors external to the metal—classification of corrosion. Principles and methods of corrosion testing Prevention of corrosion in the atmosphere—underwater—in closed water systems by removal of dissolved gases—in steam generators—in steam and hot-water heating systems—in chemical industries—underground. Stray-current corrosion (electrolysis) Cathodic protection. Appendix. Index.

Note (4185) Since 1926, when the first edition was published, this work has been known as an authoritative, useful presentation of the knowledge of corrosion of the ferrous metals. It is written from the practical viewpoint, but the theoretical aspects are adequately outlined In the present edition there are one new chapter and a fair amount of revision. The type has been reset.

STANLEY, JAMES K.

Metallurgy and magnetism. A series of three educational lectures on metallurgy and magnetism presented to members of the ASM during the thirtieth National Metal Congress and Exposition Philadelphia October 23 to 29 1948 Cleveland American Society for Metals 1949 156 p. illus. 23 cm $4.00. 2454

Contents Magnetic theory and definitions. Types of magnetic materials. Factors affecting magnetic properties. Magnetic analysis—a metallurgical tool. Appendixes: Conversion table. Testing of magnetic materials References. Index

Note. A short but informative introduction which is addressed to metallurgists rather than to physicists The treatment assumes familiarity with metallurgical concepts, terms, and with the reading of engineering graphs. Essentially the work is an outline which is adequate in itself for the metallurgists who want merely a general understanding of magnetism. However key numbers directly in the text refer to the bibliography which includes 237 references to patents and periodical articles.

STANSEL NUMAN R.

Induction heating. New York McGraw Hill Book Company Inc. 1949 212 p. illus. 24 cm. $5.00 2455

Contents Introduction. Heat Induction heaters—class A service. Circuit equations. Circuit analysis. Applications—class A service Melting metals—class B service. Power circuit conductors—switching frequencies. References. Appendixes. Index

Note: The use of induced electrical currents for the melting or heat-treating of metals is the subject of this book Chiefly the author presents the basic electrical and thermal principles in terms which are understandable to engineers. Much of the information is presented mathematically and graphically Altogether there are 31 tables and 154 figures. Typical applications are discussed also but there is no special effort to show a wide range of available commercial equipment. The appendixes contain a range of information useful to engineers who are concerned with the design and operation of induction furnaces and other induction heating equipment

WULFF JOHN, AND OTHERS

Metallurgy for engineers casting, welding and working. By John Wulff Howard F Taylor and Amos J Shaler Illustrations by George E. Schmidt, Jr New York John Wiley & Sons Inc., 1952 624 p. illus. 22 cm. $6.75 2456

Contents (abridged): Crystalline structure and properties of metals. Impurity and solubility Phase equilibrium and alloy systems. Industrial non ferrous alloys. Alloys of iron and carbon. Heat treatment of steel. Methods for determining mechanical properties of metals. Mechanism of deformation and effects of deformation of metals. Electrical and magnetic properties of metals. Corrosion. Introduction to sand casting processes. Casting processes other than sand casting. The ingot as a casting. Melting—heat flow—gases in metals. Powder metallurgy Welding. Brazing and soldering. Metal working by compression processes. Stretching, shearing, and bending processes. Metal cutting. Appendix. Index.

Note: The extraction of metals from their ores is not covered in this book, but otherwise it is an inclusive treatment particularly suited to the needs of engineering students and graduate engineers whose interest in metals is confined to their properties and working. There are brief but clear explanations of such basic ideas as the phase rule and of such processes as investment casting. Selected literature references are included with each chapter. The appendix contains also tables of general usefulness in metal specification and design. The authors are members of the Department of Metallurgy of Massachusetts Institute of Technology

POWDER METALLURGY

GOETZEL CLAUS GUENTER

Treatise on powder metallurgy New York Interscience Publishers, Inc. 1949–52 3 vol. illus. 23 cm. Vol. I $18.00 Vol. II, $18.00 Vol. III $22 00 2457

Contents (abridged) Volume I, Technology of metal powders and their products Principles. History Methods of powder production. Characteristics and properties of powders. Methods of testing powders. Powder conditioning and function of addition agents. The molding of powders into solid forms. Dies and punches. Presses. Hot pressing apparatus and techniques. Sintering practice. Subsequent working. Finishing treatments. Author index. Subject index. Volume II, Applied and physical powder metallurgy: Refractory metals and alloys. Hard metals and compositions. Electrical materials and products. Magnetic materials and products. Materials for structural parts. Porous products. Friction products. Dental alloys. Comparison of physical properties of sintered and fused industrial metals and alloys. Stress analysis of sintered metal structures. Appraisal of and alternating methods for sintered metals. Theories of bonding and sintering The future of powder metallurgy Author index. Subject index. Volume III, Classified and annotated bibliography: Part one, Literature survey Part two, Patent survey Patent cross index. Subject index. Name index.

Note A comprehensive survey of the science and technology of powder metallurgy It is based on the literature and on the author's personal experiences in the field. He is Director of Research for the Sintercast Corporation of America and also Adjunct Professor of Chemical Engineering in New York University Although the pertinent theory is adequately covered, most of the space in volumes I and II is taken up with the technical aspects. Manufacturing, fabricating, and testing methods are presented in detail Statements in the text are keyed to the literature citations. There are 4[illegible] figures in volumes I and II. The bibliography is classified and contains full indexes. There are 899 pages in this volume.

KINGSTON WALTER E editor

The physics of powder metallurgy A symposium held at Bayside, L. I., New York, August 24–26 1949 sponsored by the Metallurgical Laboratories Sylvania Electric Products Inc. New York McGraw-Hill Book Company Inc. 1951 404 p. illus. 24 cm. $9.00 2458

Contents Fundamental problems of sintering processes, by W E Kingston and G. F Hüttig. Mechanism of crystal growth, by A. G Smekal Orientation in recrystallization and grain growth, by F A. Back Recrystallization, by M. Rabkin. Structure and behavior of grain boundaries, by M. R. Achter and R. Smoluchowski. Self-diffusion in iron, by F S. Buffington and others. Homogeneous nucleation, by D. Turnbull and J. H. Hollomon. Surface tension as a motivation for sintering, by C. Herring. Relationships between properties and structure of sintered material made up of single crystal types, by G. F Hüttig and others. Shrinkage of synthetic pores in copper by A. W Pentecoste and A. J. Shaler. Relations between diffusion and viscous flow in metals, by B. H. Alexander and others. Examination of sintered structures with the electron

microscope, by L. Delisle and G. A. Davis. Sintering of copper-gold alloys, by F Duwez and C. B. Jordan. Sintering with liquid phase, by F V Lenel. The principles and present status of hot pressing, by C. G. Goetzel. Theoretical aspects of sintering of carbides, by R. Kieffer. Experimental production of pure titanium carbide powder by means of carburizing gases, by V Fattinger. Nature of metal powders prepared by reduction of oxides, by B. Kopelman. Particle-size distribution of tungsten and molybdenum powders, by A. D. Power and I. M. Kolthoff. Electrical properties as indicators of the degree of sintering, by H. H. Hausner and J. H. Dedrick. Fundamentals of pressing of metal powders, by R. P Seelig. Alloy powder products from fully alloyed powders, by G. J. Comstock and J. D. Shaw. Name index. Subject index.

Note: A valuable contribution to the literature of this subject. Although there is much in it that is of interest to men directly in charge of the production of metal parts from metal powders, fundamental aspects rather than details of techniques are stressed. The papers are accompanied by condensations of the discussions that followed their presentation and many of them contain literature references.

IRON AND STEEL

American Institute of Mining and Metallurgical Engineers

Basic open hearth steelmaking by the Physical Chemistry of Steelmaking Committee, Iron and Steel Division A I M E. Second edition, completely revised and enlarged. Edited by W O Philbrook and M B Bever in collaboration with H. B Emerick and B M. Larsen. (Sponsored by the Seeley W Mudd Memorial Fund) New York The American Institute of Mining and Metallurgical Engineers, 1951 940 p illus. 26 cm. $8 00. 2459

Contents: Part I, Practice: Basic open hearth furnaces, by H. K. Work and H. M. Banta. Survey of operations, by T S. Washburn. Open hearth refractories, by R. B. Sosman and others. Open-hearth fuels, combustion, and instrumentation, by H. V Flagg and others. Raw materials, by T L. Joseph and others. Slag control, by W O. Philbrook and F M. Washburn. Charging and melting practice, by W O. Philbrook and others. Refining practice, by W O. Philbrook and others. Finishing and deoxidation practice, by K. R. Belding and R. K. Kulp. Molds and pouring practice, by H. J Forsyth and L. G. Ekholm. Ingot structure and segregation, by J W Halley. Nonmetallic inclusions, by C. E. Sims. Properties of steel as influenced by constitution, by A. G. Forrest and R. W Farley. Part II, Principles: Physical chemistry of high-temperature reactions, by J. Chipman. Kinetics of metallurgical processes, by L. S Darken. Physical chemistry of liquid steel, by John Chipman. Physical chemistry of slag-metal reactions, by G Derge and M. Tenenbaum. Physical chemistry of open-hearth refractories, by R. B. Sosman. Thermal changes in melting and refining, by L. S. Darken. Gas flow and heat transfer, by B. M. Larsen. Combustion and utilization of fuel, by B. M Larsen. Rates of open-hearth reactions, by B. M. Larsen. Index.

Note. (4301) In this book the most important process for the manufacture of steel is described both for workers with only practical interests and for supervisors and metallurgists who need more basic understanding. The work is a cooperative one and the authors of the various chapters are prominent metallurgists, chemists, etc. currently associated with steel manufacturing or with the teaching of metallurgy in colleges of engineering. Useful literature lists are included in the chapters. The first edition was published in 1944. Extensive revisions were made in preparing this edition, and the book is now about 300 pages longer.

American Society for Testing Materials

Symposium on evaluation tests for stainless steels, presented at the fifty-second annual meeting of the American Society for Testing Materials, Atlantic City June 30 1949 Philadelphia American Society for Testing Materials, 1950. 231 p. illus. 23 cm. (American Society for Testing Materials. Special technical publication no. 93) Paper $2.50 2460

Contents. Introductory summary by F L. LaQue. Present knowledge of low-carbon 18-8, by H. W Gillett. Corrosion resistance and mechanical properties of low-carbon austenitic stainless steels, by D. C. Buck and others. Accelerated corrosion testing of chromium-nickel stainless steel weldments, by F K. Bloom and M. K. Carruthers. An appraisal of methods for evaluating the corrosion resistance of stainless steels, by M. H. Brown and others. Some observations on tests for intergranular susceptibility of 18-8 Mo stainless steels, by H. Ebling and M. A. Scheil. Influence of carbon and molybdenum on the intergranular corrosion resistance of austenitic chromium-nickel steels with and without columbium, by W O. Binder and C. M. Brown. Comparative corrosion resistance of stainless steels in various acids, by R. B. Mears and others. Comparison of plant corrosion test results on austenitic stainless steels with results of Huey and Strauss tests, by H. O. Teeple. Results of some plant corrosion tests of welded stainless steels, by G. F Comstock. Testing multiple specimens of stainless steels in modified boiling nitric acid test apparatus, by W B. DeLong. General discussion.

Note: The symposium of which this publication presents the papers was sponsored by A.S.T.M. Committee A-10 on Iron-Chromium, Iron-Chromium-Nickel, and Related Alloys. Its purpose was to permit critical appraisal of some of the testing methods in use for evaluating certain corrosion-resistant characteristics of these alloys.

Bullens Denison Kingsley and others

Steel and its heat treatment. Volume III Engineering and special-purpose steels by D K. Bullens and the Metallurgical Staff of the Battelle Memorial Institute. Fifth edition. New York John Wiley & Sons, Inc., 1949 606 p. illus. 24 cm. $8 50 2461

Contents. Section I, Engineering alloy steels. Limitations of carbon steels. Alloy effects on equilibrium and nonequilibrium diagrams. Alloying elements present in minor percentages. Behavior and costs of some individual alloying elements. Alloy steels for normalizing. Section II, Constructional alloy steels for heat treating: Simple alloy steels. Binary or double-alloy steels. Complex alloy steels. Steel castings. Toughness and serviceability at high hardness; quenching stresses and quenching cracks. Steels for quenched and tempered springs. Alloy steels for carburizing. Section III, Special steels: Nitriding steels. Steels for low-temperature service. Ferritic steels for high temperature use, their properties and weldability. Austenitic steels for high temperature uses. Steels for corrosion and high-temperature resistance, especially corrosion. Steels for wear resistance. Carbon and intermediate tool and die steels. High speed tool steels. Steels for magnetic uses. Index of steels. Subject index.

Note. Volumes I and II of the fifth edition of this useful work were reviewed in entry 2114 in *Scientific, medical and technical books published in the United States of America—Supplement of books published 1945–1948.* The third volume corresponds in scope to volume II of the fourth edition. As were the first two volumes, this volume has been very thoroughly revised. It presents the current knowledge of the relationship between the presence of the various alloy elements and the use of various heat treatments upon the properties of commercially used steels and steel alloys. The treatment is theoretical in the sense that the various known effects are related to the underlying principles insofar as these are known; but the book is intended for practical engineers and metallurgists and is written from their viewpoint. Each chapter is accompanied by a bibliography of considerable length.

Comstock, George Frederick, and others

Titanium in steel by George F Comstock, Stephen F Urban and Morris Cohen. New York Pitman Publishing Corporation, 1949 320 p. illus. 24 cm. (Pitman metallurgy series, Frank T Sisco advisory editor) $7.50 2462

Contents: The physical chemistry of titanium in steel. Phase diagrams of titanium alloys and compounds. Titanium in rimming and deoxidized steels. Titanium in cast steel. Effect of titanium on structure and hardenability. General effects of titanium on the properties of steel. Titanium in low-alloy steels. Effect of titanium on strain aging. Titanium-containing steel. Carbide stabilization of

stainless steel with titanium. Titanium in precipitation-hardening steels. *Titanium in heat-resisting steels and alloys.* Bibliography. Name index. Subject index.

Note: A concise presentation of technical information on the effects of use of titanium as deoxidizer, carbon- and nitrogen-stabilizing element, and alloying metal in steel. Data are presented in short synopses, tables, and graphs, which are based mainly on the literature of the past two decades. Of the 174 references in the bibliography only 34 were published before 1930, and over half were published in the last ten years. The book is primarily of interest to metallurgists in the steel industry and secondarily to engineers in the steel-using industries.

CRAFTS, WALTER, AND JOHN L. LAMONT

Hardenability and steel selection New York Pitman Publishing Corporation 1949 279 p illus. 24 cm. (Pitman metallurgy series Frank T Sisco advisory editor) $5.50 2463

Contents. The hardenability pattern. Heating for hardening. The transformation of austenite. Quenching. Hardness and hardenability. Hardenability test methods. Jominy hardenability control. Tempering after hardening. Mechanical properties and hardenability. Factors in the selection of steel. Appendices. Bibliography. Name index. Subject index.

Note. As these authors point out, the heat treatment of steel was known in ancient times and the operations of quenching and subsequent tempering are described rather fully in early classical writings. *However it is only in recent years that heat treating processes have* been thoroughly studied and their effects correlated with conditions and results to the extent that the hardenability of steel of given composition can be predicted with fair accuracy. In the past two decades and especially in the latter one many investigations have been made and the periodical literature has grown tremendously. Essentially this book is condensed summary of this new knowledge. It is organized and written primarily for engineers and other technically trained persons. The text is supplemented by large amount of data presented tabularly and graphically. The bibliography contains 119 references.

JOSEPHSON G W AND OTHERS

Iron blast furnace slag production, processing, properties, and uses. By G W Josephson, F Sillers jr and D G Runner A report prepared in cooperation with the National Slag Association based on data gathered and compiled by the Problems Committee of the Association. Washington D C. Government Printing Office, 1949 304 p. illus 23 cm. (United States. Bureau of Mines. Bulletin 479) Paper $1.00 2464

Contents. Introduction. *History and development. Production and* processing of iron blast-furnace slag. Chemical and mineralogical composition of iron blast-furnace slag. Physical properties of blast-furnace slag. Blast-furnace slag as aggregate for portland-cement concrete. Blast-furnace slag as aggregate for flexible-pavement bases and surfaces. Chemical and ceramic uses of blast-furnace slag. Railroad ballast, roofing, and other uses. Appendixes. Materials required per cubic yard for concrete and cement mortars, by F Hubbard. Composition of asphaltic concrete, hot- and cold-mixed types, by F Hubbard and others. Specifications and methods of tests—A.S.T.M., Federal Specification Board, and A.A.S.H.O. Miscellaneous test procedures. Useful tables. Comprehensive bibliography. Index.

Note. This bulletin is devoted to iron blast-furnace slag, its production, processing, physical and chemical properties, and utilization. It is summary of information from the published literature, and is intended for engineers, contractors, architects, chemists, and others who wish to understand and more successfully use this by-product of the iron and steel industry.

SEABRIGHT LAWRENCE H

The selection and hardening of tool steels. New York McGraw-Hill Book Company, Inc., 1950 263 p illus. 24 cm. $6.00. 2465

Contents. Introduction, classification of tool steels: Primary steel requirements. Composite chemical analysis of steels in each group. Tool steels classified by wear-toughness table. Chemical composition of representative tool steels. The wear-toughness ratio in rec- ommended steels for various applications. Part I, Water hardening steels: *Group 1* Maximum wear resistance—movement in hardening unimportant. Group 2 General cutting tools—movement in hardening unimportant. Group 3, General die work—movement in hardening unimportant. Group 4 Maximum toughness—movement in hardening unimportant. Part II, Oil- and air-hardening steels: Group 5 Maximum wear resistance—movement in hardening important. Group 6, General cutting tools—movement in hardening important. Group 7 General die work—movement in hardening important. Group 8, Maximum toughness—movement in hardening important. Part III, High-speed and hot-work steels. Group 9, Maximum wear resistance—resistance to high temperatures important. Group 10, General cutting tools—resistance to high temperatures important. Group 11 General die work—resistance to high temperatures important. Group 12 Maximum toughness—resistance to high temperatures important. Appendix. Hardness conversion table. Temperature conversion table. *Producers and distributors.* Index of tool steels. Subject index.

Note. A compact reference book designed as systematic guide to the composition and properties of the commercially available tool steels. Information on the heat treatment and working of the individual steels is included also. The book will be useful to tool designers, metallurgists, and other technically trained people whose work requires an understanding of tool steels. In the "Index to tool steels," steels marketed in the U.S.A. under trade names are listed and the names of the suppliers are given.

ZAPFFE CARL ANDREW

Stainless steels an elementary text for consumers. Cleveland American Society for Metals 1949 368 p. illus. 23 cm. $5.00. 2466

Contents: Historical background of the stainless steels. The corrosion resistance of the stainless steels. The metallurgical constitution of the stainless steels. Martensitic stainless steels. Ferritic stainless steels. Austenitic stainless steels. Production, fabrication and finishing. Glossary. Bibliography. Author index. Subject index.

Note. The consumers referred to in the title are not the ultimate purchasers of pots, pans, automobiles, etc., but manufacturers and purchasing agents who buy stainless steels for fabrication into finished products. The book provides nontechnical descriptions of the various important alloys known as stainless steels. The emphasis is on their properties, but considerable amount of space is given also to the history of the stainless steels and to the ways in which they are manufactured. An excellent glossary and an extensive bibliography of the periodical and patent literature are included.

VARIOUS METALS

AMERICAN SOCIETY FOR METALS

Physical metallurgy of aluminum alloys. A series of five educational lectures on physical metallurgy of aluminum alloys presented to members of the A. S. M during the twenty-eighth National Metal Congress and Exposition Atlantic City Cleveland American Society for Metals 1949 247 p. illus. 23 cm. $5 00. 2467

Contents Equilibrium diagrams of aluminum alloys, by W. L. Fink. Metallography of aluminum alloys, by F. Keller. Commercial wrought aluminum casting alloys, by W. E. Sicha. Commercial wrought aluminum alloys, by J. A. Nock, Jr. Thermal treatment of aluminum alloys, by E. H. Dix, Jr.

Note. A collection of lectures originally addressed to men concerned in practical ways with metallurgical research and development. The pertinent literature has been consulted and is referred to in the discussions. Especially impressive is the bibliography of 111 ... on the determination and interpretation of equilibrium diagrams. The lecture on metallurgy includes many excellent micro-photographs of structure.

BARKSDALE JELKS

Titanium its occurrence, chemistry and technology New York The Ronald Press Company 1949 591 p. illus. 24 cm. $12.00. 2468

Contents (abridged) The discovery of titanium. Geology and mineralogy of titanium. Production and imports of titanium bearing ores. The chemistry of elemental titanium and its oxides. The chemistry of titanium salts. Organic compounds of titanium. Methods of chemical analysis of titanium compounds. Production of sulfate solutions of ilmenite for pigment manufacture. Hydrolysis of titanium sulfate solution. Filtering and washing hydrous titanium dioxide acid recovery Composite pigments. Calcining, milling, and processing titanium dioxide to produce pigments. Colored titanium dioxide and titanate pigments. Chloride processes of pigment manufacture. Fluoride, nitrate, sulfide, and chloracetate processes of pigment manufacture. Titanium pigment industry Uses of titanium pigments. Iron and steel. Nonferrous metals and alloys. Hard alloys. Electrical industry Ceramics. Mordants and dyes. Catalysts. Special applications. Literature cited. Index.

Note: A comprehensive survey of the science and technology of the metal titanium and its derivatives. A considerable part of the volume is devoted to the production of titanium pigment for use in paint and elsewhere as an obscuring or coloring material. However, all of the reported uses are described, including such specialized applications as reagents in chemical analysis. The bibliography covers the international literature, including the patents. It runs to 77 pages and contains several thousand references.

DEAN REGINALD SCOTT

Electrolytic manganese and its alloys. New York The Ronald Press Company 1952 257 p. illus. 24 cm. $12.00 2469

Contents: Production and properties of electrolytic manganese. Nonferrous alloys of electrolytic manganese. Ferrous alloys of electrolytic manganese. Index of names. Index of subjects.

Note. The author of this technical monograph was leading figure in the development of electrolytic manganese during his years of association with the United States Bureau of Mines. Here he presents the current knowledge of both the metal itself and its alloys. The discussions of the production and properties of electrolytic manganese run to only 82 pages; hence more than two-thirds of the book is given to descriptions of the alloys. These descriptions include wide range of specific data on properties, heat treatment, and applications. The book is based on digest of the periodical and patent literature, and each of the chapters is accompanied by long list of references.

DORR, JOHN VAN NOSTRAND, AND FRANCIS L. BOSQUI

Cyanidation and concentration of gold and silver ores. Second edition. New York Mc Graw Hill Book Company Inc. 1950 511 p. illus. 24 cm. $9 00 2470

Contents: Part 1 Technical: Historical. Examination and testing of ore. Coarse crushing. Sorting and sampling. Fine grinding. Classification. Sand treatment. Slime treatment. Concentration. Roasting. Amalgamation and bullion recovery Plant control. Cyanicides and refractory ores. Cyanide regeneration and miscellaneous processes. Part 2, Descriptive Treatment of gold ores. Treatment of silver ores. Costs and power. Appendices Useful reference information. Books on cyanidation. Analytical methods. Index.

Note: (4097) The standard book on the economically important processes of recovering gold and silver from ores. The first edition was the work of the senior author alone. In the present edition the book has been reorganized and extensively rewritten. Important material added includes new discussions of the treatment of refractory ores and the chemistry of cyanide solutions. The descriptions of considerable number of ore treatment plants which have been constructed since 1936 are now included in the second part. The work is of interest to advanced students in mining engineering and to practicing engineers.

MANTELL, CHARLES LETNAM

Tin its mining, production, technology and applications. Second edition New York Reinhold Publishing Corporation, 1949 573 p. illus. 24 cm. (American Chemical Society monograph series) $12.00 2471

Contents: History Physical and chemical properties of the metal. Production, distribution, and consumption. Ores and ore deposits. Mining and ore dressing. Metallurgy Gaseous reduction, leaching and metallic reduction. Electrolytic refining. Plating. Electrolytic tin plate. Constitutional thermal equilibrium diagrams—binary alloys. Ternary and quaternary alloys. Alloys in industry Hot-dipped coatings. Foil and collapsible tubes. Compounds. Corrosion. Corrosion of tin plate by food products. Secondary tin. Detinning of tin-plate scrap. Analytical methods. Name index. Mines and localities index. Subject index.

Note: A comprehensive monographic treatment. The larger part of the book is concerned with the metallurgy of tin after it has been extracted from the ore, and with the chemistry and commercial uses of tin. There is little resemblance, other than subject, between the present edition and the first edition of the work published in 1929. The contrast is due not to any change in purpose but to the great increase in the knowledge and uses of that metal which has taken place during the past twenty years. The literature of the subject, including patents, is referred to in footnotes.

RAUDEBAUGH ROBERT JOHN

Nonferrous physical metallurgy New York Pitman Publishing Corporation, 1952 345 p. illus. 24 cm. (Pitman metallurgy series) $9 00 2472

Contents. Aluminum and its alloys. Magnesium and its alloys. Copper and its alloys. Nickel and nickel alloys. Alloys of cadmium, lead, tin, and zinc. Some less widely produced nonferrous metals and their alloys. Powder metallurgy and refractory-metal composites. Author index. Subject index.

Note. A concise and practical account of the various techniques employed in the processing, fabrication, and application of the more important nonferrous metals. Particular attention is given to recent developments in the field such as the melting and casting of molybdenum, fabrication of ductile titanium, and the utilization of powdered metals. Numerous micrographs, tables of alloy properties and composition, and chapter bibliographies are included. Of interest primarily to metallurgical students and others requiring review of modern metallurgical practices.

MARINE ENGINEERING

ADAIR JAMIE AND THOMAS C GILLMER

Fundamentals of naval construction and damage control. Annapolis, Md. United States Naval Institute, 1951 272 p. illus. 28 cm $6 00 2473

Contents Planning and building the ship. Definitions and geometry of the ship. Resistance, propulsion and steering. Buoyancy Equilibrium of floating bodies. Initial stability Overall stability Weight effects on stability Impaired stability Control of damage. Forces on ship involving motion. Submarine buoyancy and stability by E. E. Allmendinger Weight and strength of ships. The ship's structure. Appendix Approximate method of integration in ship calculations. Index.

Note: A textbook on damage control for the use of midshipmen in the course in the Department of Marine Engineering at the United States Naval Academy entitled "Naval construction and damage control. The authors emphasize the importance of such fundamentals as nomenclature, buoyancy and stability resistance and propulsion, and weight and strength, to officers responsible for damage control. The textbook covers this whole area of theoretical naval knowledge, including the pertinent fundamentals of naval architecture.

UNITED STATES NAVAL ACADEMY

Naval auxiliary machinery Revised 1952 Annapolis, Md. United States Naval Institute, 1952 262 p. illus. (part col d) 28 cm. $4 00 2474

Contents. Piping, fittings and valves. Packing and heat insulation materials. Pumps and air ejectors. Blowers Heat exchanger equipment. Condensers. Distilling plants. Feed water systems. Fuel oil system. Refrigeration equipment. Compressed air systems. Centrifugal oil purifiers. Control instruments. Machinery outside the engineering spaces. Fire-fighting equipment Appendix Additional pumps. Additional forced draft blowers. Additional feed water systems and attendant units. Index.

Note: A textbook prepared for use in the United States Naval Academy this publication covers not only the pumps, blowers, distilling plants, and the oil and water systems, but also the appurtenances essential to their combined effective operation as part of the naval engineering plant, such as piping, valves, fittings, and insulating materials. Also discussed in the light of their contribution to the ship's primary function are the refrigeration and compressed air systems. Coverage likewise extends to important shipboard auxiliaries located outside the engineering spaces, such as the steering gear windlasses, and weight-handling equipment. Emphasis is upon the details of construction and the operating principles of the machinery

UNITED STATES. NAVAL ACADEMY

Naval boilers, revised, 1949 Annapolis, Md. United States Naval Institute 1950 184 p. illus. 28 cm. $4 00 2475

Contents: Elementary principles. Descriptive classification. Limitations on boiler capacity General features in the development of express boilers. Construction details of express boilers. Boiler fittings. Forced circulation boilers. Boiler feed water and its treatment. Fuel oil and fuel oil burners Appendix Terms, fittings or parts obsolete or obsolescent on naval boilers but still in use on merchant marine ships or shore establishments. Types and description of boilers obsolete or obsolescent on naval vessels but still in use on merchant marine ships or shore establishments Specific designs and data on modern express boiler types. General lighting off, securing and casualty procedure with sample safety precautions. Index.

Note: A textbook developed at the United States Naval Academy and used there in course taken by first-year midshipmen. It covers in descriptive style the construction features and operating principles of steam generating equipment used in vessels of the United States Navy Much of the material is of course applicable to similar equipment in merchant vessels.

UNITED STATES. NAVAL ACADEMY

Naval turbines revised 1952 Annapolis, Md. United States Naval Institute, 1952 128 p illus. 28 cm. $4.00 2476

Contents. Elementary principles. Descriptive classification. Details of construction. Turbine accessories. Measurements and adjustments. Main propulsion turbine control and cruising arrangements. Auxiliary turbines and their control. Lubrication. Main propulsion shafting and propellers. Appendix: Additional turbine classifications. Additional turbine accessories and auxiliaries. Additional measurements and adjustments. Main propulsion turbine overspeed control. Index.

Note Prepared primarily for the use of midshipmen of the United States Naval Academy this textbook covers the details of construction and the operating principles of main propulsion and auxiliary turbines used aboard modern naval vessels. The subject matter presented in descriptive manner in order to familiarize the student with the machinery he will encounter aboard ship and to provide background for the theoretical studies in subsequent courses in fluid mechanics and thermodynamics. The text is illustrated with extremely clear diagrammatic drawings and 7 folding plates giving design details of different types of turbines. The book is included in the bibliography for promotion examinations of officers of the United States Navy and should be of value also to any [illegible] or engineers concerned with turbines on naval ships. The publication is revision of *Naval turbines* published by the United States Naval Institute in 1949.

WOODS HOLE OCEANOGRAPHIC INSTITUTION

Marine fouling and its prevention. Prepared for Bureau of Ships, Navy Department, by Woods Hole Oceanographic Institution, Woods Hole, Massachusetts. Annapolis, Md. United States Naval Institute, 1952 388 p. illus. 27 cm. (Woods Hole Oceanographic Institution. Contribution no. 580) $10.00. 2477

Contents Part I, Problems of fouling: The effects of fouling. Ship resistance. Part II, Biology of fouling: The fouling community. Temporal sequences and biotic successions. The seasonal sequence. Quantitative aspects of fouling. Geographical distribution. Relations to local environments. The principal fouling organisms. Species recorded from fouling. Part III, Prevention of fouling: The history of the prevention of fouling. The invention of protective devices. Factors influencing the attachment and adherence of fouling organisms. The prevention of fouling with toxics. The physical chemistry of compounds of copper and mercury and their interactions with sea water Mechanism of release of toxics from paints. The dissolution of the matrix and its ingredients. Characteristics of antifouling coatings. The design of antifouling paints. The testing of antifouling paints. The fouling of metallic surfaces. Interaction of antifouling paints and steel. Index.

Note. A monograph based on investigations made during the years 1940–1946 by the staff of the Woods Hole Oceanographic Institution. The purpose of the research was to increase scientific knowledge of the fouling process and of the way in which protective coatings act. The emphasis was upon exploration of the fundamental basis on which preventive techniques must rest, rather than upon the improvement of existing paint formulations. The publication, which includes many photographs and other illustrations and gives extensive bibliographical references, amounts to complete encyclopedia on the subject of fouling, and should be of great value to persons interested in the problem, including naval officers, ship owners and operators, naval architects and engineers, paint manufacturers, shipbuilders, and all concerned with the maintenance of ships and various underwater installations.

NAVIGATION

CALAHAN HAROLD AUGUSTIN

The sky and the sailor a history of celestial navigation. New York Harper & Brothers, 1952 262 p. illus. 22 cm. $4 00 2478

Contents: Navigation with [illegible] can opener. Before the dawn of science. The beginnings of astronomy Eratosthenes measures the earth. Claudius Ptolemy The dark ages. The mariner's compass. The sacred calabash. Prince Henry the Navigator Columbus. Out of the printing press. Mercator and the sea chart. Three mathematicians—Kepler Vernier Andrew The problem of latitude. The sextant. Longitude and time. The chronometer Observatories and almanacs. Bowditch. The Sumner line. Maury The development of the Sumner line. The future. Glossary

Note: An informal account in which the slow development of navigation is dramatized in [illegible] series of essays about outstanding men and discoveries. The author's style is personal and humorous, but his facts are based on extensive research. The book will appeal to anyone who desires an easy-to-read story of the highlights of how man learned to find his way at sea. There is no index or bibliography

CUGLE, CHARLES HURST

Cugle's practical navigation. Sixth edition, completely revised by I. J Stephens. New York E P Dutton & Company 1952 823 p. illus. 25 cm $15.00 2479

Contents (abridged): The international and inland rules of the road. Extracts from general rules and regulations (ocean and coast wise) and navigation laws of the United States. Deck officer's information. Stability and hull construction. Mathematics of navigation. Explanation of tables in the American practical navigator (Bowditch). Chart navigation. Dead reckoning and day's work. Speed of ship by wheel and percentage of slip. Construction of [illegible] mercator chart. Middle latitude sailing. Great circle sailing. Time. Latitude by meridian altitude of sun. Meridian passage of star. Meridian passage of planet. Meridian passage of moon. Latitude by Polaris. Deviation by time azimuth of sun. Deviation by star planet and moon. Longitude by sun. Longitude by planet. Longitude by moon. The line of position. Intersection of lines of position by computation. Tides and currents. Identification of stars.

Note: (4299) A standard book of rules and problems for students and amateur navigators, first published in 1914. The treatment is elementary and practical, and only essential theory is included. This edition has been revised to conform with the change in format of the American Nautical Almanac introduced in 1950. The Greenwich hour angle (G.H.A.) system of computing time is now employed, and new material has been added on the magnetic compass, electronic aids to navigation, and fuel conservation.

DUTTON BENJAMIN

Navigation and nautical astronomy Tenth edition. Prepared for the instruction of midshipmen at the United States Naval Academy Original edition (1926) by Commander Benjamin Dutton, U S Navy Revised by Commander Edwin A. Beito U S. Naval Reserve, under the direction of the Head of Department of Seamanship and Navigation, United States Naval Academy Annapolis, Md. United States Naval Institute, 1951 850 p. illus. (part col d) 26 cm. $6.00 2480

Contents: Preliminary definitions; chart projections. Instruments used by the navigator. Magnetic compass errors. The sailings. Publications and charts. Dead reckoning and piloting. Electronic navigation. Nautical astronomy Lines of position from celestial observations. The marine sextant; correction of sextant altitudes. Computed altitude and azimuth. Finding *t*, *d*, and *tL*. The complete solution for [illegible] celestial line of position. Latitude observations. Sunrise, sunset, moonrise, moonset, star identification curve of magnetic azimuths. The practice of navigation. Air navigation. Polar navigation. Lifeboat navigation. The maneuvering board. Appendices. Index.

Note: (4301a) A standard text and reference book of navigation and astronomy for midshipmen and naval officers. The new edition is revised and enlarged, and includes [illegible] complete explanation and discussion of the new type (1950) Nautical Almanac. The articles on the gyro compass and logs have been extensively revised; the chapter on the maneuvering board has been expanded; and numerous minor changes have been made to include recent developments. The edition also marks the substitution, to conform with the new practice, of "mean time" for "civil time.

GIBSON EDMUND A.

Basic seamanship and navigation. New York McGraw Hill Book Company Inc. 1951 414 p. illus. 24 cm. $6 00. 2481

Contents: Part i, Seamanship General ship description Marlinspike seamanship. Deck seamanship. Cargo handling. Ground tackle. Boats. Ship handling. Towing and salvage. Canvas and leather. Part ii, Navigation. Rules of the road. Fundamentals of navigation. Navigational aids. Instruments. Time and timepieces. Dead reckoning—piloting. Electronic navigation. Celestial navigation. Glossary Index.

Note: A practical introductory guide. It is written in [illegible] lucid style, and there are about 170 reproductions of line drawings. Nautical language is used freely but basic terms are defined in the text when first introduced and others can be found in the 40-page glossary The first part runs to about 190 pages. The 133-page second part contains an elementary but inclusive survey of present-day marine navigation, including electronic systems.

MIXTER GEORGE WEBBER

Primer of navigation. Third edition. With problems in practical work and complete tables. Revised for third edition by Ramon O Williams. New York D Van Nostrand Company Inc. 1952 553 p. illus. 24 cm. $7.50. 2482

Contents: Introduction. Tools of the trade. The magnetic compass. Errors of the compass. Compass adjustment. Gyro systems. Lights, buoys, and beacons. They prevent collisions. Piloting Radar on board ship. Mariners' maps. Dead reckoning Loran and radar. Outward bound. Lighthouses in the sky Sumner lines. Nautical astronomy The sextant and its use. Altitudes and their correction. The bubble sextant. Time. The chronometer and timekeeping The Almanac and it use. The Air Almanac. Methods. The noon sight. Polaris. Azimuths. Solutions for lop. Days with the sun. The stars. Planets and the moon. All in [illegible] day Zero hour. Appendix. Index.

Note: (4314) A comprehensive text for students of navigation and experienced seamen. Navigational methods are presented as simply as possible, and the treatment requires no mathematical knowledge beyond simple arithmetic. All tables necessary for solving the numerous problems and exercises are included. Like other texts on navigation published since 1950, this volume has been revised to conform with the changes made in the 1950 edition of the American Nautical Almanac. A chapter on electronic navigation and [illegible] brief biography of George Mixter, who died in 1947 have been added to this edition.

ORMAN LEONARD M

Electronic navigation. Published jointly by Pan American Navigation Service and Weems System of Navigation. North Holly

wood, Calif 1950 222 p illus. 25 cm. $4.50 2483

Contents: Introduction to radar. Capabilities and limitations of radar as a navigational aid. Training of operators. Installation and maintenance. Loran. Other electronic navigation systems. Auxiliary radar devices. Appendixes: Available radar and loran. Questions and answers. Glossary. Bibliography. Index.

Note: A practical book for student navigators. It provides information on loran, decca, radar and several other electronic systems for finding position at sea and in the air. Both the U. S. A. and British systems are covered. The treatment is introductory and descriptive.

WILLIAMS RAMON O AND GEORGE WEBBER MIXTER

Navigation problems and solutions. Practical work—solutions—plotting—almanac data. New York D Van Nostrand Company Inc. 1951 162 p illus. 28 cm. $5 00 2484

Contents: Dead reckoning. Sumner line work. Moon sight problems. Latitude by Polaris. To solve for LOP. Work with the sun. Three star fixes. Planet and moon work. Practical work. Answers to plot. Excerpts from Nautical almanac. Excerpts from Air almanac. Excerpts from H. O. no. 214.

Note: A useful collection for student navigators. It contains a wide variety of problems which are similar to those given in Naval Reserve Officers training courses in the United States of America. Detailed solutions of these problems and almanac tables used in working out the solutions are both included.

ZWENG, ALLAN C.

Practical manual of the E-6B computer Second revised edition. North Hollywood, Calif Pan American Navigation Service, 1952 133 p. illus. 27 cm $3.00. 2485

Note: A study guide and instruction manual for the E-6B computer, a mathematical instrument which is very widely used in solving problems in air navigation. In the exposition manipulations of the computer in solving various problems are explained step by step. Many worked examples are included and there are several hundred practice problems for the student. The first edition appeared in 1944. Added in this edition are some new problems and descriptions of two new computers, the E-6C and the E-10.

AERONAUTICS

GENERAL

BAUGHMAN, HAROLD EUGENE

Baughman's Aviation dictionary and reference guide. Revised by Ernest J Gentle & Charles Edward Chapel. Third edition. Los Angeles Aero Publishers Inc. 1951. 653 p. illus. 24 cm. $7.50. 2486

Contents (abridged) Dictionary: Definitions, 2nd edition. Abbreviations. New definitions, 3rd edition. Reference guide: Radar information. Illustrated nomenclature. Useful tables. Radio range orientation. General structural symbols & formulas. General aerodynamics symbols & formulas. Specifications. Materials. Shop mechanics. Safety rules.

Note: (4345) A standard reference book. In this edition the main dictionary has not been revised but a supplement containing 1,000 new terms has been added on pages 263–318. Various changes including some omissions have been made in the "reference guide" section. The reduction in length by approximately 250 pages has been accomplished mainly by leaving out Civil Aeronautics Administration material readily available elsewhere.

FOGG, ROBERT STEVENS AND OTHERS

Seaplane flying and operations by Robert S. Fogg, William D Strohmeier and Daniel J Brimm, Jr New York Pitman Publishing Corporation 1949 218 p illus 24 cm. (Pitman books on private and business flying, Alexander Klemin advisory editor) $3 75 2487

Contents: Forword, by Admiral Richard E. Byrd. Introduction. Section 1, *Fundamentals of water flying:* Types of water aircraft. Taxiing and sailing. Docking procedure. Take-offs. Elements of flight. Landing. Securing and handling. Cross-country flying and general technique. Section II, Design, construction, and maintenance: Engineering considerations. Preparation, installation, checking. Inspection, maintenance, and repair. Section III, Seaplane bases: *Types of seaplane bases. How to operate a successful seaplane base.* Appendix. Index.

Note: A practical book for the noncommercial flyer and also for persons interested in going into the business of operating seaplane bases. The special techniques of handling planes designed to land on and take off from water are discussed from the beginner's standpoint. The book is a thorough revision of Brimm's *Seaplane manoeuvring, maintaining, operating,* New York: Pitman, 1937

HUNSAKER, JEROME CLARKE

Aeronautics at the mid-century New Haven Yale University Press 1952 116 p. illus. 22 cm. $3.00 2488

Contents: Fifty years of development. Air transportation. Social and political effects.

Note: A readable resumé of the past, present, and possible future of air transportation. The author traces the development of aircraft, and discusses various aspects of the present air transportation business, including fares, safety the human factor automatic control, airports, and private flying. The influence of the airplane on cities and on rural areas is touched on, and its effect on nations in peace and in war is elaborated at some length. The book is one of a series of volumes based on the Dwight Harrington Terry Foundation Lectures on Religion in the Light of Science and Philosophy given at Yale University. The author is Professor of Aeronautical Engineering in the Massachusetts Institute of Technology

PIPER, WILLIAM THOMAS

Private flying, today and tomorrow in collaboration with D J Duffin New York Pitman Publishing Corporation 1949 295 p. illus. 24 cm. (Pitman books on private and business flying, Alexander Klemin advisory editor) $4.50. 2489

Contents: Forword, by Leighton Collins. What is private flying? How private flying grew. The role of women in flying. What the personal plane can do. Your personal plane. Buying, renting, and the flying club. Operating costs and insurance. Learning to fly. Cross-country flying. Airports—the key to private flying. The future of private flying. Appendix: Organization of flying clubs. Index.

Note: Practically every aspect of present-day private flying is discussed in this book. The chief subtopics are named in the chapter titles quoted above. Also included are such things as a complete picture sequence showing the various steps in taking a small plane aloft and performing various standard maneuvers with it; a factual description with photographs of all of the light private planes and a few heavier ones being manufactured in the U.S.A. when the book was being written; a survey of the many uses of light planes with special emphasis on their use in agriculture; and a model constitution and set of by-laws for flying clubs. The author is president of the *Piper* Aircraft Corporation.

UNITED STATES. CIVIL AERONAUTICS ADMINISTRATION OFFICE OF AVIATION SAFETY

Flight instruction manual. Washington, D C. Government Printing Office, 1951 184 p. illus. 26 cm. (United States, Civil Aeronautics Administration. Technical manual no. 100) Flexible cloth, $1.50 2490

Contents: Part one, Basic flight information Load factors. Principles of safe flight The parachute, its care and use. Part two, Principles of safe flight: Preliminary instruction. The flight syllabus. Basic flying technique. Part three, Instruction: Elementary instruction. Intermediate instruction. Advanced instruction. Acrobatic instruction. Seaplane instruction. Multi-engine instruction. Appendix: The flight instructor and the student. Glossary of aeronautical terms.

Note: An official reference manual for flying instructors and students. It supersedes five Civil Aeronautics bulletins of 1940–1943 as follows: no. 1, 21, 26, 31 and 32. Each section of text covers some particular maneuver or phase of instruction for example, the section dealing with loops, after describing the execution of the loop, includes eleven additional paragraphs explaining various difficulties met in executing the loop and means of avoiding them.

VARNEY ALEX

The psychology of flight. New York D Van Nostrand Company Inc., 1950 269 p. 21 cm. $4.25 2491

Contents: Why pilots behave as they do. Adapting to the new environment. Why we get off the beam. The case of the absent minded pilot. Learning to relax. Learning to observe. Developing reflexes. Learning to co-ordinate. The building of confidence. The building of judgment. How a pilot can control his emotions. The need to win. The psychology of errors. When death strikes. The psychology of buck fever and checkitis. The psychology of airsickness. The psychology of instrument flying. The temperament of the pilot. The personality of the pilot. The key to power. Index.

Note. An informal book addressed to student pilots and experienced pilots alike. In it the author who has had a long and varied experience as a pilot and as head of a flying school, skillfully discusses the attitude of men toward airplanes and flight and shows not only what causes difficulties in learning to fly but also what leads experienced pilots into accidents. The book is not a scholarly one—in fact there is no documentation. Nevertheless, it belongs in

the pilot's personal library and in library collections used by student aviators.

AERODYNAMICS

ABBOTT, IRA HERBERT, AND ALBERT E. VON DOENHOFF

Theory of wing sections including a summary of airfoil data. New York McGraw-Hill Book Company Inc. 1949 693 p illus. 24 cm. (McGraw Hill publications in aeronautical science, Jerome C. Hunsaker, consulting editor) $15 00 2492

Contents The significance of wing-section characteristics. Simple two-dimensional flows. Theory of wing sections of finite thickness. Theory of thin wing sections. The effects of viscosity Families of wing sections. Experimental characteristics of wing sections. High-lift devices. Effects of compressibility at subsonic speeds. References. Appendixes. Basic thickness forms. Mean lines. Airfoil ordinates. Aerodynamic characteristics of wing sections. Index.

Note: A reference book of substantial value to aeronautical engineers who are concerned with the design of airplanes or with aerodynamic research. The authors are associated with the National Advisory Committee for Aeronautics, and the book is based largely on research carried out by this committee. Pertinent results and theories reported in the literature have, however been incorporated. The first part of the book—which accounts for somewhat less than half of the total length—consists of summarized critical presentations of current aerodynamic theories and condensed results of experimental work. The appendixes in the latter half of the book consist of tabular and graphical data organized under the headings listed above.

BONNEY E ARTHUR

Engineering supersonic aerodynamics. New York McGraw Hill Book Company Inc., 1950 264 p. illus. 24 cm. $6.00 2493

Contents. Compression and expansion waves. One-dimensional flow—nozzles and diffusers. Two-dimensional characteristics. Airfoil characteristics. Bodies of revolution. Supersonic wind tunnels. Components design and performance. Index.

Note: An introduction to this specialized field of aerodynamics. Although mathematics is freely used in the exposition, the work is not mathematical treatment of the subject. Rather it is statement of the basic physical principles combined with illustrations of their application in the design of aircraft. It is suitable for upper-class engineering students and also for engineers out of college who have studied courses in standard subsonic aerodynamics.

DAILEY CHARLES LEE, AND F C WOOD

Computation curves for compressible fluid problems. New York John Wiley & Sons, Inc. 1949 33 p illus. 29 cm. Paper $3.00. 2494

Contents: Section I, Energy relations and heat addition functions: Point functions of local Mach number Heat addition in constant area channel. Section II, Plane shock and expansion relations: Plane shock relations. Prandtl-Meyer expansion. Section III, Cone flow relations—Taylor-Maccoll theory

Note: (2174*) A collection of twenty-six charts which depict graphically the behavior of air as it flows past bodies moving at high rates of speed and under varying conditions of pressure, density, and temperature. The material has been prepared for the use of aeronautical engineers concerned with the design of wind tunnel nozzles and diffusers, jet engine design and performance calculations, and with other problems involving compressible fluid flow. The manual is intended to supplement H. Liepmann and A. Puckett' *Introduction to aerodynamics of compressible fluid*, New York, 1947 which provides detailed discussion of the theoretical aspects of the subject.

DOMMASCH, DANIEL O AND OTHERS

Airplane aerodynamics, by Daniel O Dommasch, Sydney S Sherby and Thomas F Connolly New York Pitman Publishing Corporation, 1951 520 p illus. 25 cm. $6.50. 2495

Contents (abridged): The atmosphere. Fundamental dynamics and thermodynamics of air. Airfoil theory Wing theory Drag. The propeller Aircraft propulsion. The basic performance problem. Special performance problems. Maneuvers. Theory and design of control surfaces. Longitudinal stability and control. Lateral and directional stability and control. Seaplane problems. Appendixes: Characteristics of representative NACA airfoils. Properties of the NACA standard atmosphere. Index.

Note An unusual integration of aerodynamic theory practical problems in airplane design, and airplane characteristics and performance. It is the outgrowth of material prepared for course for experienced pilots, offered by the Test Pilot Training Division of the Naval Air Test Center In essence, it is presentation of the fundamental principles of airplane flight for men with extensive experience in flying planes. Greater attention is given to the broader aspects, but minor details, such as the effects of application of brakes during the landing run, also are analyzed.

FERRI, ANTONIO

Elements of aerodynamics of supersonic flows. New York The Macmillan Company 1949 434 p. illus. 24 cm. $10.00. 2496

Contents: General considerations. Theory of two-dimensional flow—potential flow—characteristics system—small disturbances. Theory of shock waves. Theory of two-dimensional flow—interaction and reflection of shock waves and expansion waves. Theory of two-dimensional flow—characteristic theory for rotational flow. Measurement of the physical quantities of supersonic flow Supersonic profiles. Two-dimensional effects. Supersonic diffusers. General considerations for three-dimensional phenomena. Aerodynamic phenomena for body of revolution, analyzed by using the theory of small disturbances. Phenomena for conical bodies—hodograph system. Characteristic system for three-dimensional phenomena. Pressure drag of supersonic wings. Lift and induced drag of supersonic wings. Appendix. Index.

Note: This book deals chiefly with the physical phenomena of gas flow that are of significance in the prediction of the aerodynamic behavior of planes, projectiles, missiles, wind tunnel elements, etc. when air (or other gases) passes over their surfaces at supersonic speeds. The physical phenomena, the mathematical computations, and the applications are covered from the viewpoint of mathematicians and engineers concerned with aeronautical research and design. Although introductory to the subject, the book is written at the graduate-professional level. The author is Chief of the Gas Dynamics Section of the Langley Aeronautical Laboratory

HOLLAND, RAY JR.

The physical nature of flight. New York W W Norton & Company, Inc. 1951 287 p. illus. 22 cm. $4.00. 2497

Contents (abridged) The atmosphere. Lift. Drag. Impact. Friction. The practical aspects of air flow. Pressures. The vortex. Flow separations cause trouble. The stall made harmless. Wing sections and streamlining. Why planes require long wings. The full fabric of lift. Propulsion. Stability Flight efficiency How fast? Looking ahead. Index.

Note: This book on airplane flight and the control of planes is outstanding for clear well-conceived elucidations of both general principles and details. The whole anatomy of the subject is carefully dissected and described. The meanings of such terms as "shock, "drag, and "downwash are explained in simple terms and analogies. It is suitable for lay readers, pilots, and even engineers who desire general rather than specialized introduction.

JOHNS HOPKINS UNIVERSITY APPLIED PHYSICS LABORATORY

Handbook of supersonic aerodynamics. Department of the Navy Bureau of Ordnance. Compiled and edited under Bureau of Ordnance contract NOrd 7386 by The Aerodynamics Handbook Staff of The Johns Hopkins University Applied Physics Laboratory Silver Spring Maryland. A Bureau of Ordnance

publication. Washington, D C. Government Printing Office, 1950–52 3 v illus. 27 cm. (Navord report 1488) Looseleaf Vol. 1 1950, $2.00 Vol. 2 1950, $1 50 Vol. 4 section 12 1952 $1.25 Other volumes and sections not yet published. 2498

Contents: Volume 1 Symbols and nomenclature. Fundamental equations and formulae. General atmospheric data. The mechanics and thermodynamics of steady one-dimensional gas flow Volume 2 Compressible flow tables and graphs. Volume 3 Two-dimensional airfoils. Three-dimensional airfoils. Solid and ducted bodies. Volume 4 Mutual interference phenomena. Static stability Dynamic stability Aeroelastic phenomena. Volume 5 Viscosity effects. Heat transfer. Properties of gases. Mechanics of rarefied gases. Volume 6 Ducts, nozzles and diffusers. Free jets. Wind tunnel design and instrumentation. Measurement techniques. Miscellaneous problems.

Note: When completed this reference work will consist of series of six volumes presenting basic information in the field of supersonic aerodynamics and bringing together data and theories pertaining especially to the design of supersonic vehicles. The volumes are being issued in loose-leaf form to permit the addition of supplementary material. Much of the information is presented as graphs and tables. References and indexes appear at the ends of the volumes already published.

KUETHE, ARNOLD MARTIN, AND J D SCHETZER

Foundations of aerodynamics. New York John Wiley & Sons, Inc. 1950 374 p 23 cm. $5 75 2499

Contents: The fluid medium. Kinematics of fluid field. Dynamics of fluid field. The flow about body The thin airfoil. Finite wing. Introduction to compressible fluids. The energy relations. Some fundamental aspects of isentropic flow Waves. Airfoils in compressible flow. Introduction to the dynamics of viscous fluids. Laminar flow in tubes and boundary layers. Turbulence. Turbulent flow in tubes and boundary layers. Transition from laminar to turbulent flow. Some aspects of viscous compressible flows. Aerodynamic characteristics of wings. Appendix. Problems. Author index. Subject index.

Note: An engineering college textbook in which the fundamental theory and concepts of aerodynamics are compactly surveyed. As the chapter titles indicate, perfect, viscous, and compressible fluids are all covered. The treatment assumes no previous acquaintance with aerodynamic concepts or terminology but the reader will need sound knowledge of calculus. The authors are members of the Department of Aeronautical Engineering of the University of Michigan

MILES EDWARD ROY CECIL

Supersonic aerodynamics, a theoretical introduction. New York McGraw-Hill Book Company Inc. 1950. 255 p illus. 23 cm. $4 50 2500

Contents: Fundamental theory Divergence and circulation. The potential equation. Characteristics in the plane. Linear theory of plane flow. The linear potential equation in three dimensions. Shock waves. Cones in supersonic flow. The method of characteristics for axially symmetric supersonic flow Potential flow in the hodograph plane Comparisons of subsonic and shock flow in two dimensions.

Note: In this work the current knowledge of aerodynamic laws and behavior at supersonic speeds is presented for advanced students of aeronautical engineering and for engineering school graduates already employed in the field. The emphasis is on mathematical methods in solving the problems involved, and good part of the text is concerned with the solutions of non-linear partial differential equations. Both computational and graphical methods of solution are considered. A knowledge of basic fluid dynamics is essential to understanding the text.

PERKINS, COURTLAND D AND ROBERT E HAGE

Airplane performance, stability and control. New York John Wiley & Sons, Inc., 1949 493 p. illus. 24 cm. $7 00. 2501

Contents: Part 1, Airplane performance: Introduction. Drag estimation. Propulsion. Airplane performance. Part 2, Airplane stability and control: Static longitudinal stability and control stick-fixed. Static longitudinal stability and control stick free. Maneuvering flight. Directional stability and control. Dihedral effect and lateral control. Longitudinal dynamics. Lateral dynamics. Appendix. Index.

Note: A sound presentation of aerodynamics as applied to airplane design in the subsonic range. It is addressed both to aeronautical engineering students enrolled in college courses and to graduate engineers already engaged in airplane design. It was developed over period of years while the authors were associated with the Air Force Institute of Technology the Boeing Airplane Company and Princeton University

POPE, ALAN

Aerodynamics of supersonic flight, an introduction. New York Pitman Publishing Corporation 1950 184 p illus. 24 cm. (Pitman aeronautical publications aeronautical engineering series) $4.00 2502

Contents: Fundamental relations. Flow in duct. Two-dimensional flow The oblique shock. Approximate theories. Supersonic wind tunnels. Three-dimensional flow. Appendix: Standard atmosphere. Index. Answers to problems.

Note: A brief survey of current theory and experimental methods. According to the author it is designed for use in one-semester college courses offered to students who wish to test their own interest in supersonic aerodynamics and thus determine whether to pursue the subject further. Previous college courses in calculus and elementary dynamics are assumed. The author's style is clear; the book is well organized and very generously illustrated.

POPE ALAN

Basic wing and airfoil theory New York McGraw-Hill Book Company Inc., 1951 294 p. illus. 24 cm. $5 75 2503

Contents: Vector analysis. Complex variables and Fourier series. The stream function. Other flow functions. The Joukowski transformation. Airfoil construction and pressure distribution. Thin airfoil theory Thick-airfoil theories. The finite wing. The monoplane wing. The field about the wing. Spanwise load distribution for arbitrary wings. Miscellaneous applications of perfect fluid theory Appendixes. Index.

Note: A textbook designed for use in engineering college courses offered to advanced undergraduate students. The treatment is intermediate in level between the frankly introductory texts and the graduate-level treatises. The author is member of the faculty of the Daniel Guggenheim School of Aeronautics of the Georgia Institute of Technology

SCANLAN ROBERT H. AND ROBERT ROSENBAUM

Introduction to the study of aircraft vibration and flutter New York The Macmillan Company 1951 428 p illus. 24 cm. $10 00 2504

Contents (abridged): Basic mathematical techniques. The Lagrangean equations of motion and vibration theory The linear single-degree-of-freedom system. The two-degree-of-freedom system. Self-excited systems. Uncoupled beam vibration. Two-dimensional flutter theory Three-dimensional flutter theory Empennage vibration and flutter analysis. Normal (coupled) modes of vibration. Solution of the flutter stability determinant. Wing torsional divergence, aileron reversal and effectiveness. Instrumentation and testing. Bibliography Appendixes General equation governing subsonic and supersonic flows. Subsonic incompressible theory of the forces on an oscillating airfoil in two dimensions. Oscillating air forces in subsonic compressible flow Oscillating air forces in supersonic flow Tables of subsonic incompressible aerodynamic coefficients. Index.

Note: An introduction to specialized though highly important aspect of aeronautical engineering. It deals mainly with classical theory and problems. However there is chapter on sweptback wings and some discussion in the appendixes of analysis of vibration and flutter under conditions of compressible flow The mathematics employed includes matrix algebra. The book is suited to upperclass and graduate engineering students and to professional engineers in need of an introduction to this special field. The bibliography runs to twenty-two pages.

AIRCRAFT CONSTRUCTION

NEVILLE, LESLIE E

Aircraft designers data book. New York McGraw Hill Book Company Inc 1950 534 p. illus. 29 cm. $12 50 2505

Contents: General design characteristics. Wing and auxiliary surface design. Empennage design. Fuselage body and hull design. Landing gear design. Control systems. Fuel and lubrication systems. Power plant installation. Miscellaneous design details. Rotating wing aircraft. Turbine engines. Index.

Note. A valuable reference book for both engineers and draftsmen employed in the design of airplanes. It contains many hundreds of drawings, together with small number of photographs, of the mechanical details of the structures and mechanisms of [illegible] of modern airplanes. Compact discussions of structures are also included. Condensed *specifications of United States military*, personal, and transport aircraft and of leading Canadian, British and French planes are tabulated in the appendix. Most of the material has been compiled from *Aviation* and *Wings*.

NORTHROP AERONAUTICAL INSTITUTE. TECHNICAL DEVELOPMENT STAFF

Aircraft maintenance and repair by the Technical Development Staff of Northrop Aeronautical Institute. Charles Edward Chapel, chief editor New York McGraw Hill Book Company Inc. 1949 444 p illus. 29 cm. $7 00 2506

Contents Fundamentals of aircraft hydraulics. Flow control valves. Pressure control valves. Hydraulic systems. Hydraulic brake actuating systems. Landing gear. Heat treating and inspection of metals. Aircraft gas welding equipment. Gas welding technique for ferrous metal. How to weld aluminum alloy. Aircraft construction and repair by welding. Aircraft sheet metal tools, machines, and methods. Aircraft layout work. Aircraft riveting. Recommended riveting repairs for aluminum alloy structures. Aircraft woodworking tools and machines. Glue, screws, and nails for aircraft woodwork. Construction and repair of wooden aircraft. Fabric covering. Dope and its application. Aircraft wire and cable work. Assembly and rigging. Weight, balance, and loading. Index

Note (3160[a] 3191) The third volume published in useful, practical series for student aircraft mechanics. The topics named in the chapter titles are discussed clearly and thoroughly and the discussion is supplemented by generous number of well produced illustrations. The book is suitable for use both as text in organized class instruction and as home study manual. Like the others in the series, it is designed for mechanics and other practical workers rather than aeronautical engineers.

PERRY DAVID J

Aircraft structures. New York McGraw Hill Book Company Inc., 1950 566 p. 24 cm. $7.00 2507

Contents (abridged) Equilibrium of forces. Inertia forces and load factors. Shear and bending moment diagrams. Beams with unsymmetrical cross sections. Analyses of typical members of semi-monocoque structures. External loads on the airplane. Mechanical properties of aircraft materials. Joints and fittings. Design of members in tension, bending, or torsion. Design of compression members. Design of webs in shear. Special methods of analysis. Appendix. Index.

Note A textbook written primarily for use in undergraduate work in engineering colleges. The author who is Head of the Department of Aeronautical Engineering of the Pennsylvania State College, has emphasized basic structural theory and methods of analysis. Little material has been included on the design of specific airplanes or the properties of specific materials. The chapters are supplemented by good lists of related literature

SHANLEY FRANCIS REYNOLDS

Weight-strength analysis of aircraft structures. New York McGraw Hill Book Company, Inc., 1952 394 p. illus. 24 cm. (The Rand series) $8.50 2508

Contents Part I, Principles of optimum structural design. Methods of analysis. Principles of structural design for minimum weight. General instability of stiffened shells in pure bending. Minimum weight of stiffened cylindrical shells in pure bending. Effect of torsional-stiffness requirements on wing structural weight. Part II, *Structural-weight equations*: General weight-analysis methods. Weight analysis of the sheet-stringer-rib type of wing structure. Effective depth of airfoil sections. Evaluation of integration factors. Inertia and shear reduction factors. Wing ribs and secondary structure. Nonoptimum structural weight. Weight analysis of the thick plate type of wing structure. Weight analysis of thin-wing structures. Weight analysis of fuselage and shell structures. Part III, Material properties and behavior: *Analysis of stress-strain-time relations*. Stress-strain-time properties of some aircraft materials, by L. R. Jackson and others. Inelastic-column theory. Principles of creep buckling. Effect of creep on column deflection, by T P Higgins, Jr. Index.

Note An important treatise for aircraft designers and stress analysts. It presents methods of analyzing and predicting the structural weight of aircraft and missiles. Part discusses methods by which the minimum weight can be determined for any material and conditions of loading. These principles of design for minimum weight are utilized in deriving weight equations for wing and fuselage structures, the subject matter of Part II. A number of reports prepared in the course of investigations of new materials and extreme operating conditions are included in Part III. These reports demonstrate engineering methods by which the effects of temperature and time can be included in structural design and weight calculations. While not designed as textbook, certain of its parts have been used by the author as basis for graduate course in structures, and some problems used in that course have been included in Parts and II. Bibliographical references appear at the ends of most chapters.

TEICHMANN, FREDERICK KURT

Airplane design manual. Third edition. New York Pitman Publishing Corporation, 1950 382 p. illus. 24 cm. (Pitman aeronautical publications aeronautical engineering series) $7.50 2509

Contents Procedure in design. Types of airplanes. Airfoil selection. Preliminary weight estimate. The three-view. The balance diagram. The cockpit. Instruments and equipment. The passenger cabin. Heating and ventilating. Soundproofing. The power plant. Design of the wing. The landing gear. Tail surfaces. Control systems. The fuselage. Preliminary performance calculations. Elementary longitudinal stability calculations. Materials of construction. Appendix: Weight data. Miscellaneous design data on American airplanes. Airplane data. Materials design data. Index.

Note (4417) An introduction to practical design of airplanes and their component parts. Although moderate amount of mathematics is used in some of the chapters (for example the one dealing with wing design) many topics are discussed without the use of mathematics at all. The book is particularly suitable for such readers as production workers in airplane manufacturing plants and draftsmen, especially those who must gain their knowledge of the subject in home study. In this revised edition there is fair amount of new material including discussions of jet engines, recent research sealing arrangements, and new structural materials.

TITTERTON, GEORGE FRANCIS

Aircraft materials and processes. Fourth edition. New York Pitman Publishing Company 1951 359 p. 24 cm. $5.00 2510

Contents: Definitions. Testing aircraft materials. Steel and its alloys. Aircraft steels—properties and uses. Heat treatment of steel. Corrosion-resisting steels. Surface hardening. Shaping of metal. Wrought aluminum alloys. Aluminum-alloy castings. Magnesium alloys. Nickel alloys. Copper and its alloys. Metal joining processes. Corrosion and its prevention. Wood and glue. Fabric and dope. Plastics. Transparent materials. Rubber and synthetic rubber. Titanium and its alloys. Selection of materials. Appendices. Index.

Note. (3187[a]) A useful introductory manual. During World War it was widely used by men who were entering aircraft manufacturing from other professions. The discussions of materials and of processes such as heat treatment of corrosion-resisting steels include good deal of engineering data. The short chapter on titanium and its alloys is the major addition in the present edition. However, other chapters contain new sentences and new paragraphs and occasionally one or more new pages.

UNITED STATES CIVIL AERONAUTICS ADMINISTRATION

Personal aircraft inspection manual. Washington D C. Government Printing Office, 1950 81 p. illus. 26 cm. (United States. Civil Aeronautics Administration. C. A. A. technical manual no. 101) Flexible cloth $0.55 2511

Contents: Introduction. Part 1, Inspection fundamentals: The maintenance process. The inspection process. The forces of attrition. General inspection information. Part II, Inspection techniques: Fuselage—hull. Cabin—cockpit. Engine—nacelle. Landing gear. Wing—center section. Empennage. Propeller. Radio. Miscellaneous.

Note: This illustrated manual is designed for the use of student mechanics, pilots, and personal aircraft owners. It provides a general guide for the inspection of personal aircraft and is intended to be employed in connection with manufacturers' service handbooks wherever possible. The details of inspection are described in simple, nontechnical language, and photographic illustrations are provided in abundance to show the exact area under discussion and points to be checked.

UNITED STATES DEPARTMENT OF DEFENSE. MUNITIONS BOARD AIRCRAFT COMMITTEE

Wood aircraft inspection and fabrication. Department of the Air Force Air Matériel Command. Department of the Navy Bureau of Aeronautics. Department of Commerce Civil Aeronautics Administration. *Issued by* the Subcommittee on Air Force-Navy Civil Aircraft Design Criteria, Munitions Board Aircraft Committee. Washington, D C. Government Printing Office, 1951 335 p. illus. 26 cm. (Bulletin ANC—19) Paper $1.25 2512

Contents: Wood: Wood as an aircraft material. Identification of wood. General characteristics. Defects and blemishes. Requirements for wood in specific parts. Modified wood: Plywood, impregnated wood, compreg, impreg, heat-stabilized wood. Plywood. Glued laminated members. Resin-treated plywood and laminated wood (impreg and compreg). Heat-stabilized compressed wood (staypak). High-strength laminated paper plastic (papreg). Combination materials. Acetylated wood. Aircraft glues: Kinds. Properties of aircraft glues. Use characteristics of aircraft glues. Control of glue quality. Processing and fabrication: Inspecting and storage of lumber. Control of humidity in factories. Gluing. Bag-molded plywood and structures. Gluing and assembly operations. Temperature measurement. Machining, bending, and other woodworking operations. Finishing wood in aircraft. Propeller manufacture. Miscellaneous. List of specifications. Glossary. Index.

Note: An illustrated bulletin for use in the inspection and fabrication of wood parts of military and commercial aircraft. The technical material, covering information on wood, modified wood, glues, and processing, is based chiefly upon the results of investigations conducted by the Forest Products Laboratory of the United States Forest Service. The bulletin was prepared jointly by the Laboratory and by the ANC-19 Panel on Sandwich Construction for Aircraft of the Subcommittee on Air Force-Navy-Civil Aircraft Design Criteria. Strength data and other design criteria are beyond the scope of this bulletin; for such data the reader is referred to *Bulletin ANC-18a, Design of wood aircraft structures* (see below).

UNITED STATES FOREST PRODUCTS LABORATORY

Design of wood aircraft structures. Department of the Air Force *Air Matériel Command*. Department of the Navy Bureau of Aeronautics. Department of Commerce Civil Aeronautics Administration. Second edition. Issued by the Subcommittee on Air Force-Navy-Civil Aircraft Design Criteria of the Munitions Board Aircraft Committee. Washington, D C. Government Printing Office, 1951 234 p. illus. 26 cm. (United States. Department of Defense. Munitions Board. Aircraft Committee. Subcommittee on Air Force-Navy-Civil Aircraft Design Criteria. ANC—18 Bulletin) Paper $1 00. 2513

Contents: General: Purpose and use of bulletin. Nomenclature. Strength of wood and plywood elements: Physical characteristics and factors affecting the strength of wood. Basic strength and elastic properties of wood. Columns. Beams. Torsion. Basic strength and elastic properties of plywood. Plywood structural elements. Flat rectangular plywood panels. Curved plywood panels. Joints. Methods of structural analysis: General. Wings. Fixed tail surfaces. Movable control surfaces. Fuselages. Hulls and floats. Detail structural design: General. Plywood covering. Beams. Ribs. Frames and bulkheads. Stiffeners. Glue joints. Mechanical joints. Miscellaneous design details. Examples of actual design details.

Note: A practical guide to the design of both military and commercial wooden aircraft. Information on the strength and elastic properties of structural elements constructed of wood and plywood is presented in Chapter 2, this information superseding that contained in the June, 1944 edition of ANC—18, *Design of wood aircraft structures*. Chapter 3 contains suggested methods of structural analysis for the design of various aircraft components. Although these methods are in many cases the same as those used for metal structures, special considerations are introduced which take into account the special properties of wood. The fourth chapter presents recommendations on the detail structural design of wood aircraft and contains some examples of how various manufacturers have treated the solution of specific detail design problems.

AIRCRAFT ENGINES

CASAMASSA JACK V editor

Jet aircraft power systems principles and maintenance. New York McGraw Hill Book Company Inc. 1950 338 p illus. 23 cm. $6.50 2514

Contents (abridged): History and design of jet machines: The aviation gas turbine engine (turbo jet). Gas turbine propeller combination (turbo prop). Athodyds—pulse and ram jets. Rockets. Theory and installation: Jet propulsion theory. Air inlets, cooling, and exhaust systems. Thrust augmentation methods. Materials for gas turbines. Gas turbine fuel systems. Lubrication systems. Ignition and starter systems. Servicing and operation: Production problems. Inspection, maintenance, and overhaul. Jet transports. Addenda: Powerful jet engines developed by Pratt & Whitney Aircraft. Cooling for "hot" pilots. Boeing designs for jet transports. Lockheed's proposals for jet transports. Jet fuel (proposed). Russian jet designs. Glossary. Appendix. Visual aids. Index.

Note. An introductory textbook designed for men who are preparing for employment as mechanics on jet aircraft engines. Descriptions of the types of such engines and of their component parts comprise about two thirds of the book. Only about one-third is devoted to inspection, maintenance, and overhaul operations. There are numerous special features of value to the beginner including numerous illustrations, study questions, references to other reading, and glossary of jet terms.

DURHAM FRANKLIN P

Aircraft jet powerplants. New York Prentice-Hall, Inc., 1951 326 p. illus. 22 cm. $6 65 2515

Contents: Introduction. Principles of thrust and the energy equation. Thermodynamic properties of air and gas. Turbojet engine processes. Turbojet engine performance. Turbopropeller engine processes and performance. Duct flow and the inlet diffuser. Air compressors. Combustion chambers or burners. Nozzle flow and the jet nozzle. Turbines. The ramjet engine. The rocket motor. Appendix. Index.

Note: A college textbook intended for upperclass students in engineering colleges. The main types of jet powerplants, such as the turbojet engine, turbopropeller engine, and the rocket, are described very briefly in the first chapter. After this introduction, the theory and the performance characteristics of jet engines and their component parts are covered. Algebra and calculus are both used in the mathematical computations, and the treatment assumes previous courses in thermodynamics and fluid mechanics.

PHOTOGRAPHY

ADAMS, ANSEL

Natural-light photography Basic photo 4 New York Morgan and Lester, 1950 118 p. illus. 24 cm. $3.00 2527

Contents (abridged) Qualities of natural light. Film response and filters. The polarizers. Visualization. Landscape. Seascape. Still and moving water. Snow and ice. Foliage Desert photography Clouds. The moon and moonlight. Naturalistic details. The miniature camera out of doors. Portraiture. Synchro-sunlight. Architecture and industry Objects of art. Index.

—— The print contact printing and enlarging Basic photo 3 New York Morgan and Lester 1950. 120 p. illus. 24 cm. $3.00 2528

Contents (abridged) The expressive print. Photographic papers. Properties of photographic papers. The darkroom. Processing the print. Detailed description of making print. Detailed description of making an enlargement. Problems of control. Detailed description of toning. Etching and spotting of prints. Making prints for reproduction. Mass production of prints. Photo murals, overmantels, screens. Framing. Index.

Note: (2209*) Two books in 6 book series written by this author. In the series the author presents wide range of information on principles and techniques with the avowed purpose of helping his readers develop personal approach to photography The material goes beyond the needs of the average amateur photographer but is well suited to meet the needs of both amateurs and professionals who wish to do work with distinct individual quality. Included are long discussions of such common problems as the photography of moonlight and also of specialized techniques such as the use of polarizers.

ANTHONY ANNE J

Negative and print retouching for amateur and professional. Illustrations by the author New York Greenberg 1950 138 p. illus. 27 cm. $5 00 2529

Contents Part 1, Negative retouching: "Look pleasant, please. The tools of the trade. The purpose and use of the retouching tools. The negative. The technique of pencil retouching. Dye retouching. Etching. Summary of the fundamentals. Corrective retouching. Correcting mechanical and processing errors. Now it up to you. Part II, Print retouching. Photographic papers. General print retouching—basic equipment. Retouching the glossy print. Retouching the semi-matte print. Retouching the matte print. Retouching the warm-tone and toned print.

Note: A practical guide to the art of correcting, improving, or altering photograph by working on the negative or print. Necessary materials and tools are listed, and the detailed descriptions of each process are supplemented with numerous illustrations and before-and-after photographs. The material is primarily of interest to the professional photographer, but is sufficiently simplified to meet the needs of the amateur.

CAMERON JAMES ROSS

Motion picture projection and sound pictures. 12th edition. Coral Gables Florida Cameron Publishing Company 1952 869 p. illus. 21 cm. $12 50 2530

Contents (abridged) Early attempts at projection. Working principle of projectors. Special purpose projectors. Motion picture electricity Light and lenses. Resistance in arc circuits. Open alignment check systems Electronic-control arc lamp. Sound. Amplifier systems. Speaker systems. Picture projection. Simplex sound equipment. RCA reproducing equipment. Motiograph AA projector Ampro imperial projector Studio projection. Stereoscopic pictures. Theater television.

Note: (4446) A text addressed to operators of motion picture projection equipment and to men studying for this occupation. As the chapter titles show part of the book is devoted to background information on electricity optics, etc., and part of it to very specific information about particular makes of projectors. The book is not well organized but is, nevertheless, widely used because of the specialized information included.

CAMERON, JAMES ROSS

Sound motion pictures recording and reproducing With chapters on motion picture studio and film laboratory practice. Seventh edition. Coral Gables, Florida Cameron Publishing Company, 1950 879 p. illus. 21 cm. $12 50 2531

Contents (abridged) Historical—[illegible] and motion—sound transmission—elementary talking machines—recording and reproducing sound. Light and lenses. Sound. Electronic emission. Studio practice. Editing. Rerecording. RCA recording system. Magnetic tape recorders. Disc recordings. Microphone technique. The motion picture camera. Composite photographic process. History of animated cartoons. Motion picture laboratory. Film processing. Film production for television. Production with Mazda lamps. Stereophonic reproduction. R.C.A. Fantasound. Vitasound. Filmosonic projector

Note: (4448) A widely used handbook of background and practical information for men concerned with the recording, editing, and projection of sound motion pictures. A good deal of historical information is included along with the practical. In the chapters devoted to specific sound systems or projectors the information given is addressed particularly to operators of the machines. Not outstanding for style or organization, the book is nevertheless useful because of the wide range of specialized information in it.

CHAMBERLAIN KATHERINE

An introduction to the science of photography New York The Macmillan Company 1951 292 p. illus. 24 cm. $6.50. 2532

Contents. How photography began. Making print. Films and their processing. Cameras. Factors that influence the critical definition of the photographic image. Exposure and exposure meters. The graphs of photography Projection printing. The reflection and refraction of light. The formation of images by pinholes and lenses. More photographic optics. The rendering of color in monochrome. Introductory considerations regarding color photography The additive processes of color photography Color transparencies by subtractive processes. Color prints. Appendix. Index.

Note: An elementary text designed to provide the amateur photographer with an understanding of what takes place during the various operations leading to the production of photograph. Much practical information is given regarding the selection of cameras, the techniques of contact and projection printing, the use of exposure meters, etc.; but emphasis is placed on the theory underlying photographic optics, formation of images, and making of negatives and prints. The fundamentals of color mixing and the different color processes are discussed at some length.

FEININGER ANDREAS

Advanced photography methods and conclusions. New York Prentice-Hall, Inc., 1952 244 p. illus. 29 cm. $7.50 2533

Contents: Part 1 Thoughts about photography Part 2, Experimentation. Part 3, Observation. Part 4, Imagination.

Note: An eminent American professional photographer has combined technical information with esthetic theorizing in this book, written for both amateur and professional photographers. Included is chapter on building photographic equipment for special needs not satisfied by commercially available apparatus. His discussions of equipment are specific. His discussions of the artistic elements of

photography are less concrete but are none the less valuable. The book is illustrated with variety of outstanding photographs of various types.

FEININGER, ANDREAS

Feininger on photography Chicago Ziff Davis Publishing Company, 1949 409 p. illus. 29 cm. $15.00. 2534

Contents: Part I. The technique of making photograph. The equipment of photographer. The materials of photographer. The darkroom. The functions of the camera. The processing of negatives and prints. Learning from mistakes. Part II. The art of making photograph: Contrasts and how to control them. Color and how to control it. Controlling space and perspective. Light and lighting. Motion. Planning and directing the picture story Composition and the importance of the "background." Conclusions and the "photographic" techniques.

Note: An earlier and somewhat more technical book than the author's *Advanced photography* described above. It contains very specific advice on such matters as buying and testing lenses, developing of negatives, and the control of light and shade. Though not reference book, fair amount of reference material is included. Use for reference is hampered, however, by the lack of an index. The book is of interest to advanced amateurs and to beginning professional photographers. Originally published by the Ziff-Davis Publishing Company it is now available from Crown Publishers.

GIBSON, H. LOU

The photography of patients including discussions of basic photographic and optical principles. Springfield, Ill. Charles C Thomas, 1952 118 p illus. (part col d) 22 cm. (American lecture series Ralph P Creer, editor Publication num. 95) $5.50 2535

Contents: Fundamentals. Equipment and space. Making close-ups with roll film cameras. Lens properties. Positioning and lighting. Films and filters. Printing methods. Paper selection, quality control and print quality Appendix A. Index.

Note: A short, practical manual on the basic knowledge and techniques of photography that are useful in the production of clear photographs made in connection with medical research and practice. The author is member of the Medical Division of the Eastman Kodak Company

KINGSLAKE, RUDOLF

Lenses in photography, the practical guide to optics for photographers. Garden City New York Published by the Case-Hoyt Corporation for Garden City Books 1951 246 p. illus. 22 cm. $2 95 2536

Contents: Perspective. Light rays and lens aberrations. Light waves and how they behave. Definition and resolving power Depth of field. The brightness of images. Types of photographic objectives. Lens attachments. Enlarging and projection systems. Stereoscopic photography Shutters. Camera view finders and range finders. Bibliography Index.

Note: The principles and performance of camera lenses and related optical devices are discussed in this book from the viewpoint of the amateur photographer who wants to understand lenses in order to use his equipment intelligently It is not simple book of directions instead, the author discusses the main characteristics of lenses, provides diagrams of the successful types, and shows why they work as they do. Also included are specific instructions on allied matters such as manipulating enlarger systems so as to correct defects in negatives. The author is Director of Optical Design with the Eastman Kodak Company

LESTER, HENRY M editor

Photo-lab-index the cumulative formulary of standard recommended photographic procedures. John S. Carroll, associate editor Twelfth edition. New York Morgan & Lester 1952 Two vol. Loose-leaf illus. 22 cm. $17 95 2537

Contents: Introduction and index. Ansco. Ilford. Gevaert. Defender. Du Pont. Eastman Kodak. Haloid. Film data. Filter data. Illumination. Photo papers. Miscellany—weights, measures, conversions. Photographic chemicals. Cine data. Darkroom. Color data. Photographic optics. Defects in negatives and prints. Transparencies and slides. Copying. Photomechanical processes. Bibliography Photo words. Television.

Note: (2215) A standard manual of useful information of technical data on photographic procedures, processing, and materials, *intended for reference use in photographic workshops.* The information included covers wide range. Part of it as in the section on weights and measures is general. A substantial portion applies particularly to the products of individual manufacturers. The work is published in loose-leaf binders and is kept up to date by quarterly supplements available by separate subscription of $3 00 per year. Since the work is revised page by page and section by section as new products are introduced and new data become available, the present edition contains good deal of text that is the same as in the eleventh edition, because there has been no need for revision. However, the necessary changes have been made and continue to be made as new quarterly supplements are published.

LURAY, HOWARD

"Strobe"—the lively light. With a foreword by Dr Harold E. Edgerton. San Francisco Camera Craft Publishing Company, 1949 128 p. illus. 24 cm. $4.00 2538

Contents (abridged) Basic electronics for photographers. Choosing speedlight. Exposure and development—black and white. Filters, exposure and development—color. Application to specific problems. Glossary Electronic symbols. Bibliography

Note: A brief practical manual on the use of high-speed gaseous discharge lamps in making photographs by flashlight. It was written for professional photographers hence the preliminary chapters are devoted to an outline of the fundamental electronic principles. About three-fourths of the space is occupied by discussions of photographic techniques in which these high speed lamps are advantageous. The illustrations include some remarkable examples of high-speed photography

MCCOMBS, KENNETH MONROE

Commercial photography Chicago American Technical Society 1951 363 p illus. 22 cm. $5 00 2539

Contents: Commercial photography as career. The first requirement—a camera. Technique of camera operation. Professional photographic films. The photographer's darkroom. Negative processing. Photographic printing. Print finishing procedures. Outdoor photography Night photography Composition in professional photography Models in photography Studio portraiture. Portraiture of special subjects. Third dimensional portrait lighting. Commercial, fashion, and news photography Illustrative photography Color photography Legal aspects of photography How to sell picture. New improvements in commercial photography Your future in professional photography Index.

Note: A very practical introduction. It is slanted particularly for students who are studying commercial photography in trade schools, but it is suitable also for those learning this business by themselves. Throughout the book the instructions are compact, specific, and often given in step-by-step style. The author is successful commercial photographer who is head of the photography department of the Los Angeles Trade-Technical Junior College.

MORGAN WILLARD DETERING AND HENRY M LESTER, editors

The new Leica manual a manual for the amateur and the professional covering the field of Leica camera photography Twelfth edition. By Willard D Morgan Henry M. Lester and 20 contributors. New York Morgan & Lester Publishers, 1951 427 p illus. (part col d) 23 cm. $5.00 2540

Contents: The Leica camera and equipment, by W D. Morgan. Leica lenses and optics, by J. S. Carroll. The 35mm film—selection, exposure, and development, by A. Wellman. Color filters and their uses, by H. M. Lester. Flash photography by H. M. Lester. Electronic flash, by H E. Edgerton. Darkroom, equipment and enlarging procedures, by W D. Morgan. Enlarging papers and printing, by A. Adams. Copying and close-up photography by W D. Morgan. Microphotography with the Leica, by R. Newhall. Color photography by H. M. Lester. The Leica in photo-journalism, by A. Rothstein. The picture story in industrial and public relations, by W Vandivert. My way with the Leica, by A. Eisenstaedt. Child

particulars with the Leica, by J Rieling. Lantern slides for projection, by W D. Morgan. Visual communication of ideas, by R. de Keller Pictures by available light, by J Deschin. Traveling with Leica, by J Bryan. Music and the Leica, by A. Siegel. Philatelic photography with the Leica, by R. D Kershner. Underwater photography with the Leica, by P Rackpole. Medical photography, by W M. Hall. Photomicrography and macrophotography at variable magnification, by R. O. Keller. Presenting the print—spotting, trimming, mounting & display by K. Cramer Index.

Note: (2311) Primarily guide for both amateur and professional users of Leica cameras, this manual has proved also to be useful to miniature camera users in general regardless of make of equipment. In the present edition the contents are new Many new names are represented among the contributors and even the chapters written by contributors to former editions are new treatments.

NEBLETTE CARROLL BERNARD

Photography its materials and processes. Fifth edition. New York D Van Nostrand Company 1952 500 p. illus. 26 cm. $10.00. 2541

Contents (abridged) Light sources for photography Photographic optics. Photographic objectives. Photographic light filters. Photographic shutters. Fundamentals of photochemistry The photographic emulsion. Color sensitizing of photographic emulsions. The manufacture and physical properties of negative materials. The silver halide grain, the mechanism of exposure, and the latent image. Photographic exposure effects The theory of development. Photographic developers. Fixing and washing. Diffusion-transfer reversal processes. Photographic sensitometry Photographic tone reproduction. Reproduction of color in monochrome. Structure of the image. Negative materials. Photographic exposure and exposure meters. Negative processing. Improvement of the negative. Printing processes. Principles of three-color photography Three-color separation negatives. Subtractive printing processes. Screen and lenticular processes. Multilayer processes. Accuracy of color reproduction. Subject index. Author index.

Note. (4493) A standard text and reference book on the technical phases of photography This edition has been very substantially revised and rewritten. The emphasis has been shifted further towards materials and processes, and writings of fourteen specialists in addition to the author have been included The treatment of most topics is concise but informative. Literature references are included for most topics. The book is addressed to scientists, including but not limited to those who are preparing for research in photography and allied fields such as photolithography Little space is devoted to the everyday practice of photography however it contains much information that will be useful to those commercial photographers and serious amateurs he want to know more about the scientific and technical bases of their craft.

NEBLETTE CARROLL BERNARD AND H. N TODD

Elementary photographic sensitometry Rochester N Y Rochester Institute of Technology 1950 100 p. illus. 24 cm. $3.00 2542

Contents. What is sensitometry? Exposure of the material. Sensitometers. Development of the material. Threshold speeds. Density, opacity transmission The measurement of density The D log E curve. The developing factor or gamma. The time-gamma curve. Filter factors. The time log curve. H & D speeds. Weston speeds. Speeds based upon the exposure for density of 0.10 plus fog The American Standards Association speed Latitude and useful exposure scale. Effect of the developer and development on the D log E curve. The measurement of spectral sensitivity The sensitometry of papers. Tone reproduction Index

Note Although elementary in the sense that it is designed for persons beginning the study of the subject, this book is intended for those with interest in the scientific bases of photography In it are presented the scientific fundamentals, methods of measurement, and standards pertinent to the "quantitative measurement of the response of photographic materials to radiant energy It was developed for use in course given by the Department of Photographic Technology of the Rochester Institute of Technology and is suitable for use in such courses, and as an outline for persons studying the subject by themselves Some literature references are included, but the bibliography is not extensive.

NEWHALL BEAUMONT

The history of photography from 1839 to the present day New York The Museum of Modern Art, 1949 256 p. 27 cm. $5 00. 2543

Contents: The elusive image. The mirror with memory Prints from paper Portraits for the million. Pictorial effect. The faithful witness. The conquest of action. Photography as an art. The straight approach. Documentary Instant vision. Experiments in abstraction. For the printed page. In color. Sources of quotations. Selected bibliography Index.

Note: In 1937 the Museum of Modern Art, New York, organized an exhibition of photographs covering the period 1839 to 1937 The present volume is an expansion and elaboration of the catalogue hich was prepared for the exhibition. As might be expected, emphasis is placed on the artistic aspects of the subject, but attention is also given to the evolution of apparatus and techniques. Numerous reproductions of photographs taken with various types of equipment by famous photographers are included.

SIMMONS ALBERT DIXON

Photography for sportsmen. New York. D Van Nostrand Company Inc., 1951 172 p. illus. 24 cm. (A Van Nostrand sporting book, edited and designed by Eugene V Connett) $5.00 2544

Contents: Sceneries. Field equipment. Exploring the world of color. Through the low finder. Getting close to nature. Fins. Fur. Feathers. Seeing the unseen through slow motion. Riding. Jungle palaver. Stray shots for all.

Note A book on still and motion picture photography in the outdoors especially intended for sportsmen who take their cameras on hunting and fishing trips. The author has avoided technical language of photography where possible and has produced practical manual illustrated with many of his own striking and successful photographs.

SIPLEY LOUIS WALTON

A half century of color New York The Macmillan Company 1951 216 p. illus. (part col d) 26 cm. $8 00. 2545

Contents There is always background. The new century moves forward. Post-war innovations. Color grows during the depression. The camera and the press. The dye-coupler takes over. Color aiding and control systems. The half century closes.

Note In this lavishly illustrated book the main steps in the development of color photography and color reproduction in the graphic arts are described by the Director of the American Museum of Photography An expertly written text it is supplemented by many examples of color reproductions that represent high points in the development of these two arts. The illustrations author was assembled at considerable cost and effort and probably will never be duplicated again in book form. Much of the historical information appears to have been derived at first hand from men have careers have spanned the developments that are described. Although the book has considerable historical value, there are no literature references and no index.

SOCIETY OF MOTION PICTURE AND TELEVISION ENGINEERS

Principles of color sensitometry A report of the Color Sensitometry Sub-committee H. E Bragg and others C. F J Overhage, editor New York Society of Motion Picture and Television Engineers 1950. 72 p. illus. 23 cm. Paper 2546

Contents Introduction. Sensitometric exposures. The processing of sensitometric tests. Quantitative evaluation of the image. Densitometer design principles. Transformations between integral and analytical densities. Interpretation of sensitometric results. Statistical aspects of color sensitometry References.

Note: "Much of color sensitometry is built on basic principles familiar to sensitometry of black-and-white materials. Some principles are new It is the object of this report to outline these principles and to describe the methods and instruments of color sensitometry in order to give the workers in the field of color motion picture photography comprehensive view of the present state of the science as it applies to them. The treatment is not detailed, and in some places rigor has given way for better understanding, but the coverage is intended to be comprehensive.

FOOD TECHNOLOGY

ADVANCES IN FOOD RESEARCH. Volume III. Edited by E. M. Mrak and George F. Stewart. New York Academic Press, Inc., 1951 518 p. illus. 24 cm. $9.50. 2547

Contents: Enzyme-catalyzed oxidative browning of fruit products, by M. A. Joslyn and J. D. Ponting. Physical and chemical aspects of the production, storage, and utility of dry milk products, by S. T. Coulter and others. Electromagnetic radiation fundamentals and their applications in food technology, by B. E. Proctor and S. A. Goldblith. The pharmacological evaluation of antioxidants, by A. J. Lehman and others. Salmonella infection as a food industry problem, by W. R. Hinshaw and E. McNeil. Reactions between sugars and nitrogenous compounds and their relationship to certain food problems, by J. P. Danehy and W. W. Pigman. Chemical and microbial studies on sliced cured bacon, by J. A. Ulrich and H. O. Halvorson. Certain aspects of internal corrosion in tin plate containers, by R. R. Hartwell. Rationale for studies of consumer food preferences, by R. L. D. Morse. Control of microorganisms causing spoilage in fruit and vegetable products, by M. von Schelhorn. Author index. Subject index.

Note: ([illegible]) As in the earlier volumes of the series, original monographic papers on topics of current interest to nutritionists, food chemists, etc., are presented. Essentially each paper is a literature survey of a specific topic, accompanied by an extensive bibliography of the pertinent literature. The author index includes the names of authors of cited material. The papers, written on a professional level, are intended for scientists and technologists in the food industries and in laboratories where food research is carried on.

AMERICAN CHEMICAL SOCIETY

Analytical methods in the food industry a collection of the papers presented at the Symposium on Analytical Methods in the Food Industry held by the Divisions of Analytical Chemistry and Agricultural and Food Chemistry of the American Chemical Society at the 115th national meeting in San Francisco, March 28 to April 1, 1949 Washington D C. American Chemical Society 1950. 73 p. illus. 24 cm. (American Chemical Society Advances in chemistry series edited by the staff of Industrial and engineering chemistry No. three) Paper $1.50. 2548

Contents: Introduction, by J. R. Matchett. Measurement of color changes in foods, by E. J. Eastmond. Determination of amino acids, by M. S. Dunn. Quality control methods in frozen food production and distribution, by E. Campbell. Determination of water in some dehydrated foods, by R. Makower. Measurement of oxidative rancidity, by R. W. [illegible]. Measurement of filth in foods by microanalytical methods, by D. E. Tilden. Some aspects of control methods in the canned food industry by G. H. [illegible] and W. C. [illegible].

Note: A collection of original papers addressed to graduate chemists. All are accompanied by bibliographies. The bibliography included with Dunn's "Determination of amino acids" runs to 313 references.

AMERINE, MAYNARD ANDREW AND M. A. JOSLYN

Table wines, the technology of their production in California. Berkeley and Los Angeles University of California Press 1951 397 p. illus. 24 cm. $4.50. 2549

Contents: Introduction. Wines and grapes. Trends in the industry. The winery and its equipment. Design and construction. Equipment. Sanitation. Recommended procedures for making wines: From grapes to new wines. Clarifying and aging. Dry red wines. Dry pink wines. Dry white wines. Sweet table wines. Sparkling and carbonated wines. Preparing wines for market. Finishing operations. Testing and analyzing. Wine disorders. Winery by-products. Technological principles: Composition of grapes. Composition of table wines. Alcoholic fermentation. Propagation of fermentations. Appendices. Basic and reference tables. General references and citations. Index. List of illustrations. List of tables.

Note: An inclusive survey of good practices. It is addressed particularly to managers, chemists, and other technicians associated with the table wines industry in the state of California. However, most of the information presented is applicable also to wineries in other regions. Typical equipment is described and illustrated, but this phase of the subject is not covered comprehensively. The text is supplemented by 38 tables of reference data and a 17-page international bibliography.

AMERINE, MAYNARD ANDREW, AND LOUISE B WHEELER

A check list of books and pamphlets on grapes and wine and related subjects, 1938–1948. Berkeley and Los Angeles University of California Press, 1951 240 p. 24 cm. $5.00. 2550

Contents: Check list. Addendum. Subject index. Index of authors, editors, and translators not alphabetically listed. Index of country or state of publication. Bibliography.

Note: A comprehensive bibliography within the decade covered. It is international in scope and includes both books, pamphlets, and government publications but not articles in journals, except in instances where an article was also issued separately. The main arrangement is alphabetical by name of author.

ASSOCIATION OF FOOD INDUSTRY SANITARIANS INC.

Sanitation for the food-preservation industries. Prepared by the Association of Food Industry Sanitarians, Inc. in cooperation with the National Canners Association. Editorial committee Stephen M. Anderson and others. New York McGraw-Hill Book Company, Inc. 1952 284 p. illus. 24 cm. (McGraw-Hill series in food technology editor Frank K. Lawler) $5.30. 2551

Contents: Organization of the sanitation program. Inspection techniques. Housekeeping. Animal and bird pests. Insect pests. Sanitary significance of microorganisms. Water supply. Construction and maintenance of buildings and equipment. Cleaning. Chlorination. Employee facilities and industrial hygiene. Feeding and housing of employees. Waste treatment and disposal. Laboratory aids. Glossary of terms. Index.

Note: An officially sponsored manual which makes available practical information on efficient methods of establishing and maintaining optimum conditions of cleanliness in plants devoted to the canning, freezing, and dehydrating of foods. Organized in a modified outline form and written in simple language, it can be comprehended by anyone with a secondary school education. On the other hand, its scope is sufficiently broad to make it useful to management personnel as well as to workers. Literature references are included.

AVERY, ARTHUR C.

Fish processing handbook for the Philippines. Drawings by Pio Medel. Washington,

D C. Government Printing Office, 1950 149 p. illus. 23 cm. (United States. Department of the Interior Fish and Wildlife Service. Research report 26) Paper $0.50 2552

Contents: Introduction. Handling fresh fish. Freezing. Salting. Drying. Smoking. Miscellaneous preserving methods. Canning. Home canning of species that are seldom canned. Spoilage of fish and fish products. Reference data for fish processors. Bibliography

Note. This handbook for fish processing was prepared for use in the Philippines, where fish is second only to rice as the most important food. *It contains reliable information for both home and* commercial processors. It covers the handling of fresh fish, the various methods of preserving fish, and the spoilage of fish and fish products. It gives step-by-step descriptions of Philippine fish preserving methods, with suggestions on improving them and of methods used in other parts of the world which have been adapted for Philippine use by Philippine Fishery Program of the Fish and Wildlife Service. Much of the information in the handbook was taken from data collected by the former Philippine Bureau of Science. Included are tables of useful data for fish processors and drawings of common species of Philippine fish.

FRANDSEN JULIUS HERMAN, AND D HORACE NELSON

Ice creams and other frozen desserts. Amherst, Mass. J H. Frandsen 1950 318 p. illus. 24 cm. $5.25 2553

Contents: History development, and importance of the ice cream industry Food value of ice cream. Classification of ice creams, sherbets, and ices. Composition and properties. Ice cream ingredients. Stabilizers and emulsifiers. Flavoring and coloring materials. Calculation of ice cream mixes. Restandardizing and calculating some unusual mixes. Calculating cost of mixes, amount of materials per cent overrun, etc. Making and processing the mix. The freezing process. Packaging, hardening, and shipping. High fat and high serum solids ice cream. Ices and sherbets. Fancy molded ice creams, novelties, and specialties. List of formulas. Defects, scoring, and grading. Sanitation. Refrigeration. Some laboratory tests often used in ice cream plants. Sales outlets. Formulas for soda fountain use. Reference material. Index.

Note: A manual of the commercial manufacture of ice cream particularly as it is done in the U. S. A. Formulas are included for variety of flavors of standard ice creams and also for novelty types such as spumoni, fruit salad, sherbet, and water ice. Also there are formulas for syrups and toppings used in making the ice cream dishes and drinks that are sold at soda fountains. Soda fountain recipes are included because many manufacturers of ice cream maintain such retail outlets. The authors are members of the faculty of the University of Massachusetts.

HUGHES OSEE

Introductory foods. Revised edition. New York The Macmillan Company 1949 575 p illus. 22 cm. $4 50 2554

Contents: Introduction. Fruits and fruit preparation. Vegetables and vegetable preparation. Milk and milk products other than butter and ice cream. Eggs and egg cookery Meats and meat cookery Frosted foods. Carbohydrates and carbohydrate cookery Beverages. Fats and oils. Salads and salad dressings. Gelatin. Freezing and frozen desserts. Batters and doughs. Food preservation. Meal planning. Meal service. Appendices. Index.

Note. (4563) A standard textbook designed for use in introductory courses offered by college departments of home economics. The various classes of foods are described with emphasis on their nutritive values. Basic food preparation and preservation techniques are discussed. Much information that is generally useful in buying and preparing food is included. The first edition appeared in 1940. This edition has been much revised and sections such as that on food preservation have been considerably expanded.

HUNZIKER, OTTO FREDERICK

Condensed milk and milk powder Prepared for factory school and laboratory Seventh edition, completely revised. La Grange, Illinois O F Hunziker 1949 630 p. illus. 24 cm. $7.00 2555

Contents (abridged): Chemical composition and reaction of milk. Physical properties of milk. The milk condensary Thermodynamics of milk condensing. Description of the vacuum pan. Steam requirements for forewarming and condensing. Factory sanitation. Quality of milk supply and its control. Sweetened condensed milk Definition, intake and standardization. Condensing the milk. Sweetened condensed skim milk—condensed whey Packaging. Evaporated milk: Inspection, standardizing and forewarming. Irradiation, fortification, homogenization. Cooling, standardizing, canning. Sterility and heat stability Viscosity color, flavor mineral deposits. Plain, superheated, frozen condensed milk. Concentrated buttermilk, sour skim milk. Sterilized sweet milk and sweet cream. Composition and formula of concentrated milks. Concentrated milk defects. The dried milk industry: *Milk drying systems. Thermodynamic and engineering aspects.* Manufacture of dried whole milk. Manufacture of dried buttermilk. Manufacture of dried whey Manufacture of dried malted milk—dried ice cream—dehydrated sweetened condensed milk. Yield, composition, properties of dried milks. Keeping qualities of dried milks. Vitamins in milk and milk products. Manufacture of milk sugar of commerce. *Factory tests and analyses.* Index.

Note: (5007a) As in previous editions, this volume presents the latest available information on apparatus and processes that will be of interest to advanced students, research workers, and plant managers concerned with large-scale commercial dairy operations. Numerous illustrations of equipment are again included and the statistical data and official standards have been revised through 1948. The material is based on the author's own experience and on review of the literature of the subject, and in this revision more than 600 references to world literature are provided.

JACOBS, MORRIS BORIS

The chemical analysis of foods and food products. Second edition. New York D Van Nostrand Company Inc. 1951 902 p. illus. 23 cm. $9 00 2556

Contents: General methods. Physical chemical methods. Coloring matters in foods. Chemical preservatives in foods. Metals in foods. Chemical food poisoning. Milk and cream. Milk products. Oils and fats. Sugar foods and carbohydrates. Gums, cereals, starch, other polysaccharides, flour and bread. Jams, jellies, and fruits. Vegetable products. Spices, flavors, and condiments. Nonalcoholic beverages and allied products. Meat, meat products, fish, and eggs. Vitamins. Inorganic determinations. Flavor and quality measurement. Filth and decomposition in foods. Field tests. Appendix. Subject index.

Note. (4544) The new edition of this well known work, like the first, is designed for food chemists, food technologists, public-health workers, and others concerned with the purity composition, processing, and dietary value of food products. It contains precise descriptions of commercial food products and provides detailed procedures for their analysis. The general arrangement of the earlier edition has been retained, but the scope has been broadened to cover problems in toxicology. Chapters have been added on chemical food poisoning, flavor and quality measurement, and filth and decomposition in food; and the sections on coloring matter, milk products, and vitamins have been doubled in length.

JACOBS MORRIS BORIS editor

The chemistry and technology of food and food products. Second completely revised and augmented edition, prepared by a group of specialists under the editorship of Morris B Jacobs. New York Interscience Publishers, Inc. 1951 3 v 24 cm. Vol. I, $12.00 Vol. II, $15.00 Vol. III, $15.00. 2557

Contents Volume Part I, Fundamentals: Introduction, by M. B. Jacobs. Physical chemistry of foods, by M. B. Jacobs. The carbohydrates, by E. F. Degering. Lipids, by W. O. Lundberg. Proteins and amino acids of food products, by L. M. Thomas. Enzymes, by M. B. Jacobs. Vitamins, vitagens, and hormones, by H. R. Rosenberg. Mineral matters and other inorganic food adjuncts, by E. H. Carr. Coloring matters in foods, by C. F. Jablonski. Digestion and fate of foodstuffs, by A. E. Wilhelmi. Food spoilage and food poisoning, by H. O. Halvorson. Part II, Unit operations and processes, by K. M. Garst. Part III, Sanitary and quality control. Food supervision and grading, by W F Reindollar. Instruments in the food plant, by M. B. Jacobs. Food sanitation, by A. E. Abrahamson. Washing, detergency, sanitation, and plant housekeeping, by J L. Wilson. Insect and fungus control in food processing, by H. H. Shepard. Domestic rodent control, by H. H. Shepard. Abridged index to volume I. Volume II. Part IV Foods: Milk, cream, and dairy products, by M. B. Jacobs. Meat and meat products, by W M. Urbain. Fish, shellfish, and crustacea (part I) by M. E.

Stansby Poultry and eggs, by M. E. Pennington. Cereal grains, by W F Geddes. Edible fats and oils, by C. E. McMichael and A. E. Bailey Baking and bakery products, by W H. Cathcart. Vegetables and mushrooms, by F A. Lee. Fruits and nuts, by F A. Lee. Carbohydrates and sugar foods, by R. F Doggett. Confectionery and cocoa products, by M. Schoen. Coffee and tea, by W H. Ukers and S. C. Prescott. Flavors, spices, condiments, and essential oils—Part I, Flavors, spices, and condiments, by L. Worrell. Part II, Essential oils, by M. B. Jacobs. Abridged index to volume II. Volume III Part Preservation: The dehydration of foods, by E. M. Mrak and G. Mackinney Food preservation by temperature control, by M. E. Pennington and D. K. Tressler. Preservation of food in hermetically sealed containers, by O. B. Williams. Food preservation by use of microorganisms, by F W Fabian. Chemical preservatives, by M. B. Jacobs. Packaging, by C. W Browne. Part VI, Production: Technology of cereal grains, by W F Geddes. The production of bread and bakery products, by W H. Cathcart. Sugars and sirups, by G. P Meade. Confectionery and cocoa products, by M. Schoen. The manufacture of chewing gum, by M. B. Jacobs. Fruit juices, jams, jellies, and preserves, by A. M. Neubert and J. L. St. John. Milk and milk products, by P Corash. Meat and meat products, by W M. Urbain. Fish, shellfish and crustacea (part II) by M. E. Stansby Oils, fats, and related products, by C. E. McMichael and A. E. Bailey Enzymes in food processing, by M. B. Jacobs. Carbonated nonalcoholic beverages, by M. B. Jacobs. Alcoholic beverages, by P Valaer. Industrial waters, by F C. Nachod and E. Mendell. Cumulative index to volumes I-III.

Note: (4845) An encyclopedic work of interest not only to chemists and other technical specialists associated with the food processing industries, but also to specialists in nutrition, public health, etc. Each of the chapters is essentially monographic survey and is accompanied by extensive literature references. The chapters on instruments in food plants, edible fats and oils, chewing gum, and enzymes in food processing have been added in the present edition. The chapters carried over from the previous edition have been very extensively revised and in some cases are signed with the names of new contributors.

JARVIS NORMAN DONALD

Curing of fishery products. Washington, D C. Government Printing Office, 1950. 271 p. illus. 23 cm. (United States. Department of the Interior Fish and Wildlife Service. Research report 18) Paper $0 60. 2558

Contents: Importance of fish curing in the history of the United States. Statistical review of the fish curing industry Preservative action in fish curing. Air dried fishery products. Dehydration of fish. Principles of fish salting. Dry salting cod. Dry salt cod—foreign cures. Spoilage in dry salt cod and other cured fish. Miscellaneous dry salt fish. Dry salting fish in warm climates. Miscellaneous brine-packed fish. Herring salting. Salmon salting. Spiced and pickled fish. Caviar and other fish roe products Smoking fish. Herring smoking. Salmon smoking. Smoked haddock and other groundfish. Miscellaneous fish smoking. Delicatessen products. Literature cited. Index.

Note: This report covers the techniques of all methods of fish preservation except refrigeration and canning. In it are described the methods employed of curing certain types of fish in England, Scotland, and Norway in addition to current American methods. It is published as handbook and guide to persons and firms connected or concerned with the fish-curing industry Interest in the subject stems from the fact that curing does not require the equipment or capital needed for canning or freezing.

JENSEN LLOYD BRYAN

Meat and meat foods processing and preservation from meat plant to consumer New York The Ronald Press Company 1949 218 p. illus. 22 cm. $3 75 2559

Contents: The rise of applied science in the preservation of meat. Processing of fresh meats. Freezing of fresh meats and freezer storage. Curing of meats. Effects of bacterial action. Special microbiological problems. Home—curing and smoking procedures. Production of bacon. Preservation and curing of beef. Preparation and protection of table-ready meats (sausage) Processing and care of canned meats. Storage and handling of meats by retailers and consumers. Meat cookery and meat in the diet. Bacterial food poisoning. Appendix—Historical notes on the use of meat as food. Bibliography: Historical references. Technological references. Index.

Note: The many technical processes which are employed in preparing and preserving meat from the time the animals are slaughtered until the edible products reach the consumer's table are recounted in this book, which is suitable for use as textbook or reference book by such groups as home economics students, public health workers and persons in the retail food business. The bacteriological aspects are emphasized, but there is also much information on other aspects such as the role of meat in the diet. The author is Chief Bacteriologist for Swift and Co.

JOSLYN, MAYNARD ALEXANDER

Methods in food analysis applied to plant products. New York Academic Press Inc., 1950. 525 p. illus. 23 cm. $8.50 2560

Contents (abridged) Statistical analysis, errors, expression of results. Sampling. Moisture content and total solids. Ash content and ashing procedures. Extraction methods and separation processes. Densimetric methods. Refractometric methods. Polarimetry and saccharimetry Colorimetry and spectrophotometry Potentiometric and related methods. pH and buffer capacity Viscosimetric and other physical methods. Acidimetry Alcoholometry Carbohydrates. Pectins and pentosans. Tannins. Organic nitrogenous compounds. Index.

Note A work in which basic physical and chemical principles and techniques, rather than specific laboratory procedures, are discussed. Also the author has assumed that his readers will be concerned more with the estimation and control of the quality of food products than with the detection of adulteration. The book is addressed to upper-class and graduate college students who understand the principles and techniques of qualitative and quantitative analysis. It is written in the style of monograph with keyed references from the text to extensive bibliographies. For chemists already at work in the field, especially those concerned with manufacturing, it should prove useful survey of applicable techniques and guide to the literature.

MARKLEY KLARE STEPHEN, editor

Soybeans and soybean products. New York Interscience Publishers, Inc., 1951 1145 p. 2 v illus. 24 cm. (Fats and oils a series of monographs on the chemistry and technology of fats, oils, and related products, Editorial board A. E. Bailey and others) $11 00 per volume. 2561

Contents: Vol. Production History of soybean production, by W J. Morse. World soybean production and trade, by E. L. Burtis. Structure and composition Structure and genetic characteristics of the soybean, by L. F Williams. Chemical composition of soybean seed, by W J. Morse. Chemical composition of soybean oil, by R. F Dunbert. Chemical characteristics of soybean oil, by S. T Bauer Physical properties of soybean oil, by M. E. Jefferson. Proteins and other nitrogenous constituents, by S. J. Circle. Other constituents of the soybean, by R. F Dunbert. Nutritive factors in soybean products, by H. H. Mitchell. Processing: Grading and evaluation of soybeans and derived products, by E. Freyer Handling and storage of soybeans, by L. R. Holmes. Biological processes in stored soybeans, by M. Milner. Mechanical processing of soybeans, by L. F Langhurst. Vol. II. Solvent extraction processes, by L. F Langhurst. Utilization of soybean products: Production and utilization of lecithin, by J. Stanley Processing of edible soybean oil, by J W Bodman and others. Nutritional value of soybeans and soybean products, by H. J. Deuel, Jr. Edible soybean oil products, by H. C. Black and K. F Mattil Soybean oil by-products, by R. W Lehmann and M. D. Embree. Nonedible soybean oil products, by T F Bradley Soybean oil meal for livestock and poultry by J W Hayward. Soybean protein food products, by R. S. Burnett. Soybean protein industrial products, by R. S. Burnett. Other soybean products, by J. M. Smith and F O. Van Duyne. Author index, volume II. Subject index, volumes I-II.

Note: Each of the 25 monographs in this comprehensive work has been prepared by an expert, and is well documented with literature references. Although the levels of the monographs vary the work as whole is technical and is designed for professional workers in fields where knowledge of soybean processing or soybean products is essential.

MILLER, ALBERT RAUCH

Meat hygiene. Philadelphia Lea & Febiger 1951 420 p. illus. 24 cm. $7 50 2562

Contents: History Elements of meat hygiene. Ante-mortem inspection Post-mortem inspection. Trichinosis. Physical and chemical characteristics of meat and the principal organs. Facilities relating to sanitation in plant operation. Facilities for inspection. Materials added to meats. Preparation of meat and meat food products. Meat grading. Adulteration and misrepresentation. Deteriorative changes

in meat. Organized meat hygiene control. Appendix. Bibliography. Index.

Note: A college text and reference manual designed primarily for use by students of veterinary medicine and graduate veterinarians. It is useful also to public health officers and other persons who are concerned with the sanitary handling of meat. Although the inspection phase is emphasized, most of the processes involved in the slaughtering of animals and the processing of their meat are described in some detail, hence the book is also a description of meat packing as it is currently practiced in the United States of America. The author is Chief of the Federal Meat Inspection Service of the United States Department of Agriculture.

NEARING HELEN, AND SCOTT NEARING

The maple sugar book, being a plain practical account of the *art of sugaring* designed to promote an acquaintance with the *ancient* as well as the *modern* practise together with remarks on *pioneering* as a way of living in the twentieth century New York The John Day Company 1950 271 p. illus. 21 cm. $3 75 2563

Contents: Part I, Sugaring in the past: Sugar from trees. Indians, the first maple-sugar makers. The early settlers make syrup and sugar. Part II, Sugaring—its present practice: The sugar bush. Sugar tools and equipment. Maple sap and sap weather. Making maple syrup. Making maple sugar. Marketing maple products. Part III, A living from maple: Pioneers, [illegible] pioneers! The money in maple. A life as well as a living. Maple recipes. Notes. Bibliography. Index.

Note: An informal but nevertheless authentic monograph on syrup and sugar made from the sap of maple trees. It is based on both personal experience and library research and is carefully documented. The notes in the bibliography together occupy 16 pages. The descriptions of marketing practices and the data on prices refer particularly to the northeastern United States of America.

OWEN WILLIAM LUDWELL

The microbiology of sugars, syrups and molasses. A reference book for the raw sugar manufacturer or refiner and for all industries engaged in the manufacture storage or commercial utilization of sugars syrups and molasses. Published by Barr-Owen Research Enterprises. Minneapolis, Minn. Burgess Publishing Company 1949 275 p. illus. 22 cm. $5.00. 2564

Contents. Source of microorganisms in factory juices. The microbial flora of sugar cane and beet juices. Typical fermentations of cane and beet juices. Fermentation of diffusion juices from sugar beets. The appraisal of the microorganisms in cane juices and beet diffusion juices. The progressive decimation of microorganisms incident to the manufacturing process. The microbiology of syrups. The microbiology of raw sugars. The deterioration of blackstrap molasses in storage. Author index. Index.

Note. This publication brings together information from the voluminous literature on the microbiology of sugar and sugar products and provides for sugar technologists and other scientists interested in the subject a convenient source of references applicable to problems connected with fermentation in sugar manufacture and the deterioration of sugars or syrups and molasses. The last chapter, which covers the deterioration of blackstrap molasses in storage, deals with chemical rather than microbiological phenomena, but is included in the book because of the economic importance to the sugar industry of preventing this type of loss, for which microorganisms have sometimes been held responsible. The author is director of the William L. Owen Laboratories, Baton Rouge, and bacteriological consultant for a number of Louisiana industrial concerns, including sugar refineries.

PARKER, MILTON E. AND OTHERS

Elements of food engineering. By Milton E. Parker with the collaboration of Ellery H. Harvey and E S Stateler Volume one. New York Reinhold Publishing Corporation, 1952 386 p. illus. 24 cm. $8 75 2565

Contents: Engineering factors in food processing. Agricultural and nutritional aspects of food production. Foods and food processing. The food-processing industry. Refined food processing—wheat and corn flours—rice and oats milling—minor cereal flours—fats and oils—sugars, syrups, starches, and gums—food protein derivatives—spices, essential oils, condiments, and flavoring extracts—beverages and fermentation products—nuts.

Note. This is the first volume published of a projected three-volume treatise on the engineering aspects of present-day large-scale food processing. In this volume the treatment is largely descriptive. However the processes covered are described explicitly. The work is intended for study and reference use by college students who are preparing for technical positions in the food processing industries and by technical personnel already employed in these industries. The authors are all associated with the teaching of food engineering in the Illinois Institute of Technology.

PYLER ERNST JOHN

Baking science and technology by E. J Pyler In collaboration with the staff of the Siebel Institute of Technology In two volumes. Chicago Ill Siebel Publishing Company 1952 2 v illus. 24 cm. $15 00. 2566

Contents (abridged): Volume I. Part I, Basic science: The carbohydrates. Fats and oils. The proteins. The enzymes. The vitamins. Yeast, molds and bacteria. Part II, Materials of baking: Wheat flour. Miscellaneous flours. Sugars and syrups. Plastic baking fats. Milk and milk products. Eggs and egg products. Bibliography I. Volume II. Part III, Baking technology: Dough mixing. Fermentation. Dough make-up. The baking process. Rye bread production. Physical and chemical testing methods. Part IV Aspects of cake baking: Cake ingredients. Flavor. Cake baking technology. Part V Bakery equipment: Flour handling equipment. Dough handling equipment. Ovens equipment. Cooling, slicing and wrapping equipment. Bakery sanitation. Appendix. Bibliography II. Subject index.

Note. A comprehensive account of the basic principles and processes underlying the baking industry and of the chief ingredients used. It is based on Siebel's *Manual for bakers and millers*, 1924, but the material has been so thoroughly revised and amplified as to constitute a new work. Emphasis is placed on bread making, but other types of baking are also discussed from the point of view of the chemical reactions involved, the quality and properties of the ingredients, and the equipment and techniques employed. Numerous photographs of bakery equipment and an extensive bibliography are included.

STORCK, JOHN AND WALTER DORWIN TEAGUE

Flour for man's bread a history of milling. Illustrated by Harold Rydell. Minneapolis University of Minnesota Press, 1952 382 p. illus. 27 cm. $7.50 2567

Contents: The line we shall follow. Diet makes the man. The grinding of wild grains begins. Grain cultivation begins. Farming and milling tools appear—and bread. The grain empires. Milling becomes a business. Water turns the millstones. Man masters the winds for milling. Man's new power resources. Milling comes to America. Oliver Evans invents the automatic mill. Westward led America. Automatic milling and the purifier start a revolution in American milling. Rollers and gradual reduction advance the milling revolution. The automatic all-roller gradual-reduction mill completes the revolution. The business side of milling gains importance. The modern mill and its flour. The new era of organization and research. Looking forward. Vocabulary of milling terms. References and notes. Index.

Note. A well-documented, popular history of the development of flour milling. The main theme is the chain of improvements in the technical processes from the earliest hand-stone methods to the highly mechanized, efficient, and sanitary modern mill. In the early chapters, where the authors have leaned heavily on archaeological records of early civilizations, the account has a decided each[illegible]. In the later chapters there is more emphasis on major inventions and the contributions of prominent millers. Also, there are frequent mentions of the names of large milling companies in the United States of America. The book is an outgrowth of a [illegible] project, hence liberal use is made of illustrated matter including not only pictures but also flow charts and maps. The "References and notes" are arranged according to chapter and constitute a bibliography of source materials on flour milling.

TRESSLER, DONALD KITELEY, AND JAMES McW LEMON

Marine products of commerce, their acquisition, handling, biological aspects and the science and technology of their preparation and preservation. In collaboration with A. E. Alexander and others. Second edition revised and enlarged. New York Reinhold Publishing Corporation, 1951 782 p. illus. 24 cm. $18.00. 2568

Contents (abridged) The ocean, its potentialities and products. Salt from sea water. Magnesium, bromine and other products from sea water. The red algae of economic importance. The brown algae. The precious coral industry. Economic importance of the world's fisheries. American fishing gear and fishery methods. Fish and shellfish as food. Refrigeration and freezing of fish. The principles of fish salting. Canning of fish and fish products. Fish meal and oil. Fish liver oils. Fish glue and isinglass. Manufacture of leather from marine sources. The oyster industry of the world. The clam industry of the United States. The American shrimp industry. The lobster fishery. Marine turtles and terrapins. The whaling industry. Seal fisheries. Commercial sponges. Index.

Note: A cyclopedic reference book that is unique in its field. The first edition was published in 1923. The viewpoint and scope of the present edition are essentially the same as the first but the contents of the book are new. Under chapter titles, such as are given above, both economic and technical information are presented. The chapters are supplemented by bibliographies that include the periodical and patent literature.

VALAER, PETER

Wines of the world. New York Abelard Press, 1950 576 p. 22 cm. $6.50 2569

Contents (abridged) Grapes for the world's winemaking. Wine types. Sherry wine. Port wine. Madeira wine. Champagne and other sparkling wines. Vermouth. Blackberry and other berry wines. Raisin wine and raisins. Apple wine and apple juice. Honey wine. Wine production in the United States. California's wine areas. Winemaking in New York State. Wines of other lands. Acids and their significance in wines. Use of pure yeast cultures, sulfur dioxide, and temperature control in wineries. Cellar treatment of wines. Grape concentrates and other concentrates used for winemaking. Methods of analysis of wines. Selective bibliography of wine. Analyses of wine. Index.

Note: Although this is a general book on wines, there is considerable emphasis on the technology of winemaking. The inclusion of technical aspects is obvious from the titles of some of the chapters, but even in titles such as "Wines of other lands" there is some discussion of technical matters. The book is of interest to wine consumers and also to persons associated with the wine trade. The bibliography was compiled by the Wine Institute, and it includes both books and articles. In the final chapter detailed chemical analyses of a wide range of wines are presented. The author has been associated with the United States Bureau of Internal Revenue as a specialist in wines for many years.

VAN HOOK, ANDREW

Sugar its production, technology, and uses. New York The Ronald Press Company 1949 155 p. illus. 22 cm. (A volume of the Humanizing science series edited by Jaques Cattell) $3.00. 2570

Contents: Sugar and the sugars. Production—cane. Production—beet. Commercial and trade aspects. By-products: recent and anticipated developments. History. Index.

Note: This book brings together in readable form, with suitable illustrations, the essential facts about the growing, processing, and refining of sugar, the scientific basis of its technology its uses, both present and potential, and a brief history of sugar from ancient times to the present day. It is especially suited for those outside the sugar industry who want or need a well-rounded picture of the sugar industry and its background.

VON LOESECKE, HARRY WILLARD

Bananas chemistry physiology, technology Second revised edition. New York Interscience Publishers, Inc., 1950. 189 p. illus. (part col d) 22 cm. (Economic crops. A series of monographs on the chemistry, physiology and technology of food and food products, Z. I Kertesz, editor Vol. I) $5.00 2571

Contents: History and growth of the trade. Structure and development. Commercial storage and ripening methods. Chemical changes during ripening. Transportation of bananas. Banana products. Nutritive value in health and disease. Diseases and insect pests of bananas. World banana production and trade. Author index. Subject index.

Note: An inclusive survey of economic, horticultural, and nutritional information on one of the world's most important fruits. The treatment of most topics is brief; for instance, there are only three pages on insect pests. On the other hand, abundant literature references are given, there being nearly 400 such in the book. Topics related to marketing, for example ripening methods, are treated more fully but even in these parts only the main facts are outlined.

VON LOESECKE, HARRY WILLARD

Outlines of food technology Second edition. New York Reinhold Publishing Corporation, 1949 585 p. illus. 24 cm. $7.50. 2572

Contents: The tin can and the glass container. Fruits and their products. Preservation of vegetables. Dairy products. Meat, meat products and poultry. Fish and shellfish. Grains and their products. Edible fats and oils. Sugars and starches. Nuts. Spices, relishes, essential oils and extracts. Beverages. Confectionery. Jams, jellies and preserves, certified dyes. Storage and marketing of fruits and vegetables. Preservation of foods by freezing. Index.

Note: (4580) As the title implies, this book is a general survey of food products and present-day food processing. It is not, however a popularization but is suited to such readers as college students, grocers, and workers in the food-processing industries. It is suitable also as a reference book in libraries. In its new edition it is 80 pages longer. The new and revised material appears throughout and relates both to food products not mentioned in the first edition and to new developments in processing. Both the footnote references to related literature and the helpful lists of suggested readings have been revised.

ZIEGLER, PERCIVAL THOMAS

The meat we eat. Third edition. Danville, Illinois The Interstate, 1952 511 p illus. 24 cm. $3.50 2573

Contents (abridged) Part one. Federal and state meat inspection. Hog slaughter. Cattle slaughter. Lamb slaughter. Veal and calf slaughter. Packing house by-products. The preservation, smoking and storing of meats. Cold storage and refrigerated food lockers. Dressing poultry and game. Part two. Meat as a food. Federal meat grading. Cutting pork and rendering lard. Sausages. The beef carcass and its cuts. The veal carcass and its cuts. The sheep carcass. Meat judging. Meats identification. Appendix: Organizations that promote meat. Index.

Note: A practical manual in which most of the space is given to descriptions of slaughtering methods adaptable to farms and small slaughter houses and to the preparation of meat for use as human food. Such techniques as the slaughtering of hogs and the cutting up of the carcass are described very specifically. Related matters, such as the value of meat as food and governmental grading and inspection of meat, are discussed more briefly. There are more than 240 figures, a majority of which are reproductions of photographs of slaughtering and cutting-up operations. Selected literature references are included.

MISCELLANEOUS TECHNOLOGY

GENERAL

BARR, W E, AND VICTOR J ANHORN
Scientific and industrial glass blowing and laboratory techniques. Pittsburgh Instruments Publishing Company 1949 388 p illus. 21 cm. $6 00 2574

Contents. Introduction Elementary glass blowing seals. The fabrication of multiple glass seals. Tube bends. Spirals. Closed glass tubing circuits Ground surfaces for glass apparatus. Glass to metal seals. Production of high vacuum. Vacuum gages. High vacuum technique in equipment production. Gas adsorption apparatus for measuring surface area. The modified Mascarin-Wright molecular weight apparatus. Swietoslawski ebulliometers. Design and construction of distillation equipment. Index

Note: Here is manual of glass-blowing techniques and related information which is written on professional level. Although it contains information which is of value to students, it is intended chiefly for research workers who must design and sometimes build glass apparatus in the course of their laboratory experiments. The text is concise and clear, and is supplemented by over 300 illustrations of glass-blowing tools, operations and, also, advanced apparatus such as mercury diffusion pumps. Many of the chapters include lengthy lists of references to related literature.

DELMONTE, JOHN
Plastics molding. New York John Wiley & Sons, Inc., 1952 493 p illus. 24 cm. $9 00 2575

Contents: Introduction to plastics molding materials. Hydraulic pumps for molding presses. Mechanical pressure systems. Hydraulic accumulators and packings. Valves for the molding plant. Distribution of gases and fluids. Heat for the molding of plastics. Material preparatory equipment Compression and transfer molding equipment. Design of compression and transfer molds. Injection molding machines. Design features of injection molds. Extrusion equipment for plastics materials. Finishing accessories for the plastics molding plant. Instrumentation for the molding plant. Plant layout Author index. Subject index.

Note: A thorough book on the plant and equipment aspects of the plastics molding industry In most of the chapters particular process is described concisely then the machines and equipment for carrying out the process are discussed. However the emphasis is on principles and uses and the author does not attempt to describe all available machines. Such topics as molds are discussed from the engineering and design viewpoints. The book is of interest to trained engineers concerned either with the organization of plastics molding plants or with their management

HODGEN MARGARET T
Change and history a study of the dated distributions of technological innovations in England. New York Wenner-Gren Foundation for Anthropological Research, Inc., 1952 324 p illus. 25 cm. $4.50 (Viking Fund publications in anthropology No 18) 2576

Contents: The problem of change in the social studies. The historical investigation of dated innovations. Dated distributions of technological innovations. On innovators. Distributions and processes. Technological innovations and migrations Appendix.

Note: This book is based on study carried out to find the answers to such questions as "where during the long British past have technological changes taken place? Among what groups, in what communities, or at what sites and at what dates have the folk displayed technological initiative? What geographical differences in the acceptance of new handicrafts are to be observed between historic Britons and their prehistoric forbears, or among Britons at different historical periods?" About half of the space is devoted to tabulated information on the introduction of crafts such as woolen cloth making, copper mining, and oil engine making into various shires and parishes. The period covered is approximately 1000-1800. Literature references are given. The work is of interest both to the scholarly student of the history of technology and to the student of sociology

SEAMAN ROBERT G, AND ARTHUR M MERRILL editors
Machinery and equipment for rubber and plastics. Volume 1. Primary machinery and equipment. New York India Rubber World, 1952 804 p. illus. 24 cm. $15.00 2577

Contents (abridged) Mills. Mill accessories. Mixers. Calenders and accessories. Extruders. Extruder accessories. Presses, compression. Press accessories. Presses, injection. Molds and mold accessories. Tub coating and handling equipment. Pressure vessels. Heater dryers, and coolers. Tire and tube machinery Hose and belting machinery. Footwear machinery Wire and cable machinery Sole and heel machinery Latex machinery Special plastics machinery Appendix. Index.

Note The first volume published of projected two-volume work. It contains signed articles in which kinds of machines are discussed from the standpoint of their characteristics and usual applications, descriptions of the machines offered by various manufacturers in the United States of America are given, and few advertisements included. In this first volume there are 24 of the signed general articles bearing such titles as "Extrusion and applications of extruders, and "Hard chromium plating of plastic and rubber molds.

SIMONDS HERBERT RUMSEY AND OTHERS
Extrusion of plastics rubber and metals. By Herbert R. Simonds, Archie J Weith and William Schack. New York Reinhold Publishing Corporation 1952 454 p. illus. 24 cm. $10.00. 2578

Contents (abridged) Part 1, Extrusion of plastics: The plastics extrusion industry. Custom extruders. Plastic materials for extrusion. Equipment for plastics extrusion. Theoretical aspects. Conditions. Instrumentation. Mixing of compounds. Design and use of dies. Plastic coatings on filaments Shapes and tubes. Sheeting and films. Extrusion of rubber, metal and wire and other products. Part II, Extrusion of miscellaneous materials. Appendix: Glossary Manufacturers of extrusion equipment. Tables and traded products. Manufacturers of conversion factors. General index.

Note A practical survey of extrudable materials and extrusion processes. It is devoted mainly to the extrusion of synthetic plastic materials, but other materials are included as indicated in the title. It is intended for production engineers and others with practical interests in the subject. There are many tables of engineering data, and the numerous illustrations include photographs of extrusion equipment and operations. Possibly because the book is based primarily on survey of current industrial practices, literature references have been omitted.

RAILROAD OPERATION

BRUCE ALFRED W
The steam locomotive in America its development in the twentieth century New

York W W Norton & Company, Inc., 1952 443 p. illus. 24 cm. $7 50. 2579

Contents: Railways, railroads, and locomotives. Early development of the steam locomotive. The steam locomotive industry. General development of the steam locomotive, 1901 to 1950. The basic development of power transmission, 1901 to 1950. Development of basic elements. Progressive development of individual types of steam locomotives. Development of special-service locomotives. Growth and development of the steam locomotive. The competitors of the steam locomotive. The future design of the steam locomotive. Résumé. Index.

Note: Although the sub-title of this book indicates limitation in time to the present century the earlier development of the steam locomotive from its beginnings to the close of the nineteenth century is adequately outlined. Beginning with 1900, the author gives a detailed account. His chapter on the development of basic elements is over 100 pages long; and in it he has described fully the evolution of such parts of the steam locomotive as the boiler mechanical stokers, grates, cylinders, valves, driving wheels, etc. Inserted pages near the center of the volume contain reproductions of photographs of 144 typical locomotives, and legends under the photographs supply technical details. There is no bibliography. The book is based primarily on the author's life-long experience in the engineering of

McGowan George F

Diesel-electric locomotive handbook—electrical equipment. New York Simmons-Boardman Publishing Corporation, 1951 290 p. illus. 21 cm. $4 95 2580

Contents: The electric transmission. Electrical fundamentals. The electric generator. The traction motor. Exciters, auxiliary generators, motor blowers, dynamic braking. Batteries. Contactors, etc. Electro-motive division electrical equipment. Alco-General Electric electrical equipment. Lima-Hamilton locomotive electrical equipment. Baldwin Locomotive electrical equipment. Fairbanks, Morse electrical equipment. Index.

—— Diesel-electric locomotive handbook—mechanical equipment. New York Simmons-Boardman Publishing Corporation 1951 262 p. illus. 21 cm. $4 95 2581

Contents: The development of the Diesel-electric locomotive. Fundamentals. Lubricating and cooling. Fuel systems—fuel. Pistons, piston rings, liners. Connecting rods, bearings, crankshafts. Valves, timing, heads. Governors. The steam generator. The air compressor. The American Locomotive Company Diesel engine. The Baldwin Locomotive Diesel engine. The electro-motive Diesel engine. The Fairbanks-Morse Diesel engine. The Lima-Hamilton Diesel engine. The gas-turbine locomotive. Index.

Note: Practical books suitable for use in home study by operating and maintenance personnel, especially those preparing to take qualifying examinations for more responsible positions. They are organized in short paragraphs, each of which is introduced by a caption in heavy type. Other aids to facilitate study are a liberal number of good illustrations and numerous electric circuit diagrams. According to the preface the chapters devoted to specific locomotives have been thoroughly checked for accuracy by the manufacturers.

Van Metre, Thurman William

Trains, tracks and travel. Eighth edition. New York Simmons Boardman Publishing Corporation, 1950 432 p. illus 24 cm. $4.95 2582

Contents: Clearing the way. Our steam railroads. The railroad track. The steam locomotive. The challenge to steam. Freight cars. Passenger train cars. Streamliners on parade. Passenger stations and terminals. Freight terminals. The operation of trains. Railroads and national security. Index.

Note: (2163) An expertly written, popular account of American railroads, their history rolling equipment, and operation. It appeals to young people, railroad fans, and general readers. The first edition was published in 1924, and the successive editions portray gradual but major evolution in the equipment of American railroads. In the present edition—which is only nine pages longer than the preceding one—revisions have been made in several chapters. The major change is the rewriting of the final chapter, but new statistical information and new descriptions of equipment have been inserted in several others.

PAPER

American Paper and Pulp Association

The dictionary of paper including pulps boards paper properties and related paper making terms. Second edition. New York American Paper and Pulp Association 1951 393 p. 24 cm. $6 50. 2583

Contents: Philosophy of definitions. Classification and definitions of pulps. Classification of waste materials used in the paper and board industries. Definitions of papers, boards, and papermaking terms. Bibliography.

Note: (4426) More than 2000 terms employed in the various branches of the paper industry are defined in this semi-official work. The definitions, though prepared by experts in the field, are designed for use by both laymen and technically trained readers. As in the previous edition, the majority of the terms refer to types of paper and include concise information on methods of manufacture, history [illegible], uses, and properties. The changes made in this revision are of minor nature and include an expansion of the introductory chapters on pulps and waste materials, the insertion of some new terms, and revision of the two page bibliography.

Casey James P

Pulp and paper chemistry and chemical technology New York Interscience Publishers, Inc., 1952 2 v illus. 24 cm. $15 00 per volume. 2584

Contents. Volume I, Pulping and papermaking: Cellulose and hemicelluloses. Lignin. Pulpwood. Pulping. Bleaching. Fiber preparation. Nature of fiber bonding. Sheet formation. Filling and loading. Internal sizing. Surface sizing. Wet strength. Coloring. Microbiology. Water. Author index. Subject index. Vol. II, Properties of paper and converting: Properties of paper. Use of statistics in the paper industry. Pigment coating. Printing. Laminating and pasting. Internal treatment of paper with resinous materials. Coating with resinous materials. Resins. Capillary reading. Author index. Subject index.

Note: A comprehensive treatise in which papermaking is viewed as essentially a chemical process. However there is little in it of chemical theory. Instead the author has presented detailed information on the various processes that enter into the manufacture of pulp and paper, including only the strictly mechanical, on the physical and chemical properties of paper, the kinds and properties of paper coatings, etc. There are many hundreds of footnote references to the literature.

Graff John Henry

Microscopy of pulp and paper Appleton, Wisconsin The Institute of Paper Chemistry 1952 398 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. Number 177) Paper $15 00 2585

Note (4429) A bibliography which is complementary to the author's *Pulp and paper microscopy* issued by the same publisher in 1942. The arrangement is alphabetical by name of author and there are fully detailed author and subject indexes. Each entry is annotated. The international literature has been covered and the coverage is essentially complete through 1949. In addition some references have been added to material that appeared during 1950.

Joint Textbook Committee of the Paper Industry of the United States and Canada

Pulp and paper manufacture prepared under the direction of the Joint Executive Committee on Vocational Education representing the Pulp and Paper Industry of the United States and Canada. J Newell Stephenson, editor in-chief. New York. McGraw Hill Book Company Inc., 1950–51 2 v 24 cm. Vol. 1 $10.00 Vol. 2 $7.50. 2586

Contents: Volume I, Preparation & treatment of wood pulp: Structure and properties of pulpwood. Preparation of pulpwood. Manufacture of mechanical pulp. Manufacture of sulphite pulp. Manufacture of alkaline-process pulps. Treatment of pulp. Bleaching of wood pulps. Testing of wood pulp. Index. Volume II, Preparation of stock for paper making: Pulping of rag and other fibers. Wastepapers, board-stock preparation; deinking processes. Beating and refining. Fillers and loading. Sizing of paper. Paper coloring. Semichemical, high-yield chemical, and special groundwood pulping processes. Index.

Note: (4430b) *The manufacture of pulp and paper* prepared by the Joint Executive Committee of the Vocational Education Committee of the Pulp and Paper Industry of the United States and Canada, was published during 1921–23 in five volumes. During 1927–29 a second edition was issued of volumes 3, 4 and 5, and during 1937–39 a third edition of the same volumes appeared. The present work, of which the first two volumes are at hand, is an extensive revision and expansion of these three volumes. The text has not been so much rewritten as revised by interpolating and adding to the text of the third edition. Much new material including new tables and illustrations has been added. It is still intended for practical workers in pulp and paper manufacturing industries. Although designed both for school use and home study the treatment throughout is so authoritative and detailed that the work will amount to a comprehensive encyclopedia of pulp and paper manufacture. Beginning with this revision, the complete set will consist of four volumes, the present ones and others titled as follows: Vol. III, *Manufacture and testing of paper and board;* Vol. IV *Auxiliary paper mill equipment.*

MOSHER, ROBERT H., editor

Specialty papers their properties and applications. Prepared by a staff of specialists under the editorship of Robert H Mosher Brooklyn N Y Remsen Press 1950 520 p. illus. 23 cm. $10.00 2587

Contents (abridged) Gift wraps, fancy box and packaging papers, by R. H. Mosher. Decorative papers: Display papers and lamp shade stock, by R. H. Mosher Paper drapes, by J. C. Pickering, Jr. Wall papers, by R. Blakeslee. Functional and protective papers: Food packaging, by J J Austin. Metal parts wrappers, by R. H. Mosher. High-gloss specialty papers. Flint glazed papers, by R. Blount. Friction-glazed papers, by R. H Mosher Brush-enamel papers, by F C Hayward Miscellaneous decorative papers: Metallic coated papers, luminescent coated and printed papers, etc., by R. H. Mosher Miscellaneous functional papers Photosensitive papers, by C. E O. Thomas. Asphalt and waterproof papers, by M. L. Downs. Waxed papers, by A. M. Worthington. Gummed and specialty tapes and labels, by F W Farrell. Carbon papers, by R. R. Wienaga. Filters, by W H. Allen. Metal-foil papers, by J. H. Davies Glossary by R. H. Mosher. Index.

Note: Each chapter in this work contains information on the history, properties, uses, and manufacture of a specific type of specialty paper. Practically all of the chapters are accompanied by substantial bibliographies. The book appears to be the only full-scale treatment of the subject.

MOSHER, ROBERT H. editor

The technology of coated and processed papers. Prepared by a staff of specialists under the editorship of Robert H. Mosher New York Remsen Press Division, Chemical Publishing Co., Inc. 1952 733 p. illus 22 cm. $15 00 2588

Contents: Introduction, by R. H. Mosher Theory of high polymers and their application to the paper-converting industry by R. T Mesrow. Rheology of paper coatings and instruments for the measurement of their flow properties, by P Denny Water-soluble coatings, by R. H. Mosher Solvent coatings and solvent-recovery systems, by M. Brown. Water-dispersion coatings, by R. H. Mosher. Hot-melt coatings, by R. C. Miller Organosol and plastisol coatings, by J. M. Furness. Paper converting machinery by F W Egan Printing inks and printing processes, by R. H. Mosher. Adhesives and lamination processes, by F C Compton. Saturating agents and paper saturation, by W A Abramowitz and others. Machine production of printing papers and resin treated specialties, by R. H Mosher. The testing of raw stock, raw materials and specialty papers, by R. H. Mosher Index.

Note. A companion volume to R H. Mosher ed., *Specialty papers: their properties and applications,* described above. The title published first describes the papers themselves, and this one is devoted mainly to the technology of their manufacture. Each chapter is the work of a specialist associated with the paper converting industry or with a supplier to this industry and is accompanied by a bibliography A wide range of information on present-day materials and processes is presented. There are 103 tables of useful data and 130 figures. The editor is General Manager of the Mead Valley Coated Paper Company

WEST, CLARENCE JAY

Paper testing Second edition. Appleton, Wisconsin The Institute of Paper Chemistry 1949 182 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 139–144 June 1949) Paper $5 00. 2589

Contents: Introduction. General articles. Bending strength. Bursting strength. Compressibility Creasing quality Smoothness. Folding endurance. Stiffness, softness, rigidity Stress-strain properties. Stretch, elasticity Tearing strength. Tensile strength. Wet tensile strength. Author index. Patent index.

Note. A comprehensive listing of all the important articles relating to the methods of testing the strength of papers. The entries are annotated and grouped as indicated above. In this edition the number of references has been increased from 534 to 650.

WEST CLARENCE JAY

Pulping processes. Parts I–IV Appleton, Wisconsin The Institute of Paper Chemistry 1949–50 4 v 27 cm. (The Institute of Paper Chemistry Bibliographic series. Nos. 172–175) Paper $5.00 each. 2590

Contents (abridged) Part I, Nitric acid process. Part II, Chlorine process. Part III, Ammonia, magnesium, and sodium bases for sulfite pulping. Part IV Semichemical processes.

Note: An extensive bibliography of articles, books, and patents descriptive of the various types of pulping processes which have been studied experimentally or which are in actual commercial use. The entries are annotated and within each subgroup are arranged alphabetically by author Each volume includes patent and author indexes.

WEST CLARENCE JAY

Slime control and prevention. Appleton, Wisconsin The Institute of Paper Chemistry 1949 76 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 170) Paper $5 00. 2591

Note: A bibliography of periodical articles and manufacturers' literature on the control of slime in pulp and paper plants. References relating to the treatment of [illegible] water at the [illegible] of moist pulp are not included. The entries are annotated and arranged alphabetically by author.

WEST, CLARENCE JAY

Wet strength of paper Second edition. Appleton, Wisconsin The Institute of Paper Chemistry 1951 155 p. 27 cm. (The Institute of Paper Chemistry Bibliographic series. No. 168) Paper $5 00 2592

Note. A bibliography of books, articles and patents on the treatment of paper to give it wet strength and on the testing and uses of such paper. The entries are annotated. In this edition there are 391 references as compared with 177 in the first edition. An index to the listed patents is provided.

REFRACTORIES

AMERICAN IRON AND STEEL INSTITUTE

Refractories bibliography 1928–1947, inclusive. New York The Institute and the American Ceramic Society Columbus, Ohio. 2109 p. 28 cm. $15.00. 2593

Note: A major bibliography containing more than 11,000 references, almost all of which are accompanied by an abstract. The entries are arranged alphabetically by author; otherwise the book resembles *Chemical abstracts* in organization and style. The subject index is very detailed.

NORTON FREDERICK HARWOOD

Refractories. Third edition. New York McGraw Hill Book Company Inc., 1949 782 p. illus. (part col d) 24 cm. $10 00. 2594

Contents (abridged) Part I, Introduction Scope of the refractories industry in the United States. Literature on refractories. History of refractory development in the United States. Part II, Manufacture: Refractory raw materials. Molding methods. Drying. The firing of clay and other refractory materials. Kilns for burning refractories. Some special refractory materials. Part III, Properties: The fusion point of refractory materials and their equilibrium diagrams. Load bearing capacity of refractories. Spalling. Expansion and shrinkage. Sizes and tolerances. Miscellaneous properties of refractories. Part IV, Uses: Refractories in the iron and steel industry. Refractories in the generation of steam power. Refractories in use in nuclear power production. Refractories for gas-turbines and jet propulsion engines. Brickwork construction. Appendix: Reference tables. Index.

Note: (4443) A comprehensive treatment in which there is information on practically all aspects of the subject from the early history of the industry in the United States to probable future uses of refractories. It is designed primarily for engineers and other persons with technical education or experience. However some parts, especially those dealing with uses, are sufficiently non-technical to be useful to laymen who may need reference information. A considerable amount of material has been added to this edition, including chapters on refractories in nuclear power production and in gas turbines and jet propulsion engines. Statistical information and also the unusually extensive bibliographies have been brought down to date.

TEXTILES

MAUERSBERGER, HERBERT RICHARD, AND OTHERS

American handbook of synthetic textiles American synthetics handbook a practical text and reference book for the entire textile and related industries. By Herbert R. Mauersberger and twenty collaborators. Over 430 tables, charts, flowsheets, and illustrations. New York Textile Book Publishers, Inc., 1952 1216 p. illus. 20 cm. $10.80 2595

Contents: Historical background. Economics and statistical background, by S. B. Hunt. Preparation of cellulose. Cellulosic fiber yarn and tow processes. Manufacture of nylon yarns and staple. Manufacture of synthetic fibers, filaments and yarns (other than nylon). Processing of synthetic staple. Winding, coning and filling preparations. Warping and warp sizing. Throwing and twisting, by V. A. Schafer. Weaving of synthetic fabrics. Synthetic gray goods constructions. The manufacture of knit goods, by G. A. Urlaub. Dyeing of synthetics, by A. R. Macormac. Dye nomenclature, by A. R. Macormac. Synthetic piece goods printing, by H. P. Baumann. Finishing of synthetic fabrics, by L. Shapiro. Performance standards for rayon fabrics, by J. Labarthe, Jr. Identification of synthetic fibers by X-ray diffraction, by A. N. J. Heyn. Books, bibliographies and literature references. Appendix. Index.

Note: The first edition of useful reference book. It is addressed primarily to the personnel of the textile industry and is written largely in technical terminology. A very wide range of information is included, ranging from an outline of the historical development of synthetic fibers and textiles to formulas for use in the printing of piece goods. A number of chapters contain bibliographies in addition to the general bibliography at the end of the book. The volume in hand contains approximately 100 pages of advertising which are not included in the pagination given above.

MERRILL GILBERT ROSCOE AND OTHERS

American cotton handbook, a practical text and reference book for the entire cotton industry by Gilbert R. Merrill Alfred R. Macormac and Herbert R. Mauersberger Second revised edition. New York Textile Book Publishers, Inc., 1949 943 p. illus. 20 cm. $9.50. 2596

Contents: Historical background. Economic and statistical background of cotton growing and manufacturing, by J. R. Wallace. Cellulose and the cotton fiber. The cotton plant its cultivation and varieties. Ginning, classing and marketing. Opening and picking. Carding and combing. Drawing and roving operations. Standard and long draft spinning. *Winding and twisting. Spooling,* warping and slashing. Weaving of cotton gray goods. Knitgoods manufacture. Bleaching and processes preparatory to dyeing. Dyes and cotton dyeing. Printing piece goods. Cotton goods finishing. Physical testing of fibers, yarns and fabrics, by K. R. Schwarz. Chemical testing, by L. P Sheehan. Nomenclature of cotton dyes. *Bibliography* Subject index.

Note. A comprehensive technical and economic reference book. By far the greater portion of space is given to manufacturing processes. Substantial changes are made in preparing this edition. Several chapters which appeared in the first edition do not appear in this one. These include such useful chapters as the one on cotton gray goods construction, the one on the laundering of cotton materials, and the glossary of cotton terms. On the other hand, fuller treatments are now included of such operations as bleaching, dyeing, printing, and finishing. The most notable change is found in the bibliography which has been approximately tripled in number of entries.

SIU RALPH GUN HOY

Microbial decomposition of cellulose with special reference to cotton textiles. New York Reinhold Publishing Corporation 1951 531 p illus. 22 cm. $12.00. 2597

Contents Part A, Introduction Cellulose decomposition in nature. Part B, Structure and properties of cotton fabrics: Morphological, physical and chemical features of cotton fibers. Structural features of cotton fabrics. Part C, Causal organisms: Morphological and taxonomic aspects. Effect of nutritional and environmental factors on cellulolytic activity of microorganisms. Part D Mechanism of degradation. Gross attack on fabrics. Biochemical transformation of cellulose molecules. Part E, Methods of prevention. Theoretical considerations. Methods for testing microbiological resistance of cotton textiles. Prevention of microbiological damage by physical barriers. Prevention of microbiological damage by toxic inhibitors. Prevention of microbiological damage by chemical modification. Author index. Index of microorganisms. Subject index.

Note. A synthesis of scientific information on the deterioration and destruction of cellulosic materials by bacteria and fungi. The author's discussions of basic matters such as causal organisms are potentially of interest to anyone concerned with the topic but his "case histories" and his information on prevention of deterioration are largely restricted as the title indicates to cotton textiles. The heavy documentation is indicated by the fact that there are approximately 2,200 names in the author index. The author is Research Director of the Pioneering Research Laboratories of the U S. Army Quartermaster Corps.

SKINKLE, JOHN HENRY

Textile testing physical, chemical and microscopical. Second edition, revised and enlarged. Brooklyn N Y Chemical Publishing Co Inc., 1949 353 p illus 22 cm. $7 75 2598

Contents. Part I, Physical testing: Statistical analysis. Moisture determinations. Fiber testing. Yarn testing. Fabric testing; construction—properties dependent upon air space—water and fabric relationships—tactile and draping qualities (handle)—serviceability, wear. Abrasion. Strength and strength testing of fibers, yarns, and fabrics. Part II, Chemical testing: Introduction and general considerations. General and inorganic extraneous matter. Organic extraneous matter. Fiber mixtures. Swelling and damage in cellulose fibers. Damage to wool. Damage to silk. Part III, Microscopical testing: Identifications. Quantitative microscopical determinations. Index.

Note. In its second edition this useful manual has been enlarged by 61 pages and improved by thorough revisions of text and format. The most important addition is scheme of analysis to identify organic matter in finishing agents, in which the presence or absence of certain groups is determined first then each group is analyzed for its individual components. There are descriptions of various new instruments and tests, such as the A. S. T. M. test for measurement of absorption by spraying, drop penetration tests, and the drape meter developed by the A. A. T. C. C. The lists of references have been extended.

HANDICRAFTS

ATWATER, MARY MEIGS

The shuttle-craft book of American hand weaving being an account of the rise, development, eclipse, and modern revival of a national popular art, together with information of interest and value to collectors technical notes for the use of weavers & a large collection of historic patterns. With illustrations. Revised edition. New York The Macmillan Company 1951 341 p. illus. 23 cm. $5.50. 2599

Contents: Origins and development. Weaving heirlooms—the scope of this book. Beginner's problems. Design of the fabric. Choice of pattern and color. Setting up the loom. Adjustments, knots, the tie-up. Weaving. The plain weave. The twill weave. The four harness overshot weave. Additional four-harness weaves. The summer-and-winter weave. The "spot" or "Bronson" weave. Double-faced twill and damask. The double weave. Leno. Rug making. Pick-up weaving. Finishes. Index.

Note: This is the completely revised edition of a standard handbook on American weaving first published in 1928. It gives an account of the history of hand-weaving, its origin, development, decline, and modern revival. It also gives instructions for weaving and other information, including advice on the choice of looms and materials. Patterns for weaving are presented in technical diagrams and in photographic reproductions. Writing on the basis of long experience with the craft of hand-weaving, the author gives detailed directions for the fundamental processes, gives accounts of the weaves and patterns current in colonial North America, and supplies information on weaves from the southwestern United States, Mexico, Guatemala, and Peru. The author does not endeavor to cover Scandinavian weaving, tapestry weaving, draw-loom weaving, or fly-shuttle weaving. Although beginners without other instruction may find the work somewhat advanced, the book is to be recommended for any persons earnestly interested in the practice of hand-weaving.

BAXTER, WILLIAM THOMAS

Jewelry gem cutting and metalcraft. Third edition, revised and enlarged. New York Mc Graw Hill Book Company Inc. 1950 334 p. illus. 21 cm. $4.50 2600

Contents: Metalcraft. Jewelry making. The art of gem stone-cutting. Identification of gem stones and gem minerals. Dealers. Magazines devoted to mineralogy and gem cutting. Books of interest. Index.

Note: The techniques of jewelry making and gem cutting described in this volume are based on methods taught by the author in his classes at Woodrow Wilson High School, Washington, D. C. The material is thus written for the guidance of novices and amateur craftsmen. This revision follows the pattern set by the previous editions, and employs numerous photographs to supplement the detailed working instructions. New sections have been added on facet cutting of gem stones, centrifugal casting, and making spoon-handled forks and spoons. The list of equipment dealers and the brief bibliography have been brought up to date.

BLACK, MARY E

Key to weaving a textbook of hand-weaving techniques and pattern drafts for the beginning weaver. Revised and enlarged. Milwaukee The Bruce Publishing Company 1949 324 p. illus. 27 cm. $6.50 2601

Contents: The loom. Preparing the loom. General information. Two-harness weaves. Three-harness weaves. Four-harness weaves. Five-harness weaves. Six-harness weaves. Eight-harness weaves. Weaving [illegible]. Floor coverings. Bibliography. Glossary of weaving terms. Weaving terms in foreign languages. Index.

Note: The author of this detailed and fully-illustrated text is Director of the Handicrafts Division, Department of Trade and Industry Nova Scotia. As indicated, the book is written for the beginner and provides descriptions of the various types of looms and methods of setting them up. The greater part of the volume, however, consists of instructions for weaving specific patterns and varieties of textures. In this edition new material has been added on warping, threading, two-harness weaving, and weaving of narrow webs on [illegible] looms. The final chapter on floor coverings is also new.

CHERNER NORMAN

Make your own modern furniture working plans and room designs for more comfortable and convenient living. Drawings by Norman Cherner and Frank Stork. Photographs by Thomas Yee. New York McGraw Hill Book Company Inc., 1951 140 p. illus. 26 cm. $4.50. 2601

Contents: Part one, Factors in furniture design: Your home is you. Your home is your budget and space. Fabrication and material. Steps in designing and planning the furniture. Part two, Suggested interior arrangements: One-room apartment. Living room. The room you sleep in. The room you eat in. Pleasant isolation. The child's room. Part three, Suggested furniture ideas: Seating and bedding. Table and work surfaces. Storage. Finishing. Upholstery. Reflections on tomorrow's interior.

Note. In this volume are presented instructions and plans for the construction of simple modern-style furniture. The book is written for the amateur craftsman, and the various operations require only the use of hand woodworking tools. The lists of materials, assembly instructions, and sketches of construction details are preceded by brief descriptions of the basic wood working techniques. Considerable space is devoted to the selection and design of furniture to meet specific needs. Numerous photographs of furniture arrangement are

CRAMLET ROSS C

Woodwork visualized. Milwaukee The Bruce Publishing Company 1950. 158 p. illus. 27 cm. $1 76 2603

Contents (abridged): Tool identification and classification. Lumber. Saws. Planes. Chisels. Knives. Wood files. Layout tools. Boring tools. Holding tools. Drilling tools. Scraping tools. Tool sharpening. Joinery. Fastenings. Hardware. Finishing. Projects. Index.

Note: An introductory book to the common hand woodworking operations and to the tools with which they are performed. It is included here because of the unusual method of presentation. Almost the entire space is given to [illegible] of plates on which tools and operations are shown in exceptionally clear drawings. The drawings are accompanied by legends that explain the tool or operation.

FABBRO MARIO DAL

How to build modern furniture. New York F W Dodge Corporation, 1951–52 2 v illus. 29 cm. $6 00. each volume. 2604

Contents (abridged): Volume 1, Practical construction methods: General notes about wood. Butt joints. Rail to frame joints. Joining three pieces. Plywood. Veneer. Molded plywood. Fixed fabric or board. Hinges. Application of doors to furniture. Catches and locks for doors. Adjustable shelves. Joining legs to furniture. Joining wood and glass. Joining metal and wood. Common metal joints. Joining plate glass to metal. Joining metal to rubber. Upholstery work. Volume II, Designs and assembly: Tools and equipment.

Methods of woodworking. Standard furniture measurements. Furniture you can build.

Note: Not only is this work devoted entirely to furniture in the modern style, but it covers certain operations such as joining wood and glass which are not discussed in older books on furniture making. The greater part of the space is devoted to reproductions of drawings and photographs, and the exposition is largely in the form of legends which accompany the illustrations. The work is addressed to amateur craftsmen. Dimensioned drawings, bills of materials, etc., are given for a considerable range of domestic furniture.

FRIED, HENRY B

The watch repairer's manual. New York D Van Nostrand Company Inc., 1949 307 p illus. 24 cm. $6.00. 2605

Contents: The modern watch. Cleaning and overhauling the watch movement. How to case a watch. Adjusting the cannon pinion. Mainspring repairs. How to make a stem. Fitting a balance staff. How to make a balance staff. Adjusting the balance staff. How to true a balance wheel. How to poise a balance wheel. Replacing a pallet jewel. Replacing a roller jewel. Causes of overbanking (set of action). Adjusting pallet-guard fingers. How to put a watch in beat. *Collecting and studying* hairsprings. *General repairs. Trouble shooting.* Appendices. Bibliography. Index.

Note: An excellent book whether it is used as a text or reference manual. All watch repairing operations which the average watchmaker will need to know are described explicitly and the majority of them are also illustrated in *clear, generously proportioned drawings.* The book is suitable for use either in organized courses or in home study. The author is Head of the Department of Horology at the George Westinghouse Vocational High School in New York City.

HAINES, RAY EDWARD AND OTHERS

The wood-turning lathe. By Ray E. Haines, John V Adams, John G Miller Robert L. Thompson, and *Raymond Van Tassel. New* York D Van Nostrand Company Inc., 1952 132 p. illus. 26 cm. (The home work shop series) $2 95 2606

Contents: History and basic principle of the lathe. The home workshop lathe. Basic tools and accessories—their care and use. Basic operations. Advanced and special operations. Projects. Index.

Note: An introductory book for home mechanics. In it the wood-turning lathe, the tools and accessories used with it, and the basic operations on it are described clearly and simply. Both tools and operations are also shown in pictures. The chapter on projects accounts for more than half of the space. It contains detailed descriptions, including lists of materials and dimensioned drawings, for a variety of simple articles such as lamps, salt and pepper shakers and small tables.

HAWKINS REGINALD ROBERT, AND CHARLES H. ABBE

Home mechanic's outdoor handbook. New York D Van Nostrand Company Inc., 1950 490 p. illus. 21 cm. $5 95 2607

Contents: Driveways. Walks, stepping stones, steps, curbs, edgings. Terraces. Walls, tree wells and boxes, window wells, compost enclosures. Outdoor fireplaces, grills, incinerators. Fences, gates, stiles. Summerhouses, arbors, and trellises; foot bridges and other small structures. Small buildings. Garden pools. Swimming pools. Sprinkling systems. Tennis courts; other recreation areas. Outdoor lighting. Basic operations. Planning the grounds. Bibliography. Index.

Note: A manual of information on how to build driveways, terraces, outdoor fireplaces, and many other structures which enhance the utility and beauty of the well kept yard. It is written primarily to enable homeowners to design and build such structures themselves, but the suggested plans and construction details will be helpful also to those who have the actual work done by others. Much practical information is included which is not readily available elsewhere. The chapter on basic operations discusses such matters as stump removal, grading, concrete making, and masonry operations. Numerous sketches and working designs are included. Although practically all of the typical garden structures are covered, the book is essentially one for the average homeowner rather than the garden hobbyist.

HOARD, F E., AND A. W MARLOW

The cabinetmaker's treasury New York The Macmillan Company 1952 267 p. illus. 26 cm. $6 00. 2608

Contents: Essential processes in cabinetmaking. Chairs. Stools. Tables. Beds. Cupboards. Chests. Desks. Mirrors and dressing glasses. Clock cases. Period characteristics of English and American *furniture. Glossary*

Note: A book addressed to craftsmen (both amateur and professional) with some previous experience in woodworking. Certain fundamental operations, such as the making of joints, the construction of bracket feet, fluting and reeding of turnings, and carving are discussed briefly in the first chapter. The rest of the book is devoted to scaled drawings of furniture pieces and to fairly detailed procedures for making the pieces. Altogether there are 102 full-page plates of drawings. The book is especially suited to the needs of skilled amateur craftsmen who are interested in the making of fine furniture.

HOME, RUTH M

Ceramics for the potter Peoria, Ill. Chas. A. Bennett Co. Inc., *1952 229 p.* illus. *24* cm. $4.50. 2609

Contents: From elements to clays. Clays: their classification and uses—their characteristics. The effects of heat on clays. Clay resources of the world. Bodies from naturally occurring clays. Bodies: hard paste porcelain—soft-paste porcelain. *From slips to glazes.* The porcelain glaze. Oxides and acids of glazes. Glazes. Enamels. Stamping. Pattern and colour. Kilns. The future of pottery. Appendices. Bibliography. Index.

Note: This book is a blend of historical, scientific, and technical *information rendered in terms that anyone—layman or professional—* with serious interests in pottery can understand. Although the text includes some mathematical and chemical symbols, it is written in a pleasant lucid style and is designed for straight reading. Basic technical data of a reference nature, such as atomic weights, chemical composition of clays and glaze formulas, are collected in the appendices.

HUNT, WALTER BERNARD

Indian silversmithing. Milwaukee Bruce Publishing Company 1952 160 p. illus. 27 cm. $5.50. 2610

Contents (abridged): Tools and equipment. Concha buttons. Money clips. Tie clasps and bar clips. Lapel pins and brooches. Rings. Tarnishing or antiquing. Turquoise in Indian jewelry. Channel work. Ear ornaments. Concha belts. Neckerchief slides. Appliqued work. Fill and stamp boxes. Oval and round saltcellars. Bracelets. Arm guards or ketoh. Belt buckles. Squash blossom necklaces. Wrist-watch bands. Miniature vases and canteens. Index.

Note. A good book on a class of handicraft articles that should be popular with amateur jewelry makers. The tools and the operations of working with silver and turquoise, jewelry articles patterned after those made by the Navajo Indians and other tribes in the Southwest, are described clearly for beginners. There are seventy figures and four plates in color all of which appear to be reproductions of photographs. In addition there are forty-eight plates of reproductions of drawings made by the author. The author is an authority on American Indian crafts and many authentic designs are shown. However the inclusion of such articles as salt-cellars and an antique tea steeper indicates that the book is not limited to articles of Indian origin.

KENNY JOHN B

The complete book of pottery making With photographs and drawings made especially for this book by the author New York Greenberg 1949 252 p. illus. (part col d) 27 cm. $7.50. 2611

Contents: Introduction to clay. Getting started. The potter's wheel. Plaster of paris. Molds. Slip casting. More about plaster. Clay and clay bodies. The kiln. Glazes. Mixing glazes. Decoration. Do potters eat? Index.

Note. A detailed and practical guide to the art of pottery making for both the beginner and advanced craftsman. The author progresses gradually from the elementary operations performed by hand and on the wheel to the more difficult techniques of making molds, firing, and glazing. Numerous sketches and photographs showing the

various stages of each process constitute an important feature of the book. A final chapter discusses the possibilities of pottery making as a career.

KINGERY, ROBERT ERNEST
How-to-do-it books a selected guide. New York R. R. Bowker Company 1950 293 p 20 cm. $3.50 2612

Note. A useful guide to books and pamphlets on handicrafts, nature study child care, gardening, and a host of other subjects. Most of the books listed were written for use by amateurs and laymen. Information on the following points is given for each book listed title, author's name, publisher year of publication, number of pages, price, and an annotation descriptive of the book content or purpose.

KINNEY RALPH PARSONS
The complete book of furniture repair and refinishing. Easy to follow guide with step-by step methods. New York Charles Scribner's Sons, 1950 240 p. illus. 25 cm. $3 50 2613

Contents Restoration, Repairs, Removing old finish. Preparing for new finish. Refinishing Reviving old finishes Enameling and "trade" furniture finishes. More about materials Tools for the beginner. More hand tools. Sharpening and care of tools. Care and storage of paints and brushes. The home workshop—tools and shop practice Care of furniture. Formulas. Reference books. Acknowledgments. Index.

Note: One of the better books on this subject for amateur craftsmen. The restoration and refinishing of old furniture are emphasized, but part of the material is applicable as well to the finishing of new furniture and to the finishing or refinishing of articles of wood other than furniture. Most of the text consists of concise discussions of specific points or detailed directions for specific operations. Many of the illustrations have been made from photographs of refinished antique furniture.

MARGON LESTER
Construction of American furniture treasures measured drawings of selected museum pieces with complete information on their construction and reproduction 38 full page plates, 344 detail drawings and more than 40 photographs of the work of the most famous early American cabinetmakers. New York The Home Craftsman Publishing Corporation, 1949 167 p. illus. 30 cm. $4 95 2614

Note: Measured drawings constitute the outstanding feature of this book. As indicated in the title, the furniture depicted is American and all of the pieces illustrated are now in the collections of museums or historic houses. Each piece represented is shown in a photograph, then its dimensions and construction details are shown in one or more plates of drawings. The book is intended for amateur craftsmen and cabinetmakers who are interested in making replicas of historic furniture; consequently the illustrations are accompanied by detailed directions for construction and finishing of the pieces.

PELTON, B W
Furniture making and cabinet work, a handbook. New York D Van Nostrand Company Inc., 1949 596 p illus. 24 cm. $6 95 2615

Contents: Cabinetmaking. Indoor furniture construction. Outdoor furniture. Built-in furniture and conveniences. Furniture finishing. Veneers and inlays. Upholstery and seat weaving. Restoration, repair and refinishing. Salvaging discarded furniture. Principles of interior decoration. Indoor remodeling. Index.

Note: Practical and detailed instructions for the amateur craftsman in the art of constructing a wide variety of indoor and outdoor furniture. Each project includes a dimensioned drawing, a list of materials required, and step-by-step construction methods. The project section is preceded by a description of basic woodworking operations and tools. The final chapters, although less detailed than the ones on furniture, provide information on the basic steps in room remodeling and interior decoration.

STANLEY WORKS. STANLEY TOOLS DIVISION
How to work with tools & wood. For the beginner for the home craftsman for the handyman for the homeowner New Britain, Connecticut Stanley Tools Division of the Stanley Works, 1952 181 p. illus. 24 cm. 2616

Contents. All of us can use tools. How to become skilled. Let's make something. Taking it from a working drawing. Finishing up the bookrack. This will be a bench. And now about using tools. Sharpening the tools. More about putting the pieces together. Some fancy touches. Getting it ready for use. Things around the house. Index.

Note: A simple, fully illustrated introduction to hand woodworking tools and to such hand operations as planing, sanding, boring, and the making of joints. Some finishing operations are covered also.

INDUSTRIAL MANAGEMENT

GENERAL

ABRUZZI, ADAM

Work measurement new principles and procedures. New York Columbia University Press, 1952 290 p illus. 24 cm. $6.00. 2617

Contents. Introduction Industrial experimental studies. Designing research program on industrial productivity The problem of process standardization. Case studies of local stability Studies of local stability: implications. Case studies of grand stability Studies of grand stability: implications. Developing standard data for operation elements and motions. The relationships among operation elements. Comparing the work methods of different operators. The implications of the likelihood ratio results. Motion standard data and related questions. Obtaining useful measurements and estimates. Measuring and estimating delay factors. Bibliography Index.

Note. This book treats the subject of industrial work management from a new approach based upon modern experimental techniques. As a result of a series of intensive studies of representative industrial operations, the author produces evidence to show that all standard data procedures used for work measurement hitherto are invalid. He introduces procedures which eliminate the most controversial aspect and the weakest link of present practice by doing away with the need for rating worker performance. He also shows that there is no "one best way" of performing industrial operations. In presenting a methodology for handling the problems of work measurement, he presents objective procedures and criteria for deciding how a process can be considered standardized and for determining when certain standard data have predictive value. The book is of interest to persons who are professionally concerned with the theory of work measurement, especially industrial engineers. Full comprehension of the presentation demands an understanding of mathematical statistical analysis.

ALFORD, LEON PRATT

Principles of industrial management. Revised edition. Revised and rewritten by H. Russell Beatty New York The Ronald Press Company 1951 779 p. illus. 24 cm. $6.25 2618

Contents (abridged) The background of modern industrial management. The effects of mechanization. Expansion of industry in the United States. The ownership of industry. Planning—objectives and policies. Organization for control. Organization for operation. Simplified practice and engineering standards. Control of purchasing. Inventory control. Production planning and control. Quality control. Inspection. Motion and time study. Classification and symbolization. Cost accounting. Maintenance of buildings and machinery. Personnel administration. Wage and salary administration. Employment and personnel services. Industrial safety—accident and disease prevention. Index of names. Index of subjects.

Note. An unusually comprehensive and thorough presentation of the basic principles and practices of industrial management. The book, although intended primarily for use as a college text, has considerable value as a reference manual for the practicing executive. Emphasis is placed on fundamentals but numerous illustrations of actual management techniques are included. This edition, a revision of *Principles of industrial management for engineers*, New York, 1940, has been extensively rewritten and enlarged. New chapters have been added on industrial leadership and marketing and the sections on quality control and motion and time study have been greatly expanded—changes which account for almost 230 additional pages.

APPLE, JAMES MACGREGOR

Plant layout and materials handling. New York Ronald Press Company 1950 367 p illus. 23 cm. $5.00 2619

Contents (abridged) The plant layout function. Production planning. Introduction to the materials handling problem. Materials handling equipment. Materials handling and related functions. Operation planning. Layout planning. Service departments. Checking and approving the layout. Plant location. Industrial plant buildings. Appendix Conveyor data. Lift trucks. Materials handling surveys. Railroad and highway transportation. Building construction and service facilities. Plant layout template and model standards. Bibliography Index

Note In this work plant layout and materials handling are presented as elements in industrial engineering. Much emphasis is put on co-ordination of the plant layout and the materials handling system with the over-all plan and function of the plant. Typical equipment is discussed and illustrated, but this matter is incidental to the main theme. The book is suitable for use both as a textbook and as an introduction or "refresher" for practicing engineers.

BELLOWS ROGER MARION

Psychology of personnel in business and industry New York Prentice-Hall, Inc., 1949 499 p. illus. 23 cm. (Prentice-Hall industrial relations and personnel series, Dale Yoder editor) $6 70 2620

Contents Part I, Development of personnel technology: Personnel methods serve management. Background of personnel technology. Part II, Tools for effective use of personnel Criteria. Job analysis. Attracting personnel. Selection interviewing. The use of psychological tests. Training. Job evaluation. Personnel incentives. Merit evaluation. Employee dynamics—turnover control. Part III, Worker satisfaction through human understanding: Industrial social psychology. Employee counseling. Planned communications. Techniques for improving communications. Employee attitude surveys. Employee suggestion systems. Part IV, Implications of personnel technology: Personnel men as leaders. Trends in personnel research. Appendixes. Index.

Note The psychology of human relations in business and industry is considered in all its aspects in this textbook for students of business administration and other persons interested in improving personnel management by use of personnel systems and procedures. Personnel methods and management are covered from the sociopsychological viewpoint. Summaries and selected references appear at the ends of chapters. The appendixes contain much useful information, including lists of sources for motion pictures and sound-slide films, distributors of government training films, colleges giving courses in personnel subjects, suppliers and publishers of tests, publishers of pamphlets on occupations, periodicals, and research and professional organizations in the field of personnel and industrial relations.

BETHEL, LAWRENCE L. AND OTHERS

Industrial organization and management, by Lawrence L. Bethel, Franklin S Atwater George H. E. Smith and Harvey A. Stackman Jr Second edition. New York McGraw-Hill Book Company, Inc. 1950 851 p. illus. 24 cm. (McGraw-Hill industrial organization and management series, L. C. Morrow consulting editor) $7.00. 2621

various stages of each process constitute an important feature of the book. A final chapter discusses the possibilities of pottery making as a career.

KINGERY, ROBERT ERNEST

How-to-do-it books: a selected guide. New York: R. R. Bowker Company, 1950. 293 p. 20 cm. $3.50. 2612

Note: A useful guide to books and pamphlets on handicrafts, home study, child care, gardening, and a host of other subjects. Most of the books listed were written for use by amateurs and laymen. Information on the following points is given for each book listed: title, author's name, publisher, year of publication, number of pages, price, and an annotation descriptive of the book's content or purpose.

KINNEY, RALPH PARSONS

The complete book of furniture repair and refinishing. Easy to follow guide with step-by-step methods. New York: Charles Scribner's Sons, 1950. 240 p. illus. 23 cm. $3.50. 2613

Contents: Restoration. Repairs. Removing old finish. Preparing for new finish. Refinishing. Reviving old finishes. Examining and "trade" furniture finishes. More about materials. Tools for the beginner. More hand tools. Sharpening and care of tools. Care and storage of paints and brushes. The home workshop—tools and shop practice. Care of furniture. Furniture. Reference books. [illegible]. Index.

Note: One of the better books on this subject for amateur craftsmen. The restoration and refinishing of old furniture are emphasized, but part of the material is applicable as well to the finishing of new furniture and to the finishing or refinishing of articles of wood other than furniture. Most of the text consists of concise discussions of specific points or detailed directions for specific operations. Many of the illustrations have been made from photographs of refinished antique furniture.

MARGON, LESTER

Construction of American furniture treasures: measured drawings of selected museum pieces with complete information on their construction and reproduction ... 38 full-page plates, 344 detail drawings and more than 40 photographs of the work of the most famous early American cabinetmakers. New York: The Home Craftsman Publishing Corporation, 1949. 167 p. illus. 30 cm. $4.95. 2614

Note: Measured drawings constitute the outstanding feature of this book. As indicated in the title, the furniture depicted is American and all of the pieces illustrated are now in the possession of museums or historic houses. Each piece represented is shown in a photograph, then its dimensions and construction details are shown in one or more pages of drawings. The book is intended for amateur craftsmen and cabinetmakers interested in making replicas of historic furniture. Accompanying the illustrations are detailed directions for construction and finishing of the pieces.

PELTO, B. W.

Furniture making and cabinet work; a handbook. New York: D. Van Nostrand Company, Inc., 1949. 596 p. illus. 24 cm. $6.95. 2615

Contents: Cabinetmaking. Indoor furniture construction. Outdoor furniture. Built-in furniture and conveniences. Furniture [illegible]. Veneers and inlays. Upholstery and seat weaving. Lacquering, repair and refinishing. Finishing. Carved furniture. Principles of interior decoration. Indoor remodeling. Index.

Note: Practical and detailed instructions for the amateur craftsman in the art of constructing a wide variety of indoor and outdoor pieces of furniture. Each project includes dimensioned drawings, a list of materials required, and step-by-step construction methods. The project section is preceded by descriptions of basic woodworking operations and tools. The final chapters, although less detailed than the ones on furniture, provide information on the basic steps in home remodeling and interior decoration.

STANLEY WORKS. STANLEY TOOLS DIVISION

How to work with tools & wood. For the beginner, for the home craftsman, for the handyman, for the homeowner. New Britain, Connecticut: Stanley Tools Division of the Stanley Works, 1957. 151 p. illus. 24 cm. 2616

Contents: All of us can use tools. How to become skillful. Let's make something. Taking it from a working drawing. Finishing up. [illegible] the bench. This will be a bench. And now [illegible]. Sharpening the tools. More about putting the pieces together. Some fancy touches. Getting it ready for use. Things around the house. Index.

Note: A simple, fully illustrated introduction to hand woodworking tools and to such hand operations as planing, sawing, boring, and [illegible]; the making of joints. Basic finishing operations are covered also.

principles rather than upon the examples. While technically forecasting, planning, and control are engineering activities, discussions from the engineering viewpoint are supplemented by brief treatments of the economic and social implications.

MALLICK, RANDOLPH W AND ARMAND T GAUDREAU

Plant layout planning and practice. New York John Wiley & Sons Inc., 1951 391 p. illus. 25 cm. $7 50. 2627

Contents (abridged) Part 1, Approach to plant layout: The role of plant layout in management. Ascertaining the need for relayout. Basis for designing plant layout. Techniques of plant layout engineering. Part 2, Planning the processing departments: Framework of plant layout procedure. Determining the capacities for the design. Analyzing, balancing, and routing the operations. Planning and equipping the work station. Internal transportation of plant material. Part 3, Designing plant service facilities: Receiving, shipping, and warehouse areas. Storerooms and storage facilities. Test rooms, inspection points, and dispatch stations. Maintenance facilities, tool cribs, and sprinkler systems. Power and lighting systems. Planning office layouts. Employee service facilities. Part 4, Justifying the layout project: Buildings for housing the plant layout. Presenting the proposal to the management. Bibliography Index.

Note: An outstanding work on this subject. Well organized, well written, and very generously illustrated, it is designed for practical use by corporation executives and plant engineers. The material is applicable both to the design of new layouts and the redesign of established ones.

MOORE, FRANKLIN G

Production control. New York McGraw Hill Book Company Inc., 1951 455 p. illus. 24 cm. $6.00 2628

Contents: Production control duties. Types of production. Types of production control. Forecasting and estimating. Authority to manufacture. Basic information required for order control. Drawings, drawing numbers, and identification systems. Determining parts and materials requirements in order control. Preparing for production in order control. Initiating production and controlling production in progress with order control. Flow control. Block and load control. Mechanical tabulation. Reproduction of forms and communications systems. Relationships of the production control department with other departments. Value of production control. Cases and problems Bibliography Index.

Note. This introduction to the basic principles and methods of production control is designed for use in college courses in commerce and management. In order to illustrate why certain procedures are followed various techniques and forms employed in industry are described in detail. Numerous flow charts and seventy case studies and related problems are included. The author is Professor of Management at Northwestern University School of Commerce.

TIME AND MOTION STUDY

BARNES, RALPH MOSSER

Motion and time study Third edition. New York John Wiley & Sons Inc., 1949 559 p. illus. 24 cm. $5.50 2629

Contents (abridged) History of motion and time study Extent to which motion and time study may be profitably used. Process analysis. Activity charts—man and machine charts. Operation analysis. Fundamental hand motions. Motion study and micromotion study equipment. Making the motion pictures. Fatigue. The relation of motion and time study to wage incentives. Stop-watch time study—time study equipment—making the time study—determining the rating factor—determining allowances and time standard. Determining time standards from elemental time data and formulas. Determining time standards for die and tool work. Determining time standards for assembly operations. Motion and time study training programs. Appendixes. Bibliography Index.

Note: (4480a) A thorough study of the basic principles and methods of motion and time study It is devoted almost exclusively to measurement techniques and each phase of the subject is well illustrated with case studies drawn from various manufacturing fields. Revisions and changes in this edition are largely based on the author' survey of eighty factories. New chapters on process analysis, gang process charts, activity charts, and machine charts have been added, and numerous action photographs or new included.

CARROLL, PHIL

Timestudy fundamentals for foremen. With a foreword by Glenn Gardiner Second edition. New York McGraw Hill Book Company, Inc. 1951 209 p. illus. $3.00 2630

Contents: What timestudy gives to industry Why you should understand timestudy How to begin timestudy Looking at the job details. How long does it take? How long should it take? How to set consistent element times. What job details repeat? How to set standards. Be sure to explain timestudy Incentive plans explained. You can improve methods. How your job changes. Are you looking ahead? Selected references. Index.

Note A small book written in simple language. Its purpose is to acquaint foremen and supervisors with the basic principles and methods of conducting timestudies. The explanations of how such study is applied and what it can accomplish are given clearly and simply Numerous charts and cartoons help to enliven and clarify the textual material. The first edition was published in 1944. This second edition is an extensive revision. The chapter on incentive plans, in particular has been revised and enlarged, and the bibliography now includes books published since 1944.

MUNDEL MARVIN EVERETT

Motion and time study principles and practice. New York Prentice-Hall, Inc. 1950 457 p. illus. 23 cm. $7.00 2631

Contents (abridged) What motion and time study can accomplish. The human factor. The scope of motion and time study How to start the analysis. Process chart—product analysis—man analysis—combined analysis. Operation charts. Multiple-activity analysis—man and machine charts—multiman charts. Micromotion study Micromotion study and therbligs. Memomotion study Time study—definition of standard time—recording the standard practice—recording the time—time—rating—objective rating—allowances. Synthesized time standards. Applying motion and time study standards. Problems. Bibliography Index.

Note: A textbook for college courses which provides systematic and practical introduction to and treatment of motion and time study The basic principles are presented which underlie all successful motion and time studies, and illustrative examples from many industries and types of work are given in great detail so that the reasoning behind the application of procedures may be seen. The material presented was tested by use in university classes and in in-plant training courses for workers of various levels. A detailed bibliography and 37 pages of problems appear at the end of the book.

SYLVESTER, LAWRENCE ARTHUR

The handbook of advanced time-motion study New York Funk & Wagnalls Company 1950 273 p. illus. 24 cm. $5.00 2632

Contents: Introduction. Part 1, The theory of work and the causes of deviations in rates of production The nature of human work. Work can be measured. The concept of fair day's work. The theory and nature of individual differences. The effects of variable conditions. A summary of theory Part 11, Advanced practice of time-motion engineering: The human side of time-motion study Personal contacts. Tools and equipment. How to take time-motion study Predicting base and standard time values. Standard data versus job time study Maintaining standardized conditions. Administration of the time-motion department. Conclusion: Looking forward. Acknowledgments. Index.

Note The author who is president of management engineering firm, has written this book primarily for graduate industrial engineers and others, such as union stewards, who have professional interests in time-motion studies Human work is regarded as having three components: 1. Mechanical component—Force × distance. 2. Human component pace (rhythm) and skill, etc. 3. Conditional component—posture, light, heat, ventilation, hazards, and interruptions. The basic importance of the human element and of industrial relations is stressed. Examples of the application of the meth-

ods discussed in various industries are given in graphic or tabular form. Statistical interpretations of the various results of time-motion studies are included.

QUALITY CONTROL

BOWKER ALBERT H., AND HENRY P GOODE
Sampling inspection by variables. New York McGraw Hill Book Company, Inc. 1952 216 p. 24 cm. $5 00 2633

Contents. Introduction. General principles of sampling inspection by variables. Properties of the variables plans. Installation of the variables plans. Operation of the variables plans. Plans for use when the standard deviation of the product is known. Procedures for two-sided specification limits. Illustrative applications. The use of control charts in sampling inspection. Construction of sampling plans and standard procedure. The mathematics of sampling inspection by variables. Appendix. Computing techniques and methods of applying the acceptance criteria. Tables and charts. Index.

Note: A manual of inspection plans based on the measurement of variable or variables—a basis of inspection that is in contrast to the system of rejection or acceptance on the basis of specified attributes. Most of the book is devoted to the design, installation, and operation of practical and statistically sound plans. The book is organized along the lines of and complements *Sampling inspection* New York, 1948 (2334)

BUTTERBAUGH GRANT ILLION
A bibliography of statistical quality control supplement. Seattle University of Washington Press, 1951 141 p. 23 cm. Paper $2 00 2634

Contents. Part I, Periodical literature. Part II, Manuals, monographs, pamphlets. Part III, Books. Index of authors. Index of subjects.

Note. A supplement to the author's *Bibliography of statistical quality control* issued by the same publisher in 1946. The original work and the supplement together record 1437 periodical articles, books, and manuals published in the English language. Most of the entries are accompanied by an annotation several lines in length. A few of the entries have very short annotations and some are not annotated.

FEIGENBAUM ARMAND VALLIN
Quality control principles, practice, and administration New York McGraw Hill Book Company Inc., 1951 443 p illus. 24 cm. (Industrial organization and management series, L. C. Morrow consulting editor) $7.50 2635

Contents The principles of quality control Part I, Quality control—tool of management What is "quality control"? What are the factors in controlling quality? What are the jobs of quality control? What the organization for quality control? Part II, The statistical point of view Frequency distributions. Control charts. Sampling tables Special methods Part III, Applying quality control in the plant. New-design control Incoming-material control Product control. Special process studies Part IV Introducing quality control into the plant Selling the quality-control program. Summary of modern quality control Index.

Note An overall presentation of quality control from the management and administrative viewpoint It is primarily practical book, based on experience with quality control in numerous industrial firms during World War and after. The necessity for keeping the quality control program within bounds so that it does not cost more in time or money than its results justify is emphasized A wide variety of practical procedures, relating not only to inspection but to record keeping and follow-through, is described The author is secretary of the Quality Control Co-ordinating Committee of the General Electric Company

GRANT EUGENE LODEWICK
Statistical quality control. Second edition. New York McGraw Hill Book Company Inc., 1952 557 p 24 cm. (McGraw Hill industrial organization and management series, L. C. Morrow, consulting editor) $6.50 2636

Contents (abridged) Part one, What will statistical quality control do? Objectives of statistical quality control. Some representative applications. Part two, The Shewhart control chart for variables. Some fundamental statistical concepts. Why the control chart works—example of process in control—examples of processes out of control. Directions for simple $\bar{X}$ and R charts. The selection of rational subgroups. Part three, Other Shewhart control charts. Some fundamentals of the theory of probability The control chart for fraction defective. The control chart for defects. Part four, A statistical approach to acceptance procedures. Some statistical aspects of tolerances. Some fundamental concepts in acceptance sampling. Acceptance sampling by attributes. Acceptance sampling by variables. Part five, Making statistical quality control work Some cost aspects of quality decisions. Organization for statistical quality control. Appendixes: Glossary of symbols. Bibliography Tables. Name index. Subject index.

Note: (2226) A standard exposition of the theory and methods that form the basis for quality control procedures. It intended for persons such as plant executives and industrial engineers who expect to make practical use of control charts and sampling plans. The applicability of quality control to large variety of manufacturing operations is demonstrated, and analyses of actual case histories in industry are included. In this edition two chapters have been rewritten, and the number of problems for the reader to solve has been much increased. Answers have been given to some of the problems for the benefit of persons studying the book at home. Relatively minor changes are in various other parts. The author is Professor of Economics of Engineering at Stanford University

HEIDE, JOHN D
Industrial process control by statistical methods. New York McGraw Hill Book Company Inc., 1952 297 p. illus. 24 cm. $6 00 2637

Contents. Introduction. Presentation of data. Process frequency distributions. Control charts. Limit lines. Operating specifications. Technical problems. Study of process data. Factory installation. Practical program aids. Factory interpretation of charts. Organization and administration. Quality reporting and quality rating. Evaluation of test procedures and test results. Appendixes. Index.

Note. A practical book on statistical quality control written primarily for personnel in manufacturing establishments who will be directly concerned with the use or supervision of statistical quality control procedures. Quality control is correctly presented as logical basis for mass production. The reader is first introduced to its statistical bases and to the design of control charts. In the later chapters various practical steps in installing quality control program and using it in the factory are treated. The author holds the position of Industrial-Statistical Analyst with the United States Rubber Company

JURAN JOSEPH M , editor
Quality-control handbook. New York McGraw Hill Book Company Inc., 1951 800 p. illus. 24 cm. (McGraw Hill industrial organization and management series, L. C. Morrow consulting editor) $12 00 2638

Contents Economics of quality by J. M. Juran. Specification of quality by C. R. [illegible] quality by J M. Juran. Organizing for quality by [illegible] Introducing statistical quality control in [illegible] plant, by D. [illegible] Control of quality [illegible]. Acceptance of quality by J M. Juran. Statistical [illegible] by J M. Juran. Assurance of quality by J. M. Juran. Paper work in methods in the quality function, by J W Enell. Applications of electric accounting machines to quality control, by International Business Machines Corporation. Quality control in the chemical process industries, by J. C. [illegible]. Quality control of textile production, by [illegible] Quality control in aircraft manufacture, by C. A. Bicking. Quality control of electron tubes, by Sylvania [illegible] by J O. Rutherford Quality [illegible] Electric Products, Inc. Vendor inspection, by D. [illegible] Quality control in screw-machine operations, by L. A. [illegible] Appendixes Glossary of symbols. Tables and charts. Index.

Note: It is important to notice that this book deals with the whole subject of quality control rather than with the statistical

aspects only However, the latter are adequately treated, not only in the chapter on statistical methods but in sections in other chapters. The book is intended for executives and others in industry who are directly concerned with the control of quality of manufactured products and with organizing and administering quality control programs in manufacturing plants. It is practical, direct treatment, full of useful information for its intended readers.

SCHROCK, EDWARD M

Quality control and statistical methods New York Reinhold Publishing Company 1950 213 p. illus. 24 cm. $5 00 2639

Contents (abridged) What quality control and statistical methods have to offer. Case histories. The meaning of numbers. Summarization of data. Pictorial presentation of data. The quality control chart to identify assignable causes. Modified control chart limits. Use of control chart when known trend exists. Quality control by limit gauges. Use of the variables control chart as basis for reducing volume of inspection. Binomial and Poisson distributions. Acceptance sampling. Sequential analysis. Least squares and correlation. Glossary Suggestions for further reading and reference. Index.

Note. A practical introduction. The topics included have been well selected, the discussions of them are short and explicit, and the relationships between quality control techniques and the economical production of satisfactory products are made clear. About 30 pages of the book are taken up with series of reference tables for number of defectives. The book is suitable for factory workers and supervisory personnel who are making their first contacts with quality control.

SAFETY ENGINEERING

ASSOCIATED GENERAL CONTRACTORS OF AMERICA INC.

Manual of accident prevention in construction. Fourth revised edition. Washington, D C. The Associated General Contractors of America, Inc., 1952 257 p. illus. 24 cm. $3.00 2640

Contents: Introduction. Accident prevention organization. Housekeeping. Sanitation. First aid. Demolition. Arc welding. Gas welding and cutting. Flammable gases and liquids. Handling and storage of materials. Excavation. Shoring. Barricades. Explosives. Pile driving. Form construction and concrete placement. Hoists, cranes, and derricks. Steel erection. Masonry Scaffolding. Ladders. Power saws. Hand tools. Road and street construction. Motor graders, bulldozers and tractors. Conveyors and cableways. Equipment upkeep. Motor trucks. Garages and repair shops. Tunnels. Shafts. Compressed air work. Boilers. Unfired pressure vessels. Railroad construction. Quarries and gravel pits. Laying pipe lines. Boats and barges. Temporary electrical installations. Fire hazards and prevention. Protective clothing. Camp housing and sanitation. Occupational diseases. Inspection. Reference tables. Alphabetical index.

Note: A practical and clearly presented guide to safe ways of performing construction work. The text is supplemented by numerous photographs, diagrams, and specifications and throughout the book emphasis is placed on the importance of educational work and of proper organization and methods. This edition includes new sections on housekeeping, welding, power saws, flammable gases and liquids, bulldozers and tractors, and boats and barges. Reference tables of weights and safe working loads are included.

GRAY DWIGHT E. AND JOHN H. MARTENS

Radiation monitoring in atomic defense. New York D Van Nostrand Company Inc. 1951 122 p. illus. 21 cm. $2.50 2641

Contents: Part one, Background information. What is atomic energy? What is nuclear radiation? What kinds of hazards do atomic explosions produce? What radiation hazards result immediately from an atomic explosion? What radiation hazards continue after an atomic explosion? What basic protective measures can be taken against atomic explosions? How are nuclear radiations detected and measured? Part two, Instruments and equipment. Basic considerations. The Geiger counter survey meter. The ionization chamber survey meter. The proportional alpha counter. Pocket chambers and dosimeters. Film badge dosimeters. The AEC emergency monitoring kit. Future defense monitoring instruments. Bibliography Index.

Note: A short, clearly written non-specialist's book on the detection and measurement of dangerous radioactive radiation and on the instruments which are used for such detection and measurement. It is addressed primarily to civil defense personnel whose duties will include the protection of others from dangerous radiation in times of emergency It should be of interest also to laboratory workers who handle radioactive materials and to safety personnel in industrial establishments where use is made of such materials.

HEINRICH HERBERT WILLIAM

Industrial accident prevention a scientific approach. Third edition. New York Mc Graw Hill Book Company Inc., 1950 470 p. illus. 24 cm $6.50 2642

Contents: Principles of accident prevention. Basic philosophy of accident prevention. Safety organization—first aid and hospital—creating and maintaining interest. Facts and fact finding. Accident analysis. Selection of remedy Application of remedy—corrective action. Machine, prime-mover and power-transmission guarding. Process and procedure revision. Personal protective devices. Illumination and vision. Occupational disease. Motor-vehicle fleets. Safety psychology Fatigue. Education. Formula for supervision. Accident statistics. Summary Appendixes: Chronology of industrial accident prevention. Background of industrial safety Standards for mechanical guarding. Illumination of industrial interiors. Causes of compensated accidents. Relation of age to industrial injuries. Bibliography Index.

Note: (4701) In this text for students and safety engineers emphasis is placed on the basic principles and methods of accident prevention, rather than on detailed discussions of specific safety measures. Descriptions of protective devices and case histories are included, but only to illustrate how an accident situation may be analyzed and corrected. On the other hand, administrative aspects, such as methods of persuading top management to institute or supplement the safety program in plant, are covered in some detail. The major changes evident in this revision include newly added chapters on motor-vehicle fleets, solving supervisory problems, personal protective devices, and selection on safety education courses. Books published since 1941 have been added to the bibliography

NATIONAL SAFETY COUNCIL, INCORPORATED

Accident prevention manual for industrial operations. Second edition. Chicago National Safety Council, Inc., 1951 793 p. illus. 23 cm. $18.00 2643

Contents: Permanent structures and plant layout. Maintenance and maintenance crews. Boilers. Pressure vessels. Refrigerating equipment. Principles of guarding and transmission guards. Power presses. Metalworking machinery and abrasive wheels. Woodworking machinery Guarding special equipment. Storage and manual handling of material. Power handling of material. Hand and portable power tools. Welding and cutting. Electrical hazards. Flammable liquids. Fire prevention. Fire extinguishment and control. Personal protective equipment. Motor transportation. Industrial health engineering. Industrial poisons. Medical services and table of chemical hazards. Safety organization and training. Accident records. The safety man's resources. Index.

Note: (3343*) A guide and reference book of principles and good practices, written for safety engineers and foremen and intended for use in conjunction with the technical publications on specific safety problems issued by the National Safety Council. In this edition the new sections are those covering maintenance, boilers, pressure vessels, refrigerating equipment, welding, industrial poisons, industrial health engineering, and medical services. The book has been reorganized so that the former second and third parts, covering construction and demolition and permanent equipment and facilities, have been absorbed into the various sections of the book. A feature is the new final section "The safety man's resources, which is compendium of information concerning the work and publications of the various trade associations, public agencies, and private service organizations in the field of safety engineering.

SAX NEWTON IRVING, AND OTHERS

Handbook of dangerous materials Assisted by M. J O'Herin and W W Schultz. New York Reinhold Publishing Corporation, 1951 848 p. 26 cm. $15.00. 2644

Contents: References. List of abbreviations and symbols. General chemicals. Explosives. Fungus diseases and fungicides. Radiation and radiation hazards. Shipping regulations. General index.

Note: A work of interest to factory managers, safety personnel, and industrial physicians. The first part is an alphabetically arranged compilation of materials that are hazardous to human beings because they are poisonous, cause allergic reactions, or are explosive. The following points are covered for most of the materials included: hazardous properties, storage and handling, synonyms, chemical formula, chemical and physical properties, shipping regulations. The writeups of many of the materials include one or more literature references, but literature references are not always given. The section on fungus diseases includes much information on diagnosis and treatment. The section on shipping regulations is a reprint without editorial comment of the current regulations pertaining to explosive and hazardous materials of the Interstate Commerce Commission. The senior author is a toxicologist associated with the General Electric Company at Schenectady New York.

AGRICULTURE

GENERAL

ADVANCES IN AGRONOMY Prepared under the auspices of the American Society of Agronomy Volume I. Edited by A. G. Norman. New York Academic Press, Inc., 1949 439 p. illus. 24 cm. $8.50 2645

Contents: Plant growth on saline and alkali soils, by H. E. Hayward and C. H. Wadleigh. New fertilizers and fertilizer practices, by R. J. Jones and H. T. Rogers. Soybeans, by M. G. Weiss. The clay minerals in soils, by J E. Gieseking. Alfalfa improvement, by W J White. Soil microorganisms and plant roots, by F E. Clark. Weed control, by A. S. Crafts and W A. Harvey Boron in soils and crops, by K. C. Berger Potato production, by O. Smith. Fixation of soil phosphorus, by L. A. Dean. Author index. Subject index.

—— Volume II. Edited by A. G Norman. New York Academic Press, Inc. 1950 407 p. illus. 24 cm. $8 50. 2646

Contents: Cotton, by J E. Adams. Soil nitrogen, by L. E. Ensminger and R. W Pearson. Vegetable production, by J. E. Knott and O. A. Lorenz. Prairie soils of the upper Mississippi valley by G. D. Smith and others. Ladino clover by G. H. Ahlgren and R. F Fuelleman. The control of soil water by E. C. Childs and N. Collis-George. Preservation and storage of forage crops, by R. E. Hodgson and W K. Kennedy The reclamation of coal mine spoils, by H. Kohnke. Irrigated pastures, by W Keller and M. L. Peterson. Author index. Subject index.

—— Volume III. Edited by A. G Norman. New York. Academic Press, Inc., 1951 361 p. illus. 24 cm. $8.50 2647

Contents: The subsoil, by E. Winters and R. W Simonson. The management of alfalfa meadows, by C. J. Willard. The chemistry of soil potassium, by R. F Reitemeier. The changing pattern of agriculture in England and Wales, by J. A. McMillan. The adaptability and breeding of suitable grasses for the Southeastern states, by G. W Burton. Chemical treatment of the soil for nematode control, by A. L. Taylor. Problems and progress of soil conservation in the United States, by H. J. Harper Irrigation, agriculture and soil research in the United States, by R. O. Parks. Author index. Subject index.

—— Volume IV Edited by A. G Norman. New York. Academic Press Inc., 1952 416 p. illus. 24 cm. $8.50 2648

Contents: Grassland agronomy in Australia, by H. C. Trumble. Type of soil colloid and the mineral nutrition of plants, by A. Mehlich and N. T Coleman. The physiological basis of variation in yield, by D. J. Watson. Copper in nutrition, by F A. Gilbert. Ecological and physiological factors in compounding forage seed mixtures, by R. E. Blaser and others. Soil manganese in relation to plant growth, by E. G. Mulder and F C. Gerretsen. Atomic energy and the plant sciences, by N E. Tolbert and P B Pearson. Vegetation control on industrial lands, by K. C. Barrons. Soil and the growth of forests, by T S. Coile. Author index. Subject index.

Note: A series of annual volumes designed to survey and review the latest developments in the field of plant nutrition, growth, management, and utilization. Each volume consists of individual papers prepared by specialists, most of whom are associated with the agriculture departments of leading universities in this country and Europe. The selection of papers indicates broad interpretation of the term "agronomy" but throughout the series the basic theme is soil-crop relationships. Each paper includes an extensive list of references keyed to the textual material.

BEYER, GLENN H.

Farm housing in the Northeast. A survey of facilities, activities possessions, and preferences of families on owner-operated farms. The factual findings by Glenn H. Beyer with the assistance of the Northeastern Farm Housing Technical Committee. Ithaca, New York Cornell University Press 1949 458 p. illus. 24 cm. $4.50 2649

Contents (abridged) Introduction and background: Methodology Geographic distribution and economic groups of families. Part I, The present pattern of farmhouses: Age of dwelling units. Type of construction. Size of house. Equipment and furniture. Part II, Household activities: Food preparation and preservation. Laundry work. Sewing. Entertaining. Part III, Household inventories: Food. Clothing and sewing materials. Bedding and household linens. Need for additional storage space. Part IV, General housing preferences The dwelling unit. Equipment and furniture. Household activities. Part Summary Glossary Index.

Note: An analytical presentation of the results of present housing facilities and housing needs of families living on farms in the states of Connecticut, Maine, Massachusetts, New Jersey New York, Pennsylvania, Rhode Island, and West Virginia. The data were gathered largely by personal interviews. They throw light not only on housing requirements but also on household activities on farms. For example, information is included on the kinds and quantities of foodstuffs preserved in year The book is one product of project which has as its ultimate goal the development of functional house plans suited to the needs of farm families in the region covered.

CASTETTER, EDWARD FRANKLIN AND WILLIS H. BELL

Yuman Indian agriculture primitive subsistence on the lower Colorado and Gila rivers. New Mexico The University of New Mexico Press, 1951 274 p illus. 24 cm. $6.00. 2650

Contents: The country The people. General basis of subsistence. Agricultural implements. Cultivated crops. Agricultural techniques. Semicultivation of seed plants. Wild plant and animal products. Rituals and group activities. Summary discussion, and interpretation. Bibliography Index.

Note: ([illegible]) A complementary work to the authors' *Pima and Papago Indian agriculture*, Albuquerque, 1942. Agricultural crops and practices are the main topics, but these are described in their environmental and social setting. The first two chapters of the book are basic and account for approximately one quarter of the total space. Agricultural practices are described in all the available detail. These include various techniques of food preservation; for example, methods of preparing pumpkins for indefinite storage. The book is of interest to students of anthropology as well as to readers interested in the history of agriculture.

FULMER, JOHN LEONARD

Agricultural progress in the cotton belt since 1920 Chapel Hill The University of North Carolina Press 1950 236 p illus. 23 cm. $3.50 2651

Contents: Trends in the cotton belt. Regional trends. Farm organizational changes. Mechanization. The mechanical harvesting of cotton. Urbanization and agriculture. Other dynamic factors influencing southern agriculture. Income shifts. Summary and conclusions. Statistical appendix. Selected bibliography Index.

Note The extensive changes in the last three decades in the agriculture of the southern states of the United States of America where cotton is the traditional crop are detailed in this volume. The main viewpoint of the book is economic and much of the information is presented in the form of statistical tables. However, the economic aspects are directly related to changes in agricultural practices, particularly those changes which resulted in the decline of importance of cotton as a cash crop. The chapter on the mechanical harvesting of cotton gives a useful summary of experience with mechanical pickers and strippers. The book is thoroughly documented throughout.

HEDRICK ULYSSES PRENTISS

A history of horticulture in America to 1860 New York Oxford University Press, 1950 551 p. illus. 23 cm $7.50 2652

Contents: Part I Indian gardens. Colonial New England. Colonial New York. The colonies on the Delaware. Colonies on Chesapeake Bay. The South Atlantic colonies. Part II Post-Revolution in the north. Post Revolution in the south. The North Atlantic states, 1800–1830. The North Atlantic states, 1830–1860. The South Atlantic states, 1800–1860. The North-Central states. The South-Central and Gulf states. The Far West. Part III Botanic explorers and botanic gardens, 1800–1860. The dawn of plant breeding. Horticultural literature, 1700–1860. Horticultural societies, 1790–1860. Bibliography. Index.

Note The first and only volume on the subject indicated by its title, this book was written by the late director emeritus of the New York State Agricultural Experiment Station. As sources the author consulted official documents, botanies, agricultural books, magazines, and newspapers of the period, as well as books of travel. Any person concerned with gardening, fruit growing, or viticulture who wishes to know something of the early history of these activities in the thirteen colonies and the early Republic will find the volume of interest.

HOUK, IVAN E

Irrigation engineering. Volume I Agricultural and hydrological phases. New York John Wiley & Sons Inc. 1951 545 p illus. 24 cm. $9 75 2653

Contents: Introduction. Irrigation soils. Soil fertility. Moisture in irrigation soils. Soil-moisture movements. Climatic factors. Runoff and streamflow. Snow melting and runoff forecasting. Evaporation from water surfaces. Land evaporation and transpiration. Irrigation and water requirements. Losses and waste of irrigation water. Irrigation water supplies. Quality of irrigation water. Irrigation of saline and alkali soils. Irrigation preparations and procedures. Name index. Subject index.

Note A comprehensive and detailed treatise. It covers not only the broad aspects as named in the chapter titles, but also the subtopics such as the proportion of rainfall intercepted by the foliage of plants. The published literature has been skillfully digested, and statements in the text are keyed to the lists of references which accompany the chapters. Numerous tables of data such as "Permissible velocities in canals excavated through different soils" are included. The writing is on a professional level and the work is suitable for advanced students of agricultural engineering, practicing irrigation engineers, and other technical personnel concerned with irrigation. The second volume of the work will discuss the planning and construction of irrigation projects.

IOWA STATE COLLEGE

Midwest farm handbook. Second edition By members of the staff Iowa State College. Ames Iowa State College Press 1951 280 p. illus. 24 cm. $2 50. 2654

Contents: Animal husbandry. Dairy husbandry. Livestock disease prevention. Dairy industry. Poultry. Poultry diseases. Agricultural engineering. Agronomy. Weed control. Plant disease control. Seed analysis. Seed treatment. Pest control. Business end of farming. Beekeeping. Forestry. Landscape architecture. Horticulture. Measurements. Weather. Index.

Note A reference book of practical information. The presentation of many topics is very condensed but the main points are covered. In most instances brevity has been achieved only by including the most useful facts or describing the most effective method to the neglect of others. The discussion of some topics such as taxes are strictly local in application, but a considerable part of the book is applicable to farming in any region where climate and crops resemble those of Iowa.

ISRAELSEN, ORSON WINSO

Irrigation principles and practices. Second edition New York John Wiley & Sons, Inc., 1950 405 p. illus. 23 cm. (The Wiley agricultural engineering series edited by J Brownlee Davidson) $6.50. 2655

Contents: Progress and problems. Sources and storage of irrigation water. Measurement of irrigation water. Conveyance of irrigation water. Pumping water for irrigation. Irrigation methods. Farm irrigation implements and structures. Basic soil and water relations. Storage of water in unsaturated soils. The flow of water in soils. Saline and alkali soils. Drainage of irrigated lands. Time of irrigation. Consumptive use of water, by H. F. Blaney and O. W. Israelsen. Irrigation of cereals, forage, and root crops. Irrigation of orchards. Irrigation in humid regions. Social and administrative aspects of irrigation, by J. H. Maughan. Appendixes: Problems and questions. References. Index.

Note. (4119) The revised edition of this textbook for college and university students covers the same field as the first edition, but the work has been changed and improved in the light of 18 years of additional study and experience. Some chapters have been entirely rewritten and others contain major changes. A new chapter is included on the drainage of irrigated lands. The references have been brought up to date and are now grouped at the end of the book. The publication is of value to farmers concerned with large-scale irrigation problems and to agronomists, agricultural engineers, and civil engineers, as well as to students. The volume includes a folding map of the United States to show mean annual precipitation, red lines and figures indicating average annual precipitation in depth in inches.

JUSTICE O L. editor

Manual for testing agricultural and vegetable seeds. United States Department of Agriculture Production and Marketing Administration in cooperation with the Bureau of Plant Industry Soils and Agricultural Engineering. Most of the work on this manual was performed under a project authorized by the Research and Marketing Act of 1946. Washington, D C. Government Printing Office, 1952 440 p illus. 24 cm. (United States Department of Agriculture. Agriculture handbook no 30) $4 00. 2656

Contents Introduction. Seed sampling and testing equipment. Obtaining the seed sample. Procedures for determining purity composition. Application of purity procedures to specific groups of seeds. Procedures for determining germination. Application of germination procedures to specific groups. Examination for noxious-weed seeds. Origin of seeds. Testing for trueness of variety. Testing for moisture. Tolerances. Calculations, records, and reports. Identification of seeds. Development, structure, and hereditary characteristics of seeds. Physiology of seeds. Pathological considerations in seed testing. Literature cited. Selected references. Available publications on seed testing. Glossary. Appendix. List of botanical names. List of plant names. List of botanical and common names. Index.

Note. A book of instructions for seed technologists and laboratory workers showing how to conduct laboratory tests and presenting other background information of a practical nature. Procedures are given for the testing of all kinds of agricultural and vegetable seeds, domestic and imported. A central section of 34 plates gives drawings of the seeds of 735 species of grasses, grains, vegetables, and flowers. The manual supersedes the Department's Miscellaneous publication no. 437 *Testing farm seeds in home and school*, published in 1941.

MALONE CARL C

How to make your farm pay a practical guide for Midwest farm operators. Ames, Iowa The Iowa State College Press, 1950. 371 p. illus. 24 cm. $3 75 2657

Contents. Who should farm. Where should you farm. Money-making—the management problem. Choosing the type and size of farm. Getting started. Laying out the cropping system. Fitting livestock into the farm plan. Making the most from your livestock. Putting the farm plan together. When you go to market. Checking up on yourself. Helpers—public and private. Around the family table. Index.

Note: A reliable introduction to sound farm management practices for farms in the Corn Belt and adjacent farming regions in the area of the United States known as the Midwest. The region includes areas where several main types of farming are practiced including the growing of corn, wheat, beef cattle and hog raising, dairying, and "mixed" farming. The main theme of the book is that farming is business; and farm management practices for the main types of farming, corn, cattle raising, and hog raising are discussed at length with shorter discussions of other types of farming and crops. Record-keeping is emphasized and sample forms are included. The author is faculty member of Iowa State College.

REICK FRANKLIN MERING

The 4-H story, a history of 4 H club work. Ames, Iowa The Iowa State College Press 1951 308 p. illus. 24 cm. $3 00. 2658

Contents (abridged) Years of the valiant pioneers. The government sponsors corn club. Corn clubs take hold in the South. Canning clubs get under way. The cloverleaf goes national. Club work grows in the North and West. Congress passes the Smith Lever act. Club work with Negroes expands. The national committee is formed. Early days of the club congress. National camp established. 4 H comes the man. New legislation for extension. War and the Bankhead Flannagan act. Summing up. Bibliography Index.

Note: The 4-H clubs, whose origin and development are recounted in this book, have been major influence in the education of young people for better living and for leadership in rural life. They have reached their widest development in the United States of America. This book is devoted mainly to the U. S. A., but there is some information on comparable organizations in other countries. It is written in simple style and is of potential interest not only to persons directly concerned with the organization and guidance of 4-H clubs but also to persons with more general interests in rural life and agricultural betterment. There is bibliography.

ROE, HARRY BURGESS

Moisture requirements in agriculture. Farm irrigation. New York McGraw Hill Book Company Inc., 1950 413 p illus 24 cm. (McGraw Hill publications in agricultural engineering, Quincy C. Ayres consulting editor) $6.00. 2659

Contents: General considerations. Sources and disposition of soil moisture. Flow and measurement of water. Interrelations of irrigation and drainage. Fundamental principles of irrigation and problems of agriculture under it. Time of irrigation. Use of water in irrigation. Irrigation methods. Irrigation structures and works for the farm. Pumping in irrigation. Irrigation of specified crops. Irrigation farming. Legislative and administrative features of irrigation. Supplemental irrigation in humid regions. Literature cited. Literature consulted but not specifically cited. Index.

Note: An introductory but inclusive work in which particular attention is given to agriculture and farm irrigation in the United States of America west of the Mississippi River. It covers both the engineering and the agricultural phases of the subject. The author explains in elementary terms the hydraulics of mechanical distribution of water within farming areas and on individual farms and correlates this explanation with modern soil science. A feature of the book is its detailed presentation of the water requirements of different types of crops as determined by recent experiments and scientific research and corresponding presentation of the methods whereby these requirements may best be met. The book is suitable both as textbook for colleges training engineers in agriculture and as practical guidebook for farmers, technicians, and engineers directly concerned with problems of irrigation.

VAUGHAN LAWRENCE MOORE AND LOWELL S. HARDIN

Farm work simplification. This publication is jointly sponsored by the Work Simplification Committees of the American Farm Economic Association and the American Society of Agricultural Engineers. New York John Wiley & Sons Inc., 1949 145 p. illus. 22 cm. $2 96 2660

Contents: What farm work simplification is. What savings can be made. The principles of effective work. Basic economy of labor. Simplifying handwork. Reducing chore travel. Using equipment and work crews effectively. Principles may be applied to all work. How results may be used. Research in work simplification. How to organize and conduct study. Four types of analysis. Case studies of individual farms. Self-analysis by farmers. Training in work simplification. Short courses for in service training. A sample classroom demonstration. High-school and college instruction. Index.

Note: A short, well-organized book which is devoted primarily to practical ways of simplifying farm work. New methods described are based upon actual experiences of persons working in the field at state agricultural colleges.

SOILS AND FERTILIZERS

KELLEY WALTER PEARSON

Alkali soils their formation, properties and reclamation. New York Reinhold Publishing Corporation 1951 176 p. illus. 24 cm. $5.50 2661

Contents. Introduction. Origin and accumulation of salts in soils. Effects of salts and soils. Soluble salts and exchangeable bases of alkali soils. Formation of sodium carbonate and the evolution of alkali soils. Irrigation in relation to alkali soils. Alkali soils in relation to plant growth. Reclamation of alkali soils. Selected bibliography Index.

Note. The control of alkalinity in soils is fundamentally chemical problem, and this book deals almost entirely with the chemical aspects. It is of interest to chemists doing laboratory research on the problems of alkalinity and also to soil chemists and agronomists working directly with soil reclamation or irrigated agriculture. The author is Professor Emeritus of Soil Chemistry at the University of California.

KELLOGG CHARLES EDWIN

Our garden soils. New York The Macmillan Company 1952 232 p. illus. 22 cm. $4.00 2662

Contents: Natural soils. What place? The garden needs good skeleton. Organic matter: the gardener's chair. Plenty of well-behaved water. Soil acidity and how to change it. Balancing the plant nutrients. More about lawns and grades. Starting plants and moving them. Planning the garden. Appendices. Soil maps. Some soil preferences of selected plants. Planting suggestions and yields of selected vegetables. For further reading. Index.

Note. A handbook about garden soils for the amateur gardener written in non technical language by the Soil Survey Chief of the U. S. Department of Agriculture. The book will be equally useful to those who wish to adapt their soils to certain kinds of plants and to those who wish to know what kinds of plants will grow best on the soils they have. The author tells how to determine soils types, how to maintain proper amounts of organic matter and moisture, how to control soil acidity and how to balance plant nutrients. The appendices contain much useful information including lists of soil preferences by genera for vegetables, herbs, small fruits, fruit trees, perennial and annual flowers, shrubs, vines, ground covers, bulbs, and ferns.

LYON THOMAS LYTTLETON AND OTHERS

The nature and properties of soils. A college text of edaphology By T Lyttleton Lyon, Harry O Buckman, and Nyle C. Brady Fifth edition. Revised by Harry O Buckman and Nyle C. Brady New York The Macmillan Company 1952 591 p. illus. (part col d) 24 cm. $5 75 2663

Contents: The soil in perspective. The supply and availability of plant nutrients in mineral soils. Some important physical properties of mineral soils. Soil colloids their nature and practical significance. The organisms of the soil. The organic matter of mineral soils. Forms of soil water their movement, and their plant relationships. Vapor losses of soil moisture and their regulation. Liquid losses of soil water and their control Soil air and soil temperature. The origin, nature, and classification of parent materials. Soil formation, classification and survey. Organic soils—nature, properties, and utilization. The soil reaction soil acidity and alkalinity Lime and

its soil-plant relationships. The nitrogen economy of soils. The supply and availability of phosphorus and potassium. Fertilizers and fertilizer management. Farm manure and green manure. The fertility management of mineral soils. Index.

Note: (4745) In this standard work the nature and properties of soils are covered from a scientific standpoint and this knowledge is related to the maintenance of good soil conditions in agriculture. The fourth edition was published in 1943. In this edition all except five of the chapters have been either drastically revised or almost wholly rewritten. Some of the material, such as the chapters on soil water, soil colloids, and soil structure, has been recast at the simpler level. The number of illustrations has been more than doubled. Also revised and brought up to date are the bibliographical references, which are given in footnotes.

MILLAR, CHARLES ERNEST, AND L. M. TURK

Fundamentals of soil science. Second edition. New York, John Wiley & Sons, Inc., 1951. 510 p. illus. (part col'd) 24 cm. $5.50 2664

Contents. Materials for soil development. Processes of soil development. *Physical* properties of soils. Classification of soils. Chemical properties of soils. Soil reaction. Lime and its use. Soil moisture. Soil organisms—kinds, numbers, activities, and relation to soil productivity. Soil organic matter. Cover and green-manure crops. Farm manures. Nutrient requirement of plants. Fertilizers and fertilizer materials. Fertilizer practices. Conserving soil. Soil fertility maintenance and productivity rating of soil. Soils and agriculture of arid regions. Irrigation. Soil resources. Acreage of farmland in the United States. Acreage of arable land and land requirements. Land policies of the United States. Glossary. Index.

Note: (4747) An inclusive introduction from the agricultural viewpoint. The authors are Professors of Soil Science at Michigan State College. The first edition was published in 1943. In this edition special attention is given to the advances in fundamental knowledge since then. The treatment of the chemical properties of soils and the formation and classification of soils has been revised and expanded. However, the special chapters on *truck* and *lawn soils* which are included in the first edition have been dropped.

SHAW, BYRON T., editor

Soil physical conditions and plant growth. Compiled by the Joint Committee on Soil Tilth, American Society of Agronomy [and] American Society of Agricultural Engineers. New York, Academic Press Inc., 1952. 491 p. illus. 24 cm. (Agronomy; a series of monographs prepared under the auspices of the American Society of Agronomy. Volume II) $8.80 2665

Contents: Soil as a physical system, by L. T. Alexander and H. E. Middleton. Mechanical impedance and plant growth, by J. F. Lutz. Soil water and plant growth, by L. A. Richards and C. H. Wadleigh. Soil aeration and plant growth, by M. B. Russell. Soil temperature and plant growth, by S. J. Richards and others. Epilogue, by B. T. Shaw. Index.

Note: This work is the result of a planned effort to prepare a critical statement of the current knowledge of the relationships between plant growth and soil physical conditions including not only the mechanical conditions of soil but also water content, aeration, temperature, etc. The chapters are based on literature surveys and are accompanied by extensive bibliographies. The authors are leaders in soil research associated with colleges of agriculture and government research agencies. The book is addressed primarily to graduate scientists, agricultural engineers, and other persons with similar scientific backgrounds and interests in basic knowledge of agricultural soils.

THORNE, DAVID WYNNE, AND H. B. PETERSON

Irrigated soils, their fertility and management. Philadelphia, The Blakiston Company, 1949. 288 p. illus. 26 cm. $5.50 2666

Contents (abridged): Problems of irrigated regions. Soils of arid regions. Soil, water and plant relations. Plant relations to saline and alkali soils. Evaluating land for irrigation. Source and quality of irrigation water. Measuring irrigation water. Irrigation practice for various crops. Effects of irrigation on soil characteristics. Drainage. Reclamation and management of saline and alkali soils. Control of the physical properties of soil. Control of the biological properties of soil. Maintaining organic matter in soil. Minerals and plant growth. Maintaining available nitrogen in soil. Maintaining available phosphorus in soil. Potassium. Mixed fertilizers. Principles of fertilizer practice. Soil management in fruit production. Special problems in vegetable crop production. Glossary. Appendix. Index of authors. Subject index.

Note: A guide to the principles and practice of irrigation agriculture, written by two professors at the Utah State Agricultural College. Emphasis throughout is upon the soil management problems of irrigation rather than upon the engineering problems. The authors assume that the reader has an elementary knowledge of botany, chemistry, mathematics, and physics, and that he is familiar with such concepts as pH, base exchange, and the physical properties of soil. Agricultural practices on irrigated lands throughout the world, as well as in western United States, are covered. Each chapter is concluded by a bibliography.

UNITED STATES. DEPARTMENT OF AGRICULTURE. SOIL SURVEY STAFF

Soil survey manual. By Soil Survey Staff, Bureau of Plant Industry, Soils, and Agricultural Engineering, Agricultural Research Administration, United States Department of Agriculture. Washington, D. C., Government Printing Office, 1951. 503 p. illus. (part col'd) 24 cm. (United States. Department of Agriculture. Handbook no. 18) $3.00. 2667

Contents: Soil and landscape. Character of soil maps and reports. Purpose of soil maps and reports. Preparation for field work. Plotting and assembly of field data. Examination and description of soils in the field. Parent materials of soils. Land form, relief and drainage. Identification and nomenclature of soil horizons. Soil color. Soil texture, coarse fragments, stoniness and rockiness. Soil structure. Soil consistence. Soil reaction. Special formations in soil profiles. Organic matter and roots. Accelerated soil erosion. Vegetation. Land use. Units of soil classification and mapping. The soil mapping legend. Plotting soil boundaries in the field. Collection and examination of soil samples. Estimation and mapping of salts and alkali in the soil. Yield predictions and soil management practices. Soil correlation and inspection. Soil grouping on the map. The soil survey report. Soil taxonomy and mapping. General bibliography. Special bibliography of soil surveys. Appendixes: Map preparation with the plane table. Map preparation with compass traverse. Notes on map compilation and reproduction. Sample descriptions of soil series. Guide to map scales. Index.

Note: A guide and reference book for soil scientists engaged in soil classification and mapping. It covers methods and problems of making and interpreting detailed basic soil surveys in the United States and territories. The work is a revision and enlargement of U. S. Department of Agriculture Miscellaneous publication No. 274, *Soil survey manual*, by Charles E. Kellogg, issued September 1937 and supersedes it.

WAKSMAN, SELMAN ABRAHAM

Soil microbiology. New York, John Wiley & Sons, Inc., 1952. 356 p. illus. 23 cm. $6.00. 2668

Contents. Historical. The microbiological population of the soil as a whole. Occurrence of specific microorganisms in the soil. Decomposition of plant and animal residues in soils and in composts. Humus—nature and formation. Decomposition of soil organic matter and evolution of carbon dioxide. Transformation of nitrogen in soil. Nitrogen fixation—nitrate formation and nitrate reduction. Nitrogen fixation in soil, nonsymbiotic—symbiotic. Transformation of mineral substances by microorganisms. Higher plants and soil microorganisms. Disease-producing and antagonistic effects of soil microorganisms. Pests, microorganisms in the soil and their control. Stable manures, composts, and green manures. Microorganisms and soil fertility. Recent developments in soil microbiology. Index.

Note. An introductory survey in which there is some emphasis on those aspects of the subject which are important in an understanding of soil fertility. Although introductory, the treatment is not elementary. The book is addressed to such readers as agronomists, chemists, graduate students in agricultural colleges and to graduate chemists and other scientists who find themselves in need of a fairly substantial survey. The chapters are supplemented by useful selected

bibliographies. The book replaces two other works by the author, *Principles of soil microbiology* second edition, Baltimore, 1931 and *The soil and the microbe*, New York, 1931, and includes some material that appeared in those works. However, no material has been carried over which is not still valid, and the greater part of the material in the present title is new. There are 130 figures and 77 tables.

CONSERVATION OF NATURAL RESOURCES

DAVISON VERNE ELBERT

Bobwhites on the rise. With illustrations by Wallace Hughes. New York Charles Scribner's Sons 1949 150 p illus. 24 cm. $3 75 2669

Contents: Bobwhite and its range. Prevailing problems. Traditions to forget. The bobwhites' habits. Food is their greatest need. Cover, too, is essential. Wildlife land and its management. Woodland management. The place of fire. Cropland. Pastures. Idle land. Organized efforts. Bobwhite numbers and hunting. The things to do, in quick review. Laws to encourage production. Bibliography

Note: "Dedicated to those who hunt the bobwhite quail and to the landowners, who alone can grow more of them," this volume for hunter, farmer, and game preserve owner presents land management as the chief influence on the welfare and production of the bobwhite. It shows what practices applied to wildlife lands can lead to conditions favorable to the increase in numbers of this popular game bird. The author writes on the basis of two decades of experience with game management in various sections of the range of the bobwhite quail in the U. S. A.

GABRIELSON IRA NOEL

Wildlife management. New York The Macmillan Company 1951. 274 p. illus. 22 cm. $4.50. 2670

Contents: The problems of wildlife management. Research in wildlife management. Education in wildlife management. Regulation of human harvest of wild populations. Inventories. Refuges in wildlife management. Artificial propagation. Population controls. Manipulation of upland environment. Manipulation of environment for aquatic forms. Sportsmanship. Administration and wildlife management. Can public hunting and fishing be maintained? Index.

Note: A thoughtful study by the Director of the United States Fish and Wildlife Service, of present-day problems in the field of wildlife management and their solutions. The author appraises present wildlife management activities, indicating the advances made over the past half-century and taking into consideration the fact that farming, engineering projects, lumbering and other activities must continue side by side with the habitat for wild populations. He emphasizes the necessity for a balanced program and particularly the need for periodic checks on projects and practices to be certain they are serving the needs of wildlife. The book is illustrated with photographs and contains bibliographical references at the ends of the chapters.

GOLZÉ, ALFRED R.

Reclamation in the United States. New York McGraw Hill Book Company Inc., 1952 451 p illus. 24 cm. (Civil engineering series, Frederic T Mavis consulting editor) $8.00 2671

Contents: History of reclamation in the United States. Economics of reclamation. Reclamation law. Participating agencies. Investigation and authorization of proposed projects. Single-purpose projects. Multiple-purpose projects. River-basin development. Allocations of cost. Repayment by water users. Repayment by power and other users. Financing the reclamation program. Estimating the cost. Programing and accounting. Settlement. Operation and maintenance. Appendix: Irrigation statistics—17 western states 1949–1950. Index.

Note: A comprehensive work covering reclamation in the sense of "the process of reclaiming the desert lands of the western United States through irrigated agriculture, supported by coordinated development of hydroelectric power." Its purpose is two-fold: (1) to provide instruction material for college courses in engineering and economics relating to reclamation and (2) to provide reference material for research or review of the reclamation programs of the United States. Bibliographical references appear at the ends of the chapters. The author is Director of Programs and Finance in the United States Bureau of Reclamation.

GRANGE WALLACE BYRON

The way to game abundance, with an explanation of game cycles. New York Charles Scribner's Sons 1949 365 p illus. 24 cm. $6 00 2672

Contents (abridged): Part I, The pattern of life (the biological and environmental background). Patterns of environmental adjustment. The mathematics of abundance. The daily and annual activity cycle. Home range: natural resources, habitat. The theory of predation. The theory of disease—parasitism. Part II, Plant and animal successions (the nature and inevitability of habitat change). Game range and primeval wilderness. Game range and succession wilderness. The impact of civilization. The natural propagation unit principle. Part III, Population cycles (why abundance is necessarily cyclic—mechanisms of population response to habitat changes). The cyclic nature of predation—predation and the snowshoe rabbit cycle. The coalescent effect of scattered natural propagation units. The explanation of simultaneity of the snowshoe rabbit cycle. Part IV The technology of game increase (tools, methods and principles of control by man). The control of game cycles. Controlled burning for game. Forest cuttings for game; forest plantings. Cultivation—food strips—winter feeding. Aquatic habitats. Refuges. Restocking. Predator control. Legislation and enforcement for game increase. The management opportunity. Index.

Note: A survey of game conservation and management intended for the hunter or sportsman interested in understanding the causes of game abundance and game scarcity rather than for the research man and administrator in the wildlife management field. Technical terms have been used only when essential. The work is not a summary of other presentations, but an independent work written mainly upon the basis of the author's own observation, research, and field experience. Its conclusions relative to the game cycle have not previously been published.

GREENBERG DAVID BENJAMIN

Raising game birds in captivity New York D Van Nostrand Company Inc. 1949 224 p. illus. 26 cm $7.50 2673

Contents: The importance of wild life in nature's scheme of things. The business of farm game bird production. Game bird classification. Artificial incubation. Artificial brooding. Hatching and rearing with bantams. The nutrition and feeding of game birds. Wing clipping, pinioning, brailing, etc. Predators and their control. Pheasants. The growing pheasant. The story of a going pheasant farm. Bobwhite quail. The chukar (chukor) partridge. The Hungarian partridge. The McCarty pens for raising pheasants, bobwhites, chukars, and Hungarians. Wild turkeys. Aquatic game birds. The marketing of game birds. Appendices. Official organizations concerned with wildlife protection. Publications on game birds. Index.

Note: A comprehensive illustrated manual on breeding, raising, and selling game birds. The book describes in detail the best methods of incubating, brooding, raising, and marketing the several varieties of game birds. It also covers the equipment needed to raise game birds and includes many plans and drawings for pens, incubators, brooders, etc. The book should be valuable to game breeders and conservation department officials and to others interested in raising game birds, whether for food or for purposes of stocking shooting preserves or government lands. Attention is called to the laws of the states of the United States of America governing the marketing of game birds.

MARTIN ALEXANDER CAMPBELL, AND OTHERS

American wildlife & plants, by Alexander C. Martin, Herbert S. Zim, and Arnold L. Nelson. A guide to wildlife food habits the use of trees shrubs, weeds, and herbs by birds and mammals of the United States. Prepared under the direction of the United States Fish and Wildlife Service, Department of the Interior at the Patuxent Research Refuge, Laurel, Maryland. New York McGraw Hill Book Company Inc., 1951 500 p. illus. 23 cm. $7.50 2674

Contents: Part I, Introductory chapters. The plant roots of wildlife. Farm crops and wildlife. Wildlife food-habits studies. Interpreting the data of this book. Part II, Animals and their foods: Water birds. Marshbirds and shorebirds. Upland gamebirds. Songbirds. Birds of prey. Fur and game mammals. Small mammals. Hoofed browsers. Fish, amphibians, and reptiles. Part III, Plants useful to wildlife: Woody plants. Upland weeds and herbs. Marsh and aquatic plants. Cultivated plants. Wildlife plants ranked according to their value. Index.

Note. An elementary inclusive reference book for students of bird life, foresters, conservationists, etc. The second part treats the wildlife of the United States group by group, giving data on their foods, ranges, habits, and economics. About half page is devoted to each principal species of bird or animal. For most species the data given include common name, scientific name, range, general description, both animal food and plant food, with list of plants eaten in specified localities, and an animal-plant food ratio diagram showing the seasonal changes in the proportions of plant and animal food eaten. Literature references are given in some cases. The third part of the book denotes the value of different genera of trees, shrubs, weeds, aquatic plants, and cultivated crops to various kinds of wildlife in different parts of the country

MURIE OLAUS JOHN

The elk of North America. Harrisburg, Pennsylvania The Stackpole Company, and the Wildlife Management Institute, Washington, D C. 1951 376 p illus. (col d front.) 23 cm. $6 50 2675

Contents. Introduction. The name. Origin of the American wapiti. The American forms of elk. Early elk distribution in America. Elk habitat. Life span. Migration. Physical characters. Reproduction. Natural enemies. Accidental deaths. Parasites. Diseases. Varied opinions on the "elk problem." *Food habits.* Elk habits. The elk population. Elk hunting. Elk management. Bibliography Index.

Note A comprehensive treatise written on the basis of many years of field study among the Yellowstone elk herds and checked by field studies on all other major elk herds. It is one of series of books on practical wildlife management published by the Wildlife Management Institute. The book is of particular interest to persons concerned with wildlife management and conservation and is also source of information for the general reader

PARKS WILLIAM ROBERT

Soil conservation districts in action. Ames, Iowa The Iowa State College Press 1952 242 p. illus. 24 cm. $3.50 2676

Contents Beginnings of the soil conservation district. Nature of the soil conservation district. Gearing local districts into national conservation program. Role of district supervisors. Increasing supervisors' role in district administration. Value of district in achieving soil conservation. Future of the soil conservation districts. Appendix. Index.

Note In the United States of America the soil conservation district is legally independent unit of local government which works in cooperation with and essentially under the technical direction of the soil conservation service of the national government. The purpose of local soil conservation districts is to organize and to carry out such soil conservation techniques as terracing, construction of waterways, and reforestation. This book presents an outline of the history of such districts and thorough survey of their experience over period of 15 years There is some emphasis on the legal and management aspects, but accomplishments are also described.

PATTERSON ROBERT L.

The sage grouse in Wyoming. Sketches by Charles W Schwartz. Denver Colo Sage Books Inc. 1952 341 p illus. 24 cm. $5.00 2677

Contents (abridged) Part I, The sage grouse and its environment. Part II, The natural history of sage grouse populations. Part III, Sage grouse and man. Part IV Restoration and management. Part Appendix Literature cited Index

Note A comprehensive study from the conservation standpoint of the sage grouse (also commonly called sage hen), *Tetrao urophasianus*. It was sponsored by the Game and Fish Commission of Wyoming, and most of the work was done within the boundaries of that state However the results of the study are applicable to the sage grouse throughout its natural range and some of the findings are generally applicable to the conservation of other game birds.

Covered are not only the expected points such as the effects of disease and predation, but also critical discussions of land reclamation programs which involve destruction of the natural sagebrush habitat.

SMITH, GUY HAROLD, editor

Conservation of natural resources. Third edition. New York John Wiley & Sons, Inc., 1950 552 p. illus. 25 cm. $6.00 2678

Contents: The development of conservation in America, by A. J. Wright. The public domain and its disposal, by S. R. Visher. The great soil groups and their utilization, by L. A. Wolfanger. Soil conservation, by W A. Rockie. Tree crops, by J. R. Smith. American irrigation, by R. H. Brown. Grassland resources, by H. C. Hanson and W C. Whitman. Reclamation of wet and overflow lands, by G. J Miller. The agricultural prospect, by G. H. Smith. Our forest resources, by O. D. Diller The practice of forest conservation, by O. D. Diller Water supply for domestic and industrial uses, by J. H. Garland. Water power and its conservation, by G. H. Smith. Our waterways and their utilization, by E. J. Foscue. Floods and flood control, by G. H. Smith. Conservation in the mineral kingdom, by W M. Myers. The mineral fuels, by E. W Miller. Conservation of wildlife, by C. A. Dambach. Fisheries for the future, by H. H. Martin. Recreational resources, by E. C. Prophet. The conservation of man, by E. Huntington. State and local planning, by L. Durand, Jr. National planning and the conservation of resources, by G. H. Smith. Index.

Note: (4785) A new and revised edition of textbook which covers the entire field of conservation in manner to interest the general reader as well as the college student. Nine new authors appear among the contributors to this edition. The book retains the general arrangement and organization of the earlier editions, but most of the chapters have been rewritten. large number of illustrations have been added, and the entire make-up modernized.

THOMAS, HAROLD EDGAR

The conservation of ground water A survey of the present ground water situation in the United States. Sponsored by The Conservation Foundation. New York McGraw Hill Book Company Inc., 1951 327 p. 24 cm. $6 50 2679

Contents: Introduction. Hydrologic principles and basic data. Problems resulting from ground water development and use. Ground-water problems resulting from land occupancy. Our increasing requirements for water. Current deficiencies and future needs for effective ground water development. Better ground-water management, by Abel Wolman. Appendixes: Pumpage from major ground water reservoirs in order of magnitude. Index of localities. Selected bibliography of areal ground-water studies. Subject index.

Note An authoritative study particularly applicable to the United States of America, of current and probable future demands for well water the problems that arise when too much water is pumped from underground reservoirs, and means of conserving and replenishing underground water. Included are many case histories of ground-water reservoir exploitation. Related aspects such as the pollution of underground water by sewage and chemical wastes are covered. The author argues strongly for government management of important ground-water reservoirs.

WING LEONARD WILLIAM

Practice of wildlife conservation. New York John Wiley & Sons, Inc. 1951 412 p. illus. 24 cm. $5.50 2680

Contents. Conservation and management. The biological base of management. Techniques of field investigations and practice. Farm management. Techniques of field investigations and practice. Farm game and its management. Farm game birds and mammals. Forests and forest wildlife management. Game birds of the forest. Forest game mammal management. Game management in the open range. Southern wildlife species. Northland wildlife. Fur bearer management. Wildfowl management. Lake fish management and management. Stream improvement and management. Songbird and nongame conservation and management. Treatment of rare, threatened and persecuted species. State powers and controls. Federal wildlife controls in the United States. Provincial and federal wildlife sphere in Canada. Administration and regulations. Index.

Note The chapter headings indicate the detailed subject content of this book on wildlife conservation and game management. The author has written on the basis of experience in various parts of North America. The book is especially suited for instruction at

the college level, and it will be of interest and use also to the general reader who wishes to be informed on wildlife conservation and to the professional conservationist who needs a reference work covering the entire field of conservation theory and practice.

YOCOM CHARLES FREDERICK

Waterfowl and their food plants in Washington. Seattle Wash. University of Washington Press, 1951 272 p. illus. 24 cm. $5.00 2681

Contents (abridged) Waterfowl and their status in Washington. Waterfowl that winter in Washington and their relative abundance. Survey of nesting and resident waterfowl in eastern Washington, summers 1947 and 1948. Brood studies. Migration. Waterfowl and their relationship to hunting. Parasites and diseases. Management. The important food and cover plants for waterfowl in Washington: Typhaceae. Sparganiaceae. Potamogetonaceae. Juncaginaceae. Alismaceae. Hydrocharitaceae. Gramineae. Cyperaceae. Lemnaceae. Polygonaceae. Chenopodiaceae. Ceratophyllaceae. Nymphaeaceae. Ranunculaceae. Cruciferae. Haloragidaceae. Lentibulariaceae. Summary. Literature cited. Subject index. Plant and cover food index.

Note This is a study based upon field observations, of the wild swans, geese and ducks of the state of Washington with special attention to their food habits and to the native aquatic food plants and their distribution within the State. The expressed objective of the publication is to lay the groundwork for future research. Systematic descriptions are given of the distribution of 42 species of waterfowl. Descriptions, drawings, keys, and distribution maps of 124 species of cover and food plants utilized by the fowl are included. Ninety literature references are cited.

FARM MACHINERY AND BUILDINGS

BARGER, EDGAR LEE, AND OTHERS

Tractors and their power units. By E. L. Barger W M. Carleton E. G McKibben and Roy Bainer New York John Wiley & Sons, Inc., 1952 496 p. illus. 23 cm. $6.50 2682

Contents (abridged) History and development of the tractor. Power and power measurement. Thermodynamic principles of internal combustion engines. Tractor fuels. Carburetion and fuel induction. Ignition systems. Engine cooling and cooling systems. Lubrication and lubrication systems. Dirt exclusion. Governors. Engine types and development. Design features of the tractor engine. Operator's comfort, convenience, and safety Hitches. Clutches and brakes. Transmissions, differentials, and final drives. Traction and traction devices. Tractor tests and performance. Tractor maintenance and repair Tractor power cost estimating. Appendix. Index of authors. Index of subjects.

Note A treatise written from the engineering viewpoint. It applies particularly to farm tractors but much of the material is applicable also to larger machines such as are used in construction. The material is not limited to major aspects such as are named in the chapter titles but includes also discussions of such points as tractor stability The book is intended for students enrolled in agricultural engineering colleges, but it contains material of value to anyone concerned with the selection or design of tractors. Lists of references to related literature are included.

BARRE, HENRY JOHN AND L L. SAMMET

Farm structures. New York John Wiley & Sons, Inc. 1950 650 p illus. 23 cm. $7.00 2683

Contents (abridged) Materials and methods of use—wood, concrete, masonry Types of structural frames. Heat and heat transfer. Air water vapor mixtures. Heat flow through walls—insulation. Temperature gradient—condensation in walls Physiologic reactions of animals to ambient temperatures and relative humidity Dairy buildings. Poultry housing. Principles of crop and feed preservation and storage. Storage of fruit and vegetable crops. Storage of grains. Farm houses Estimating construction costs. Building and farmstead planning for process efficiency Introduction to structural design. Estimating loads. Stress analysis. Design for axial loading. Beams. Connections. Appendix. Index.

Note A book on the engineering of farm structures rather than on their planning and building. It relates standard methods in structural analysis and design to the problems encountered by architects or agricultural engineers in designing farm buildings. Standard building materials are covered as well. Some material on floor plans and layouts is included, but there has been no attempt to cover these aspects of the subject fully The book is intended primarily for students of agricultural engineering, but it is quite suitable also as reference manual.

JOHNSON ELMER JOHN AND ALVIN H. HOLLENBERG

Servicing and maintaining farm tractors. New York McGraw Hill Book Company Inc., 1950 313 p. illus. 24 cm. (McGraw Hill rural activities series, W A. Ross, consulting editor) $4.50 2684

Contents Setting up a servicing and maintenance program. Operating a tractor safely Applying tractor power in farming. Lubricating the chassis and assemblies. Lubricating the engine. Lubricating and servicing the transmission and final drives. Servicing air cleaners. Maintaining the tractor electrical system. Selecting and using tools. Servicing and adjusting the carburetion and fuel systems. Servicing the cooling system. Servicing, adjusting, and repairing tractor tires. Locating tractor troubles and making minor repairs. Preparing the tractor for winter use. Cleaning, painting, and storing farm tractors. Appendix: Some essential tools and equipment for servicing and maintaining the farm tractor. Some essential supplies for servicing the farm tractor. References. Definitions of terms used. Index.

Note An illustrated manual of detailed directions. It is addressed to farmers rather than to mechanics who repair tractors. The various types of farm tractors from the small two-wheel garden models up to the crawler or track-laying tractors are covered. Directions for major repair operations are not included; instead, the space is devoted to the minor repairs and maintenance operations appropriate to the average farm.

JONES FRED R.

Farm gas engines and tractors. Third edition. New York McGraw Hill Book Company Inc., 1952 489 p illus. 24 cm. (McGraw Hill publications in agricultural engineering, Quincy C. Ayres, consulting editor) $6 00 2685

Contents (abridged) Farm power sources and adaptability History and development of the internal-combustion engine and farm tractor Types of farm tractors Thermodynamic principles and applications—engine cycles and efficiencies. Tractor-engine types and construction Valves and valve operation. Fuels and combustion. Fuel supply and carburetion systems. Air cleaners. Cooling and cooling systems Governing and governing systems. Ignition methods—fundamentals of electric ignition. Storage cells and batteries. Diesel-engine construction and operation. Electric generators—starters—lighting. Lubricants and lubrication systems. Tractor clutches. Tractor transmissions and accessories. Tractor chassis—traction devices—pneumatic tires—steering mechanisms Tractor power rating—Nebraska power tests. Tractor hitches and field operation. Gas-engine and tractor servicing and maintenance. Economics of tractor utilization Materials of construction—power transmission. Appendix Index

Note An up-to-date textbook which is useful not only in agricultural college courses, but also as a practical manual for mechanics and service men, and for owners and operators of tractors. It is illustrated with 415 photographs and drawings and 42 tables, and each chapter is concluded with bibliographical references. For the third edition the author has completely revised a large part of the subject matter A chapter has been added on basic thermodynamics and its application to heat engine design. Such new developments as the use of LP gas as a tractor fuel, hydraulic transmissions, and hydraulic controls are clearly presented. The illustrations have also been revised.

MOSES BEN DUNCAN AND KENNETH R. FROST

Farm power New York John Wiley & Sons, Inc. 1952 484 p illus. 24 cm. $5 75 2686

Contents (abridged) Part 1, Relation of farm power to agriculture. Farm power development and utilization. Part 2 Internal-combustion engines: Internal-combustion engine principles. Valve

and engine timing. Fuels and combustion. Ignition methods. Diesel engines. Fundamentals of electric ignition. Starting and lighting systems. Governors and governor controls. Engine cooling. Lubrication. Engine troubles. Part 3 Tractors. Clutches. Transmissions. Differentials and final drives. Pulley attachments, power take-offs, and power lifts. Tractor controls. Air cleaners. Spark arresters. Traction members. Power measurement. Hitches and drawbars. Tractor selection and management. References. Index.

Note: Although the title indicates a general treatise of power on farms, this book is limited to tractors and their engines. The treatment is practical and it is also simple in the sense that no previous acquaintance with mechanical engineering on the part of the reader has been assumed. On the other hand, such aspects as tractor transmissions are discussed in adequate detail for the farmer's purposes. The book is intended primarily for students at agricultural colleges. It can be used also as a source of general information about tractors and their elements. There is a five-page bibliography.

WOOLEY, JOHN COCHRAN

Repairing and constructing farm buildings. New York McGraw Hill Book Company Inc., 1952 261 p. illus. 24 cm. (McGraw Hill rural activities series W. A. Ross consulting editor) $4 50 2687

Contents: Part I, Repairing farm buildings: Introduction to Part I. Terminology of repair and construction. Disposing of roof and yard drainage. Repairing foundations. Repairing basement walls and floors. Repairing and replacing parts of barn frames. Repairing and re-covering exterior walls. Repairing windows and repairing and replacing doors. Repairing and re-covering old roofs. Insulating old buildings. Ventilating existing buildings. Repairing silos. Repairing ceilings, walls, and floors in farm homes. Part II, Constructing farm buildings. Introduction to Part II. Constructing farm buildings. Staking out a new building. Excavating for construction of farm buildings. Mixing and placing concrete. Constructing a foundation. Erecting the framework of a farm building. Framing gable, gambrel, and hip roofs. Framing Gothic-roof buildings. Constructing yard fences and gates. Appendix: General-purpose lumber. Wood fasteners. Paint for farm buildings. Wood preservatives. Definitions of parts and terms used in repair and construction of farm buildings. Correlated list of visual aids. Index.

Note. A practical book for the farmer who wants to learn how to construct and repair his own buildings or for contractors and carpenters engaged in such work. It presents in nontechnical language all necessary details for the construction and repair of various types of farm buildings, including the farm house. Carefully prepared line drawings add to the usefulness of the book. While not intended as a textbook, the book should be of service in agricultural education and also for persons who need information on construction and repair for purposes of supervision of carpenters and inspection of finished work.

AGRICULTURAL CHEMISTRY

AHLGREN, GILBERT HAROLD, AND OTHERS

Principles of weed control. By Gilbert H. Ahlgren, Glenn C. Klingman and Dale E. Wolf. New York John Wiley & Sons, Inc. 1951 368 p. illus. 22 cm. $5.50. 2688

Contents: Introduction. Principles of control and eradication. Chemicals used in weed control. Physiological effects of herbicides. Field crops grown in rows. Small grains and flax. Grasslands and rights-of-way. Drilled and broadcast legumes. Vegetables and fruits. Drainage and irrigation ditches, stream banks, lakes, and ponds. Turf, lawns, and ornamental plants. Brush and undesirable trees. Soil sterilants. Defoliation. Poisonous weeds. Special weed problems. Application equipment. Appendix. Author index. Subject index.

Note. An indication of the impact of science upon agriculture is found in the fact that most of this book is devoted to weed control by chemicals. Calcium cyanamide, 2, 4-D, 2, 4, 5-T and other chemicals now in use or that have been tried in practical weed control are described. Techniques of chemically controlling weeds in various crops or chemically controlling particular weeds are covered. There are good lists of references and more than 100 illustrations.

ASSOCIATION OF OFFICIAL AGRICULTURAL CHEMISTS

Official methods of analysis of the Association of Official Agricultural Chemists. Editorial board Henry A. Lepper chairman. Committee on Editing Methods of Analysis H. J. Fisher (chairman) E. L. Griffin, W. F. Reindollar, J. W. Sale, F. H. Wiley, and Marian Lapp Otis. Seventh edition. Washington, D. C. The Association of Official Agricultural Chemists 1950 910 p. illus. 24 cm. $10 00 2689

Contents. Agricultural liming materials. Fertilizers. Soils. Caustic poisons. Economic poisons. Plants. Baking powders and baking chemicals. Beverages: non-alcoholic and concentrates. Beverages: distilled liquors. Beverages: malt beverages, sirups and extracts, and brewing materials. Beverages: wines. Cacao bean and its products. Cereal foods. Coffee and tea. Dairy products. Eggs and egg products. Enzymes. Fish and other marine products. Flavoring extracts. Fruits and fruit products. Gelatin, dessert preparations, and mixes. Grain and stock feeds. Meat and meat products. Metals, other elements and residues in foods. Nuts and nut products. Oils, fats, and waxes. Preservatives and artificial sweeteners. Spices and other condiments. Sugars and sugar products. Vegetable products, processed. Waters, mineral, and salt. Drugs. Cosmetics. Coloring matters. Extraneous materials: isolation. Microbiological methods. Microchemical methods. Radioactivity. Standard solutions. Vitamins. Reference tables. General index.

Note (3317*) This latest quinquennial revision of a work that has been standard among agricultural chemists for more than 30 years presents the laboratory analyst with the most recent approved procedures for the analysis and examination of the products of agriculture and other commodities connected with agriculture. The change of title reflects the action of the Association in deleting the former "tentative" classification—methods now being designated "first action" upon first adoption and "official" upon subsequent final adoption. In the seventh edition nearly all chapters have been expanded by the inclusion of new methods, particularly the chapters on cosmetics, coloring matters, metals and other elements in foods and drugs, preservatives, vitamins, and extraneous materials in foods and drugs.

DUTCHER, RAYMOND ADAMS, AND OTHERS

Introduction to agricultural biochemistry by R. Adams Dutcher, Clifford O. Jensen and Paul M. Althouse. New York John Wiley & Sons Inc. 1951 502 p. 22 cm. $6 00. 2690

Contents (abridged) Part 1 General and introductory: Chemistry of living matter. Physical state of matter. Carbohydrates. The lipids. Proteins. Enzymes. Biological oxidations. Part 2 The plant: Food production. The soil and its relation to plant growth. Fertilizers. Pesticides. Farm chemurgy. Part 3, The animal: Foods and feeding. The chemistry of blood, lymph, and body fluids. Digestion of foods. The chemistry of blood. [illegible] The vitamins. Energy metabolism. Lipid metabolism. [illegible] metabolism. Protein nutrition. Mineral metabolism. Mineral nutrition. Appendix. Index.

Note. (4801) This book is primarily a textbook for use in agricultural colleges, but its compact discussions of such topics as [illegible] metabolism could be useful to students in fields other than agriculture. Previous study of inorganic and organic chemistry is assumed in the treatment. The book is designed for approximately the same audience as Dutcher and Haley's *Introduction to agricultural biochemistry* but the contents are largely new.

FREAR, DONALD ELISHA HARDING, editor

Agricultural chemistry: a reference text. New York D. Van Nostrand Company Inc., 1950–51 2 vols illus. 25 cm. Vol. 1 $9.50 vol. 2 $9 50 2691

Contents: Volume one, Principles of agricultural chemistry: Part I, Some fundamental materials and processes common to plants and animals: Chemistry of the carbohydrates, by M. L. Wolfrom. Chemistry of the lipids, by J. B. Brown. Chemistry of the amino acids and proteins, by C. M. Stevens. Part II, Chemical processes of fundamental importance in agriculture: Chemistry of enzymes and their action, by G. F. Somers. Biological oxidations, by V. R. Potter. Part III, Biophysical phenomena and cell chemistry, by H. W. Popp. Plant chemistry: Plant metabolism—general features, by D. R. [illegible] Absorption and utilization of inorganic substances in plants, by D. R. Hoagland and F. R. Steel. The chlorophylls and photosynthesis, by F. P. Zscheile. Plant pigments other than the chlorophylls, by L. F. Zscheile. Utilization of carbohydrates in plants, by [illegible] Absorption and utilization of nitrogen compounds in plants, by F. E.

Schlenker Plant hormones and other regulatory factors, by J van Overbeek. Part IV Animal chemistry: Animal metabolism—general features, by B. H. Schneider. Digestive processes, by B. H. Schneider Energy metabolism, by L. Voris. Carbohydrate metabolism, by M. E. Kohl. Lipid metabolism, by J. B. Brown. Protein metabolism, by G. H. Pritham. Absorption and utilization of inorganic substances, by J. K. Loosli. The vitamins, by N B. Guerrant. Part Soil chemistry: The minerals of the soil, by C. D. Jeffries. Colloids of the soil, by E. A. Hauser. Soil organic matter by J E. Dawson. Subject index. Volume two, Practical applications of agricultural chemistry: Part I, Chemistry of major agricultural products: The chemistry of seed and cereal crops, by V H. Morris. The chemistry of fruit and vegetable crops, by H. W von Loesecke and Z. I. Kertesz. The chemistry of forage crops, by J T Sullivan. The chemistry of meat and meat products, by R. C. Miller The chemistry of milk and dairy products, by A. H. Johnson. The chemistry of eggs and poultry products, by R. M. Conrad. Part II, Fertilizers and soil amendments: Nitrogenous fertilizers, by S. F Thornton. Potassium fertilizers, by J. D Romaine. Phosphate fertilizers, by C. A. Black and W H. Pierre. Mixed fertilizers, by S. F Thornton. Liming materials, by A. C. Richer Minor element supplements, by E. R. Purvis. Part III, Nutrition of farm animals: The nutrition of dairy cattle, by S. E. Smith. The nutrition of beef cattle, by H. R. Guilbert. The nutrition of horses and mules, by P B. Pearson and C. F Winchester The nutrition of sheep and goats, by P B. Pearson. The nutrition of poultry by H. W Titus. The nutrition of swine, by R. C. Miller. The nutrition of domestic and fur bearing animals, by A. E. Schaefer Part IV Pesticides: Insecticides, by D. E. H. Frear Fungicides, by D. E. H. Frear. Herbicides, by D E. H. Frear. Part Commercial agricultural chemistry: Inventions and patents relating to agricultural chemistry by C. W Rivise and A. D. Caesar. Chemurgic applications of agricultural products, by J. R. Clopton. Subject index.

Note: A comprehensive survey of agricultural chemistry is presented in this work. Each of the chapters discusses in some detail the chemical aspects of some phase of the growing or processing of plants and animals of agricultural importance. Concluding each chapter is bibliographical list of references. The work is especially suitable for reference use by such readers as (1) university graduate students in the various branches of agricultural chemistry (2) county agents, extension workers, and business men whose work involves knowledge of such products as feeds, fertilizers, and insecticides, and (3) research investigators in the agricultural sciences who need information on subjects bordering on their own specialties. The volumes can be used independently of one another

HUNGER SIGNS IN CROPS a symposium. Prepared by Firman E Bear [and others] Revised edition. Washington The American Society of Agronomy and The National Fertilizer Association, 1949 390 p illus. (part col d) 26 cm. $4.50 2692

Contents: Why do plants starve? by G. D. Scarseth and M. J. Volk. Plant-nutrient deficiency in tobacco, by J E. McMurtrey Jr. Deficiency symptoms of corn and small grain, by G. N Hoffer and R. A. Krantz. Plant-nutrient deficiency symptoms in the potato, by H. A. Jones and others Plant nutrient deficiency symptoms in cotton, by H. P Cooper and L. Donald. Plant-nutrient deficiencies in vegetable or truck crops, by J J. Skinner and E. R. Purvis. Nutrient deficiency symptoms in deciduous fruits, by O. W Davidson and W P Judkins. Plant-nutrient deficiency symptoms in legumes, by W L. Nelson and F E. Bear Symptoms of citrus malnutrition, by A. F Camp and others. Appendix. Index.

Note: (741a) The symptoms and effects of deficiencies in soil nutrients that are essential to plant growth are described in this valuable work. A clearly written text supplemented by 113 illustrations reproduced in black and white and 124 plates in color. Though written by eminent specialists in plant nutrition, the book is addressed primarily to persons with practical interests such as agricultural extension workers, chemists in the fertilizer industry and scientific farmers. The chapter titles are the same as in the first edition, but there has been much revision and most of the chapters are now signed with the name of an additional contributor.

UNITED STATES ATOMIC ENERGY COMMISSION

Some applications of atomic energy in plant science. Washington, D C. Government Printing Office, 1952 211 p. illus. 23 cm. Paper $0.50 2693

Contents (abridged): Part one, Major activities in atomic energy programs, July–December 1951 Part two, Condensed AEC annual financial report, fiscal year 1951. Part three, Atomic energy and its applications in plant science Effects of radiation on plants—intense radiation and plant development. Effects of moderate radiation. Handling atomic energy wastes. Biochemical effects of radiation. Radiation and plant genetics. Plant research with isotopes Efficient use of fertilizers. Biological sources of plant nutrients. Movements of minerals in plants. Tracer research on trees. Studies of crop pests. Photosynthesis and biosynthesis: Biosynthesis of tagged compounds. Appendices.

Note: The eleventh semiannual report of the Atomic Energy Commission reviewing major developments of the second half of 1951 that can be publicly divulged without hazard to national security together with the AEC financial report for fiscal 1951 is combined in this publication with detailed review of developments in plant science research supported by the AEC.

ECONOMIC BOTANY

HILL ALBERT FREDERICK

Economic botany a textbook of useful plants and plant products. Second edition. New York McGraw Hill Book Company, Inc., 1952 560 p illus. 24 cm. (McGraw-Hill publications in the botanical sciences Edmund W Sinnott, consulting editor) $7.00 2694

Contents (abridged): Introduction. The importance and nature of plant products. Industrial plants and plant products: Forest products, wood and cork. Rubber and other latex products. Gums and resins. Essential oils. Fatty oils and waxes. Sugars, starches, and cellulose products. Drug plants and drugs. Food plants: The major cereals. The minor cereals and small grains. Legumes and nuts. Vegetables. Fruits of temperate regions. Tropical fruits. Food adjuncts: Spices and other flavoring materials. Beverage plants and beverages. Appendix Bibliography Index.

Note: (4809) An introductory survey of the commercial products derived from plants. It is designed for use as textbook but it serves equally well as reference book. In both public and private libraries it is used to supply general information on such plant products as chicle gum, gum arabic, kola nuts, and Spanish moss. Though it is limited to books published since 1934, the bibliography is helpful feature. In this edition there is fair amount of new material including discussions of 140 additional species. There are 110 figures, most of which are reproductions of photographs.

KLOSE, NELSON

America s crop heritage the history of foreign plant introduction by the Federal Government. Ames The Iowa State College Press, 1950. 156 p. illus. 24 cm. $3.50 2695

Contents: Early American agriculture. Search for new crops, 1770–1840. Federal promotion of crops. Leadership of the Patent Office, 1836–62. The commissionership, 1862–89. Main importations. Lesser importations. Plant introduction under Rusk and Morton. Bonanza years. Plant introduction of the twentieth century Appendix. Index.

Note: A somewhat informal history of an important activity in the development of agriculture in the U. S. A. As the subtitle indicates, is limited to the efforts of the National Government in introducing and testing new plants. Even within this limitation, the account is rather generalized and only the most prominent men and the most important importations are given much space. However information is assembled in the book that had not been readily available to students of the history of agriculture and of the economic development of the U S. A.

KUMMER, ANNA PEDERSEN

Weed seedlings. Drawings by the author Chicago The University of Chicago Press, 1951 435 p. illus. 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $5 00 2696

Contents: Artificial key to the species and varieties. Illustrations and descriptions of three hundred species and varieties of weed seedlings. Index.

Note: A practical book for the identification of the seedlings of weeds likely to be found growing in gardens, farms, ranches, or woods in the United States and Canada. Preceding the illustrations and descriptions is a key to assist in the process of identification. The 300 varieties include all common and noxious weeds. The drawings, which are unshaded, show the general aspect and growth habit of the plant, including the roots. For each species there is also a set of drawings, in twice the natural size, which show a detached seed leaf and the first, third, and fifth leaves. Descriptions include features not obvious in the drawings, measurements of the seedlings, and range and habitat. The author made the drawings from weed seedlings grown from seed taken from identified specimens and harvested in four representative stages of growth.

ROBBINS WILFRED WILLIAM AND OTHERS

Weed control, a textbook and manual, by Wilfred W Robbins, Alden S Crafts, and Richard N Raynor Second edition. New York McGraw Hill Book Company, Inc., 1952 503 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8 00 2697

Contents. Weeds and human affairs. Reproduction of weeds. Methods of preventing the introduction and spread of weeds. Ecology of weeds. Principles of weed control. Tillage methods of weed control. Biological control of weeds. Use of chemicals in weed control. Properties and functions of herbicides. Selective herbicides—foliage contact applications. Selective herbicides—foliage contact applications—oils. Selective translocated herbicides—foliage contact applications—hormone-like substances. Selective herbicides—root applications. Nonselective herbicides—foliage contact applications. Nonselective herbicides—translocated foliage applications. Nonselective herbicides—root applications. Evaluation of combinations of chemical applications. Equipment for applying herbicides. Special weed problems—weeds of grasslands and turf. Special weed problems—cropped areas. Special weed problems—noncropped areas. Special weeds. Appendix. Convenient measures. Required nozzle capacities to apply desired number of gallons of spray per acre. Cost per unit weight of active ingredient. Common and scientific names of weeds used in text. General references. Author index. Subject index.

Note (4815) A critical review of currently useful methods, organized so that it may be used both as a textbook in agricultural college courses and a reference book for practical farmers and agricultural extension workers. It has undergone complete revision to cover such developments since the 1942 edition as the discovery of 2,4-dichlorophenoxyacetic acid as a selective weed killer, the introduction of trichloroacetic acid and its salts, isopropyl phenylcarbamate, and maleic hydrazide, and other types of advances, including soil studies and improved methods of marketing and applying herbicides. The new edition contains new illustrations, additions to the bibliographies, and enlarged sections on specific weeds, the weeds of different crops, and special weed problems. The book has been somewhat reduced in size, principally by the elimination of illustrative material; the figures, mostly photographic, have been reduced in number from 202 in the first edition to 181.

SCHERY ROBERT W

Plants for man. New York Prentice-Hall, Inc., 1952 564 p. illus. 26 cm. $10 00 2698

Contents. Part I, Introduction. Man's dependence upon plants. Man's economic interest in plants. Part II, Products from the plant cell wall: Forests available to man. The forest belts of North America. Wood and its uses. The forests, man, and the future. Fibers. Part III, Cell products and extractives. Latex products. Pectins, gums, resins, oleoresins, and similar exudates. Vegetable tannins and dyes. Essential oils for perfumes, flavors, and industrial uses. Medicinals, insecticides, and herbicides—tobacco. Vegetable oils, fats, and waxes. Carbohydrate extractives—sugars and starches. Part IV. Plants and plant parts used primarily for food and beverages: Food plants. The cereals. Other food seeds and forage. Vegetables—root, stem, and leaf crops. Fruits. Beverage plants. Of minor importance and miscellaneous. Index.

Note. A readable, encyclopedic work on the plants and plant products that are useful to man. It is organized so that it may be used either as an introductory text in economic botany or as a source of information for general readers. Plants of considerable economic importance are given several pages of space, while those of minor importance are described in a single paragraph. The book is generously illustrated and the chapters are accompanied by selected references for supplementary reading. The index is full.

PLANT DISEASES

BARNES, HELEN VIRGINIA, AND JESSIE M. ALLEN compilers

A bibliography of plant pathology in the tropics and in Latin America. Washington, D C. Government Printing Office, 1951 78 p. 27 cm. (United States. Department of Agriculture. Bibliographical bulletin no. 14) Paper, $0.40 2699

Contents: Introduction, by Frederick L. Wellman. A bibliography of plant pathology in the tropics and in Latin America. Index of authors. Index of plant diseases.

Note. This bibliography, listing 2191 references on phytopathology in the tropics and Latin America, covers the years 1937 through 1949. In the preface a listing is made of sources containing bibliographies prior to 1937. The arrangement is alphabetical by author, with brief annotations where the titles do not fully indicate the contents and with notes to describe items in foreign languages which contain English summaries. A key to the contents is provided by the index in which diseases are grouped under the scientific names of the host plant and cross indexed under the names of the host plants in English, Portuguese, and Spanish.

CATION DONALD, AND OTHERS editors

Virus diseases and other disorders with viruslike symptoms of stone fruits in North America. Publication committee Donald Cation, chairman. Washington, D C. Government Printing Office, 1951 276 p. illus. (part col d) 24 cm. (United States. Department of Agriculture. Agriculture handbook 10) $2.50. 2700

Contents Introduction. Virus diseases of peach. Virus diseases of sweet cherry. Rough bark of oriental flowering cherry. Virus diseases of sour cherry. Virus diseases of plum and prune. Ring pox of apricot. Virus diseases of almond. Viruslike diseases not proved transmissible. Deficiency and excess troubles that resemble virus diseases. *Literature cited. Appendix:* Common and scientific names of plants. List of authors. Host-disease index.

Note This handbook brings together up-to-date information about more than 40 known virus diseases affecting stone fruits in the United States, and also covers certain nonvirus and nutritional disorders which might be confused with virus diseases. Many photographic illustrations in black and white and in color of diagnostic symptoms are provided to assist in recognition of the diseases. The chapters, each devoted to a specific disease and prepared by a specialist or group of specialists, are grouped by fruit. The following sub-headings occur in typical chapters: name of the disease, name of the causal virus, history, geographic distribution, economic importance, host range, symptoms, diagnostic or unusual characteristics, transmission, incubation period, and control measures. The publication is useful to plant pathologists, fruit growers, nurserymen, students, and regulatory officials.

ELLIOTT, CHARLOTTE

Manual of bacterial plant pathogens. Second, entirely revised edition. Waltham, Mass. Chronica Botanica Company 1951 186 p. illus. 27 cm. (Annales cryptogamici et phytopathologici. Volume x. Edited by Frans Verdoorn) $6.00 2701

Contents: Part I, Bacterial plant pathogens. Part II, Bacterial species reported in the literature from plants but not recognized as valid plant pathogens. Index of genera and species of plant hosts. Index of genera and species of bacteria.

Note A reference book of primary interest to professional workers in plant pathology. It is organized as a dictionary with the scientific names of the pathogens arranged alphabetically. The entry for each organism contains a variety of information including literature references, concise physical descriptions, behavior in various standard tests, optimum temperature, thermal death point, host range, geographical distribution, and methods of control. The nomenclature adopted in this edition is that of the 1948 edition of Bergey's *Manual of determinative bacteriology*

SPRAGUE, RODERICK

Diseases of cereals and grasses in North America (fungi, except smuts and rusts) New York The Ronald Press Company 1950 illus. 538 p. 24 cm. $8.00 2702

Contents. The Fungi: Phycomycetes, Ascomycetes, Basidiomycetes. Fungi imperfecti: Sphaeropsidales, Melanconiales, Moniliales. Glossary Literature cited. Index of fungi. Index of cereal and grass hosts.

Note: A systematic, descriptive manual designed to aid plant pathologists in the identification of parasitic fungi and the diseases of the grass family caused by them. Saprophytic fungi associated with parasitic fungi are also included. The geographic area covered includes North America, Central America, and Hawaii. The monograph on each species includes technical description of the individual fungus and of disease symptoms caused in the host, range by states and provinces, world distribution, and literature citations. The author is plant pathologist on the staff of the Agricultural Experiment Station of the State College of Washington.

STEVENS, NEIL EVERETT AND RUSSELL B STEVENS

Disease in plants an introduction to agricultural phytopathology Waltham, Mass. Chronica Botanica Company, 1952 219 p. 24 cm. $4 75 2703

Contents: Plants, plant disease, and human welfare. The effect of disease on plants. Causal agents of plant disease: Viruses. Bacteria and fungi. Flowering plants, nematodes, and insects. Nutritional factors, climatic effects, chemical injury Factors influencing the development of pathogenic diseases. The host. The pathogen. Weather and soil. Insects. Variation and physiological specialization in plant pathogens. Introduced hosts and pathogens. Disease control: The economy of disease control. Chemical treatment. Seed treatment. Soil treatment—crop rotation. Exclusion—eradication—quarantine. Breeding for disease resistance. Market pathology Handling plant disease problems. General index. Index of persons.

Note: A survey in which the emphasis is on the aspects of plant disease which are of general interest and applicability On numerous points, such as the recently developed fungicides, there is little or no information; on the other hand such aspects as methods of testing fungicides are adequately described. Descriptions of individual diseases are in general not included, but types of diseases are discussed. The style is condensed. For example the chapter on breeding plants for resistance to disease is only 10 pages long. However it is supplemented by selected bibliography Social and economic aspects are covered in general and the economy of various large-scale control measures is compared. The work is part of 13-volume *Manual of the plant sciences*, edited by Frans Verdoorn.

WALKER, JOHN CHARLES

Plant pathology New York McGraw Hill Book Company Inc., 1950 699 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8.00. 2704

Contents: History of plant pathology Nonparasitic diseases. Bacterial diseases. Diseases incited by plasmodiophorales Diseases incited by phycomycetes—by fungi imperfecti—by ascomycetes—by basidiomycetes—by phanerogamic parasites—by nematodes. Virus diseases. Relation of environment to disease development. Host-parasite interaction. Disease control through exclusion and eradication. Disease control through protection. Disease control through host resistance. Index.

Note: An introductory textbook for undergraduate college students of botany and agriculture. The broad principles of the subject are developed from fairly intensive studies of representative diseases. For the diseases discussed there is general overview, an account of symptoms, causal organisms, the disease cycle, varietal resistance, control, and list of general and specific references. The style is clear and concise and extensive lists of literature citations are included. There are 149 illustrations. The author is Professor of Plant Pathology in the University of Wisconsin.

WESTCOTT, CYNTHIA

Plant disease handbook. New York D Van Nostrand Co., Inc., 1950 746 p. illus. 24 cm. $8.50. 2705

Contents: Introduction. Garden chemicals and their application. Classification of plant pathogens. Plant diseases and their pathogens. Host plants and their diseases. List of agricultural experiment stations. Glossary Selected bibliography Index.

Note: A substantial reference manual. There are two main parts. Plant diseases and their pathogens, about 360 pages in length, furnishes concise semi-technical descriptions of the diseases. The second main part "Host plants and their diseases, about 340 pages in length, is arranged by plant names with the diseases to which particular plant is susceptible listed under the plant name. The book is more comprehensive than is required by the average home-gardener but it is valuable reference book for libraries, agricultural extension workers, and advanced amateur gardeners.

INSECT PESTS AND INSECTICIDES

AMERICAN CHEMICAL SOCIETY

Agricultural control chemicals. Collected papers from the Symposia on Economic Poisons presented before the Division of Agricultural and Food Chemistry of the American Chemical Society at the 115th national meeting in San Francisco March 28 to April 1 1949 and the 116th national meeting in Atlantic City September 18 to 23 1949 Washington D C. American Chemical Society, 1950 273 p. illus. 24 cm. (American Chemical Society Advances in chemistry series. No. 1) Paper $2.50 2706

Contents: Objectives and scope, by J L. St. John. World use of economic poisons, by S. S. Easter. Insecticides in agriculture, by S. A. Rohwer. Some problems in the use of newer economic poisons, by G. F MacLeod. Labeling requirements for insecticides and other economic poisons under Federal law by W G. Reed. Registration and labeling of economic poisons in California, by A. B. Lemmon. State and municipal health department requirements for use of common (useful) insecticide sprays, by E. L. Holmes and L. J. Salathe. Use of residual spray materials in typical food industry, by E. L. Holmes and L. J. Salathe. Pharmacology and toxicology of parathion, by L. W Hazleton and E. G. Holland. Pharmacology and toxicology of some important economic poisons, by C. H. Hine. New safe insecticides, by H. Wachs and others. Spray residues on food crops and their relation to total food consumption, by R. H. Robinson. Public health aspects of agricultural chemicals, by H. K. Abrams. Benefits and hazards of insecticides to public health, by W J. Hayes, Jr and S. W Simmons. The physician's role in the pesticide problem, by B. E. Conley and J R. Wilson. Determining new insecticides in formulations and residues, by H. L. Haller. Mass-production techniques for estimation of parathion residues, by F A. Gunther and R. C. Blinn. Mass estimation of DDT surface and penetrating residues, by F A. Gunther and M. E. Miller. Microbioassay of insecticide residues in plant and animal tissues, by W M. Hoskins and P S. Messenger Toxicity of spray residue of fresh and processed fruits and vegetables, by A. Hartzell. Some poisonous residue factors in use of two new organic insecticides, by G. S. Hensill and L. R. Gardner. Selenium residue on and in the peel of Washington apples, by K. C. Walker. Fruit surface residues of DDT and parathion at harvest, by M. M. Barnes and others. DDT and parathion spray residues on apples, by W E. Westlake and J E. Fahey Parathion spray residue on soft fruits, apples, and pears, by K. C. Walker. Absorption of DDT and parathion by fruits, by G. E. Carman and others. Removal of DDT and parathion residues from apples, pears, lemons, and oranges, by F A. Gunther and others. Synthesis and development of parathion and related compounds, by J. T Cassaday and others. Organic phosphorus insecticides, by S. A. Hall. Chemistry and toxicity of some organothorine insecticides, by W T Sumerford. Alkali-stable polychloro organic insect toxicants, aldrin and dieldrin, by R. E. Lidov and others. Insecticidal activity and dehydrochlorination rates of some polychloro insecticides, by S. J. Cristol. Colorimetric method for estimating small amounts of aldrin, by A. A. Danish and R. E. Lidov. Polarographic determination of O,O-diethyl O p nitrophenyl thiophosphate (parathion) by C. V Bowen and F I. Edwards, Jr. Effect of acetic acid on recovery of ethylene dibromide from California soil, by W J. Hanson. Multiple responsibilities of the insecticide chemist, by D. D. Irish. Responsibilities of the chemist in the development of insecticides, by W H. Tisdale and J. W Williams. Pest-control chemicals in the production of food, by L. S. Hitchner. Military characteristics of insecticides, by F W Whitemore, Jr. Development and use of synthetic organic insecticides, by

C. E. Palm. Toxicological investigations by industry by J H. Fosliger. Toxicological action and metabolic fate of chlordan, by E. F Stohlman and M. I. Smith. DDT in eggs and tissues of chickens fed varying levels of DDT by M. J. Bryson and others. DDT in milk and tissues of dairy cows fed DDT-dusted alfalfa hay by C. Biddulph and others. 2 4-dichlorophenoxyacetic acid (2 4-D) as selective herbicide, by J H. Quastel. Metabolic products of elemental sulfur 35 applied to lemons as an insecticide, by F M. Turrell and M. B. Chervenak. Colorimetric determination of small quantities of 1,1,1-trichloro-2,2-bis(p-methoxyphenyl)-ethane, by J. D Fairing and H. P Warrington, Jr. Partition chromatography in analysis of insecticide formulations, by T H. Harris. Organic-chlorine determinations as measure of insecticide residues in agricultural products, by R. H. Carter and others.

Note: A collection of original papers written by chemists and addressed to professional chemists. Literature references are included for some of the papers.

BAILEY, STANLEY FULLER, AND LESLIE M SMITH

Handbook of agricultural pest control. New York Industry Publications, Inc. 1951 191 p. illus. 20 cm. $3 25 2707

Contents: Introduction. Section I, Chemicals: The agricultural chemicals. Physical and chemical properties. Compatibility Containers. Fumigants and fumigation. Toxicology and residues. Spray oil specifications. Section II, Machines: Spraying machines. Rates of delivery of spray machines. Rates of application for sprays. Dusts and dusting. Aircraft. Section III, Miscellaneous: Reference tables and formulas for mosquito control operators. Hazards. Miscellaneous topics. Tables and formulas. Terms and symbols.

Note: A brief, well-constructed handbook containing up-to-date factual information useful in the use of insecticides, fungicides, weed killers, etc. There are 101 tables in addition to formulas scattered through the text. Trade names of chemicals are included occasionally to clarify the materials designated by chemical names. It is useful book for progressive farmers, agricultural pest control operators, agricultural advisers, and research workers wanting precise guidance in handling, measuring, and applying agricultural chemicals. The authors are Professors of Entomology in the University of California.

BAKER, WILLIAM ALFONSO AND OTHERS

Biological control of the European corn borer in the United States, by W A. Baker W G Bradley and C A. Clark. Washington, D C. Government Printing Office 1949 185 p illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 983) Paper $0.50 2708

Contents (abridged) Introduction. Synonymy Importations. Domestic collections. Laboratory breeding. Storage of parasite material. Emergence. Parasite shipments. Colonization and sampling methods. Liberation procedure. Field sampling procedure. Imported parasites in maintenance status in the United States. Imported parasites not known to be established in the United States. Parasite complexes at test points in the United States: Utilization of native hosts by imported parasites. Field status of native parasites. Insect predators. Birds. Disease Summary Literature cited.

Note A scientific report by three entomologists of the Bureau of Entomology and Plant Quarantine on the results of investigations conducted between 1919 and 1940 to reduce the losses of field and sweet corn due to the European corn borer. These investigations largely took the form of experiments with the introduction of various dipterous and hymenopterous insects parasitic upon the corn borer. Methods of introduction and colonization of the parasites are described, and figures are tabulated to show results by years, localities, and species of parasites released. Individual attention is given to 23 different imported species of insect parasites. Briefer treatment is given to 29 native insect parasites and to insect predators, birds, and disease as biological methods of control.

BROWN ANTHONY WILLIAM

Insect control by chemicals. New York John Wiley & Sons Inc. 1951 817 p illus. 22 cm. $12.50 2709

Contents Insecticides of the mid-twentieth century and their properties. The structure of organic chemicals and their toxicity to insects. Susceptibility of insects to the entry of poisons. The pharmacology of poisons for insects. Equipment developed for the application of insecticides. The application of insecticides from aircraft. Toxicity and hazards to man and domestic animals. Toxicity of insecticides to plant growth. Chemical control of insects feeding on plants. Chemical control of insects affecting man and animals. Insecticides and the balance of animal populations.

Note: The author has managed to cover practically all aspects of the subject from what is known about the relations between molecular structure and toxicity to comparisons between airplanes and helicopters in the application of dusts. The gist of the available information is given in all instances, and most practical workers in the field will find it adequate. Literature citations are given for all the important statements in the text. Most of the bibliographies appended to the chapters run to several hundred references, hence the book can be used also as guide to the literature.

EBELING, WALTER

Subtropical entomology San Francisco Lithotype Process Co., 1950 747 p. illus. 28 cm. $7 50 2710

Contents: Origin and scope of applied entomology Morphology and metamorphosis. Classification. The orders of insects. Organization and legislation in entomology Artificial control. Insecticides used primarily as stomach poisons. Sulfur compounds. Insecticides of plant origin. Chlorinated hydrocarbons. Organic phosphates. Miscellaneous organic insecticides. Spray oils. Fumigants. Orchard fumigation. Equipment for application of insecticides. Experimental design and evaluation of treatment. Biological control. Citrus pests. Citrus pests of foreign countries. Grape pests. Walnut pests. Almond pests. Pecan pests. Fig pests. Olive pests. Avocado pests. Date pests. Pests of minor subtropical fruits. Literature cited. Index.

Note. About half of the space of this comprehensive work is devoted to background principles and to general information about insecticides, and the other half is devoted to descriptions of the pests (and their control) of specific fruits. The two chapters on citrus pests are the longest in the book. Control methods are described explicitly and recent developments in insecticides are taken into account. The book is based on teaching experience at the University of California, and is intended primarily for the use of students of applied entomology It is useful also as reference book. There are 570 figures and bibliography of 1032 citations.

FENTON, FREDERICK AZEL

Field crop insects. New York The Macmillan Company 1952 405 p. illus. 22 cm. $5 75 2711

Contents: Introduction. Insect abundance and distribution. Insect biology Insecticides. The application of insecticides. Crop [illegible] and dusters for insecticides. Physical and mechanical control. Cultural control. Biological control. Plant quarantines and pest control campaigns Leaf and plant destroying insects. Sap sucking insects. Fruit feeding insects. Soil inhabiting insects. Borers and other internal feeding insects. Feeders on floral parts and seeds. Feeders on broken seeds and farinaceous material. Index.

Note A general introductory treatment designed mainly for use in agricultural college courses. It covers both insects that attack growing crops in the field and those that attack storage grains. The descriptions of harmful insects occupy more than half of the book, but they include not only biological information but also specific discussions of methods of control. The author is Professor of Entomology in Oklahoma Agricultural and Mechanical College.

HOUGH WALTER SENEFF, AND A. FREEMAN MASON

Spraying, dusting and fumigating of plants. Principles and applications. Revised edition. New York The Macmillan Company 1951. 726 p. illus. 22 cm. $12.50 2712

Contents: Part I, Principles: Development of pest control on plants. Insecticides. Fungicides. Miscellaneous spray [illegible]. Compatibility [illegible] pesticides, and compatibility Spraying and dusting machines. Construction and operation of spraying and dusting equipment. Fumigation. Seed treatment for control of insects, diseases, and weeds. Part II, Application: Growth regulators. Herbicides. Seed treatment Bush-fruit and strawberry troubles. Orchard-fruit troubles. Vegetable and Grape troubles. Cranberry troubles. Citrus troubles. General [illegible] truck-crop troubles. Cotton troubles. Tobacco troubles. Index of [illegible] sect feeders. Poison baits. Appendix. Index of authors. Index of subjects.

Note: A comprehensive volume on the control of plant pests, diseases and weeds, in the United States and Canada. It has been completely rewritten from the original edition of 1928. In the first part up-to-date information is presented on all phases of the subject, including equipment, chemical compounds, and methods of application. Part two contains brief descriptions of diseases and destructive insects, with keys for diagnosis and discussions of best current remedies. The book contains many illustrations, charts, and formulas, and has bibliographical references in footnotes. It is practical book which has particular value as reference work for persons growing fruits and vegetables commercially and for persons working at agricultural experiment stations.

METCALF CLELL LEE, AND W P FLINT

Destructive and useful insects their habits and control. By C. L. Metcalf and W P Flint. Revised by R. L. Metcalf Third edition. New York McGraw Hill Book Company Inc., 1951 1071 p. illus. 24 cm. (Mc Graw-Hill publications in the agricultural sciences R. A. Brink, consulting editor) $10.00 2713

Contents: Insects as enemies of man. The value of insects to man. The external morphology of insects. The internal anatomy and physiology of insects. The mouth parts of insects. Development and metamorphosis. The place of insects in the animal kingdom. The orders of insects. Insect control. Apparatus for applying insecticides. Insects injurious to corn. Insects injurious to small grains. Insects injurious to legumes. Cotton insects. Tobacco insects. Insects injurious to vegetable gardens and truck crops. Insects injurious to deciduous fruits and bush fruits. Citrus insects. Insects attacking shade trees and shrubs. Insect pests of greenhouse plants and the flower garden. Household insects and pests of stored grains, seeds, and cereal products. Insects injurious to domestic animals. Insects that attack and annoy man and affect his health. Index.

Note: (4440) A thorough treatment of principles and practice in economic entomology which is used both as text in college courses and as reference manual and guide for agricultural extension workers, farmers, fruit growers, etc. The preceding edition was published in 1939. For this edition parts of the book were entirely rewritten, and other parts were substantially revised and augmented. The chapter on insect control, increased 40% in length, now contains descriptions including structural formulas of more than 180 substances used in the control of insects. The chapter on apparatus for applying insecticides has been completely modernized and new illustrations of the latest types of equipment have been added. Literature lists have been revised to include the recent literature. There are now 334 figures.

PAINTER, REGINALD HENRY

Insect resistance in crop plants. New York The Macmillan Company 1951 520 p. illus. 22 cm. $9 50 2714

Contents: Introduction. The mechanisms of resistance. Factors that affect the expression or the permanence of resistance. Resistance to insects in wheat. Resistance to insects in corn. Resistance to insects in cotton. Resistance to insects in sorghums. Resistance to insects in potato. Methods and problems in breeding for resistance to insects in crop plants. Selected supplementary bibliography Index.

Note: This book is comprehensive survey and digest of the published literature pertaining to the control of injurious insects by growing strains and varieties of crop plants that have high degrees of resistance to insect attack. Numerous examples of such resistance are known and the literature is voluminous. The author has summarized it under the headings noted above and has included references to the source articles. The specially titled "Selected supplementary bibliography" is supplementary to the extensive bibliographies appended to the chapters. The author has been the head of comparative study of insect resistance in crop plants at the Kansas Agricultural Experiment Station since 1926.

PYENSON LOUIS L.

Elements of plant protection. With line drawings by Emily B Steffens. New York John Wiley & Sons, Inc., 1951. 538 p. illus. 21 cm. (Wiley farm series) $4 96 2715

Contents (abridged): The external and internal structure of insects. The seasonal life history of insects. The relationship of insects to other organisms. Invertebrates other than insects harmful to plants. The chemical control of insects: the stomach poisons—the dormant and summer contact insecticides—fumigants and spray supplements—the new synthetic organic insecticides. Mammals and birds injurious to agriculture. Control of vertebrate animal pests. Plant diseases. Causes of plant diseases. The seasonal life history of pathogens. Viruses and physiopathies as the cause of plant diseases. The control of plant diseases. Plant treatments for disease control. Weeds. The reproduction of weeds. The elements of weed control. Chemical methods of weed control. Selective herbicides. Selective herbicides other than 2 4 D. Pre-planting and pre-emergence weed control. Application equipment. Selection, care, and manipulation of application equipment. Appendix: Selected reference books. Glossary Index.

Note: Brought together in this book is large fund of information on all types of plant pests, including insects, disease-producing organisms, rodents, birds, and weeds; the major pests and their control are well covered, but the author did not attempt encyclopedic treatment of all pests and all control measures. There are 50 tables and 216 drawings and photographs. The book is adaptable for introductory courses in economic entomology, plant pathology or weed control. While primarily intended for classroom use, the work is useful also in practical agricultural pursuits.

SHEPARD HAROLD HENRY

The chemistry and action of insecticides. New York McGraw Hill Book Company, Inc., 1951 504 p. illus. 24 cm. $7.50 2716

Contents: Introduction. Arsenical compounds. Fluorine compounds. Sulfur and its compounds. Copper compounds. Miscellaneous inorganic and metal-organic substances. Plant products: nicotine and other alkaloids. Pyrethrins, rotenone, and miscellaneous plant extractives. Petroleum, animal and vegetable oils, soaps, creosote. Synthetic organic insecticides. The chemical control of insects: general aspects. Relative toxicity and mode of action of insecticides. Attractants and repellents. Appendix. Index.

Note: A compact work suited especially to quick reference use in agricultural and technical libraries. Insecticides currently of importance are described as to their sources, chemical nature, uses, and toxicity. Special attention is given to toxic effects upon plants and animals. The chapters are essentially resumes of published literature including patents, and references to this literature are given both in the text and in the chapter bibliographies. The author is on the staff of the United States Department of Agriculture.

STEINHAUS EDWARD ARTHUR

Principles of insect pathology New York McGraw Hill Book Company, Inc., 1949 757 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $9.50. 2717

Contents: Introduction. Mechanical, physical, and chemical injuries. Diseases of nutrition and metabolism. The extracellular microbiota of healthy insects. Intracellular microbiota. Infection and epizootiology. Resistance and immunity. Symptoms and pathologies. Bacterial infections. Fungous infections. Virus infections. Protozoan infections. Nematode infections. Applied insect pathology and biological control. Author index. Subject index.

Note. An introductory but comprehensive survey of the diseases of insects and of the use of these diseases in the biological control of insect pests. The transmission of diseases to animals and plants by insects is not dealt with. The exposition is simple enough to make the book useful to students who have had basic courses in entomology. On the other hand, each chapter is followed by an extensive bibliography of the related literature. The work is both textbook and reference book, and the fully detailed indexes add to the reference feature. The author is Associate Professor of Insect Pathology in the University of California.

UNITED STATES DEPARTMENT OF AGRICULTURE

Insects. [Edited by Alfred Stefferud] Washington, D. C. Government Printing Office, 1952 780 p. illus. (part col d) 24 cm. (United States. Department of Agriculture. The yearbook of agriculture, 1952) $2.50. 2718

Contents (abridged) Introducing the insects: How many insects are there? by C. W. Sabrosky. Fossil insects, by F. M. Carpenter. How insects live, by E. O. Essig. How insects choose their food plants, by C. T. Brues. How to know an insect: What kind of insect is it? by C. F. W. Muesebeck. How to collect and preserve insects for study, by P. W. Oman. Insects as helpers: Insect friends of man, by F. C. Bishopp. Pollination by native insects, by G. E. Bohart. Breeding bees, by O. Mackensen and W. C. Roberts. Insecticides and bees, by F. E. Todd and S. E. McGregor. Insects to control weed, by J. K. Holloway and C. B. Huffaker. Insects as destroyers: Losses caused by insects, by G. J. Haeussler. Carriers of human diseases, by F. C. Bishopp and C. B. Philip. Insects and helminths, by E. E. Wehr and J. T. Lucker. Insects and the plant viruses, by L. D. Christenson and F. F. Smith. The nature of insecticides: How insecticides are developed, by R. C. Roark. The organic insecticides, by C. V. Bowen and S. A. Hall. The inorganic insecticides, by R. H. Carter. Aerosols and insects, by W. N. Sullivan and others. Applying insecticides: Using insecticides effectively by E. J. Newcomer and others. Research on aerial spraying, by J. S. Yuill and others. Machines for applying insecticides, by H. Ingerson and F. Irons. Warnings as to insecticides: Toxicity to livestock, by R. D. Radeleff and others. Residues, soils, and plants, by V. R. Bunnell. Residues on fruits and vegetables, by B. A. Porter and J. E. Fahey. Insecticides and the pure food law by P. B. Dunbar. Resistance to insecticides. Insects are harder to kill, by B. A. Porter. Fumigants: Fumigating soils and plants, by R. Latta and M. C. Lowe. Fumigating stored foodstuffs, by R. T. Cotton. Quarantines. How insects gain entry by E. R. Sasscer. Our domestic quarantines, by H. J. Conkle. Inspections at terminals, by A. P. Messenger. Other controls: Insects, enemies of insects, by R. D. Burks. Parasites and predators, by C. P. Clausen. Infectious diseases of insects, by E. A. Steinhaus. The vapor-heat process, by A. C. Baker. Cold treatment of fruits, by H. H. Richardson. Radiant energy and insects, by A. H. Yeomans. Weather and climate, by H. B. Mills. Resistant crops, the ideal way by C. M. Packard and J. H. Martin. Economic entomology: Surveys of insect pests, by G. J. Haeussler and R. W. Leiby. The insecticide industry by L. S. Hitchner. The industrial entomologist, by E. M. Searls. Extension work in entomology by M. P. Jones. Insects, man, and homes: Household insects, by L. S. Henderson. Mosquitoes, by H. H. Stage. Insects on cotton: Progress in research on cotton insects, by C. F. Rainwater. The pink bollworm, by L. F. Curl and R. W. White. Insects and vegetables: Potato aphids, by W. A. Shands and B. J. Landis. Sweetpotato weevil, by R. A. Roberts. The pea aphid, by J. E. Dudley Jr., and W. C. Cook. The beet leafhopper, by J. R. Douglass and W. C. Cook. Insects on fruits: The oriental fruit fly by W. Carter. The Mexican fruit fly, by P. A. Hoidale. The Japanese beetle, by C. H. Hadley and W. E. Fleming. Insects on field crops: Cereal and forage insects, by C. M. Packard. Grasshoppers, by J. R. Parker. The Mormon cricket, by C. Wakeland and J. R. Parker. The chinch bug, by C. Wakeland. The European corn borer by W. G. Bradley. Insects that attack tobacco, by D. J. Caffrey. Pests on ornamentals: Insect pests of flowers and shrubs, by C. A. Weigel and R. A. St. George. Livestock and insects: Flies on livestock, by G. W. Eddy. Ticks, lice, sheep keds, mites, by E. F. Knipling. Screw-worms, by W. G. Bruce. Cattle grubs, by E. W. Laake and I. H. Roberts. Forests, trees, and pests: The spruce budworm, by R. C. Brown. Bark beetles in forests, by F. P. Keen. The gypsy moth, by J. M. Corliss. Insects and wildlife. Insects and the lower vertebrates, by O. B. Cope. Bibliography and appendix. A selected list of publications, by L. L. Hawes and J. S. Wade.

Note: A cyclopedic work on applied entomology. Agricultural aspects are emphasized but there is also much material on general phases, such as the relation of insects to disease. Although the authors include many outstanding entomologists, the work is addressed to farmers, amateur collectors, and general readers rather than to professionals. Seventy-two colored plates, each of which illustrates a different insect in various stages of its development, are included.

WESTCOTT CYNTHIA

The plant doctor the how why and when of disease and insect control in your garden. Revised edition 1950 with a calendar for the Northeast and special chapters for other sections. Line drawings by the author Philadelphia, New York J B Lippincott Company 1950. 231 p. illus. 21 cm. $3.00 2719

Contents: The plant doctor's calendar: February March. April May. June. July August. September. October November. Special troubles in the Middle West. Special troubles in the Southeast. Special troubles in the Southwest. Special troubles in California. Special troubles in the Northwest. Alphabetical miscellany. List of agricultural experiment stations. Index.

Note An established reference handbook used by non-commercial gardeners in the United States of America. It presents a considerable range of simple practical information on insecticides application and other control measures. The first edition was limited to the north-eastern United States, but the book now covers the whole nation. However that portion which is arranged by calendar month still relates only to the area around New York City. The alphabetical miscellany is an extensive list of common garden plants with their diseases and descriptions of the preferred treatments. Although of no use to the specialist, the book is a handy one for its intended audience.

FIELD AND VEGETABLE CROPS

AHLGREN GILBERT HAROLD

Forage crops. New York McGraw-Hill Book Company, Inc., 1949 418 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $5.50 2720

Contents. History and development. Geography and production. Influence of climate and soil. Expansion of alfalfa. Growing alfalfa. Red clover production. Alsike clover. Ladino clover. The sweet clovers. The lespedezas. The kudzu vine. Soybeans and cowpeas. Crimson clover the vetches, and field peas. Timothy culture. Kentucky bluegrass. Lowland grasses. Orchard grass, tall oatgrass, and tall fescue. Prairie hay Johnson and bermuda grass. Sudan grass and sorgo. The millets. Cereal hay crops. Identifying the plants. Know the seeds. Hay mixtures. Multiple-purpose mixtures. Soil-improvement practices. Seedbed preparation. Selected seed. Seed placement. Companion crops. Hay standards. Quality production. Brome hay. Growing silage crops. Making grass silage. Grassland farming. Insects good and bad. Some important diseases. Plant-breeding contributions. Seed production. Index.

Note An agricultural college textbook designed as an introduction to the subject. It deals with those grasses and legumes "harvested by man and later fed to livestock." It is of course limited to forage crops of some agricultural importance in the United States of America. In general, for each crop, the history of its introduction as a forage crop is outlined, its requirements as to soil and climate are described, data are given on yields, on protein content, and on general forage qualities. These topics and other related ones are treated concisely with much of the information condensed in tables. However each chapter is supplemented with an adequate list of references. The author is a member of the faculty of Rutgers University

ANDREWS WILLIAM BAKER, editor

Cotton production, marketing and utilization State College, Mississippi W B Andrews 1950 476 p. illus. 24 cm. $4.50. 2721

Contents: Shifts in cotton production among and within states, and some related factors, 1800–1949, by H. P. Todd. Cotton varieties and breeding, by J. F. O'Kelly. The response of cotton to fertilizers, by W. B. Andrews. Cotton diseases, by A. L. Smith. Cultural practices, by H. P. Smith. Cotton insect control, by W. B. Andrews. Harvesting cotton, by H. P. Smith. Cotton ginning, by C. A. Bennett. Warehousing for market, by J. H. Todd. Cotton fiber technology by F. L. Gerdes. Cotton classing and standardization, by A. B. Cox. Cotton markets and marketing, by A. B. Cox. The spinning, weaving, finishing and marketing of cotton products, by J. F. Bodgen and others. Uses of cotton and its substitutes, by E. B. Evans. World cotton production and trade, by D. S. Murray. Cottonseed, by J. F. Moloney. Index of authors. Index of subjects.

Note The editor of this work is associated with the Mississippi Agricultural Experiment Station, and other contributors are associated with agricultural colleges, the U. S. Department of Agriculture, or with associations such as the National Cottonseed Products Association. A compact style is used in most of the chapters and a wide range of information is presented. Recent developments, such as mechanized cotton picking, are described along with long established techniques. Each chapter is supplemented by a useful bibliography

BANADYGA ALBERT ALEXANDER

Cucumbers for pickles a 1948 survey of literature dealing with their production. Oak Park, Illinois National Pickle Packers Association 1949 276 p. 24 cm. $3.00. 2722

Contents: Introduction—Importance and distribution of pickle industry. Cultural practices. Diseases. Insects. Flower ratios. Physiology breeding, and genetics. Varieties. Summary Bibliography—cucumber references. Appendix: Reports by stations.

Note: In the first part of this book the available information on the culture and breeding of pickle cucumbers is summarized. In the second part the international literature down to 1948 is listed with the usual bibliographical details. Although the book contains information that is valuable to farmers, it is intended more for agricultural extension workers and others who are professionally concerned with the growing of pickle cucumbers. The pickling of cucumbers is not included.

BARNHART, FLOYD

Cotton. Fourth edition second printing. Revised and enlarged. Caruthersville, Mo. The author 1952 390 p. illus. (part col d) 24 cm. $3.50. 2723

Contents: The place of cotton. Cotton crop reports. Estimating yield of cotton. Judging and exhibiting cotton stalks and bolls. Elementary cotton marketing. Some factors which lower the grade of cotton. Harvesting cotton. Ginning. Soils, their composition, formation, and classification. Soil, some important factors for farmers. Fertilizers. Types and varieties of cotton. Selecting, delinting, and treating planting seed. Preparing soil for planting. Planting cotton. Cultivation of cotton. Structure and development of insects. Cotton insects and their control. Diseases of cotton, by G. M. Watkins. Appendix: Use of geese for Johnson grass control. Recent changes in cotton acreage in ten southern states, by H. P. Todd. Line-diagram method for the setting of farm implements, by W E. Meek, and R. B. Ewing. Smith-Deary act. Index.

Note: A practical handbook and textbook which has gone through four editions since it was first published in 1940. It was written especially for use in the vocational agriculture departments of secondary schools throughout the cotton belt of the United States. Organized with the assumption that teaching of the subject will begin in the fall, the chapters are arranged in such manner that those jobs which should be studied in the fall appear first. The fourth edition is revised in the following respects: certain data brought up to 1951; new pictures added, newer insecticides, sprays, and spray rates presented; state recommendations for insect control changed from those of 1949 to those for 1951; new chapter added, entitled Diseases of cotton.

BROWN HOWARD DEXTER, AND CHESTER S HUTCHISON

Vegetable science. Edited by R. W Gregory Philadelphia J B Lippincott Company 1949 452 p. illus. 24 cm. $6.00 2724

Contents: The importance of vegetables. Food value of vegetables. Cost accounts. Vegetable classification. Soils and fertilizers. Green manures. The growing environment. Plant growing and plant-growing structures. Equipment. Irrigation and drainage. Storage of vegetables. Seed production and plant breeding. Disease and pest control. Marketing vegetables. Home gardening. The potato. Sweet potato, yam, taro, and dasheen. Tomatoes, eggplant, and peppers. Beans and peas. Cole crops. Perennial crops. Sweet corn and popcorn. Cucurbits or vine crops. Salad crops. Greens. Root crops. Bulb crops. Index.

Note: An introductory text which is however sufficiently inclusive and detailed to make it of value to practical farmers. Agricultural practices which conserve the soil and at the same time permit the economical production of vegetable crops are emphasized. One hundred fifty-four figures, the majority of which are reproductions of photographs, 45 tables, and selected lists of literature references supplement the exposition. The authors are members of the faculty of Ohio State University

HUGHES HAROLD DE MOTT, AND OTHERS editors

Forages the science of grassland agriculture. Under the editorial authorship of H. D Hughes, Maurice E. Heath, and Darrel S Metcalfe. Ames, Iowa The Iowa State College Press, 1951. 724 p illus. 26 cm. $6 75 2725

Contents: Part I, Forages and productive agriculture: Forages in our advancing civilization, by H. D. Hughes. What is grassland farming? by M. E. Heath. Economic aspects of forage production, by E. O. Heady Forages and soil conservation, by G. M. Browning. Soil fertility and the nutritive value of forages, by R. L. Lovvorn and W W Woodhouse, Jr Forage statistics, by D. S. Metcalfe. Part II, Forage grasses and legumes. The botany of grasses and legumes, by D S. Metcalfe. Legume and grass seed production, by E. A. Hollowell. Forage crop breeding, by I. J. Johnson. The inoculation of legumes, by O. N. Allen. Alfalfa, by H. M. Tysdal. Red clover and alsike clover by C. P Wilsie. Sweetclover by W K. Smith. Ladino and other white clovers, by E. A. Hollowell. Lespedeza, by C. A. Helm. Crimson clover by E. A. Hollowell. Birdsfoot trefoil, by H. D. Hughes and H. A. MacDonald. The vetches, by R. McKee. Other legumes, by R. McKee. The bluegrasses, by E. N. Fergus. The brome grasses, by L. C. Newell and K. L. Anderson. Timothy by M. W Evans. Orchardgrass, by W M. Myers. Bermuda grass, by G. W Burton. Dallisgrass, Bahiagrass, and Vaseygrass, by H. W Bennett. Reed canarygrass, by M. E. Heath and H. D. Hughes. The fescues, by R. Y Bailey. The ryegrasses, by H. A. Schoth. Redtop and the bentgrasses, by J A. De France. The wheatgrasses, by C. McKee. Johnsongrass, carpetgrass, and other grasses for the humid South, by H. W Bennett. Other grasses for the North and West, by V R. Hawk. Cereals as forage, by M. A. Sprague. Sorghums for forage, by J. R. Quinby and R. E. Karper Millets and kochia, by W W Worzella. Rape, kale, and similar forages, by C. S. Dorchester Part III, Forage production practices: Soil, climate, and use in choosing forage crops, by G. S. Axelrod. Establishment of new seedings, by C. J. Willard. Fertilization of forages, by G O. Mott. Weed control in forages, by C. J. Willard. Hay and pasture seedings for the Northeast, by V G. Sprague. Hay and pasture seedings for the Central and Lake states, by H. L. Ahlgren. Hay and pasture seedings for the humid South, by D. G. Sturkie. Hay and pasture seedings for the northern Great Plains and Intermountain states, by L. C. Newell. Hay and pasture seedings for the southern Great Plains, by R. C. Potts. Hay and pasture seedings for the Pacific Coast states, by A. L. Hafenrichter. Part IV Forage utilization What is quality hay? by G. Bohstedt. Mechanization of haymaking and storage, by K. L. Barger. Grass-legume silage, by C. B. Bender Dehydration of forage crops, by R. E. Silker Emergency hay and pasture crops, by A. C. Arny Permanent pastures, by M. A. Hein. Rotation pastures, by D R. Dodd. Range pasture, by D A. Savage. Irrigated pastures, by M. L. Peterson. Forages for dairy cattle, by R. E. Hodgson. Utilization of forages with beef cattle, by R. F Fanfaloon. Sheep are efficient users of forages, by W G. Kammlade. Forage utilization by hogs, by G. O. Mott. Forage for poultry by D. C. Kennard. Terminology Author index. Subject index.

Note: Each of the short chapters in this comprehensive work was written for it by a college professor or other specialist who is recognized as an eminent authority on the specific topic of his chapter. The typical chapter is short but the main facts are always presented and each chapter is supplemented by references to longer treatments in professional periodicals. The book is organized so that it may be used as a text in agricultural colleges However it is also a useful reference manual for agricultural leaders and others in need of specific information about forage grasses.

MARTIN JOHN HOLMES AND WARREN H. LEONARD

Principles of field crop production. New York The Macmillan Company 1949 1176 p. illus. 22 cm. $6.50. 2726

Contents (abridged) Part I, General principles of crop production. Crop plants in relation to environment. Botany of crop plants. Crop improvement. Tillage practices. Fertilizer, green-manuring, and rotation practices. Seeds and seeding. Harvest of field crops. Pastures and pasturage. Weeds and their control. Part II, Crops of the grass family: Indian corn or maize. Sorghums. Sugarcane. Wheat. Rye. Barley Oats. Rice. Millets. Perennial forage grasses. Part III, Legumes: Alfalfa Sweetclover The true clovers. Lespedeza. Soybeans. Cowpeas. Field beans. Peanuts. Miscellaneous legumes. Part IV Crops of other plant families: Buckwheat. Flax. Cotton. Tobacco. Sugar beets. Potatoes. Miscellaneous industrial crops. Sweetpotatoes. Part Appendix: Seeding; seed and plant characteristics. The percentage composition of crop products. Glossary Index.

Note: An introductory but fairly inclusive textbook for use in agricultural courses. Somewhat less than one-third of the space is given to discussions of general principles and practices. The remainder of the space is occupied by descriptions of both major and minor crop plants. The discussions of the major plants are fairly long and are organized under subheadings such as, economic importance, adaptation, origin and history botanical description, general description, cultural and harvesting practices, uses, diseases and finally literature references. Crops of lesser importance are discussed somewhat more briefly The first-named author is senior agronomist in the Bureau of Plant Industry of the United States Department of Agriculture; the second is Professor of Agronomy in Colorado Agricultural and Mechanical College.

ments. As factual information and illustrative material the author presents material which he has found useful in the presentation of the subject at Michigan State College. This edition contains newly added chapters on hormones and on the control of weeds.

HUME, HAROLD HARDRADA

Camellias kinds and culture. New York The Macmillan Company 1951 271 p. illus. (part col'd) 23 cm. $6.50 2738

Contents: Camellia geography Camellia history Camellia botany Camellia classification. Japonica camellias. Sasanqua varieties. Miscellaneous camellias. Naming camellia varieties. Propagating camellias. Soils and soil fertility Planting camellias. Fertilizing camellias. Culture and care. Pruning and training. Camellias in gardens. Pot and greenhouse culture Camellia diseases. Insects and mites. Index.

Note. A comprehensive book on the history and classification, kinds and varieties, and propagation and culture of camellias. The author writes in [illegible] fashion to be helpful to amateur camellia growers and covers all the details of care of the plant necessary to the achievement of success in the raising of this flower. The introductory chapters on the geography history and botany of the camellia cover about 40 pages, the remainder of the volume is about equally divided between the descriptions of the varieties of camellias and the methods of culture. The work is handsomely illustrated with eight plates in full color and many others in black and white.

LAURIE, ALEX AND VICTOR H RIES

Floriculture fundamentals and practices. Second edition. New York McGraw Hill Book Company Inc. 1950 525 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink consulting editor) $6.00 2739

Contents: How plants grow. Soils. Fertilizers. Horticultural taxonomy Bulbous culture. Cold frames, hotbeds, and greenhouses. Garden design Propagation of plants. Lawns. Annuals Perennials. Flowering bulbs The rock garden. Roses. Water gardening. Woody plants. House plants. Insect pests and plant diseases. Greenhouse management Index

Note. (1947) A standard work used both as [illegible] text in agricultural colleges and as [illegible] manual of practical information by persons with interests in commercial floriculture. The treatment of most topics is concise hence considerable range of information is included, some of it very specific Bibliographies are included. The greater part of the text is unchanged from that of the first edition published in 1942 but important revisions have been made in some parts as in the discussion of pest control.

LEVISON JACOB JOSHUA

The home book of trees & shrubs. A complete guide to the design, planting and care of the home grounds, with information on lawns, woodlands, flower borders, garden accessories and the identification of trees. Second edition, completely revised enlarged, and reset. New York Alfred A. Knopf 1949 524 p. illus. 28 cm. $10 00. 2740

Contents: What trees can teach us Structure and habits of trees and shrubs. Types and kinds of trees and shrubs. Planning the home grounds. When and how to plant. Trees and shrubs for every purpose Trees and shrubs for color Worth-while, interesting trees and shrubs not commonly seen. The care of trees and shrubs Pruning, wounds, cavities, and bracing. How to control insects and diseases. The ailments of trees and shrubs Common insect pests. Common diseases. The wooded portion of the place Lawns Flower borders, herbs, and wild gardening Accessories. How to identify some of the most common trees. Some good books on trees and shrubs. Common names and botanical equivalents Index

Note. This guidebook by [illegible] distinguished arboriculturist is reference tool which will serve the homeowner amateur and professional gardener and landscape designer A reference book in which trees and shrubs are discussed from the standpoint of their characteristics and uses in the landscaping of gardens and grounds around dwellings. Its basic purpose is to tell in detail how to select and handle trees and shrubs for the individual's own grounds and how to achieve good results most economically Related matters such as garden features are discussed briefly The illustrations include numerous reproductions of plantings and landscapes. Tables and outlines are used to advantage to clarify and summarize.

MUSSER, HOWARD BURTON

Turf management. A publication of the United States Golf Association. Foreword by James D Standish, Jr New York McGraw Hill Book Company Inc. 1950 354 p. illus. 24 cm. $7.00. 2741

Contents. Broad relationships in the production of special-purpose turf. Soil and turf relationships. Fertilizers and lime in turf production. Drainage and irrigation. Special purpose turf grasses. Turf propagation. Turf maintenance. Weed control. Turf diseases and related damage. Control of insects and other pests. Elements of golf-course design. Golf-course operation. Appendix. Index.

Note This book which is devoted exclusively to the establishment, care, and upkeep of golf turf, public park lawn, and other large areas of turf grasses was prepared under the sponsorship of the United States Golf Association. It is an authoritative presentation of all phases of large-scale turf development and maintenance with the most emphasis on golf course grass problems. There is no bibliography The appendix contains lists of fertilizers, liming and soil amendment materials, turf weeds, weed-control chemicals, and tabulated information on various grasses. The author is Professor of Agronomy at Pennsylvania State College.

NORTHEN, REBECCA TYSON

Home orchid growing. New York D Van Nostrand Company, Inc. 1950. 286 p. illus. 23 cm. $6.50. 2742

Contents Orchids as [illegible] hobby Adult cattleyas and their care. The cattleya species. Hybrids. Seedlings from flask to community pot. Seedlings from community pot to first bloom. Growing and sowing your own seed. The orchid tribes; the aerides tribe. The cattleya tribe. The cymbidium tribe. The cypripedium tribe. The dendrobium tribe. The odontoglossum tribe. Collectors' items. Mass and [illegible] studies. Diagnosing orchid ailments. Housing your orchids. The care and use of cut flowers. Bibliography Appendices: Key to the tribes and genera of the orchid family Sources of orchid plants and supplies. Index.

Note An explicit, practical guide for amateur growers, especially those who wish to grow orchids in their homes and in small greenhouses on [illegible] non-commercial basis. The illustrations include ten plates in color and several hundred black-and-white illustrations. The author wife of Henry T Northen, Professor of Botany in the University of Wyoming, is an eminent amateur grower of orchids.

SIMON MARON J., AND OTHERS

The complete garden handbook, by Maron J Simon, John Elliott, Dickson W Pierce, and Beatrice P Hendrix. Botanical consultant G L. Wittroch. New York D Van Nostrand Company Inc., 1950. 451 p. illus. (part col d) 22 cm. $5.00. 2743

Contents: A planting plan for your property. How to work a flower garden. Flowering plants for the home garden. Roses. Trees, shrubs, and lawns. A small orchard for the home. How to work a vegetable garden. How to buy woody plants. Garden pests and their controls. Flower arrangements. Plants for indoors. Garden aids at a glance Index.

Note An inclusive handbook on the growing of flowers, bushes, trees, lawns, fruits, and vegetables for amateur gardeners. Features worthy of note are simple directions, comprehensive coverage from original planning to the art of flower arrangement, emphasis on the practical, and 31 excellent color plates. Every flowering plant or shrub of importance in gardens in the United States of America is treated in [illegible] brief separate article, with directions for kind of soil, location, planting, culture, and the varieties best suited to various parts of the country The final chapter includes outline maps of the United States showing frost and planting times, transplanting seasons, weather conditions, etc A key to the detailed contents of the manual is provided by the index.

WYMAN DONALD

Trees for American gardens. New York The Macmillan Company, 1951. 376 p. illus. 24 cm. $7.50. 2744

Contents: Introduction. Hardiness. Order of bloom. Ornamental fruits. Foliage colors. Trees for urban purposes. Street and highway planting. One hundred tree champions. Dwarf trees. General list of recommended trees. Secondary list of trees. Index.

Note: Essentially a reference manual for landscape architects, nurserymen, and amateur gardeners concerned with selecting trees to meet specific growing conditions or produce desired landscaping effects. Seven hundred and forty-five species of trees are described and grouped according to degree of hardiness, date of blooming, autumn coloration, and other characteristics important in gardening. Emphasis is placed on the landscaping qualities of the trees, and only brief attention is given to planting methods and general care.

FRUIT CULTURE

BROOKS REID MERRIFIELD AND H. P OLMO
Register of new fruit and nut varieties, 1920–1950 By Reid M Brooks and H. P Olmo with the assistance of cooperating horticulturists. Berkeley Calif University of California Press, 1952 206 p 24 cm. $3.00 2745

Contents: Register of varieties: Almond. Almond-peach. Apple. Apricot. Avocado. Blackberry. Blueberry. Butternut. Carissa. Carob. Cherimoya. Cherry. Cherry plum. Chestnut. Cranberry. Currant. Date. Elderberry. Fig. Filbert. Gooseberry. Grape. Grapefruit. Guava. Hickory. Lemon. Lime. Mango. Natal plum. Nectarine. Orange. Orangequat. Papaya. Peach. Pear. Pecan. Persimmon. Plum. Plumcot. Pomegranate. Prune. Quince. Raspberry. Strawberry. Tangelo. Tangerine. Tangor. Tung. Walnut. White sapota. Patented varieties. Varieties by place of origin. Index.

Note: A compilation of lists of new varieties of fruits and nuts originated in North America during the years 1920 to 1950 inclusive. The lists were published originally in the *Proceedings* of the American Society for Horticultural Science. Information given for each variety includes place and date of origination, name of originator, date of commercial introduction, U S. A. patent number with assignment if any, parentage when known, brief description or characteristics of fruit and tree, and time of bearing, when significant. The lists were compiled with the cooperative assistance of 86 American and Canadian horticulturists located in 42 states and 4 provinces. Varieties are included only if they have shown promise of becoming commercially important or appear to have unusual characteristics useful to the breeder of new forms.

CHANDLER, WILLIAM HENRY
Deciduous orchards. Second edition, thoroughly revised. With 113 illustrations. Philadelphia Lea & Febiger 1951 436 p. illus. 24 cm. $6.50. 2746

Contents: Part I, The tree and its flowers and fruit. The deciduous orchard tree. Deciduous orchard buds. Classification of deciduous orchard trees. Growth and flower bud formation. Pollination and the setting of fruit. The growing fruit. The mature fruit. Part II, Deciduous orchard environments: Climate for deciduous orchards. Deciduous tree roots and the soil. The water supply in tree and fruit. Nutrients for trees. Essential elements and some others that influence trees. Part III, Growing and training deciduous orchard trees. Propagation of deciduous orchard trees. Transplanting trees from the nursery to the orchard. Response of deciduous trees to pruning. Part IV. Deciduous orchard species. Pome fruits. Stone fruits. The mulberry and the fig. The persimmon, the northern papaw and some other fruits. Edible nut trees. The tung-oil tree. Recent papers. Index.

Note: (4930) A standard textbook used in courses in fruit growing in agricultural colleges. Although some information on cultural practices is included, the main emphasis is on background information such as the processes of flower bud formation, pollination, the shaping of fruit tree nutrition, and influence of climate, etc. The first edition was published in 1942. This edition has almost the same number of pages; nevertheless important revisions have been made in all chapters. References to 370 recent papers have been incorporated in the text. However several bibliographies appended to chapters were not revised although the need for revision is evident.

CHILDERS NORMAN FRANKLIN
Fruit science orchard and small fruit management. Edited by R. W Gregory Philadelphia J B Lippincott Company, 1949 630 p. illus. 24 cm. $6.00 2747

Contents. Introduction. Establishing the fruit planting. Apple regions, production and varieties. Pruning apple trees. Soil management for apples. Flower-bud formation, pollination, and fruit set in the apple. Thinning apple fruits. Grafting and budding apple trees. Freezing injury to apples. Harvesting and packing apples. Storing apples. Marketing apples. Pear and quince culture. Peach, nectarine, apricot, and almond. Culture of plums. Cherry culture. Control of insects and diseases. Judging contests and exhibitions. Freezing preservation of fruits. Grape growing. Strawberry growing. Bush berry culture. Appendix. Index.

Note A practical text written by a staff member of the New Jersey Agricultural Experiment Station. Designed primarily for use in agricultural college courses, enough matter has been included to make it useful also in agricultural extension work and as orientation for young farmers who are thinking of growing fruit. There are 304 figures, many of which have been reproduced from photographs, more than 40 tables, and a useful selected list of pertinent books, government publications, and current journals.

DARROW GEORGE MCMILLAN AND OTHERS
Blueberry growing by George M. Darrow J B Demaree, and W E. Tomlinson, jr Revised 1951 Washington, D C. Government Printing Office 1952 53 p. illus. 23 cm. (United States. Department of Agriculture. Farmers' bulletin no. 1951) Paper $0.20 2748

Contents (abridged) Development of the blueberry industry Important species. Lowbush blueberry Highbush blueberry Dryland blueberry Evergreen blueberry Mountain blueberry Rabbiteye blueberry Highbush varieties and their culture Soil and climatic requirements. Varieties and their characteristics. Need for cross-pollination. Growing and care of seedlings and native plants. Planting and cultivation. Maintaining soil fertility Good drainage essential. Irrigation often profitable. Mulching. Pruning. Harvesting and marketing. Yields. Uses. Blueberry diseases. Blueberry insects.

Note. A summary of information on selecting and growing blueberries in home gardens and commercial plantings and protecting them from diseases and insects. Most of the space is given to the highbush varieties, which are the chief varieties grown commercially in the United States.

EDMOND JOSEPH B AND OTHERS
Fundamentals of horticulture a textbook designed for courses in general horticulture. By J B Edmond A. M. Musser, and F S. Andrews. New York The Blakiston Company 1951 502 p. illus. 24 cm. $5.50 2749

Contents (abridged) Part I, Plant growth and development: Fundamental plant processes, tissues, and structures. The water supply The nutrient supply Part II, Principal horticultural practices Propagation Climates, sites, and soils. Plant growing structures Transplanting—cultivating—irrigating. Pruning. Control of pests. Preservation. Part III, Principal horticultural crops: The tree fruits. Grapes, and small fruits. Nut fruits—subtropical fruits—tung Vegetable crops Commercial floriculture. The nursery plants. Horticulture and the home Index.

Note An introductory textbook on the growing of fruit, flower, and vegetable crops. Basic information on plant growth and on practices that are common to the production of many crops is emphasized. The authors are members of the faculties of colleges in the southern United States of America, and the book deals mainly with the horticulture of that region.

GARRIS EDWARD WALTER, AND H S WOLFE
Southern horticulture management. Edited by R. W Gregory Philadelphia J B Lippincott Company 1949 564 p illus. 24 cm. $4.00 2750

Contents (abridged) Part I, General principles: The growth and function of plants. The propagation of plants. Soils—selection, fertility and management. The control of insects and plant diseases. The conservation of fruits and vegetables. Part II, Vegetable crops: Asparagus. Beans. The cabbage family Celery Sweet corn. Eggplant

and peppers Greens. The lettuce family. The melon family. Onions. English peas. Irish potatoes. Sweet potatoes. Tomatoes. Part III, Fruit crops: The apple and pear. The peach. The citrus fruits. The strawberry. Grapes. The pecan. The fig. Bramble fruits. The oriental persimmon. Tropical fruit. Plums and cherries. Blueberries. Part IV Ornamental plants and flowers. Index.

Note. The Head of the Department of Agricultural Education and the Head of the Department of Horticulture of the University of Florida collaborated in the writing of this practical, introductory text. The practices and crops described are those which are useful in the southern states of the United States of America. The book is written in simple style. Numerous tables are used to summarize information on production, uses, seasons for planting, cultivation, thinning, harvesting of particular crops. Useful lists of government publications of the national and state governments are appended to the chapters.

ROSE, DEAN HUMBOLDT AND OTHERS

Harvesting handling and transportation of citrus fruits a digest of information on the subject published mostly from 1938 to 1948. By Dean H. Rose, Harold T Cook, and W H. Redit. Washington D C. Government Printing Office, 1951 178 p. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no 13) Paper $0 40 2751

Contents: Introduction. Harvesting and handling. Small sizes. Harvesting. Degreening. Grading. Packaging and packing. Storage. Maturity and quality. Composition. Vitamins. Transportation. Post harvest diseases and their control. Diseases and injuries. Detection of blemishes and diseases by X-rays and ultraviolet light. Chemical treatments for controlling postharvest decay. Insect damage affecting market quality.

Note. The second publication in a series of digests reviewing and listing the literature concerning the postharvest handling and treatment of important horticultural crops. The publication gives a digest of information from recent literature on the biology and care of mature citrus fruits—lemons, limes, grapefruit, oranges, and tangerines—and also presents bibliographies, by chapters, of the literature cited, which is extensive.

SHOEMAKER, JAMES SHELDON

General horticulture. Philadelphia J B Lippincott Company 1952 464 p illus 24 cm. $6 00 2752

Contents. The horticultural industry. Classification of horticultural plants. Structure of plants. Basic plant processes. Temperature, light, and water. Propagation of horticultural plants. Planting, fruit set, and harvesting. Soil management. Training and pruning. Preservation of horticultural products. Landscape gardening and design. Controlling diseases, insects, and weeds. Index.

Note. An introductory text which is devoted to basic matters such as plant anatomy, plant tropisms, seed production, plant training and pruning. These matters are related to horticultural practices, but the book is not a manual of practices. The chapter bibliographies list many specific works which amplify the general treatment of each section. The book is profusely illustrated with pictures and easily understood diagrams. The author is Head of the Department of Horticulture of Ontario Agricultural College.

SMOCK, ROBERT MUMFORD AND A. M NEUBERT

Apples and apple products. New York Interscience Publishers, Inc., 1950 486 p illus. 22 cm. (Economic crops a series of monographs on the chemistry physiology and technology of food and food products Z. I. Kertesz, editor) $8 75 2753

Contents (abridged). History and distribution of the apple. World distribution of apples. Distribution of the apple industry in the United States and Canada. Varieties of apples; Tree characteristics. Fruit characteristics. Development and structure of the apple fruit. Some environmental and cultural factors affecting the chemical composition and physiology of apples. Chemical changes and physiology of apple fruit on the tree. Chemical changes and physiology of apple fruit after harvest; Transportation (water loss). Carbohydrates. Acids. Nitrogen compounds. Minerals. Fats, oils, and waxes. Color compounds. Enzymes. Vitamins. Organic emanations from apples. Composition of internal atmosphere of apples. Respiration. Fruit maturity and quality. Prestorage treatments of apples. Cleaning apples. Grading apples. Wrapping and packing apples. Carbon dioxide treatment of apples. Precooling of apples. Storage of apples in fresh state. General consideration of apple products manufacture. Chemical constituents affecting products manufacture. Nutritional value of apples and apple products. Preparation and preservation of apples: Development of dried, canned, and frozen apples. Apples used for drying, canning, and freezing preservation. Fruit preparation. Preservation by drying. Preservation by canning. Preservation by freezing. Preservation with chemicals. Apple juice, sirup, and concentrate. Fermentation products of apples. Cider. Apple wine. Apple brandy. Industrial alcohol. Cider vinegar. Miscellaneous fermentation products. Jelly, butter, and other apple confections. Apple pomace. Composition. Preservation. Utilization. Appendix. Author index. Subject index.

Note: In this treatise the chief emphasis is on the chemistry, physiology and processing of the apple fruit after it has been harvested. However certain preharvest aspects which affect the chemistry and physiology after harvest are discussed. The chapters pertaining to storage and to the manufacture of apple products account for more than half of the book's length. Much of the information on manufacture has been collected from such sources as patents and articles in journals. There are over 900 literature references.

BEEKEEPING

GROUT ROY A, editor

The hive and the honey bee, a new book on beekeeping to succeed the book "Langstroth on the hive and the honeybee." Edited by R. A. Grout with the collaboration of a staff of specialists. Revised edition. Hamilton, Ill. Dadant & Sons 1949 652 p. illus. 24 cm. $4 00 2754

Contents: The beekeeping industry, by R. A. Grout. Races of bees, by A. Z. Abushady. The honey-bee colony—life history, by O. W Park. Activities of honey bees, by O. W Park. The honeycomb, by H. C. Dadant. Beekeeping equipment, by H. C. Dadant. First considerations in keeping bees, by G. H. Cale. The apiary, by M. G. Dadant. Common practices in management, by G. H. Cale. Management for extracted honey production, by G. H. Cale. Extracting the honey crop, by R. A. Grout. The production of comb honey, by C. E. Killion. The production of bulk comb honey, by M. L. Lyle. The overwintering of productive colonies, by C. L. Farrar. Honey, by V. G. Milum. Marketing the honey crop, by R. B. Willson. The honey bee as a pollinating agent, by J. L. Hambleton. Sources of nectar and pollen, by F. C. Pellett. The anatomy of the honey bee, by R. E. Snodgrass. Production and uses of beeswax, by R. A. Grout. The production of queens and package bees, by M. G. Dadant. Injury to bees by poisoning, by J. E. Eckert. Diseases and enemies of the honey bee, by A. P. Sturtevant. Index.

Note. A comprehensive manual in which the emphasis is definitely on the practical aspects of beekeeping but in which there is also considerable discussion of biological aspects. It goes back to the first edition, published in 1853, of L. L. Langstroth's *Langstroth on the hive and the honeybee* and includes numerous editions of that classic revised by Langstroth during his lifetime and later by Charles Dadant and C. P Dadant. In 1946 the first edition in which the chapters were written by a number of contributors appeared; and this edition is the first revision of it. In comparison to the 1946 edition there are three new chapters—those by Abushady, Willson and Hambleton—and extensive revisions have been made in several of the other chapters. There are now 303 figures, and several of the authors have documented their chapters with footnote reference to pertinent literature.

KILLION CARL EVEREST

Honey in the comb Paris Illinois Killion & Sons Apiaries, 1951 114 p. illus. 24 cm. $3 00 2755

Contents: Comb honey. Choosing a location. Comb honey equipment. Colony management. Care and storage of comb honey. Marketing comb honey. Bulk comb honey. Beekeeping records. The future for comb honey. Index.

Note: In this book the author, an experienced apiarist who has specialized in the production of comb honey, covers an aspect of

beekeeping which is not especially emphasized in comprehensive books on beekeeping. The equipment which this author has found best when comb honey is the primary product of apiary and practical techniques of producing comb honey are both described in factual style. There are 71 figures, all being reproductions of photographs.

ANIMAL HUSBANDRY

ANDERSON, ARTHUR LAWRENCE

Introductory animal husbandry Revised edition. New York The Macmillan Company 1951 701 p. illus. 24 cm. $6.25 2756

Contents (abridged) Part I, Cattle. A, Beef cattle: Beef type. Cattle markets. Market classification of cattle and cattle prices. Cattle slaughtering, processing, and by-products. Market classification of dressed beef and veal. Beef cattle feeding and management. Beef cattle breeding. B, Dairy and dual-purpose cattle Dairy type. Milk production and milk records. Dairy cattle feeding and management. Dairy cattle breeds and breeding. Part II, Swine: The lard-type and other types of American hogs. Bacon-type hogs. Market classification of hogs and hog prices. Swine feeding and management. Swine breeding. Part III, Sheep: Mutton-type sheep. Wool-type sheep. Sheep slaughter mutton and lamb, by-products from sheep slaughter. Sheep feeding and management. Sheep breeding. Part IV, Horses and mules: Draft horses. Farm and ranch horses. Light horses. Horse and mule markets. Unsoundness of the horse. Horse feeding and management. Horse breeding. Mules. References. Index.

Note: (4943) An established textbook for use in agricultural college courses. It is used also as reference manual in agricultural libraries and elsewhere. Leading types and breeds of domestic animals are described, but most of the space is devoted to marketing and other economic aspects. Even in the chapters on feeding and management, these aspects rather than farm practices are emphasized. The bibliography is limited to books.

ANDERSON, ARTHUR LAURENCE

Swine management, including feeding and breeding. Edited by R. W Gregory Philadelphia. J B Lippincott Company 1950. 531 p. illus. 22 cm. (Agricultural management series, prepared under the general supervision of R. W Gregory) $4.00 2757

Contents: The swine-raising industry Methods of hog raising and farming methods. Judging market hogs. Swine breeds. Breeding stock selection. The breeding season. The breeding herd, feeding and management. The farrowing and suckling period. Raising pigs on dry-lot. Raising pigs on pasture. Cereal grains and other basal feeds. The protein supplements, alfalfa meal, and similar feeds. Mineral and vitamin supplements. Pasture and forage crops for swine. Harvesting crops with hogs. Swine breeding. Swine shows and sales. Swine housing and equipment. Marketing hogs. Operating the swine enterprise. Slaughtering hogs. The control of diseases and parasites. Appendix. Index.

Note: Primarily textbook for students of agriculture, this volume covers the subject of modern swine husbandry from the practical rather than from the theoretical standpoint. Aside from its textbook value, the book should also be useful as reference work for hog raisers, meat packers, and manufacturers of equipment, feeds, and other products used by hog producers. The text contains 77 tables in addition to abundant photographic illustrations and at the ends of the chapters are suggestions for further study and bibliographic references. The publication replaces an earlier work of the same author entitled *Swine enterprises*.

BIEN CORABEL AND MARIE GOULD compilers

Tropical beef cattle industry in the western hemisphere. Washington, D C. Government Printing Office, 1952 157 p. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no. 19) Paper $0.40. 2758

Contents: General: Adaptation. South America. Central America. Mexico. United States. West Indies. Hawaii. Physiology hygiene and sanitation Physiology and morphology Diseases. Pests and parasites. Management: Breeding and breeds. Feeds and feeding. Pasture and range: Management. Fertilizers. Land clearing. Soils. Water. Browse. Forage plants. Poisonous plants. Weeds. Products. Index.

Note: A bibliography of 1749 numbered items, mostly dated between 1940 and 1950, pertaining to the beef cattle industry in the American tropics. Most of the references are in the English, Spanish, and Portuguese languages. The bibliography includes within its scope the economics of the industry the breeds adapted to warm humid climates, the care and management of beef cattle in the tropics, feeding and nutrition, diseases and parasites, pastures and forage plants. The index brings out important subjects in each publication, and includes also the names of authors, editors, and translators. Some of the references are annotated, and the longer references show contents or partial contents. Florida and the Mexican Gulf coastal regions of the United States are included, as are the West Indies and all of Central America and the northern half of South America, excepting Bolivia and Paraguay, which are omitted because climatic conditions in those two countries differ from those in the humid tropics.

BRIGGS, HILTON MARSHALL

Modern breeds of livestock. New York The Macmillan Company 1949 772 p illus. 24 cm. $6.00 2759

Contents. Section I, The breeds of cattle: Shorthorn. Polled Shorthorn. Hereford. Polled Hereford. Aberdeen-Angus. Galloway and West Highland. Brahman and associated breeds. Milking Shorthorn. Red Poll. Holstein-Friesian. Jersey Guernsey Brown Swiss. Ayrshire. The American dairy cattle. Section II, The breeds of hogs: Berkshire. Hampshire. Poland China. Spotted Poland China. Duroc. Chester White. Yorkshire and the Tamworth. Hereford, Minnesota No. 1, and Minnesota No. 2. Section III, The breeds of sheep and goats. Merino. Rambouillet. Southdown. Hampshire. Shropshire. Oxford. Dorset. Cheviot. Suffolk. Corriedale. Columbia, Targhee, Panama, Romeldale, and Montadale. The long-wool breeds. Karakul. Angora goat. The breeds of milk goats. Section IV The breeds of horses: Arabian. Thoroughbred. Standardbred. Hackney American saddle horse. American quarter horse. Morgan, Tennessee walking horse. Palomino. Percheron. Belgian. Shire, Clydesdale, and the Suffolk. The breeds of ponies. American Jack. Index.

Note: A reference manual in which breeds of livestock currently recognized and bred in the United States of America are described and their history outlined. Such points are covered as origin, foundation of the breed, activities of outstanding breeders, important breeding developments in the U. S. A. and elsewhere, the influence of outstanding individuals of the breed, descriptions of prominent families and herds, lists of champions and winners, history and activities of U S. A. associations concerned with the breed and, finally the titles of the U S. A. periodicals currently published about the breed. There are 391 illustrations, most of them are reproductions of photographs of outstanding animals. A few literature references are included as footnotes. The author is Associate Dean of the School of Agriculture of Oklahoma Agricultural and Mechanical College.

CARROLL WILLIAM ERNEST, AND J L. KRIDER

Swine production. New York McGraw-Hill Book Company Inc., 1950. 498 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $6 00. 2760

Contents (abridged) Part I, Organization factor in the cost of production: Characteristics of swine and of their production. The enterprise and the farm. Part II, Establishing swine enterprise as factor in the cost of production: Number and kind of hogs affect cost of production. Breed and cost of production. Maintaining and improving the herd. Part III, Management factor in the cost of producing pork. The system of management may affect costs. Management factor in the number and quality of pigs weaned. Managing fattening pigs factor in the cost of production. Equipment factor in the cost of production. Part IV Feed as factor in the cost of production. The importance of feed in swine-production costs. Nutrient allowances for swine. Cereal grains as swine feeds. Milk, animal, and marine products. Protein and vitamin supplemental feeds of plant origin. Forage crops for swine. Formulation of rations for efficient production. Preparation of feeds and methods of feeding. Feeding the breeding herd. Marketing hogs factor in profits. Index.

Note: An agricultural college textbook in which the economics of hog raising on modern farms is treated from the practical farmer's standpoint. To reveal which are profitable practices the authors have

made extensive use of experimental data from the United States Department of Agriculture and from state agricultural experiment stations. Bibliographical citations appear at the ends of the chapters. In addition to its use as text, the book is potentially valuable to men in the business of growing swine or planning to engage in it.

CLAWSON, MARION
The western range livestock industry New York McGraw Hill Book Company, Inc., 1950 401 p. illus. 24 cm. (The American forestry series, Walter Mulford, consulting editor) $5.50 2761

Contents: What is "range"? Range livestock in the nation. Divisions of the range region. Climate of the range region. Plant cover in relation to range livestock production. Other natural factors. General economic structure of the range region. Land ownership. Administration of federal range lands. Livestock numbers and production rates. Economic utilization of feed and forage. Range livestock fattening and marketing. General characteristics of ranches. Ranch organization and management principles. Cattle ranches. Sheep ranches. Ranch values and incomes. Grazing land values and grazing fees. Credit for the range livestock industry. Meat consumption. Geography of meat and animal prices. Income from sale of meat animals. Competition among meats. Wool. Factors affecting the supply of meat. Range livestock industry in the second World War. Conclusion and look ahead. Index.

Note: An authoritative survey, largely from the economic point of view, of the industry of raising beef cattle and other domestic animals on the open, unfenced grazing areas in the western portion of the United States of America. The area covered is mainly one in which the forage consists of native plants and which, because of low rainfall or rough topography, is not suitable for other forms of agriculture. The problems discussed relate to the best utilization of the available pasture so as to produce meat and wool in the most profitable ways, taking the long-range viewpoint. The 80 plus illustrations include both graphs on which much economic data are represented and photographs of scenes of the industry. The author is Director of the Bureau of Land Management of the Department of Interior of the United States Government.

DEVOE GEORGE PERCY AND J L. KRIDER
Raising swine. New York McGraw Hill Book Company Inc., 1952 447 p. illus. 24 cm. (McGraw Hill rural activities series, W A. Ross, consulting editor) $4.50 2762

Contents. Engaging in swine raising. Selecting and purchasing swine. Keeping and using records. Planning breeding program for swine. Feeding swine. Providing facilities for raising swine. Handling and caring for swine. Keeping swine healthy. Breeding and improving swine. Marketing swine. Preparing and processing pork for home use. Correlated list of visual aids. Index.

Note. Good practices in the raising of swine under conditions which prevail in the United States of America are described in simple language and in rather full detail in this book. The main emphasis is on the raising and marketing of meat animals, however, the raising of breeding stock is also discussed. The book is suitable for the guidance of young people who are interested in raising hogs as 4-H club enterprises and for practical farmers. It is fully illustrated.

ENSMINGER, M EUGENE
Animal science Danville, Ill. The Interstate, 1950 1059 p. illus. 23 cm. $6.00 2763

Contents (abridged) General sections: Some principles of genetics and animal breeding. Feeding livestock. Livestock barns, shelters, and equipment. Animal health, disease prevention, and parasite control. Marketing livestock. Meat and animal by-products. Beef cattle: Distribution, adaptation, and the future of the beef cattle industry. Types and breeds of beef and dual purpose cattle. Breeding beef cattle. Feeding beef cattle. Central marketing and packer slaughtering of cattle and calves. Sheep and goats: Distribution, adaptation, and the future of the sheep industry. Types and breeds of sheep. Systems of sheep production. Central marketing and packer slaughtering of sheep and lambs. Wool and mohair. Goats. Swine: History and development of the swine industry. Distribution, adaptation, and the future of the swine industry. Types and breeds of swine. Breeding swine. Feeding swine. Central marketing and packer slaughtering of hogs. Horses and mules: Distribution, adaptation, and the future of the horse and mule industry. Types and classes of light horses according to use. Types and classes of work horses and mules. Breeds of light horses. Breeds of draft horses. Determining the age and height of horses. Breeding horses. Appendix.

Note: A large volume covering all aspects of modern animal husbandry. It is arranged for use as a textbook by agricultural college students and by 4-H and FFA groups. It also is useful to farmers and ranchers as reference book. The author is Chairman of the Department and Division of Animal Husbandry at the State College of Washington.

ENSMINGER M EUGENE
Beef cattle husbandry Danville, Illinois The Interstate 1951 381 p. illus. 24 cm. (Animal agriculture series) $3.50. 2764

Contents: History and development of the beef cattle industry. Distribution, adaptation, and the future of the beef cattle industry. Types and breeds of beef and dual-purpose cattle. Establishing the herd, selecting and judging beef cattle. Systems of beef production. Breeding beef cattle. Feeding beef cattle. Beef cattle management. Buildings and equipment for beef cattle. Beef cattle health, disease prevention and parasite control. Central marketing and packer slaughtering of cattle and calves. Selecting, fitting and showing beef cattle. Appendix. Index.

Note: A practical text in which some attention is paid to history and economics but most of the space is devoted to describing good techniques. It is introductory to the field, but genetics and some other advanced topics not found in all introductory books are included. There are 144 figures.

ENSMINGER, M. EUGENE
Horse husbandry Danville, Illinois The Interstate, 1951 336 p. illus. 24 cm. $3.50. 2765

Contents: History and development of the horse and mule industry. Distribution, adaptation, and the future of the horse and mule industry. Types and classes of light horses according to use. Types and classes of work horses and mules. Breeds of light horses. Breeds of draft horses. Selecting and judging horses. Determining the age and height of horses. Unsoundnesses and stable vices. The horse in action. Breeding horses. Feeding horses. Buildings and equipment for horses and mules. Horse and mule health, disease prevention, and parasite control. Equitation. Appendix: Animal units. Weights and measures of common feeds. Gestation table. All-time top sales. United States and world records for thoroughbreds. The breed associations. Breed publications. State agricultural experiment stations. Index.

Note: In this work on the care and breeding of horses under current conditions in the United States of America the emphasis is on light horses, such as are used for racing, riding, hunting, etc. The book is addressed to beginners and nonspecialists, but it contains enough material to make it useful to those who are interested in horse raising from a practical standpoint. For each breed of horse described the author gives origin and native home, characteristics, adaptation and use, and present status. The 144 figures include many reproductions of photographs of horses and numerous line drawings of such operations as saddling and mounting.

ENSMINGER, M EUGENE
Sheep husbandry Danville, Ill. The Interstate, 1952 404 p. illus. 23 cm. (Animal agriculture series) $3.50. 2766

Contents (abridged) History and development of the sheep industry. Types and breeds of sheep. Establishing the flock. Systems of sheep production. Breeding sheep. Feeding sheep. Sheep management. Buildings and equipment for sheep. Sheep and goat health. Wool. Central marketing and packer slaughtering of sheep and lambs. Fitting and showing sheep. Goats. Selecting, fitting and showing sheep. Glossary of wool terms. Goats. Selecting, fitting and showing sheep. Appendix: Gestation table. All-time top sales. The breed associations. Breed publications. State agricultural experiment stations. Index.

Note. A practical book for use as text in high school and college introductory courses. It is comprehensive enough to be useful as source of information for farmers who are just entering the branch of animal husbandry or who want information about it so as to decide whether to enter. Management both under range conditions and on small farms is discussed. The book is very profusely illustrated, but no bibliography is included other than list of current periodicals.

ENSMINGER, M EUGENE
Swine husbandry Danville, Illinois The Interstate, 1952 378 p illus. 24 cm. (Animal agriculture series) $3.50. 2767

Contents: History and development of the swine industry. Distribution, adaptation and the future of the swine industry. Types and breeds of swine. Establishing the herd selecting and judging swine. Breeding swine. Feeding swine. Grains and other high energy feeds for swine. Protein and vitamin supplements for swine. Pastures for swine. Buildings and equipment for swine. Swine health, disease prevention and parasite control. Central marketing and packer slaughtering of hogs. Selecting, fitting and showing swine. Appendix: Animal units. Weights and measures of common feeds. Gestation table. All-time top sales. The breed associations. Breed publications. Swine publications. State agricultural experiment stations. Index.

Note: A well-organized, practical description of good techniques in swine production. The treatment is elementary enough for use in agricultural courses in high schools and colleges, yet sufficiently detailed for the guidance of farmers and swine raisers. The choice of feeds, methods of feeding, and disease prevention are discussed in considerable detail. One hundred fifty-six figures and more than 20 tables supplement the textual material.

GORMAN, JOHN ALEXANDER

The western horse its types and training. Danville, Illinois The Interstate, 1949 396 p. illus. 22 cm. $3.00 2768

Contents: Part I, Training: Training the colt. Training the young horse to work. Training the stock horse. "Bronc busting." Restraining devices. Training and gaiting the pleasure saddle horse. Trick training. Rodeos and western shows. Horse shows and recreation. Horse racing. Part II, Types of western horses: Light breeds of horses. Types of western stock horses. Reserved horses. Wild horses. Draft horses and mules. Part III, Shipping and marketing horses: Reducing losses in shipping. Marketing horses. Index. Breed associations.

Note: "Western" in the title of this book refers of course to the western part of the United States of America, a region in which all types of horses are raised, most of them under range conditions, and in which most of the "cow ponies" are produced. The book is about evenly divided between the discussions of training methods and the descriptions of types of horses. The style is simple. The book is useful as a general source of information on how western horses are bred and trained. The author is a member of the faculty of the University of Wyoming.

MAYNARD LEONARD AMBY

Animal nutrition. Third edition. New York McGraw Hill Book Company, Inc. 1951 474 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink consulting editor) $7.00 2769

Contents: Part 1, General bases of nutrition. The expanding field of nutrition. The animal body and its food. Some physiochemical bases of life processes. Part 2 The nutrients and their metabolism. The carbohydrates and their metabolism. The lipids and their metabolism. The proteins and their metabolism. The inorganic elements and their metabolism. The vitamins. Part 3 The measurement of body needs and food values. Feeding experiments. The determination of digestibility. Nutritional balances. Feeding standards. Part 4, Nutritive requirements for body processes and productive functions. The fasting catabolism. Maintenance. Growth. Reproduction. Lactation. Work production. List of visual aids. Name index. Subject index.

Note: (1414) This college textbook discusses the principles of nutrition underlying the successful feeding of farm animals. It also teaches how new facts of nutrition are being learned experimentally and how they find application in practice. The third edition has been thoroughly revised to cover advances in the field since the second edition was published in 1947. The principal changes reflect advances in knowledge of amino acids, vitamins, and micro-mineral elements, in addition to which the pages dealing with the biochemistry of nutrition have been expanded to cover more specific present-day understanding of how nutrients function. The selected bibliographical references have also again been brought up to date.

PERRY ENOS J editor

The artificial insemination of farm animals. Second revised edition. New Brunswick, N J Rutgers University Press, 1952 341 p. illus. 23 cm. $5.00 2770

Contents: Historical, by E. J. Perry. Advantages and limitations, by E. J. Perry. The organs of reproduction, by J. Edwards. The role of hormones in reproduction, by R. P. Reece. General information, by E. J. Perry. Factors influencing the quality and quantity of semen, by E. J. Perry. Cattle, by E. J. Perry. Sheep and goats, by C. E. Terrill. Horses and jackstock, by V. Berliner. Birds, by F. P. Jeffrey. Swine, by E. J. Perry. Dogs, by E. P. Leonard. We must breed better livestock, by J. W. Bartlett. Systems of breeding, by J. W. Bartlett. Selection of sires, by J. W. Bartlett. Artificial breeding organizations, by E. J. Perry. The shipping of semen, by E. J. Perry. Diseases in relation to artificial insemination, by J. A. Henderson. Feeding and management of sires, by J. W. Bartlett. Index.

Note: (1440*) The second revised edition of this standard work on the artificial insemination of farm animals has been brought up to date in all its parts and contains an added chapter on the artificial insemination of dogs. Covering both principles and procedures of the method, the publication is a complete exposition of the subject and may be equally well used as a textbook in agricultural colleges and as a manual of practice for those concerned with artificial insemination programs.

RICE, VICTOR ARTHUR, AND FREDERICK NEWCOMB ANDREWS

Breeding and improvement of farm animals. With chapter on Selection in meat animals by Everett James Warwick. Fourth edition. New York McGraw Hill Book Company Inc., 1951 787 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8.00. 2771

Contents: Section I, Animals and man up to the present. Animal breeding—present and past. Early man and animal domestication. Animal origins and progression. Section II, Mechanisms of reproduction: The male's part in reproduction. The female's part in reproduction. Reproductive efficiency. Lowered fertility and sterility. Pregnancy and parturition. Mammary development and the initiation of lactation. Artificial insemination. Section III, Mechanisms of heredity: History and problems of genetics. The principles of heredity. The principles of variation. Sex determination. Section IV The art of breeding. Systems of breeding—unrelated animals. Systems of breeding—related animals. General considerations in selection. Selection in dairy cattle. Selection in meat animals. Selection in horses. Retrospect and prospect. Appendix. Livestock record associations. Name index. Subject index.

Note: (4974a) A standard textbook for agricultural college courses. Each section has been brought up to date with added data to cover new developments and added material in the bibliographies and illustrations. Among the advances covered are the broadened recognition of the fundamental aspects of animal agriculture and shifting emphases among the various classes of livestock; further developments in the hormonal regulation of sex manifestations and the widespread adoption of artificial insemination and continuing delineation and refinement of the basic laws of inheritance and their application to livestock improvement.

SAUNDERSON, MONT HARRIS

Western stock ranching Minneapolis The University of Minnesota Press, 1950 247 p. illus. 24 cm. $5 00 2772

Contents: Resources and ranches. Livestock management economics. Grazing land use. Choice of feed crops for ranch use. Markets, prices, and incomes. Business management. Planning the management program of the ranch. The use of federal public lands. Common and botanical names of range plants. Bibliography. Index.

Note: The author of this book is a Range Economist associated with the United States Forest Service, and he has covered the subject of stock raising in western United States of America from the economic and management standpoint. Land, use, feed, labor, market prices, and management of grazing areas (both private and public) are among the important aspects discussed in some detail. Areas of the United States of America which are suited to ranching and the chief types of stock ranches are described in the first chapter

SMITH, WILLIAM WESLEY

Pork production. With a chapter on *Sanitation and disease control* by L. M. Hutchings. Third edition. New York The Macmillan Company 1952 616 p. illus. 22 cm. $5.50. 2773

Contents: General view Feeding and handling the herd in the breeding season. Feeding pregnant sows and gilts. Care and feeding of the sow and litter Size of litters—birth weight of pigs—milk flow of sows. Housing and general management of the breeding herd. Food demands of the growing and fattening pig. Food deficiencies of the cereal grains. Forage crops. Methods of feeding on forage. Hogging-off corn and other crops. Protein supplements—dairy by-products—packing house and similar products. Protein supplements of plant origin. The cereal grains and other carbonaceous feeds. The cost of producing pork. Marketing. Factors affecting the price of hogs. Judging. Breeds of hogs. Breeding. Sanitation and disease control. Index.

Note: (3019) A standard book on the subject used both as text in agricultural college courses and as reference book. All aspects of the subject which are of interest to the practical hog raiser are covered in considerable detail. References to the literature are included. The previous edition appeared in 1937 In the third edition there has been extensive revision in order to describe new management practices and to include research information published in the recent literature. Economic data have also been revised. The number of figures has been increased to 112.

SNAPP, ROSCOE R.

Beef cattle. With a chapter on sterility by Harry Hardenbrook, jr Fourth edition. New York John Wiley & Sons, Inc., 1952 641 p. illus. 23 cm. $6 50 2774

Contents: Part 1, General aspects of the beef-cattle industry: Phases and areas of beef production. The relation of beef cattle to general farming. The relation of beef cattle to soil fertility Part 2, The breeding herd. Advantages and disadvantages. When to start. Selection. Reproduction and mating. Pregnancy Parturition. Summer management. Winter management. Weaning, dehorning, castration, and marking of calves. Feeding and care of young cattle. Part 3 Fattening cattle for market: Fattening cattle. The importance of age in growth and fattening. The importance of grade and sex in feeder cattle. The use of grain in fattening cattle. Carbonaceous concentrates and their use. Protein requirements. The principal nitrogenous concentrates. Roughage and its use. Corn silage as feed for fattening cattle A comparison of various silages. Grass as feed for fattening cattle. Miscellaneous feeding stuffs. The preparation of feeds for beef cattle. Methods of feeding. Part 4, General problems in beef production Baby-beef production. The marketing of cattle. The financial aspect of beef production. Fitting cattle for show and sale. Buildings and equipment for beef cattle. Diseases and parasites affecting beef cattle. Sterility Index.

Note. (4077) After 13 years this comprehensive textbook and manual has again been revised and brought up to date. Included in the fourth edition are reports on new breeding and feeding techniques introduced since the previous edition, new methods of calculating rations and estimating the feed required to winter or fatten beef cattle of different ages and weights, new data on grass silage, new material on artificial insemination, and special chapter on sterility in beef cattle. Additions have also been made to the chapters on fitting cattle for show and sale, on buildings and equipment, and on diseases, parasites, and poisonous plants. Four chapters of introductory and background materials and the lists of references at the ends of the chapters which appeared in the previous edition have been omitted. The new edition contains 110 illustrations and 263 tables.

WILLIAMS DAVID WILLARD

Beef cattle production in the South. Second edition. Danville, Ill. The Interstate, 1950 450 p. illus. 21 cm. $3.00 2775

Contents (abridged) Historical development and distribution. Judging beef cattle. Breeds of beef cattle. Breeding beef cattle. Feeds and feeding. Marketing beef cattle Handling and management practices. Showing beef cattle Pastures Sanitation—parasites—diseases. Equipment for beef production. Appendix. Glossary of terms. Selected references. Index

Note: An introductory text written at the level of first courses in high schools and agricultural colleges. It is limited largely to practical aspects, but some elementary historical information is included. The 233 figures include pictures of beef breeds, ranch equipment, and management practices. The author is Vice-Chancellor for Agriculture in the Texas A. & M. College System.

DAIRYING AND DAIRY PRODUCTS

ECKLES CLARENCE HENRY

Dairy cattle and milk production. Fourth edition. Revised by Ernest L. Anthony New York The Macmillan Company, 1950. 560 p. illus. 22 cm. $5.25 2776

Contents (abridged) Origin and classification of domesticated cattle. The dairy type. Holstein-Friesians. Jerseys. Guernseys. Ayrshires. Brown Swiss. Minor breeds. Dual purpose cattle. General considerations in selecting breed. Selection of the individual cow. Selection, care, and management of the sire. Cattle breeding. Calf feeding and raising. Calf raising and calfhood diseases. Factors influencing growth and development of dairy heifers. Registered herds—the business side of the pure-bred business. Care and management. Milking factors influencing the quantity and quality of milk. Common ailments of cattle. Feeding for milk production. Characteristics of common feeds. The silo and silage. Barns for cows. Appendix. Index.

Note: (4981b) A long-established agricultural college textbook. In it full descriptions of dairy breeds raised in the United States of America are combined with discussions of the management of dairy cattle. In this edition evidence of revision and amplification is to be found throughout the book. However in most instances the changes are limited to the rewording of sentences and the insertion of new sentences or new paragraphs. Professor Anthony who is responsible for the fourth edition, is Dean of Agriculture in Michigan State College.

ECKLES CLARENCE HENRY, AND OTHERS

Milk and milk products prepared for the use of agriculture college students. By Clarence Henry Eckles Willes Barnes Combs, and Harold Macy Fourth edition. New York McGraw Hill Book Company Inc., 1951 454 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $5 75 2777

Contents (abridged) The constituents of milk. Factors influencing the composition of milk. Milk and dairy products as food. Microorganisms. The Babcock method for determining fat in milk and cream. Common dairy processes. Market milk. The manufacture of dairy products—butter—cheese—ice cream—condensed milk, dry milk, milk by-products. Dairy arithmetic. Appendix. Methods for bacteriological analysis of milk. Roese-Gottlieb method for fat determination (official A.O.A.C.) Babcock method for fat determination (official A.O.A.C.) Table for calculating total solids in milk from specific gravity and fat percentage. Table for determining the total solids of sweet and sour cream buttermilk from the lactometer reading. Market grades of creamery butter. Tentative U.S. standards for grades of American Cheddar cheese. Specific grading requirements for non-fat milk solids. Index.

Note: (5051a) A standard work used both as an introductory text and as practical guide for dairy plant personnel. The arrangement and scope are the same as in the preceding edition published in 1943 and much of the text has not been altered. However, useful revisions have been made, particularly in the statistical material and in the tests described in the chapters on the Babcock method, miscellaneous tests, and in the appendix.

ELLIKER PAUL REUBEN

Practical dairy bacteriology New York McGraw Hill Book Company Inc., 1949 391 p illus. 23 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $5.50 2778

Contents: Structure and distribution of microorganisms. Nutrition and growth of microorganisms. Inhibition and destruction of microorganisms. Methods of cultivating and studying microorganisms. Milk as habitat for microorganisms. Methods used to determine sanitary quality of milk and milk products. Microbiology of market milk and cream Butter and cheese starter cultures. Microbiology of butter. Cheese. Fermented milks. Condensed- and dry-milk products. Ice cream. Cleaning dairy equipment. Index.

Note This book is both text for college courses and handbook for dairy farmers, inspectors, and dairy-plant workers. Proceeding from the general to the specific the presentation begins with four introductory chapters on microorganisms, then covers all phases of bacteriology as it applies to the dairy industry Detail on manufacturing methods is included so that the student or reader may gain more complete knowledge of the nature of the processes affecting numbers and types of microorganisms in dairy products. The chapter on methods used to determine sanitary quality of milk and milk products presents number of common procedures, such as standard plate count, microscopic count, and dye-reduction tests. These are presented to indicate briefly the nature of the methods, interpretation

of results, and the materials and equipment necessary to perform them. The author is Professor of Dairy Bacteriology at Oregon State College. Bibliographical references appear at the ends of the chapters.

ESPE, DWIGHT, AND VEARL R. SMITH

Secretion of milk. Fourth edition. Ames, Iowa Iowa State College Press, 1952 291 p. illus. 23 cm. $3 95 2779

Contents: Evolution of the mammary gland. Anatomy of the udder. Hormonal interrelations in mammary gland development. Hormonal interrelations in lactation. Physiological and biochemical aspects of lactation. Physiology of milking. Mechanics of milking. Physiological factors affecting the quantity and quality of milk. Effect of feed on the amount and composition of milk. Environmental factors affecting lactation. Index.

Note: (3444*) This book is standard critical review and digest of the literature pertaining to milk production in dairy cows. Each of the chapters consists of concise text key-numbered to an extensive list of literature references. Many points are made that are of value to the practical farmer, but the chief uses of the book are as supplementary text in agricultural college courses and reference handbook in research. In the present edition the chapter arrangement has been somewhat reorganized, and literature published as late as 1950 has been covered.

GILMORE, LESTER ODELL

Dairy cattle breeding. Edited by R. W Gregory Philadelphia J B Lippincott Company 1952 604 p. illus. 23 cm. $6.00 2780

Contents: Domestication. Inheritance and environment. Basic considerations in breeding. Gene frequency analysis. Sex. Reproductive efficiency. Multiple births. Lethals. Nonlethal physical characters. Color and color patterns. Blood typing. Disease resistance. Growth and development. Milk secretion. Efficiency of feed utilization. Longevity and miscellaneous physiological characteristics. The selective process. How production is recorded. Type and production. Evaluating bulls. Evaluating dams and cow families. Pedigrees. Herd analysis. Inbreeding. Outbreeding. Extending the use of well-bred bulls and cows. Artificial breeding. Collecting and processing semen. Purebred cattle. Index.

Note: This publication is an inclusive textbook for agricultural college students and teachers which can also be of use to dairy cattle breeders, to officials of breed registry and artificial breeding organizations, and to vocational agriculture students and teachers. The author concentrates on the breeding of dairy livestock, except in certain chapters wherein records relating to all cattle are presented, such broader knowledge being considered helpful to the student for an understanding of the breeding of dairy livestock; these chapters are those dealing with domestication, environmental variations, reproduction, inherited characters, and systems of breeding. Illustrations number 173 aside from 116 tables. Bibliographical references are given in footnotes, and study questions are given at the ends of the chapters.

LASCELLES H. R.

Western dairying. Danville, Illinois The Interstate, 1951 280 p illus. 21 cm. $3 00. 2781

Contents: Factors that influence milk production in the West. Rentals, partnerships and leases. Grass. The cow. The bull. Production testing and record keeping. The shelter Feeding under western conditions Disease control. Pricing milk. The show ring. Sources of material. Index.

Note: A practical introductory text on the breeding and management of dairy cattle under the economic and agricultural conditions prevailing in the western states of the United States of America. It is addressed primarily to young people, especially students in high schools and members of 4-H clubs. However, the subject is covered explicitly and thoroughly enough to make the book useful to anyone in need of an introductory view of this branch of western agriculture. Selected literature references are included.

NEVENS, WILLIAM BARBOUR

Principles of milk production. New York McGraw Hill Book Company Inc. 1951 443 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $5.50 2782

Contents (abridged) Part I, Dairy farming affords many incentives: Production of milk an important phase of agriculture. Part II, Feeding, breeding, and managing dairy cattle: Feeding dairy cattle; feeding cows during the barn-feeding season—the composition and nutritive value of feeds—mineral and vitamin needs—feeding dairy cattle during the pasture season. Breeding dairy cattle Selection—systems of breeding—artificial insemination. Raising the dairy calf. Part III, Dairy-cattle breeds and selection of individual animals. Part IV Milk secretion, production of high-quality milk, and marketing milk. Part , The business aspects of dairy farming. Part VI, Growing and preparing feeds for milk production Good soil management essential to successful feed-crop production. Pastures on most farms may be improved. Making high-quality hay Silage has an important place in milk production. Part VII, Better buildings for milk production. Index.

Note: Presenting both important principles and modern methods of milk production, this book is suitable for use as textbook in agricultural colleges and as practical guide for persons actively engaged in dairy farming. Appropriate illustrations are part of the text, while lists for supplementary reading and review questions are given at the ends of the chapters. The author is member of the faculty of the University of Illinois.

OLSON THOMAS MANDANEOUS

Elements of dairying. Revised edition. New York The Macmillan Company 1950. 708 p illus. 22 cm $5.50. 2783

Contents (abridged) Part I, Dairy cattle: Factors influencing the development of the dairy industry Dairy cattle breeding. *Holstein-Friesians. Jerseys. Guernseys. Ayrshires. Brown Swiss.* Minor dairy breeds. Dual purpose breeds. Developing dairy herd. Selecting individual animals and maintaining profitable herd. The dairy sire. The dairy calf. Milk secretion. *Factors* affecting the quantity composition, and quality of milk. Composition, digestion, and metabolism of feeds. *Factors* affecting the composition and nutritive value of feeds. Feeding standards and feeding practices. Crops to grow for dairy cattle and characteristics of common feeds. Maintaining healthy herd. Part II, Dairy products: Milk. Microorganisms of milk and production of quality milk. Testing milk products. Butter. Ice cream. Cheese. Part III, Dairy farming: The business side of dairy farming. Essential buildings and equipment for dairy farming. Milk houses. Silos. Milking machines. Judging and fitting dairy animals. Appendices. National dairy organizations. Score cards for dairy products. Score cards for dairy animals. Tables. Index.

Note (4995) A college textbook which provides an introductory but inclusive treatment. The descriptions of individual breeds are relatively brief; but the practical aspects of developing dairy herd, managing it, and marketing its products are discussed at considerable length. The discussions of such milk products as ice cream are not full enough to serve as guides to manufacturers but they contain enough information to enable farmers in many cases to decide whether or not the product under discussion is possible activity for the particular farm enterprise. In this edition the book has been considerably revised and expanded by approximately 130 pages. There are 130 figures but few literature references.

PETERSEN, W E.

Dairy science, its principles and practice. Second edition. Edited by R. W Gregory Philadelphia J B Lippincott Company 1950 695 p. illus. 24 cm. $6 00 2784

Contents (abridged) The history of dairying. The economics of milk production. Milk consumption. Economics of market milk—The butter industry—The cheese industry—Concentrated milk products—Ice cream industry—Milk by-products. Origin, development, and classification of dairy cattle. The Holstein-Friesian. The Jersey The Guernsey The Ayrshire. The Brown Swiss. The milking Shorthorn. The Red Polled. The lesser breeds. Types of dairy farming and breed selection Selecting the individual cow Fundamental considerations of heredity Known inherited characteristics in dairy cattle. Systems of breeding. Selection and care of the herd sire. Artificial insemination. The purebred business Calf raising. The physiology of milk secretion. Factors influencing the quantity and quality of milk. The milking machine and milking. Efficiency and cost of milk production. Common diseases of dairy cows. Dairy barns. Barnyard manure. Common feeds—characteristics and treatment. Feeding dairy cows in the barn. Feeding cows on pasture. Chemical constituents of milk. Physical and chemical properties of milk. Dairy microbiology: bacteria, yeasts, and molds. Common tests of milk and cream. The more common dairy processes. Market milk. Butter. Cheese. Condensed and dried milk. Ice cream and other dairy products. Appendix. Reference readings. Index.

Note. (4996) A comprehensive volume designed primarily for use as text for college students of dairy production. It is of value also

in vocational education and as reference book. Problems pertaining to milk production are given especial emphasis. Lists of questions and selected bibliographies arranged by chapters are printed separately at the conclusion of the book. The new edition has been completely revised and reset from the original (1939) edition. All charts and graphs have been brought up to date. New procedures and methods are presented, including an added chapter on artificial insemination, and references are given to recent journal articles and other new publications of importance.

ROADHOUSE, CHESTER LINWOOD, AND JAMES LLOYD HENDERSON

The market milk industry Second edition New York McGraw Hill Book Company, Inc. 1950 716 p. illus 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $7 50 2785

Contents: History and development of the market-milk industry The composition of milk and its physical and chemical properties. Bacteriology in relation to market milk. Milk and the public health. Safeguarding the milk supply Sanitary production of market milk. Construction and arrangement of sanitary dairy-farm buildings. Country milk-receiving stations. The transportation of milk. Flavors of milk. Construction and arrangement of city milk plant. Milk-plant operation. Washing and sterilizing dairy equipment. Pasteurization of milk. Mechanical refrigeration. The cooling of milk. The creaming of milk. Table cream and pastry cream. Special milk products. The distribution of milk. The cost of milk production. The price of milk and price plans. Dairy inspection and market-milk control. Milk and nutrition. The milk-plant laboratory and its operation. Appendix. Index.

Note: (5009) A college textbook which conveys view of the market-milk industry as whole and also provides specific information on milk-plant operation. It is useful both in classroom instruction and in self-instruction by men already employed in the industry The second edition has been completely revised and somewhat expanded from the first edition of 1941 Specific changes in the industry which are covered in the second edition include improvements in the pasteurization of milk by the high-temperature short-time method, the general adoption of homogenized milk, the official checking of the holding time of high-temperature pasteurizers, improved procedures for preparing cultured buttermilk, and the further use of fiber containers in milk distribution. The processing of several new products is also described, among them being frozen milk, frozen cream, plastic cream, hydrated milk, recombined milk, and yoghurt. The bibliographical references have been brought up to date.

SPEARING JACK

Fitting and showing dairy cattle. Ames Iowa The Iowa State College Press 1952 97 p illus. 20 cm. $2 00 2786

Contents: Selection of the show herd. Steps in fitting. Feeding. Foot trimming Clipping. Horn training and polishing. Going to the fair. The day before the show Showing in the ring. Care of cow and calf.

Note: Techniques of preparing dairy cattle for display and judging at cattle sales and cattle shows and of handling them in the show ring are described in this short but useful book. The language of the book is simple and explicit, and it is intended primarily for young people and other beginners. The illustrations include number of photographs of prize-winning cattle.

THOMAS ROY HILMAN AND OTHERS

Dairy farming in the South. By Roy H. Thomas Paul M Reaves and C. W Pegram. Revised edition. Danville Illinois The Interstate, 1949 431 p. illus. 21 cm. $2 50 2787

Contents: The importance of dairying in the South. Producing milk and dairy products for home use. Composition testing and value of milk. Value of milk in the diet. General breeding problems and practices. The herd sire Caring for cow and calf. Judging dairy cows. Selecting the dairy breed. General problems in dairy feeding. Feeding practices. Pastures for dairy cattle. Silage for dairy cattle. Dairy buildings and equipment. Producing quality dairy products. Marketing dairy products. Common diseases and parasites of dairy cattle. Fitting and showing dairy cattle. Artificial insemination of dairy cattle. Production testing of dairy cattle. New methods and equipment are making dairying easier. The man and the cow in the production of milk. Index.

Note: (4998) A practical textbook designed for use in agricultural courses in high schools and colleges. It is devoted to the specific problems and practices of dairy farming in the southern United States where the warmer climate and the longer growing season require somewhat different techniques than those which are standard in the northern United States. The discussions are phrased in simple language and they are limited mainly to matters that are of direct concern to small farmers. In this edition the last four chapters have been added. There are 174 figures, but no bibliography

TROUT, GEORGE MALCOLM

Homogenized milk a review and guide. East Lansing, Mich. Michigan State College Press, 1950 233 p. illus. 23 cm. (Michigan Agricultural Experiment Station. Bulletin. Memoir series. No 9) $3 75 2788

Contents: An introduction to homogenized milk. Effect of homogenization on the physical and chemical properties of milk. Effect of homogenization on the fat and proteins of milk. Processing homogenized milk. Problems associated with homogenized milk and their control. Laboratory control. Qualities of homogenized milk with which the consumer may be concerned. Literature cited. Author index. General index.

Note: The Michigan Agricultural Experiment Station began in 1930 series of studies of milk homogenization. This volume brings together the results of these studies, presenting them against background of pertinent historical information, other scientific studies, and recent commercial applications and usages. It is complete guide to the subject, with bibliography of 451 citations.

WHITTIER, EARLE OVANDO, AND BYRON H. WEBB

Byproducts from milk. New York Reinhold Publishing Corporation 1950. 317 p. illus. 24 cm. $6 00 2789

Contents: The byproducts of milk. Beverages from byproducts. Fermentation products from whey Condensed products. Dried products. Cheese and cheese products. Bakery products. Canned products. Miscellaneous feed products. Casein and whey proteins. Lactose. Index.

Note. A comprehensive presentation of the technology of manufacturing food and non-food products from milk. It is based on review of the literature, including patents and government publications; statements in the text are keyed to the reference lists. Certain products such as butter and cheese which are fully covered in other books are either omitted or discussed only in selected aspects. For example, cheddar cheese is not included, but there is considerable discussion of cheese spreads. The book is especially useful for the information that it provides on host of minor products such as acidophilus milk, chocolate-flavored milk, lactic acid, whey concentrates, cottage cheese, canned cream, salad dressings, and casein. Flow sheets are included for the manufacture of calcium lactate, casein, and lactose. The authors hold positions with the Bureau of Dairy Industry in the United States Department of Agriculture.

POULTRY

BARGER, EDGAR HUGH, AND LESLIE ELLSWORTH CARD

Diseases and parasites of poultry Fourth edition thoroughly revised, with 77 illustrations Philadelphia Lea & Febiger 1950. 400 p. illus. 21 cm. $4.00. 2790

Contents: The mortality problem. The nature of disease. The anatomy of the fowl. Poultry surgery Diagnostic methods. Bacterial diseases. Virus diseases. Protozoan diseases. Nutritional diseases. Miscellaneous conditions. Poisons. Internal parasites. External parasites. Controlling flock mortality Appendix. Index.

Note. (5029) A standard, compact handbook designed for agricultural extension workers, veterinarians, and commercial poultrymen. The various aspects of the subject named in the chapter titles are outlined with enough information given on diseases and control measures for average men. However each chapter is supplemented by long list of well-selected references in which fuller discussions of specific sub-topics can be found. The present edition has the same chapter titles and approximately the same number of pages as the preceding one, and there has been no change in scope or plan of

organization. However, revised and later information has been inserted in many parts of the book and publications since 1943 have been added to the list of references.

Biester, Harry Edward, and L. H. Schwarte, editors

Diseases of poultry Third edition. Ames, Iowa The Iowa State College Press 1952 1245 p. illus. 26 cm. $11.50 2791

Contents: Anatomy by H. L. Foust. Digestion, by E. A. Hewitt. Poultry genetics as related to pathology by N. F. Waters and J. H. Bywaters. Avian hematology by C. Olson, Jr. Principles of disease prevention, by W. R. Hinshaw. Proteins, carbohydrates, fats, fiber, minerals, and water in poultry feeding, by L. C. Norris and M. L. Scott. Vitamins and vitamin deficiencies, by R. M. Sherwood and J. R. Couch. Pullorum disease, by H. Van Roekel. Paratyphoid infections, by K. Fenstermacher. Fowl typhoid, by W. J. Hall. Fowl cholera, by C. Murray. Tuberculosis, by W. H. Feldman. Infectious coryza, "chronic respiratory disease," and coccobacilliform coryza, by M. S. Hofstad. Brucellosis, anthrax, pseudotuberculosis, tetanus, and vibrio infection, by H. J. Stafseth. Listerellosis, botulism, erysipelas, and goose influenza, by N. D. Levine. Streptococcus, staphylococcosis, arthritis, colibacillosis, and coligranuloma (Hjärre's disease) by M. S. Hofstad. Diseases caused by fungi, by K. L. Bullis. The avian leukosis complex, by E. Jungherr. Infectious bronchitis, by M. S. Hofstad. Infectious laryngotracheitis, by M. S. Hofstad. Newcastle disease, by C. A. Brandly. Ornithosis and psittacosis, by K. F. Meyer. Avian encephalomyelitis (epidemic tremor) by P. K. Olitsky and H. Van Roekel. Equine encephalomyelitis virus in birds, by L. T. Giltner. Fowl pox, by C. H. Cunningham. Fowl plague, by E. L. Stubbs. Foot-and-mouth disease in fowl, by P. K. Olitsky and H. W. Schoening. Rabies and infectious equine anemia, by L. H. Schwarte. Duck virus hepatitis, by P. P. Levine. Avian monocytosis, by E. Jungherr. Neoplastic diseases of the chicken, by W. H. Feldman and C. Olson, Jr. External parasites of poultry by E. A. Benbrook. Nematodes and acanthocephalids of poultry by E. E. Wehr. Cestodes of poultry by E. E. Wehr. Trematodes of poultry, by E. W. Price. Protozoa, by E. R. Becker. Diseases of the digestive system, by A. J. Durant and H. C. McDougle. Poultry surgery by L. H. Schwarte. Vicious habits and miscellaneous conditions, by L. H. Schwarte. Poisons and toxins, by L. H. Schwarte. Diseases of the turkey by W. R. Hinshaw. Index.

Note: (2482*) An established encyclopedic reference book for research workers, veterinarians, and large-scale poultry farmers. The current knowledge of each topic named in the chapter titles is summarized and extensive bibliographies are given at the ends of most chapters. Although the greater part of the text is identical with that of the second edition, the revision has been thorough. References to new advances and to literature published since the date of the second edition appear throughout the book. Several of the chapters are signed with the names of new contributors. The chapter on ornithosis and psittacosis—one of those very extensively revised—now includes a bibliography of approximately 200 references, of which 58 were published since 1947. Incidentally this chapter has public health as well as veterinarian interest.

Card Leslie Ellsworth

Poultry production. Formerly by Lippincott and Card. Eighth edition thoroughly revised, with 216 illustrations and 4 plates 2 in color Philadelphia Lea & Febiger 1952 416 p. illus. 24 cm. $5.00 2792

Contents: The poultry industry. The structure of the chicken and the formation of the egg. Principles of poultry breeding. Selection and improvement. Incubation. Brooding and rearing. Houses and equipment. The principles of poultry nutrition. The feeds. The nutrient requirements of poultry. Management practices. Controlling diseases and parasites. Marketing poultry products. The business of poultry keeping. Index.

Note: (2491*) A long-established text widely used in agricultural college courses and to a lesser extent by practical farmers. The presentation is more advanced and there is more emphasis on basic matters, such as the biology of ovulation, than would be appropriate in a book for beginners studying the subject without the aid of an instructor. Nevertheless, the main emphasis is on the application of scientific findings to practical poultry farming. In this revision the chapter on breeds and the extensive literature citations which were features of earlier editions have been dropped. On the other hand, valuable material has been added on poultry breeding and improvement, poultry houses, and recent developments in nutrition.

Charles, Thomas Burr, and Homer O Stuart

Commercial poultry farming. Eighth edition. Danville Ill. The Interstate 1950. 540 p. illus. 24 cm. $4.00. 2793

Contents: Incubation. Hatchery practices. Brooding practices. Battery brooding and laying cages. Broiler production. Capons and caponizing. Principles of feeding. Feeding chickens. Feeding adult birds. Rearing and range management. Selection. Breeding and sex distinction. Trapnesting and pedigreeing. Improvement programs. Marketing. Fattening. Housing and appliances. Management factors. Poultry diseases. Egg formation. Classes, breeds, varieties, strains. Turkey production. Index.

Note: This work in its various editions has been used as an agricultural school textbook for many years. It provides an introductory but substantial survey of practical knowledge, together with relatively full discussions of improvement programs. All major phases of the subject are discussed from the selection of eggs for incubation to the packing and marketing of the eggs and dressed birds. It is not now up to date on such matters as the use of hormones in caponizing or the effects of antibiotics in promoting growth. There are scattered references to government publications, but both the bibliography and the index are inadequate.

Heuser Gustave Frederick and others

Poultry management, by G. F Heuser, G O Hall, and J H. Bruckner Philadelphia J B Lippincott Company 1952 565 p. illus. 22 cm. (Agricultural management series, prepared under the general supervision of R. W Gregory) $4.00 2794

Contents: The poultry industry. Breeds of poultry—their nature, characteristics, and uses. Principles and practices of poultry breeding. Culling the farm flock. Housing the flock. Feed nutrients and poultry feeds. Hatching the chicks. Brooding and rearing. Growing young stock. Feeding hens for production. Producing market poultry. Marketing poultry products. Poultry and egg shows. Diseases and parasites of poultry. Growing turkeys. Index.

Note. A practical, comprehensive text. It is written in simple language and is addressed to such readers as students taking their first formal course in the subject, and to farmers now engaged in poultry farming or thinking of engaging in it. Economic aspects such as the relations between the number of laying hens per man working on the farm and labor income from the enterprise are adequately discussed. However, most of the space is devoted to descriptions of good practices. There are 87 tables of data on various aspects such as optimum levels of humidity in incubators and composition of mixed feeds. There are numerous illustrations and adequate bibliographies.

Hoffmann Edmund, and James M. Gwin

Successful broiler growing. Second edition. Mount Morris, Illinois Watt Publishing Company 1951 256 p. illus. 22 cm. $3 50. 2795

Contents: Introduction. Producing and consuming areas. Outlook for poultry meat production. Breeds and strains. Housing. Feeding principles and practice. Brooding and management. Disease prevention and control. Marketing. Home killing and dressing broilers. Investment, financing, expenses, and returns. Broiler production in batteries. Breeding for meat production. Producing eggs for hatching broiler chicks. Appendix. Index.

Note: (2486*) A practical work intended for use as a text in agricultural courses in high schools and colleges, and as a first instruction manual for practical poultrymen. It is written clearly and simply. In this edition the length has been increased by 70 pages. Many parts have been revised and the economic information has been brought down to about the end of the year 1949. Changes have been made in the bibliography

Hutt Frederick Bruce

Genetics of the fowl. New York McGraw-Hill Book Company, Inc., 1949 590 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $7.00. 2796

Contents. Domestic birds. Cytology Variations in the skeleton. Structural variations in the skin. Variations in the plumage. Variations in the color of the skin. Variations in the color of the plumage. Lethal genes and miscellaneous characters. Variations in body size. Egg production. Variations in eggs. Genetic resistance to disease. Genetic aspects of reproduction. Linkage. Genetics in practice. Appendix: Symbols for the genes of the fowl. Glossary Author index. Subject index.

Note. Intended for use as text and reference book for agricultural college students, this work surveys present knowledge of heredity and variation in the domestic fowl (chicken) The student is assumed to have had an introductory course in genetics, but the poultryman he has not had such course should not have difficulty in understanding the book. Much of the text consists of digest of the literature of the subject. The final chapter tells how present knowledge may contribute to the breeding of better fowls.

JULL MORLEY ALLAN

Poultry breeding. Third edition. New York John Wiley & Sons Inc., 1952 398 p illus. 24 cm. $6.00 2797

Contents: Breeds and varieties of chickens. Physiology of reproduction. Mechanism of inheritance. Color characters. Morphological characters. Gene linkage and blood group antigens. Fertility and hatchability Viability Meat production. Egg production. Egg characters. Selection methods. Index.

Note: (3039) A standard treatise in which accounts of genetic mechanisms and discussions of commercially desirable characteristics in poultry that are basic to breeding are given most of the space. However, these topics are covered from the viewpoint of practical breeders. Also in this edition, the final chapter outlines practical methods for the selection of breeding stock. Each of the chapters is supplemented by substantial list of literature references. The work was extensively rewritten for this edition. Text, illustrations, and bibliographies have all been revised.

JULL MORLEY ALLAN

Poultry husbandry Third edition. New York McGraw Hill Book Company Inc., 1951 526 p illus. (part col d) 24 cm. (Mc Graw Hill publications in the agricultural sci ences R. A. Brink, consulting editor) $6 50 2798

Contents: The poultry industry The breeds of chickens. The biology of the chicken. Breeding principles. Breeding practice. Incubation principles and practice. Rearing principles and practice. Housing and yarding principles and practice. Feeding principles. Feeding practice. Disease prevention and control. Marketing eggs. Marketing poultry Economics of production. Index.

Note: A standard textbook for agricultural college courses. Essentially it is complete guide to the principles and methods of modern poultry husbandry In this edition it has been revised to bring it thoroughly up to date in all its parts, including text, illustrations, tables, and selected lists of references.

MARSDEN STANLEY J AND JOSEPH HOLMES MARTIN

Turkey management. Fifth edition. Dan ville, Ill. The Interstate, 1949 774 p. illus. 21 cm. $4.50 2799

Contents: The turkey's place in American agriculture. Classification, origin, and history Terminology and varieties. Turkey shows and showing. Breeding principles and practices. Characteristics, management, and feeding of breeding stock. Trapnesting and pedigreeing. Artificial incubation. Artificial brooding and rearing. Turkey feeds and feeding. Marketing, selection, and grades. Malformations and bad habits. Disease prevention and sanitation. Diagnosis and control of diseases and parasites. Caponizing, sexing and artificial insemination. Appendix. Index.

Note: (2492) A standard work in which the results of modern scientific research are coordinated with practical procedures in commercial turkey raising. Literature references and considerable range of reference data are included. Changes from the preceding edition are not major, but they do include some revisions in tables and bibliographies. Also the index has been much improved.

RICE, JAMES EDWARD, AND HAROLD E. BOTSFORD

Practical poultry management. 5th edition. New York John Wiley & Sons, Inc., 1949 614 p illus. (part col d) 21 cm. (The Wiley farm series, A. K. Getman and E. R. East man editors) $3 95 2800

Contents: Culling the flock. Principles of selection. Housing the laying and breeding stock. Principles of housing poultry Feeding the laying and breeding stock. Principles of feeding layers and breeders. Anatomy and physiology of the domestic fowl. Using artificial illumination on laying and breeding stock. Keeping records of the flock. Studying the records. Diagnosing common diseases. Treating diseases and combating parasites, pests, and vices. Maintaining sanitary conditions. Preparing eggs for market. Preparing poultry for market. Selecting breeders. Mating the breeders. Renewing the flock. Hatching the eggs. Formation of the egg and chick. Brooding the chicks. Preventing and treating chick diseases, parasites, and vices. Capon production. Maintaining egg production during the summer. Mid-season care of young stock. Fitting, exhibiting, and judging poultry Classes, breeds, and varieties. Shall I be poultryman? Index.

Note (3046) The latest edition of standard manual and complete illustrated guide to the principles and practices underlying successful poultry raising. The book is especially suitable for beginners in poultry husbandry whether on farms and chicken ranches or in agricultural colleges and vocational schools. The new edition covers the advances of the 1940's, including the new types of housing and equipment introduced for labor-saving purposes, and the new types of feeding rations resulting from research in nutrient allowances for chickens.

TAYLOR, LEWIS WALTER, editor

Fertility and hatchability of chicken and turkey eggs. New York John Wiley & Sons, Inc. 1949 423 p. illus. 22 cm. $5.50 2801

Contents: The selection of the breeding flock, by W W Cravens. Formation of the hen's egg, by D. C. Warren. Fertility in chickens and turkeys, by J. E. Parker The care of hatching eggs before incubation, by E. M. Funk. Biochemistry of the developing embryo, by A. L. Romanoff. Physical conditions in incubation, by W M. Insko, Jr Genetics and physiology of embryonic development, by H. R. Moseley and W Landauer. Diseases in relation to hatchery operations, by W R. Hinshaw Education and research in fertility and hatchability by L. W Taylor. Appendix: Supplementary references. Incubation trouble-shooting chart. Glossary. Index.

Note: A review of all significant literature through 1947 on factors influencing fertility and hatchability of chicken and turkey eggs. It was published at the instigation of the International Baby Chick Association. Particular consideration is given by the authors to evaluation of results obtained from past research and to problems remaining to be solved. The book can serve both as college textbook and as source of information for those concerned with the practical applications of the subject. Extensive lists of pertinent literature are included.

WINTER, ALDEN RAYMOND, AND E. M. FUNK

Poultry science and practice. Edited by R. W Gregory Third edition. Philadelphia. J B Lippincott Company 1951 662 p. illus. 24 cm. $6 00 2802

Contents: The poultry industry Classes, breeds, and varieties of chickens. The anatomy and physiology of the chicken. Breeding principles. Breeding practices. Incubation principles and practices. Rearing principles and practices. Housing principles and practices. Feeding principles. Feeding practices. Diseases and parasite prevention and control. Marketing eggs. Marketing poultry Poultry farm management. Turkey varieties and breeding problems. Turkey production and management. Ducks, geese, and miscellaneous poultry. Game bird production, by James Hamilton. Appendix. Index.

Note: (3049) A comprehensive work designed for use both as text in agricultural college courses and as reference manual for agricultural extension workers and practical farmers. A wide range of information is presented in the text and 141 tables. The chapter on marketing of poultry may be cited as an example of the thoroughness of the treatment. This chapter is 41 pages long, considers

30 illustrations, 6 tables, and 3-page bibliography. Both small and large-scale packing methods are covered. The second edition was published in 1946. The third edition represents an extensive revision and augmentation. The type has been reset.

FISH CULTURE

TAYLOR, HARDEN FRANKLIN, AND OTHERS

Survey of marine fisheries of North Carolina. By Harden F Taylor and a staff of associates. Chapel Hill The University of North Carolina Press, 1951 555 p. illus 26 cm. $10.00. 2803

Contents (abridged) Foreword, by R. E. Coker. Part I, Hydrography of North Carolina marine waters, by H. Marshall. Part II, Biology and natural history of the economic species: Introduction, by H. F Taylor. The menhaden, by W A. Ellison, Jr. The edible finfishes of North Carolina, by E. W Roelofs. The oyster and other mollusks in North Carolina, by A. F Chestnut. The shrimps in North Carolina, by C. Broad. The blue crab in North Carolina, by J. C Pearson. The diamond-back terrapin in North Carolina, by R. E. Coker. The seaweed resources of North Carolina, by H. J. Humm. A preliminary survey of marine angling in North Carolina, by F LaMonte. Part III, Economics of the fisheries of North Carolina, by H. F Taylor. Bibliography Appendix. Index.

Note A comprehensive monograph that covers the biological, practical, economic, and legal aspects. Although limited to marine products that are of some importance in North Carolina the book is of more than local interest, because the marine products gathered by North Carolina fishermen are identical with those gathered by fishermen of many other regions. Similarly the discussions of economics and marketing are of general interest along at least the Atlantic seaboard of the United States of America. The book is essentially a skilled synthesis of published literature and it includes much information, especially economic information, that had not been published hitherto. Bibliographies and numerous statistical tables are included.

VETERINARY MEDICINE

DYKSTRA, RALPH RALPH

Animal sanitation and disease control. Revised and enlarged edition. Danville, Ill. The Interstate Printers-Publishers, 1949 808 p. illus. 21 cm. $3 75 2804

Contents (abridged) Part one, Some animal health factors: The anatomy and physiology of the organs of digestion in animals. Pulse, respiration and temperature. Vitamins, minerals and hormones as health requirements. Water and its influence. Animal housing and control. Animal surroundings and manure disposal. Part two, Some animal disease factors: Domestication and domestication. Hereditary factors and abnormalities. Insects and carriers and their role. Community sales, community dips, and transit losses. Part three, Some methods of disease control. The quarantine. Disinfecting procedures. Pasture rotation and sanitation. Destroying ailing animals and disposal of carcasses. Part four Infectants and their handling: Guides in the selection of chemical disinfectants and their modes of action. Non-chemical disinfection. Methods of application of chemical disinfectants. Part five, External and internal parasites and their control Disinfecting buildings. Some disinfecting agents and repellents. Rats, and some other rodents, and their control. Part six, Non-infectious, sporadic ailments: General statement and hereditary ailments. Some secondary ailments. Control and cosmetic devices, and ailments. Some surgical ailments. Plant, feed, and chemical poisonings. Deficiency ailments. Part seven, Infectious and communicable ailments of farm animals. Part eight, Some infectious and communicable ailments of barnyard fowl: General sanitary measures for the control of poultry ailments, and description of some of the ailments. Part nine, Parasites and diseases: Some larger (macroscopic) parasites. Some smaller (microscopic) parasites. Part ten, Miscellaneous information: Some special methods of diagnosis. Artificial feeding of orphaned animals. Methods of administering medicine to animals. Livestock breeding problems. Artificial insemination or artificial breeding. The sound and unsound horse. Some diseases common to man and animals. Part eleven, Livestock sanitary bureaus, boards, and commissions, and the veterinarian. Index.

Note (2077) A revised and enlarged edition, brought up to date, of a standard textbook on disease control in domestic farm animals. It is addressed to students, farmers, and others concerned with the health of livestock. Emphasized are the principles for the prevention of animal disease. The book is divided into 11 chapters covering all phases of the subject and contains 183 illustrations.

HADLEY, FREDERICK BROWN

Principles of veterinary science. Fourth edition illustrated. Philadelphia W B Saunders Company 1949 521 p. illus. (part col d) 21 cm. $5.00. 2805

Contents: Part I, Anatomy and physiology of animals: Introductory The animal world. The animal body as a whole. The skeletal system. The muscular system. The nervous system. The circulatory system. The respiratory system. The digestive system. The urogenital system. The special systems. Part II, Animal diseases: The meaning of disease. Veterinary medicine. Veterinary hygiene. Veterinary pathology Wounds and wound infections. Diseases of the digestive organs. Mineral and vitamin deficiency diseases. Veterinary surgery Veterinary obstetrics. Disturbances of the reproductive organs. Other noncommunicable diseases. Some communicable diseases. Veterinary parasitology Poisons and poisonings. Index.

Note: (1016) An introductory textbook for college courses. It is more suited to the needs of students who are interested in veterinary science as a phase of animal husbandry than to those students who are preparing for the veterinary profession. The sections on structure and function are designed to be of practical value in judging animal form, capacity, and productivity as well as in the solving of problems connected with the feeding and breeding of animals. In the present edition less space is devoted to the horse and more to the dairy cow One new chapter has been added, and the discussion of animal breeding has been enlarged to include recent advances in this field.

HAGAN, WILLIAM ARTHUR, AND DORSEY WILLIAM BRUNER

The infectious diseases of domestic animals with special reference to etiology diagnosis, and biologic therapy Second edition. Ithaca, New York Comstock Publishing Company Inc., 1951 920 p. illus. 24 cm. (Comstock series in veterinary medicine, William Arthur Hagan, consulting editor) $8.75 2806

Contents (abridged) Part I, The mechanisms of infection and resistance: The causes of disease. The protective mechanisms of the body Toxins and antitoxins. The lytic antibodies. The agglutinins and precipitins. Phagocytosis. Hypersensitization. Part II, Chemotherapy Part III, The pathogenic bacteria. Part IV Bacteria-like pathogenic organisms of uncertain classification. Part V The pathogenic fungi. Part VI, The pathogenic protozoa. Part VII, The viruses. Index.

Note (2077) A successful textbook for the instruction of college students of veterinary medicine. It is useful also to graduate practitioners of veterinary medicine and research workers as a reference manual and guide to the literature. Although arranged largely according to standard biological groups, there is little emphasis on morphology and classification. Instead, for each organism such matters are discussed as culture, pathogenicity for experimental animals, disease manifestations in domestic animals, modes of transmission, diagnosis, chemotherapy etc. Also if the organism is pathogenic to man this fact is stated. In comparison to the first edition the book has been very extensively rewritten. It is more than 200 pages longer and now contains 153 figures. The authors are faculty members of the New York State Veterinary College at Cornell University

MCCAY CLIVE MAINE

Nutrition of the dog. Second edition. Ithaca, New York Comstock Publishing Company Inc., 1949 337 p. illus. 22 cm. $3.50 2807

Contents: Man and their dogs. Carbohydrates for dogs. Fat in the diet of dogs. Proteins for dogs. Amino acids and protein derivatives. Mineral requirements of dogs. Fat-soluble vitamins. Water-soluble vitamins. Modern dog foods. The ingredients of dog foods. Plant foods. Testing dog foods. Blood and bone. Practical feeding and management of dogs. Kennels and equipment. Parasites and their control. Questions about foods. A shelf of books for the dog owner. Index of persons. Index of subjects.

Note: Offering more than the title suggests, this book is guide to the care and the feeding of dogs. The style is sufficiently nontechnical to make the book available to the average owner of dog, but the wide range of information included, together with the extensive literature references, gives the book enough substance to make it valuable to *veterinarians as well. Each chapter* includes an introductory section of essential information which is then developed on more technical lines. This edition incorporates recent advances and is more than twice as long as the first edition published in 1943. Statements in the text are keyed to the bibliographies. References are given to papers published in both U.S.A. journals and the journals of other countries.

MERCHANT, IVAL ARTHUR
Veterinary bacteriology and virology Fourth edition. Ames, Iowa Iowa State College Press 1950 885 p illus. 24 cm. $8.50 2808

Contents (abridged) Part one, General biology of microorganisms: The physiology of microorganisms. Bacteriological technics and methods. Sterilization and disinfection. Antibiotic agents. Part two, Infection, resistance and immunity: The mechanism of infection. Toxin and antitoxin. Agglutination and precipitation. Cytolysis and complement fixation. Phagocytosis. Anaphylaxis and allergy. Part three, Classification and characteristics of pathogenic bacteria, yeast and molds. Part four The filtrable viruses and bacteriophages: General characteristics of virus diseases. Methods used in the study of viruses. Classification of viruses. Index.

Note (1510*) A standard textbook for introductory courses in veterinary colleges and reference manual for practicing veterinarians. About equal emphasis is given to morphology and to physiology. In parts 3 and 4 there are systematic descriptions of genera in which the following points are covered for each genus: synonyms and history distribution and transmission, morphology cultural requirements, resistance, biochemical properties, antigenic structure, pathogenicity immunity and laboratory diagnosis. In this edition the length of the book has been increased by approximately 200 pages. The section on filtrable viruses and bacteriophage has been much enlarged and other sections have been revised. There are 143 figures and extensive literature references.

MULLIGAN RICHARD MICHAEL
Neoplasms of the dog. Baltimore The Williams & Wilkins Company 1949 135 p. illus. 23 cm. $4 00 2809

Contents Introduction. Mammary neoplasms. Epithelial neoplasms of skin and adnexa. Neoplasms of mesenchymal origin and of nerve sheath cells. Melanoma. Mast cell sarcoma, lymphosarcoma, histiocytoma. Neoplasms of endocrine glands. Other neoplasms. Technical supplement. Bibliography Index.

Note. A compact monograph in which most of the space is given to the commoner neoplasms while the uncommon ones are described rather briefly It is concerned with diagnosis and classification, not with treatment. However data relating incidence to age and sex are included. There are 30 plates, most of which contain reproductions of more than one photograph. Microphotographs of neoplastic tissues predominate but there are also number of photographs of gross specimens. The book is of interest to teachers and students of veterinary pathology and to practicing veterinarians.

NEWSOM, ISAAC ERNEST
Sheep diseases. Baltimore The Williams & Wilkins Company 1952 352 p. illus. 24 cm. $7.00 2810

Contents: Part I, Infectious diseases: Diseases due to bacteria. Diseases due to fungi. Diseases due to protozoa. Diseases due to filterable viruses. Diseases due to rickettsiae. Part II, Parasitic diseases: Diseases due to external parasites. Diseases due to internal parasites. Part III, Non-infectious diseases: Diseases due to deficiency *Neoplasms.* Diseases of the digestive system. Diseases of the respiratory system. Diseases of the urinary system. Diseases of the genital system. Diseases of the circulatory system. Diseases of the nervous system. Diseases of the skin and of the ear. Part IV Poisons: Diseases due to inorganic poisons. Diseases due to organic poisons. Diseases due to poisonous plants—photosensitization. Diseases due to plants containing hydrocyanic acid (prussic acid). Diseases due to plants containing selenium. Diseases due to other plants. Index.

Note: An inclusive textbook and reference manual which is devoted entirely to discussions of specific diseases. The typical essay on disease covers such points as etiology symptoms, morbidity mortality anatomy treatment, and literature references. The essays on parasitic diseases contain also descriptions of the life cycles of the parasites. There are 118 illustrations and lists of literature references. The book is of interest to practical sheep breeders, veterinarians, agricultural extension workers, and students of veterinary medicine. The author is Dean of Veterinary Medicine of *Colorado Agricultural and Mechanical College.*

SEIDEN, RUDOLPH
Livestock health encyclopedia the control of diseases and parasites in cattle, sheep and goats, swine, horses and mules with explanation of veterinary, medical, pharmaceutical, chemical, and other scientific terms. Based on official publications. New York Springer Publishing Company Inc., 1952 614 p. 24 cm. $7.50 2811

Note. An alphabetically-arranged reference book designed for the use of farmers rather than veterinarians. Most of the entries are short but some run to full page or more. A wide range of information is included, some of it rather technical. Most entries are keyed to citation of the source publication from which the information given was derived. The bibliography of these publications constitutes useful list of currently useful state and federal government publications.

WHITNEY LEON FRADLEY
The complete book of home pet care. Garden City New York Doubleday & Company Inc., 1950 552 p. illus. 22 cm. $4 95 2812

Contents (abridged) The animal body and how it functions. Drugs and their uses. Minor operations and home surgery How to give medicines and apply accessories. Problems of reproduction. Sanitation and hygiene. Health hazards in hospitalization, boarding. Shows and shows. How to feed your dog. Raising puppies. General diseases of dogs. The digestive tract. Parasites. Cats and their food. Breeding and raising kittens. General diseases of cats. Miscellaneous feathered pets. The care and feeding of birds. Diseases of birds. The care and breeding of aquarium fishes. Ailments of fishes. Other pets. Selected bibliography Index.

Note. An encyclopedic compendium of the information about the feeding and elementary care of such animals as dogs, cats, rabbits, guinea pigs, birds, fishes, and turtles. The author is veterinarian but the book is designed for owners of pets rather than professional veterinarians or commercial breeders. A wide range of helpful information is included and is made quickly available by an exceptionally full index.

FORESTRY

ALLEN, SHIRLEY WALTER

An introduction to American forestry Second edition. New York McGraw Hill Book Company Inc., 1950 413 p. illus. 24 cm. (The American forestry series Walter Mulford, consulting editor) $6 00 2813

Contents: Man and the forest. Building the country with forests. Where our forests are and what they produce. What a forest is. What forestry is. Forestry that starts with a forest. Forestry that starts with bare ground. Defending the forest from fire. Defending the forest from attacks of insects and other animals. Defending the forest from fungous pests and from the elements. Measuring the forest. Harvesting the forest crop. Making forest products adaptable and durable. Beneficial influences and services from the forest. Forestry as a public policy in the United States. How the Forest Service and other Federal bureaus practice forestry. How the states and communities practice forestry. The practice of forestry on private lands. Education in forestry—the profession of forestry. Forestry and national planning. Appendix Selected forest-fire statistics. American forest schools. Index.

Note: (3090) An inclusive, introductory work used primarily as a text in college courses and secondarily as a source of general information about forestry and forest conservation in the United States of America. It is written in a simple style and most of the material is descriptive. The first edition was published in 1938. Numerous minor revisions are apparent in this edition but the book has not been extensively revised.

BAKER, FREDERICK STORRS

Principles of silviculture. New York Mc Graw Hill Book Company Inc. 1950 414 p. illus. 24 cm. (The American forestry series Walter Mulford, consulting editor) $5.50. 2814

Contents: Introduction. Forests in general—their form and composition. Ecological classifications of forests. Classification by site, quality and density. Tolerance and crown classes. Water supply of the forest. Utilization of water by the forest. The photosynthetic process. Nitrogen and mineral nutrition (forest soils). Production of seed. Dissemination of seed. Overwintering losses of seed. Germination of seeds. Establishment; mortality of seedlings. Growth of trees in general. Height growth of trees. Growth of trees in diameter. Growth of trees in volume. Growth of stands. Biology of the growth of stands. Bibliography. Index.

Note: (3091) A college textbook in which the chief emphasis is on the physiological aspects of trees and forestry. There are full discussions of such topics as transpiration, the development of seedlings in the succulent stage, survival of seedlings under various conditions, and relations between growing space and production of merchantable timber. A bibliography of 519 references is included. The book is an extensive revision of the first half of the author's *Theory and practice of silviculture*, New York, 1934.

BAXTER, DOW VAWTER

Pathology in forest practice. Second edition. New York John Wiley & Sons, Inc., 1952 601 p. illus. 24 cm. $7 50. 2815

Contents: Plant disease. The fungi that cause disease. Loss and appraisal of damage. Relation of nursery site and practice to disease incidence. Relation of site and cultural practice to disease incidence in plantations. Relation of site and cultural practice to disease incidence in the mature forest. Relation of fungi and certain other plant pests to disease in the mature forest. Relation of site and care of shade and park trees to disease incidence. Handling and treatment of forest products in relation to decay and certain other defects. Discolorations, stains, and molds in forest (and allied) products. Index.

Note (3093) A practical treatment of tree diseases in the sense that the subject is treated from the viewpoint of professional foresters and others who are concerned with silviculture or with the marketing and use of lumber. Disease in tree nurseries and in ornamental tree plantings also is covered from a practical viewpoint. Approximately equal emphasis is placed on descriptions of tree diseases and on their control. A wide range of useful information has been added in this edition. The new material pertains both to recent developments in the understanding of specific diseases and in control methods.

BRAUN EMMA LUCY

Deciduous forests of eastern North America. Philadelphia The Blakiston Company 1950 596 p. illus. 23 cm. $10 00. 2816

Contents: Part I, Introduction. The forest. Forest ecology and terminology. Part II, The deciduous forest formation. The deciduous forest as a whole. The mixed mesophytic forest region. The western mesophytic forest region—a transition region. The oak-hickory forest region. The oak-chestnut forest region. The oak-pine forest region. The southeastern evergreen forest region. The beech-maple forest region. The maple-basswood forest region. The hemlock-white pine-northern hardwoods region. Part III, The evolution of the present pattern of forest distribution. Problems of forest distribution. The paleobotanic record. Disjunct occurrences of species and communities and their significance in forest migration. A brief physiographic history of eastern United States. A chronologic account of forest development correlated with physiographic history. The relationships of climates and the climax elements of the forest regions. Bibliography. Index of scientific and common names. Subject index.

Note An important reference book written on the basis of more than 25 years of field study throughout the deciduous forests of eastern North America supplemented by study of the literature of the subject. It provides a broad view of the entire forest area, portraying the present pattern and so far as possible reconstructing the pattern of the original forest, presenting data on composition and aspect of forest communities in all parts of the forest area, and tracing through geologic time the development and distribution of forests in eastern North America. The bibliography includes about 800 references and the illustrative material consists of 84 photographs, 91 tables, and 9 maps. A folding map measuring 60 × 69 cm. of the forest regions of eastern North America, which is supplied folded inside the back cover of the book mounted on linen and rolled, may be obtained from the publisher at $1.50 per copy

BROWN NELSON COURTLANDT

Logging the principles and methods of harvesting timber in the United States and Canada. New York John Wiley & Sons Inc., 1949 418 p. illus. 24 cm. $5 50. 2817

Contents (abridged) Part I, General introduction. Forest utilization. Forest resources and stumpage valuation. Forest labor and housing. Partial cutting (selective logging) Part II, Preparation of logs for transport: Felling and bucking. Part III, Minor log transportation. Animal skidding. Tractor logging. Power logging—cable logging systems. Part IV, Loading for transport. Part V, Major land transportation: Chutes. Wheeled vehicles—animal and tractor draft. Sleds. Motor trucks. Forest railroads. Part VI, Major water transportation. Floating and driving. River and lake rafts and booms. Ocean rafts. Flumes. Barges and steamers. Summary of regional logging methods. Index.

Notes: (3118–9) The several books by Professor Brown on various aspects of the lumbering industry are well known to students of forestry and to the industry. The present volume brings together in revised form two earlier works. *Logging—principles and practices*, New York, 1934 and *Logging—transportation*, New York, 1936. It constitutes a practical and up-to-date guide to the methods and techniques of felling, handling, collecting, and transporting lumber as practiced in the United States and Canada. Particularly valuable are the descriptions of the latest types of equipment, the tabulations of data regarding operating costs and production estimates, and

the numerous photographs and diagrams illustrating operating methods. The extensive bibliographies contained in the two earlier volumes have been omitted in this revision.

Chapman, Herman Haupt, and Walter H. Meyer

Forest mensuration. New York McGraw Hill Book Company Inc. 1949 522 p illus. 24 cm. $5.50. 2818

Contents (abridged) Elementary computations. Cord or stacked measure. Cubic volume of logs. The measurement of board feet in the log. Construction of log rules. Piece products. Determination of volume of felled trees for the construction of volume tables. Local tree volume tables. The construction of standard volume tables for cubic feet. The construction of alinement charts for standard volume tables for cubic feet. The construction of standard volume tables for board feet. The construction and application of taper tables. The measurement of diameters of standing trees. The measurement of heights of standing trees. The boundary survey and determination of total area. Timber estimating for cubic and cord measure. Timber estimating for board feet by use of log rules. Measurement of piece products in the tree. Fundamental statistical techniques. The age of trees and stands. The growth of trees and of stands. Normal yield tables for even-aged stands and their construction. Periodic and current growth in diameter based on stand tables. Growth percentage. Sample plots. The forest survey or inventory Appendix. Index.

Note: (5111) Forest mensuration is treated on an advanced but practical level in this work. The table of contents indicates the wide scope. Not only are log rules and volume tables discussed but the other techniques that may concern foresters and timber surveyors such as the establishing of boundaries in lands surveyed long ago are covered also. Problems such as the varying contents of the cord and the accuracy of established log rules are analyzed. The estimating of growth and yields is fully discussed. Extensive bibliographies are included. The book is text for college students of forestry and manual for graduate foresters. It supersedes H. H. Chapman and D. B. Demeritt, *Elements of forest mensuration*, 1932.

Craighead Frank Cooper, and others

Insect enemies of eastern forests. Washington, D C. Government Printing Office, 1950 679 p illus. 24 cm. (United States. Department of Agriculture. Miscellaneous publication no 657) $2.50 2819

Contents: Introduction: Relation of insects to forest and ornamental trees. Prevalence and activity of forest insects. Insects and diseases. The control of forest insects. Natural control factors and influences. Silvicultural control of forest insects. Insects attacking shade and ornamental trees. Borers in living trees. Insects in nurseries and young plantations. Insects attacking forest products. Bark beetle control. Insecticidal control of insects in the forest, by R. F Potts. The use of beneficial insects in the control of forest tree pests, by R. C. Brown. The zoological position of insects and some of their common relatives: Crayfish and shrimps. Millipedes and centipedes. Scorpions. Pseudoscorpions. Spiders. Harvestmen. Mites, ticks, and red spiders. Marine borers, by R. A. St. George. The forest insects: Practical keys to the orders, families, and genera of forest insects, based on types of injury. Important orders of insects. *The termites, by T E. Snyder. Grasshoppers, katydids,* walkingsticks, and related forms, by M. D. Wygant. Sucking insects, by W L. Baker and others. The beetles, by F C. Craighead and others. Butterflies and moths, by J V Schaffner Jr. The flies, by R. T Webber. Hymenoptera. The sawflies and horntails, by J V Schaffner, Jr and William Middleton. Bees, wasps, ants, and parasites, by P B. Dowden. *Literature cited.* Index.

Note: This publication treats in practical manner the more important forest insects of the United States east of the Great Plains (or, roughly east of the 100th meridian) The insects are described in systematic order with numerous illustrations, chiefly photographic. Keys to assist in identification are frequent. There is considerable discussion of practical control methods. The work is companion volume to F P Keen, *Insect enemies of western forests* (United States. Department of Agriculture. Miscellaneous publication no. 273)

Flick Frances Josephine, compiler

The forests of continental Latin America (including European possessions) A bibliography of selected literature, 1920–1950. Washington, D C. Government Printing Office, 1952 193 p. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no. 18) Paper, $0 45 2820

Contents: Sources consulted. General. Argentina. Bolivia. Brazil. Central America: British Honduras. Costa Rica. Guatemala. Honduras. Nicaragua. Panama. El Salvador Chile. Colombia. Ecuador. The Guianas: British Guiana. French Guiana. Surinam (Dutch Guiana). Mexico. Paraguay Peru. Uruguay Venezuela. Periodicals. Index.

Note. An annotated bibliography of books and periodicals published between 1920 and 1950. A total of 1957 books and articles is listed. For each item are given author, title, publication data. Brief annotation follows where scope of the article is not clearly indicated in the title. Outside the scope of the bibliography are such commodities as Hevea rubber, cinchona, and palm products, which are subject to separate bibliographic treatment. Also omitted, or included only incidentally are references on economic botany wood technology, forest legislation, commodity production statistics, and trade statistics.

Graham, Samuel Alexander

Forest entomology Third edition. New York McGraw Hill Book Company Inc., 1952 351 p illus. 24 cm. (The American forestry series Walter Mulford, consulting editor) $6 00. 2821

Contents: Introduction. Historical review. Detection and appraisal. Reproductive potential. Environmental resistance. Population levels. Direct control of tree insects. Direct control by chemical methods. Insecticides and their effects. Methods of indirect control. Indirect control by parasites and predators. Indirect control by silvicultural practices. *Leaf-eating insects. Sap-sucking insects. Meristematic insects. Phloem insects. Phloem-wood insects. Wood destroyers.* Bibliography Index.

Note. (5099) An introductory work addressed primarily to college students of forestry but potentially valuable to any mature reader in need of survey of the problem of control of insects injurious to forests. The subject is treated from the viewpoint of forestry and even in the chapters on kinds of insects, the author has not attempted to name all the injurious insects. The emphasis is on biological and chemical control methods and on matters related to control, such as the effects of weather. The second edition was published in 1939. In comparison this edition represents very extensive revision with much material on such topics as chemical control, that did not appear in the 1939 edition. There are new 85 figures and 12-page classified bibliography

Guise, Cedric Hay

The management of farm woodlands. Second edition. New York McGraw Hill Book Company Inc. 1950 356 p. illus. 24 cm. (The American forestry series, Walter Mulford consulting editor) $6 00. 2822

Contents: Farm woodlands and forestry The structure and physiology of trees. Ecology of woodlands. The volumes of woodland products. Surveys and maps. The volumes of trees and stands. The increment and yield of growing timber. The care and improvement of woodlands. Establishing new woodlands—forest planting. Protection of farm woodlands. The utilization of woodland products. The marketing of woodland products. The durability and preservative treatment of farm timbers. Woodland management. Index.

Note (5100) A standard description of forestry principles and practices applicable to the management of small woodlands and timber stands on farms in the United States of America and especially in the northeastern part of that country The emphasis is on principles and practices that will produce continued and profitable yield. The book is used chiefly as college text, however it is also suitable for use as manual of practical information. The first edition was published in 1939. This edition lacks most of the statistical material that appeared in the first edition, but useful material has been added on such topics as timber estimating, logging methods, and tree planting.

Meyer, Hans Arthur, and others

Forest management. By H. Arthur Meyer Arthur B Recknagel and Donald D Steven

son. New York The Ronald Press Company, 1952 290 p. illus. 24 cm $6 00. 2823

Contents: Part I, Introduction: Scope and objectives of forest management. History and present status of forest management. Part II, General organization of forest property for management: Ownership, boundaries, and subdivisions of forests. Maps and classification of forest conditions. Actual growing stock and growth. The development and improvement of forests. Business aspects of forest management. Part III, Forest regulation. Problems and scope of forest regulation. The normal even aged forest. The normal uneven aged forest. Methods of regulation of cut. Part IV Management plans: Types and forms of management plans. Farm woodlands and other small forest properties. Management plans for medium and large forests. Control and revision of management plans. Index of names. Index of subjects.

Note: The chief distinctive feature of this text is its presentation of the principles of forestry from the standpoint of American conditions, where such factors as higher labor costs and lower product costs make inapplicable some of the principles and techniques developed in Europe. Such problems as the determination of "best" plan of rotation are discussed against the historical background and the economic, technical, and silvicultural factors in American forestry As the title indicates, the book is about management. Though problems of finance, logging, protection, etc., are noted as closely influencing the execution of management plans, they are not developed. Both European and United States of America literature is included in the lists of literature references. One of the authors is college teacher of forestry one is on the staff of large paper company and one is staff member of the United States Department of Agriculture.

PRESTON, JOHN FREDERICK

Farm wood crops. New York McGraw Hill Book Company Inc., 1949 302 p. illus. 24 cm. (The American forestry series, Walter Mulford, consulting editor) $4.50 2824

Contents: Introduction. National aspects of farm woodlands of the United States. Financial value of woodlands in the farm business. Other farm woodland values. Problems of forestry on the farm. Assistance available to farmers. Farm planning involving the woodland. Developing farm woodland enterprise Practices on farm woodlands. Establishment of new woodlands. Tools and equipment. Building farmer clientele. Appendixes References in the text. Bibliography Glossary Index.

Note: This book is concerned primarily with the principles of handling farm woodland as branch of general farming and secondarily with the actual techniques of forestry. It is compiled textbook of farm forestry intended both as text for students and as technical guide for farmers wishing to develop farm woodland enterprise. It may also be useful to conservationists who wish to show farmers the financial and other advantages of farm woodland enterprise.

SHIRLEY HARDY LOMAX

Forestry and its career opportunities. New York McGraw Hill Book Company Inc., 1952 492 p. illus. 24 cm. (The American forestry series, Henry J Vaux, consulting editor) $6.50. 2825

Contents: The meaning of forestry Forestry throughout the ages. The development of forestry in the United States. Forest regions Protecting forests. Forest care and use. Harvesting timber crops. Lumber manufacture and sale. Wood, its nature, and uses. Wood chemistry paper, and plastics. Secondary forest products. Wildlife and range management. Forests and recreation. Protecting soil and watersheds. The business of forestry Social benefits of forestry World and national forest resources. Recent programs and progress. Proposed programs of forestry The profession of forestry Employers of foresters. Forest employment by regions and fields. Education in forestry Research in forestry Administration in forestry Trends and outlook in forestry Index.

Note: A survey book that presents picture of contemporary forestry in relation to the national and world economy and also describes the scope and techniques of forestry. It is addressed particularly to young people who are thinking of adopting forestry as career, but its scope is wide enough to make it useful to general readers and others in need of general information on forestry. The author is Dean of the College of Forestry of Syracuse University.

SOCIETY OF AMERICAN FORESTERS

Forestry terminology A glossary of technical terms used in forestry Original edition compiled and edited by Committee on Forestry Terminology, Ralph C. Hawley chairman. Revised edition compiled and edited by Committee on Forestry Terminology, Edward N Munns, chairman. Washington D C Society of American Foresters 1950. 93 p 26 cm. $3.00. 2826

Note (1311) An alphabetical listing, with definitions, of words and terms used by foresters. The scope of the contents is shown by the names of the ten subcommittees of the Committee on Forestry Terminology responsible for the publication Forest entomology Forest fires, Forest pathology Lumbering and wood using industries, Forest management, Forest mensuration, Range management, Recreation and wildlife, Silviculture, Wood technology; these subcommittees decided on terms to be included and excluded and were responsible for the drafting of the definitions. Some words have been included which were omitted from the 1944 edition, added definitions have been given for many terms, and in certain cases definitions have been rewritten. A total of 3400 words and terms are defined, aside from which the vocabulary contains many cross references.

SOCIETY OF AMERICAN FORESTERS COMMITTEE ON HISTORY OF FORESTRY

Fifty years of forestry in the U S. A. Edited by Robert K. Winters. Washington Society of American Foresters, 1950 385 p. 24 cm. $4.00 2827

Contents: The first half century, by Robert K. Winters. Forest protection, by H. T Gisborne. Silviculture, by F S. Baker. Forest management, by H. H. Chapman. Forest utilization, by Nelson C. Brown. Range management, by L. A. Stoddart. Forest wildlife management, by Warren W Chase. Forest influences, by Bernard Frank. U. S. Forest Service, by Lyle F Watts. U. S. Department of the Interior by John F Shanklin. Other Federal agencies, by S. Blair Hutchison. State forestry, by Joseph S. Illick. Industrial forestry by W B. Greeley Farm forestry by Joseph F Kaylor. The Society of American Foresters, by Shirley W Allen. Citizens and trade associations dealing with forestry by Charles A. Gillett. Education in professional forestry by Ralph S. Hosmer. Forest research, by Leonard T Dana. American and world forestry by S. B. Show Appendixes. Literature cited. Index.

Note: The major aspects of the development of forestry in the United States of America are covered in this sponsored work. Considerable attention is paid to the enactment of legislation, the growth of government agencies, and the development of forestry as profession. Apparently because of space restrictions many of the chapters are little more than outlines, but important dates are given and outstanding men and associations are named. The bibliographies are not comprehensive but are limited more or less to the publications referred to by the various authors in their papers.

SPURR, STEPHEN HOPKINS

Forest inventory New York Ronald Press Company 1952 476 p illus. 24 cm. $8.50 2828

Contents: Part I, Forest measurement: Tree measurement. Measurement of trees and stands on aerial photographs. Sample plots. Part II, Volume estimation. Tree-volume computation. Theory of tree-volume estimation. Methods of volume table construction. Total cubic-foot volume. Factors affecting total cubic-foot volume. Merchantable cubic-foot tree volume. Board foot tree volume. Tree-volume tables for use with aerial photographs. Direct estimation of stand volume. Part III, Growth estimation The growth of trees and stands. Continuous inventory Stem analysis. Stand table projection. Yield tables. Growth tables. Density Site. Growth correlations. The two-way method of predicting growth. Part IV Sampling and inventory designs: Theory of sampling. Sampling applied to forest inventories. Ground surveys. Aerial photographic surveys. Combined photographic and ground surveys. Aerial photocruise tests. Large-scale European and American surveys. Bibliography Index.

Note: The increasing use of aerial photographs in determining not only the kind of trees on forest area but also—in some cases—the volume of harvestable timber has prepared the way for the

comprehensive, critical presentation of currently useful techniques of forest mensuration. The uses and limitations of aerial photographs are discussed fully and practical techniques for combining aerial surveys with the ground cruising of sample plots are described. The book is addressed to advanced students of forestry and to persons who are professionally in charge of large scale forestry and timber projects. Information from the published literature and original material based on the author's investigations are both included. Literature citations are included in the text and the book concludes with a comprehensive bibliography

UNITED STATES. DEPARTMENT OF AGRICULTURE

Trees the yearbook of agriculture, 1949 Washington, D C Government Printing Office, 1949 944 p illus. (part col'd) 24 cm. (United States. Department of Agriculture. The yearbook of agriculture, 1949) $2 00 2829

Contents (abridged) The editor to the reader by A. Stefferud. The tree: A tree is a living thing, by N T Mirov Trees remembered and remembering, by G. H. Collingwood. Trees and homes Trees for the country home, by W H. Larrimer City trees, by L C. Root and C. C. Robinson. Shade trees for the Northeast, by A. M. Waterman and others. Shade trees for the Southeast, by R. M. Lindgren and others. Shade trees for the Plains, by E. Wright and T W Bretz. Shade trees for the Rockies, by L. S. Gill. Shade trees for California, by W W Wagener. Shade trees for the north Pacific area, by T W Childs Forests and men The community of trees, by J H. Buell. Forest types of the United States, by W A. Dayton. Forests and soils, by J T Auten and T B. Plair Forest renewal, by L. I. Barrett. Direct seeding of trees, by W E. McQuilkin. Amateur tree breeders? Why not? by E J Schreiner. Production of planting stock, by P M. Carmean and others. The small woodland. Cash crops from small forests, by R. E. McArdle. Cooperatives and small woodlands, by A. W Bratton. Windbreaks and shelterbelts, by J. H Stoeckeler and R. A. Williams. The job of planting trees: a survey, by P C. Wakeley and G. W Jones. How to care for your small forest, by M. M. Bryan. Harvesting the small forest, by A M Sowder The farmer and Christmas trees, by A. M. Sowder Company forests: Large private holdings in the North, by H. L. Shirley Private forestry in the West, by C. L. Tebbe and H. J Andrews Forestry on large ownerships in the South, by J. H. Stone and others. Naval stores, the industry by J. Ward. Naval stores, the forests, by C E. Ostrom and J W Squires. The national forests The people's property by C. M. Granger. Appalachian comeback, by M A Mattoon. The Arkansas cooperative, by J. K. Vessey Evolution of management on Chippewa, by H. B. Wales. Forestry in the Black Hills, by A. F C. Hoffman and T Krueger New security for forest communities, by D. J. Kirkpatrick. Rebuilding a southern forest, by F A Albert. Pine forests of California, by B. O. Hughes and D Dunning. Forests of Alaska, by B. F Heintzleman. The administration of national forests, by E. W Loveridge Projects of many uses State forests, by S. G. Fontanna. Community forests, by G A Duthie. Arboretums, places of beauty and science, by W H. Larrimer and E J Schreiner. Insects, diseases, parasites: Insects in the forest, a survey, by F C. Craighead and J M. Miller The key to protection, by S. A. Rohwer The spruce budworm, by R. C Brown and others. Pine bark beetles, by F P Keen. Insects in wood products, by T E. Snyder. Controlling the tussock moth, by P H. Roberts and J C. Evenden. Diseases and the forest, by L M Hutchins. Dutch elm disease, by R. U. Swingle and others Blister rust on white pine, by J F Martin and P Spaulding. Breeding and selecting pest-resistant trees, by R. B Clapper and J M. Miller The airplane in forest-pest control, by J S Yuill and C. B Eaton Fire, friend and enemy: Building a fire organization, by E S. Pierce and C. A. Gustafson. Forest fire danger by G. L. Hayes. Fighting fires from the air, by C. S. Crocker Fire as a tool in southern pine, by A. W Hartman. Fun in the forests New values in the minds of men, by L. F Kneipp. Trail riding in the wilderness, by S. W Allen. Treasures of the nation, by C. L. Wirth and J H. Gadsby Safety for forest visitors, by R. R. Monahan. Forests and wildlife: Forests as wildlife habitat, by L. W Swift. Trees and food from acorns, by A. A. Downs. Managing Utah's big-game crop, by D. I. Rasmussen and D M Gaufin. Forests and fish, by P R. Needham and F W Johnson. Action on the Blue Ridge, by T C. Fearnow and L. T Quinn. Watersheds and how to care for them, by G. W Craddock and C. R. Hursh. T help control floods, by G. R. Phillips and R. Frank. Wood to use: Seasoning of wood, by R. C. Rietz. Preservative treatment of wood, by T R. Truax. Fungi and wood, by C. Hartley The gluing of wood, by D Brouse. Chemicals from wood, by A. J. Stamm. The Forest Products Laboratory, by G. M. Hunt. The foresters' calling: Education in forestry by S. T Dana. Teachers and conservation, by J L. Beatman. National forest personnel, by H. D. Cochran. Industrial forestry associations, by C. Collins. Picturing forests from the air by R. D. Garver. Railroads and foresters, by R. N Hoskins. Yesterday and today: The history of forestry in America, by W N Sparhawk. Today and tomorrow: Forest resources and the nation's economy by E. C. Crafts and M. A. Dieta. The world forest situation, by S. B. Show. A national program for forestry by L. F Watts. Lists and other aids: Important forest trees of the United States, by E. L. Little, Jr. Fifty trees from foreign lands, by E. L. Little, Jr. Key for the identification of woods without the aid of a hand lens or microscope, by A. Koehler Trees best adapted for special purposes. A vacation guide: National forests. Natural areas. Areas administered by the National Park Service. Public forest-tree nurseries. State forestry agencies. Publications of the Forest Products Laboratory For further reading: a bibliography Some words woodsmen use. Index.

Note The purpose of this large collection is explained in the words of the editors: "We have tried here to put into clearer perspective some items of history importance, administration, and outlook that so far have been in scattered form. We have tried to tell the essentials of choosing, planting, and growing trees as a farm crop, as a renewable natural treasure, as a necessary part of country and city life. We have tried to make a book that is practical and useful for all Americans and interesting and inspiring for those who are unaware of the beauty and delight of the woods. The papers were written for the work by many outstanding specialists in forestry conservation and related fields.

UNITED STATES. FOREST SERVICE

Woody-plant seed manual. Prepared by the Forest Service. Washington, D C. Government Printing Office 1948 [i.e., 1949] 416 p. illus. 27 cm (United States. Department of Agriculture. Miscellaneous publication no. 654) $3 00 2830

Contents (abridged) Part 1 Seed and its development: Flowering. Pollination and seed formation. Seed structure. Types of seed. Seed ripening. Germination. Biological changes during germination. Types of germination. Seed production and dispersal. Sources of seed. Collection, extraction, and storage. Treatment of seed prior to sowing. Seed testing. Literature cited. Part 2, Bibliography Uses of trees: Wildlife purposes. Wood production. Erosion control. Shelter belts. Ornamental planting. Glossary Index of plant names used in part 2.

Note: A manual of information on all phases of woody-plant seed handling for seedsmen, nurserymen, and foresters. It contains the results of more than 20 years of studies. The information on such points as the time of seed ripening, behavior of the seed after planting, viability, storage of seed, and pretreatment to induce prompt germination is based on both laboratory and field tests and practices. The first part gives general principles on the various phases of seed handling from formation of the seed to sowing; the second part provides detailed yet concise information on the seeds of all principal American species and varieties of trees and shrubs, including data on distribution and use, descriptions of seeding habits, methods of seed collection, extraction and storage, seed germination, and nursery and field practice, with illustrations of the seeds and seedlings. As the manuscript of the manual was completed for publication at the beginning of World War II, the bibliography for the most part lists no publications later than 1941.

UNITED STATES FOREST SERVICE. DIVISION OF TIMBER MANAGEMENT

Timber management plans on the national forests, by L. S. Gross forester Washington, D C. Government Printing Office, 1950. 59 p. illus. 26 cm. o.p 2831

Contents Planning management plans. The working circle: Timber and land. Boundaries. Subdivisions. The management plan: Timber and land. Transportation. Economics. Silviculture. Regulation of cut. Acquisition. Cutting policy Tending the forest. Protecting the forest. Working the relation with other uses. Management of other lands. Appendix: plan Annual plans. Control records. Selected references. Use of aerial Management plan outline. Management plan surveys. photographs in management plans. A continuous inventory basis for determining growth, mortality and yield. The use of yield tables for determining growth, mortality and yield. Regulation of cut, R-6.

Note. A handbook on the preparation of timber management plans which are essential to the attainment of the U. S. Forest Service objective of sustained yield. Although primarily designed for use within the service, it contains valuable information on the formulation of timber management plans in any forest area.

WACKERMAN, ALBERT EDWARD

Harvesting timber crops. New York Mc Graw-Hill Book Company Inc. 1949 437 p. illus. 24 cm. (*The American forestry series*, Walter Mulford, consulting editor) $6 00 2832

Contents: Introduction. Part I, Considerations preliminary to actual harvesting: Timber crops—the goal of forestry. The development of forest industries in America. The origins of modern timber harvesting methods. Planning the timber harvest. Woods labor. Part II, Preparation of trees for removal from the forest: Selection of trees to cut. The felling operation. Bucking felled trees. Hewing, riving, and peeling. Tools used in felling, bucking, and processing trees. Part III, Movement of products from the forest: Bunching products in the forest. Skidding forest products. Loading forest products. Transportation of products from the forest. Part IV Organization and control of harvesting operations: Measurement of forest products. Organization of harvesting operations. Costs and records. Regional harvesting practices. The Northeast, by F C. Simmons. The Lake states, by George Banzhaf. The western pine region, by T J. Orr Jr. The Douglas fir region, by W D. Hagenstein. California redwood, by Emanuel Fritz. Southern hardwoods, by E. R. Linn. The southern pine region, by W C. Hammerle. Selected references. Index.

Note: A well-organized text which is designed for college students of forestry and practical foresters. Emphasis is on the forestry aspects rather than on the engineering aspects of harvesting, although the third part of the book dealing with the movement of products from the forest necessarily covers certain of the engineering phases of the operations. A feature of the volume is the section on regional harvesting practices written by regional authorities on timber harvesting in different parts of the United States.

WESTVELD, RUTHFORD HENRY

Applied silviculture in the United States. Second edition. New York John Wiley & Sons Inc., 1949 590 p. illus. 24 cm. $6 00. 2833

Contents: Northeast spruce-hardwood region. New England white pine region. Oak region. Allegheny hardwood-pine-hemlock region. Southern Appalachian region. Southern pine region. Southern bottomland hardwood region. *Central hardwood region.* Lake States region. Douglas fir region. Northern Rocky Mountain region. Lodgepole pine region. Southwest ponderosa pine region. California pine region. Northwest ponderosa pine region. Black Hills ponderosa pine region. Redwood region. Southeastern Alaska. Appendix: Common names of trees and their scientific equivalents. Common names of insects and their scientific equivalents. Common names of diseases and some of their causal agents with their scientific equivalents. Author index. Subject index.

Note: (3114) A textbook on the application of silviculture in the 16 chief forest regions of the United States. It presents the fundamental principles of the ecology and economics of each of the forest regions with a view to giving the student a broad outlook of silvicultural problems. The book may also be useful as a reference book for the practitioner, especially since it contains at the close of each chapter a comprehensive list of references. The revised edition takes account of advances in silviculture since 1939. In the handling of data on prices, costs, and profits the author has, wherever possible, eliminated references to dollars and substituted man-hours of time or ratios to show relative values. Other changes include those made to conform with revised lists of tree names and forest-type classifications and additions to the bibliographies so as to include references to publications issued 1939–1948.

WESTVELD, RUTHFORD HENRY, AND RALPH H. PECK

Forestry in farm management, by R. H. Westveld and the late Ralph H. Peck. Second edition, revised by R. H. Westveld. New York John Wiley & Sons Inc. *1951 340* p. illus. 24 cm. $5.00 2834

Contents (abridged) Forest trees in a balanced agriculture. Growing forest-tree crops. How to improve and perpetuate existing farm forests. How to establish new farm forests. Measuring volumes and growth of farm forests. Making trees into the most valuable wood products. Marketing farm-forest products. Management of farm forests for special products. How farm forests may aid wildlife. Appendix. Index.

Note: (3115) The value and usefulness of forests to farmers, the methods of handling them, and the means of making them real farm assets are set forth in this book. It is divided into two parts, the first giving an account of the fundamental principles of modern farm forestry, the second (the appendix) presenting certain basic information such as log and volume tables. The second edition has been brought up to date and expanded and in some respects rewritten. It discusses the new equipment and the new techniques of the decade between the first edition and the second edition, the most notable being the power saws and the tree-planting machines which have reduced both the amount of labor needed and the cost of harvesting and planting trees. The references at the ends of the chapters have been revised. A new chapter has been added on the public and private aid available to farm-forest owners in the United States. Persons concerned with forests on farms, whether as farmers or county agricultural agents or teachers of vocational agriculture or students in agricultural colleges, find this book of basic value.

FOREST PRODUCTS

BROWN HARRY PHILIPS, AND OTHERS

Textbook of wood technology By H. P Brown, A. J Panshin, and C. C. Forsaith. Formerly published under the title, Commercial timbers of the United States. New York McGraw Hill Book Company Inc. 1949–52 2 v 23 cm. (The American forestry series, Walter Mulford, consulting editor) Vol. I $7 50 Vol. II, $10 00 2835

Contents: Volume I, Structure, identification, defects, and uses of the commercial woods of the United States: The plant origin of wood. The tree. The gross features of wood of value in identification. The woody plant cell. The cambia of trees. The minute structure of coniferous woods. The minute structure of porous woods. Variable quality of wood within tree-species. Figure in wood. Defects in wood. Natural durability of wood. Glossary Index. Volume II, The physical, mechanical, and chemical properties of the commercial woods of the United States: Part I, The physical properties of wood Density and specific gravity Wood in relation to moisture. Wood in relation to heat. Wood in relation to sound, light, and electricity The bending and finishing of wood. Part II, The mechanical properties of wood Mechanics of short wooden columns. The mechanics of wooden beams. The mechanics of wooden beams—stresses in simple wooden beams subjected to transverse loading. The mechanics of wooden beams—divers analyses with respect to wooden beams and members. Stresses in wooden columns up to the proportional limit. Stresses in wooden beams and columns beyond the proportional limit. Standard testing procedure for determining the mechanical properties of wood Working stresses for wood. Variation in the strength properties of wood. Strength properties of laminated wooden beams and columns. Strength properties and fire resistance of wood-steel construction. Strength properties of plywood. Holding power of timber fasteners. Holding power of timber fasteners—modern timber connectors. Stresses in framed structures. Part III, The chemical properties of wood. The chemical components of wood. Effect of chemical treatments on wood. Thermal reactions of wood and its decomposition by biological agents. Index.

Note: (5117) In this revision of an earlier work it has been the authors' purpose "to bring together all available worthwhile information on the commercial timbers of the United States. The work is used as text by college students of forestry and as reference tool by engineers, architects, and others requiring knowledge of the structure and characteristics of wood. Volume one retains the general arrangement and scope of the previous work, but the former sections on durability and defects of wood have been enlarged to form five new chapters. Volume two is entirely new and has been added to achieve the above-stated comprehensiveness.

BROWN NELSON COURTLANDT

Forest products the harvesting processing, and marketing of materials other than lumber including the principal derivatives, extractives, and incidental products in the United States and Canada. New York John Wiley & Sons Inc. 1950 399 p illus. 21 cm. $5.50 2836

Contents (abridged) Part I, Introduction, economics, and general considerations Relative importance of principal forest products. Technical properties in relation to uses. Decreasing use of special products. Farm woodlands as sources of forest products. Principal developments and advances made in recent years. Part II, Construction materials: Veneers and plywood. Cross ties. Shingles and shakes. Part III, Chemically derived products: Wood pulp and its products. Wood-distillation products. Rubber Maple sugar and sirup. Part IV Wood containers. Part Mechanically reduced products. Excelsior. Wood flour. Wood densification. Part VI, Wood as fuel. Part VII, Miscellaneous products: Bark (other than for tannin). Christmas trees and decorations. Wild fruits, edible nuts, and tree seeds. Glossary of some terms as used with forest products. Bibliography of forest products. Index.

Note (5120) The ancestry of this book goes back to the author's *Forest products* which appeared in 1919 and was revised and published in second edition in 1927 In 1937 the book was again revised and published under the title of *Timber products*. Now the original title has been restored. The book remains treatise and reference book on the harvesting, processing, and uses of forest products other than sawn lumber. In the present edition the economic data have been revised and good share of the descriptive text has been completely rewritten. Also there are discussions of many new topics, such as sandwich type of wall panels, compressed wood, and insulating wool from tree bark. As in earlier editions, minor forest products, such as spruce gum and Spanish moss, are covered as well as major products.

LARSON, AGNES MATHILDA

History of the white pine industry in Minnesota. Minneapolis Minn. University of Minnesota Press 1949 432 p. illus. 23 cm. $7 50 2837

Contents: Minnesota's forest treasure. The lumber industry comes to the Upper Mississippi valley The home market stimulates the mills at St. Anthony and Winona, 1850–1870. The pinelands of the St. Croix delta become the property of lumbermen. Logging in the St. Croix forests. Rafting and milling downriver. Railroads broaden the market for the white pine of the Upper Mississippi, 1870–1890. Lumber and logs on the Mississippi after 1870. Growth of sawmills in Minnesota, 1870–1890. Logging and driving, 1870–1890. Life in the woods. The downriver sawmills are stilled. The lumber industry in Minneapolis reaches its height, 1890–1905. The Duluth district sends its white pine eastward. The pinelands of northern Minnesota become private property The operation of national land laws in the pineland area. The operation of state laws in the pineland area. The new age in logging and sawing. Marketing and prices, especially after 1890. The white pine in the building of the state. Index.

Note: A full-scale history based upon consultation and study of original company records and interviews with persons formerly active in an extensive regional industry. The story is told in detail of the cooperation of the promoters and managers of little and big business units and the lumberjacks and other workers in lumber who, with the help of tools and machines and rivers and lakes, felled the trees, manufactured the lumber, and sent it to market. A section of 16 pages of illustrations includes reproductions of many original photographs of loggers at work.

NORTHEASTERN WOOD UTILIZATION COUNCIL

Charcoal production and uses. New Haven, Conn. Northeastern Wood Utilization Council, Inc., 1952 101 p illus. 23 cm. (Its bulletin no. 37) Paper $2 00. 2838

Contents: The physical and chemical properties of commercial charcoals in relation to industrial use, by C. A. [illegible] and H. [illegible]. [illegible]. Small rectangular charcoal kilns, by E. W. [illegible]. The [illegible] Charcoal production in steel drums, by H. L. [illegible]. The [illegible] carbonization of wood; SIFIC process, by A. [illegible]. History and present status of the industry; continuous carbonization, the Mellman retort, by D. F Othmer. Beehive kiln operation, by D. F Othmer. Domestic uses and distribution, by C. K. [illegible]. Industrial uses, by R. P Kelly Briquetting of charcoal, by R. S. Aries. Active carbon, by J. W Hassler.

Note A collection of original papers presented at a conference held in cooperation with the University of New Hampshire in Durham, New Hampshire in September 1951. Each paper is a short technical discussion of some aspect of the manufacture or use of wood charcoal. Two of the papers deal with charcoal production in small portable kilns.

NORTHEASTERN WOOD UTILIZATION COUNCIL, INC.

The chemistry and utilization of bark. Report of conference at Cambridge Mass., September 17 1948 New Haven Conn Northeastern Wood Utilization Council, Inc. 1949 133 p. illus. 23 cm. (Its bulletin no. 25) Paper $3.00 2839

Contents: Estimates of bark supply in the Northeast, by J C. Rettie and F C. Simmons. The chemical composition of barks, by E. F Kurth. Research on bark at McGill, by V D Harwood and C. B. Purves. The development on bark problems by Weyerhaeuser, by W G. Van Beckum. Structural boards from eastern cedar and western red cedar barks, by H. Schwartz. The domestic vegetable tannin situation, by R. M. Lollar and F O'Flaherty Tannin from northeastern barks, by J. S. Rogers. The possible use of bark in soils, by R. Wahl. The use of bark for paper de-inking, by R. S. Aries. Improvement of bark burning methods through the use of bark drying, by J. H. Friday The drying of bark, preliminary report by Northeastern Wood Utilization Council.

Note: This pamphlet contains original papers presented at the conference named in its title. All of the papers are technical discussions bearing on established or potential uses of tree bark.

NORTHEASTERN WOOD UTILIZATION COUNCIL

Chipped wood production and uses. New Haven, Conn. Northeastern Wood Utilization Council, Inc. 1951 135 p. illus. 23 cm. (Its bulletin no. 33) Paper $2.00 2840

Contents: Wood chips and forestry, by A. C. McIntyre. Possibilities of wood chipping in forest management, by A. Koroleff. Stationary chippers for processing low-quality and waste wood, by J. T. Morgan. Portable wood-chipping equipment, by E. W Fobes. A pilot study of the use of light portable wood chippers, by R. H. Fenton. Panel discussions: A, Brush disposal Land clearing, by R. A. McKusick. Power lines, by L. M. Miller Pulpwood operations, by C. R. Silversides. B, Uses for chipped wood: Mulch for berries, by V G. Shutak and R. P Christopher Soil amendment—decomposition of wood chips in soil, by M. Salomon. Wood chips as soil amendment, by H. A. Lunt. Material for compost, by R. C. Schon. Bedding—wood chips as bedding material for dairy cows, by R. W Henderson, Jr. Wood chips as bedding, by W Pulver. Pulpwood, by J. S. Hart. Roofing—The saturating felt industry in the Northeast, by C. R. Lockard and C. E. Hrubesky. Wood chips for use in roofing felt manufacture, by F T Ratliff. Wallboard, by R. S. Aries. Fuel, by E. C. Miller. Appendix. Index.

Note: A collection of short papers that were originally presented at a discussion conference held at Marlboro College, Marlboro, Vermont. The papers are short and only a few of them are accompanied by literature references. However each one contains useful information bearing on established or potential uses of chipped wood made by grinding or chipping wood wastes obtained in manufacturing or land-clearing operations.

NORTHEASTERN WOOD UTILIZATION COUNCIL

Wallboard production and uses. Report of conference at Cambridge, Mass. September 16, 1949 New Haven, Conn. Northeastern Wood Utilization Council, Inc., 1950 183 p. illus. 23 cm. (Its bulletin no 31) Paper $4.00. 2841

Contents (abridged) Wood waste supply in New England, by R. S. Sowinski. Demand for wallboard from dealers' standpoint, by J. A. Nickerson. Preparation and characteristics of fiber pulp for hardwood, by A. Asplund. The silox and stabruft processes for wallboard manufacture, by P Macpillera. Resin bonded boards from wood waste, by G. Wyss. Wallboard from wood waste without resins by a dry process, by D. F Othmer and L. G. Rochell. Durisol light weight pre-cast concrete, by J. D. Dale. Variables affecting the properties of wood waste molding, by T W Sears, Jr. Resin bonded wood waste panels, by T. H. Vaughan. Development of plasreed products, by R. A. Caughey Production of wood waste boards by a continuous process, by W J. Fleckbein. Woodschood, by W C. Smith. Equipment for wallboard manufacture, by H. D. Thrasell. The modern combination insulation hardboard factory by H. K. Linzell. Summary and conclusions, by R. S. Aries. Index.

Note: A collection of original papers written for the conference named in the book's title. Most of the papers contain explicit descriptions of the manufacture of particular products classed as wallboard. Some of these contain data on strength and other engineering properties and some contain economic data. Only wallboards in which wood is an ingredient are discussed. The majority of authors are associated with United States manufacturing companies, but some of them are nationals of other countries.

NORTHEASTERN WOOD UTILIZATION COUNCIL

Wood fuel. Report of conference at Philadelphia, May 10 1951 New Haven, Conn. Northeastern Wood Utilization Council, Inc. 1951 77 p. illus. 23 cm. (Its bulletin no 35) Paper $3.00 2842

Contents The world wood fuel situation, by H. I. Baldwin. Wood fuel in a national emergency by E. L. Hermann. Characteristics of wood as fuel, by R. P H. Miller. Wood fuel values. A, Stick wood. Harvesting wood in stick form, by F C. Simmons. B, Chipped wood: Source and availability of chipped wood for fuel, by R. R. Alexander. Use of chips in gravity feed stoves, by J W Allen. Spreader stoker firing of wood and coal in multiple fuel furnaces, by E. C. Miller and G. E. Hansen. C, Briquets: Briquets from sawdust, bark and other waste, by W W Letts.

Note. A collection of short technical papers on various aspects of the use of wood as fuel. The emphasis is on the use of waste wood in chipped or briquetted form. Several of the authors pay special attention to the economic problem created by the rising cost of hand labor in wood gathering.

NORTHEASTERN WOOD UTILIZATION COUNCIL

Wood products for fertilizer Bulletin number 32 June, 1950 New Haven, Connecticut Northeastern Wood Utilization Council, 1950 53 p. illus. 23 cm. Paper $1 00. 2843

Contents: Fertilizer requirements of the Northeast, by J. A. Chucka. Wood ashes as a fertilizer, by H. A. Lunt. The use of sawdust, shavings and superphosphate with dairy manure, by A. R. Midgley. Comparisons of sawdust and wheat straw for bedding, by J W White. The utilization of waste bark, by R. G. Fuller and others. Action of soil bacteria on wood products, by C. Thom. The use of lignin in potato fertilizer by S. Dunn and others. Research on lignin as a soil builder by R. S. Aries.

Note: (2330*) A revision of a collection of papers which were presented originally at a conference held in 1948 and published in pamphlet form the same year. The material is based largely on investigations conducted at state agricultural experiment stations. In this edition new developments are reported and a paper on the utilization of bark has been added. Two papers on lignin, printed in the first edition, have been omitted.

PANSHIN ALEXIS JOHN AND OTHERS

Forest products their sources, production, and utilization. By A. J Panshin E. S Harrar W J Baker and P B Proctor New York McGraw Hill Book Company Inc.,

1950 549 p illus. 24 cm. (The American forestry series Walter Mulford, consulting editor) $6.50 2844

Contents: Part I, Economics of forest utilization. Timber resources and their importance in the economy of the United States. Wood residues and the related problems of wood-utilization research. The relation of wood properties to wood utilization. Part II, Wood products: Round timbers. Mine timbers. Railroad ties. Wood furniture. Veneers and plywood. Wood containers. Shingles and shakes. Wood flour. Sawdust and shavings. Wood fuel. Minor wood products. Part III, Chemically derived products from wood. Pulp and paper. Thermal- and sound-insulation materials. Cellulose filaments and film. Carbonization and destructive distillation of wood. Wood saccharification. Part IV. Derived and miscellaneous forest products: Naval stores. Maple sirup and sugar. Tannins and dyes. Wood in the plastics industry. Minor forest products. Index.

Note. A college textbook which is useful also as an elementary reference book in institutional and personal libraries. The first part occupies only 51 pages. The rest of the space is devoted to specific descriptions of forest products which are currently manufactured in the United States of America or are imports of economic importance. Individual products are described in adequate detail and the methods of manufacturing each one are also described. Flow charts are used frequently to diagram processes, and illustrations are included to show special machines and techniques. Selected literature references are included.

ADDENDA

ALLEN, JAMES H., editor
Strabismus ophthalmic symposium (I) With 181 illustrations. St. Louis The C. V Mosby Company 1950. 476 p. illus. 26 cm. $10.50 2845

Contents: The anatomy of the extrinsic muscles of the eye, by W H. Fink. The voluntary mechanism for eye movements, by F H. Adler. The involuntary or reflex mechanism, by F H. Adler. General physiology of the ocular muscles, by F H. Adler. The sensory physiology of binocular vision, by K. C. Swan. Normal and anomalous correspondence, by H. M. Burian. Classification of ocular movements—ophthalmostatic and ophthalmokinetic apparatus, by H. M. Burian. Terminology with extended comments on the position of rest and on fixation, by W B. Lancaster Etiology of heterophoria and heterotropia, by H. M. Burian. Etiology of heterotropia and heterophoria, by R. G. Scobee. Congenital structural muscle anomalies, by H. W Brown. Clinical application of neurology by G. P Guibor. Screen cover test, by H. W Brown. Measurement of deviations, by W B. Lancaster Some uses of ophthalmic prisms, by G. P Guibor. The use of atropine in the treatment of motor defects, by G. P Guibor An evaluation of the pleoptic, by R. G. Scobee. The management of convergent strabismus, by F D. Costenbader. The physiology and management of divergent strabismus, by F D. Costenbader. Factors in the cure of squint, by F D Costenbader Which muscle should be attacked in tropia surgery by R. G. Scobee. Surgical management of convergent strabismus, by C. S. O'Brien. Surgical treatment of concomitant divergent strabismus, by O. S. Lee and C. S. O'Brien. Surgery of the oblique muscles, by H. W Brown. Factors underestimated, features overemphasized, and comments on classification, by W B. Lancaster. Discussion. Index.

Note: A book planned as specialized medical college course at the postgraduate level. Although some material was reprinted from such professional journals as the *Archives of ophthalmology* the papers are for the most part original. All are accompanied by literature references.

INORGANIC SYNTHESES. Volume III. Editor in-chief Ludwig F Audrieth. Associate editors John C. Bailar jr and others. Consultant on nomenclature and indexing Janet D Scott. Advisory board Arthur A. Blanchard, W C. Johnson and Raymond E. Kirk. New York McGraw Hill Book Company Inc., 1950 230 p. illus. 23 cm. $4.50 2846

Note: (291*) The present volume of this important series contains fifty-three new syntheses. Typical substances are sodium peroxide 8-hydrate, basic beryllium acetate and propionate, boron chloride and bromide, carbon tetraiodide, vinylchlorosilanes, methyl germanium triiodide, hydroxylammonium salts, sodium pyrophosphates, ammonium metavanadate, columbium (IV) oxychloride, telluric acid, chromium hexacarbonyl, anhydrous metal fluorides, rhenium (VII) oxide, and anhydrous iron (III) chloride. Each synthesis has been selected by board of editors comprised of eminent American chemists, and has been checked by one or two chemists other than the submitter. For each substance there are brief general discussion, detailed description of the laboratory procedure, discussion of properties, and list of references to related literature. In some cases, there is diagram of the laboratory apparatus.

JACOBSON C A compiler and editor
Encyclopedia of chemical reactions. Volume III. New York Reinhold Publishing Corporation, 1949 842 p. 24 cm. $15.00 2847

Contents: Cobalt. Columbium. Copper. Didymium. Dysprosium. Erbium. Europium. Fluorine. Gadolinium. Gallium. Germanium. Gold. Hafnium. Holmium. Hydrogen. Illinium. Indium. Iridium. List of abstractors. Journals used by abstractors. Index to reagents (formulas) Index to reagents (names) Index to substances obtained (formulas). Index to substances obtained (names)

—— —— Volume IV New York Reinhold Publishing Corporation 1951 790 p. 24 cm. $15.00 2848

Contents: Introduction. Abbreviations. Iron. Lanthanum. Lead. Lithium. Magnesium. Manganese. Mercury Molybdenum Neodymium. List of abstractors. Journals used by abstractors. Index to reagents (formulas) Index to reagents (names) Index to substances obtained.

Note. (291–291*) Additional volumes in reference work which is designed to provide short statements of the inorganic reactions that have been reported in the literature. The arrangement is alphabetical, first by chemical elements, then under each element by reactant and reagent. The information given for each reaction varies but always includes an expression of it in equation form and reference to the original source. Brief data on procedures, conditions, and the properties of products are given in many instances.

NEW YORK ACADEMY OF MEDICINE
Disorders of the circulatory system a symposium presented at the twenty fourth graduate fortnight of the New York Academy of Medicine, October eighth to nineteenth, 1951 Edited by Robert L. Craig. New York The Macmillan Company 1952 305 p. illus. 23 cm. $5.50 2849

Contents: The role of the connective tissue in diseases of the cardiovascular system, by P Klemperer. Contraction in the heart muscle fiber by A. Szent-Gyorgyi. Lipid metabolism and atherosclerosis, by A. Keller. Diet and lipotropic agents in atherosclerosis, by J. W Gofman. Coronary disease—clinical-pathologic correlations and physiology by H. L. Blumgart. The clinical recognition of coronary heart disease, by R. L. Levy The importance of cardiac arrhythmias, by L. N Katz. Pathologic physiology of mitral stenosis and its surgical implications, by L. Dexter. Surgery of acquired valvular disease, by R. H. Wylie. Surgical remedies in congenital cardiovascular disease, by G. H. Humphreys II. The electrocardiographic effects of myocardial and pericardial injury by C. E. Kossmann. Edema and dyspnea of heart failure, by E. A. Stead, jr. The mechanism and management of circulatory failure, by W Dock. The treatment of some bacterial infections of the heart and pericardium, by T H. Hunter. Humoral and vasomotor controls of blood vessels, by I H. Page. Endocrine factors in hypertension, by G. A. Perera. The medical management of acute and chronic arterial occlusion, by A W Duryee. The surgical therapy of acute and chronic arterial occlusion, by J W Lord, jr. Circulatory responses to life situations, by S. Wolf. List of committees Subjects of past fortnights, 1928–1951

Note The papers collected in this book were presented on the occasion named in the book's title, and were part of course addressed to graduate practitioners. The course included, besides these lectures, panel discussions, hospital clinics, and scientific exhibit. The lecturers were drawn, for the most part, from the faculties of leading medical schools in the City of New York and elsewhere in the United States. Some of the authors described developments and techniques not previously published and all presented authoritative surveys of their special topics.
